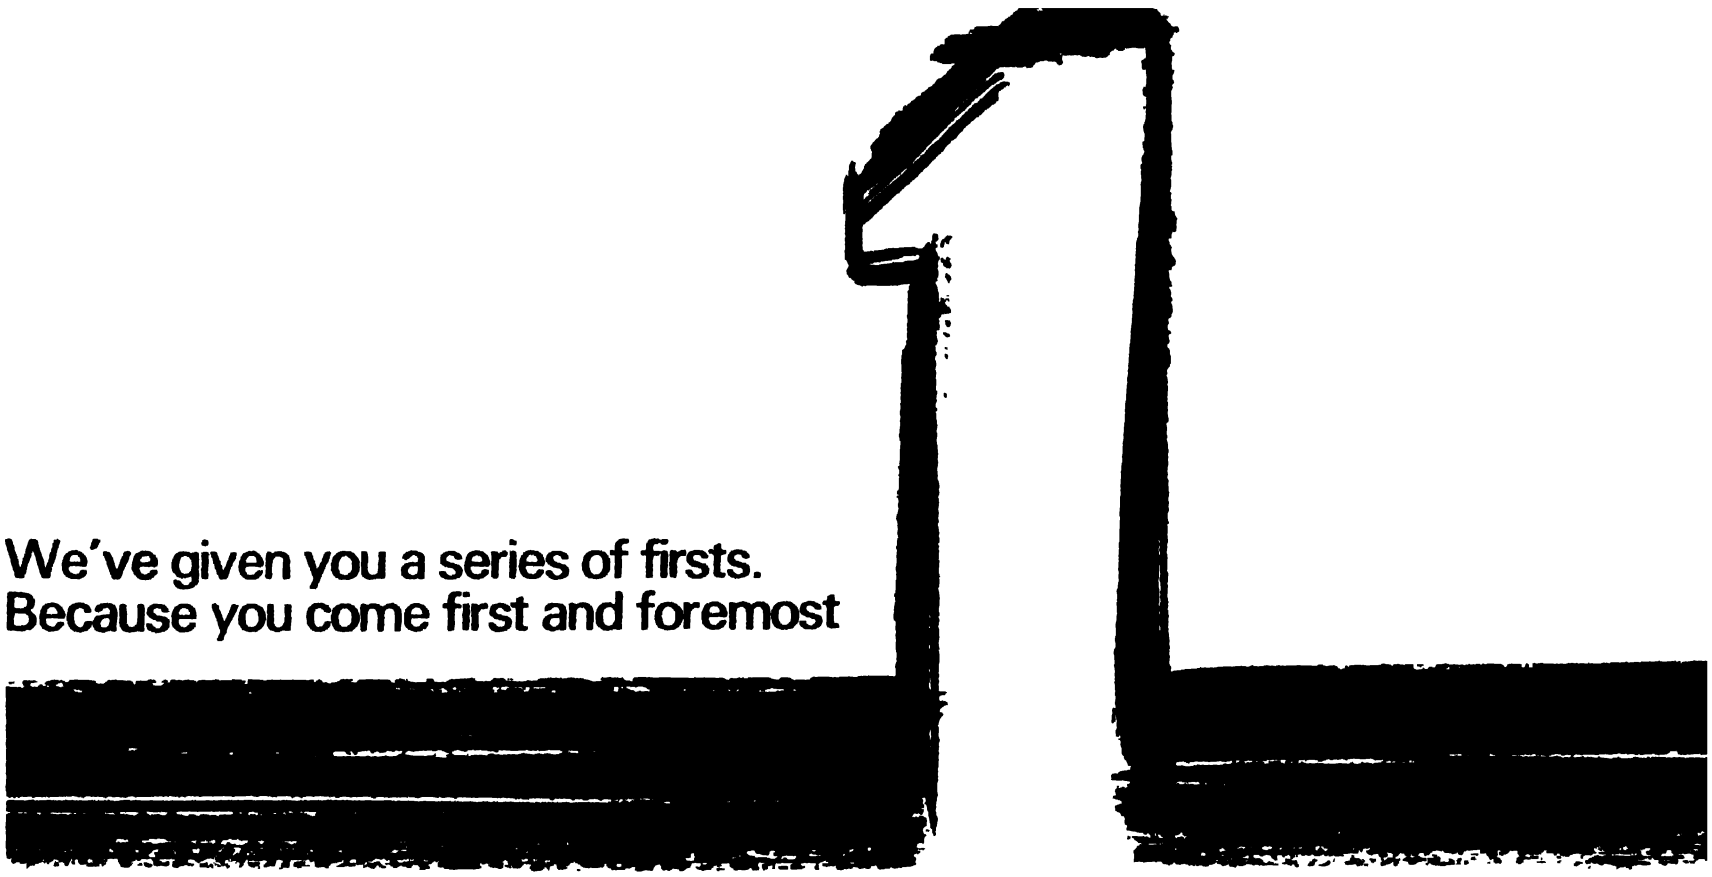
il: A Success Story



Asian Paints.

A series of firsts add up to make us No.1

When you're going to be first, you try a little harder.
That's why we reach out to you with the widest distribution. The most competitive prices
And, of course, the largest range.

It takes foresight to come out first

First with a comprehensive retail network. Our products are sold in over 20,000 outlets spanning the length and breadth of the country.

☐

First Indian paint company to set up a subsidiary abroad.

☐

First with Majiktouch The wonder concept that gives you shades you thought didn't exist.

☐

First with Super Decoplast – India's No. 1 affordable Plastic Emulsion Paint.

☐

First with corrosion-resistant protective paints for Urea Prill Towers.

☐

First with computers for integrated management systems. Also the first Colour Control System for 100% shade fidelity.

☐

First with Krilo – India's first pure acrylic car finish.

15 years of leadership **asian paints**

Nestum is gentle on baby's digestion

Enriched with 11 vitamins and iron

From 4 months, give your baby Nestum baby cereal rice — enriched with 11 vitamins and iron.

Made from rice, the cereal that's the easiest to digest.

Nestum is versatile

Start by serving Nestum with milk. As baby grows, introduce variety in his diet by serving Nestum with stewed fruits, cooked and mashed vegetables and dal.

Nestum®
baby cereal rice

Easy to prepare:

Pour pre-boiled warm milk

Add Nestum & mix

Ready to serve

NESTLE

Interest free credit for the financially responsible

A convenience from Diners Club – when you shop, travel and entertain

Products and services cost the same on your Diners Club account. The credit that you get from 3000 establishments is absolutely free. But apart from the economics of this convenience is the assurance of knowing you can never be stranded without money.

Membership to Diners Club costs you only Rs. 400 – the one time entrance fee – plus Rs. 200 as annual subscription. To expedite your application, just fill in this form and send it to Diners Club alongwith your cheque.

LETTERS TO THE EDITOR

Sattar Continues

Sir—I fully endorse the views expressed by Mr Sunanda Datta Ray in "Bangladesh: Fateful Poll?" (November 15). Aminul Islam deserves rich appreciation for his telling painting.

ASHOK N. PRABHU
Honavar

Death Trap

Sir—The article, "Debt Trap or Lifeline" (November 15) was very comprehensive and interesting. I fully agree with the views of the 23 economists. The loan involves the acceptance of conditions imposed by the IMF, resulting in the surrender of the country's economic sovereignty. India should not have banked so heavily on the IMF loan.

P.V. CHILLAL
Karnataka

Sir—The IMF loan is not only a debt trap but it is a death trap for developing countries like India.

RAMANAND SHARMA
New Delhi

Sir—With political and socio-economic uncertainties, one wonders how the IMF loan will boost the economy of the country. We were the slaves of the British and today we are the slaves of our creditors!

M.H. BADSHA
Madras

Sir—Our politicians are capable of turning any lifeline into a trap with their corruption and selfishness. With so much help coming to us, they will indulge more and more in their corrupt practices and grab import licences, etc. Dr Ezekiel writes that the IMF loan will merely postpone the problem, but if we use the time available properly, the country may be able to emerge from the oil crisis relatively unscathed.

DIWAKER KALE
Bombay

Prophet Of Gloom

Sir—Kudos for an excellent issue (November 1). Not only was the cover story eminently readable, but the cartoons themselves spoke volumes.

ANAND GARG
Madhya Pradesh

Sir—Mr Sham Lal's article, "Crumbling Pillars Of State" (November 1), is another high-sounding expose like his "National Scene".

The executive, the legislature, the bureaucracy and the judiciary are only the limbs of the ailing body of the state. We cannot cure these limbs like we can the right eye or the left eye through modern medicine. One has to go deep into the problem to root it out.

S.D. DINN
Bombay

Sir—Mr Sham Lal appears to be a very good prophet of gloom. I am allergic to his evident frustrations. How can I appreciate an article that exudes no optimism and makes no constructive suggestions?

DEBASISH RAY
Vanivihar

Sir—Your editorial talks of the Janata misrule. Whom are you kidding?

V. KRISHNAMURTHY
Bangalore

Sir—The article was a rational analysis of rotting Indian life coupled with a masterpiece by Mario. In fact, the whole body fabric of the nation is heavily infected with the virus of corruption and sycophancy, and the state's four most important organs—the executive, the legislature, the bureaucracy and the judiciary—are working as the "receptors" of the virus. The surgeon-in-charge, Mrs Gandhi, is still a great hope to the patient for she still has no match as a leader. What we need is not an authoritarian government but a government with authority, especially moral authority. Yes, national integrity is impossible without personal integrity.

K.N. TYAGI
Meerut

Sir—I read with interest the analysis of the malaise of the Indian political system as analysed by Mr Sham Lal, and also your editorial. I congratulate you for your brilliant point that the erosion of the power of the state has become irrelevant and therefore its diseases will not, in fact, affect the major areas of our life, making social development autonomous. However, that point should not be stretched too far. The Indian state has managed to influence almost every aspect of our life—political, economic, social and developmental. Therefore, it is not just a diseased limb but the very brain and heart of our body politic.

PRAVIN SHETH
Ahmedabad

Sir—Congratulations to Mr Sham Lal for so brilliantly analysing the perils that face the country, and to Mario for so vividly illustrating the theme. The article should be an eye-opener for our political leaders who have brought the country to the verge of collapse. If the governing body itself is corrupt, who is going to alleviate the suffering of the masses?

SANGITA BHATNAGAR
Patna

Sir—The cover story was superb. It precisely depicted the sad state of the bureaucracy with its pending files, the legislature with their selfish, power-hungry politicians of all hues, the judiciary vainly trying to perform a balancing act and the executive which has only hollow promises to offer.

NAZIR AHMED
Bangalore

Sir—Much of what Sham Lal says is, unfortunately, true. However, one gets the impression that the author has over-emphasised the calamities we are facing. In this context, the observation in your editorial that the country is by no means on the verge of collapse is welcome and reassuring. Even so, many of us will not be able to endorse your flattering tributes to Mrs Gandhi. We cannot shut our eyes to the fact that Mrs Gandhi herself, during her long political career, has contributed the lion's share of the uncertainties by her autocratic methods of functioning.

K. GOVIND
Kuttipuram

Hollow Socialite

Sir—What proportion of your readers spend their evenings at cocktail parties that you should accept the senseless pratings of that spoilt, rich socialite, Ms Kilachand ("The Emptiness Inside", November 1)?

Please note that the majority of us toil for our living and know nothing about, nor have the least interest in, the lives of the filthy-rich.

G. DOCTOR
Bombay

Sir—Emptiness is not confined to the cocktail-circuit. It has also afflicted the members of the middle and lower middle class. The emptiness that we of the lower strata of society suffer from arises for slightly different reasons. We struggle to keep up with the Joneses, try to keep middle class morality intact, and keep telling ourselves that the glamorous world of the rich and the elite is not real. At the same time, we try to ape the mores and manners of the rich. In the end we are left with a nagging doubt about this struggle and feel empty and cheated.

C.V. MATHEWS
Bombay

Sir—Ms Kilachand's sincerity is questionable. She continues to be very much a part of the society that she pretends to criticise, so who is she kidding?

DILEEP NANDA
Bombay

Sir—My congratulations to Ms Shobha Kilachand for her Emptiness.

MADHU JOSI
Bomb.

Biased Viewpoint

Sir—I read with interest Mr K.C. John's article, "Kerala: Grievous Blow to CPM" (November 1). He seems to have been carried away by an anti-Marxist mood. He does not mention even a word about the Congress (S) leaders' personal grouses against the CPM (which had nothing to do with law and order) over the spoils of the office which were really responsible for the pull-out.

Mr John mentions an incident concerning a film producer, Balu Kuriath. Such goondaism is by no means the sole monopoly of the CPM. The writer could have been a bit more realistic and should have done his home work.

The photographs of EMS and his wife, and the Congress (S) leaders at the Delhi Session, however, were excellent.

ASHOK KUMAR
Trivandrum

Sir—Congratulations for your brilliant editorial, "Mrs Gandhi's Burden", and the article on Kerala by Mr K.C. John. I am, like you, convinced that Mrs Gandhi bears a tremendous burden and that she needs the sincere co-operation of all of us. How she bears the burden on her frail shoulders is a miracle of our times. Let us add strength to her elbow in every way.

G. RAMACHANDRAN
South Kerala

Sir—The exit of the CPI(M)-led ministry in Kerala, as you have rightly pointed out, was due to its own mistakes. It was a hotch-potch of various parties without any common objective except to retain power by hook or by crook. This marriage of convenience has resulted in a colossal waste of public money.

U.S. IYER
Pune

Sir—Mr K.C. John was not objective. He attributes the collapse of the ministry headed by the CPI(M) to the political violence perpetrated by the CPI (M) cadres. But as many as 13 murders were reported within a period of three weeks, ending November 14—all after the imposition of President's rule in Kerala. This shows that political violence in the State is not the monopoly of a single party

P.K. SATHISH
Kerala

Sir—The article was totally biased. The fall of the Marxist-led front should be attributed to the monopolistic press which, in collusion with the opposition, magnified the law and order problem to fantastic proportions.

A JAYATHILAK
Trivandrum

Dickensian World

Sir—The article "Crackers Don't Make Their Day" (October 25), grieved my heart and I was sorry to learn that "Pip" and "Joe" of Charles Dickens' world still live in India.

SARMISTHA SEN
Bhubaneswar

Sir—Rajiv Shankar's article was frank and factual. I hope the article will go a long way in arousing the citizens into raising their voice against exploitation of children.

MOHAMED AURIFULLA
Jeddah

Sir—The article gave a horrific account of child labour. One would like to ask what the Government did for these exploited children in the International Year of the Child? Also, how did the employers go scot-free after violating the Labour Act? Will Sivakasi remain a den of injustice? Why do the Trade Unions keep mum over the issue?

UNDERSEA OPERATIONS ARE VITAL. A driver goes down to make subterranean surveys which are so vital for offshore drilling for oil.

DRILLING. Men at work on the derrick platform of "Sagar Samrat" which first discovered oil in a limestone reservoir on February 19, 1974.

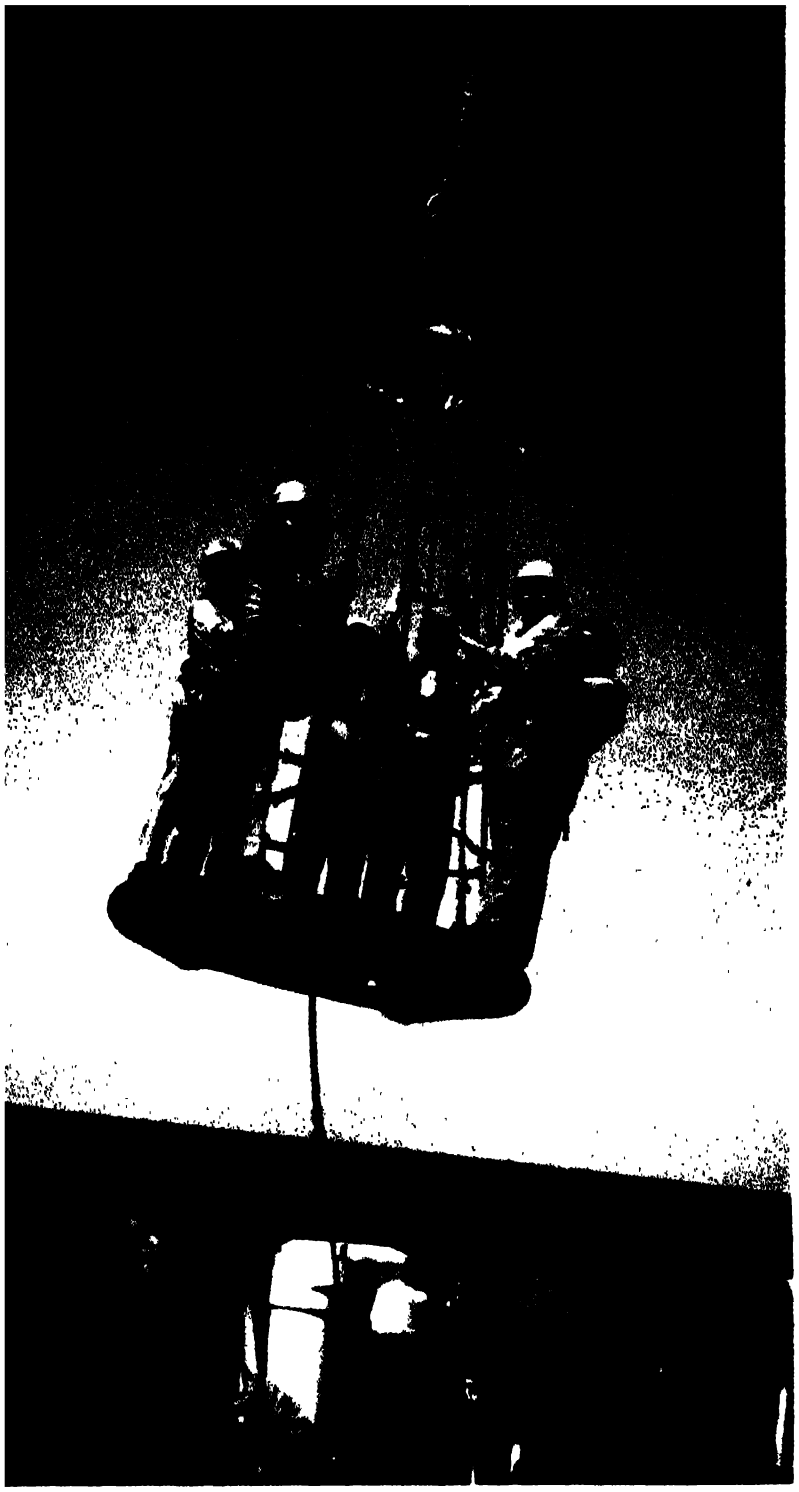
Oil: A Success Story

Will India reach near self-sufficiency in oil by 1985? Much will depend on the renewed efforts to raise Bombay High production to 20 million tonnes and the onshore production from Assam and Gujarat to 11.5 million tonnes. ONGC hopes to achieve a total production of about 38 million tonnes,including gas.

by B. Krishna

THE latest oil discovery in the Cauvery basin of the northern Palk Strait, some 50 km south-west of Vedaranniyam, a town known for its salt pans, and within 20 kms of Pt. Calimere, holds out an alluring prospect. It may not only take the country beyond self-sufficiency in crude oil but also give a valuable new lead for future exploration in the Cauvery basin and other areas on the east coast.

The sulphur-free Palk Strait crude is very light—therefore the recovery can be up to 80%



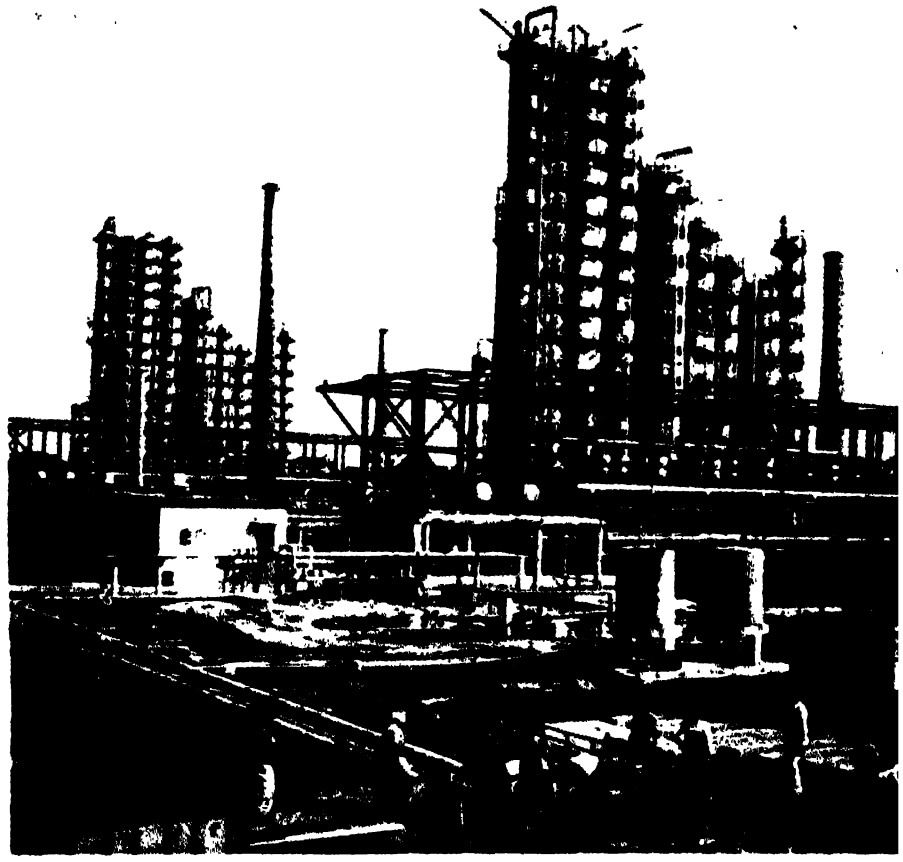
LOFTY CONVEYANCE. A puggy net transporting men from the supply vessel to the derrick platform.

compared with 50 to 60% in Bombay High and 40% in most offshore fields elsewhere. What is more, oil has been found here in the upper cretaceous sands for the first time in India. Some of the world's larger oilfields have been discovered in such structures.

Finally, the well was spudded in only nine metres of water, perhaps the shallowest depth in the world where a floating drill barge has been successfully operated. The rate of flow at a well-depth of a little over 2,300 metres was about 1,500 barrels a day through a half-inch choke. All in all, the find is "highly indicative" of a good commercial field.

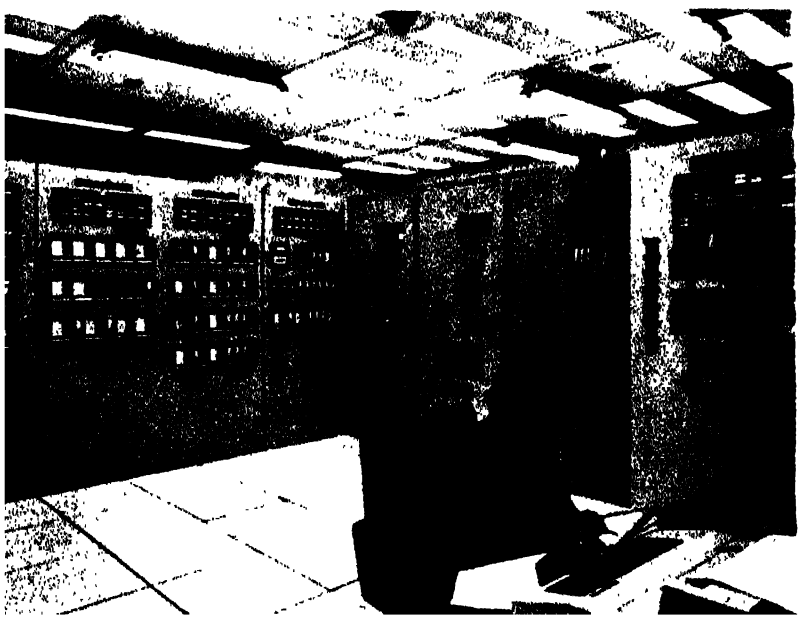
of secondary recovery will help increase the current production in Gujarat from around 3 million tonnes a year to 4.5 million tonnes and that in the North-East from 4.5 million tonnes to about 7 million.

On present reckoning, at least another five million tonnes of oil a year can be secured from the Palk Strait find, the new 80 square-kilometre structure some 35 kilometres east of Bombay High at a depth of 75 metres (where the initial rate of flow of about 1,030 barrels a day went up by over four times to 4,400 barrels a day within a month) and the new onshore discoveries in Nagaland and Tripura, where thirty km east of Agartala



HOW TO CROSS THE HUMP. Gujarat is an outstanding example of how oil can dramatically improve the economic scene of a State. Several priority industries use ONGC's oil and gas not only as fuel but as the basic feedstock.

CENTRAL CONTROL ROOM on Bombay High (North) process platform.



Even prior to the Palk Strait discovery, the ONGC has been aiming at self-sufficiency in hydro-carbons by the end of the sixth five-year plan. It hopes to produce, in terms of oil equivalent, at the rate of about 38 million tonnes of crude and gas annually by 1985. If all goes well, the annual output of Bombay High and adjacent fields will go up to 20 million tonnes of crude, 2.25 million tonnes of associated gas and 3 million tonnes of free gas (both in terms of oil equivalent). The onshore fields will yield another 11.5 million tonnes of crude and 1.25 million tonnes of gas (again in terms of oil equivalent). Even if there are no new discoveries on land, the use of modern methods

gas has been struck in substantial quantities: it is flowing at the rate of 90,000 cubic metres per day from a single well.

Lucky Strikes

All these lucky strikes would mean little, however, unless the indigenous crude can be refined at home and natural gas put to good use. Prior to 1954, India's refining capacity was only half a million tonne a year from the Digboi refinery of the Assam Oil Company. The refineries set up by Burmah-Shell, Stanvac (later Esso) and Caltex increased it to 5.8 million tonnes by 1960-61. The public sector refineries, together with these, further raised it to 17.1 million tonnes in

→

1970-71, 23.2 million tonnes in 1977-78 and 24.2 million tonnes in 1978-79. With the proposed expansions of the Madras, Vizag and Koyali refineries and the coming on stream of the Mathura refinery, India's total refinery capacity is expected to be about 44.5 million tonnes by 1985.

For full utilisation of that capacity, India will have to import eight to ten million tonnes of crude by 1985 unless the country is able to discover and produce that much more from her own sub-soil. On present showing, such imports would cost about Rs 3,000 crores. The chances, however, are that the bill may be less in real terms if the imports of crude from West Asia and elsewhere by Japan and the Western nations continue to decline.

As it is, the steep hike in oil prices since 1979 (by 150%) seems to have materially changed the situation. According to oil analysts, OPEC has "unwittingly done the industrialised world an enormous favour," conservation alone having enabled it significantly to reduce consumption. Thanks to reduced demand, OPEC's production has already hit a new low of 21 million barrels a day, which is 23% short of its level a year ago and far below its capacity of 35 million b/d.

Alternate Fuels

Through the use of alternate fuels like coal and gobar gas, a successful attempt has been made in India, too, to keep consumption down to 31 million tonnes during 1980-81 as against the estimated demand of 33 million tonnes. The chances of pegging it to 35 million tonnes a year in 1985, against the Fuel Policy Committee's estimated figure of 47.75 million tonnes by 1983-84, are distinctly bright.

Besides restricting home consumption to as low a level as possible, production of crude oil is being stepped up through a vigorous effort under the sixth plan. The ONGC's outlay has been raised from Rs 3,370 crores to Rs 4,788 crores, and it is proposed to undertake more drilling operations—in as many as 325 offshore wells.

The Palk Strait discovery, however, confirms the experts' view that the offshore areas from Kutch to West Bengal are potentially rich. Besides Bombay High, Bassein and the Deep Continental Shelf (about 180 km west of Bombay High), the Bengal-Orissa basin, the Gulf of Mannar, Tarapur, Diu, Dahanu and Saurashtra regions off the Gujarat coast, and even the areas adjoining the Andaman and Nicobar Islands will be further explored.

Our Reserves

How much do we possess? The Soviet petroleum geologist, Dr G.P. Kalinin, whose association with the ONGC dates back to its inception, believes that the offshore areas may have as much as one billion tonnes of crude oil. A World Bank report has confirmed that Bombay High structures alone have a recoverable reserve of 125 million tonnes. And, in the opinion of the head of the Moscow Institute of Petroleum, Mr N.A. Eremenko, "Calcutta is floating on a sea of oil".

Dr Kalinin has also estimated that India's offshore reserves could be over 4,000 million tonnes. Although by 1985 the ONGC expects to recover from onshore in the north-eastern region and Gujarat around 11.5 million tonnes, the Commission is intensifying its exploratory activities in such areas as the Himalayan foothills, the Ganga Valley, Jaisalmer, Krishna-Godavari basin, West Bengal, Nagaland and Tripura. In all it will dig and test about 560 wells between now and 1985.

War Of Independence

The Palk Strait discovery happily coincides with the Silver Jubilee year of the ONGC: a successful record of 25 years of operations. Prior to its establishment, India was hostage to foreign oil interests. The one man who proved a thorn in their flesh was

A FAIRYLAND. Bombay has two refineries — Hindustan Petroleum (former Stanvac) and Bharat Petroleum (former Burmah-Shell) built in 1954 and 1955 respectively. Their total refining capacity is 3.2 million tonnes.

B. Krish

the late Mr K.D. Malaviya, an incorrigible optimist, who vowed to break their stranglehold. He, indeed, waged a war of independence for a national oil industry. He set up the ONGC in 1956, the Indian Refineries Ltd in 1958 and the Indian Oil Corporation in 1959.

His doggedness and unwavering optimism was seen in his reply to foreign experts' pessimistic forecasts as early as 1955: "The risk is worth taking, and, if we do locate a good oilfield, the money and energy spent will be repaid many times over." Bombay High has already proved him true; the Palk Strait may again do so.

Mr Malaviya's first victory came in the discovery of oil at Ankleshwar and a few other places in Gujarat in the early sixties, which gave "birth to India's national oil industry" Despite discouragements and hard going, indigenous production of crude oil rose slowly, rather painfully, from 100 tonnes in September 1961 to 6.8 million tonnes in 1970, 12.84 million tonnes in 1979 and around 16 million tonnes in 1980.

Mr Malaviya's drive for self-sufficiency also included a pragmatic and foresighted programme of building India's indigenous refining capacity, without which success in crude production would mean little. Herein he was guided by three considerations: First, not to let the foreign oil companies expand their refineries, no matter what pressure he was subjected to; second, to build public sector refineries at Gauhati (1962), Barauni (1964) and Koyali (1965) to take care of the indigenous crude discovered in Assam (Nahorkatiya and Moran) and Gujarat; and, third, to build up refineries at Cochin (1966), Madras (1969) and Haldia (1975) to process imported crude to ensure that the rising demand for petroleum products is met indigenously.

New Challenges

In the past 25 years the ONGC has, admittedly, matured into a highly technical and scientific organisation, with rich experience of working in diverse and difficult areas, both on land and in sea, under trying conditions of climate and terrain. But the Palk Strait discovery has taken it on to the threshold of a new era. But it is plainly too bottom-heavy to face the new challenges.

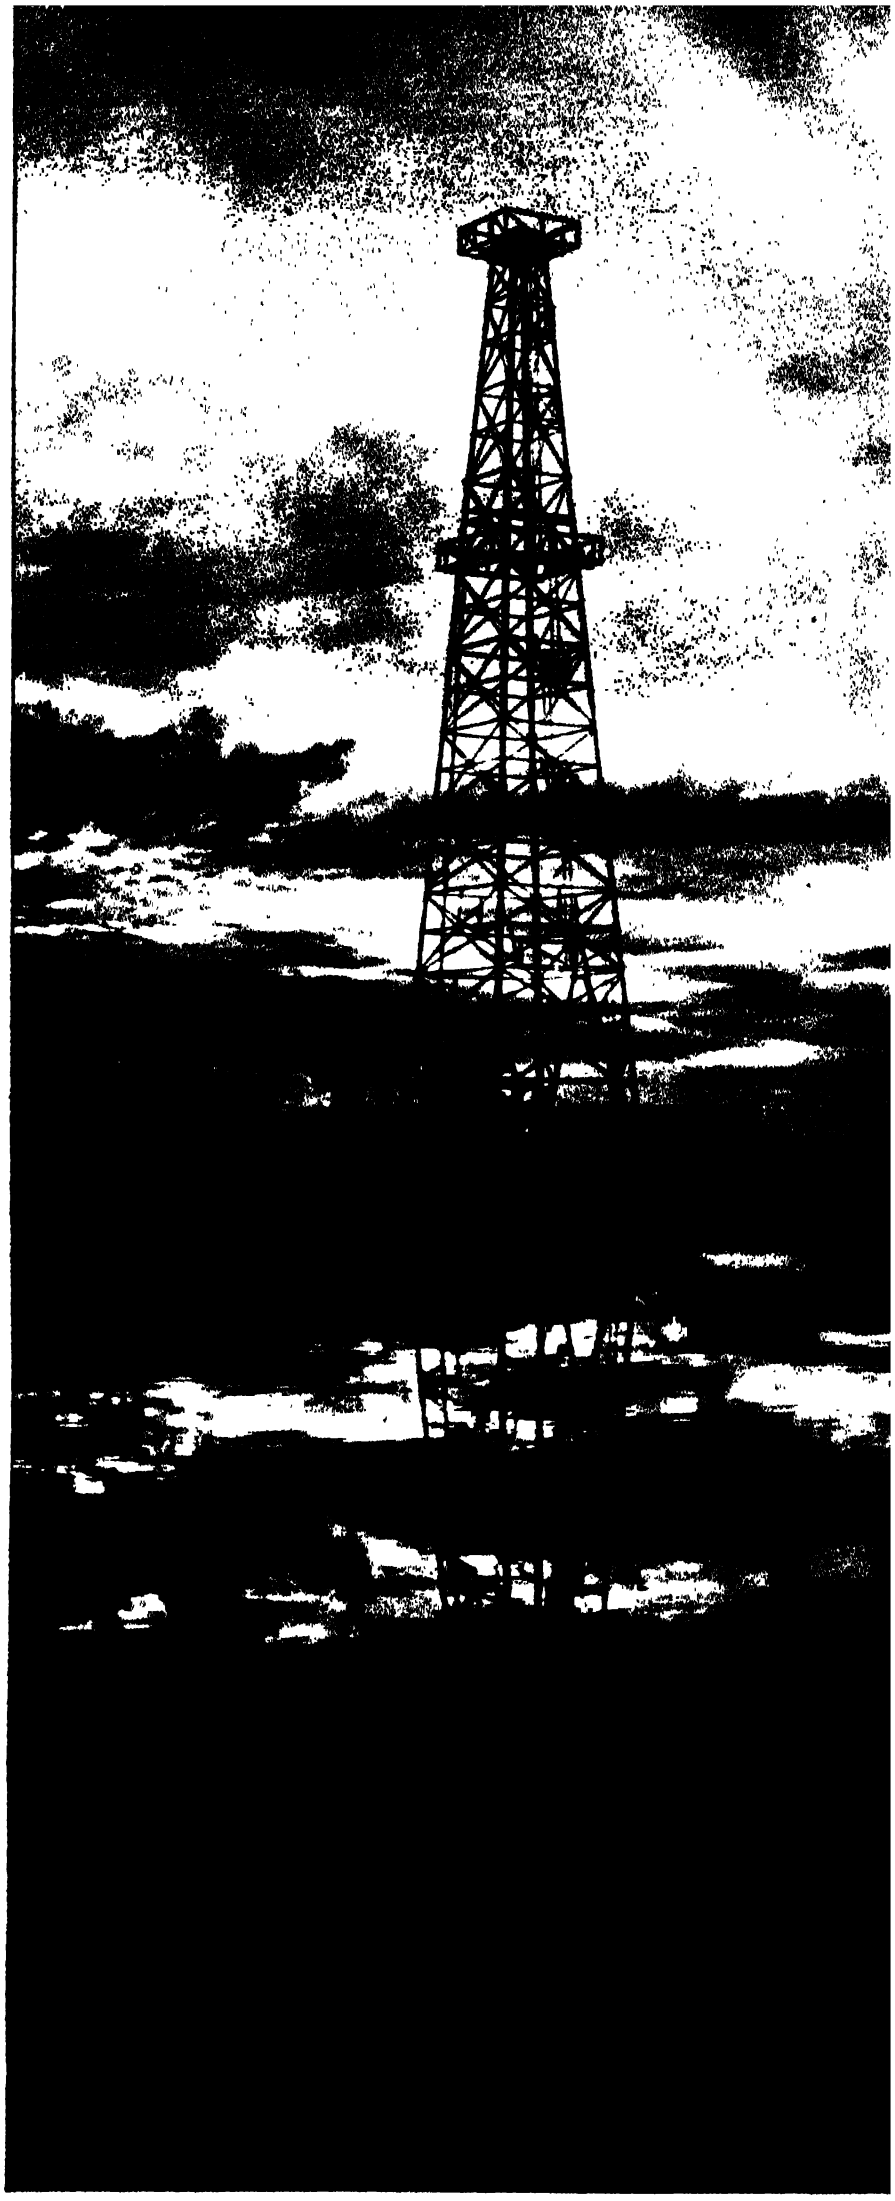
At the very least, it needs five members in charge of its fast-growing operations instead of the two it has at present. The responsibilities of the members (offshore) should be bifurcated and one member each should be responsible for exploration and production on the west coast and the east coast with headquarters, respectively in Bombay and Madras. Likewise, exploration onshore needs three members, each separately in charge of the three regions: central (Dehra Dun), western (Baroda) and eastern (Calcutta). The ONGC will also set up more institutes to train its engineers, scientists and technicians not only in the current operations but also to familiarise them with the latest technologies.

Crossed The Hump

Looking into the future, one can confidently say that it will not be as bad as the past. India seems to have crossed the hump.

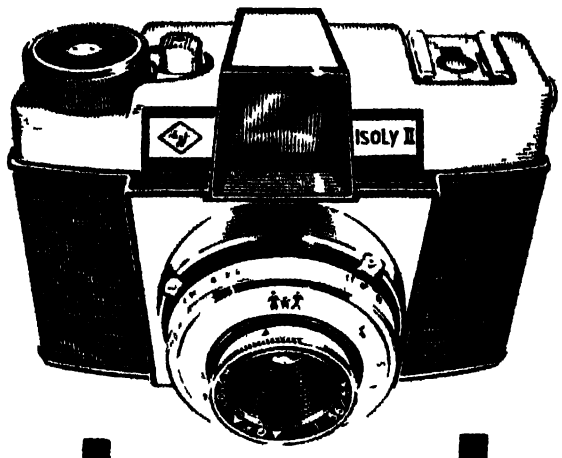
Hereafter the current import bill of about Rs 5,200 crores a year on crude and products will come down in real terms rather than go up. The world oil glut appears to have thrown OPEC into disarray, and the fall in international demand for oil seems to be irreversible.

The recent developments at home and abroad will not only ease the strain of oil imports on India's hard-pressed financial resources but usher in by the end of the sixth plan a new era of economic prosperity for the country. While dedicating the Bombay High project to the nation in April 1975, the Prime Minister, Mrs Indira Gandhi, had called it "a great adventure", and had further significantly observed: 'We are proud of our technicians, scientists and engineers... What is most important is that we should be truly independent." Though such independence may not be entirely realised by 1985, the goal is not far off. ■



B. Krishna

IN THE ASSAM OILFIELD, a derrick in Moran. India's post-independence search for oil began with its discovery in Nahorkatiya and Moran.



Agfa Photography at f/22

The Agfa Isoly-II gets every detail of a landscape or a temple. Close the aperture down to f/22 to get the greatest possible depth of field Set the shutter speed at 1/100 second and the distance at infinity Use slow film for greater sharpness—125 ASA The result? A picture where every detail—from 3 m to as far as the eye can see—is perfect

The Agfa Isoly II is a great all-round camera. You simply adjust settings, distance and film to freeze a sports scene, get close enough to snap a leopard snarling or take a perfect picture in dim, soft light

The Agfa Isoly-II opens up all kinds of exciting possibilities. Even amateurs can look forward to professional results Because only the Agfa Isoly-II:

- Is built to German specifications and undergoes over 100 exacting tests
- Has an Agnatar f/5.6 lens, 3 speed settings (B, 1/30 & 1 100), 5 aperture settings (5 6, 8, 11, 16, 22) and distance settings from 1.5 m. to infinity
- A hot shoe contact and universal flash contact pin.

Takes 16 pictures on a 120 roll film.

Expose your excellence. Get an Agfa Isoly-II Today!

The Hunt For Oil

25 years of the ONGC

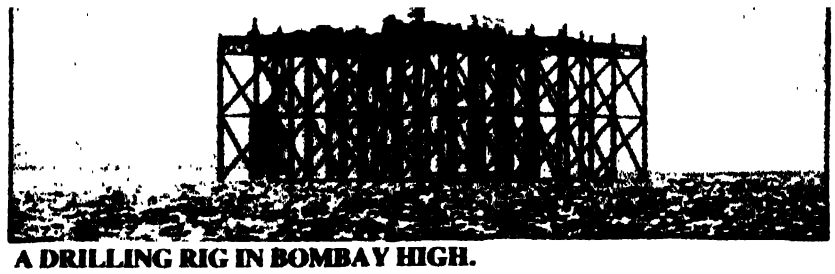
by Uma Vasudev

BOMBAY High is not the whole of India's Oil and Natural Gas Commission. But it certainly is the star in the repertory, the primma donna around whom are centred hopes of a runaway success. Bombay High is not a play. But it certainly is adventure on the seas, a city in water, fed by oil. Yellow, ant-like rigs with legs and arms of steel clamping the ground at a depth of 350 feet under the sea, and ferreting out oil, dot a landscape of heavy blue water on which the sun picks out ripples which look like wrinkles on the skin of an elephant. It's like a city of the future, 100 miles out from the ONGC, Helibase at Bombay. The men that man these jack-up rigs, semi-submersible ships, cantilevered rigs and the tanker, named after the man who gave shape to scientific aspirations in India, Jawaharlal Nehru, act like denizens of a planetary world; ordinary men, who look like ordinary men, but live in extraordinary conditions, doing extraordinary things.

One felt, while alighting on the Bombay High North platform, in the Arabian sea, that one was in a ship in outer space. Perhaps there's not much difference between sky and sea when it is reality and earthy occupations which get left behind like a dream. The difference here was that the men — yes, all the men — were not clothed in space suits, nor were they floating in a gravity dance, as one has seen astronauts do. They were on a ship that did not look like a ship, but was anchored in the sea. Living facilities were small, neat, air conditioned, but super-luxurious, replete with video and cassettes of the latest films to keep the men amused fourteen days out of every month that they have to be engaged drilling the treasure that lies buried like an unawakened monster. For, once you find the oil, you have to keep it under control, draw it out with measured technique so that it doesn't break the shackles of centuries and explode in your face.

The Bombay High Field production area in this offshore search for oil has been divided into Bombay High North and the Bombay High South. The Bombay High North, now operating, is the main process platform. It receives oil and gas from 13 other platforms in the area, which have drilled a total of 56 wells. Out of these, 48 wells are actually flowing and produce 160 thousand barrels a day. BHN separates the oil from the gas and sends them in 204 kilometres of pipeline under the sea to onshore at the gas plant at Uran. Originally it was thought that Bombay High would not be able to produce more than 10 million tons a year. But with the production experience and knowledge that has been gained, it is anticipated that Bombay High alone will yield 17 million tons per annum by 1984-85.

The moot question is how long it will take India to become self-sufficient in oil. The recent decision by the OPEC countries to fix oil prices at 32 dollars a barrel will reduce India's import bill by Rs 1000 crores in the next year, with a saving even during the next two months of about 20 crores. But India still needs to meet its requirement of 34 million tons in 1981-82. Out of this ONGC, drilling in both offshore and onshore areas, would contribute 13.7 million tons which is 40.3 per cent of the total requirement. Taking into account that Oil India can contribute another 2.83 million tons this raises the capacity of indigenous production to 48.6 per cent. "In 1984-85," says Colonel S.P. Vahi. the new Chairman of the ONGC, "we expect the demand to go up to 45.5 million tons. Out of this ONGC could supply 24.9 million tons which is 54.3% of the total requirement. Again, adding the Oil India production to this, we would be meeting 61 per cent of the country's oil needs by then."



A DRILLING RIG IN BOMBAY HIGH.

According to Mr P.P. Khanna, Joint Secretary in-charge in the Ministry of Petroleum, this does not include the accelerated programme of production in the onshore areas which is expected to yield more than its normal due. "We are preparing plans for that both in the eastern and western regions, coupled with this is also the enhanced on-recovery techniques to be adopted. The Institute of Reservoir Studies at Ahmedabad carries out studies, prepares pilot project and tries them out. We implement them on the field. Whatever other inputs are required, government is arranging those. Nobody can say that by such and such a time you'll have so much oil," he adds.

Tough Business

Though the promise for the future is spelled out in low key, with each ONGC and Ministry official keeping his fingers crossed, there is an undercurrent of excitement that runs right through the organisation. The name of the late Mr K.D. Malaviya, former Minister of Petroleum, keeps recurring as the man who insisted that India's oil exploration must keep apace with its potential even at a time when the potential was waived away as inconsequential by foreign experts. There are difficulties no doubt. As Colonel Vahi says, "The oil business is a very difficult business and to achieve results tremendous efforts have to be put in by the organisation and the people. Working on oil rigs is no pleasure. Men have to work, particularly onshore in very hostile areas, the movement of rigs is over very difficult terrain and there are tremendous problems of logistics. Even in offshore, the work is pretty dangerous."

Dr A.K. Malhotra, member offshore of the ONGC, identifies the major constraints to our oil exploration as a paucity of trained men, even though from the time when they started in 1976 with a few people the task force has grown to almost 2400 persons. The tremendous spurt in oil exploration the world over has also led to scarcity of equipment. But what we need to tackle the nature of investments of such magnitude that the ONGC has to deal with is that "our internal systems and procedures will have to be streamlined, and this is something," points out Dr Malhotra, "which obviously occupies both the government's mind and the commission's mind."

Exploratory Wells

Till April 1, 1981, ONGC had drilled 1,823 exploratory wells on shore, as well as developing wells, involving a total metrage of 37 lakhs, 840,073 metres of drilling. The total production by ONGC has been 88.18 million tons of oil and 8,250 million cubic metres of gas. Offshore, they have drilled 52 structures with a total of 103 wells and propose to drill 107 wells in the offshore area alone. The total area of sedimentary basins in India is 1 million sq km on land and 800,000 sq km offshore up to a depth of 2000 metres. Capital (from scratch in 1956) was Rs 190 crores in 1972-73, became 521 crores in 1978-79 and has now gone up to Rs 8,081 crores. ONGC's plan expenditure was Rs 208 crores in 1975-76, 228 crores by 1978-79, 287 crores in 1978-80 but leaped to an approved plan expenditure of Rs 671 crores this year. The expenditure in 1984-85 is expected to be Rs 4,887 crores.

Where is the money to come from? Considering the amount that has to be spent on foreign exchange and the stake the country has in oil, money spent is money worth it. "We have used and have no objections in using funds that may flow from various sources like the World Bank," points out a Ministry official, "we have borrowed from the Euro-dollar market—200 million dollars—or from the OPEC countries, but that is only to supplement what we have." No programme it seems is going to be allowed to suffer for want of funds, "whether the World Bank is coming or OPEC or not." ■

IT COULD BE OUR TURN NEXT. **Residents of a building watch firemen rescuing the victims of a housecrash nearby.**

A Critique Of The Kerkar Report

Making Bombay Liveable

The Kerkar report on solving the housing problems of overcrowded Bombay has generated more controversy than any such effort so far. Mr J.B. D'Souza, who, as Managing Director of the City Industrial Development Corporation (CIDCO) for several years, manfully grappled with the task on the ground, took his time to study the Kerkar report in Hyderabad, where he is now the Principal of the Administrative Staff College. He has now come up with a devastating critique. For him the Kerkar plan is not like the proverbial curate's egg—thoroughly bad. Though he has found some reasons to applaud it, he is convinced that it will not work. But his own alternative suffers from evident infirmities. There is no warrant for his presumption, for instance, that millions of tenements for slum-dwellers in Bombay can be built simply by giving suitable tax concessions to private builders. Nor has he fully costed his plan to improve the conservancy and public transportation systems in Bombay. Even so, his views, detailed below, deserve serious attention equally of the powers-that-be and town-planners everywhere because he speaks with conviction and the authority of intimate knowledge.

by J. B. D'Souza

EARLY this year the Maharashtra Government came out with one more of its periodical stunts for the relief of its capital city. It set up a "High Power Steering Group". One need not, of course, quarrel with a name if the result were a sensible diagnosis and prescription for Bombay's ills. But is that so?

There are four reasons to applaud the Kerkar Group's work. The first is its readiness to tackle a complex problem with incredible speed. The second, its recognition of Bombay's economic role in national development and the need to foster that role. Third, it has swept away *some* of the quack remedies offered by similar bodies set up earlier. Lastly, it recognises the value of using private enterprise for solving Bombay's problems, though unfortunately it did not see as valuable the most visible manifestations of private enterprise in housing, viz the shanties which poor people first improvise and then improve into tolerable homes.

Truly impressive is the imaginative ease with which the Group has wished resources into its plans, with regard neither for realism in the light of experience in the matter of funds on that nor for the physical limits on the building materials available for conventional housing. The report visualises an ambitious Accelerated Housing Program (AHP), commencing in the current year.

Wild Assumptions

After some wild assumptions the Group assessed the money its AHP would draw from domestic sources at Rs 4400 crores over a period of 12 years. That left a vast gap of nearly Rs 2000 crores. So it simply assigned the deficit to the World Bank to meet! Did no one tell the Group that with all the Central Government's concern for Calcutta, it has been able to attract only about Rs 110 crores from the World Bank for that city? Indeed, the World Bank has given Rs 110 crores *in ten years* for Calcutta against the Group's target of Rs 180 crores *a year* for Bombay!

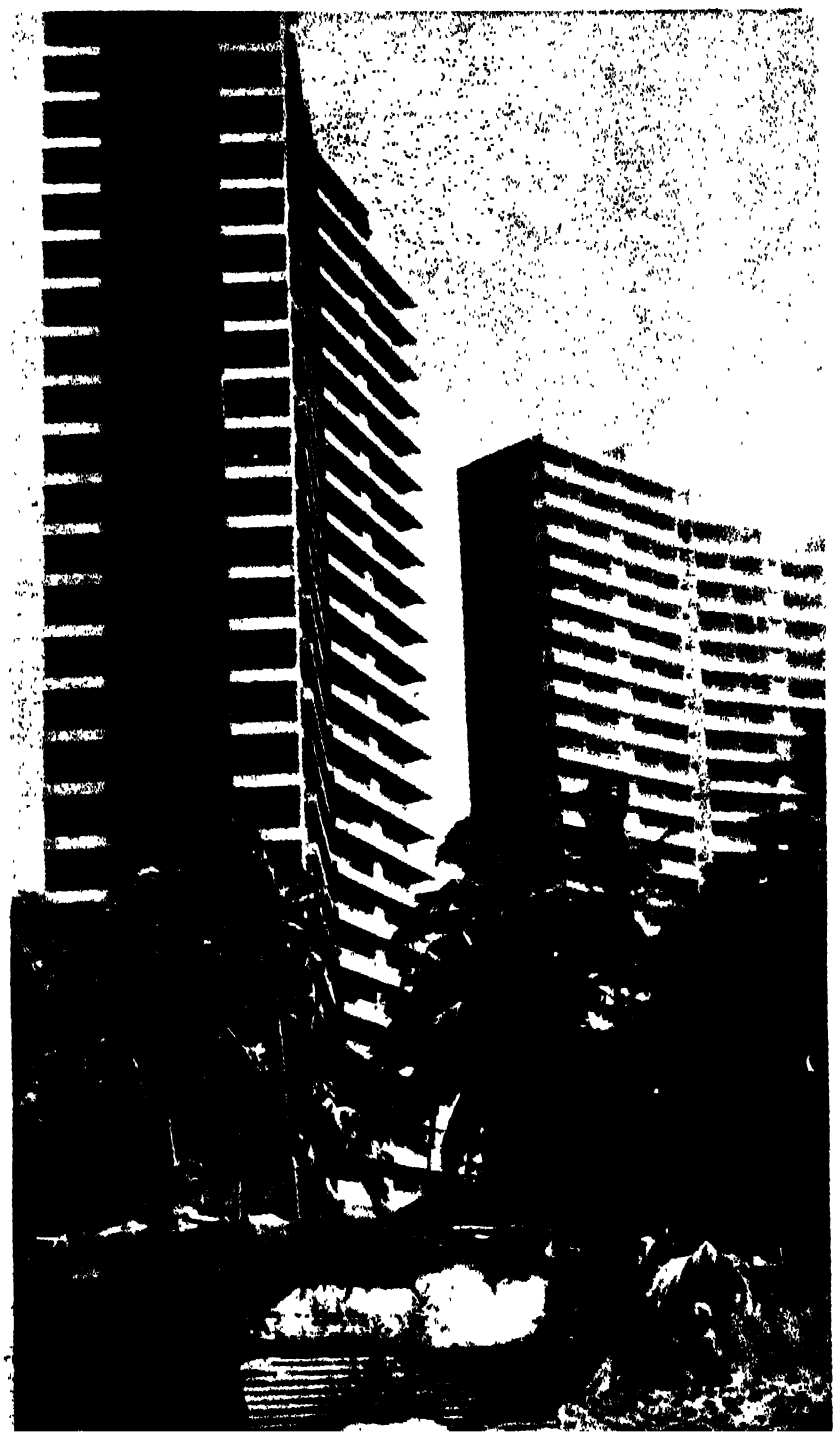
That is not all. The AHP will swallow some 500,000 tonnes of steel in its first five years or nearly a fifth of what one of the VI Plan Working Groups on Housing has assessed as the need *for the whole country* in five years! With slightly more than one per cent of India's population, can Bombay hope to consume so much steel only for its housing program? And what about all the bricks, sand and timber the AHP will need?

Let us now look at the principal ideas in this carelessly edited report. First, the Group regards the entire legally defined metropolitan region—a vast, largely rural area—as the city of Bombay. Lurking in this belief is an impression that you can uproot and re-settle Bombay's citizens—particularly poor citizens—anywhere in the metropolitan expense, even if their work places remain where they are—far away. True, there is perfunctory recognition of the need to move employment as well, but no estimation either of the costs of such moves (they are not only financial) or of the cost of expanding the transportation system to enable the enormous commuting that will become necessary if jobs don't move. These costs will only add to the housing costs, which are impossibly high anyway, of the AHP.

Second, the Group wants to "thin out" the squatter slums. Its prescriptions rely on assumptions

own statistics. For instance, it believes that large numbers of slum dwellers, whom it wants to move out of the slums, can afford conventional housing. (Nearly 65 per cent can afford "superior" forms of housing, it says). The Group's statistics show that between 60 per cent and 83 per cent of the population in two slums have savings "below Rs 3000", which could mean anything down to zero. And surely even the maximum, Rs 3000, cannot buy conventional housing anywhere in Bombay. The Group's income

BENEATH THE GLITTERING BUILDINGS on the Bombay skyline lies a "sea of shanties". This represents "the most visible manifestation of the private enterprise in housing".



COT ABOVE AND STEP BELOW. The author questions the Kerkar Report's basic assumption that Bombay is impossibly crowded. An urban survey a few years ago revealed large under-utilisation of land in five out of seven wards of the city.

statistics tell the same story. Nearly 80 per cent of the slum population have family income below Rs 600 a month and cannot, therefore, afford to rent or hire-purchase houses that cost more than Rs 5000 to Rs 8000. In this "superior" housing

Urban Renewal?

The decrepit built-up localities are to receive the benefits of Urban Renewal, which may need relocation of up to two-thirds of their population. The Group does not clearly say what it wants to do with the renewed land; little of it "is contemplated for reaccommodating the existing inhabitants" (Xerxes Desai, in the *Sunday Observer*). Desai's fears are borne out by experience in the renewal programmes that even affluent countries have launched, programmes that have turned urban renewal into dirty phrase and an unacceptable policy. After the ugly July riots in England, the *Economist* observed that many of them had exploded on the fringes of comprehensive re-development, as planners softened the areas up for development.

Although the report concedes that some buildings in the city could benefit from restoration, it tends to belittle the efforts of the Building Repair and Reconstruction Board to rehabilitate old houses or rebuild those it cannot save by repair. But the grounds on which it does so slip away quickly on scrutiny. The repairs, it suggests, are unreliable because out of 19 houses that collapsed in 1980, eight had been repaired earlier. "This shows that 42 per cent of collapses occurred where the buildings had been repaired, and ... that repairs to buildings can only be a stop-gap arrangement, prolonging their lives for at best a few more years". Eight houses may have collapsed, but how did the remaining 5869 of the 5877 repaired buildings behave? The Group perhaps forgot that houses are repaired only to add some years to their lives, not to prepare them for eternity.

The Group has discovered that in many cases the quality of the work done by the Repair Board is poor but surely this goes for a whole lot of new construction, too, and regularly brings down quite a few flyovers, houses and even dams in our country. Not so long ago a flyover in Bombay crashed and, as I write, a brand new 7-storey building in Hyderabad town has crumbled. Will the Steering Group's AHP be entirely immune from the wiles of deceitful contractors?

Regrettably, the Group has failed to look at the comparative economics of repair operations. One study, which might have been available to the group if it were not in such a hurry, showed that Rs one lakh spent on repairs →

can buy significantly more household-years of shelter than the same sum spent on building new houses. The Group's own figures indicate that in eleven years 5877 buildings have been repaired at a cost of about Rs 54.15 crores. This works out at Rs 6000 per tenement if (as the Group assumes, incorrectly I believe), each building contains 15 tenements. On an average you have added about 15 years to the life of these tenements for just Rs 6000.

Non-Numerate

Were I as statistically reckless as the Group has been, I would reject the 15-tenements-per-building figure, and estimate the average number of tenements in each repaired building from the six cases in the report: they contained 383 tenements, an average of 64 per building. With an average of even 50 tenements in each building that you repair, the average repair cost comes to Rs 1850 for a tenement that you can reasonably expect to last for 15 years. Even if one were to suggest, as the Group fallaciously does, that 42 per cent of the repaired buildings would crumble prematurely, the community would still gain enormously; the effective average cost of a tenement that stood for 15 years would then be about Rs 3000.

Let us now turn away from such arithmetic to another criticism voiced by the Group on the Repair Board's operations. Some of the buildings reconstructed "as recently as 3 or 4 years ago are already in a poor condition. Maintenance, garbage clearance, sewerage remain problematic and the narrow open spaces between buildings are filthy", it says. But will the AHP escape similar decay? The problem really arises from the municipality's ineffectiveness in these decrepit areas, as in the squatter slums of Bombay. Irrationally, the Municipality lavishes its attention and expenditure in proportion not to the population in each locality but to less relevant features like road length. But it is people, not roads, that produce garbage and sewage. I remember trying, without success, to persuade the Commissioner some years ago to give the hutment colonies as much conservancy attention *per capita* as he did to Cumballa Hill. It is expedient to neglect the poor.

The AHP will be designed to build 3.2 million Standard Housing Units (SHU) in twelve years. An SHU, which will cost Rs 20,000 without reckoning the cost of land, has a floor area of 180 sq ft and includes a WC *mori*. Different classes of households will get one, one and a half, or two SHU's each, but some will get only a serviced site, equated in cost with half a unit. The programme requires an average annual creation of 266,000 SHU's their equivalent, to cater for slum replacement, urban renewal, present shortage, and future requirements, including migration.

The Group wants to use the Urban Ceiling law to raise about Rs 780 crores for this programme, by a series of seemingly ingenious devices. Owners of large areas in excess of the ceiling will give up upwards of a fourth of the excess, retaining the rest on payment of Rs 50 per sq m, but they will have either to give the government 15 per cent of the tenements they build on the land they retain or pay it the price of those flats. The government can also acquire another lot of 15 per cent of the flats at the same price. Other exemptions will cost landowners Rs 200 per sq m of land exempted.

Gimmicks Galore

The report relies on these gimmicks, *plus* dispersal "into the mainland", and negotiation with the Central Government for a take-over of the vast salt pan lands bordering the Thana Creek to meet the AHP's land requirements. Was the Group aware that negotiations with the Central Government for the salt pan lands have been going on for almost 20 years?

The Steering Group relies on an approach to the Central Government for cement and steel allotments too. (Happily, it doesn't place its trust in Trusts!) It also hopes to save cement by trying out a new material called Gralibeton in Germany, which is 96 per cent sand of a kind said to be "abundantly available in India". Its use will enormously speed up building and lower overall costs to less than Rs 30 per sq ft, the Steering Group is led to believe. One is, of course, sceptical about these claims. Our own Central Building Research Institute at Roorkee has been researching cheap building materials for decades; assuming that Gralibeton has escaped its attention, one must still ask: Sand of the requisite quality may be abundant in India; is it abundant enough for Bombay to make a Gralibeton AHP feasible?

BEFORE AND AFTER. The building collapsed despite repairs. According to the author, when it upbraids the Repairs Board, the Kerkar Report probably forgets "that houses are repaired only to add some years to their lives, not to prepare them for eternity".

Malthusian Myth?

The philosophy of the Report as a whole rests on an impression that Bombay is impossibly overcrowded. The Group evidently swallows the myth that densities are already intolerable and that diseconomics or inefficiencies have set in. The densities that worry the Group—the highest is about 1500 per acre (in Bhuleshwar)—are probably lower than the density in several parts of Manhattan in New York City. Just ten years ago Hong Kong *planned* a new town at a gross density of 2000 per acre, and this was *not* due to a shortage of land in Hong Kong's New Territories; it was a deliberate choice of high density urbanisation for reasons of efficiency and of convenience to the residents—and also to improve the quality of life!

If 35 per cent of the land area of Greater Bombay is assumed to be residential, the density of this zone would be only about 215 per acre. Even the old city (Bombay island) will have an average residential density of less than 600 per acre. Nither of these figures would be alarming if the population were fairly evenly spread; indeed, there is scope for *far higher densities* if land is to be efficiently used in Bombay.

The fact remains that while certain localities are overcrowded, vast areas even in the island city remain unused or underused. A distinguished urban economist, Nigel Harris, discovered after a survey a few years ago a heavy

underutilisation of land in five out of seven wards in the island city. "If the Defence Department holding in Colaba—which has no economic nor security rationale—were settled at the average density for Bombay Island, it would take over 100,000 inhabitants; at the average density of D Ward, 400,000 (and at the remarkable density of Bhuleshwar district, nearly 830,000)".

Of the Group's several recommendations, I can see the Maharashtra Government pouncing with alacrity on those who seek to "thin out" the city's poor. The chances are that it will pick on these parts of the report and repeat the horrors of the 23rd July, leaving the Group's constructive suggestions to the musty files in its Mantralaya.

Administrative Monster

The only other idea it will accept eagerly is the proposal for yet another administrative monster, an "apex body" which the Group sees as doing all the things that other agencies in the city have not done. This conformity to Parkinson's doctrine will no doubt appeal to the Government not for any reason of public policy, but because of the opportunity it offers for patronage.

New agencies nowadays get created in the public sector for precisely this reason; they offer comfortable berths to the Minister's brother-in-law and to the ruffians who bring him all those votes. The BMRDA was set up for precisely the kinds of purposes that the Steering Group has in mind for the Apex Body. A second authority will simply serve to delay even longer the clearances needed for the positive steps for Bombay's relief that might otherwise be feasible.

We ought now to leave the Steering Group's "unhappy aberration", in Xerxes Desai's words, and explore some saner prescriptions for Bombay's ills. The search for sanity will, of course, take account of the city's role in the economic life of the country, and seek to promote that role. It will also recognise:

One, that Bombay never has really been an island, entire unto itself in any but the purely literal sense. So you cannot isolate it and deter migrants from coming in; you cannot make it an oasis of affluence in impoverished surroundings. *The effort to slow down migration must begin with rural uplift*

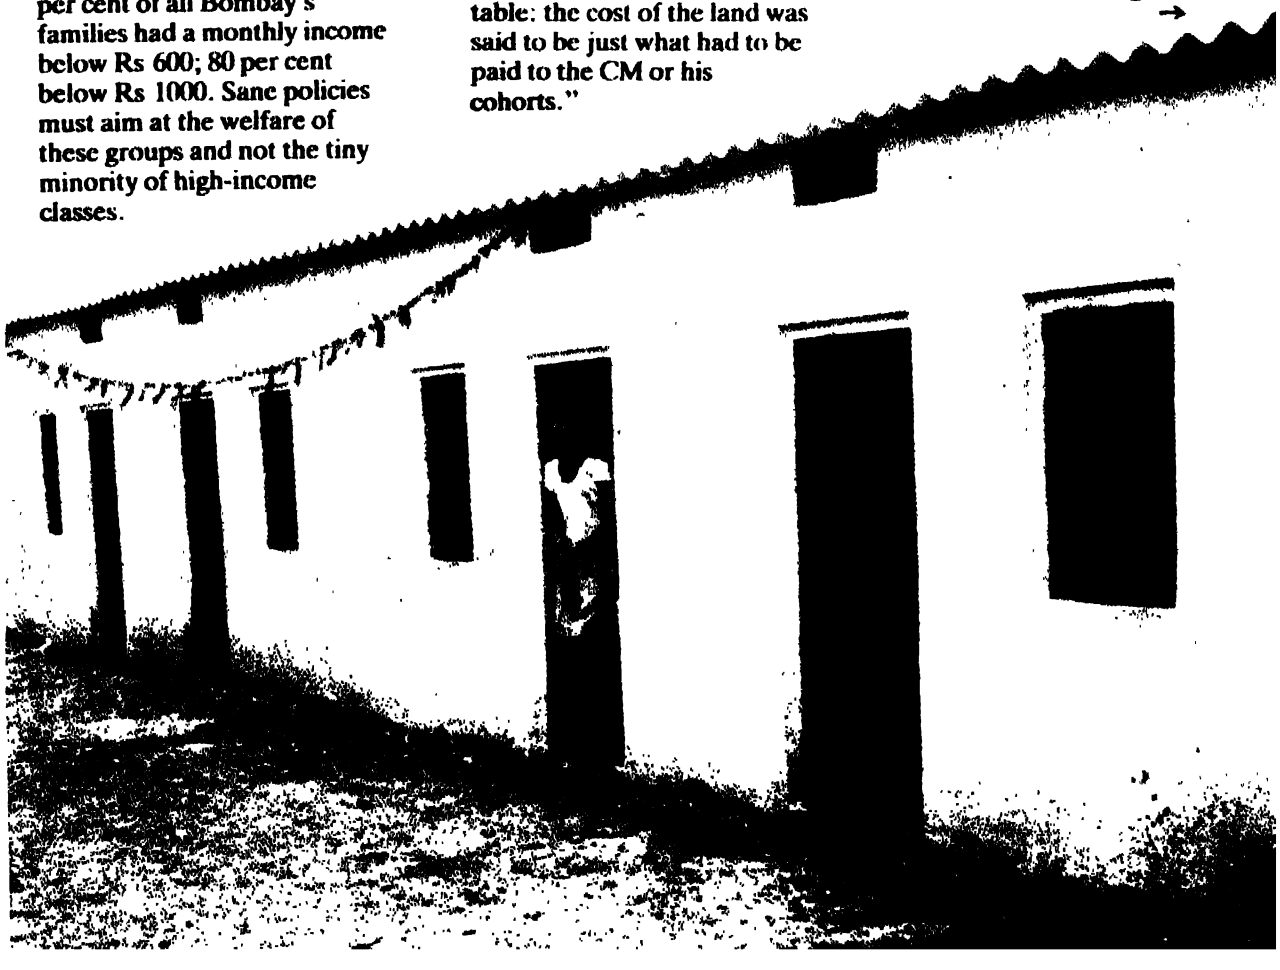
Two, that Bombay's population is preponderantly poor, and will remain so for many years. The Steering Group's figures show that 54 per cent of all Bombay's families had a monthly income below Rs 600; 80 per cent below Rs 1000. Sane policies must aim at the welfare of these groups and not the tiny minority of high-income classes.

Three, that successive State Governments have never really wanted to solve the city's problems; their interest has centred on Bombay as an opportunity for plunder. Their thirst has always been strong enough to make them generate serious problems for the city to fill their coffers. "During Mr V.P. Naik's days," Olga Tellis wrote recently in *Sunday*, "a minimum of Rs 10 crores ... was made by the political authorities on the sale of plots ... in the Backbay... In fact, the only substantial amount that the builder spent was the money paid under the table: the cost of the land was said to be just what had to be paid to the CM or his cohorts."

I myself remember V.P. Naik referring to the disastrous development at Backbay as a gold mine, as indeed it was, and continues to be. The tradition began in the 1920's when K.F. Nariman fought corruption among British officials in the Backbay project. Backbay became Nariman Point, but remained a Scandal Centre.

Four, the fact that the housing problem is closely related to the land use pattern. It is this that has swollen land prices in certain parts of Bombay, and added to the miseries of the poor by forcing on them excessive commuting costs. →

IN THEIR BIGGEST DEMOLITION ACTION in recent years, the employees of the Bombay Municipal Corporation give a heave-ho to a "brand new chawl" in Jogeshwari.



Low cost tenements to rehouse evicted slum-dwellers.

Visions of happier tomorrows

Children are tender, defenceless, innocent..... They need love, care and security.

That is not all. Their needs will grow. Good education. First class students. Good health. Sports stars. A flying start in life. Their tomorrows should be happier, sunny days.

To make these dreams come true, you have to plan well in advance. Plan with Corporation Bank.

At Corporation Bank we have several savings schemes. Our Cumulative Deposit scheme is meant for people like you. Set aside Rs. 50 per month in Corporation Bank. We make your money work to enable you to get sizeable amounts.

Period	Deposit of Rs. 50 per month	Amount payable at maturity
12 months	Rs. 600	Rs. 625.00
24 months	Rs. 1200	Rs. 1311.50
36 months	Rs. 1800	Rs. 2104.00
48 months	Rs. 2400	Rs. 2955.50
60 months	Rs. 3000	Rs. 3895.50
84 months	Rs. 4200	Rs. 6078.50
120 months	Rs. 6000	Rs. 10278.50

Deposits accepted in monthly instalments of Rs. 5 and multiples thereof.

It is a better deal than spending everything now.

THE VICIOUS SEESAW. You cannot solve the problems of Bombay till you have tackled the problem of poverty.

Five, as the VI Plan admits, the hutment colonies that most of us so piously deplore form an appreciable part of the existing housing capital, however sub-standard it may be. Sensibly, the VI Plan abandons the traditional reliance on slum clearance; the endeavour will be to upgrade the squatter slums by supplying them with water and providing sanitation.

Is there then an alternative to the Kerkar Plan? One can at least put down some basic propositions as groundwork for a plan. A good deal of the vacant land is in private hands, appreciating annually in value without effort by its owners. The Urban Ceiling law has not helped to bring it into use; indeed, the clearance delays that the Government has found it convenient and profitable to impose have heavily *decreased* the pool of land dizzy heights. It would be far more sensible to impose on all land a property tax assessed as if the land were fully built (as permitted by the City Plan). This would soon bring much of the vacant area into the land market and therefore *reduce land prices*. It would also raise resources for the municipal body, which has to lay its services to vacant lands well before they are built upon.

Besides, a sensible land use pattern must ensure that employment centres are spread out much more evenly over Greater Bombay than they now are. At the same time, let us seriously try to conserve the existing housing stock. We are too ready to discard our decaying houses, seeing merit only in replacement. But repair can be far more cost-effective, as we have seen.

Galloping Decay

It is sad that the survival of rent control is accelerating the decay of our houses. Rent control without indexing for inflation leaves landlords with scarcely any margin to permit repairs; it gives them a strong interest in premature obsolescence and collapse, which hold out prospects of re-building, and unaccounted profit. Rent control also subsidises one group of citizens, *ie* tenants in rent controlled houses, at the expense of the rest. Thus municipal services are financed disproportionately by taxes on citizens who do not live in controlled houses. Kerkar's Group has wisely asked for an end to rent control by transfer of ownership to the occupants of controlled premises, against payment to the landlords of a capital sum equal to 100 times the monthly rent. Investment of this sum would give a landlord a trouble-free income equal to or larger than his present net income from his tenants.

Finally, private enterprise needs to be drawn much more effectively into the task of housing the poor. Today builders cater only to the upper classes, on whom they make enormous profits. We ought to induce them, by suitable tax incentives, to build and sell houses for much less than Rs 15,000 or Rs 20,000, the tax rate on their profits *falling* as the sale prices fall. Indeed, we must also use the private sector's really conspicuous skill: the ability of poor people to improvise shelter with scarcely any help from an unhelpful government. Government need provide only well laid-out sites and services in localities all over the city—not on the fringes—where poor people will build with minimum attention from the Government but with security of tenure. I have seen such experiments flower into excellent housing in some of the Latin American countries. It never happens here because we deny poor people ownership of their plots and impose on them impossibly high building standards. Sites and services on a really large scale, in all the wards of a city, *provided ahead of need* so that new migrants have somewhere to settle, are all that a poor country can afford. Yet they hold promise of wholesome development, given adequate conservancy attention. They also help promote the economic needs of the city by shortening the links between employment and workers' homes, thereby conserving energy as well.

In any case, the public transportation system needs support and vast expansion; simultaneously, private transport should be discouraged in the central business areas, as in Singapore. Similarly, the existing hutment colonies deserve much better conservancy attention, as well as maintenance of the sanitary improvements made in recent years but quickly left to decay.

You simply cannot solve the problems of Bombay (or any other Indian city) till you have tackled the problem of poverty, in both rural and urban areas. You need a really vigorous drive to lift the poor out of their misery—stimulating employment, both in the villages through land reforms and other measures, and in the towns. It is not just cosmetics, but a serious assault on poverty that can save a city like Bombay. No city is an island... ■

Year Of The Disabled

MAKE HIM FEEL A MAN!

Self-esteem is the most valuable possession any man can have.

by Firdaus Kanga

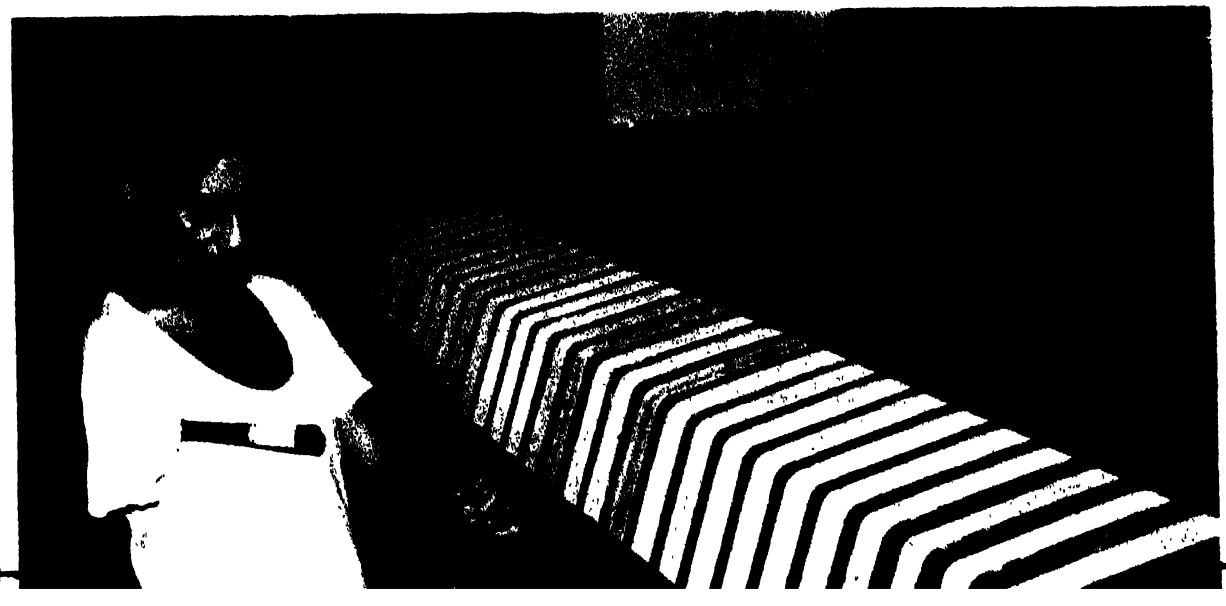
AS someone who has been disabled all his life, I have strong views on the International Year of Disabled Persons (IYDP). I know these views will strike many people as disagreeable and even inhuman! To them I want to say that all my beliefs are based on reason and have been reached after careful thought.

First of all I should like to define my concept of our rights to freedom and equality.

What Is Freedom?

Freedom is the right to life, liberty and the pursuit of happiness (not *merely happiness*). Freedom does not mean freedom from the various facts of reality. Our right to equality is based on the fact that all human beings belong to the same species and, therefore, must have equal treatment before the law.

—Hitesh Doshi



—Hitesh Doshi

This concept cannot be widened to mean equality between rich and poor, talented and mediocre, beautiful and ugly, healthy and sick. Any attempt to widen the concept of equality to include these categories would one day lead to the morally disgusting but logically irrefutable demand that those who have two eyes must compulsorily donate one to those who need cornea transplants, and those who have two kidneys give up one to the victims of kidney failure. I am not being fatuous when I say this. Certain Communist countries have come very close to this state of affairs.

→

Everyone is asked to sacrifice everything for the good of the collective.

State-Run Charity

Charity and the IYDP are closely inter-related. Charity is meaningful only if it is privately administered and voluntary. State-run charity (miscalled *fair* redistribution of wealth) is in the first place immoral because it is based on compulsion (in the form of higher taxes). No one stops those who are moved by the plight of the disabled from giving away all their wealth for the latter's benefit. But no one has the right to force those who have earned their wealth to part with it in favour of those who have not. Besides, such state-collected funds usually find their way into the bottomless pit of corruption. And what charity is done is rarely effective because it is not administered by dedicated individuals but by disinterested bureaucrats.

Another vociferous demand being made by a large section of the handicapped is for reservation of jobs in the private and public sectors. No one has the right to tell an individual who he should hire in his firm. It has been proved that the handicapped are, by and large, very efficient. Private firms can take advantage of this pool of talent. If they do not, for reasons of prejudice, they are as much losers as the workers they reject. The private sector cannot and must not be made to adopt a policy of job reservations.

As for the public sector, we have seen the havoc that the displacement of merit has already caused. (I am, of course, referring to the various categories of job reservation in effect today). Job reservations invariably lower the degree of efficiency (this is but natural if the criterion for employment is to be what a person lacks rather than what he has in the way of qualifications). Besides, a reservation policy in favour of the disabled will give rise to widespread resentment amongst the able-bodied who will feel deprived of jobs as a result of it.

Perhaps the issue that is nearest to every disabled person's heart is that of *success*. I, myself, would be overjoyed if every theatre, library, museum and office sprouted a ramp tomorrow. But the needs and desires of any section of society cannot possibly be decisive in all situations. It is certainly fair to ask the government to provide access to all public buildings, utilities and transport. After all, the handicapped are tax-paying citizens of this country and they have the right of access to everything that is maintained out of public funds.

It would not, however, be proper to commemorate the IYDP by forcing private owners of theatres, restaurants, etc, to build and maintain ramps and other forms of access out of their own money. If patronage from the handicapped were sufficient to give the extra profits, they would have done so on their own. To ask them to do so when it is not in their self-interest is irrational and, therefore, unjust.

Change Attitudes

The best thing that those who have compassion for the disabled could do to make this year a success would be to change their attitudes. The handicapped do not have a claim to your time or money because they are disadvantaged. Do not sympathise with a man just because he has no legs or cannot see or hear. Instead, admire and encourage every success he wins. Help him when you see him involved in an honest struggle to make a living. His virtue is your reward.

Perhaps the saddest thing that a handicapped person has to live with is a sense of inadequacy which is carried over from his physical disability. This ugly impotence cannot be cured by government intervention, charity or undeserved compassion. It is only removed when a disabled person makes a success of his life in the open, competitive world, whether it is as the prospering owner of a roadside stall or as the President of the USA. Such a success proves his worth to himself and to the world. And, at last, he is fulfilled for he has the most valuable possession any man can have: Self-esteem. ■

A journalist by profession, he has won the Times of India Silver Medal for the best student in journalism, the U.G. Rao Memorial Silver Medal for the best student in editing and the Nagpur Times Gold Medal for scoring the highest marks in the Diploma examination in journalism. At present he edits manuscripts for a publishing house and contributes articles to periodicals as a free-lance writer.

What Needs To Be Done

by H.J.M. Desai

The unique opportunity provided by the International Year of Disabled Persons, 1981, has been largely missed. We have yet to formulate realistic policies, plans, programmes and projects aimed at the prevention of disability and the welfare of the disabled.

ACCORDING to best available estimates, the number of blind people in the country total nearly nine million, the orthopaedically handicapped five million, the deaf and dumb two million, leprosy patients three to four million and the mentally retarded about two million.

Miserable Life

The pain and distress caused by physical and mental disabilities are better imagined than described. In advanced countries, early medical and surgical intervention and scientific medical rehabilitation very substantially reduce the adverse effects of functional disabilities. Indeed, as many as half of the disabled are thus restored to normalcy. In India, preventive medicine is not available to even two per cent of the patients.

But, at least in one sphere, the situation is not all that bleak. We have an excellent national plan for the prevention and control of blindness. This plan is being emulated by several developing countries. What is essential now is to formulate a comprehensive national policy and plan for the rehabilitation of all categories of the disabled with the approval of Parliament. It should be designed to ensure early medical and surgical intervention, medical and psychological, rehabilitation, vocational training, education, employment and economic resettlement, sports and recreation, integration, social development and general welfare of all categories of the disabled. →

What is more, radical changes in our organisational set-up at the national and State levels are necessary to implement a new policy so as to

build up expertise at the highest level of policy formulation, planning, programming, budgeting and for evaluating the progress of different schemes for the disabled.

If we have effectively to help the disabled in the rural areas, where nearly 80 per cent of them live, the district authorities, zilla parishads and village panchayats should be actively involved in the task.

Right To Assistance

Finally, it is time that Parliament enacted comprehensive legislation covering all aspects of the problem of the disabled. Such legislation should provide that no disabled person be discriminated against or refused admission or equal treatment in any educational, training or similar institution, in social or cultural organisations, bodies or clubs, or in opportunities for employment, promotion and advancement.

If millions of disabled persons in the country continue to remain idle and unproductive, the loss to the economy will be colossal.

India, along with other developing countries, should accept the simple principle that the greater the disability, the greater the right of the disabled person to receive all assistance not only from the state and the voluntary agencies but also from the community as a whole.

Mother Teresa recently said that the greatest disease was not cancer or leprosy but the feeling of being unwanted and uncared for. She emphasised that many people "need that little love, that little care".

Let us all give to the disabled "that little love, that little care".

IN every country, one person in ten has a physical, mental or sensory impairment. Their bodies have missing or defective parts. They are paralysed, have limited hearing, sight or mental capacity. These people may become disabled, that is, they may experience difficulties in moving, eating, seeing, speaking, hearing or learning. These, then, are the handicapped.

The main causes of impairments and disabilities are inadequate nutrition, difficulties at birth, preventable diseases, infections and accidents

No Accurate Estimate

Of the 140 million disabled children in the world, 80 per cent live in developing countries. Most of them cannot hope to receive even the basic help they require to give meaning to their lives.

In India there is no accurate estimate of the number of disabled persons. This itself is a reflection on the scant attention and recognition that the handicapped receive in our country. If one person in ten is assumed to be disabled, then our country has 68 million of them, including 25 million children.

Existing services offer facilities to only four per cent of the physically handicapped, two per cent of the blind, two per cent of the deaf and barely 0.2 per cent of the mentally retarded. The 800 voluntary agencies and State institutions offer education and training to only 30,000 disabled children.

Rehabilitation A Luxury

The care of the disabled falls under the Ministry of Social Welfare. Out of its total budgetary allocation of Rs 48 crores, only Rs one crore is earmarked for providing services to the disabled. Because most of the work is left to voluntary agencies, rehabilitation, according to a UNICEF manual is generally viewed as a luxury. Since the majority of the disabled in India live in the villages and in urban slums, it is obvious that the emphasis should be on simple, inexpensive methods of rehabilitation which could be linked to community-based services such as primary health care, education, nutrition, sanitation, etc.

India, with its rapidly growing population, will be faced with an increasing disability burden. Poverty and ignorance go hand in hand in perpetuating the problem. The worst hit are the children. And it is no consolation to know that most impairments that occur during childhood can be prevented.

What have we actually accomplished during the Year? A cartoon was circulated during one of the numerous conferences and seminars held in 1981. The first panel under the heading "1980" showed a person in a wheelchair all alone at the back of a large room. The second panel, labelled "1981", depicted the person in the wheelchair completely surrounded by a crowd of people waving banners and slogans of the IYDP. In the third panel, labelled "1982", the person in the wheelchair was again at the back of the room, all alone!

Is this what the International Year of Disabled Persons meant to us?

The author is the Honorary Secretary General, National Association for the Blind, and Chairman, Rehabilitation, Training and Employment Committee, World Council, for the Welfare of the Blind.

I live in a body labelled:
'Handicapped'
Stunted legs and arms askew
I live in a body I wouldn't have
chosen
But then few of us do.

People say I'm brave
As though bravery were a
choice
I learned early not to scream
For mine is an unheard voice.

The world is competitive
And I'm ill-equipped to
compete
But I'm no less of a person
Because I'm not complete.

I live in a body labelled:
'Second rate'
Though I feel second to none
When society knows the
difference
Then my battle is won.

Concrete Help For The Handicapped

Today banking institutions have stepped out of their traditional roles to assume a new social responsibility towards the disabled and the neglected.

by Preeti Chaturvedi

RAGHUVIR Verma, 14, had a fall while playing football. His parents were not unduly worried about the minor injury in his right hand. About a fortnight later they realised that his hand was no better, in spite of all the home medications. By the time they took him to hospital it was too late. The hand would have to be cut off to avoid further degeneration of the arm.

Due to financial problems he was unable to continue in school. But on his own, he started studying and reading about Ayurvedic medicine. He even managed to complete the course. But what could he do next?

A bank employee who knew about Raghuvir's plight recommended him to his officer for financial assistance. Today Raghuvir has his own dispensary and his practice is flourishing.

Tariq Zaman was polio-stricken since childhood. Being the eldest, his three younger brothers and one sister were dependent on him. Through strong will and determination he managed to learn welding and could take up small jobs. The State Bank of Patna, came to his help and advanced him a sum of Rs 1,000. Today he is manufacturing grill doors. Apart from feeding and clothing his brothers and sister, he is also able to send them to school.

Sunil Chumble lost both his legs in an accident at the age of five. He struggled through school and successfully completed a diploma course at the J.J. School of Arts, Bombay. In 1973 he started a small advertising agency. Appreciating his desire to stand on his own feet, the State Bank assisted him financially. Today he undertakes newspaper advertising as well as interior decoration and sells designs for trade-marks, monograms, letter-heads, and visiting cards. He is so buoyed by his success that he is planning to make short advertising films.

"Innovative Banking"

In a world of growing economic disparities, banking institutions are now stepping out of their traditional roles and assuming a new social responsibility towards the underprivileged sections of society, especially the handicapped.

Under the new concept of "innovative banking", the State Bank has played a pioneering role in selecting programmes which may not be considered banking propositions in the strictest terms but are essential for the welfare and progress of the community. They have accepted, as their corporate philosophy, that the human and financial resources at their command should be mobilised towards lending support to solving problems connected with the removal of poverty, improving the quality of life and lending a new dignity and a new meaning to life.

To aid them in discharging this newly-acquired role a special Rs 5-crore Research and Development Fund was created in 1977. This fund enables the bank to take up several projects to assist handicapped persons as well as support projects for agricultural and rural development.

Besides subsidising the cost of artificial limbs through grants, the R & D Fund provides capital for ventures that could be taken up by handicapped persons to achieve economic independence. It also provides for vocational training to selected handicapped persons and assistance to educational institutions which have training programmes to look after the physically handicapped.

"Personal" Touch

In this International Year of the Disabled it is fitting to highlight some of the concrete work that the State Bank group has done in this sphere. I was taken on a tour to some of their centres in Delhi, Meerut, Lucknow, Kanpur, Patna and Nasik. Their efforts are laudatory. What impressed me most was the "personal" touch that marked most of the projects undertaken by each local office.

Officers assigned to the task personally identify institutions or handicapped persons in need of financial assistance, establish a person-to-person rapport with the people concerned and closely follow their progress.

Among the physically handicapped, the loss of a limb is the most common disablement. The main objective of the Centre for Bio-Medical Engineering (established in 1971 at the IIT in Delhi in collaboration with the All-India Institute of Medical Sciences) has been to carry out technological research concerning the disabled.

It has now developed an above-knee artificial leg which permits the amputee to sit cross-legged and squat almost in a natural fashion. This new leg has been found very suitable, especially for Indian conditions of work, where almost every type of job is done in these two positions.

In order to open up the employment market for the blind (most blind are either jobless or confined to tasks like caning chairs and packaging) the Centre for Bio-Medical Engineering has evolved new and easy means for the blind to operate the centre lathe (an machine for shaping wood, metal, etc). Simple attachments and small changes in the operation schedule now allow a blind person to operate the lathe at 75 per cent the speed of a person with normal sight.

The Centre has been assisted in endeavours of this kind by a grant of Rs 8.5 lakhs to perfect advanced but lowpriced technology to help handicapped persons, more so in villages in their original vocations like farming, animal husbandry, pottery-making etc.

Help For The Deaf

The Connaught Circus Branch of the State Bank of India has rendered financial assistance to the tune of Rs one lakh to the All-India Institute of the Deaf, (affiliated to the World Federation of the Deaf, Rome,) for the purchase of a very sophisticated printing machine, costing Rs 1.70 lakhs for their Press Institute.

Nearly 40 persons are earning their livelihood at the Institute. Further, a number of handicapped persons are also getting training there in various aspects of printing so that eventually they can work independently.

Mentally Retarded

The Delhi Society for the Welfare of the Mentally Retarded Children has three operational wings: (i) a diagnostic and guidance clinic to trace various forms of mental retardation and to offer counselling to their parents;(ii) a special school for the mentally retarded;and (iii) a vocational training centre to work for the integration of the mentally handicapped in the society

Out of its Research & Development Fund,the State Bank of India has given a grant of Rs 37,000 to the Society for non-recurring expenditure and also created an endowment fund of Rs 2.5 lakhs, earning an annual interest of Rs 25,000 to look after its recurring expenses.

At Kanpur is situated ALIMCO,

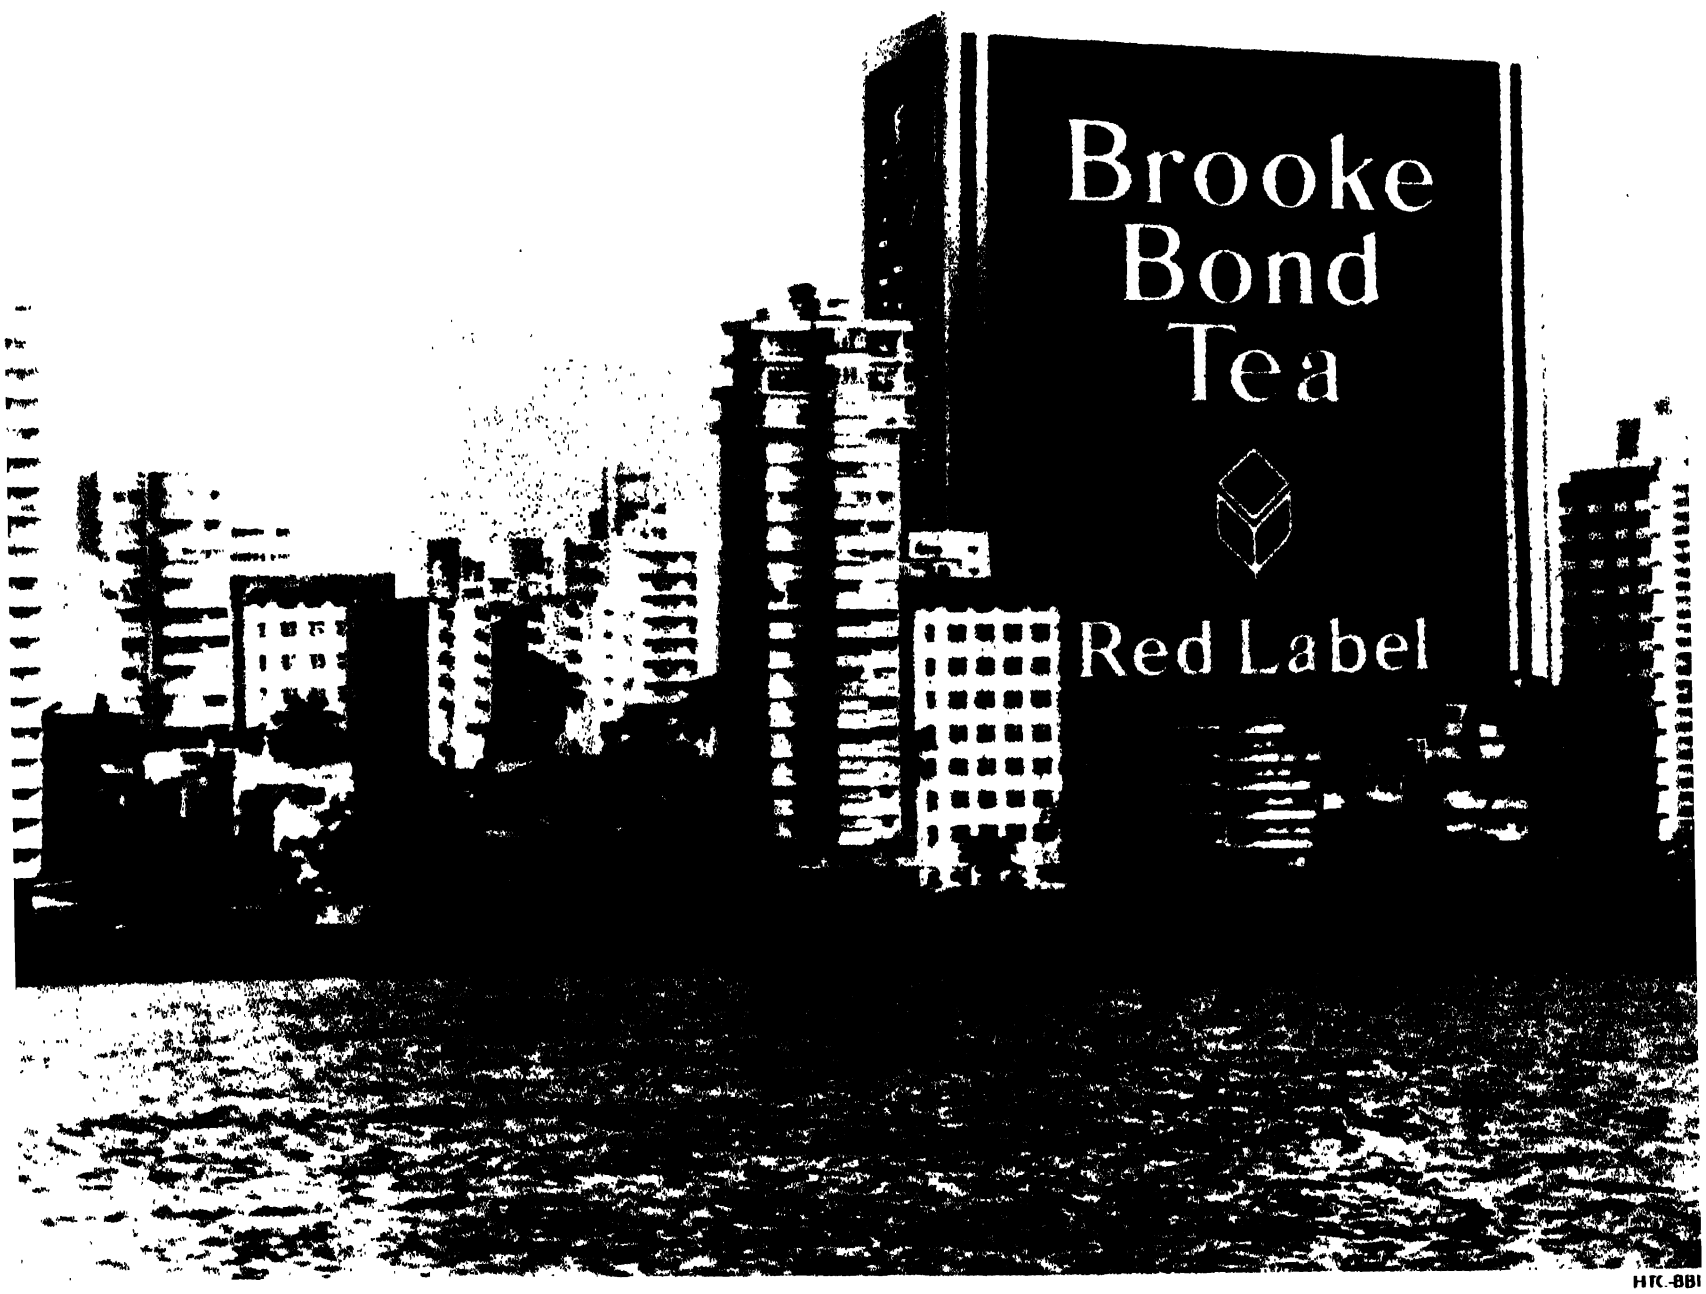
MORE THAN 8,400 handicapped persons have been given loan assistance by the State Bank to start individual endeavours.

In millions of homes, good mornings begin like this.

With rich, strong Brooke Bond Red Label tea. Red Label means total satisfaction and great value for the price you pay. That's why more tea drinkers trust Red Label than any other packet tea. Morning after morning, year after year.

Good tea. Good value. Good morning.

Brooke Bond Red Label
India's largest selling packet tea



HTC-8BI

one of the premier artificial limbs manufacturing concern in the country. With a grant of Rs 8 lakhs given by the State Bank, the "Kanpur Prosthethics Centre" (limb fitting centre set up by ALIMCO) is now able to give a 20 per cent discount to disabled persons who come for limb fittings. Being a highly industrialised city (where accident rates are very high) handicapped persons have been greatly benefited by the scheme. Branches of the Kanpur centre have so far helped 400 handicapped persons to the tune of Rs 4.5 lakhs.

Lead A Normal Life

Alauddin is an educated but blind man living in Patna. His neighbour told him that the State Bank was helping handicapped persons in a big way. He could not believe it, but he went to the branch nearest to his home to find out for himself. He came back with a loan of Rs. 3,000! With it he started a small business of selling toys and locks. When I visited him at his modest home, his mother, with tears in her eyes, introduced me to her *bahu* and grandchild. This normal life for her son, she said, was possible only because of the help rendered by the State Bank.

TEACHING THEM TO SPEAK. The Deaf and Dumb School at Nasik is the first of its kind in the city. The State Bank has given grants worth Rs 1.33 lakhs to more than 29 institutions all over the country.

The branches of the State Bank in Bihar have taken up the cause of the handicapped in a big way. Besides financing them, the Patna office has been holding regular seminars to help the handicapped persons to help themselves. Eminent eye and orthopaedic surgeons, members of handicapped associations, are invited to participate. It would be worth mentioning that during the Handicapped Week (October 8-15, 1978) and World Day of the Disabled (March 18, 1979) the various branches in Patna identified about 600 handicapped persons for assistance.

The Bokharo industrial belt is particularly prone to leprosy. Most of the lepers live by begging. The extent of participation of the Bank employees can be seen from the fact that they go to the homes of these lepers. Already, after selecting 22 of them, the bankers have promoted a "Rehabilitation Society". These 22 persons now do independent jobs like carpentary and tailoring. Encouraged by the results, other lepers have approached the Bank for help.

Hundreds of miles away in Maharashtra, an association of otolaryngologists headed by Dr D.N. Lele conducted a survey in Nasik district in 1975 and organised as many as 14 camps to examine all those suffering from deafness and other eye diseases. About 6,000 persons in all were examined. From the survey, it was found that there were about 200 deaf and dumb children of school-going age in Nasik district alone.

It was, therefore, decided to start an institution for them in Nasik. Since no trained teacher was available, Dr Lele's wife undertook special training in Bombay to teach the deaf. She, in turn, trained another teacher.

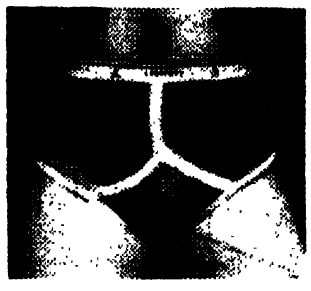
Both of them now teach about 40 children at the school. The State Bank has donated hearing aids and other audio equipment for the children. It is also extending help in constructing a new building and hostel for the school.

A Beginning

In comparison with the magnitude of what needs to be done, the experiments and efforts by the State Bank group undoubtedly pale into insignificance. But it is a beginning. What is important is that all individuals associated with the bank's schemes believe in their cause and are sincerely pursuing it. ■

WHY do *Liberty*® make the widest range of BRIEFS and VESTS...

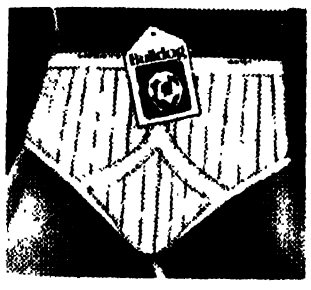
Because they are made for Every Masculine Physique, Fashion and Taste.



REGULAR for traditional body lines. Available in white and six colours.

LO-RISE a pleasant change for the slim body. In white and pastel shades.

HIPSTER a fitting compliment for the athletic body. Available in white and six colours.



BULLDOG a tough new breed of briefs. In Exclusive registered striped design.

MIDWAY for fuller leg coverage.

RACER the only poplin underwear to relax in. Available in white and pastel shades.

BELAIRE designed to keep you cool. • Briefs in Regular and Hipster • Vests with and without sleeves.

SUPREMA Snug and Soft VESTS that stay in shape With and without sleeves. In white and colours.

Pick your choice, One has got to be right for you.

Must We Welcome All Foreigners?

"We are subservient to the *safed-chamdi* foreigner—we take in strangers, many of whom do not respect us and recognise our laws only in the breach. When we cast a blind eye on their misdemeanours, we are not being hospitable but only foolish."

by Patanjali Sethi

CENTURIES ago, distant islands gave shelter to pirates and brigands, political renegades and refugees. Thieves, murderers and adventurers could always find safety there. Today, India has become the haven for troublesome foreign students, dubious religious groups, dope-peddlers, "neo-hippies", hordes of refugees and Arabs who come only for fun.

As a regional leader, India must contribute its share in educating students from developing countries. The influx of refugees has also to be dealt with in a humanitarian manner. Hinduism has always assimilated outsiders and other "beliefs", provided they are genuine

THE IMPORTED HARE KRISHNA MOVEMENT. What goes on behind the closed doors of their tightly guarded residential colonies is unknown. Above: No end to the influx of refugees. Since Independence, more than 8 million displaced persons have settled in different parts of the country.

However, beset as we are with numerous problems of our own, there is need for rethinking whether our country can afford to continue with this "open-door" policy. The financial and social costs must be weighed. The foreign exchange earnings from the visitors are offset by the expense of dealing with the difficult ones among them—in maintaining law and order. This expense has not been computed.

Foolish Hospitality

In the midst of imported superficial values, the gossamer frailty of our own beliefs and the value system stand exposed. We are subservient to the *safed-chamdi* foreigner. Our hospitality seems to have the proverbial Biblical flavour. We take in strangers, many of whom do not respect us, and recognise our laws only in the breach. When we cast a blind eye on their misdemeanours, we are not being hospitable but only foolish.

Thousands of foreign students, mostly from Iran, clash violently among themselves and with the police They use sticks, knives and stones, ransack libraries, attack consulates and destroy newspaper offices.

Toleration of such insidious lawlessness is officially justified "because of our friendly relations" with the countries of their origin. India has large-heartedly maintained good ties with Afro-Arab nations. However, that should be no reason to permit hordes of Iranian students to create trouble on the campuses, fight their pro- or anti-Khomeini battles in our cities and generally endanger peace. They are a nuisance even as tenants.

Though an exact count is not available, there are estimated to be at least 15,000 Iranian students, largely in Pune, Bangalore, Chandigarh, Aligarh, Hyderabad, Ludhiana and Bombay. In Bangalore alone, there are over 3,000. The arrogant, rude and uncouth among them "outshine" the unidentified well-behaved ones. They participate in political activity, circulate underground literature and take out *morchas*. In view of the changed circumstances in their country, there can be sympathy for them, since many of them do not know where to go. But that is no reason why they should abuse our hospitality or take undue advantage of it.

The arrest of some of them can be no lasting solution. They come as students to India. If they cannot confine themselves to studies but would rather create chaos and disrupt the peace, there is no reason why the trouble-makers should not be deported.

There are students here from West Asian, African and neighbouring countries. Most of the 40,000 Nepalis studying outside the land-locked kingdom are in India. These and those from Egypt, Palestine, Iraq, Yemen and Tanzania generally maintain a low profile. They refuse to be affected by the "Iranian infection". It is doubtful whether this immunity will last long.

"Children Of God"

India's "spirituality" has served the purpose of numerous imported religious groups.

The Children of God sect is not permitted anywhere in the West. Indulging in drugs, free sex and crime, the "Children" were expelled from the US and not allowed to settle down in Britain, West Germany and other countries. So India has become their home. They have group gatherings in Bombay and were headquartered in a commune near Kalyan. Their crudely written literature pretends to have religious exhortation, but suggests female sexual subservience to one man.

I was once taken to a "secret" gathering of theirs at "grave risk" by a friend. I used a fanciful name and pretended to be a "troubled soul". An attractive girl in a dress that left little room for imagination sat with me. Barely 18, she had left her home in the South and lived and moved with the group. She hoped to marry one of the guitar-strumming foreigners.

Such a group was once charged with kidnapping a Bangalore teenager, whose father secured her custody after a court wrangle.

The imported Hare Krishna movement has gained some following in our country and people visit the impressive "Krishnaland" temple at Juhu (Bombay). The residential colony has a strict security and intelligence system. Few, if any, know what happens there. Foreigners, their heads shaven clean, wield a powerful control on the tiny commune.

They Laughed At Her Death

They are the same type of people whose behaviour caused consternation in London recently. A female follower in a Hare Krishna *rath yatra* was crushed under the giant wheels of the chariot and, while she lay dying in a mess of blood and bones, they laughed: "How lucky to die like this!"

Closer at home, many strange doings, violence and deals said to be shady, were tolerated in Pune when hordes of the *bhagwa*-cloth-clad used to congregate here.

Welcome genuine seekers, certainly, but why the dregs of society? Many individuals who seek "an inner peace" or "beauty of the soul" are only drug-imbibing drifters and dropouts.

Tourism is welcome, but not at the cost of our self-respect and dignity. Many who come as tourists treat our laws with contempt and denigrate our beliefs. More than the foreign exchange they can bring in—which is not always enough even to sniff at—there is the need to promote understanding and goodwill, which do not always result.

Warped Thinking

Our fondness for foreigners sometimes gets translated into ridiculous rites. Warmth, hospitality and informality are replaced by ceremonies where there are garlands for every visitor given by VIPs, presentation of gifts and lengthy speeches.

This indicates a warped way of thinking. It can be traced to the status symbol gained when one can be seen with a foreigner in tow, paraded almost as an authentic rarity, as if he were an antique. That explains why all those Yul Bryner-type "Children of God have been so easily accepted. So much so that even the so-called religious leaders take pride in displaying foreign disciples. As if god is closer that way!

International gangs find this attitude convenient. This is clear from a few stray arrests. A Frenchman with many aliases was recently nabbed in a Bombay suburb. He was using a stolen Italian passport and was said to be a member of an international gang dealing in forged passports and travellers' cheques.

Two alleged members of a terrorist group, Werner Voigt, and a woman, Anna Weise, were nabbed in Bombay early this year. Both were West German nationals. Voigt had no passport and had entered India illegally. Interpol had launched a worldwide search for him.

CREATING TROUBLE. Some 15,000 Iranian students are living in India. There is no reason to permit them to fight their pro or anti-Khomeini battles in our cities and endanger peace.

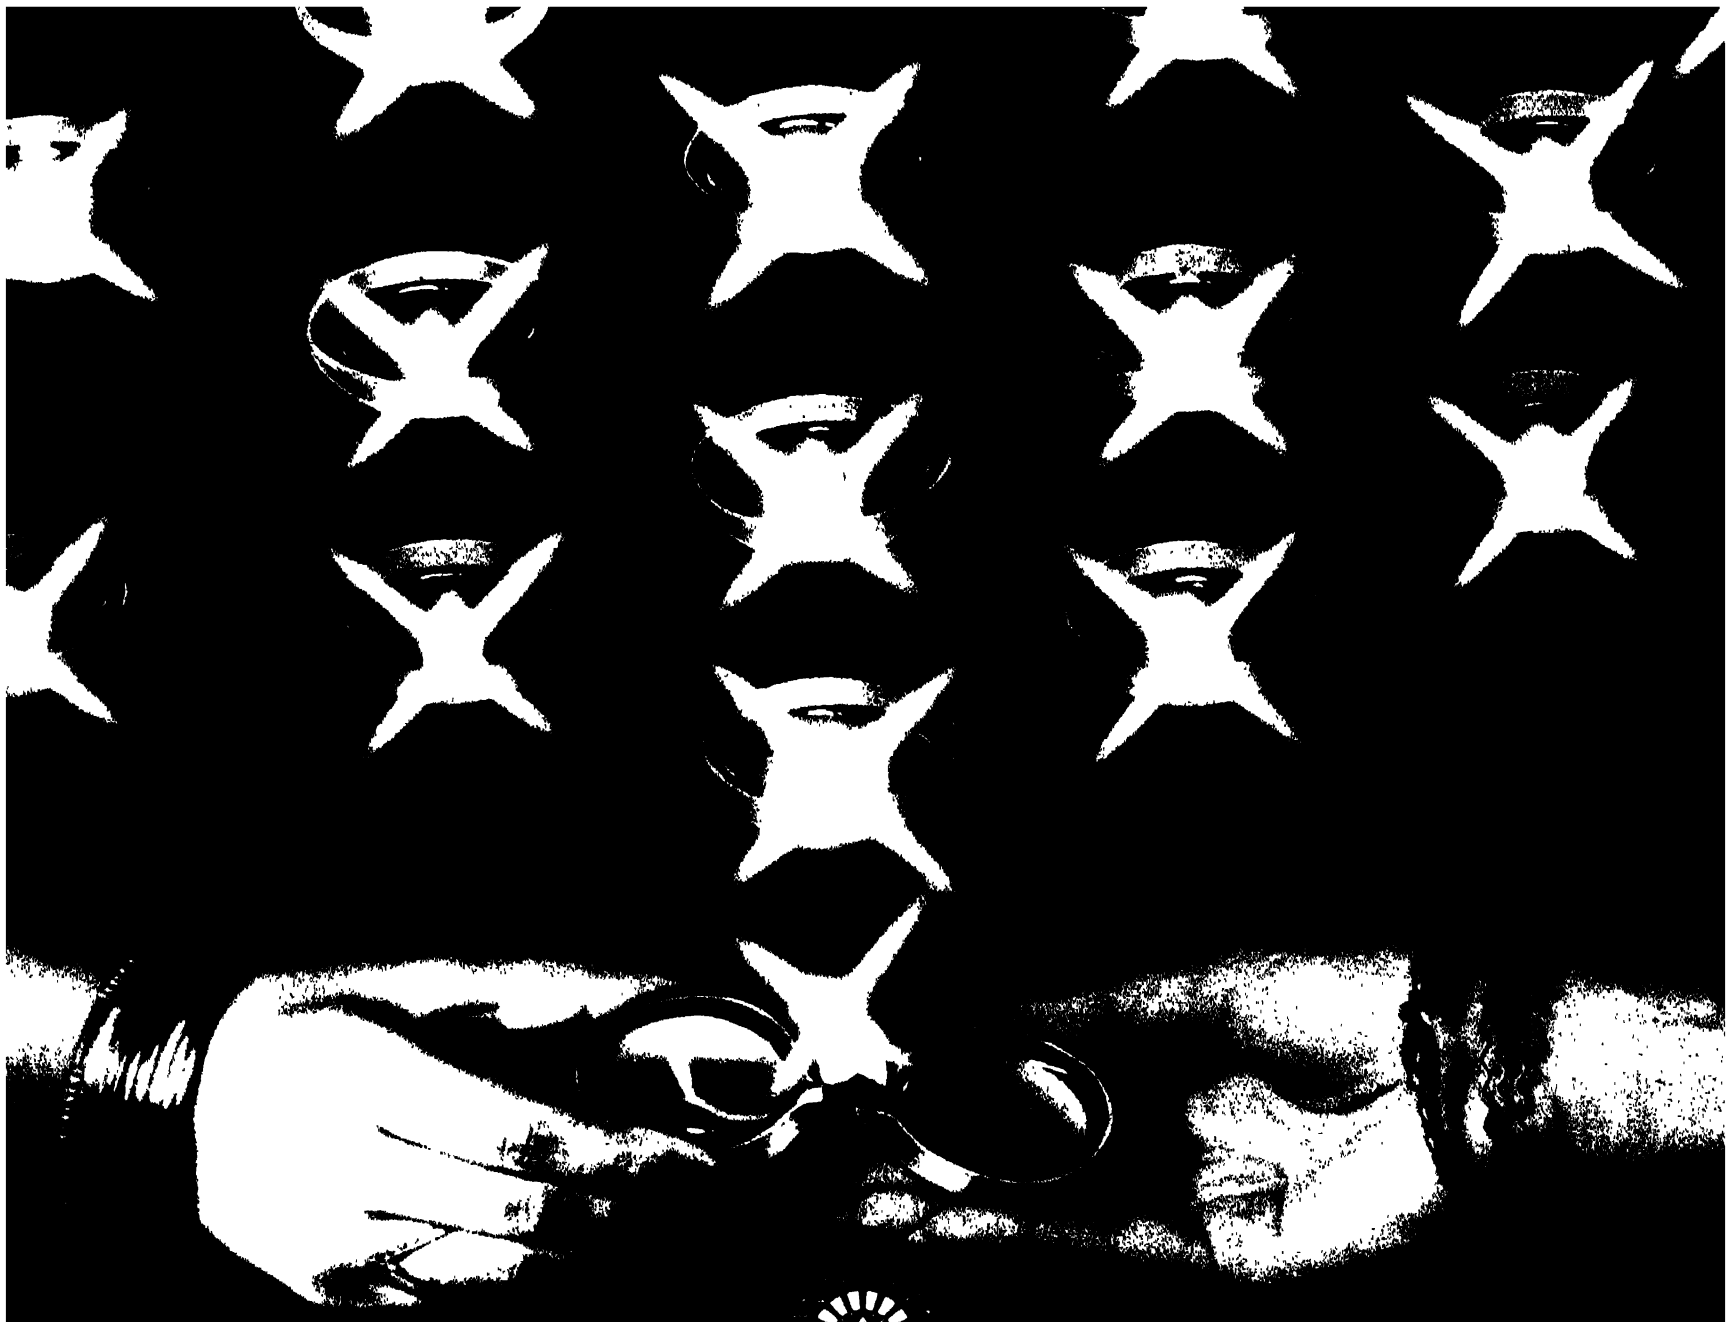
Foreigners have also been involved in violent activities. Naxalites held in a jungle on the West Bengal-Bihar-Orissa border had hand grenades, arms and ammunition. Among them was Mary Tyler, claiming to be a British schoolteacher.

It is a known fact that agents of some countries inimical to India visited the north-eastern region. This was easy for them as many foreigners live there. The agents went there to further their destabilisation game.

Goa: Favourite Haunt

Goa is a favourite place for gangs to lie low, plan moves, regroup themselves and to take rest. Charles Sobhraj and others have used the place. So have members of Baader Meinhoff, the Red Star and the PLO.

LAVISH SPENDERS. Some Arab tourists cause problems when they "overstay" and create inflation with their "free-spending" ways. Some "marry" young girls, only to use them later as maid servants.



Social action is a beginning without an end.

Canara Bank's founder Shri A. Subba Rao Pai believed that a good bank should be both the financial heart of the community and a catalyst to improve the common man's lot. Along side this philosophy was his love for education, also a social cause. Through 75 years **Canara Bank** has sought to fulfil its founder's vision.

Realising that welfare needs are too enormous to be surmounted at once, **Canara Bank** planned and reviewed its involvement in social action – step by step.

- The Golden Jubilee Education Fund established in 1956 to help students on means-cum-merit basis.
- Summer placement and Earn While You Learn schemes benefiting thousands of students every year all over.
- **Canara Bank** Relief and Welfare Society set up in 1962, to serve the needy and the handicapped.
- A Foundling Home 'Mathru Chaya' to bring up orphans and abandoned children.
- Community Service Complex 'Seva Kshetra' and the Elders Home for the aged.
- And now to mark the Platinum Jubilee, a Rural Development Trust to carry the philosophy of the founder, by dedicating it to the rural masses.

To co-ordinate all these pioneering welfare activities the Bank has a full-fledged Social Action Department.

For Canara Bank, indeed, Social Action is a beginning without an end.

CANARA BANK
1906–1981

Beyond interests, a concern.

Following a number of cold-blooded murders in Bombay over a few months during 1980-81, it was suggested that Mafia gangsters had come into the city, perhaps as foreign visitors. Joseph Fouad, an alleged Mafia killer, had a four-month asylum in Delhi before he was asked to leave. He stayed at the posh Vasant Vihar colony and was possibly planted in India. The purpose was not made clear. Union Minister Yogendra Makwana said that a constant watch had been kept on his activities and that his stay was terminated "at an appropirate time".

In this case, officials obviously knew about the Mafia killer. Yet he was allowed to stay for long.

Foreigners are known to have trespassed into the protected area of the Vikram Sarabhai Space Centre, were found skin-diving in the prohibited area of Bombay harbour, were involved in a prostitution racket at Visakhapatnam and in a number of other shady doings. They smuggle drugs, using India as a base.

Not all who come as tourists are that. In fact, genuine tourists *are* needed. It is the overstaying sort, the visaless types, who are not. Many of them come as supposed tourists, stay with impunity beyond the expiry of their visas and go about only to demonstrate their criminal bent of mind, a contempt for the country and its people.

All This And Hippies Too

Then there are the hippies. I have seen them from Manali to Madras. They are free-loving, free-living. The so-called spiritual freedom they seek is just drug addiction.

It is from among these that the notorious Charles Sobhraj recruited his first accomplices. Because India is a haven for such rejects from society, he made this country some sort of a headquarters for his nefarious activities.

Many hippies are drug smugglers. I have seen that, at some police stations in big cities, officers have to waste much of their time on such groups. When they are without visas, they go to remote places which have "true vibrations", like Goa. When their visas expire, they seek an Indian scapegoat to marry just to regularise their stay—like the German girl who married a Jaipur rickshaw-puller.

The Interpol notices are being looked into with care in Goa. (Till now, not much attention was paid to them.) During recent months, there have been numerous deaths of the so-called hippies on Goan beaches. In actual practice, they were said to be drug-pushers or otherwise connected with international crime. Their "death" could be an execution. The beaches were their hideouts and they had been traced. That Goa continues to be the centre, possibly temporary, of drug-runners is an accepted fact. The CID chief there has admitted that the deaths during the hippie season (October to March) are mostly of Western youths. A number of these deaths go unreported. There have been stories of executions and liquidation. After all, what is termed as drowning under the influence of drugs could easily be drowning of a victim after being drugged!

Better Prospects Indeed!

There is another aspect. Millions of refugees have lived on us for years. According to available information, less than a year ago, over 8 million displaced people and 140,000 families had settled in different parts of India since Independence. They come from the Chhamb area (near Jammu), Pakistan, Bangladesh, Sri Lanka, Uganda, Zaire and Vietnam. There are Indians who abandoned their own country for what euphemistically are termed as "better prospects". When there was trouble in their adopted country, they returned, perhaps like bad coins. For years, it has been "free food and lodging" for many of them. Except for a few, they have refused to be rehabilitated, expecting the Government to do everything for them, feeling sore if their lot does not improve (owing to their own lethargy).

The other refugees are from Burma, Sri Lanka, East Pakistan and Uganda. Over 200,000 had come from Burma by the end of 1974. Thousands pour in annually from the other places. State Governments have various resettlement programmes. The Dandakaranya project was the earliest. There have been camps in the South, Punjab, Orissa and Madhya Pradesh. These are not enough for the tide of people who continue to come into India. Many more are necessary.

Besides these, infiltrating hordes in the north-east have upset the local population ratios,

THESE INFLILTRATING HORDES of people have upset local population ratios and created a problem for the local authorities.

destroying peace and creating chaos.

Over the years, an unregulated flow of East Bengalis and Nepalis into Assam and other north-eastern States has led to considerable violence. The irony is that a number of them have been included in the electoral list. Objections have been filed against this. The Assam Government did set up tribunals to issue deportation orders after summary trials.

Decision Brooks No Delay

Actually, many of those who are shouting themselves hoarse against them did not hesitate to seek their support during the elections. We ourselves allowed them into the country and gave them voting rights. Whatever the political considerations, a decision about lakhs of them who infiltrated into our country has to be prevented. The difficult terrain notwithstanding, the borders should be sealed.

Assam is not alone in bearing the burden of migrants from neighbouring countries. West Bengal, Punjab, Haryana and Rajasthan have also faced the onslaught.

The Arab tourists have been welcome both because of our declared political sympathy for the Arabs as also because they are lavish spenders. The problem arises when some of them remain here for long periods, create inflation, marry young girls (only to take them on as maid servants). Numerous cases have been reported of old Arabs arranging marriages with Hyderabadi girls who are young enough to be their granddaughters.

These tourists also have a reputation for being oversexed. A few have what is called "every-night-a-woman" attitude. Prostitution has received an impetus. Nurses hired by some during "illness" are targets of their lechery.

The top hospitals are used by them quite often "only to relax," thereby blocking much-needed bed space. Here, too, preferential treatment is given to them at the cost of an Indian.

Thanks largely to the "dollar-flashing" Arabs, the Indian becomes a second-class citizen in his own country. Flat prices in Bombay shot up some time ago largely because Arabs readily invested at inflated prices in them. Despite getting the best from here, some of them tend to think of Indians as inferior beings. And we tolerate all this without protest!

It would be unjust and dishonest to say that all Arabs do not know how to behave. There are decent, well-behaved ones, but the bad nuts cause plenty of trouble.

Paradise For Rejects

India places no bar on tourists. However, there is need to ensure that our hospitality is not abused. We must retain our self-respect, our national dignity. If other countries can have regulations and people cannot legally remain tourists there for as long as they desire, there is no reason why that cannot be done here.

We have also failed to set up a worthwhile intelligence machinery to keep unwelcome foreigners out. We can no longer allow our country to be converted into a paradise for rejects from other parts of the world. ■

Black Man's Search For A Face

If we misunderstand the Black Consciousness Movement because of some differing angles of vision, we will miss the cries of the Black Man against colonial exploitation and his search for a face.

PROPOUNDING A NEW THEORY? According to Enoch Powell, African culture is radically different from that of the industrialised West. Africans can contribute very little to Western civilisation; it would be better to preserve the beautiful unspoilt African culture as it is.

by Debabrata Ghosh

WE use palliatives like "Afro-Asian unity" when the Blacks and the Browns are all discriminated, even oppressed, in South Africa or Britain. We also use such expressions as "the Third-World people" (including those in Africa) when we are somewhat unhappy with the "over-developed" countries or the transnational companies. Of course, that does not deter us from rubbing shoulders with those countries for aid or new enterprises.

In diplomatic get-togethers, we may also call the Africans our brothers (and sisters). Unfortunately, there is very often an overtone of paternalism and pity. The educated Africans surely hate this attitude.

It is high time we looked at the Black Consciousness Movement in Sub-Saharan Africa. Just to understand Africans. Their aspirations and all that. Beyond the diplomatic palliatives, of course.

The Black Consciousness Movement is not spearheaded by organisations like the Skinheads or the Ku-Klux-Klan. The movement is rather a negative reaction to "pure-white supremacy". In that sense, it is "Black Racialism", but it is claimed to be non-racial, a positive bid to the discovery of black identity and African nationalism.

Baas Kap , or "pure-white-supremacy", is typical of the Boer perception of *swart gevaar* or Black Danger, although many Americans, Europeans or Australians, even some Indians, share their attitude.

"Settler Ideology"

Obviously, for their well-being, the Europeans—who are at the top of the civilised world—should patiently play the role of their guardian. This should not be taken as the "white man's burden", but as part of their noble duty to humanity. This attitude towards the Blacks is rather akin to what Duncan Clarke calls "Settler Ideology".

This ideology also finds support in the Bible. Africans (the Homitics including the Bantu) are the offspring of Ham—cursed by God, they are destined to be "slaves of the Slave". They are, like Biblical Ham, materialistic, sensuous, Godless, impulsive, crafty and irresponsible: condemned by God, they have crinky hair and dark skin. To all intents and purposes, they are not fit to be considered equals to the highly civilised white people.

Of late, this crude prejudice has given way to a subtler ideology. Its main propounder is Enoch Powell. If the "Settler Ideology" can be classified as Biological Theory, Powellism can be termed as "Cultural Theory". (Incidentally, Powellism is very much evident in our attitude to the "tribal and scheduled castes in India.")

Powellism

What does Powellism say? African culture is radically different from that of the industrialised West. Africans are tribal, agrarian and/or pastoral. Their thoughts, their value system, their behaviour pattern or motivation are all different from those in the West. Africans can contribute very little to this industrial civilisation. Industrialisation in Africa can only be effected through the leadership of the Europeans. In actual fact, there is no need for industrialisation in Africa beyond the marginal one. Even Western knowhow and sciences are irrelevant in Africa. Science tends to degenerate into science fiction or pseudo-science there. The more we preserve the beautiful unspoilt African culture, the better. The African elites are, however, fighting out this biological or cultural theory consistenly.

That the European civilisation is indebted to all civilisations and cultures in the world, that the British Industrial Revolution was possible primarily because of the capital formation through the use of the African slaves and the booties from the plunder of the Indian subcontinent may be conveniently forgotten by the Euro-American racists, but *not* by the African elite. They also appreciate the fact that the pigment of the skin had nothing to do with the commencement of the Industrial Revolution. The recent industrial and technological revolution in Japan testifies to this.

Tribal Character

The Black Consciousness people in Africa even dispute the "tribal character" of the Africans. To them, human beings everywhere are diverse and unique. It is true even in the same family, not to speak of any tribe. "Tribal character" can just be a phase in the ongoing process of development—the so-called character can never be final. If tribalism means "narrow-mindedness" or parochialism, it is there in every society, including the developed one.

Africa is going through the trauma common to all Third World nations. The ties of extended family and filial bond are very much strong. In that background, nepotism too. Then there are regional loyalities. In the context of the partition of Africa with no reference to linguistic divisions, loyalty to the state is rather weak.

Other typical Third (and African) World problems are: constraints in industrialisation and agricultural revolution; Big Power rivalry for the spheres of influence; providing market for old-model arms from the arsenal of the big nations; foreign aid and exchange; the rural-urban confrontation and migration, population, education and what-have-you.

In that sense, African problems are human or at most the Third World ones—and not of Black men alone. Black Consciousness is needed only to identify the African Personality.

Even Christ Is Black

Even Jesus Christ is blackened. The Black Christ Movement is part of the new colour consciousness. The song, "What colour is God's skin?" is quite popular.

These people ask: *God created man in his own image. Is that image only the white man's? Why should Jesus look like a white man? Let Him be seen as an Asian in Asia, an African in Africa. Just as He was depicted like a native Ethiopian in the ancient Ge'ez Bible. People in every continent will be able to accept God as Divine Father only if Jesus is depicted as their kind.*

When Idi Amin forced four Englishmen to carry his litter, symbolically to demonstrate the White Man's Burden, all Black Africa was electrified with joy and inspiration. The joy was almost physical—much more intense than when one smoulders and burns the effigy of an otherwise uncatchable, but diehard enemy. Whatever the aftermath of the violent uprooting of the clinging Asian traders from Uganda, the action was acclaimed all over Africa. Steve Biko, the youth leader of the Black Consciousness Movement, who was beaten to death in South African police custody, drew genuine support from many White people, like Donald Wood, apart from fellow Black men. ■

Mrs Gandhi At Nandurbar

Following the victory of the Congress-I in the prestigious Nandurbar constituency in the recent by-elections in the country, Prime Minister Indira Gandhi's visit to this township in Maharashtra was an unqualified success. Addressing a mammoth public meeting (organised by the local Congress-I unit on December 5), Mrs Gandhi gave a call for the implementation of tribal welfare programmes with renewed vigour.

CFK CAS 1 81

I STARTED photography in a most unexpected manner. Following my graduation in 1971, I was convalescing after a minor operation when my father gave me his twin-lens Rollei Flex camera (which remains, to this day, my favourite camera and the one I used to take the photographs published here) and encouraged me to click anything I found interesting. In the very first roll I exposed, there was a picture which, to my delight, not only appeared in print in this magazine but also fetched me the second prize of Rs 50. Thereafter, it was an instinctive and abiding plunge into the world of photography.

I was fortunate in having good instructors at the outset—my father, T. Kasinath, Raghu Rai, T.S. Satyan and Jagananth Sharma at the Max Mueller Bhavan six-month course. For a while I joined the band of struggling freelance photographers until I landed an exciting contract with the Armed Forces Film and Photo Division, Ministry of Defence, as Photographic Officer for some post-war emergency work. But it was, essentially, my stint with *Dateline Delhi* which proved most beneficial in terms of experience, growth and opportunities.

I had an urge to do something different and useful. In 1976, an offer came my way and I found myself teaching photography to secondary school students at the Andhra School, New Delhi, for a year-and-a-half and at Modern School for another year. I also conducted a six-month evening course at the YWCA at this time. Discouraged by the general state of affairs and my vain efforts to make my work meaningful, I began to freelance again. Then in February 1980, I opted for a full-time job with the National School of Drama where I continue to be in charge of their photography department which I set up.

I do not consider myself to be an authority on the subject of photography. However, I do feel that good photographers are endowed with a third eye which helps them to see something more than the layman's eye can discern. It also gives him extraordinary reflexes so that he can freeze and capture a moment of beauty and truth for others to share. Materials, knowledge and technique are aids that help channelise this gift to greater effectiveness. Every artist thus differs only in his sensitivity to his surroundings.

As for my pictures, I would rather they spoke for themselves. ■

Dear Shutterbugs...

This photo-feature is the first of a new series we are starting. We invite photographers to send us outstanding pictures for our consideration. —EDITOR

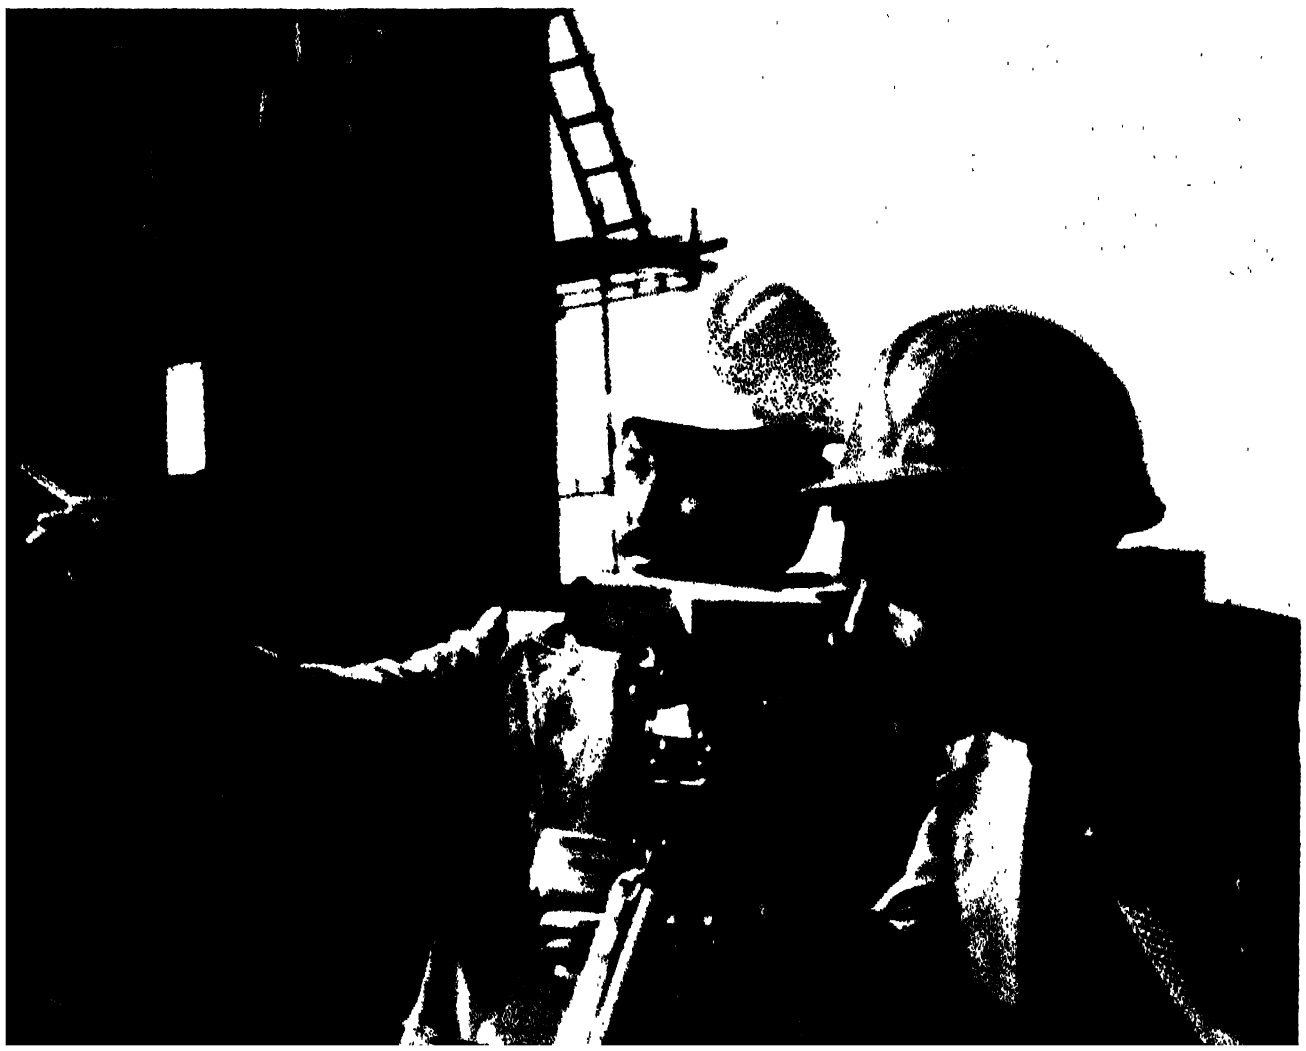
"Keeping The Rebels At Bay"

BUILDING FOR BREAD. Engineers at the site of a bakery under construction in the northern province of Balkh.



Consolidation of the power of the Karmal regime is probably the only chance that Afghanistan has of regaining peace and political stability. But this cannot possibly happen so long as it remains the cockpit of East-West conflict.

Even the hawks in the Pentagon now admit that 85,000 Russian troops in Afghanistan can indefinitely hold the ring for President Karmal and that half a dozen motley groups of Afghan insurgents operating from safe sanctuaries in Pakistan do not have the remotest hope of winning. Yet the CIA continues cynically to send them to slaughter by organising arms aid for them from Egypt, Saudi Arabia, China, Pakistan and the US itself. The earlier American pretence that this flow of arms will turn Afghanistan into a "Soviet Vietnam" and thus checkmate a Russian thrust overland to the warm waters of the oil-rich Gulf has been all but given up; instead, it is now being overtly maintained to bolster up Pakistan's status as a "frontier state" and thus justify Washington's burgeoning military links with Islamabad. If the policy tends to destabilise not only Afghanistan but the whole of South Asia, the politico-military swashbucklers in the Reagan Administration care a fig.

For all that, Mr Karmal's government, unlike President Zia's in Pakistan, has had some

IN AFGHANISTAN TODAY

'Forcing The Pace Of Progress"

success in the last two years in gaining popularity and extending its power base at home. It has released most of them from jail. Many technocrats have been lured back to the country from exile and posted in key positions in different ministries. Doctrinaire land reforms have been moderated and land ceilings raised to make peace with the tribal leaders who still rule the roost in the countryside. The government has also extended an olive branch to the obscurantist mullahs: most official functions begin with an invocation to Allah and Communist ministers visit mosques to pray like ordinary Muslims. Education and irrigation are being rapidly extended; new industries are coming up; and foreign trade has been liberalised. Indeed, thanks to a more efficient management of the economy, Afghanistan has now accumulated a comfortable foreign exchange reserve. But the Afghans' love for independence is legendary and the insurgents will always command considerable support among the people so long as Mr Karmal is seen as a puppet of the Russians. To shed that image he must get the Soviet troops out. He cannot, however, even try to do so until his own army remains incapable of containing the rebels equipped with arms from abroad.

—K. C. K

ZN FROM THE REVOLUTIONARY DEFENCE UNITS which have been formed throughout Afghanistan to counter the guerillas.

Afghanistan In The Power Game

Winds Of Change

"The revolution in Afghanistan has for the first time created real opportunities for social change. However hamhanded the implementation of reforms introduced after the revolution in April 1978, nobody can fault the Karmal regime on grounds of equity and justice."

by S. P. Seth

AFGHANISTAN has become an important issue in the new cold war between the two superpowers and their respective allies. Indeed, President Jimmy Carter described the Soviet military intervention in Afghanistan in December 1979 as the greatest threat to world peace after the Second World War. He also propounded what has come to be known as the Carter Doctrine. In effect, he declared the Gulf region as an area of vital strategic importance to the United States and arrogated to himself the right to use all possible means for its protection, including military power.

The United States still regards the Soviet action in Afghanistan as part of a global masterplan with the oil-bearing Gulf region as its next target. At least that is the ostensible justification for the deployment of a large US naval force in this area and the Indian Ocean This is being further reinforced by raising a Rapid Deployment Force (RDF) to counter an alleged Soviet threat. Washington is also developing military bases in Egypt, Oman, Kenya and Somalia, apart from its key base in Diego Garcia in the Indian Ocean. Simultaneously, it is forging a "strategic consensus" with pro-West governments of the region extending from Turkey to Pakistan.

Such interlocking relationships are designed to provide the US with facilities for pre-positioning military hardware and, where possible, even to station ground troops for an instant response to an alleged Soviet threat. The arms aid to Pakistan, the sale of AWACS planes (airborne warning and control system) to Saudi Arabia, the formal strategic relationship with Israel and other similar arrangements are all part of America's grand strategy to checkmate Soviet "aggression" further into the Gulf following its intervention in Afghanistan.

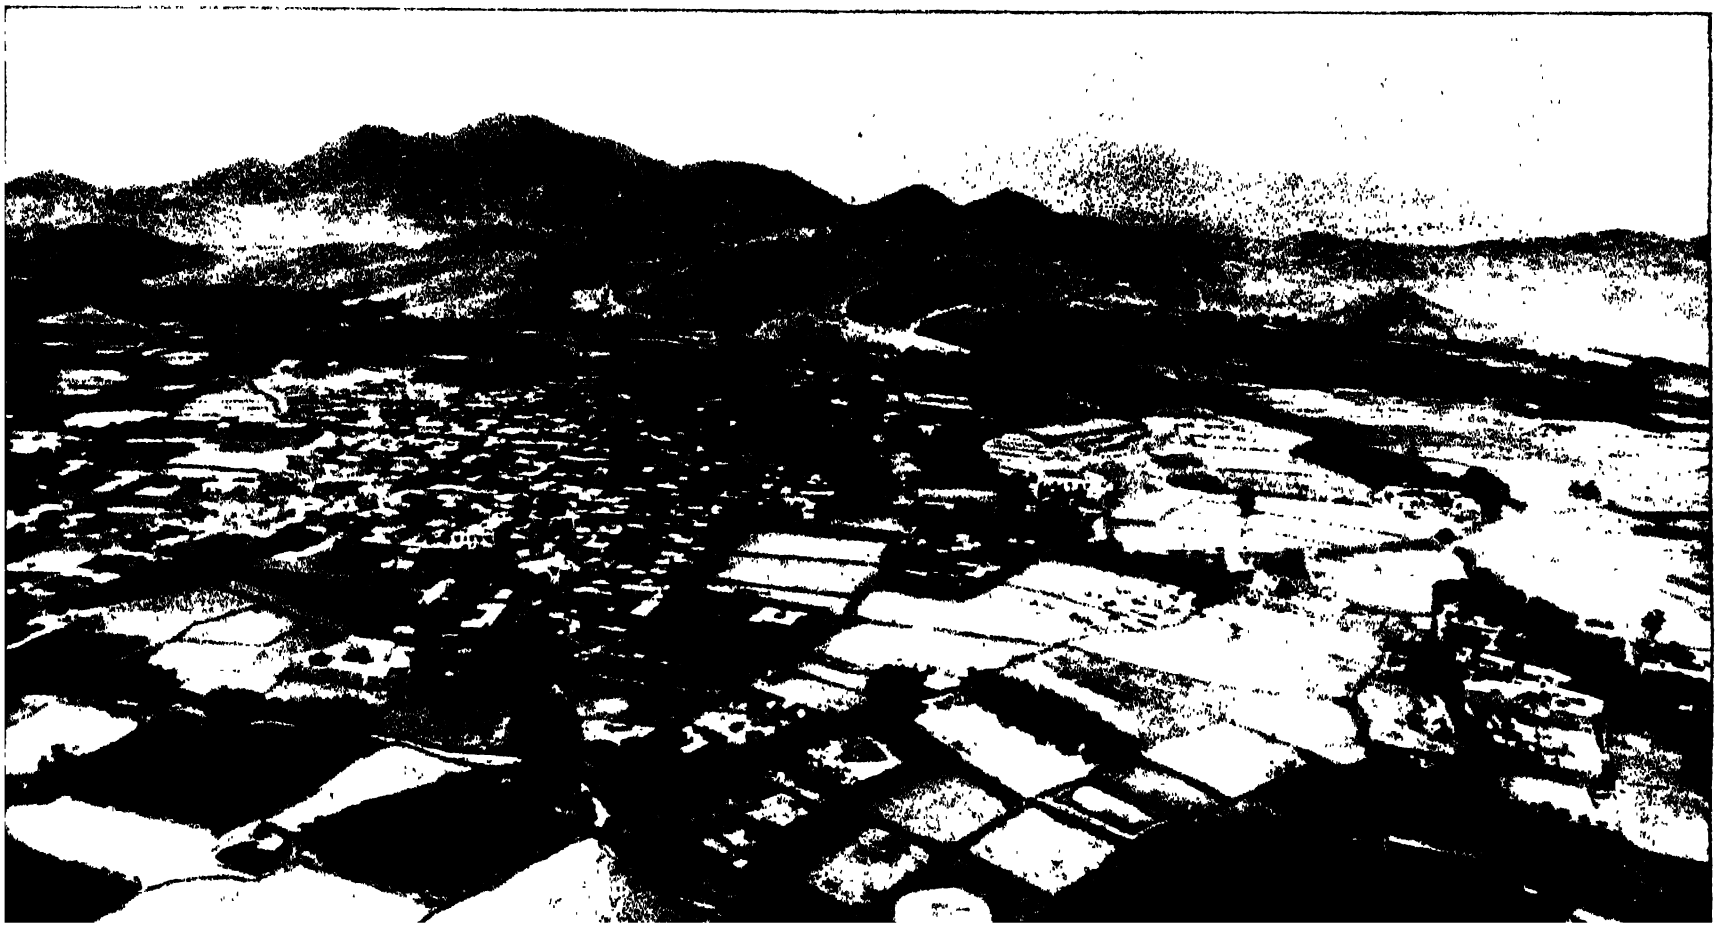
It is clear that by making Afghanistan a part of its cold war strategy, the United States and its regional surrogates are not really interested in a peaceful political solution of the problem. If the US were so interested, it would have responded positively to the Soviet President Brezhnev's offer early this year to negotiate on Afghanistan separately or as part of the overall security situation in the Persian Gulf. Similarly, Pakistan is impervious to all reasonable offers of the Afghan Government to seek a political solution.

Babrak Is Willing

In this connection, Kabul has already agreed to hold talks with Pakistan and Iran, bilaterally or trilaterally, with the active involvement of the UN Secretary-General or his appointed representative. During a recent visit to New Delhi, the Afghan Foreign Minister indicated that Kabul's proposals for talks were flexible. He even implied that his Government might agree to be represented as a political party at these talks. But Pakistan has not shown any desire to explore the new Afghan proposals.

And why should it? The Soviet military action in Afghanistan could not have come at a better time for General Zia's military regime. Mr Bhutto's execution had already weakened his position at home and abroad. Moreover, Washington had cut off all aid because of Pakistan's plans to develop atomic weapons. But, as the Soviets moved into Afghanistan, Pakistan overnight became the darling of the West as a frontline state facing the Soviet Union.

THE GOOD EARTH. Aerial view of agricultural fields in the Kunar Province. The Revolutionary Government has fixed ceiling over individual land ownership and started redistributing expropriated land among the landless peasants.



A BATCH OF POLITICAL PRISONERS being released in Kabul. They were opposed to the Amin regime which was overthrown by the "Revolution".

BABRAK KARMAL talking to the delegates of the Conference of the Ulemas.

General Zia has been more than willing since to play the American power game. Pakistan has become the convenient conduit for arms supplies to the Afghan rebels by the United States and other countries; and the Pakistani territory is now their one large sanctuary. Of course, for this General Zia wanted American arms and lots of them—not just the peanuts' offer of $400 million by the Carter administration—but the current Reaganite package of over $3 billion in arms and economic aid. And this would include nearly 40 F16 planes which will pose a serious threat to India's security.

Old Arms For New Hands

Despite General Zia's denials, it has now been clearly established on the late President Sadat's admission in an interview to an American TV network, that America was buying old Soviet-made weapons from Egypt and supplying them to the Afghan rebels through the Pakistani corridor. Earlier, the American correspondent, Carl Bernstein of Watergate fame, had written in the *New Republic* that "all the main features of the operation (concerning arms supplies to rebels) have been personally approved by Pakistan's President Zia".

Prime Minister Indira Gandhi was, therefore, quite right when she said in a recent interview to the French newspaper *Le Figaro*: "I think that Pakistan does not want a solution... They are taking the fullest possible advantage of it in every way and I think that even the much bigger countries think that it is a good idea that the Soviet Union should be engaged at various points."

Afghani "Mincemeat"

The tragedy of the whole situation is that the Afghan people, about whom the West, Pakistan, China and some Islamic countries are making so much fuss, are the proverbial mincemeat in their unscrupulous power game. In a recent message to the Afghans on the *Voice of America*, President Reagan said. "We in the United States share →

ARMS AND THE MEN. Workers of the Jangalok Auto Repairs Plant at their anti-illiteracy courses carry guns along with their satchels.

with you a belief in God and in the blessings he gives us. We also share a common love of freedom and a desire to live our lives as we determine free of outside interference." This is sheer hypocrisy when one looks at the Reagan Administration's record in El Salvador, Guatemala, the Honduras, Nicaragua and Chile, not to speak of the decade-long American carnage in Vietnam. America knows as well as Pakistan, Egypt, Saudi Arabia and China—the countries which are rendering active assistance to the Afghan rebels—that the latter do not have an iota of a chance to dislodge the Russians through their guerrilla operations. They also know that Afghanistan is no Vietnam (even though they dearly wish it were so) because the Soviets are right on the border, and the rebels lack unity and ideological motivation of the Vietcong. If required, Moscow can maintain a permanent garrison, and this is what it might lead to if all reasonable proposals for a political settlement are spurned by Pakistan and the USA.

General Zia's talk of self-determination for the Afghans is cynical through and through. Having usurped power from an elected government in 1977 (and later executing the popularly-elected Prime Minister Bhutto), he has since repeatedly reneged from his promises to seek popular mandate for his military regime. As for the disparate Afghan rebel groups, they cannot even agree among themselves on conducting a unified insurgency operation.

This leaves us with the existing reality of the Babrak Karmal regime which has sensibly shed off the extreme radicalism of its predecessors. It is also making efforts to broaden its popular base by accomodating the traditional mores and religious sensitivities of a highly backward Afghan society. And if the United States, Pakistan and others were ever to become seriously interested in securing Soviet military withdrawal from Afghanistan—as they keep reminding the world—the only way is to put an end to the fratricidal war in Afghanistan by encouraging an internal political settlement and stopping arms supplies to the insurgents. Moscow is committed to withdraw its troops in that event and may find it difficult to go back on its pledge without alienating its few remaining friends in the comity of nations.

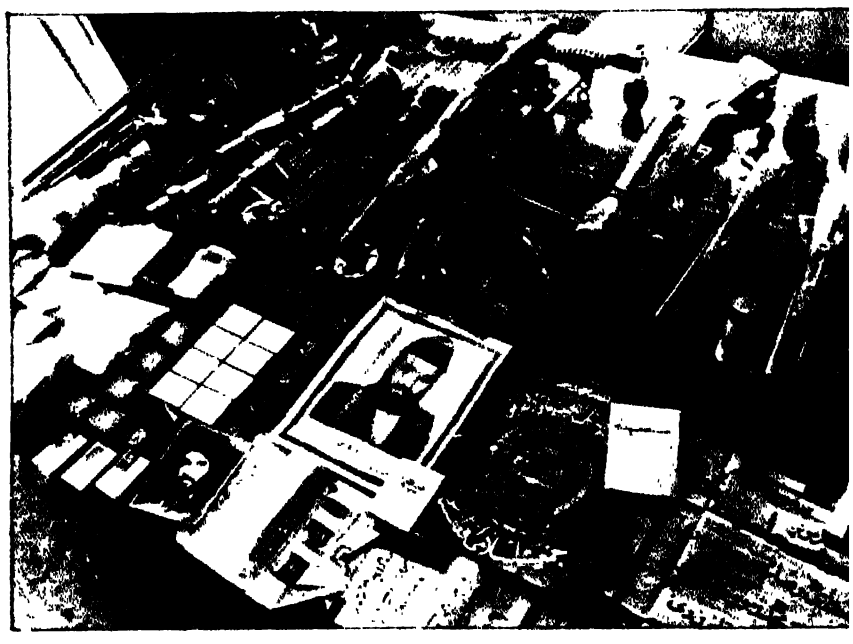
The Only Chance

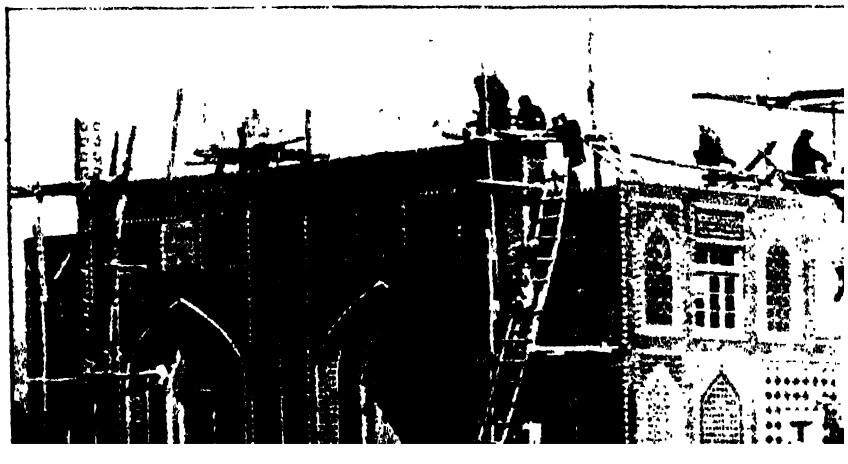
At any rate, that is the only chance that the Afghans have of regaining this sovereignty and making rapid progress towards modernisation of their tribal society. After King Amanullah's reformist decade (1919-29), which ended when the British inspired successful tribal rebellions against him, the revolution in Afghanistan has for the first time created real opportunities for social change. However hamhanded the implementation of reforms introduced after the revolution in April 1978, nobody can fault the Karmal regime on grounds of equity and justice. For instance, the Revolutionary Government has put an end to usury and cancelled all existing debts arising therefrom; guaranteed equal rights to women, fixed ceilings over individual land ownership; and it has redistributed the expropriated land among small and landless peasants. It is also attempting to root out illiteracy which stood at 90 per cent for men and 98 per cent for women before the revolution.

And what one might ask, have the rebels to offer? They want to turn the clock back in the name of Islamic fundamentalism. And even on this, there is no consensus among them regarding the composition of a government to replace the present regime.

Moscow is, therefore, understandably wary of possible anarchy on its southern border, which will undoubtedly provide ample scope for mischief-making by its enemies. On the other hand, so long as its troops remain in their country, it would be impossible for the Karmal regime to consolidate its hold over the freedom-loving Afghans. ■

WAR OF WORDS AND ARMS. Ammunition and subversive literature seized from guerrillas in the Nangarkhar Province.





THE CONSTRUCTION OF A NEW MOSQUE. The Karmal regime has been careful to leave the freedom of religion "untouched".

JAISONS:DENTSU-1481

SO HOT WAS THE PACE PAKISTAN SET that India were two down in next to no time. However, India fought back spiritedly and soon earned a penalty-push, from which wing-half Gurmail Singh is seen scoring here.

Even Test Of Indo-Pak Strength

by Raju Bharatan

India lost the four-Test series to Pakistan 2-1, but they were far from disgraced. The supervision of the first two Tests came in for a lot of criticism, but the contest was more even with the appointment of neutral umpires for the last two Tests.

A report on the first of these four Tests which revealed that there is still a place in the game for the traditional style of hockey that India and Pakistan play.

IT is not just a coincidence that we feature 'touch' artist Dhyan Chand in this issue, for the first of four Tests between India and Pakistan was a harkback to the time when hockey was queen.

It is the Dhyan Chand tradition both India and Pakistan have inherited. However, the emergence of 'direct' and 'power' hockey during the last two decades had created no end of confusion in the subcontinent about what our basic approach to the game should be. It was, therefore, a matter for both joy and relief that this goodwill series between India and Pakistan should have begun on the right note, with both teams demonstrating from the word go what this game, which they taught the world, is about.

For all the dust raised by certain curious decisions of Pak Umpire Shafaat Baghdadi, with Indian Umpire Satinderpal Walia contributing his share to the imbroglio, the fact remains that the two teams provided for the crowd a wonderful exhibition of the forgotten art in hockey. Pakistan were the better team on the run of play, with their wingers Kaleemullah and Khalid Hamid centring with a penchant and precision that their forwards skilfully exploited—especially inside-left Hanif Khan, who showed a fine flair for opportunism by notching a hat-trick.

This kind of opportunism is what Indian forwards Merwyn Fernandes, Surinder Singh Sodhi and Kaushik failed to display, though Shahid at inside-left turned in an exemplary display. A tendency to hold on to the ball a little longer than necessary instead of passing to a better-positioned colleague, a knack of 'lingering' rather than 'first-timing', is what ultimately cost India the match, though they might prefer to believe that it was the partisan approach of Umpire Baghdadi that tilted the scale 5-3 in Pakistan's favour

Photographs by Gopal Bhat

Neutral Umpires Needed

There was a 20-minute spell after the intermission when the Indian forwards ran rings round the Pak defence, which showed itself rather slow to recover. This was the spell during which Shafaat Baghdadi came whistling to Pakistan's rescue, though Pak supporters will argue that Satinderpal Walia of India did the same at the other end at critical moments. However, while Baghdadi may have contributed to cramping India's style when they were on top and looked all set to equalise, in reality it was the skill and anticipation of Pakistan's seasoned centre-half, Akhtar Rasool, that ultimately prevented us from drawing-level.

Akhtar Rasool certainly brings a most welcome leavening of experience to the Pak team at a time when they are rebuilding. Pak Hockey appeared to be on the way down after that country could finish only fourth in the Karachi Champions Trophy, which Holland won with such distinction. Subsequently, Pakistan went on a tour of the Continent, but could do nothing there to dispel the impression that they were no longer the gold-medal force they once were.

India on the other hand, after having missed the 1981 Champions Trophy, have been on the way up after a series of camps and a tour of Europe, which helped promote a sense of cohesion in their ranks. The popular view may be that too much was read into India's regaining the gold medal at Moscow last year, since the major hockey-playing countries did not take part in that Olympic Games for political reasons. However, those regularly on the hockey beat always contested this view and gave it as their assessment that India were slowly but surely on the way to regaining their lost touch in hockey.

This First Test against Pakistan certainly showed that Indian Hockey is beginning to pay its way as a result of a long-overdue injection of youth. Of course, by the time this sees the light of print, the four-Test series between India and Pakistan will have run its course. Whatever the outcome, it is to be hoped that Indian Hockey will not lose the vital spark lit by Dhyan Chand & Co. ■

PAK CENTRE-HALF AKHTAR RASOOL turned in a stand-out display, but this was one time he failed to intercept. A powerful penalty-corner drive by India's Rajinder Singh finds the boards in the First Test which we lost 5-3 to Pakistan. Goalkeeper Moinuddin, though beaten here, was an impressive performer for Pakistan, standing (with Akhtar Rasool) in the way of India drawing level.

Forgotten Touch In Hockey

There has been no parallel to Dhyan Chand in hockey. His incredible stickwork and ball-control still remain unmatched.

by S. Rifaquat Ali

THE man who scored almost a century of goals was a master craftsman symbolic of a figure cut in ebony exuberant Dhyan Chand, a Sepoy from the first Brahmin Regiment which he joined in 1922

Hockey "Wizard"

Legend has it that in 1924 the final of the Punjab Indian Infantry hockey tournament was being played at Jhelum Dhyan Chand's team was losing by two goals and four minutes were left for the final whistle when his Commanding Officer cried out 'Come on Dhyan! We are two goals down do something about it!' In a flash, the mercurial Dhyan Chand scored three goals and led his side to a great victory Ever since he was called a "wizard"

From the Amsterdam Olympic Games in 1928 to those at Los Angeles (1932) and Berlin (1936) the hockey maestro dribbled the world with his artistic wizardry yet unmatched in the history of the game

Such was his stickwork on the playfield that the Europeans did not believe the way he used to sprint down with the ball glued to his stick Apparently they grew suspicious about his stickwork and when some people examined his stick to find out if a magnet was attached to it they were stupefied when they found nothing

On August 16, 1936, the Eleventh Olympic Games came to a close in Berlin Hitler the Reich Chancellor, and King Boris of Bulgaria were in the loges of honour Every member of the Indian field hockey team qualified for the Olympic gold medal by virtue of its magnificent 8-1 victory over the spirited Germans

Hitler's Offer

But for Dhyan Chand who had scored three beautiful field goals in the match there was something bigger in store than the glittering gold medal Hitler known for his apathy towards the blacks had spurned a suggestion to meet the American track and field star Jesse Owens to Dhyan Chand the Fuehrer offered the title of Field Marshal if he remained to Germany

The superstar's patriotic feelings overcame Hitler most generous offer and Dhyan Chand returned to India without even giving a moment's thought to it

For well over a quarter of a century the peerless gem of Indian hockey mesmerised the world with his incredible stickwork ball control feint and dazzling dribbling

During the 1936 Berlin Olympics the ruler of Baroda the Princess of Bhopal and a large number of Indians travelled from all over the Continent and England to witness the final tussle which India eventually won Dhyan Chand was superb in the match When the referee had blown the final whistle the blonde German girls resplendently attired approached him for an autograph some even went to his room later and hugged the hero of the match for the dazzle and brilliance he had displayed

Record In Olympics

In the 1932 Los Angeles Olympics Dhyan Chand scored eight goals and India won 24 - 1, which is still a record in Olympics His younger brother Rup Singh, the greatest inside left the world has produced, too scored ten goals A local newspaper of Los Angeles wrote 'All the colour, glamour and pageantry of Rudyard Kipling's India might well have found its incarnation in the personnel of the Indian team which is to represent the land of Mahatma Gandhi So agile are the members of the team that they can run the full length of the hockey field juggling a small wooden ball on the flat of the hockey stick

Another Los Angeles newspaper was more candid The All India field hockey team which G D Sondhi had brought to Los Angeles to defend their 1928 Olympic title was a typhoon out of the east as it trampled under its feet and all but shoved out of the Olympic stadium the eleven representing the United States

Once discussing informally about the centre forward position which was his forte Dhyan observed 'A good centre forward is one who gets the maximum effect out of his wing forwards He should distribute the passes equally but with judgement He must know which flank is creating a better impression on the opposite defence and adjust his play accordingly He must always have something up his sleeves

Awarded Padma Bhushan

It was through field hockey that Dhyan Chand rose to the rank of Captain and retained it till his retirement in 1956 the year the state honoured him with the Padma Bhushan the first of the thirteen recipients of the award to date

Dhyan Chand baffled the hockey world through his genius which blossomed in a country engulfed in political ferment When Nehru who was then in his professional capacity as a journalist asked Gandhiji for his consent to raise funds for India's participation in hockey at the Los Angeles Olympics the Mahatma in his own characteristic style asked him 'What is hockey?'

So poor was the patronage to Indian hockey! Yet the two brothers from Jhansi Dhyan Chand and Rup Singh together formed a team of world beaters anywhere under the sun They had placed India in an invincible position

Unquestionably the wizard was an immortal without a parallel in field hockey Hockey was in his blood and he has left behind legacy in the form of his son Ashok Kumar who not only donned the national colours in the Olympic Games and other international meets but has also frequently exhibited the sparks of his father's genius

After his short stint with the Rajkumari Coaching Scheme Dhyan Chand joined the National Institute of Sports (NIS) in 1962 and he not only trained the would be coaches and the national players but also passed on his knowledge to his successor Balkishen Singh an Olympian and coach of the victorious Indian team to the Moscow Olympic Games

In 1979 Dhyan Chand was admitted to the All India Institute of Medical Sciences in New Delhi The doctors gloomily pronounced that the wizard had cancer and that his end was near However he fought death like a champion, as he had done on many occasions on the playfield But finally he yielded to God's will and the voice that was first heard on August 28, 1905 in Allahabad was silenced for ever on December 3rd 1979

Thus an era came to an end in field hockey!

Kiwi Care

If a shine is all you're looking for, any shoe polish will do. We're talking about what happens underneath the shine—the caring that's necessary to prevent the leather from ageing, hardening or cracking.

This is KIWI care.

KIWI is made of rich waxes—natural and synthetic—and dyes. As you brush your shoes with KIWI, you'll notice a 'deep shine' coming through because it works more than surface deep. The waxes sink through and nourish the leather to pliant softness. Making things comfortable inside the shoes as well as working up a shine outside.

What's more, the 'deep shine' we're talking about isn't affected by water or dust or a little roughing up. A minute's light brushing brings back the shine. You'll soon see what KIWI care is all about.

It's life for the leather and shine for your shoes.

KIWI Shining life into your shoes.

The Failure of Samar Sen

by Raghava R. Menon

He believed he made a successful swimming coach. His students developed a peculiar intimacy with water and crowds that came to watch were reminded of a school of otters.

SAMAR Sen was the swimming coach of the New Central School and he was explaining to the boys of Standard II the first principles of swimming. He believed it was wrong to teach a child to swim till he was of an age to understand. So no boy below the second standard was ever allowed near the pool.

Samar Sen was old. Twenty years ago he had come to Central School looking for work. He had no special qualifications and no teaching experience. When the headmaster, Dr Narayana Iyer, had interviewed him, Samar Sen had offered to teach any subject to the lower school in whatever vacancy there was.

The headmaster was taken abac this offer and had enquired very tactfully (for there was an air of and authority about this man tha was difficult to ignore) how he proposed to teach a subject he h not studied himself. Samar Sen l replied with extraordinary brevi and firmness that he could prove him, in a month, that he would c less and better than most!

There was a vacancy in the lowe school that had to be filled and because Dr Iyer was curious to t this man who had so subtly impressed him, he put him down teach arithmetic in the lower sch

Samar Sen's classes in arithmeti were, to say the least, very odd. began by writing down on the blackboard all the numbers from to nine not in a row, but scattere over like drops of water. Then h said, "Children, do you see the numbers on the blackboard? We

look at each of them carefully. Observe them, their shape... and while you look at them think of what they mean. Then close your eyes and visualise them in your mind's eye, putting them in a straight line one beneath the other. Continue to see them with your eyes closed. Resist the impulse to add or subtract, multiply or divide them in your mind. Simply learn to see the numbers with your eyes closed. Now begin all together."

The class had first sat with eyes shut, their brows knotted—in concentration. In the afternoon sun the landscape of green and tawny playing fields shimmered and danced in the fierce glare. Up in the sky the eagles were tiny specks resting motionless on invisible columns of vapour. The clamour of the market place was muted, like the notes of a distant organ. The class sat with closed eyes, utterly still.

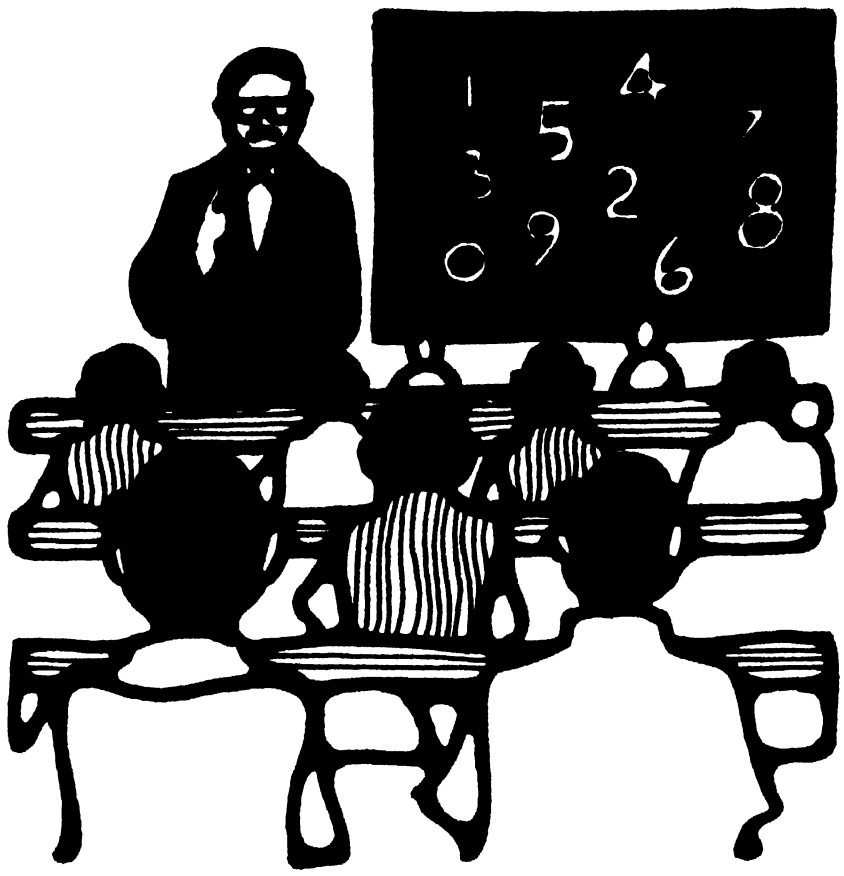
At the end of a month Dr Iyer gave them a test. The new teacher was not present that day. He claimed that he had done what he could and needed a rest. The boys solved the sums in their exercise books even before the headmaster had finished writing them on the blackboard. When he asked them to begin, the class answered in a chorus that they had finished, and were waiting for more.

The astonished headmaster had later summoned Samar Sen to his room and told him what had happened. Sen had smiled shyly and said, "Then I stay. Do I not?"

"Yes. Yes!" said the headmaster, "It is amazing, absolutely astonishing. Never seen a thing like this in my life. How did you do it?"

"Ah, well," said the teacher, "It is just a method of making them aware of numbers in a new way. I do not find this easy to explain." Samar Sen looked all over the room in an effort to simplify what he wanted to say. "Everything you do," he continued, "and the way you do it, is because of a certain kind of awareness you have of it. For instance, you are aware of me in a certain way, of your family in another way. The people whom you dislike you are aware of in yet another way. Your environment and everything that is happening in it you are aware in various ways and in various degrees. You see what I mean?" He paused and stood up and then sat down again.

"To a large extent everything you are and do is a result of this awareness," he continued after a brief pause in which he frowned. "The knowledge of arithmetic, like any other bit of understanding, is the same. An *awareness* of numbers. One kind of awareness gave rise to the system you and I were taught in our schools. I have changed the awareness of these boys. They don't any longer need the old methods." The headmaster made to interrupt, but Sen raised a hand and continued,



"You must not misunderstand. These boys are doing all the operations of arithmetic. Only, they do not do it our way. It is really very simple."

So Samar Sen joined the New Central School. First as an arithmetic teacher, then in the next ten years he taught the lower school various subjects of his choice. It was in the eleventh year of Samar Sen's career that a modern swimming pool was donated to the school by a wealthy patron.

It was a beautiful thing, this pool, the water a deep blue that made you think of the sky after the rains. It had lights within it which could be switched on at night. The spectators sat round it in tiers and watched the boys swim. It caused a great sensation in the neighbourhood and everyone admired the school for it. Very soon the pool became the venue for all aquatic sports in the region and once a year the national championships were conducted in it with great ceremony.

ONE mellow January morning Samar Sen met the first batch of swimmers that year at the edge of the pool. The second standard boys were a particularly slim and cleanboned lot and he admired their supple bodies. They were full of promise. Samar Sen rubbed his hands with satisfaction.

"Children," he began in his high fluting voice, "this morning you will be given your first lesson in swimming. The first thing you do is forget everything you've been told about it. It does not consist in moving your arms and legs as you have seen people do. No," he wagged a gentle finger. "You must learn to know the water, know it for what it is. Not up here," he tapped his forehead gravely, "like your history lessons, but with every part of your body. For it is with every part of your body that you eventually learn to swim. Learn to know the water with your arms and legs and your belly and your chest. Don't interfere with your body's knowledge of the water..." He cleared his throat, paused, looked up at the sky and stroking his Adam's apple continued. "Yes, you must not interfere. Let your body learn the water and then you will also know it. "This morning," he went on, "you will enter the pool at the shallow end and lie flat on your stomachs without moving a limb. You will go under the first few times but you must persist in lying still on the water without stirring. Like a lizard on a rock. Your limbs will love the water after some time. You will fear it no more. It will carry you softly without your knowing it, it will hold you aloft gently." He spread out his fingers and made an upward gesture. "That is all you will do for the rest of this term and when you return from your holidays I shall begin to tell you about moving in the water."

Every year, for as long as he could remember, this was the way he started off his first class of the year. And he believed he made a successful swimming coach. He knew his students developed a peculiar intimacy with water and the crowds that came to watch the New Central School boys at the Championships were reminded of a school of otters. They sped through the water with uncanny speed and a wierd abandon and gleamed and flashed in the blue depths like knives. No one could say whether they observed any special style or employed a particular stroke, for they were too swift and swam a little below the surface. Opinions about the technical skill of the New Central School swimmers were always conflicting, but the distinguishing feature of a Samar Sen student's performance in the pool was that he seemed fearfully happy as he swam—almost reckless with joy—and when he won a prize and the crowd cheered and clapped, he always seemed slightly surprised and behaved with a peculiar courtliness.

All these characteristics of the school swimmers endeared them to the people and when student after student excelled himself and astonished the swimming world, Samar Sen would smile shyly through his spectacles, wave his hands deprecatingly and exclaim, "It is all because of *the system.*"

"What is this system?" they would ask and Samar Sen would explain in his patient fluting voice. He would begin always by saying, "We really belong to the water, you know. Our history on land is pitifully recent. Biological evolution brought us to the land. The ten avatars begin with the fish after all."

What the Samar Sen system did was to remind the body of its ancestral environment. This had nothing to do with the mind in particular, although the mind come into it in certain obscure ways. So there was nothing in it that could be explained in words. It was something, he would say, that required awareness. His students never learned to swim, they were merely taught to remember. They forgot the land. Forgot they ever belonged to it. When they forgot this truthfully and believed in the water as people believe in the air and take it for granted when they breathe, then it was time to pronounce them swimmers. The result was that his students acquired the mobility of fish and also the contentment and abandon of fish in the water.

The annual sports of the New Central School was always a gay and noisy affair and all the town came to see it. The chief spectacle was, of course, the aquatic event, for it gave everyone a great thrill to see the lads in the water with their blinding speed and nonchalance, and also their curious stillness. Ever since Samar Sen's students began to compete publicly everyone came from far and near to see them.

The programme usually started in the forenoon with track events and the boys jumped and ran all day. The starter's pistol popped and the jumpers jumped, others putted shots or ran in relays. The little boys from the kindergarten would crowd round the bend of the lanes to watch the runners. From the National Girls' School on the hill above the city, the girls would come dressed in vivid ankle length skirts and coloured blouses, their eyes outlined in

collyrium, their hair oiled and slapped flat and plaited and tied together with flaming ribbons.

It was always sunny on Sports Day. There was no record of rain ever spoiling the fun. The aquatic events were held an hour or so before tea was served and after every one had eaten, there was usually a speech from the headmaster who rambled on for a few minutes. After that it was dark and late enough to go home.

IN this particular year the track events had come to a close. The great crowd, bemused and tired by the day's exposure to the sun and wind and glare, moved in a solid phalanx over the green of the playing field on which little flags and chalk lanes still glimmered in the level light of the dying day. They assembled in the tiered stadium around the pool. The mercury vapour lamps had been lit and the pool looked like living jade in the mysterious pallor cast by their light.

Samar Sen was walking round the pool dressed in his usual *dhoti* and black coat and his spectacles drooped low over his nose. The house master, Mr Ramanathan, began making his announcements of the various races of the evening. His voice ricocheted and bounced between the loudspeakers.

"This afternoon," he began.

"noon," the loudspeakers mimicked.

"We are all assembled," he went on.

"sembled," the loudspeakers repeated.

"to witness the 8th Aquatic meet of the New Central School."

"hool," said the loudspeakers.

"I have greet pleasure in announcing the names of the contestants."

"stunts," said the mocking voices.

Samar Sen stood with a bandana and a starting pistol at one end of the pool and at the other end crouched the boys under the glare of the lamps. The bandana made a downward gesture and a dull pop followed a puff of smoke.. A soundless splash and the shadows of the swimmers streaked across the floor of the pool like arrows. A little later came the sound of wild clapping as the winning boys climbed out of the water looking slightly bemused and surprised.

The New Central School swimmers were in amazing form that evening and the races broke many records. Then Mr Ramanathan, echoed by mocking voices, announced the hundred metres underwater event. It was after the boys had finished two lengths of the pool that someone noticed a black smudge struggling and gurgling at the deep end. The smudge went under a few times and came up again while the boys swam placidly under it.

The realisation that it was Samar Sen quietly drowning at the deep end of the pool while the race was being run came as a shock and many rejected the thought even while they feared it. And when at last there began a stampede to the water's edge, time had already passed and the soaking body of the swimming master with his spectacles still hanging by one ear was pulled out by anxious, horrified men from the crowd.

He lay there, a pitiful rag doll on the grass under the lamps, while the boys swam undisturbed by any knowledge of the tragedy. The men tried to revive him. At midnight he was alive but in high fever and delirium. Half the night he raved, sitting up at times and shouting, "My students, my students. They are fish. They don't recognise drowning. I have failed.... failed..." His voice would then trail off till he began raving all over again.

By the dawn's first light he died quietly in his sleep. His students were sheepish and evasive. They had known nothing.

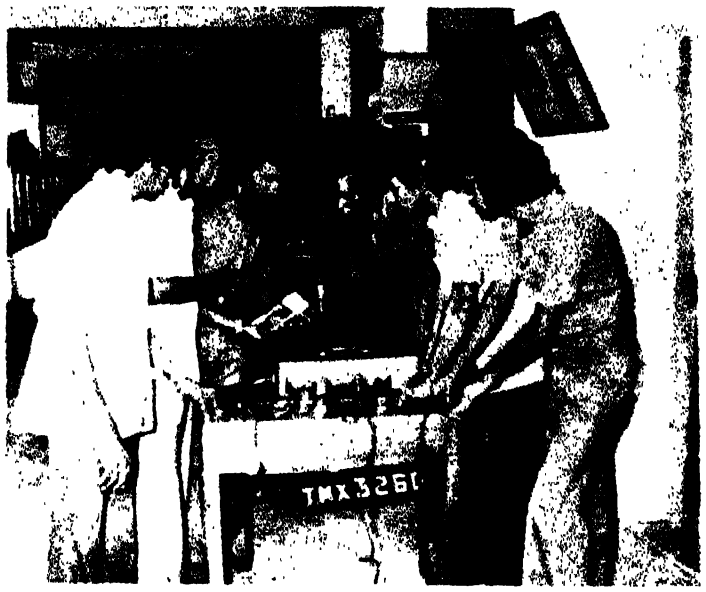
plan for a brilliant ENGINEERING CAREER

Hindustan Institute of Engineering Technology, one of India's leading educational institutions in the promotion of non-formal technical education in Afro-Asian Countries, invites applications for admission to the following courses commencing shortly. HIET is patronised by several industries, airlines and foreign countries for training of their technical personnel.



Courses of study Offered

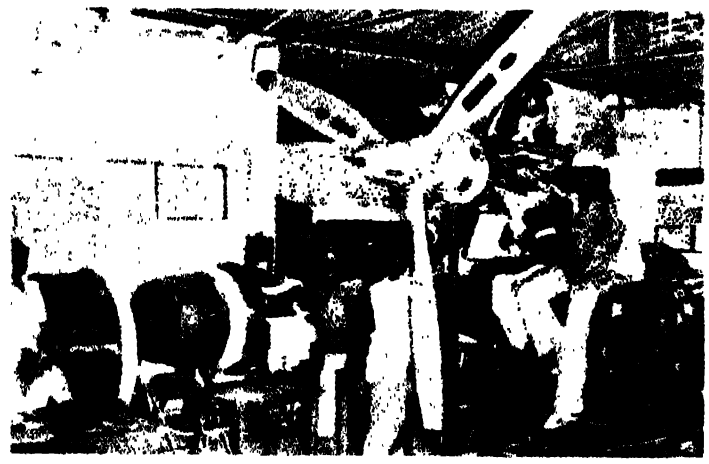
- Aircraft Maintenance Engineering
- Automobile Engg. Diploma Course
- Diploma Course in Bldg. Technology
- Diploma Course in Airconditioning & Refrigeration
- Radio & Television Course
- Computer Programming

Professional Courses

- A.M.I.E. (India)
- Grad. I.E.T.E. (India)
- AMIMI (London)
- AMAeSI (India)
- Business Management (postal)
- AMSE (London) CIVIL/MECHANICAL/ ELECTRICAL
- D.Com (postal)

FACILITIES OFFERED

- Expert faculty
- Well equipped Automobile, Mechanical, Aeronautical and Electronics Workshops
- Well equipped labs
- Technical Library with several thousand volumes
- Hostel Facilities
- Students from 22 States in India and 24 foreign Countries are on our rolls.
- Latest audio visual equipments
- Facilities for Postal students to undergo Practical in our workshops.
- Post Institutional Apprenticeship facilities and placement services



POSTAL TUITION

HIET Offers postal tuition for the above courses except 1, 5 & 6

Qualification for Admission: For Aircraft Maintenance Engineering, PUC/pre-degree or equivalent with Maths, Physics & Chemistry.

For Professional and other Courses Minimum Qualification: SSLC/equivalent.

LADIES ARE ALSO ELIGIBLE FOR ADMISSION

For Detailed Prospectus and application form send Rs. 6/- by M.O./P.O.

tea at its very best. Isn't it time you gave yourself the
rare luxury of Green Label Darjeeling tea?
LIPTON
Green
Label
Green
Label
Darjeeling tea at its very best

THE misprint of the year appeared in the sports page of a local newspaper. It read: "At this point the gallery deserted the defending champion to watch Miss Jones, whose shorts were dropping on the green with astonishing regularity."

WIFE: "Didn't like the looks of the girl you hired to clean the house, so I fired her this afternoon!"

Husband: "Without giving her a chance?"

Wife: "No, before giving you one."

This week, it's fourpence off and fivepence up!

TWO hillbillies who had never been on a train before had been drafted and were on their way to camp. A food merchant came through the train selling bananas. The two mountaineers had never seen bananas and each bought one. As one man bit into his, the train entered a tunnel. His voice came to his companion in the darkness:

"Jed, have you eaten yours yet?"

"Not yet," answered Jed. "Why?"

"Well, don't touch it. I've taken one bite and gone blind!"

HOME is a place where a man is free to say anything he pleases, because no one will pay the slightest attention to him anyway.

"Did you follow my advice about kissing women when they least expect it?"

"Oh, hell," said the fellow with the swollen eye. "I thought you said where."

AN old and privileged friend asked Bill why he married a woman with the face of a mournful cow, the brains of an addled sheep, and the disposition of a setting hen.

"Well, Joe," he sighed, "it was a truly perfect June night. I'll never forget the scent of honeysuckle wafting across the porch, the softness of the breeze that played with tendrils of her hair, or the sleepy notes of a mocking bird in a nearby bush. But even more unforgettable were the rays of a yellow moon glinting on the barrel of her father's shotgun."

THE Personnel Officer had called the clerical force together and was laying down the law. "There's going to be a new regime around here—all work. And," he concluded, "from now on, I want you out of here and calling on the factory workers at the stroke of 9."

One boy piped up, "The first stroke of 9 or the last stroke, sir?"

A BISHOP was speaking to a class of boys on the merits of moral courage. "Ten boys were sleeping in a dormitory," he said, by way of illustration, "and only one knelt to say his prayers—that is moral courage." When he had finished his talk he asked one of the boys to give him an example of moral courage.

"Well, sir," said the lad, "ten bishops were sleeping in a dormitory, and only one jumped into bed without saying his prayers!"

"AREN'T people funny?"

"Yes, if you tell a man that there are 270, 678, 934, 341 stars in the universe he'll believe you—but if a sign says *Fresh Paint*, that same man has to make a personal investigation."

THEN there was the magician who forgot himself during his sawing-a-woman-in-half-routine. "I'm heartbroken," he said. "I'm visiting her at the hospital. She's in Rooms 205 and 206."

THE difference between war and peace is that there never has been war, a really good war.

TENANT: "It's outrageous. I saw two rats fighting in my room last night."

Landlord: "So, what do you want for fifty quids, as monthly rent? Bullfights?"

HERE'S one about the twins who meet after not seeing each other for some months. "You remember me," says one to the other, "I used to be your womb-mate."

LIFE is so complicated that by the time a man finds out what it's all about he has forgotten why he wanted to know.

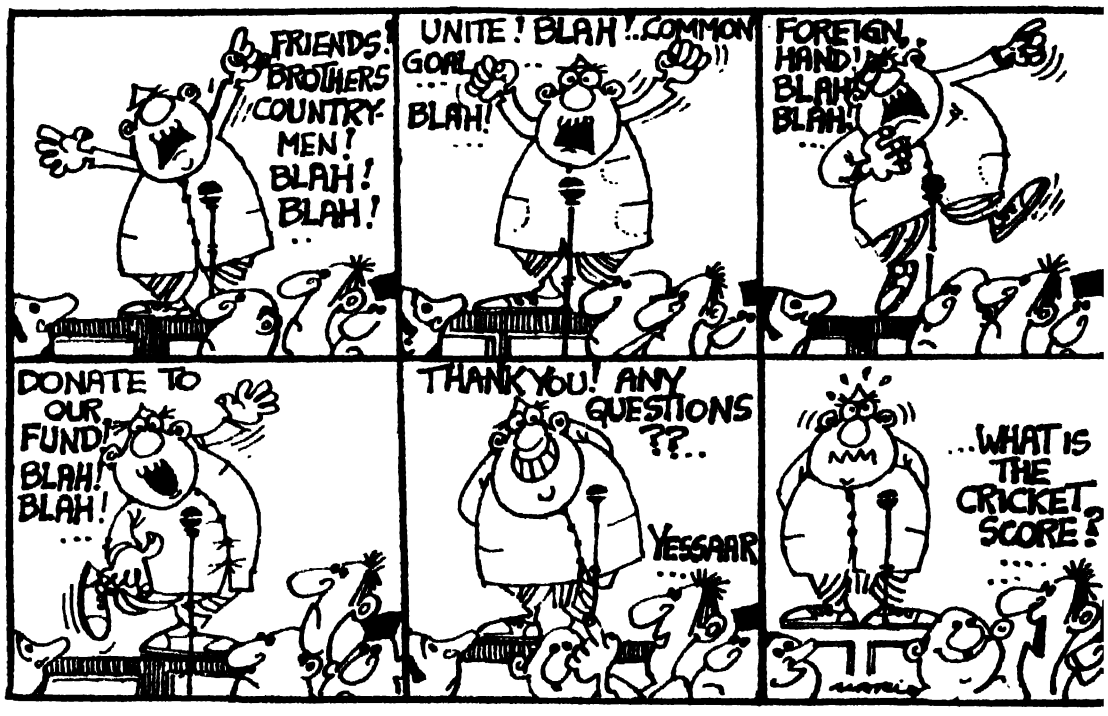
I always throw the laundry in as well!

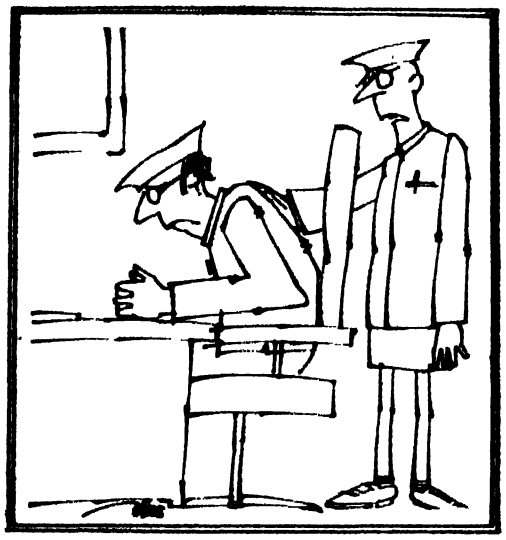
THE doctor was peeved at the young man in the examination room. "Wait a minute. I didn't tell you to open your mouth and say 'Ah'."

"I know you didn't, Doc, but your nurse just walked in."

"WHAT makes you so sure your wife doesn't like you any more?"

"She bought me a deer-skin coat to wear when I go hunting."





Don't worry, Sir, if you've not had a helicopter ride, we hope there will be floods before your term ends.

THE census-taker knocked on Miss Matilda's door. She answered all his questions, until he asked her age. That she refused to tell.

"But they all tells their age to the census-taker," he said.

"Do you mean," Matilda enquired, that Miss Grace and Miss Irene Hill down at the corner told *their* ages?"

"Yes indeed."

"Well," snapped Miss Matilda. "I'm the same."

On the report the census-taker wrote: *One more who is as old as the Hills.*

FIRST Drunk: "We are getting closer to town."

Second Drunk: "How do you know?"

First Drunk: "We're hitting more people."

SAID the wife to her husband:

"Mind escorting me out with garbage so I can say we go out together once in a while?"

THE warden was apologetic "I'm terribly sorry, Larry," he said to the prisoner about to be released, "but we've kept you here a week longer than we should have. Purely accident—our records were confused...and...

"Oh, that's okay, warden," said Larry. "Just add it to my account."

A PREACHER here says that the day will come when kissing will be prohibited."

"Well thank goodness we have our nights."

WHEN your wife gets burned at the seashore, it may be due to the bathing suit another woman is wearing.

I WILL take this case to a higher court," Jeeter's wife told the judge who had just decided in her husband's favour."

"But this is the highest court," the judge said.

"Wrong, Judge," said Jeeter. "You have not met her mother."

MOTHER firefly was talking to her children. "Now be careful," said Mom, "when you're flying indoors. Remember what happened to little Irving, the most brilliant firefly of them all—he backed into a fan and was de-lighted!"

THE husband and wife were arguing as husbands and wives will. "I'm going home to Mom," the wife wailed. "I should have listened to her twenty years ago."

He answered, "Go ahead—she's still talking!"

DICK, aged three did not like soap and water. One day his mother was trying to reason with him. "Surely, you want to be a clean little boy, don't you?"

"Yes," tearfully agreed Dick, "but can't you just dust me?"

POLITE railway commuter (during usual rush hour): "Excuse me, sir, but I fear I am standing under your foot."

BEAU PEEP — the adventures of Legionnaire Beau Peep

SPARE
JUST FIVE MINUTES

What will my son be? What about my daughter's future? Every plan for their future will cost money. Large sums of money!

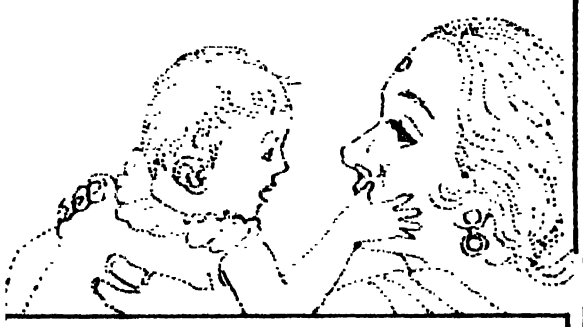
Under our Three-in-One Plan, by saving just for 5 years, you can provide higher education and a good start in life to your children.

THE THREE-TIER PLAN

Step 1

CUMULATIVE DEPOSIT

Start a Cumulative Deposit in Syndicate Bank in the name of your child on his first birthday by saving Rs. 100 per month for 60 months. When the child is six, the Cumulative Deposit would have swelled to Rs. 7791.



CUMULATIVE DEPOSIT

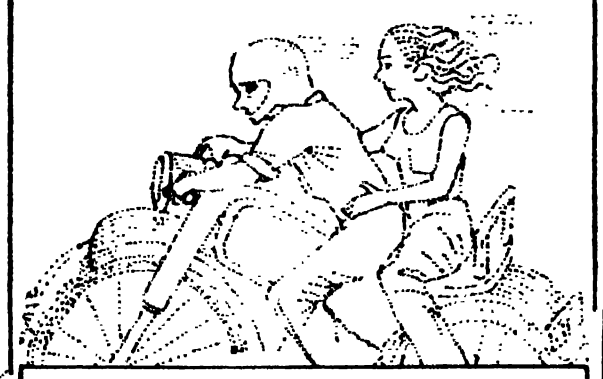
Where the Monthly Deposit is Rs. 100/-

Stipulated Period	Amount paid	Maturity Value
12 Months	Rs. 1200	Rs. 1250.00
36 Months	Rs. 3600	Rs. 4206.00
48 Months	Rs. 4800	Rs. 5911.00
60 Months	Rs. 6000	Rs. 7791.00

Step 2

PRAGATHI CASH CERTIFICATE

You reinvest a sum of Rs. 7440 in a Syndicate Bank Pragathi Cash Certificate for 120 months in your child's name. When your son/ daughter is 16, the value of this certificate would be Rs. 20,000.



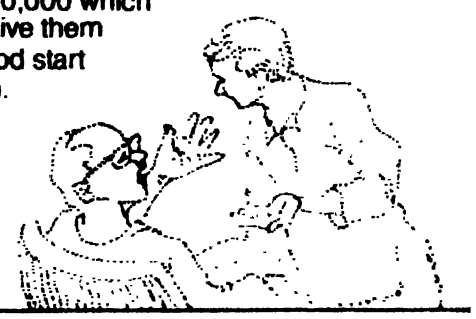
PRAGATHI CASH CERTIFICATE

Deposit of	Period	Value of Pragathi Cash Certificate
Rs. 372.00 ...	120 Months ...	Rs. 1,000
Rs. 7440.00 ...	120 Months ...	Rs. 20,000
Rs. 610.00 ...	60 Months ...	Rs. 1,000
Rs. 6100.00 ...	60 Months ...	Rs. 10,000

Step 3

SOCIAL SECURITY DEPOSIT

You can further reinvest this amount of Rs. 20,000 in a Syndicate Bank Social Security Deposit for 60 months. Your children can get interest income of Rs 165 every month to meet expenses. When they are 21, they will also have a capital of Rs. 20,000 which will give them a good start in life.



SOCIAL SECURITY DEPOSIT

Deposit	Period	Monthly income
Rs. 5,000 ...	60 Months ...	Rs. 41.32
Rs. 10,000 ...	60 Months ...	Rs. 82.64
Rs. 20,000 ...	60 Months ...	Rs. 165.28

If you are a monthly saver, the three-tier plan is practical. If you save in lumpsum, you can opt for Step 2 and 3 to fulfil your ambition of going abroad, owning a vehicle, owning a house.

mea SB 180

Saving for only 5 years makes a world of difference to your children's future.

SYNDICATE BANK
The Bank that cares for people.

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

A hectic though profitable phase in your career will commence, now. Group and social activities will be pleasing. Finances will improve steadily. Vocation and business will progress smoothly. Business deals of Tuesday will fetch higher than usual returns on Wednesday. Reorganise your affairs on Thursday.

AQUARIUS
(Kumbha)
Jan. 20-Feb. 18

The week offers splendid opportunities for making a headway in your career. Curb your involvement in group activities as much as possible. Involvements with members of the opposite sex may lead to criticism from your social circle. News from abroad brings excitement on Sunday.

PISCES
(Mina)
Feb 19-Mar. 20

You will have a luxurious and carefree time. Writers, actors and industrialists will come into the limelight on Monday. New offers or fresh contracts are likely on Tuesday. Wednesday promises inspiration to artists. All pending issues should be cleared by the midweek. Reserve the weekend for business deals.

ARIES
(Mesha)
Mar 21-Apr 20

You will be at the peak of your performance, careerwise. Concentrate on establishing your superiority rather than on financial matters. Remember, discretion is the better part of valour. Spend Sunday on sports and entertainment. Secret information of Monday can be utilised on Thursday.

TAURUS
(Vrishabha)
Apr. 21-May 20

A dull and inactive week. You may feel fed up with what you are doing at the moment and will want a major change. Curb these temptations for the present. A short trip will be pleasing on Monday and will get you a new acquaintance. You will probably feel homesick.

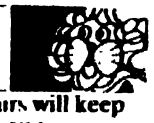
GEMINI
(Mithuna)
May 21-June 20

A week of bitter-sweet experiences. New acquaintances are likely to develop and flourish in the near future, but your family may doubt your sincerity. Sunday is excellent for entertainment. Relatives may demand your time and money. Avoid whimsical and eccentric behaviour on Thursday-Friday.

CANCER
(Kataka)
June 21-July 20

You will be very sensitive about family matters. Your spouse may suddenly have to go out of station and you may feel dejected and lonely. Job activities may prove tiresome. Clear property matters on Sunday. A minor windfall is likely on Monday. Employer employee relations may be strained.

LEO
(Simha)
July 21-Aug. 21



Domestic affairs will keep you occupied. Elders may put you in an awkward position by insisting on finalising deals which you may not be able to accept or reject. Sunday is suitable for negotiations. Entertain even unwanted guests on Monday. Property matters may lead to tension on Tuesday.

VIRGO
(Kanya)
Aug. 22-Sept. 23

There will be overall improvement in your immediate environment. You can divert your attention to business. Try to secure additional finance for immediate use. A bit of good news on Monday will lead to a good business deal on Wednesday. Meet family demands on Friday. Financial gains are likely.

LIBRA
(Tula)
Sept 24-Oct. 23

Don't let yourself be upset by flimsy provocations. Be patient and deal calmly with all issues. You will incur heavy expenses on the domestic front and on guests. A picnic on Thursday is likely to prove expensive. Reserve Friday for taking stock of finances. Do not clash with elders on Saturday.

SCORPIO
(Vrishchika)
Oct. 24-Nov 22

Although you will prosper in business, or service, you must not become slipshod for the next couple of months. No financial problems as you will make timely gains on Thrusday-Friday. Monday-Tuesday are the lucky days of the week when you can push up your interests.

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20

This week the accent is on group activities. Do take the chance to lead a delegation or a team, and prove your merit. Financial gains are likely on Sunday. Make the best use of secret information of Monday for boosting up business activities on Thursday. Friday will be good for speculation

Birthday Forecast

Sunday, December 20

A favourable year for journalists, engineers and sportsmen. Your expertise will be appreciated and you may go abroad in early 1982.
November-December are excellent for finances.

Monday, December 21

Vocationally you will do well this year. Some of you may get positions of distinction by your next birthday. Travel is indicated for teachers and missionaries.

Tuesday, December 22

Despite numerous difficulties you can make rapid strides in your career. Social workers and politicians may face opposition between May-July. The last quarter of 1982 is excellent for all-round activities.

Wednesday, December 23

You will display tremendous initiative and enterprise. You will also add substantially to your existing assets, and overcome opposition. Youngsters will flourish in personal and career affairs.

Thursday, December 24

Handle seniors and elders tactfully to secure their assistance and goodwill. You will enjoy domestic harmony and unity.

Friday, Decembr 25

Despite your practical outlook, you will be attracted to the mystic and mysterious. Your intuition will help you tremendously. Barring April-July, the rest of the year is extremely favourable.

Saturday, December 26

This year you will be extremely progressive and will absorb new thoughts and ideas. You can undertake new ventures on an experimental basis. Heart patients should avoid exertion between July and October.

1.e4, e5, 2.Nc3, Nc6 3.g3, f5 4.d3, Nf6 5.Bg2, Bb4 6.Nge2, 00 7.00, d6 8.Nd5!, Ba5 9.Bg5, Ne7? 10.Bxf6, gxf6 11.Nxe7+, Qxe7 12.exf5, c6 13.g4, h5 14.Ng3, hxg4 15.Qxg4+, Qg7 16.Qc4+, Rf7 17.Kh1!, Bd7 18.Bf3, d5 19.Qa4, Bb6 20.Bh5, Re7 21.Bg6, Qh6 22.Qg4, Kh8 23.Nh5, Rf8 24.Rg1!, Rh7 25.Bxh7, Qxh7 26.Qh4!, Bxf5 27.Rg7, Qh6 28.Rag1, e4.

Position No. 193: 29.Nxf6!!!, 1-0.

2.Nc3) The Vienna Game. The main lines are: 2...Nf6 3.Bc4, Nxe4 4.Qh5, Nd6; 2...Nf6 3.f4, d5; 2...Nf6 3.g3, d5; 2...Nc6 3.Bc4, Bc5; 2...Nc6 3.f4, exf4 (Vienna Gambit).

mas SR 180

THIS WEEK'S BRIDGE

BEGINNERS IMPRESSIVE PLAY

ATUL CHATURVEDI of Lucknow, a regular reader of this column, sent me this remarkable deal. His wife, a self-confessed beginner, and he were East and West, playing Rubber Bridge at home.

	♠ Q732 ♥ J64 ♦ Q1098 ♣ Q9	
♠ K1085 ♥ AKQ ♦ K5 ♣ AK75	N W E S	♠ A4 ♥ 9532 ♦ AJ74 ♣ 643
	♠ J96 ♥ 1087 ♦ 632 ♣ J1082	

The Chaturvedis were playing a system of their own, and the auction proceeded:

West	North	East	South
1NT	P	2D	P
3C	P	3S	P
4H	P	6D	P
P	D'ble	All Pass.	

One No Trump apparently showed a very strong balanced hand, and the next four bids showed the Aces of the bid suit! Since all the Aces were found to be present, Mrs Chaturvedi decided they ought to be in slam, so she bid it. Atul passed, and presumably was surprised when North doubled. His final pass is a compliment to Mrs Chaturvedi's declarer play, a rarity in a mixed partnership. Well done, Atul.

How would you play Six Diamonds on the lead of the Jack of Clubs? Vague squeeze possibilities come immediately to mind, but as you can see, they are doomed - But Mrs Chaturvedi had no problems.

The Ace of Clubs won the first trick, three Hearts were cashed, the Ace of Spades, King and a Spade ruff in hand brought the total to seven tricks. A club to the King and a fourth Spade was ruffed in hand with the *seven* of Diamonds. When this held, declarer was home — the thirteenth Heart was ruffed with dummy's King of Diamonds while North helplessly under-ruffed, and the Ace and Jack of trumps were the eleventh and twelfth tricks!

Actually, I was wrong when I wrote that Mrs Chaturvedi is a "self-confessed beginner"—Atul says she is, but if her play on this hand is anything to go by, her declarer play technique is impressive indeed.

No doubt eagle-eyed readers will have spotted that six No Trumps makes in one of two ways - by ducking a Spade and then squeezing North in Spades and Diamonds, or by making use of the Spade pips to concede only one Spade trick to North. But six Diamonds is certainly the more challenging contract.

Weekly Quiz No 12

NORTH deals and non vulnerable against vulnerable opens 4 Hearts. Your partner, East, doubles, showing good defensive potential, but you are in no mood to exchange 1370 for only 500 or so. Your jump to six Clubs meets with a double from South. North leads the Ace of Hearts, and your partner puts down his dummy with a resigned air. It's now up to you to justify your bashing bidding with dashing play:

West (You)	East
♠ Q53	♠ A10
♥ Void	♥ KJ108
♦ Q64	♦ KJ82
♣ AQJ10432	♣ K76

Lead: Ace of hearts, South discards the six of Spades. You cash the Ace of Clubs, and both follow. Is it to be 1540 in your column, or 200 in theirs?

Weekly Quiz No 13

You are West, playing an apparently ordinary game contract. But against expert defenders, even an ordinary contract may prove awkward:

West	East
♠ 1072	♠ K95
♥ KQJ93	♥ 762
♦ KQ2	♦ AJ4
♣ 43	♣ AKJ8
West	East
	1NT
2C	2D
3H	4H

Yes, three No Trumps might have been better, but your partner prefers that *you* play as many contracts as possible. North leads the three of Spades; South wins the Jack when you play low from dummy, and returns the four Spades to North's Queen. Play on.

Any tie will be broken in favour of the better, complete analysis.

No Entry Fee.

Prize for the first two correct solutions that reach me:

First Prize: One Year's Free Subscription to *Bridge Digest.*

Second Prize: Parksons playing card set, with winner's name printed on the synthetic leather pouch.

Please send your solution to me at: BRIDGE DIGEST, 17, Deccan Gymkhana, Poona - 411 004.

Prize winners' names will be announced in this column.

AVINASH GOKHALE

THIS WEEK'S CHESS

DOUBLE ROOK CHECKMATE

THE White Rooks on g7 and g8 deliver a typical mate when the Black King on h7 has no escape at h6. In position No. 195 Black resigns in the face of such a mate when White offers his Queen and Knight, with a Rook-Knight mate also thrown in. In Position No. 196 the possibility of a Black Queen sacrifice followed by a double Rook mate occurs in the notes.

Rastoja (Finland) - Hess (W. Germany)

Played in the II Telex Olympiad match, 1981.

1.e4, e5, 2.Nc3, Nc6 3.g3, f5 4.d3, Nf6 5.Bg2, Bb4 6.Nge2, 00 7.00, d6 8.Nd5!, Ba5 9.Bg5, Nc7? 10.Bxf6, gxf6 11.Nxe7+, Qxe7 12.exf5, c6 13.g4, h5 14.Ng3, hxg4 15.Qxg4+, Qg7 16.Qc4+, Rf7 17.Kh1!, Bd7 18.Bf3, d5 19.Qa4, Bb6 20.Bh5, Re7 21.Bg6, Qh6 22.Qg4, Kh8 23.Nh5, Rf8 24.Rg1!, Rh7 25.Bxh7, Qxh7 26.Qh4!, Bxf5 27.Rg7, Qh6 28.Rag1, e4.

Position No. 193: 29.Nxf6!!!, 1-0.

2.Nc3) The Vienna Game. The main lines are: 2...Nf6 3.Bc4, Nxe4 4.Qh5, Nd6; 2...Nf6 3.f4, d5; 2...Nf6 3.g3, d5; 2...Nc6 3.Bc4, Bc5; 2...Nc6 3.f4, exf4 (Vienna Gambit).

3...f5) A sort of Vienna Gambit Declined (Reversed).

Bulovchic-Knaak, Novi-Sad 1979, 3...Bc5 4.Bg2, a6 5.Nge2, d6 6.d3, Be6 7.Nd5, h5 8.h3, Qd7 9.Be3, 000 10.Qd2, Nge7 11.a3, Kb8 12.000, Nc8.

5...Bb4) Better seems the modest 5...Be7.

8.Nd5!) Now Black's King Bishop remains idle in the further course of the game. After 8...Nxd5 9.cxd5, Ne7 10.d4 White stands better.

9...Ne7?) This should have been preceded by 9...fxe4 to avoid loss of a Pawn.

12...c6) Preferable was 12...Bxf5 13.Bxb7, Rb8 14.Bd5+, Kh8 15.b3, Bg4.

16...Rf7) 16...d5? would lose two Pawns to 17.Bxd5+ etc., and if 16...Qf7 17.Qa4, Bb6 18.Bf3 as in the game.

24.Rg1!) Threat Rg3-h3 which is even more effective after 24...Bxf2? 25.Rg2.

29.Nxf6!!!) A Knock-out punch threatening mate in two ways; i.e. 29...Qxh4 30.Rg8 etc.; or 29...Rxf6 30.Rg8+, Kh7 31.R1g7 mate;

P. Thispsay - Mohanty:

Played in National "B", Kanpur 1981.

1.e4, c6 2.d4, d5 3.cxd5 4.Bd3, Nf6 5.c3, g6 6.Nf3, Bg7 7.Bf4, 00 8.00, Nc6 9.h3, Bf5 10.Bxf5, gxf5 11.Ne5, Nxe5 12.Bxe5, Nd7 13.Bxg7, Kxg7 14.Qf3?, e6 15.Re1, Qg5 16.Na3?, Nf6 17.Qc2?, Rg8 18.Qe3, f4 19.Qe5, Qh4 20.c4, Kh6! 21.Kh1, Rg6 22.Re2, Rag8 23.f3, Nh5? 24.Kh2, Rg3 25.Rg1, R3g5 26.Qc7, R8g7 27.cxd5, Ng3 28.Rd2, Nf5 29.dxe6...

Position No. 196: 29...Nxd4!! 30.Qc3, Qg3+ 31.Kh1, Nxf3! 32.Qxf3, Qxf3 33.gxf3, Rxg1+ 34.Kh2, fxe6 35.Nc4, Rc1 36.Ne5, Rgc7 37.Rg2, R7c2; 0-1.

4.Bd3) Caro Kann Defence, Exchange Variation. The Panov Attack 4.c4 is more fashionable.

5...g6) The main alternative is 5...Nc6 6.Bf4, Bg4 7.Nf3, e6.

7.00) The MCO column (by transposition) is: 7...Nc6 8.h3, Bf4 9.00, Bxd3 10.Qxd3, 00.

14.Qf3?) Nd2-f3 would offer a better future for the Knight.

17.Qe2?) Gives Black a vital tempo. Correct is 17.Qe3, f4 18.Qe5, when 18...Qh6 (18...Qh4 19.g3!) avoiding exchange of Queens deprives the Black King of the square h6.

21...Rg6!) If 21...Qxf2 22.Re2 (not 22.Qxf6 ?, Rg6), Qh4 23.Rf1.

23...Nh5?) Black missies here 23...Rxg2! 24.Rxg2, (or he must give up the Queen by 24.Qxf6+) Qxh3 25.Rh2, Qxf3+ and mates.

29...Nxd4!!) If 30.Rxd4?, Qg6+ 31.Kh1, Qxh6+ !! 32.gxh3, Rxg1+ 33.Kh2, R7g2 mate.

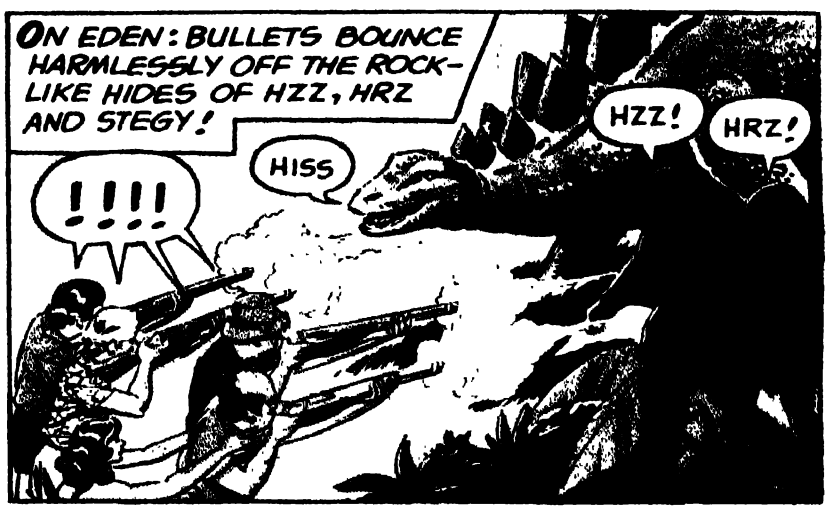
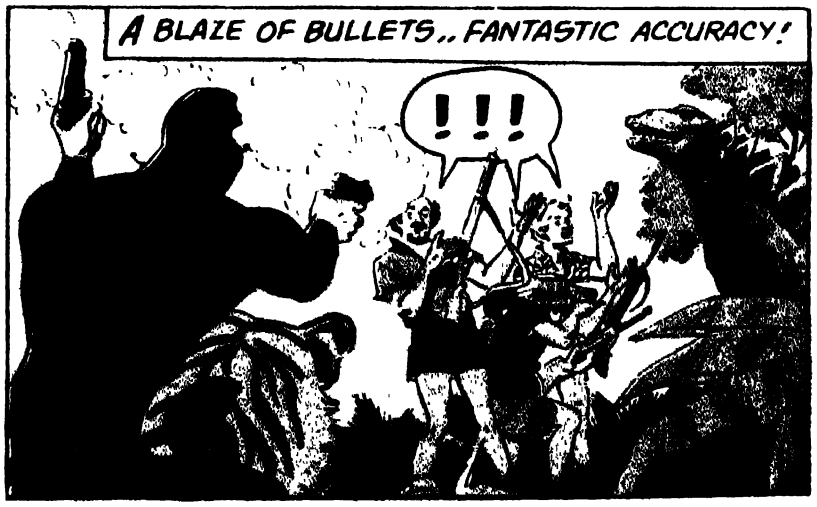
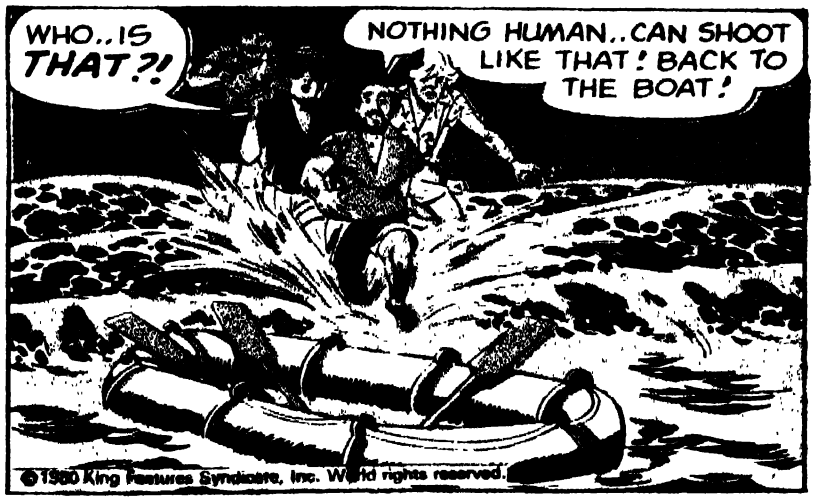
The PHANTOM

By LEE FALK and SY BARRY



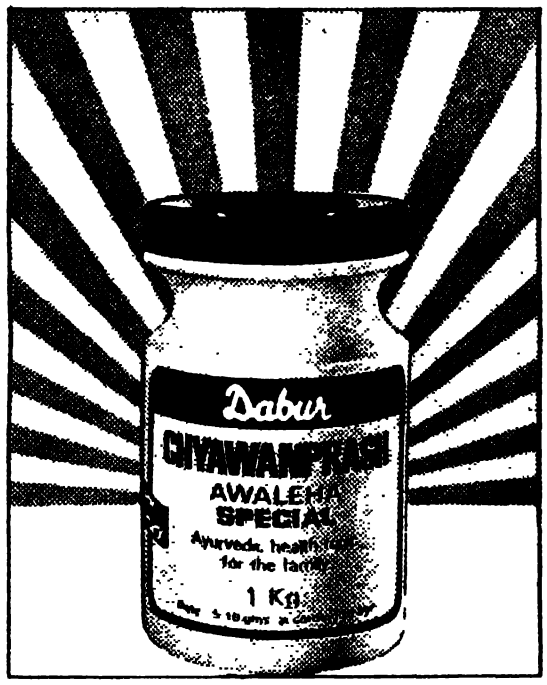




Do you need a health tonic...if you're in good health?
What is the secret of amla ?
What was the "elixir of life" ?

Startling facts about the world's best known ayurvedic tonic

Dabur Chyawanprash



The elixir of life

Chyawanprash literally means "food for Chyawan Rishi". The legend goes that Chyawanprash was first created 3,000 years ago as a health food by the physicians of the Gods.

So amazing were its powers, that the rishis often called it "Jeevan" or "the elixir of life"

The rishis believed that it not only built up resistance and kept body tissues young...it also kept the mind alert and active.

3,000 years later... Dabur Chyawanprash

For centuries, Chyawanprash remained a secret of the rishis and a few remote ashrams.

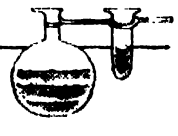
It was only in 1884, when Dabur set up their first ayurvedic plant, that Chyawanprash became easily available to everyone.

Dabur Chyawanprash is made from over 40 carefully selected herbs and ingredients. The most important of these is fresh amla. It also contains Dashmool (10 roots), Ashtawarg (8 herbs), til oil, ghee, sugar and spices.

THE SECRET OF AMLA

It was the early ayurveds who first discovered that amla is nature's best defence against illness. It is the richest known source of natural Vitamin C. In fact, amla juice contains 20 times more Vitamin C than orange juice!

An amazing medical discovery



For years people felt that all Vitamin C did was prevent colds.

It was Dr. Linus Pauling, two-time winner of the Nobel Prize, who found that Vitamin C revitalizes body tissues and slows down the ageing process. It also builds up your natural resistance against coughs and other common ailments.

DR. ASHOK MAJUMDAR, RENOWNED AYURVEDIC EXPERT SAYS :

"I strongly recommend Dabur Chyawanprash to all my patients. It has a wide range of long-term benefits for both young and old."

The complete health food for your family

Dabur Chyawanprash is more than just a health tonic—it's a complete health food for everyone in your family.

It builds up the resistance of the body and protects it from infections; it tones up the muscles and helps in the growth of tissues; it helps to fully utilise the proteins in the body; it keeps you active and full of energy.

Dabur Chyawanprash is manufactured in fully-automated plants by the world's largest manufacturers of ayurvedic products.

Dabur Chyawanprash—your daily ounce of prevention

Ayurveda has always believed that prevention is better than cure. By building up the body's natural resistance to infection, Dabur Chyawanprash helps to keep your family healthy.

Make Dabur Chyawanprash a daily health habit for everyone in your family.

Does a healthy person need a health tonic ?

Far too many people believe that a health tonic is meant only for those who are sick.

The fact is, that a good health tonic acts as a preventive. It can actually build up the body's resistance and keep you from falling ill easily.

A health tonic therefore, should be taken by everyone in the family.

Why is a natural health tonic better ?

When you take vitamins and minerals in their natural form, they are more easily absorbed by the body.

Because there are absolutely no chemicals or artificial additives, a natural health tonic is completely free from side effects and is safer for children.

Dabur CHYAWANPRASH

Your family's natural health tonic

Golden Jubilee Year Presentation to the Peerless Certificate Holders

To celebrate the commencement of Golden Jubilee Year, the "Peerless" is happy to announce that in respect of Endowment Certificates sold on and from 1st October 1981, the Bonus Rates for the periods from 15 years upto 30 years under Table 2 only, stand increased at the following rates :-

The Last Maharajas
& seven more titles for book collectors

SAVING THE TIGER
By Guy Mountfort
Illustrations : 89 colour, 33 bBw. Hard cover. 120 pp.
Rs. 159.00
Recommended by the World Wildlife Fund International, with a foreword by their Chairman, Sir Peter Scott.

RAJASTHAN
By Francis Brunel
Full colour.Hard cover. 272 pp.
Rs. 295.00
'In the ultimate analysis, Brunel's book is not so much a voyage of rediscovery for the author, as it is for the reader.'
India Today

SPIRIT OF ASIA
By Michael Mecintyre
Full colour. Hard cover. 288 pp.
Rs. 302.25
SPIRIT OF ASIA is a reflection of the artist's interest in the artistic achievements and cultural life in Asia, where art is a part of daily life.

DELHI
By Francis Brunel
Full colour.Hard cover.164 pp.
Rs. 200.00
'80 of the 160 pages are in colour and they tell us more about Delhi than any text could do.'
The Illustrated Weekly of India

LADAKH : The Trans-Himalayan Kingdom
By Ramesh Bedi & Rajesh Bedi
Full colour. Hard cover.192 pp.
Rs. 295.00
The lavish colour illustrations together with text help recreate the fascinating experience that is Ladakh.

INDIAN MINIATURE PAINTING
By M.S. Randhawa
Illustrations : 52 colour, 16 bBw. Hard cover. 128 pp.
Rs. 95.00
'...a worthwhile addition to any library.'
Sunday

INDIA
By Nicole Menant & Jean-Louis Nou
Illustrations : 68 colour, 64 bBw. Hard cover. 152 pp.
Rs. 210.00
'...the book will make a lovely gift.'
The Hindustan Times

THE LAST MAHARAJAS
By Jean-Louis Nou & Jacques Pouchepadass
Illustrations : 97 colour, 36 antique pictures.
188 pp. Rs. 450.00
From the enchanted Fairyland to the casinos, the maharajas represented the phantasm of magic riches. The theme of this book opens vistas on to two worlds, both enchanted : the world of dreams and the world of memory.
The photographs rediscover the astonishment, the wonders and pleasures of a traveller of Edwardian times.

Don't let a cold ruin your day.

A cold can be relieved

There is a way to relieve a runny nose or blocked nose, heavy head, sore throat and chest congestion—all those symptoms that can spoil the best of days.

Fight it with a colds remedy

It's not enough to treat it like you would treat any other ailment. Use a special colds medicine that works simultaneously on all affected areas.

Coldarin is only for colds

Coldarin relieves all the symptoms that bring you down. It has special ingredients that act together against all cold-affected areas. Plus Vitamin C to build your resistance. When you have a cold, it makes sense to treat it like a cold.

COLDARIN

Specially formulated for colds

CASRC-64-303

"My husband was the only earning member in my family, till I found out about UcoPlan"

I didn't ever imagine that savings could be converted into an interesting and additional source of income. Thanks to UCOPLAN—the free, financial advisory service. UCOPLAN has fitted my savings capacity to my goals and has assured me maximum earnings. In a two step plan.

Step One

I save Rs. 5 per day. At the end of every month I deposit Rs. 150 in a UCOBANK recurring deposit which has been opened for a period of 60 months.

At the end of this period see what I stand to gain :

Savings —Rs.9000.00
Earnings—Rs.11,686.50

Step Two

As per UCOPLAN, on the 61st month, I will round off the above figure to Rs. 11,800 and shall reinvest for another 60 months.

In just 10 years (time flies you know), see how much richer I shall be :

Savings —Rs.9113.50
Earnings—Rs.19,340.20

There's a UCOPLAN for your future too. Drop by any UCOBANK branch today and ask for details. UCOPLAN has a wide choice of lucrative ways to make your money work.

Because both you and your husband have worked hard for it.

United Commercial Bank

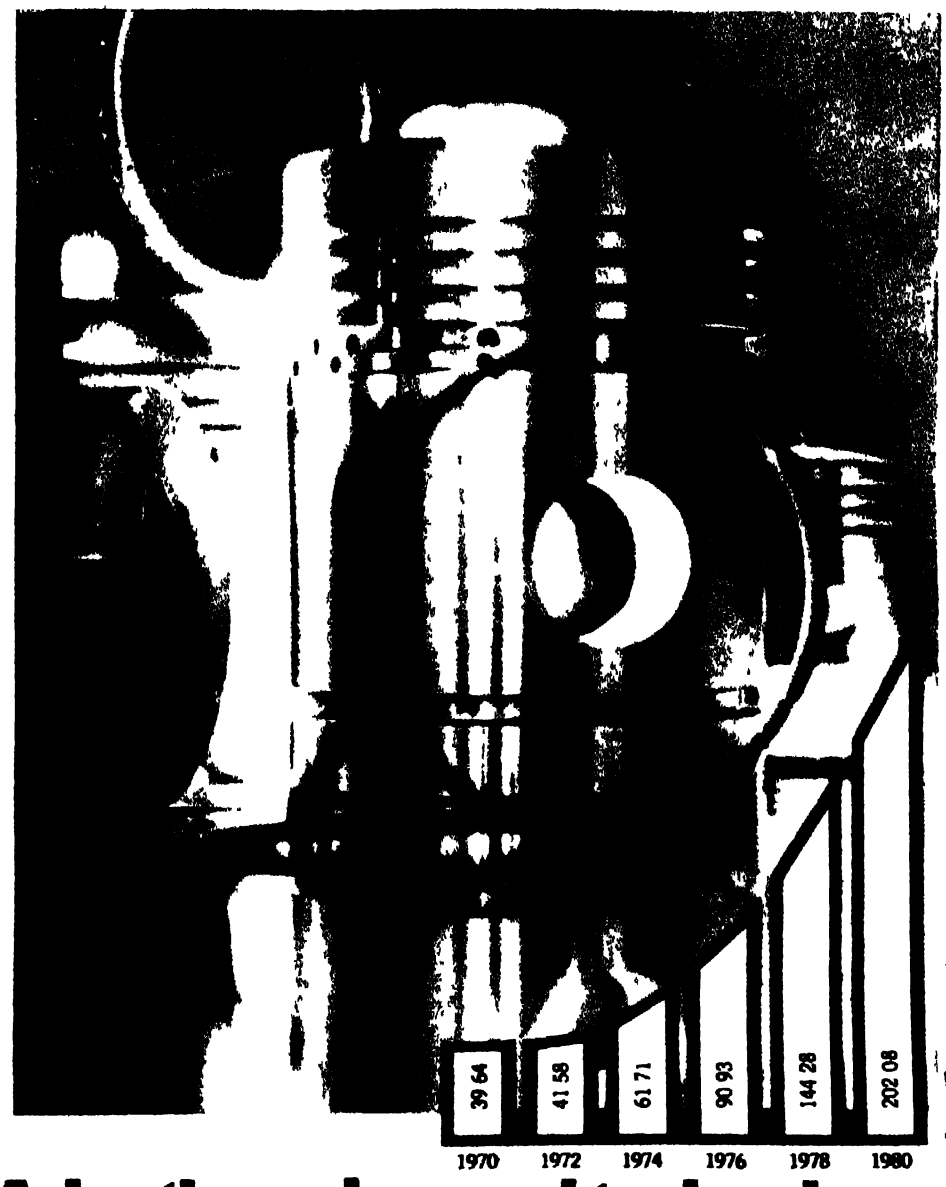
ESCORTS PROFESSIONALISM SUCCEEDS EVEN IN OTHER COMPANIES

ESCOR

Manufacturing world-class automotive ancillaries which are fitted as original equipment in over 70% of Indian vehicles.

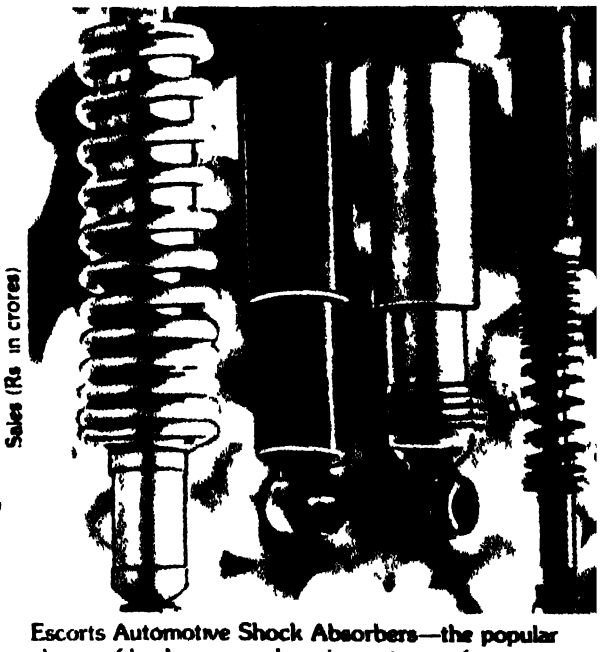


Escorts' preoccupation with precision finds its best example in automotive ancillary products.

That is why the components marketed by Escorts (MAHLE Pistons, GOETZE Rings & Cylinder Liners, ESCORTS Piston Pins, Shock Absorbers, Wheel Rims, etc.) are used as original equipment in over 70% of the vehicles made by India's automotive industry. These include leading names like TATA, Kirloskar, Bajaj, Premier Automobiles, Tempo, Hindustan Motors, Ashok Leyland, Ford, Mahindra & Mahindra, and Eicher.

Escorts is also planning for the future and is geared up to produce, for the first time in India, a range of large diameter pistons and rings for marine, industrial and locomotive applications. Also, a sophisticated range of ring carrier pistons and profile ground rings, etc. to meet the needs of India's rapidly advancing automotive technology.

Adapting advanced technology relevant to India's core needs.



Escorts Automotive Shock Absorbers—the popular choice of leading original equipment manufacturers

NORVICSUN

In millions of homes, good mornings begin like this.

With rich, strong Brooke Bond Red Label tea.
Red Label gives total satisfaction and great value for money.
And the consistent quality, the purity and garden fresh
taste only packaged teas can give. That's why
more tea drinkers trust Red Label than any other tea.
Day after day, year after year.

Good tea. Good value. Any time.

Brooke Bond Red Label
India's largest selling packet leaf tea.

HTC-881-473

One out of fifty. Would you call that a good score?

We would.
Because 1 out of every 50 Indians holds a Peerless Certificate.

It was not always so. But we had implicit faith in our Social Welfare Schemes which were meant to mobilise small savings among men of small means. The initial response was slow, but soon the soundness of the schemes attracted more and more people. Aimed mainly to benefit our rural brethren, the message of hope that these schemes contained was taken deep into the villages by our fieldworkers. Slowly, interest started building. As more and more people joined our fold, word spread that here was a safe and 100% secure plan to save money and earn interest. The list of investors became longer and longer.

That the uniqueness and reliability of the schemes have met total public acceptance is illustrated by these figures. In 1971, the schemes had attracted 26,363 persons. In 1981 alone, 24,45,591 persons became certificate-holders. This year we have already crossed the magic cumulative figure of 1 crore. Eloquent testimony to the public's faith in Peerless.

In this Golden Jubilee year the Peerless Team renews a pledge—to work towards the greater good of the common man and our motherland.

LETTERS TO THE EDITOR

Bull's Eye

Sir—May I congratulate you? I fully agree with your assessment of the Andhra scene (November 28). The WEEKLY for once came right on the dot! Do keep it up!

S. Somaskandan
Hyderabad

Sir—The article "Poll Prospects In Andhra Pradesh" by K. C. Khanna is one-sided—favouring the Cong (I). The Editor's claim that the former Chief Ministers, Anjiah and Venkataram, are not going to commit political harakiri is the Best Joke of 1982. Both of them showed scant self-respect when one was publicly scolded by Rajeev Gandhi and the other's attempt to get an interview to talk to Madam during his last days as CM was curtly rebuffed. The top man in Telugu cinema, I think, will be able to wrest the No 1 position in state politics.

P. Rahul
Hyderabad

Sir—After seeing the excellent paintings of Maneka charming Vishwamitra in two successive issues of the WEEKLY (November 21 and 28), may I ask, will Maneka (Gandhi) charm the voters of Andhra and Karnataka too?

Malcolm J. Reeves
Gwalior

Winsome Vinya

Sir—"Homage to Vinya" by R. G. K. (November 28) was a classic evocation of the dedicated saint. Let us work for the ideals preached and propounded by him.

Indrasen Chaturvedi
Gangapur City

Sir—Vinoba's tragedy was that he was dealing with people who were not averse to cheating him. My own uncle donated him some lands which were either barren or locked in litigation. One cannot blame saints like "Vinya" who are like lotuses born, once in a blue moon, in stagnant pools of corruption!

U. S. Iyer
Madras

From Rut To Riot

Sir—After reading Sheela Barse's article, "The Agony Of Meerut" (November 28), I feel the name of the town should be changed to Meeriot!

Manoj Chadha
Gurgaon

Sir—Sheela Barse does not make herself quite clear when she writes that... "the police had arrested 108 men for a murderous assault on one man". Does she mean that for the murder of one person, only one man must be arrested? Even in the Gandhi murder case, when the assailant had testified that he alone had murdered Gandhi, thousands were arrested.

How do the police know who actually murdered the pujari Rambhool? Careless statements such as these make the job of the authorities much more difficult.

Arvind Ghosh
Hyderabad

Sir—Is it not the hidden hand of Godse's ghost which is operating against the Muslim minority in the land of Gandhi?

S. Ibrahim
Pune

The Gordian Knot

Sir—Nani Palkhivala's article ("The State Of The Nation", November 21) places our national character in due perspective. We are to blame for the rot. But if nearly all Indians are dishonest, how can we save the country? Still more, how can the honest minority beat the unscrupulous majority which holds most of the trumpcards?

Umesh Chandra Pande
Nainital

Sir—With selfish politicians at the helm of affairs and ignorant, indifferent, passive and pessimistic citizens, the state of the nation is indeed dismal.

Nazir Ahmed
Bangalore

Sir—In my opinion, the root cause of all our problems can be traced back to two fundamental errors made by our planners: one, putting excessive faith in Karl Marx and second totally neglecting Thomas Malthus.

We have undoubtedly made considerable progress in the last thirty years but the growth of the population has made a near-nonsense of it all. This is a sign of national ignorance and poverty, not vitality and progress. In 1950, our population was 340 million and was increasing annually by 7 million net. Today there are 700 million Indians (increasing by 15 million every year)! This can frighten even the most optimistic among us. There is neither Democracy, nor Socialism in the country but only mass hunger, misery and frustration.

H. S. Desai
Bombay

Ra! Ra!

Sir—The story "The Marathon At New Delhi" (November 14) was a brilliant piece of narrative which made us feel as if we were running the race.

The portrayal of Sudesh epitomises the agony sportsmen go through while competing and their trials and tribulations. Please congratulate the author on my behalf.

Lokesh Dixit
Hyderabad

Of Zia And Xenophobia

Sir—Sitanshu Das has been irrational in criticising Gen Zia and his martial law in "Why Zia's Stop-Over?" (November 21). Although the continuance of the martial law in Pakistan might seem unpleasant to some of us here in India, we have no *locus standi* in the matter. India is a democracy but it is not in the business of promoting democracy elsewhere.

K.N. Tyagi
Meerut

Constitutional Conundrum

Sir—In his strenuous attempt to portray Nehru as the godfather of the Indian Constitution (November 28) Subhash Kashyap conveniently forgets that Nehru was the professor and promoter of values that he held in high esteem and that were good for his time. For example, let us consider Nehru's interests in Fundamental Rights. Having been denied his political rights in the British reign and having always fought for them, Nehru thought it fit that the people enjoy political rights. Consequently, Nehru's fundamental rights are essentially political rights which lack even the slightest vestige of socio-economic rights. The latter, embodied in the Directive Principles of State Policy, are only pious sentiments today—non-enforceable and non-justiciable. Similarly, in the area of minority rights and social reform, Nehru entertained high ideals that could not be sustained by his mediocre successors. Whether, in this context, Nehru misjudged the calibre of his successors is a moot question.

Nehru, of course, was wrong in imagining that parliamentary democracy would take the form of an economic democracy, more so, since he had deprived the people of the most elementary of economic rights. And, parliamentary democracy has survived very much in an era of perverted politics in which politicians look after their own pockets rather than the economy of the nation.

Simanta Mohanty
Bhubaneshwar

Conned Consumers

Sir—The article "Consumers Of India Unite!" (November 21) is timely. It is hardly surprising that the consumers are being cheated to the tune of Rs 2,000 crores annually by the traders, despite the Essential Commodities Act and other laws, because the politicians are busy feathering their own nests. Governmental machinery remains inert for obvious reasons. What India needs is a Ralph Nader.

N.A.
Bangalore

Andropov's Arm

Sir—"Leonid Brezhnev And After" (November 21) was impressive. Mr Andropov can probably afford to rock the boat violently because he has the support of the Politbureau. After assuming the office of General Secretary of the Communist Party, he said: "It is useless to beg for peace from the imperialists. Peace can only be upheld if we rely on the invincible might of the Soviet Armed Forces."

Secular Hindus

Sir—The statement that Nehru "made it a fashion for the Hindus to be secular" ("Ethos Of Power," November 21) is patently mischievous.

Hindu kings not only welcomed the followers of other faiths, persecuted or otherwise, to settle in India but even constructed synagogues, mosques and churches for them. Nehru was secular *because* he was a Hindu. Only a microscopic minority among the Hindus are fanatical and that, too, as a result of reaction.

L. Jaggi
Nagpur

Sir—In his panegyric on Nehru and his daughter, Mr P. Ramaswamy turns a blind eye to the plight of the

vast majority of the people in this hapless country.

Nehru's concern for the suffering masses was at least genuine, though even he failed to translate it into action. As for his daughter, she is so egotistic that she has thought for none other than herself, and so vain is she that it is only her own image that she has been trying to project. In the process, she has helped to build up "a power elite that has developed a vested interest in the creation of destitutes" (J.D. Sethi). They constitute her vote banks.

Ms Vimala Rao

Mirage In Mizoram

Sir—Anthony Mascarenhas has graphically depicted the hopeless plight of Laldenga and his "liberation" movement ("A Mizo Among The Marigolds", November 28). Laldenga's diminishing charisma and dwindling following is evident from the mass desertions and the poor influx to the MNA. Those stragglers who are still in their jungle hide-outs, have no other alternative. If they emerge, their heads will roll. Many criminal cases are pending against them.

R. N. Shanbhag

Trim The Fat

Sir—Dr Hannan Ezekiel has rightly laid stress on the urgency of India's economic condition ("Is India Going Bankrupt?", November 21).

There is but one way out, as suggested by Ezekiel: to cut down grand projects. Simultaneously, we should go all out to increase food production by improving minor irrigation and by encouraging people into profitable and productive ventures such as dairy and poultry farming. We should also improve the law-and-order situation to enable educated people or people with small capital to venture into rural areas.

Above all, we must rid ourselves of our penchant for the Soviet-type socialism which creats a giant bureaucracy.

Showbiz Showdown

We seem to have reached a very important point in Hindi cinema, reached the crossroads as it were. The commercial cinema has had a bad shock this year with some of the biggest flops in recent times. Audience tastes seem to be changing at last, an impression reinforced by the success of the middle-of-the-road cinema. And now with the National Film Development Corporation threatening to withdraw its support of the art cinema, the atmosphere in the Bombay film industry is electric. Anjali Ewing writes about the impending showdown.

For Our Eyes Only

India is getting films from the rubbish heap of world cinema. At any given time there is a plethora of films about the martial arts, vulgar sex comedies, spy and crime thrillers and B-grade adventures. The few good movies that do enter the country are not given a chance. Besides the Indian audiences who are responsible for the popularity of such pulp, the exhibitors are also responsible to a very large extent. Lalitha Krishna makes a case for getting better films into the country.

In Pakistan Today

The Power-Mad Generals

by Air Marshal Asghar Khan

No Pakistani leader has campaigned with greater zeal, consistency and dedication for the restoration of democratic rights in his country than Air Marshal Asghar Khan. As Chief of the Pakistan Air Force and later as President of Pakistan International Airlines, he watched the working of Gen Ayub Khan's dictatorship at close quarters and repeatedly warned the Government against excesses. In 1970, he founded the Tehrik-i-Istiqlal to crusade against Yahya Khan's suicidal authoritarianism. He recognised Zulfikar Ali Bhutto's right as the elected representative of the people to form the government and keep the Generals at bay but refused to join Bhutto's Ministry because he felt, with more than ample justification, that Bhutto was both autocratic and unprincipled. Later, he spurned similar blandishments from Gen Zia ul Haq and was once again incarcerated for his pains. He is not only a vigorous political activist; he is also a sensitive observer of Pakistan's political scene and a perceptive thinker. His credo—reduction of the prevailing social and economic disparities at home within a democratic framework, rapid modernisation, sturdy independence from the two Super Powers and a halt to the arms race in the subcontinent—represents the best hope for the unity, integrity and progress of Pakistan. If he lives—and is allowed to live by the unholy combine of obscurantist mullahs in long robes and the selfish mullahs in khaki—he may well be called upon to hold the reins of power in Islamabad once Pakistan comes to terms with its social compulsions and geopolitical realities. Be that as it may, in a seminal book, *Generals in Politics*, he dwells in depth and without blinkers on Pakistan's recent past, unenviable present and uncertain future. His analysis adds up to a stirring indictment of the military raj in Pakistan. It is also perhaps the best assessment by a Pakistani of the forces at work in that hapless country since Partition. The manuscript was smuggled out to the US and it will soon be published by Vikas. It is essential reading for a true understanding of a nation with which we have fought three wars. The *Weekly* begins on this page the first of a series of selected excerpts from the book.

K.C.K.

WHILE announcing the indefinite postponement of the November 1979 elections, Zia ul Haq said that, from then on, "real martial law" would operate in the country. Pakistan had therefore, reached the ultimate in military rule. There was nothing more that the people had to fear. Along with this new terminology, Zia ul Haq announced that the aims of his regime were the establishment of law and order rehabilitation of the economy curbing of social evils and the ushering in of an Islamic order.

The real martial law of Zia ul Haq started as most martial laws do—with a show of strength and efficiency but since this one was 'real' people were subject to more than ordinary inconveniences. Lime was sprinkled in the drains incidentally this is almost the first thing that is done when martial law comes to Pakistan—and there was insistence on price-lists in shops cleanliness in restaurants and gauze netting on meat in butchers' shops. Checking of vehicles and driving licences and punishments for traffic offences were more conscientiously carried out and young army officers were to be seen throwing their weight around. Even if they did their job courteously stories began to circulate about their excesses. One such story was of a Major who when he found that a vehicle's registration had expired ordered the chauffeur to slap the owner of the car sitting in the rear.

Apart from such relatively harmless pursuits the army tried to control the prices of commodities. This exercise proved to be rather complicated for the military mind. The results were obvious. Goods disappeared from the market. The next step was as expected. Raids were started on hoarders and blackmarketeers and with it began the flogging of culprits. Because of the peculiar conditions obtaining in different areas, prices of many commodities, particularly of items of daily consumption, had to be fixed districtwise. When, therefore the prices of poultry and eggs, or of vegetables and meat, in one district were fixed higher than those in an adjoining district, these items found their way to the district with the higher prices, causing shortages where the the prices were lower. No amount of flogging could put this right and the public suffered as a consequence. Shortages, therefore, became the norm and, as a result, prices rose steeply.

Improvements in the law-and-order situation and eradication of social evils proved to be equally complicated. Since most of these problems are created as a consequence of the economic conditions and the social environment, their eradication could not be accomplished without a fundamental change in the approach of the Government towards these issues. With the increased severity in the censorship of the press and with the martial law authorities exercising the

ZULFIKAR ALI BHUTTO

powers of flogging, search of houses confiscation of property and imprisonment without having to give reasons it would be a brave person who would criticise the administration of corruption or misconduct.

Social Ills

In the absence of Assemblies and elected representatives of the people and with a muzzled press there was no check on the Government's expenditure. Non-productive Government expenditure which was Rs 9.8 billion in 1976-77 exceeded Rs 25 billion in 1981-82 and the economy showed rapid deterioration. With the martial law authorities the police and the bureaucracy virtually above the law social ills, instead of decreasing began to increase. Bribery and corruption became more rampant and the law-and-order situation became worse. With overcensorship of films, VCRs and blue films became more common and when dancing in films was banned people found their way to hideouts and disreputable houses where everything was done secretly. Zia ul Haq's real martial law had therefore, far from improving the economy, dealt a blow to it, which was reflected in an unprecedented rise in prices.

By keeping the vocal elements behind the bars for most of this period, Zia ul Haq was able to suppress the public sufficiently to give the appearance of relative peace and tranquility. One did not, however, have to scratch too far below the surface to see the reality.

Having seen the strength of the Pakistan National Alliance's movement against Zulfikar Ali Bhutto and being convinced that this was the result of the people's attachment to Islam, Zia ul Haq exploited religion to the full to impress the people with his love for and devotion to Islam. This found expression in a greater use of the media for religious programmes, introduction of *Zakat* and *Ushr** and opening of profit-and-loss counters in

YAHYA KHAN

banks. Greater emphasis was also laid on the ritualistic aspects of religion. Severer punishments were ordered for those not observing the sanctity of the holy month of Ramazan.

These measures undoubtedly provided an Islamic veneer to an otherwise unIslamic military regime. For no regime that is repressive in character and fails to guarantee human rights and liberty can even be remotely Islamic. No society which is based on the exploitation of man, in which the rich are encouraged to get richer and the poor are daily becoming poorer, can be Islamic. A system that allows the rulers to spend the people's hard-earned wealth without giving them or their chosen representatives an opportunity to question the ruler's actions cannot be considered to be in keeping with the teachings of this great religion. In a country, where the majority are living below subsistence level, where 85% of the people cannot get clean water to drink*, the lavish expenditure of the rulers on themselves is a far cry from the Islamic concept of equality.

Since this biased and reactionary interpretation of an Islamic economic order suited the exploiting class, it lined up behind the military regime of Zia ul Haq. Pakistan was going back to the early 1960s, when 22 families had captured its business and industry and the gap between the rich and the poor had widened. With relatively small investments of Rs 200,000 to 300,000, loans of over Rs 100 million of the public money from nationalised banks were being advanced to enable the relatives of the ruling oligarchy to set up industries in the private sector. Overinvoicing was rampant whereby importers, who were given foreign exchange by the Government for the import of machinery, showed higher prices of equipment than what they had actually paid: they were thus able to keep large sums in foreign countries. The profits they made in business and industry were also siphoned off abroad. The experience of what this class called the "Golden Days" of Ayub Khan was being repeated.

Islamic Order Indeed!

Once Ayub Khan described his 1962 Constitution as an ideal combination of the virtues of both the Presidential and the Parliamentary system of government. In actual fact, it was just the reverse. The situation today is analogous. People are being made to believe that the introduction of the so-called Islamic order by the present Government would bring them political rights and economic benefits. In actual practice, what we have seen after the enforcement of the present order in the name of Islam has deprived the people of the good points of both the tree and the authoritarian regime. The people have been left neither with fundamental rights nor an order free of economic exploitation. Today, they have the worst of both the worlds.

As in Ayub Khan's days, the outside world, motivated by its narrow selfish interests, is not concerned with the plight of the people of Pakistan. With the backing of rich Muslim countries and by exploiting the Afghan situation to its advantage, the regime has been assured of economic support from the international aid-giving agencies. In the US, President Reagan's Republican Administration, on the lookout for dictators who fitted into their global plans, has found in Zia ul Haq and his junta people deserving of their support. Zia ul Haq, therefore, entered the 6th year of his rule with the backing of regimes in the Middle East similarly placed as his regime and with the certainty that the Western world led by the United States would support him with economic and military assistance. He knew that they would do this so long as he continued to stand up as a self-styled crusader of Islam against the forces of progress within and the threat, as they saw it, to their interests in the area.

The traditions which the courts in Pakistan had inherited had eroded with time but they had never been reduced to the level of complete subservience to the dictates of a military ruler as they were by Zia ul Haq on March 25, 1981. A petition had been filed on my behalf in the Lahore High Court, questioning the legality of Zia ul Haq's martial law. I had also filed a statement on February 2, 1980, praying that, since Zia ul Haq had not fulfilled the conditions prescribed by the Supreme Court of Pakistan in its judgment of November 10, 1977—in which only conditional validation was granted to him—his mandate to rule should be deemed to have ended. I had asked that all action taken by him to curtail basic human rights and freedom, restrict the powers of the courts, ban political parties, seal their offices, freeze their funds and restrain political activity should be declared void and of no legal effect. I had also requested the court that arrangements should be ordered for holding elections in accordance with the 1973 Constitution. Similar petitions were filed by me in the High Courts of Sind, NWFP and Baluchistan.

The hearing of the case in the Lahore High Court was completed by the third week of May 1980, when the court reserved its judgment. Since the case was of considerable constitutional importance, it attracted a great deal of public interest. The verdict was, therefore, eagerly awaited by the public when, on May 26, 1980, Zia ul Haq transferred the Chief Justice of the Lahore High Court to the Supreme Court, broke up the Bench that had heard my petition and forbade the Lahore High Court from publishing their judgment. The inference was obvious: the decision that the Lahore Court was about to announce was not favourable to the martial law regime. The petitions in the High Courts of Sind, NWFP and Baluchistan, which were pending, were never heard.

Along with this serious blow to the Judiciary, Zia ul Haq forbade anyone from addressing Bar Associations in the country. And the Bar Associations were forbidden from inviting anyone to address them. Anyone who addressed lawyers or members of a Bar Association, who invited someone to speak to them, was liable to 14 years' rigorous imprisonment, 25 lashes and confiscation of property.

Having been released 5 weeks earlier, I was at the time on a tour of Sind to address the Bar Associations of the province. I decided to disregard this latest draconian order, so did the lawyers of Hyderabad, who had invited me to address them the following day. As a consequence of my decision to exercise the right to speak in Zia ul Haq's "Islamic" society, I was rearrested on May 29, 1980, and moved back from the larger prison that Pakistan had become to the smaller prison at Abbottabad. →

AYUB KHAN

ISKANDER MIRZA (left) *and his wife* (right) *descend the steps of Sadabad Palace in Tehran, along with the Shah of Iran* (in uniform) *and Empress Soraiya, during a stopover on Gen Mirza's flight from Karachi to Ankara. *Zakat in Pakistan is a 2½% annual tax on financial assets held by non-Shia Muslims. The amount so collected is meant to be used on the destitute.

*Ushr is a 5% tax on gross agricultural produce.

*Minister for Local Government and Rural Development, *Muslim*, March 18, 1982, Page 8.

The courts, subdued and frightened, continued to stretch the by now famous law of necessity to perform their dubious role under a military regime that had now shed all pretence of legality. Their nemesis was, however, yet to come On March 25, 1981, the judges of the Supreme Court of Pakistan and the High Courts were asked to take a new oath of office. This oath took away from the courts what little freedom they still had: they could not question the legality of any martial law order nor could they interpret it. Hitherto, they had been under oath to perform their functions under the 1973 Constitution, as amended by martial law orders from time to time.

This measure of recognising the martial law amendments to the Constitution had been permitted by the Supreme Court ruling, on the law of necessity, passed on October 27, 1958, by a Bench of the Supreme Court under Chief Justice Mohammad Munir in the State vs Dosso Case. It had been upheld by the Supreme Court in the Nusrat Bhutto Case in November 1977 by a Bench presided over by Chief Justice Sheikh Anwar ul Haq. The new oath required them to swear loyalty to the Chief Martial Law Administrator or, in effect, to the Chief of the Army Staff.

Policy Of 'Pick And Choose'

Although the conscience of the courts had been dulled and they had begun to rationalise things, this latest development was too much for some of them to swallow. The Chief Justice and three judges of the Supreme Court declined to take the new oath and were automatically relieved of their jobs. Two of the three judges of the Baluchistan High Court (including the Chief Justice, Khuda Bakhsh Marri) also declined to take the oath. Similarly, two judges of the Lahore High Court did not take the oath of loyalty to the martial law regime. In the NWFP and Sind, however, except for one judge who was not invited to take the oath, all other judges decided to serve on. Significantly, not only that some of the judges of the superior courts declined to take the oath, the Government itself chose not to invite some others to the oath-taking ceremony. This practice of "picking and choosing" was unprecedented.

Under the 1973 Constitution, no per-

Background

The Great Betrayal

Iskander Mirza

ISKANDER MIRZA became President in March 1956 as the promulgation of the Constitution was not to his liking. He, therefore, chose to make an excessive and arbitrary use of his powers. During the 30 months of his Presidential office, he manipulated party positions, tried every permutation and combination to create situations under which as many as 4 Ministries fell like pins, the most short lived of them being the one headed by Chundrigar which lasted barely 7 weeks. Iskander Mirza was conscious of the fact that he had annoyed the political forces of the day, particularly the Muslim League led by Qayyum Khan and the Awami League headed by Suhrawardhy. He knew that, in the event of General Elections (scheduled for the spring of 1959), party positions in the next Parliament would change in such a manner that he could not hope to be re-elected President. He, therefore, decided to abrogate the Constitution, dissolve the Ministries and Assemblies, abolish political parties and impose martial law. This was done on the evening of October 7, 1958, when Ayub Khan became Prime Minister.

I was at that time Commander-in-Chief of the Pakistan Air Force, a post to which I had been appointed in 1957 by Suhrawardhy—at that time the Prime Minister and Minister of Defence. I was summoned by the President at about 9.00 pm on October 7. When I arrived at the President's House, I found Ayub Khan and a number of other Army officers (amongst them Brig Yahya Khan) present there. I was told by Iskander Mirza that he had decided to abrogate the Constitution; martial law had been declared and the Army was moving in to take over the Government. I had no prior knowledge of such a plan and was told that I should stay there for the next couple of hours, presumably until all moves had been completed.

The following day, or the day after, I attended a meeting presided over by Iskander Mirza at which Ayub Khan, the Chief Justice of Pakistan and the newly appointed members of Ayub Khan's Cabinet were present. At this meeting, the Chief Justice, Mohammad Munir, was asked by Ayub Khan as to how he should go about getting a new constitution approved by the people. Justice Munir's reply was both original and astonishing. He said that this was a simple matter In olden times, in the Greek states, he said, constitutions were approved by "public acclaim" and this could be done in Pakistan as well. Ayub Khan asked as to what was meant by "public acclaim", to which Justice Munir replied that a Draft of the Constitution, when prepared, should be published in the national newspapers. This was to be followed by Ayub Khan addressing public meetings at Nishtar Park (in Karachi), Paltan Maidan (in Dacca), Mochi Gate (in Lahore) and Chowk Yadgar (in Peshawar) at which he was to hold up the Draft of the Constitution that had been published in the newspapers a few days earlier and seek the public's approval. The answer, the Chief Justice said, would definitely be in the affirmative This, he said, was approval by "public acclaim".

Most of those present laughed and Ayub Khan laughed the loudest Although this advice was not followed by Ayub Khan for the approval of his Constitution, this is what the Chief Justice of Pakistan had suggested in all seriousness. No wonder Pakistan has found it difficult to shake off martial law ever since.

Ayub Khan & Yahya Khan

WHEN the Round Table Conference ended on a successful note, Yahya Khan put his own plan into action. Military Intelligence (which he controlled directly) and Civil Intelligence (which he also was able to control effectively) fed Ayub Khan with the kind of information that Yahya Khan *wanted* him to have. Ayub Khan, who had implicit faith in these sources of information, was soon convinced that the law-and-order situation in the country, particularly in East Pakistan, had deteriorated to an extent that the holding of elections and transfer of power to civilians was no longer practicable. When in response to these misleading intelligence reports Ayub Khan tried to impose martial law in certain areas, Yahya Khan concluded that the hour to strike had come.

At the end of a meeting with his close advisers, in which Ayub Khan made his intention known to impose martial law in parts of the Punjab and in East Pakistan, Yahya Khan asked to see the President in privacy When others had withdrawn, he told Ayub Khan that the step he was contemplating was not only inadequate but also unworkable. He told him that, if the Army was to be used and martial law imposed, he, the Head of the Army, must be in effective control of national affairs. As Chief Martial Law Administrator he must, he argued, direct and control the entire Government machinery.

It did not take long for Ayub Khan to get the message. The ageing Field Marshal who was so fond of quoting from history, albeit to promote his political philosophy and interests, could see history being repeated. Of course, the roles had changed and this time he was at the receiving end. By virtue of his office, Yahya Khan was dictating, in a polite but firm tone, what Ayub Khan himself had conveyed to Iskander Mirza a decade earlier. After 10 consuming years in the saddle, accompanied by his recent illness and the psychological effect of a countrywide popular movement—which had broken his spirit to fight back—Ayub Khan readily agreed to Yahya Khan's suggestion to step down. Yahya Khan became Chief Martial Law Administrator on March 25, 1969, and assumed control of the country's affairs. The wheels of fortune had turned full circle.

When this betrayal of democracy took place, mine was the lone voice of protest. The following day I made a public statement condemning the action that Yahya Khan had taken and said that there was no justification for martial law. Zulfikar Ali Bhutto was, on the other hand, the only political leader to welcome publicly the imposition of martial law. For Bhutto, the end justified the means: the end being the capture of power, he was willing to use every stratagem to achieve this. He had maintained good personal relations with important Generals throughout his tenure as a Minister in Ayub Khan's Cabinet and had done his utmost to retain these links even after his exit from the Government. He was shrewd enough to know that Yahya Khan was the likely successor to Ayub Khan and had maintained good personal relations with him. His statement welcoming Yahya Khan's martial law on his assumption of power as President and Chief Martial Law Administrator was meant to start his dealings with him on the right note. All his subsequent moves were to follow this consistent approach and, throughout almost 3 years of Yahya Khan's rule, Zulfikar Ali Bhutto maintained the closest links with him, largely through Maj-Gen Pirzada, Military Secretary to the President.

Zulfikar Ali Bhutto

AS the Indian Army closed in on Dacca, Zulfikar Ali Bhutto, who by then had been sworn in as Yahya Khan's Foreign Minister, was despatched to New York to attend the meeting of the Security Council, which had been convened to discuss the situation arising out of the Indo-Pakistan conflict. Bhutto arrived there on December 6, 1971. All the members of the United Nations were unanimous on an immediate cease-fire. Since Dacca had not fallen, an opportunity existed to salvage a hopeless situation by binding India to a cease-fire which could at least permit the orderly evacuation of the Pakistan Army and civilian Pakistani personnel and their families out of East Pakistan. Poland, with Soviet support, had introduced a resolution in the Security Council on December 10, 1971, which would have prevented the surrender of the Pakistan Army 6 days later. However, whilst the Security Council awaited the appearance of Pakistan's Foreign Minister, the world was told that Bhutto was indisposed in a New York hotel; and it was only when the Indian Army had entered Dacca and capitulation appeared imminent that he was well enough to attend the meeting of the Security Council on December 15, 1971. By then, valuable time had been lost but, even at that late hour, an outright capitulation might have been prevented. Bhutto however made an oration more befitting an election meeting in Mochi Gate than a speech in the Security Council for the survival of his country. He rejected the Polish Resolution for a cease-fire and said that Pakistan would fight for "a thousand years".

As he strode out of the Security Council, he tore up the Polish Resolution and threw it in the air. It is a poor commentary on our political sense that this performance was applauded by a large section of our people. So completely had the nation been misled over the years and so poor was our sense of understanding that the behaviour of Pakistan's Foreign Minister was thought to be the need of the hour.

Humiliating Spectacle

Dacca fell the next day and the world was entertained to a humiliating spectacle of a Ceremony of Surrender on the Racecourse at Dacca. As the Pakistani General was stripped of his badges in front of hundreds of foreign TV cameramen representing almost

son could be kept continuously under detention without a trial for more than 12 months. When, therefore, my one year in continuous detention was completed on May 29, 1981, a writ was filed on my behalf in the Peshawar High Court. The verdict was a foregone conclusion, but the helplessness of the courts had not been *publicly* announced by the oath-taking judges. When the case came up for hearing, it was ruled that the High Courts had no jurisdiction in martial law cases. The seal was, therefore, set on the "legality" of Zia ul Haq's illegal regime. Martial law was now supreme and there was no redress against its tyranny.

So ended the three decades of the partial independence of the courts and, as Zia ul Haq started recruiting Qazis and creating Shariat Courts, one wondered who they would owe allegiance to and whether they would interpret the Shariat as Zia ul Haq would wish them to do. The fear was not unfounded because many of those on the Islamic Advisory Council and other Islamic bodies are religious nonentities who have no particular qualifications to interpret Islamic law. Moreover, this has happened frequently in Islamic history. Rulers, under the garb of Islam, have terrorised people and used the so-called religious scholars and divines to keep themselves in power. The monarch-mullah combination has been in force for centuries, bestowing upon the monarch divine rights to rule ruthlessly whilst dishing out a few crumbs to the junior partner, the mullah. There was no dearth of such people in Pakistan and they flocked to support Zia ul Haq. It was not for the first time that Islam was being misrepresented and the law stretched to serve the interests of the person in power.

However, even after emasculating the Judiciary, Zia ul Haq was not prepared to take any chances. Even though the judges were under oath of loyalty to the military regime, he thought it prudent to keep them in a state of suspense and insecurity. All the superior courts—that is, the Supreme Court and the four High Courts—therefore continued to be headed by Acting Chief Justices and, despite the passage of time, Zia ul Haq thought it fit not to appoint permanent Chief Justices.

(To Be Continued)

FLOGGING REVIVED, BHUTTO HANGED. "Having seen," says the author, "the strength of the Pakistan National Alliance's movement against Zulfikar Ali Bhutto and being convinced that this was the result of the people's attachment to Islam, Zia ul Haq exploited religion to the full to impress the people with his love for and devotion to Islam... It is unprecedented that, in spite of all the appeals of almost every Head of State of a Muslim country, Zia ul Haq should have hanged the current Chairman of the Islamic Conference," Zulfikar Ali Bhutto.

all the top news agencies of the world, our officers and men in other parts of East Pakistan were being subjected to indescribable humiliation. About 93,000 servicemen surrendered and they as well as civilians (amongst them women and children) were sent to prison camps. In the flush of victory, the Mukti Bahini and others settled old scores and many innocent people were slaughtered.

Perhaps the greatest sufferers were the "Biharis". These people, who had migrated to East Pakistan from the Eastern United Provinces and Bihar in India in 1947, had never been assimilated in Bengali society. They had been the victims of race and language riots that had been erupting in East Pakistan over the years. Unfortunately, these "Biharis", who suffered from linguistic and ethnic chauvinism and a superiority complex, made no genuine attempt to assimilate themselves in Bengali society, describing the Bengalis and their language as "Hindu-ridden". Their blind support to the military in the action against the Bengalis, therefore, incurred the latter's wrath. Their plight after the surrender of the Pakistan Army was pitiable and no mercy was shown to them. In the days immediately following the surrender, a large number of "Biharis" were killed. Even now, a large number of them rot in Red Cross camps in Dacca, as we have not been able to accept those whose patriotism and courage we once admired when we needed their support.

However, it was not only the "Biharis" and the West Pakistani public that had been misled, the Armed Forces had also been led to believe that the United States' Seventh Fleet and the Chinese would come to their rescue. They had been assured that Pakistan had staunch allies who would see her through this mad adventure; that so important was Pakistan to these allies' existence that they could not possibly see her go under. So, when what they believed could never happen actually took place, there was widespread dismay.

Inside the Armed Forces the reaction to the surrender at Dacca was sharp and a sense of humiliation pervaded the atmosphere in all military formations. The Officers Corps, which represented the mood of the Armed Forces, for the first time gave expression to their disgust at the handling of the whole affair by making their views known to General Headquarters. It was all done in a reasonably disciplined manner—through proper channels. A couple of days after the surrender, Gul Hassan Khan, Chief of the General Staff, went round the key army formations to gauge the mood and came back convinced that there was great resentment against Yahya Khan who must be persuaded to leave. He and Rahim Khan, Chief of the Air Staff, spoke with Yahya Khan, who agreed reluctantly to step down from the office of President, but insisted that he should retain the post of Commander-in-Chief of the Army. It was decided that Lt-Gen Hamid Khan, Chief of Staff of the Army, should address the officers of General Headquarters and all GHQ officers above the rank of Major were assembled for a talk. The meeting ended in confusion because the officers were not prepared to listen to Gen Hamid Khan, who appeared to be lobbying for his own takeover from Yahya Khan.

Meanwhile, Bhutto was carefully monitoring the situation in New York and it was only when he was given the green light from Rawalpindi that he left for Pakistan. Gul Hassan Khan and Rahim Khan were in touch with him and, when it was finally confirmed that all was clear, Bhutto left on the final leg of his journey from Rome

Unaware at the time of these behind-the-scene manoeuvres, I addressed a press conference and a large public meeting at Rawalpindi on December 19, 1971, and called upon Yahya Khan to resign. I said that, much as I had disagreed with Bhutto's role during the past few months, there was no other alternative now, except for power to be handed to him and his party (albeit as a Caretaker Government) for a brief period, so that fresh elections could be held. Bhutto commanded a majority in the National Assembly of West Pakistan and had the right to form a government.

The People's Party stalwarts, however, had worked themselves into a state of hysteria Their leader was still abroad and they did not relish the idea of any slip that might deprive them of reaching their goal of securing power. Perhaps conscious of my past association with the Armed Forces, they were terrified of the possibility of an attempt on my part to block their way. So ruthless had they been in pursuit of power that they could not visualise anyone playing the game according to its rules. Even as I spoke before the large crowd at Liaquat Bagh in Rawalpindi and said that Bhutto and his People's Party, rather than Yahya Khan, had the right to rule, I was fired upon by local People's Party leaders. They yelled that no one except the "Chairman", Zulfikar Ali Bhutto, had the right to speak in Pakistan. It was in the face of strong and violent opposition from the People's Party that I continued my speech, that I vowed I would continue my fight for the rights of the people to express their views freely in the future, as I had done in the past.

I have kept this vow in the long years since.

Bhutto arrived in Rawalpindi on December 20, 1971, and was sworn in as President and Chief Martial Law Administrator. Yahya Khan was retired from the Army "honourably". So ended the ignominious 33 months of Yahya Khan's rule and thus began the rule of a popularly elected government in what was left of Pakistan.

Zia Ul Haq

BHUTTO selected Gen Mohammad Zia ul Haq for the post of Chief of the Army Staff when Gen Tikka Khan had completed his term of duty in this appointment on March 1, 1976. On assuming this post, Zia ul Haq superseded a number of officers senior to him in service. Zia ul Haq had attracted Bhutto's attention when, as a Divisional Commander, the General invited him to various functions. Zia ul Haq was lavish in his praise of the Prime Minister and, at one of these functions, presented him with a sword in recognition of "his services" to the country and its Armed Forces.

It was as a result of Zia ul Haq's persuasion that Bhutto agreed to be Colonel-in-Chief of the Armoured Corps—an honour normally bestowed on a senior Army officer of a General's rank. I gather that Zia ul Haq had even tried to persuade Bhutto to don the uniform of the Colonel-in-Chief of the Armoured Corps, which he wanted him to wear at a military parade.

Zia ul Haq was selected to preside at a General Court Martial convened at Attock in 1973 to try a number of officers charged with a conspiracy to overthrow Bhutto's Government. In view of the nature of the trial, the Prime Minister kept himself informed about its progress and, therefore, with Zia ul Haq's conduct of the proceedings. What Bhutto saw of Zia ul Haq during this lengthy trial confirmed him in his opinion that he was a trustworthy officer.

HOWEVER, in later years, what happened between September 1977 and March 1979 strengthened Zia ul Haq's resolve to remove from the scene the one man who, he knew, would not pardon him for what he had done on the early morning of July 5, 1977... Had the original Bench of 9 judges been maintained, the verdict could well have been 5-4 in Bhutto's favour. Moreover, when there was so much talk of bringing in Islamic laws, care was taken not to amend the Criminal Penal Code to allow the next of kin in a murder case to forgive the accused on receipt of blood money if he chose to do so—an action which is permitted in Islam.

There is, of course, the larger issue of the right of a military dictator who, according to his own solemn undertaking, had assumed control for an interim period—pending the transfer of power of the elected representatives of the people—to hang an elected Prime Minister of the country. It was also odd that a Chief of the Army Staff, himself an Armoured Corps officer, should have hanged the Colonel-in-Chief of the Armoured Corps. Moreover, it was unprecedented that, in spite of the appeals of almost every Head of State of a Muslim country, Zia ul Haq should have hanged the current Chairman of the Islamic Conference.

There must have obviously been some overriding compulsion that led Zia ul Haq to take this unprecedented step. It could only be his determination to hang on to power.

Asghar Khan

We Are Living Beyond Our Means

by A Special Correspondent

Is India going to go insolvent under the cumulative impact of increasing defence and oil expenditure coupled with a decline in our trade balance owing to a lopsided foreign trade and investment policy?

Our defence budget has more than quadrupled over the last decade and now stands at Rs 5,100 crores. Our purchase of the Jaguar proved controversial because of their high cost.

JUST like individuals, nations also go broke. Mexico is broke, while countries like Brazil, Argentina and Poland are teetering on the brink of bankruptcy. Is India in danger of sliding into a similar situation?

India has not indulged in the sort of profligacy that some Latin American countries are guilty of. Mexico owes American and European banks alone over Rs 70,000 crores, a sum that exceeds half of India's national income! Not far behind is Brazil with a debt of Rs 64,000 crores. Nor is India, like Poland, in the throes of a labour-induced economic cataclysm. And yet the situation facing India calls for constant vigilance, for though the danger of bankruptcy is not imminent, it looms menacingly on the horizon.

That this is not just the cry of a Cassandra should be evident from the worrisome erosion in the country's foreign exchange reserves. Excluding gold and SDRs (special drawing rights), the reserves have fallen thus: 1979-80 Rs 5,163 crores; 1980-81 Rs 4,822 crores; and 1981-82 Rs 3,864 crores. The figure on October 30 was only Rs 3,153 crores.

The draw-down of the reserves would appear to be still more ominous when the fact that India has already begun to avail of the huge Rs 5,500-crore loan from the International Monetary Fund is taken into account. Already drawals against this loan total Rs 1,575 crores—Rs 950 crores in the first year ended June 1982 and Rs 625 crores as the first instalment for the second year (in July 1982). Two further instalments of Rs 625 crores each are due before the end of December. This means that at the end of this year an amount of Rs 3,450 crores will already have been taken against the IMF loan, leaving a balance of about Rs 2,000 crores. When this balance is also exhausted, what happens?

The scenario is disconcerting. According to *The Economic Times*, India's current account deficit for the period 1981-84 is projected at around $19 billion. The IMF loan takes care of $5.7 billion. Concessional aid is expected to cover $6.9 billion. This leaves a deficit of $6.4 billion which has already been covered to the extent of $2.4 billion by drawals from reserves in 1981-82. Thus an uncovered deficit of $4 billion would remain by the end of 1984-85 with barely $3.5 billion in the kitty! How can we avoid such a catastrophe?

No Sacred Cows

Ultimately, the question boils down to increasing the inflow and decreasing the outflow of foreign exchange. A major cause of the outflow is the arms purchases being made by the Government. Such expenditure is always treated like a sacred cow and is never publicly discussed, let alone justified. This is wrong in a country where it is well known that the money avoidably spent on acquiring an expensive fighter plane can be better invested in providing food, drinking water, electricity and shelter to those who subsist in sub-human conditions.

The country's defence expenditure has been increasing as follows:

	(Rupees Crore)
1970-71	1,199
1980-81	3,600
1981-82	4,670
1982-83	5,100

India's arms purchases abroad have by no means been insignificant. Military equipment being received under the Indo-Soviet arms deal of March 1980 will cost about $1.6 billion. The Jaguar deal with British Aerospace involves an expenditure of about $1.5 billion. The purchase of 40 sophisticated Mirage-2000 planes—perhaps the most expensive fighter plane in the world—is estimated to cost a fortune, not to speak of the Exocet missile deal, which is in the pipeline. Recently an order for an advanced submarine was placed with West Germany. Some time ago, New Delhi asked Washington for some advanced missiles, but the request was refused.

During Mrs Gandhi's recent visit to the United States *The New York Times* reported that India was negotiationg arms purchases with that country worth $1 billion. All this is only for the induction of new equipment. In addition, India is to import military hardware to the tune of about Rs 750 crores under its programme to service, replace and modernise the existing equipment of its armed forces.

Are we succumbing to the blandishments of international arms salesmen? Or, are we deliberately overdoing the defence bit? The Stockholm International Peace Research Institute points out that in the '70s India's defence expenditure was 1.2 to 3.8 per cent of its GNP. Now the percentage is slightly above 4 and equal to that of 34 other countries. But our neighbours, Pakistan and China, have much higher percentages, the latter's being 7.

There can be no two opinions that the need to protect our frontiers and ensure the nation's sovereignty cannot be compromised. At the same time, however, the quest for satisfying defence requirements should not be allowed to overshoot the mark and degenerate into militaristic jingoism. This is a trap into which governments in many countries fall in the face of domestic non-performance.

Since those who run the present Government have shown a tendency to cry wolf in the past several months, it may be said, without prejudging the issue, that there is a case for a thorough and threadbare discussion on the country's defence expenditure. Apart from the fact that each arms deal involves huge amounts of foreign exchange, let it not be forgotten that India is among the poorest countries of the world, the poorest per capital income of $240. Massive

Adverse Balance Sheet

Central to the issue of inflow and outflow of foreign exchange is, of course, the country's adverse balance of trade. The gap, as the following table shows, has been growing steadily since 1976-77:

	(Rupees crore)
1976-77	72
1977-78	621
1978-79	1,088
1979-80	2,449
1980-81	5,813
1981-82	5,886

Although it has by now become a cliche that the adverse balance is largely because of the oil import bill, the Government is moving at a snail's pace in regard to oil exploration. In the two years since the policy decision was taken to invite high technology foreign companies to undertake offshore oil explorations, only one company, Chevron Corporation of California, has been given a contract for a single block off Saurashtra.

The main reason for the tardy progress is the blinkered tendency to imitate China, which is imposing stringent conditions on foreign companies. But while China is supposed to have the world's largest oil reserves next to Saudi Arabia, prospecting for oil in Indian waters is regarded a much less attractive proposition. The Ministry of Petroleum should, therefore, re-evaluate its conditions and make them realistic if it does not want foreign firms to shy away.

Neither is there any evidence of businesslike efforts to conserve fuel. The Working Group on Energy Policy had pointed out that a good deal of diesel is wasted in the agriculture sector because of the mismatching of irrigation pump-sets and indiscrimin-

ate use of tractors. The Petroleum Conservation Action Group has likewise opined that there is scope for saving industrial fuel up to 33 per cent. Again, it is estimated that tapping alternative sources of energy can result in reduction of oil imports to the extent of 20 per cent.

Another reason for the country's adverse trade balance is the lopsided foreign trade policy. The accent is almost entirely on export promotion. It needs to be realised that stiff international competition, growing protectionism and worldwide recessionary tendencies severely limit the effectiveness of export promotion in bridging our trade gap, which is so large that it is actually a manifestation of the economy's structural imbalance.

We are spending colossal amounts of foreign exchange on such items which can be produced indigenously and at much less cost than overseas—cement, fertilisers, aluminium, steel, paper, edible oils and coal. Infrastructural deficiencies and bureaucratic bottlenecks are mainly to blame. A note of dissent to the Tandon Committee's report on export policy says, for instance, that India could annually save foreign exchange worth Rs 1,000 crores by just improving capacity utilisation in respect of these items.

Despite the various incentives and concessions, export growth remains unsatisfactory. According to "International Financial Statistics", India's share of world exports dropped from 0.6 per cent in 1977 to 0.4 per cent in 1980. Pakistan during this period increased its exports by 42 per cent! In 1981-82 India's exports are supposed to have boomed by 13 per cent, but there is a bogus element in this claim. For instance, we exported $750 crores worth of cut and polished diamonds, but against this must be set off Rs 500 crores worth of rough diamonds that were imported.

Again, there have been exports which really represent repayments of capital. The Soviet Union had accumulated large rupee balances totalling over Rs 1,000 crores and has now started liquidating these through an orgy of buying. Further, export of jewellery rose from Rs 15 crores to Rs 37 crores, but for this purpose gold had to be imported, which means that four-fifths of the export figure is illusory. Thus the real export growth in 1981-82 was nowhere near 13 per cent.

Deteriorating terms of trade have exacerbated the problem. According to a study by the Federation of Indian Chambers of Commerce and Industry, India's terms of trade deteriorated by five per cent in 1980-81. Provisional calculations for 1981-82 indicate that import unit value rose by eight per cent and export unit value by only four per cent, which means that there was a further deterioration.

Liberalised Imports Controversy

The policy of liberalised imports has generated some controversy. Those who feign surprise over it in the face of a widening trade gap need to be told that last year, out of a total import bill of about Rs 13,000 crores, imports under the open General Licence amount to only Rs 300 crores. So, there is no such thing as the policy having caused an inward avalanche. On the contrary, the policy is well-conceived, showing an appreciation of the need to ensure inputs for industry and to upgrade technology. Some complaints about dumping have been audible, especially in regard to soda ash, PVC, polyester and viscose fibre. To the extent indigenous industry is being genuinely harmed, this question requires examination. But three points need to be mentioned.

First, most of the so-called dumped goods attract heavy duties, making one wonder whether an industry that cannot survive despite a high tariff barrier deserves to exist at all. *Second*, the goods that are being dumped are not garbage but important raw materials, which means that their Indian users are benefitting. *Third*, many compalints about dumping, as conceded privately by FICCI officials, are in the nature of unjustified breast-beating by industrialists who have for long been inured by protection. Indian industry should cease to be treated like a suckling child, weaned away from breast-feeding and exposed in measured doses to the bracing winds of foreign competition.

But for a few favourable factors, our foreign exchange reserves would have vanished long ago. Inward remittances by overseas Indians have increased from Rs 1,908 crores in 1977 to Rs 4,621 crores in 1981. Largely because of these remittances, the gross non-export receipts, which also include other invisibles, have been making an increasing contribution to the balance of payments, as follows: 1979—Rs 2,275 crores, 1980—Rs 4,467 crores and 1981—Rs 5,000 crores.

The potential indicated by inward remittances has at last induced the Government consciously to take steps to encourage inflow of funds held abroad by non-resident Indians for the purpose of investment in the country. The Central Budget for 1982-83 included some fiscal incentives to draw non-resident funds. This has been followed by four announcements of the Reserve Bank (on April 21, July 9, August 19 and in December) which have progressively relaxed in some respects the limits on equity participation by non-resident Indians in portfolio shares and new issues.

The outcome at Toronto, where an agreement was reached to assure funds for the IDA, shows that India could look forward to the current level of multilateral aid being maintained in the short run. But in the long run, with IDA funds not assured and China emerging as a competitor from 1985 onwards, the prospects of multilateral aid on soft terms are not bright. Nor can much store be laid by bilateral aid as the developed nations grapple with their own economic problems.

Recourse will have to be taken increasingly to commercial loans, of which the country has already taken over $2.2 billion in the last five years. While this is nowhere near the extravagance of the Latin American spendthrifts, forays into this area should be confined to manageable limits.

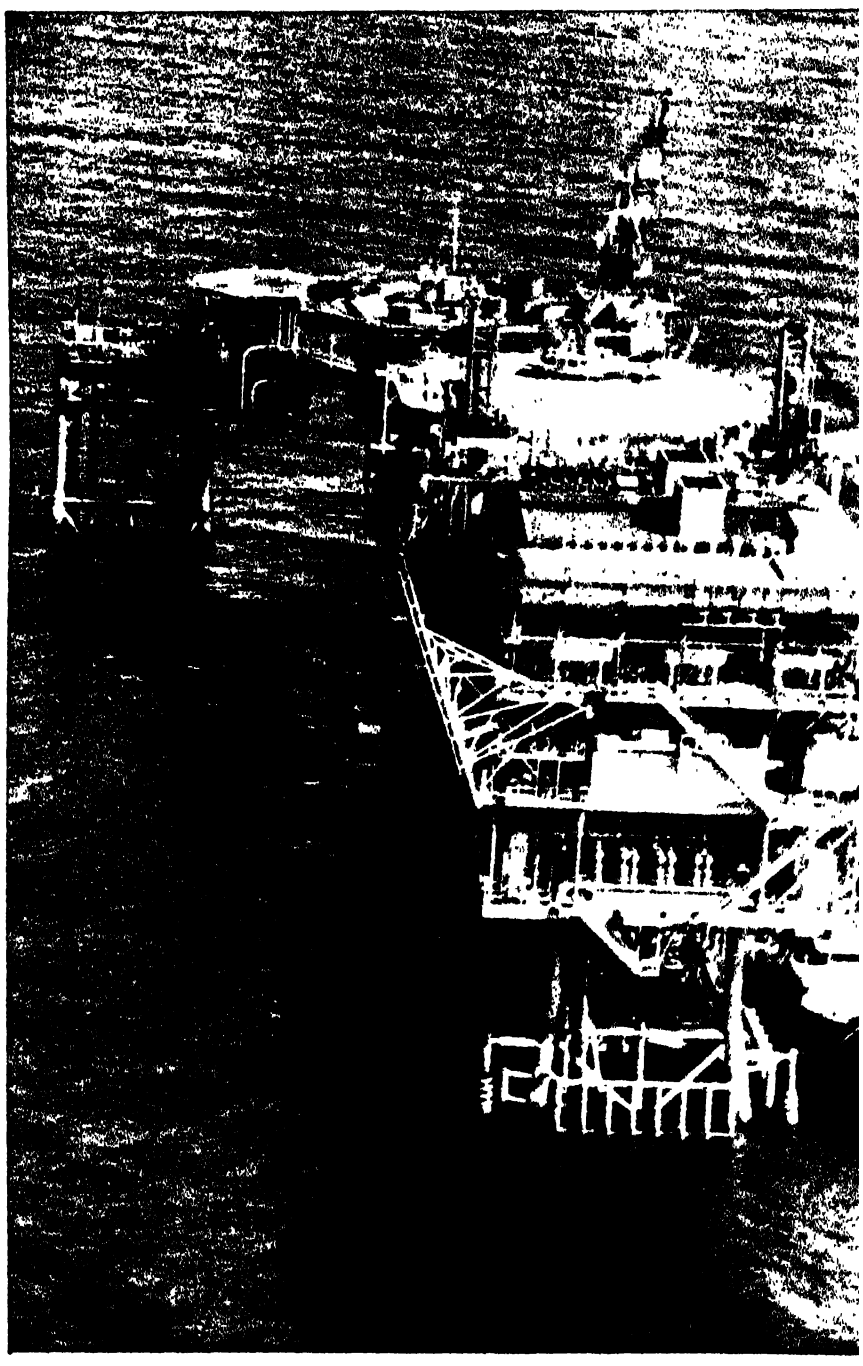
The policy on foreign investment requires re-examination. On her tours in the West, the Prime Minister never fails to invite foreign investors to India. But such ritualistic invitations have a hollow ring. The recent changes in the Foreign Exchange Regulation Act are marginal and the door is still more shut than open. In the last three years, 131 applications were received under FERA, 42 were approved, 56 were rejected (because these pertained to areas in which foreigners are not allowed to operate) and 33 are still under consideration.

Tourism can be a big foreign exchange earner, but in this country the industry is in a shambles. Our tourist traffic is among the poorest in the world. The Government bends over backwards to make the country as boring and as dull for a visitor as possible in the mistaken belief that all he comes for is to gape at the Taj Mahal. The "kicks" are conspicuous by their absence. The India Tourism Development Corporation is setting up a chain of duty-free shops to help the visitor disgorge his foreign exchange. But more than this will have to be done if even the limited boost that tourism has received from the Asian Games is to be consolidated into lasting gain.

The behaviour of Government functionaries at a time when the country's foreign exchange coffers are in danger of disappearing calls for comment because example, like charity must begin at home. The craze of Ministers and officials for globe-girdling jaunts has increased during Mrs Gandhi's regime, costing the public exchequer about Rs 10 crores annually. In the first 10 months of 1981 over 30 ministers and 1975 officials went on foreign tours.

Those eager for global joyrides should pause to reflect that a part of the foreign exchange they squander is earned by exporting foodgrains, vegetables, fruits and other food products. In other words, it is earned by further tightening the belt around emaciated bellies. The sceptic may, of course, sneer at such a fuss over the trifling amount of Rs 10 crores. But the issue goes beyong that, affecting as it does the public morale.

India is not yet broke, but it could very well become, unless the powers-that-be initiate a multi-pronged national endeavour to ward off such a catastrophe. ■



Though it is well known that our oil import bill drains most of our foreign exchange, the government is moving at a snails pace in the matter of oil exploration.

More interest in more ways than money.

Deciding on how to invest your money is tough. Going to Central Bank for help is easy enough.

Here's why:

Maximum returns in real terms:
Remember, interest from Central Bank is tax free up to Rs. 6,000/- a year.

Easy access to your capital:
You can get your money back from Central Bank any time you wish

Minimum risk:
Central Bank is government-owned and your deposits are also protected by the Deposit Insurance & Credit Guarantee Corporation.

"Money at your doorstep":
Because Central Bank has over 2,000 offices all over India to serve you wherever you are.

Privileged status:
As a Central Bank customer, you enjoy a lot of other benefits: bank assistance for personal and business purposes; Centralcard to help you do your shopping and entertaining on credit, in style; access to our all-India network to transfer money speedily; the standing orders facility for recurring payments and collections... in short, every kind of help to make the business of money handling painless and worry-free.

An early chat at Central Bank can tell you more about why you should put your money with us and the best way to do it.

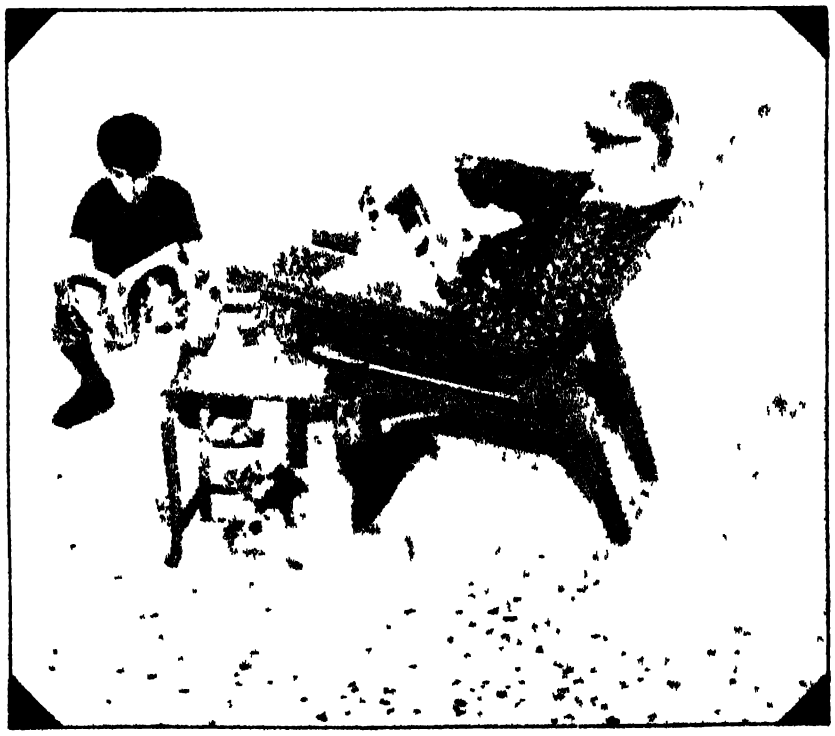
"Year Of The Aged"

It Has No Meaning In India

Participation in family life and a sense of belonging are the secrets of long life in India.

by Patanjali Sethi

THE declaration of 1982 as the "International Year Of The Aged" by the UN has no meaning for us in India It is a response to the prevailing mores and ideas in the West where the aged are treated worse than pet animals even if they are not exiled to old people's homes It presumes that the aged are a lower species of human beings and, at any rate, they need to have a special year to draw attention to their plight just like refugees or the so-called children of disaster



In India, the aged are respected and considered embodiments of wisdom There are aberrations from this general rule, particularly in metropolitan cities, where the desire to ape the West has warped some of the younger minds. But attempts of such mavericks to rationalise their attitude are simply ludicrous

It has been said that the joint family system alone can nourish respect for the old. Since the joint family has vanished, the argument goes, the aged too must accept a changed value system. There can be nothing further from the truth.
First, India lives in its villages where the joint family is still the bedrock of the social structure.

THE CUP THAT CHEERS ,shared with the grandchildren adds a sense of fulfilment in the autumn years.

AT HARMONY WITH NATURE and himself, this armchair reader enjoys the company of his grandchild and his dogs.

Secondly, in most urban homes, too, it continues to flourish. Even when sons live separately, they often invite their aged parents to live with them by turns. It is only in rare cases that the aged wish to live alone to ensure their own freedom. The very idea of going into an old people's home is repugnant to most Indians It is regarded as a sentence of rigorous imprisonment in a jail from which there is no return.

The reasons are simple. Whether the aged live separately or not, they are confident of the lasting love and affection of their children. They continue to be needed in hours of crisis when their mature guidance and filial love help overcome the troubles which are natural concomitants of the young people's living styles and value system.

Living an active life and continuing as head of the family at older than the so-called ripe old age are quite common in India. Meethiyan of Cochin, for

instance, continued as the much-beloved and revered head of a 200-member family of four generations till he died at the age of 127 Likewise, Sitabai Mona Mungekar is reported to have lived up to the age of 149 years as head of a family of three sons, 14 grandsons, 18 granddaughters and 21 great grandchildren
Gullu was about 19 years old at the time of the Sepoy Mutiny in 1857 In late 1980, he was reported to be the oldest resident of Rae Bareli district, living in the village of Thakori Grandfather of 42 children, Gullu occasionally walked two kilometres to meet his daughter in Rae Bareli

Dehumanisation Of Westerners

All this is possible because we Indians take an integrated view of life in this world and hereafter our attitudes are free of the dichotomy that prevails in the West A certain dehumanisation makes the Westerner condemn the old to a lonely existence At the same time, medical scientists seek to find formulae to increase the life-span Is there any point in trying to seek longevity when old age implies loneliness and rejection?

Two universities in Britain are trying to find out why people grow old Tentatively, they have come up with two theories a) aging is caused by wear and tear leading to changes in body cells and tissues, and b) our bodies inherit some kind of a programmed life-span leading to death at a genetically predetermined age (Shades of *Karma!*)

Be that as it may, there can be no question that the march of medical science has extended life expectancy dramatically and the number of older people in the world is increasing Indeed, one of the British researchers seemed to lament that more older people would be an extra burden on society with their disabilities and frailties!

His views are quite contrary to the findings of a West German team According to it, there need not be frailties and healthy longevity is possible through a life of hard work without strain or stress The team interviewed centenarians, had some of them examined in hospitals and conducted post-mortems on those who died at the age of 100 years or above
Among its findings Those aged 100 and above usually died of infections not of old age Special diets played no decisive role though moderation in eating did

In any event there is a powerful backlash even in the West to condemning the aged to destitution An American organisation Grey Panthers announced some time ago its aims to coax the elderly to resist being forcibly retired and pushed into homes for 'senior citizens" It offered to fight against the phobia against the old which it describes graphically as gerontophobia

But age is not an absolute concept In many cases it is really a state of mind The 80 year-old French Prime Minister Clemenceau, saw a beautiful woman and sighed "If only I were seventy! His 70 year-old friend who looked his age never understood that but Clemenceau felt young at 70

Narendra N Shah

HIS WIZENED OLD FACE all aglow, this man certainly does not show his age

Helpage In India

Few, in India realise that their life expectancy has increased from 46 to 54 within the last ten years Nor, that an ever-increasing proportion of the population will be elderly, with manifold socio-economic implications for the future.

So, a secular society "Helpage India" dedicated to creating public awareness about the problems faced by elderly people, was set up in 1978 and registered as an all-India Society in association with Helpage International U.K. In addition, it raises funds in India, for projects in India. It has its head-office in Delhi, with specially trained staff working out of 14 major centres around India. It does not (apart from two exceptions) run projects on its own, neither does it support individual cases . Instead it encourages existing organisations to start or enlarge their own facilities for caring for the elderly, providing help by using modern methods to raise funds efficiently. In India, the idea of employing full-time staff to raise funds (as opposed to relying solely on the voluntary efforts of committee members) has been introduced uniquely by Helpage India and has been described as one of the most interesting developments in social work of recent years. But Helpage India welcome voluntary assistance, in the fields of fund-raising, in direct care of the elderly, and in research, for the assessment of data, available is scarce.

Donations to Helpage India in 1982 totalled Rs 49.63 lakhs (as compared with Rs 33.10 lakhs in 1979 and Rs 42.89 lakhs in 1980). Audited accounts and reports for 1982 show that more than three-quarters of this went directly to more than 100 selected projects, scattered throughout the country, as well as to the creation of several new ones. Many more are in the pipeline.

A growing portion, of this income came not in big donations from big unions or companies, but in paise and rupees from the efforts of many thousands of school children who were motivated to help the old through educational programmes introduced into schools by Helpage staff. A pack containing teaching materials on old age is now in the process of being revised and up-dated, but, meanwhile, Helpage India staff are helping school teachers to put children in touch with projects as part of the Government's "Socially useful productive work programme"

Last July, Helpage India's senior Project Adviser was called in to contribute grassroots experience to the Indian delegation before they attended the United Nations World Assembly on aging in Vienna. A recent research programme funded by Helpage India to identify the different types of non-governmental services available for the aged has shown that throughout India there are only 353 agencies working to help meet the needs of the less fortunate of the 40 million aged 60 and above These figures would seem to bear out a recent charge levelled by Jaya Thadani in 'The Tribune', Washington,that, lulled by the thought that "we in India traditionally look after our aged" and blind to the changing realities of the situation, voluntary work for the old in India is pathetic. Donations from the privileged are paltry and individual concern or compassion for the general cause is sadly lacking.

Greater emphasis, says Helpage India, must be laid on the development of non-institutional care, such as "support services, designed to help families to care for the aged within their own families and environment". These are not only more in keeping with Indian tradition, but allow a limited amount of money to benefit a greater number of people. Smaller family units, with smaller living space and smaller incomes sometimes find it impossible to look after their elderly. Support services such as day centres, mobile medical units and home visiting could help them to do so. It seems that a preconceived attitude exists among many planners and those responsible for social services for the aged, that any person who has stopped full-time work, and is advanced in years is thereby "feeble, frail and useless". Helpage India maintain that this attitude must be changed. "It is wrong to assume (though this is often done) that simply because a person is old he or she is incapable of taking decisions or unwilling to take on responsibilities or do some light work. Old people should be actively involved in decisions relating to their future and welfare, and not treated simply as objects." These and other challenges are contained in an 'Agenda for Action'.

Tigger Stach

HARD FACTS ABOUT POLYESTER TEXTURISING AND FILAMENT YARN SPINNING INDUSTRIES

1) The Spinners of Polyester Partially Oriented Yarn (POY) and Polyester Filament Yarn (PFY) have matching captive texturising capacities. Hence Independant texturisers (about 150) are dependant on the continuance of the Open General Licence Policy with reasonable rates of protective customs duties for their very survival. **The 305.18% average protective duty (Rs. 15,000 per tonne was increased effective 23-11-1982) levied on POY/PFY is the highest protective duty ever levied on any commodity in India.**

2) The average aggregate customs duties on 150D and 75D POY works out to 750% advalorem, *making POY the highest taxed industrial raw material in the world.*

3) The total incidence of taxation (including texturising duty and sales tax) as a percentage of the CIF price of 75D and 150D POY works out to 822.62% and 826.28% respectively, **making smuggling of texturised yarns several times more lucrative than gold, watches, electronic items. The only industrial raw material being smuggled in container-loads, and setting at nought the implementation of Point number 19 of the 20-Point progamme.**

4) On the imports of POY/PFY yarns which cost around Rs. 32 crores per annum on imports of 20,000 tonnes, the texturisers contributed Rs 225 crores as import duties alone. *Now the texturisers' already-low production would decline by 50% as a result of the recent hike whereas the customs revenue will fall by Rs. 112 crores whilst seriously injuring texturisers, weavers, knitters and the common man-the ultimate consumer*

5) Out of 10 POY/PFY Spinners, 8 are MRTP Houses. Their 1981 capacity utilisation was 160% as against only 60% of the texturising industry which is in the small/medium scale sector **A glaring fact totally ignored by the government while hiking the obnoxious duty.**

6) The import cost of POY/PFY becoming more prohibitive for texturisers, the Spinner-texturisers will have a complete monopoly on the sale of all texturised yarns in the country. *A unique case of the weaker section subsidising the rich.*

7) The recent hike in import duty will distort competition between Spinner-texturisers and independant texturisers, thereby imposing on all consumers unjustified costs or restrictions. **This tantamounts to a restrictive Trade Practice under the MRTP Act - unwittingly encouraged by the government.**

8) The Spinning Industry registered, during 1981-82, growth in PAT (Profit after tax) as high as 41% compared to 1980-81 whereas cotton textiles industry had a negative PAT of 24%. *The cotton Textile Industry is a bulk consumer of texturised yarns whereas protective duty is enhanced to further protect the over-protected*

9) The Retained Profits of the Spinners increased by 59 6% and the rate of growth of the cash flow was 41 1% A higher customs duty was highly irrational by all norms **Effective 23-11-1982 their current fantastic profits will further soar by Rs. 52.50 crores per annum.**

10) Thanks to a restrictive industrial licensing policy coupled with highest tariff barriers being followed by the government, at the behest of a handful of Spinners — the rate of return to the Spinners is highest in the world when India's production of POY/PFY is 0.67% of the world's production *The small - medium scale texturising industry will, however, be added to the list of sick industries resulting in locking up of the finances advanced by Banks /Financial Institutions.*

11) The incidences of import duties on the basic raw materials of the spinners did not warrant a corresponding protective duty on POY/-PFY higher than 89.3% against prevalent rate of 305 18% **Government has fallen prey to the evil designs of the Spinners and unwittingly to the smugglers.**

12) A logical and rational case exists not only to withdraw the hike in customs duty of Rs. 15 per kg but to reduce the protective duty to a maximum of 110% advalorem. **Please help us and not kill us.**

ALL INDIA CRIMPERS' ASSOCIATION
515, Churchgate Chambers, 5, New Marine Lines, Bombay- 400 020.

In fact, in some cases youth "returns". A 105-year-old woman in south-eastern Nepal, Mrs Harimaya Chandragarhi, was reported some years ago to have grown two new teeth and dark hair once again. I met a man near Manali who has his grandson's grandson living with him. He grew a new set of teeth when he was a hundred years old. He did a young man's job in his household where five generations lived.

'Second Adolescence'

Bearing all this in mind, there is to me an implied irony in Western mores. At 40 (or so) many Westerners feel that they have moved not into middle age but into a sort of "second adolescence". They recast their whole lifestyle at that age, take to a new career, even a new life-partner.

Yet it is in the West where longevity is not related to essential values like respect for elders and taking advice from them (as they are more experienced). If the age of 40 is adolescence, why should those who are 70 or above become rejects?

All schools of medicine have concerned themselves with old age. Gerotology has become a specialised subject of study. Allopathy, Ayurveda and the Unani systems offer several remedies.

Kayakalpa has become almost synonymous with magical rejuvenation. According to Susruta and Dhanvantri, the great teachers of Ayurveda, it can restore vitality and vigour. The treatment is carried out either while the patient continues to lead a normal life or in isolation in a closed room, away from light and sound, to lower his metabolism to the minimum. His diet is controlled so that there is no strain on his digestive system. It consists largely of liquids. Thus the body cells, tissues, organs and systems are gradually revived and a youthful man emerges from the treatment.

Countries without access to the wisdom of the Atharvaveda—and the ignorant even in our own—are truly unfortunate. As life expectancy grows, it puts an artificial pressure on certain industrialised societies by creating a large pensionable population.

Numbers Not Worrisome

In mid-1979, it was estimated that there were 300 million old people in the world. The exact figure is not known as the concept of "old age" is not uniform. Considering 60 as the age for being termed old, in 1970 there were an estimated 304 million old. In 1990, the number is expected to double.

But numbers need not worry Indians. Unlike in the West, the Indian ideal, as propounded in religious and secular literature, underscores respect for age. Such an ideal needs to be spread all over the world. It certainly needs to be restored among those who are influenced by Western thinking. In fact, apathy towards the old only reflects an erosion of spiritual values, which is a major cause for social unrest in the West.

Putting the old "to bed" is as good as putting them in a coffin. An Indian medical expert at King's College Hospital in the UK has said that loneliness burns the living alive. They are no different from the so-called younger people. Their bodies and minds should be allowed to function to add meaning not only to their lives but also to their children's lives.

Growing Old Gracefully

Growing old gracefully really means having a place in the household, retaining dignity and continuing to set the respect that experience and wisdom merit. If this is allowed, the old will not become anxious about themselves and worry unnecessarily. Depriving the so-called old of activity and active participation makes them aged. Being old (in chronological terms) and being aged (in terms of frailty and ill health) are two different things.

As Mr I.K. Gujral, former Union Minister for Information, said, one of the cardinal principles of the Indian heritage is respect for the old. It is a recognition of the fact that in honouring them we are acknowledging the wisdom that the aged embody.

The Indian way of caring for and respecting elders has impressed Western social workers. In fact, when the Vridha Jan Sanman Samiti of Agra sponsored a "Senior Citizens World Congress" some years ago, some foreign delegates wondered why organisations like the Samiti existed in India. So the Samiti has ventured abroad. At a function in mid-1974 at Amanase in Ghana, for instance, it honoured the oldest woman in the world, Mrs Aba Odekye, said to be over 150 years old. Present on the occasion were her children, grandchildren, great grandchildren and great-great grandchildren, numbering 204.

THE TOUGH, CORDED, COLOURFUL
CAR UPHOLSTERY FABRIC
THAT IS COOL IN SUMMER & WARM IN WINTER

Tewilon is a wonder fabric with distinctive contrasts—it is corded and strong yet velvet soft to touch; it is cool in summer and warm in winter...an ideal answer when your car turns oven-hot in summer and ice-cold in winter. Tewilon comes in wide range of sophisticated shades—it can be combined imaginatively with rexin (see picture) for that special V.I.P. look. It would make all the difference between your car and the one next door.

The next time you change your car upholstery, change for the better—change to Tewilon.

Navy Day In Low Key

Naked In The Sea

by K.C. Khanna

THE Indian Navy celebrated its annual day this month in a low key. It has reason to be circumspect. The two Super-Powers have brought the Cold War too close to India's shores for comfort. The Pakistanis have acquired during the last 12 months the capability to hit and sink any object on the surface of the sea or below it across a wide arc stretching from their brand new naval base at Gawadar on the Makran Coast to Goa.

Towards the end of last month as many as 95 combat ships and 71 support vessels of Super and major powers were prowling in the Indian Ocean. The US alone had deployed 49 warships, including two aircraft carriers, five guided missile cruisers and 19 destroyers or frigates, along with 29 auxiliaries. And the Russians were not far behind. They had 25 war vessels and 47 support ships in the Indian Ocean. Even the French presence was not negligible, consisting as it did of 19 combat ships and five auxiliaries. Equally to the point, the range and offensive capability of Pakistan's Navy has increased manifold even as India's stakes in offshore oil all along its west coast are growing rapidly. It is reported to have strengthened its submarine arm by acquiring two more Agosta class subs from France on top of the four it already has. And, it is planning to buy three more.

In time these are all likely to be equipped with the submarine-launched version of the deadly Exocet missile (SM-39) now undergoing trials in France. Significantly, Pakistan's Admiral Niazi was present at the recent exhibition of French naval hardware at Toulon. The Pakistanis have, in addition six midget submarines. These can carry two-man vehicles that are ideal for putting a limpet mine with a time device to blow up an offshore oil installation or to block a seaport channel. Being small and slow-moving, they are extremely difficult to detect.

Simultaneously, the sea-surface capability of the Pakistanis has shot up with the reported addition of two Gearing class destroyers to their five-ship flotilla. Finally, in the air they can now pose a much greater threat. Their Mirage-5 fighters are equipped with 30 Exocet missiles and their Sea King helicopters with an equal number of the same. India's oil platforms in Bombay High are well within their range. What is more, they have acquired three Atlantic long-range maritime patrol and anti-submarine aircraft and are negotiating with the Americans to purchase three P3C Orion planes for similar missions. Superior to both Atlantics and Nimrods, the Orions will enable them to detect and hit any surface or subsurface vessel right up to Goa.

In contrast, the Indian Navy, despite its formidable array of surface war vessels, is virtually naked in the sea. For, its capability to meet a threat from the air or under water is severely constricted by lack of modern hardware. Its two squadrons of maritime reconnaissance aircraft—Super Constellations and Ilyushin-38s—are obsolete. The eight ski jump Harriers that the Government has contracted to buy from Britain to operate off the aircraft carrier *INS Vikrant* will not be in service before the end of 1983. The Indian Navy's submarine arm is weaker still. The eight F-class Soviet submarines it now has are slow, noisy, old and outdated. Most of the time at least half of them are confined to the dockyards undergoing maintenance or repairs. Indeed, no arm of the country's forces has been so sadly neglected since independence as the submarine arm even though a solitary enemy sub, the *Ghazi*, had tied up the entire Indian Navy to home ports all through the Indo-Pakistan conflict in 1965.

OLD, NOISY AND OBSOLETE: Submarines like the Kalvari (above), acquired in 1967 form the weakest link in India's defences against water-borne threats.

The need to make up for lost time is self-evident. The first of the four HDW-1500 subs that the Government has decided to acquire from West Germany will not be available till 1986; even so, they will be barely adequate for coastal defence. In a well-researched monogram, Admiral A.K. Chatterji, a former Chief of the Naval Staff, has suggested how the Navy's submarine arm can be strengthened within the ambit of overall efforts to deploy a balanced naval force to protect the nation's maritime interests in the Indian Ocean and beyond. He argues for the augmentation of the submarine fleet, including the acquistion of nuclear subs, at an additional annual cost of Rs 400 crores during the next 14 years. The Government will do well to examine his proposals seriously. ■

IMA : The Struggle To Lead

by Mohan Rao

THOUGH the Indian Army is about 250 years old, the Indian Military Academy, the nursery of its officer corps, was established only in 1932. Until the early 20s, the highest rank that an Indian could rise to was that of a Subedar-Major. Called the "Block Colonel" of the Indian Battalion, he was the link between the British officers and the Indian sepoys.

It was only after a sustained campaign by national leaders like Motilal Nehru, Madan Mohan Malaviya, Tej Bahadur Sapru, M.A. Jinnah and P.S. Sivaswamy Aiyer in the Legislative Council and in England that ten seats were first reserved for Indians at the Royal Military College at Sandhurst and the demand for setting up a college on similar lines in India was conceded a decade later.

Located between the Shivalik and Himalayan foothills in the Doon Valley, the campus of the Academy covers an area of over 1,000 acres. It was formally inaugurated on December 12, 1932. Gen Chetwode, who inaugurated it, gave the following credo to the future officers of the Indian Army: "The Safety, Honour and Welfare of Your Country come first, always and every time. The Honour, Welfare and Comfort of the men you command, come next. Your own Ease, Comfort and Safety come last, always and every time".

The Indian officers who have passed out of the portals of the Academy have lived upto this motto.

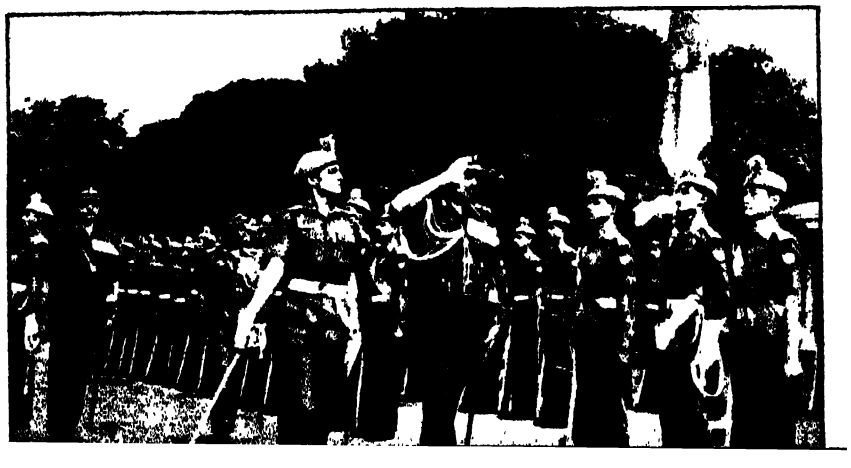
When the Second World War started in 1939 the Indian Army had 150 King's Commissioned Indian Officers and about 400 Indian Commissioned Officers from the IMA; the seniormost among them being a Major. When the war ended, more than 220 Indian officers held the rank of Lietenant Colonel and above. An Indian, Lt Col K.S. Thimayya, led the Indian Brigade with distinction during the battle of Kangaw in the Arakans in Burma. The other two Lt Colonels in the Brigade were Lt Col L.P. Sen and Lt Col S.P.P. Thorat. Many officers who passed out of the IMA won gallantry awards. The highest award, the Victoria Cross, was won by Lt (later Lt Gen) P.S. Bhagat.

The Indian Army Officers, be they trained at Sandhurst or at the IMA, have proved second to none. They did the country proud when they consolidated the Army in the wake of partition. They led the Army in Jammu and Kashmir in 1948-49, against China in 1962 and against Pakistan in 1965 and 1971.

However, in all the operations till 1965 the Army was led at the apex by an officer trained at Sandhurst. It was only in 1969 that an officer who passed from the IMA came to head the Indian Army. Belonging to the first batch which passed out of the IMA in 1934. Gen S.H.F.J. Manekshaw, headed the Army during the war for the liberation of Bangladesh in 1971. In a brief war which lasted only 14 days, the Indian Army achieved its objectives and captured over 93,000 Pakistani troops as prisoners-of-war. December 17, 1971, when the guns fell silent on the Indo-Pak front, was perhaps the finest hour in the annals of the Indian Military Academy.

Earlier this month another batch of Indian officers trained at the IMA passed out through the "Dron Dwar", named after Dronacharya who, according to legend, had his ashram nearby. Trained to display valour and wisdom, they will be walking in the footsteps of their predecessors, who have done India proud for the last five decades. ■

GEN. K.V. KRISHNA RAO, PVSM, Chief of Army Staff, salutes the Academy's colours during the passing out parade in June. The Indian Military Academy, which is celebrating its Golden jubilee this year, has trained officers who are easily on a par with their counterparts from Sandhurst or West Point.



Letter From Calcutta

What Is The CESC Up To?

ADDING INSULT to injury is how most people here describe the New Year's Day increase in the cost of electricity which has been raised by five paise to 45.85 paise per unit. This additional burden—the fifth imposition in five years—was by the Calcutta Electric Supply Corporation because the West Bengal State Electricity Board, which provides it with power in bulk, decided to increase its own charges by 4.5 paise per unit. The Board's inefficiency and callousness should have been cited to refuse permission for the higher rate, but the Left Front is never anxious to take unfavourable decisions on any branch of the government. Even so, it is more than a little curious that the CESC should buy electricity at 20.88 paise per unit and sell it to domestic consumers for 45.85. The Minister of State for Power, Mr Sankar Gupta, who was rewarded with his present appointment for having been a faithful and diligent Political Secretary to Mr Jyoti Basu during the Left Front's first tenure, says that the profit margin is "far too big"

As a good party man, Mr Gupta naturally has little time for the CESC which was a sterling company with shares quoted on the London stock exchange and a British Agent here until only the other day, and whose stately headquarters, Victoria House, in Chowringhee Square, still reeks of colonial enterprise But high though its overheads might be, the CESC still performs its tasks, if it were to be taken over, and if Calcutta is left to the Board's tender mercies, West Bengal would be a State plunged in everlasting night

For power cuts are, if anything, worse than they were in 1977 when the Left Front first took over, complaining of Congress neglect, mismanagement and inefficiency The unions are more turbulent now than before. Managerial cadres are even less mindful of their duties than in the past. And maintenance of equipment is just as poor as ever After five years in office, and glowing with pride at their mandate for a second term, the Left Front has effected no improvements whatsoever. It does not even seem to understand that the loss of so many Marxist seats in Calcutta to the Congress (I) in the last elections may have been directly linked to the intense suffering caused by prolonged power cuts, the crippling blows dealt to small-scale industry and the consequent effect on earnings.

Death Be Not Proud

NOTHING so readily brings together men of different persuasions than the Great Leveller. When Promode Dasgupta's body arrived in a Chinese aircraft, Calcutta's roads were thronged with the grieving faithful, the humble Bengali multitudes. But when they declaimed in tribute to his memory from a high scarlet-draped rostrum emblazoned with the hammer and sickle, set up in the Brigade Parade Ground, the distinguished mourners were all people who had hated and feared him in life They were the men who had always maintained that while Mr Jyoti Basu was a gentleman, Promode Babu was a Communist.

FACTORY WORKERS AND EMPLOYER both enjoy chess during loadshedding.

STATUE OF MARX AND ENGELS which was unveiled at Calcutta. (top right)

P.C. SEN placing a wreath on CPI(M) leader Promode Das Gupta's portrait (right).

Mona Chowdhury

But there they were, gathered to honour the departed enemy's memory. The former Youth Congress leader and militant anti-Communist Mr Priya Ranjan Das Munshi, still in the Congress (S) though he would rather be in the Congress (I) if only an honourable admission can be arranged, read out touching verses of his own composing Mr Gopaldas Nag, the PCC (I) general secretary, took time off from trying to persuade Mrs Gandhi to dismiss the Left Front to announce that Promode Dasgupta's name would be written in letters of gold in the history of mankind. The former Chief Minister, Mr Prafulla Kanti Sen, whose Janata Party would not even forge an electoral alliance with the CPI (M) in 1977, publicly said that Promode Babu deserved not just the Lal Salaam but salaams of every hue, and privately admitted that he was there because he and the dead man were both Baidyas, the clannish doctor caste unique to middle-class Bengal. Even the Bharatiya Janata Party, for which Marxism means dangerous revolution, sent a delegate, while the CPI's Mr Rajeswara Rao forgot ideological battles and the struggle between Moscow and Beijing in the cause of post mortem unity of the left

It was all very moving and most spectacular But how many of the tributes were genuine? One imagines that the Congress (S), Congress (I), Janata, BJP and CPI all heaved sighs of relief at the death of their most formidable adversary Even the more successful Marxist ministers, anxious to become part of the Establishment, must be secretly relieved now that the harsh voice of conscience has been silenced. Mr Saroj Mukherjee, the CPI (M) state committee secretary, who succeeds as Left Front chairman, cannot possibly exercise Promode Dasgupta's influence. Now that the man is gone, he can be deified in memory—and ignored.

Memorabilia

THE United Front government pulled down memorials erected by the British, that was the only one of the avowed 32 points of its programme ever to be realised What it could not remove it camouflaged, and the Ochterlony Monument in the heart of Calcutta's maidan, recalling the British general who acquired the Terai for India, became the Shaheed Minar. It was an era of more zeal than wisdom, and the late Subodh Banerji, Labour Minister in the United Front, is said to have decided that classical figures representing virtues like Industry and Honesty atop the parapet of Writers' Buildings, to be torn down, in the mistaken belief that they were the starchy memsahibs of British governors But the United Front also had a sense of puckish humour: at the height of the Vietnam war, it placed the American Consulate in Ho Chi Minh Sarani, which address still continues

Witness the more constructive spirit that prevails in West Bengal today: the Left Front is busy setting up its own monuments to the departed. A massive Lenin already keeps vigil in the Chowringhee end of what used to be Curzon Park and is now called Surendranath Park, after the legendary "Surrender Not" Banerjee They have now been joined at the other fringe of the park, facing Raj Bhavan, by a two-in-one chunky bronze of Karl Marx and Friederich Engels, a gift from East Germany The unveiling was nicely fitted into the one day between Promode Dasgupta's cremation and the vast public meeting held in the CPI(M) chief's memory The timing permitted a whole collective of Communists, including not only Mr E M S Namboodripad and Mr Rajeswara Rao but also the East German ambassador, to be present at the ceremony when Surendranath Park was decked out with twinkling coloured fairy lights like a fete

Some might carp that each statue means a few more coloumn inches of newspaper reporting for the ebullient Public Works Minister, Mr Jatin Chakravarti, who is nothing if not publicity conscious Others claim that each erection means more money for contractors who bask in ministerial patronage But a more valid objection to Left Front notions of civic beautification would be on aesthetic grounds The Congress was no less unimaginative Subhas Chandra Bose's *Delhi Chalo* figure points firmly to Kanyakumari, marches with right hand and foot incongruously out at the same time, while only the sculptor's skill prevents the greatcoat draped over one shoulder from slipping off. An equestrian statue of Netaji at the Shyambazar five point crossing is equally ungainly

All the figures with which Calcutta has been blest in recent years suggest, in fact, that graceful and visually pleasing lifelike recreation does not come easily to Indians Sri Aurobindo outside the Victoria Memorial is stiff and emaciated, utterly without the sage's benignity, "Bagha" (Tiger) Jatin Mukherjee has been perched on an unfamiliar horse; and Pritilata Waddedar looks as if she is angrily protesting at some impertinence by Michael Madhusudan Dutt across Red Road. The only realistic statute is of Mahatma Gandhi. Its sculptor, the late Deviprasad Roy Chowdhury, though a Bengali, was truly honoured in Madras and Patna where his symbolic stone friezes add beauty to the civic environment. Calcutta's modern public statuary is, like Bengali calendar art, clumsy and obvious to the point of being gross.

Sumita Sandilya

In The States

Fissures In Telugu Desam

HYDERABAD: Factionalism, has infested Telegu Desam, too. There is widespread discontent among many regional party workers who feel neglected. The party's President, Mr N. T. Rama Rao, who vowed to keep out the corrupt Congressmen from his party, has had to finally eat his words. The list of contestants for the 289 seats contains 35 former Congressmen, including four former Ministers. To accommodate the rejected Congressmen, NTR released his list only after the ruling party announced its candidates. Worse, the list includes as many as 50 candidates who unsuccessfully contested the last Assembly elections on different party tickets.

The preference for defectors enraged many of the aspirants who were with the regional party since its inception. This ire is taking a dangerous shape in a few districts like Krishna and Kurnool. Some of the indignant workers are planning to convene a meeting of the 'real' Telugu Desam workers and hoist up the flag of revolt.

The ruling party, contesting all the 294 seats, has put up 90 new faces. Those denied tickets are now out to sabotage the chances of the official party candidates by contesting as Independents. The selection of the candidates was based on the whims and fancies of a few influential party members.

This is especially true of Nellore and Kurnool districts where N. Janardhana Reddy and K. Vijaya Bhaskara Reddy, succeeded in throwing out their opponents. The influential Anam family of Nellore has vowed to defeat all the official party candidates in the district by contesting as Independents.

One of the sitting members from Hyderabad, Ramdas, who was denied the party ticket to accommodate the PCC(I) President's relative, Nagam Krishna Rao, went on a rampage along with his followers and ransacked the PCC(I) Chief's house.

To check the activities of the rebel candidates, the High Command is deputing observers. Not to be publicly named, they will quickly watch the activities of the rebels and report to the High Command.

With the receipt of 3,908 nominations for the 294 seats, a new record has been set in the filing of the nominations, though many of the candidates would have withdrawn from the contest before the due date and some more would put up only a token fight at the hustings.

G.S. Reddy

JOINING FORCES AGAINST A COMMON ENEMY. Maneka Gandhi with N.T. Rama Rao on her recent tour of Andhra Pradesh.

The Saffron Breakthrough

SRINAGAR: Agronomists had been dreaming for long to grow saffron, highly valued all over the world, beyond the traditional saffron-yielding lands of Jammu and Kashmir. So far the crop has been confined to Pampore in Kashmir valley and Kishtwar in the Jammu region. Even adjoining fields in the valley were found totally infertile for saffron cultivation.

However, there has now been a breakthrough in saffron cultivation in Doda district of Jammu and Kashmir, of which Kishtwar forms a part. An agricultural research unit set up at Kishtwar under the Drought Prone Areas Programme has not only succeeded in increasing the yield of saffron in this area but also in extending its cultivation to new lands. Now full-fledged research units for saffron have been set up both at Pampore and Kishtwar.

The researchers are confident that saffron can be successfully cultivated wherever certain necessary agro-climatic and soil conditions are available. However, this could merely be over-optimism since the new areas of cultivation, discovered after a good deal of intensive research, still comprise very narrow strips. Saffron thrives on light clay soil having a good built-in drainage system with medium rainfall throughout the year.

AN EXPENSIVE COMMODITY. Saffron plants had so far been unable to thrive beyond the traditional areas of cultivation. The recent breakthrough holds out hope for commercial and trading circles.

Besides India, saffron is grown extensively in France, Italy, Turkey, England and Spain.

Suraj Saraf

The Suicidal Jatinga Birds

HAFLONG: Every year in the fog and drizzle on the moonless nights of mid-August and end-October, sometimes attended by a southerly wind of moderate velocity, hundreds of different species of daytime birds, flying over Jatinga village in the North Cachar Hills district of Assam, are attracted to the brilliant lamplights installed by the villagers.

At an opportune moment, the villagers employ a long bamboo pole to ground bagfuls of these birds. The killing and catching of these visiting Jatinga birds—some of them water birds—has been the usual practice of these villagers since 1905. No scientific study has so far been made of this almost suicidal tendency of the birds. However, in April 1981, the Assam Forest Department (AFD) started a systematic study of this phenomenon from a bird observatory tower at Jatinga.

"The killing of birds is on the decline following a Save-Jatinga-Bird drive by AFD," says H.P. Phukan, the Haflong-based District Forest Officer who is investigating this puzzling behaviour of Jatinga birds.

While some older villagers consider the catching of these Jatinga birds a seasonal sport, others have responded to an AFD appeal against such large-scale destruction of the winged creatures. However, AFD's main problem has been its failure to scientifically estimate the habitat, breeding habits and the destination of these visiting birds. The AFD's claim that these are native birds is, therefore, disputable.

Wherefrom and why do these birds visit Jatinga each year at nightfall and commit suicide by flocking round artificial lights still remains a mystery.

Rafique Z. Hazarika

A BIRD OBSERVATORY tower has been erected at Jatinga in Assam to study the suicidal tendency of birds.

100 Years Of Service

IN THE SERVICE OF THE POOR. A literary class for slumdwellers in progress. Inset: Pandita Ramabai.

BOMBAY: The Arya Mahila Samaj, founded by the renowned social reformer, Pandita Ramabai, to broaden the horizons of Indian women, bound by home and husband, completed a fruitful centenary last month. India's oldest women's-institution, it inspired women to step out and publicly question age-old traditions and supersitions which resulted in voluntary slavery. A hundred years ago this was no mean achievement!

Pandita Ramabai, better known for her work with the Seva Sadans, organised the Samaj to meet the recreational and other needs of lower middle class women who, she felt, needed help even more than the downtrodden.

Later in 1916, Dr Kashibai Navrange, one of India's earliest lady doctors took over as secretary and treasurer of the Samaj. Enterprising and broadminded, she established the Free Milk Distribution Fund which till today distributes free milk every day to children at the Social Service Centre, Naigaum, in Bombay and the W.B. Navrange Balak ashram, Pandharpur, through the social service league.

The samaj also offers scholarships to needy school girls, though the total sum—only about Rs 2,500 last year—is pitifully small.

Perhaps more to the point, the Samaj runs a girl's hostel in Bombay, appropriately housed in the Kashibai Navrange lane. Established in 1934 for the use of homeless medical students (girls only, of course) it now accommodates approximately 35 undergraduates of all faculties till such time as they graduate. A reasonable sum, Rs 250, is charged each month for rent and food. It started a Kalyan Kendra 8 years ago to run literacy classes for the slum-dwellers of Papanaswadi, near its premises and is now planning to improve and extend its existing welfare schemes, emulating the example set a hundred years ago by its illustrious founder-members.

M.V.

Killer Malaria

NEW DELHI: Judging from the figures obtained for the first five months of 1982 there has been a drop in the incidences of malaria in the country by 27 per cent. However, the more malignant form of malaria, known as *Plasmodium falciparum*—the killer malaria—is on the rise in certain areas including the Union Territory of Delhi.

Against only 26 cases during January-May last year, 101 cases have already been reported this year. The local authorities have been alerted and the anti-malaria operations have been intensified.

There have been claims that the incidence of this killer malaria was brought down from 6.9 million cases in 1976 to 2.6 million cases in 1981 with over 1,60,000 officials and three lakh voluntary workers engaged in the task.

The number of cases recorded in the first five months of 1981 was 4,81,397 which came down to 3,32,597 during the corresponding period in 1982. The reduction in the incidence of the killer malaria was 14.64 per cent. In absolute terms, malignant malaria cases were 1,10,521 in 1981 which were reduced to 94,342 in 1982.

Besides New Delhi, other areas where the killer malaria has struck are the Union Territory of Chandigarh, Tamil Nadu, Tripura, Mizoram, Himachal Pradesh, Madhya Pradesh, Maharashtra and Manipur The incidence of this malaria is very high in Orissa—58,993 cases in the first four months of 1982.

The number of deaths from malaria in 1981 was 164 while the deaths reported upto April 1982 numbered 23.

Lecturers In English Lose Jobs

BOMBAY: If work hours can be used as a statistical measure, most colleges affiliated to Bombay University do not need more than one and a half lecturers for English Literature. This strange ratio has arisen not due to a lack of demand for the language amongst students but due to the vanishing of English language from the syllabus.

Today, about 33% of English lecturers in the 138 colleges affiliated to Bombay University have lost their jobs because English Literature has been whisked away from both the Commerce and Science faculties. Even the Arts student has, at the degree level, only one paper called "Communication Skills". English Literature which provides the best of material "for the proper study of mankind", the largest number of original works and translations from the best works in other languages, has been replaced by a few rules of grammar, comprehension and, of all things, the art of taking notes in a classroom. How a student can take notes without knowing the language is a riddle which only the University can solve.

More remarkable is that Commerce and Science students lack even this measly paper. Perhaps the feeling is that chemical formulae and mathematical equations are adequate enough for communication. Or maybe doctors and engineers do not need to communicate or speak or write a love letter.

A looking back reveals without doubt that English is being systematically downgraded. A generation ago, every BA student appeared for three papers in English; by the time he had graduated, he had studied three plays of Shakespeare and some poets and prose writers of the 19th and 20th century. Gradually the number and the quality of these papers dwindled. "Higher" and "lower" levels were introduced as being progressive and then mysteriously disappeared after a couple of years. As a substitute, composition papers were ushered in and again inexplicably whisked out.

With the introduction of the 10+2+3 system in 1977, English was reduced to two language papers—one, a paper called "Communication Skills" and two, a paper in English Literature or an alternative Indian language paper. Inspite of 25 students opting for English, the subsequent year saw the subject disappear from the syllabus. When questioned by teachers, the Vice-Chancellor is reported to have said, "We have merely put the vernacular on par with English—is that wrong?"

FALLEN STANDARDS? A gradual replacement of English with regional languages by the Bombay University authorities has rendered lecturers in English totally redundant.

Nothing is wrong except that in 1982 about 33% of English language lecturers have been rendered redundant in Bombay. Students coming from English medium schools have been forced to lower their standards and learn the mechanics of grammar and letter writing. And colleges will now aim at creating technicians in English rather than artists in what is, for everyone the window to the world.

And no two moments will ever be the same

Bonsai: Small Is Beautiful

In recent years, the art of Bonsai has been used commercially and exploited to make money. We often forget that a Bonsai tree is full of simple feelings and is as sentimental and emotional as a growing child. The upbringing of a child is basically what its mother gives it, so also a Bonsai's.

HAWTHORN by Pramila Wagle

JUNIPER ON STONE by Shreya Dalal

IXORA by Hansa Amersey

What the world knows of Bonsai now is what the Japanese have created with their fine understanding, training and subsequent care of these delicate trees. Bonsai to a Japanese Bonsai grower is an art dearer than his own life.

What is Bonsai? Bonsai are ordinary trees which have been trained in pots to grow into natural, beautiful shapes. Bonsai art aims at creating artificially perfect trees and since they are well cared for and protected, they may well outlive their counterparts in nature!

The chief beauty of Bonsai is its form and even when that form is beautiful and artistic, it must not be over-done. It is a reflection of nature and not a distortion of it. The important thing to remember is how to achieve harmony between size, shape, form and design of the tree and the container which carries it. To achieve satisfactory results, it is preferable to choose varieties of trees with small leaves and small flowers and fruits. The trunk and branches can be dwarfed and shaped by pruning and wiring, even the leaves can become smaller with years but the flowers and fruits will always remain proportionate to their species.

Most people are fascinated by Bonsai: miniature trees in small containers, with real flowers and fruits are so enchanting to possess!

The first instinct is to buy a plant like this and keep it in one's drawing room. It will certainly look very beautiful, but alas, unless one knows the proper care and training of these miniature wonders of nature, they will not last long. So the best thing to do is to learn the basics of Bonsai and then after that a little training, affection and care will do wonders.

BONSAI (commonly known as dwarfed miniature trees) is well known as one of the most fascinating arts of Japan. Strangely enough, though popularly known as Japanese art, Bonsai did not originate in Japan. History traces the origin of potted trees to Vedic India, when *rishis* and *munis* moved from one part of the country to another and found the need for carrying certain trees of medicinal value with them. From India, it is said, this practice of carrying potted plants travelled to China.

THE FIRST STEP: Filling up forms, studying brochures, scanning prospectuses. Picture shows Indian hopefuls at the United States Education Foundation in India, American Center, Bombay.

Scramble For "Phoren" Education

Despite innumerable hurdles, a surprisingly large number of Indian students *do* manage to go abroad for further studies each year. Moreover, a foreign education is not necessarily the exclusive preserve of the elite.

by Minnie Vaid

THERE seems to be today a veritable flood of Indian students either going abroad for further studies or wanting to go—the latter number of course being phenomenally greater than the former. Surprisingly, however, for every 100 frustrated youngsters who fail to make it, there is atleast one who manages to cross the attendant hurdles and carve a niche for himself or herself overseas.

An overwhelming majority of these plucky (or lucky) young people are "post-graduates", the Reserve Bank's clearance for undergraduate students being extremely difficult to obtain In fact, non-availability of the concerned undergraduate courses in India is a must before the RBI even looks at such applications. And, thanks to the cafetaria approach to higher education, some college, university or institute at home is equipped to offer any course under the sun that an undergraduate student can think of taking. Even so, there are notable exceptions. Full scholarships for lodging, boarding, tuition and travel are offered for instance, by the United World College, an organisation which has 5 international colleges—in Wales, Canada, Singapore, New Mexico and Italy—for undergraduates. Its cell in Delhi allots, on an average, 2-3 scholarships each year, the limited number further enhancing its prestige.

Among the first and the many hazards that a postgraduate student wishing to go abroad for higher studies encounters, apart from the all-important one of finance—is the inordinate delay the entire procedure involves. A lot of unnecessary tension can thus be avoided if he/she accepts that running through the whole gamut of securing forms, applying, taking tests, giving interviews, xeroxing documents, obtaining visas and so on usually takes the better part of a whole year.

However, the delay, the tedium, the disheartening encounters with stiff and indifferent consulate officials and the running around in circles to complete the formalities is often worth it. There are acknowledged advantages in studying and living in an advanced, though alien, land.

Admission

Time (or rather patience) and finances apart, admission to a foreign university is the most difficult part of it all. Admission procedures for French universities are relatively the quickest—an Indian student begins filling up inscription forms in February, the forms are forwarded by the office of the Cultural Counsellor, French Embassy, to the concerned university who further notifies the candidate by May. Selected candidates have then to furnish a financial bank guarantee of a minimum of 9,000 francs a year, for fees and maintenance.

This procedure is applicable to students of the First Cycle, which consists of two years of study after which the student is awarded the Diploma of General Universities Studies (DEUG). The Second Cycle also comprises two years of study while the Third Cycle which leads to the award of a doctorate, requires at least three years of work and research.

Among France's 68-odd universities, the ones that are in Paris and its outskirts are the most sought-after by Indian, as indeed other foreign, students—in fact, Parisian universities can boast of almost 10-20% of the total number of foreign students.

The FrenchGovernment awards 29 scholarships each year to Indians for higher studies in 14 subjects, prominent among them being mathematics, medical research, computer sciences, electronics, microbiology, French history and fine arts. The duration of these scholarships, which are mainly for post-doctoral research (Third Cycle), ranges from 12 months to 2-3-years. A monthly grant of 2,000 francs plus passage from India to France and back is provided by the French Government.The entire procedure from the application to the selection/rejection stage takes approximately 4 months.

The influx of Indian students into France—and Germany too, for that matter—is considerably lesser than that into the US or UK due to the language barrier,as all classes in these countries are, obviously, conducted in their own language In Germany, as in France, a foreign applicant has to pass a stiff language test at the chosen university before enrolment. The German Academic Exchange Service offers fellowships annually to the Indian Government for Indian nationals working as teachers in Indian universities or institutes of university standard, IndianInstitutes of Technology, and scientists working in research institutes of national importance. The fellowships are awarded only for advanced research and not for obtaining degrees

A remarkable feature of German education is the absence of tuition fees at their universities. Every student is, however, required to pay for health and accident insurance and subscription to the Students Union. All maintenance costs have to be borne by the foreign student due to paucity of scholarships. On an average, he is expected to spend approximately 800 marks each month for food, rent and other necessities.

Eligibility of foreign students for admission to German universities depends on whether their national school-leaving certificate is equivalent to the German one, the Abitur, or whether the applicant needs to pass the university entrance exam.

Information regarding admission procedures, courses of study and recognition of foreign certificates and diplomas can be obtained from the offices of the Foreign Students Service at all German universities.

Admission to British universities is relatively difficult, inasmuch as the education fees are steep and the number of scholarships provided by the British Council quite meagre. Only ten scholarships, for instance, were awarded to Indian students for post-graduate studies, under the auspices of the British Council during 1980-81.

Tuition fees for the same year ranged from £2,700 for the Arts to £3,600 for the Science faculty and £4,600 for the Medical faculty. Living expenses were further estimated at approximately £3,250 per annum. Thus a medical student wishing to pursue his studies in UK for a period of 5 years pays a minimum of £23,000 as tuition fees and £16,250 for keeping his body and soul together. And, thanks to inflation, these figures are rising inexorably all the while.

Select Few

The British Council does bear all expenses of fees and maintenance, of the select few who have been awarded scholarships, but a large majority of students, especially undergraduates, have to pay their own way. It evaluates applications for scholarships on the basis of the candidate's grades at the Indian university, his performance at his job (if it is a technical scholarship) and his proficiency in the English language.

Despite the financial difficulties, however, there were as many as 1,225 Indian students studying in Britain during the year 1980-81, out of which 370 were post-graduate students, 103 were undergraduates, 15 were students at polytechnics, 257 were students in industry and science etc.

As far as the United States of America is concerned, it seems to be the first and ultimate dream of a majority of Indian students wanting to study abroad. Phenomenally large numbers of enthusiastic youngsters can be found crowding the offices of the United States Educational Foundation in India (USEFI) at the American Center, Bombay. They scan endless lists of universities, and countless brochures, their faces as yet optimistic. But then, visiting the USEFI for initial information about American universities and courses is merely the first step!

Preliminary application forms, the Graduate Record Examinations, the Graduate Management Admission Tests, Test of English as a Foreign Language, applications for financial aid—the list goes on and on *ad infinitum*. Despite that, statistics reveal that there were 9,250 (extrapolated count) Indian students studying in American universities last year.

That the United States is the students' most popular choice is substantiated by the various "Trusts" that sponsor students' education abroad or just offer financial aid in some form. They operate quickly, possibly to avoid a large-scale invasion of their offices!

Most of them are Bombay-based and to get some money out of them is quite as difficult as admission to a foreign university. The J.N. Tata Endowment for the higher education of Indians, for example, calls 200 applicants for an interview after short-listing the 700-odd aspirants to the 70-80 scholarships it offers each year. The interview, held in mid-May, is conducted by a team of experts from Tata companies and outside. A consistent academic record of distinctions is a prerequisite to attaining the title of "Tata scholar" as well as the Rs 20,000 loan scholarship. Only post-graduate scholars are eligible.

The Endowment, established in 1892, also stands in "loco parentis" to its scholars, assisting them with their visas and equipment. It keeps tabs on their progress by corresponding with their tutors abroad. Admission to the universities abroad is, of course, entirely the students' own headache. The loan can be paid back within 7 years while an insurance policy of the amount of the loan is endorsed to the Trust (premium paid by the student).

Most educational Trust have similar terms of repayment. The K. C. Mahindra Education Trust, established in 1953, also accepts repayment after completion of studies, as well as the life insurance policy. Its interest-free loan scholarships are for advanced overseas education in engineering and natural sciences and tenable for a maximum period of three years. The amount offered is usually about Rs 12,000 per academic year. Seventeen scholarships were provided by the Trust this year.

Loan Scholarships

The R. D. Sethna Trust, founded in 1937, sanctions as many as 180-200 loan scholarships each year, the amount varying according to the needs of the student, but going as high as Rs 40,000, to be repaid within 4-5 years. Once again, 500-600 applications inundate the Trust's offices. Again only post-graduate scholars are considered. Students of law and the arts are not eligible.

The Shri Lalbhai Dalpatbhai Loan Scholarships scheme, Ahmedabad is similar. It, however, stipulates that the income of the applicant's parents should not exceed Rs 25,000 per year and that the student should guarantee his return to India within 5 years.

The India Foundation, formed by Dr N. B. Parulekar (also founder of Sakal Papers Pvt Ltd) in 1959, offers 15-20 travel grants (upto Rs 6,500 each) in the form of interest-free loans to Indian students who have obtained admission, assistantship or scholarship to any foreign university for academic study of not less than a year's duration.

The Aga Khan Foundation Geneva, is yet another prestigious organisation offering select and exclusive gift scholarships to highly meritorious post-graduate students, in varied disciplines such as medicine, management, social welfare, engineering, architecture etc.

The list (of such Trusts) is endless, auguring well for brilliant students whose only obstacle to furthering their academic excellence is financial insufficiency. This is not to say that the Trusts are convenient gold mines that can be tapped by academically brilliant but pecunious students. By virtue of their being entirely private organisations, with their own trustees and methods of selection, it is conceivable that they grant their loans in an arbitrary fashion. But, by and large, they operate with reasonable impartiality and their prestige is high. For, in many cases they do manage to make pipe-dreams come true! ■

PRESTIGIOUS PRINCETON rates high on the popularity list of students the world over.

Poetry of the month

Selected by Nissim Ezekiel

Prayer

Vishnu, the thousand-named God,
give us a name to know ourselves.
Give us a spouse as fickle as yours,
so we may spend time going places
to waste our ecstasy in other causes.

O God of a hundred hands,
give us a hand to rouse ourselves
from the quicksands of compromise.
Give us a flower, too, so we can feed
maggots of attention
to our raging fire of vanity.

O scorcher, burn down our inanities
to ashes of profundity.
Give us in short what we
hanker after and what we don't,
and make our lives a merry-go-round—
a multi-coloured blaze of experience.

D. Kesava Rao (Hindupur, AP)

Confessions

"No man is an island,"
said Donne, desperate,
not unlike a last-minute
deathbed atheist who
has confessed.

How far desperate such coy
confessions? An appeal to
reverse blank walls, maybe,
or even an attempt to learn
iconising them
with meanings of joy, hope:
"Ba", "Ma", "Aaa". A child
tries to toddle, falls,
gets up, falls, but never
to give all up; and
fearlessly to walk, walk again.

Aroop Mitra (Bangalore)

Within Me

Within me some one was weeping.
Within me some on was listening.
Within me some one was seeking.
Within me some one was calling.
Within me some one was saying:
"It is you that I am calling.
I'm looking for the you that's mine."

Within me some one was digging.
Within me some one was burning.
Within me some one was weeping.
Within me I was seeking myself.

Daud Haider (Bangladesh
(Translated from the Bengali by Lila Ra

Stonehenge

It's a private Stonehenge:
No one knows its meaning.
Guess is—
The druids in calf-skin clothes
slaughtered the baby sun
in the bowels of the henge.
The huge Karma stones
are still guarding
that sanguine ceremony.

Who knows
how many
king-size egos lie buried—
each ego stone covering one?
It is like
my own private Stonehenge
where I hide
my slaughtered soul.

The language of *tantra* has varied,
my druid brother,
but the ceremonies remain the same.
It's the taste of blood on a raw tongue.
That's the name of the game!

Girish Bhandari (Jabalpur)

On The Death Of A Boy

1

Death scrawls its imperious hieroglyph in red
by the side of the road.

The physician, neurosurgeon, otolaryngologist,
anaesthetist
team up to cordon off the hushed monitored bed
in the intensive care unit.
But it rides the froth in his lungs; it sloshes
through the catacombs of his brain. A turgid aqueduct
draws the noose round the faltering heartbeat.

"Mother dear, mother dear, my head is going to burst.
Mother dear, mother dear, please press my head."

The blood pressure scrambles up untried peaks
before it sinks into the trough with the heaviness
of mercury in the manometer
The unequal pupils are fixed in a defeated stare.

"My child, my beautiful child, is the pain gone?"

2

Death unmasks all art's pretensions, its artefacts,
its uncertain solace.

What words can steady the dazed tread
of a father carrying his dead teenager son, pillowed
on a huge red blotch still spreading, to the waiting van,
his fingers sticky with the relentless ooze, curling
into a gnarled fist as he looks in it for meaning,
sees his son,
sees the motley crowd of mute mourners blindly.

Can words revoke the first tremor as it breaks out
on the set corners
of a sweaty upper lip on a blanched face, the thrust
of finality into the glazed eyes of a father
who came too late?

Words falsify the brief moment's life-long grief.

Kuldip Singh (Bhopal)

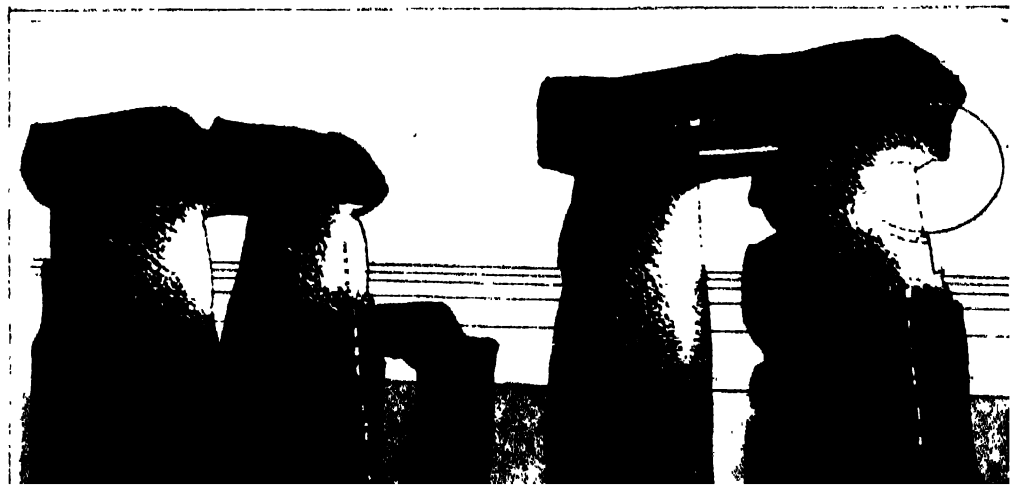
Lines On A Fellow Traveller

Dusky, wide-eyed innocence
at variance with
the gross adult lustre of gold.

Pensive child-bride.
Snatched into adulthood
as payment for a father's debt,
or to ensure a recalcitrant son,
or to cement a crumbling edifice
of quarrelling clans.

The night has swallowed your native hills,
replacing them with flat brown plains.
Unseeing eyes scan the distance.
The rushing horizontal haze,
like memories of childhood left behind,
unravelling the puzzle
of the illusion called youth
which has bypassed your life.

Pooja Juyal (Lucknow)



The Weekly Pick

The Wheat And The Chaff—Francois Mitterand; Vikas; Rs 195

Subtitled *The Personal Diaries Of The President Of France 1971-1978*, the book is a compilation of essays by the President, who was at the time leader of the French Socialist Party. These "notes" as he calls them, are not strictly speaking memoirs, but jottings on "things" he felt strongly about. Monday October 23, 1972, carries a heartwarming confession, for example, Manhattan in its contours reminded him of Botticelli. Or take Wednesday December 5, 1973, which has a charming line—"Nothing is more disturbing than beauty." The reader discovers much by way of experience.

The Educational Development Of Your Child—A Guide

A.P. Srivastava, Learning Laboratory, Rs 35

Covering varied subjects like *Giving Children Their Books, How To Motivate A Child*, and *Discussion — Techniques*, the author tries to provide a guideline on how to educate your child from the generalist's point of view. More and more parents are made aware of the necessity of involvement and interaction for better understanding of child psychology. Although a little steep in cost, it might not be a waste.

The Life Of Mahatma Gandhi; Louis Fischer; Granada; £ 1.95

Fischer's work on Gandhi is extensive: *A Week With Gandhi, Gandhi and Stalin, The Essential Gandhi, An Anthology (ED)*. And at this juncture, when so much is being done on Gandhi, it is only fair that we share Fischer's experiences. The chapters *Tolstoy and Gandhi, Churchill versus Gandhi, Gandhi Hoes His Garden* are memorable as the humorist in Gandhi is charmingly exposed.

Aspects of Buddhism; Vision; Rs 75

The Editorial Board sports eminent scholars—with Homi J.H. Taiyarkhan on *Gandhi And Buddha*, P.S. Srivastava on *Buddhism In Day-to-day Life*; and Dipak Kumar Barua on the *Legacies Of Buddhism In Bengal*. The articles are naturally research oriented and the book carries an index and a list of contributors' addresses at the end. Tibetology is more than a study of philosophy and culture now — it is currently also a study of politics — so if you are interested in the cross-currents of contemporary Tibetan thought this is a book worth reading.

Julie

Stan & Olly Resurrected

After a four year-long world-wide search by the Hal Roach studios in Hollywood, nearly 100 priceless short films and feature films of the late comedians Laurel and Hardy have been retrieved. Some of the films were made with the comedians speaking French, Italian and Spanish, while others were dubbed in German. Three or four of the films have never been shown in the US.

Postal History!

Postal history was created at Visakhapatnam when the world's first underwater postal cancellation was released by Vice-Admiral M.K. Roy, FOC-in-C Eastern Naval Command.

The special cancellation marked the 15th anniversary of the Indian Navy and was be released on board *INS Kalvari*, the first submarine to be acquired by India.

—The Hindu

Bottled Up!

Mr Satish Bhaskar, a solitary human on Suheli Islands in Lakshwadeep is safe, says a letter in a bottle.

Bhaskar, carrying out a marine turtle survey for the World Wildlife Fund, India, lived safely through the stormy four-month monsoon period, consigning his reports in bottles in the hope that they would reach civilisation through some kind samaritan fishing in the high seas and transporting them to India.

—Indian Express

Another Reason

Mrs Gandhi's one-day trip to Goa may have been necessitated by the recent ethnic riots and the troubles in the Congress (I) but the main reason she went was to see for herself the Taj Holiday Village where the Heads of State of the non-aligned summit are scheduled to camp for a 4-day breather. K. Natwar Singh had scouted around Goa and told the PM that he had found just the right place. Indeed, so effusive was he in his praise for the Taj village that Mrs Gandhi decided to go and have a look for herself.

Thank You Comrade

When, on June 22, 1941, Hitler launched a massive assault all along the Soviet frontier, Britain at once offered assistance, and sent a military mission, headed by General Ismay. Churchill refers to Ismay's report thus:

"One incident preserved by General Ismay in an apocryphal and somewhat lively form may be allowed to lighten the narrative. His orderly, a Royal Marine, was shown the sights of Moscow by one of the Intourist guides. "This," said the Russian, "is the Eden Hotel, formerly Ribbentrop Hotel. Here is Churchill Street, formerly Hitler Street. Here is the Beaverbrook Railway Station, formerly Goering Railway Station. Will you have a cigarette, comrade?" The Marine replied, "Thank you, comrade, formerly bastard!"

Bon(n)y Business

It may sound incredible but there is money even in man's mortal remains. Ever since 1936, when the first consignment left the shores of India, the export of human skeletons has been and still is a flourishing business in India. Where do these skulls and bones come from? Who are the main partners in this ghoulish trade? These are some of the questions the author examines.

by Savia Viegas

EVERY year an estimated 15,000 Indians are sent abroad; "picked" to the bone and carefully packed in crates marked "biological specimens for scientific purposes". Under this ambiguous classification which embraces everything from stuffed rabbits to bird skeletons, the skeletal remains of hundreds of "unclaimed" human bodies leave India for USA, West Germany, Australia and several other countries. Ironically, they are being used for the very education and research which could not give them a better life.

The first consignment of human skeletons left the shores of India in 1936; since then the trade has never looked back. Today, while Indian skeletons also hang in the anatomy labs of our own schools and colleges, the "fortunate" ones are handled by the probing fingers of medical students the world over.

Crisp Dollars

That the export of human skeletons is a flourishing business is evident by the fact that there are 15 firms operating in India (14 are Calcutta-based while one has its headquarters in Bombay), earning around Rs one crore annually in foreign exchange. Incidently, India is the only country in the world which sell its dead. If the bones fetch crisp dollars, who is worried about the ethics of the trade?

But that is only part of the story. For, not merely skeletons, but even skulls and loose limbs are regularly exported. According to one estimate, around 25,000 skulls are exported from India every year. However, this so-called "spare parts" trade has come under fire ever since a new promulgation concerning the certification of the export items was introduced.

The main partners in this ghoulish trade are USA and West Germany, who together account for more than half the total offtake. Here it is worthwhile to note that these two countries account for the largest per capita expenditure on research and development, with USA spending Rs 1,607 per head while the figure of West Germany stands at Rs 1,265 per head. The other major importers include Australia (12.3 per cent), Canada (11.5 per cent) and the UK (7.6 per cent).

Where do the skulls and skeletons for this roaring business come from? According to the people in the trade, most of the skeletons are obtained from unclaimed dead bodies. Details of another source were furnished by William D'Souza, who in spite of having his name registered as one of the exporters from Bombay, vehemently denied any such connections and emphatically maintained that he had dealt only in stuffed birds and animal specimens. However, he admitted after much prodding that occasionally he supplied a skeleton or two to local schools and colleges.

Most of the "goods" for the local trade, admitted Mr D'Souza, are obtained from the dead bodies of poor rural folks who often bury their dead because they cannot afford the rites which go with a cremation. Thereafter, the local touts with a quick eye quietly dig up the bones, truss them up and sell them to the local dealers for a paltry sum of Rs 30 or Rs 40. "You cannot imagine the poverty in our rural areas which forces people to commit such heinous acts," said Mr D'Souza.

In the dealer's "workshop" all traces of flesh are removed from the bones and after boiling they are treated with peroxide to give them a smooth finish. According to Mr D'Souza, on an average three complete skeletons are obtained out of every five that are acquired in this manner. Each such skeleton nets around Rs 100 to Rs 200 and is most often sold to local schools and college laboratories. These skeletons are put together at Wadgaon and Pune in Maharashtra and at various places in South India.

The most abundant source of human skeletons are the morgues of hospitals in the big cities. According to the Bombay Anatomy Act, 1949, bodies of dead persons, with no claimants within 72 hours of death, can be used by medical colleges. The only endorsement needed is the signature of a police officer stating that the body is unclaimed. Those bodies which are gnarled by disease are handed over to the sanitary staff to be destroyed. Perhaps it is these bodies that find their way into the

dealers' cauldrons, possibly with some palm-greasing One, wonders, however, how the large, local demand for skeletons is met by these few disease-wracked victims

The Export Trade

Things become much more complex when one turns to the export trade Mr D'Souza pointed out that the skeletons for export have to be of "able-bodied persons" In other words, the export consignment necessarily needs perfect human bodies preferably in the age group 25 to 40 years and, with all vital and delicate bones like phalanges, shoulder blades, dentures, etc, in good condition Such skeletons fetch as much as Rs 900 in the international market Obviously, neither the bodies of ill-nourished rural folks nor the emaciated remains from hospital morgues can meet such high standards

Skeletons In Their Cupboards

When asked the source of supply of such skeletons, Mr D'Souza replied, "I don't know But one thing is certain There is something fishy about it"

True For when it comes to sources of procurement almost all exporters are as silent as the skeletons For example, Parthasarathy Swami, who did a report on the subject for a Calcutta-based financial daily during 1981 wrote "Like chameleons in their natural habitat, these gentlemen have made a profession of being elusive Most of the exporters, when tracked to their lairs, are prone to be reticent about their business anyone with a generous assortment of skeletons in his cupboard would be chary of letting the cat out of the bag"

Surprisingly, this is the only export item that is handled without a license and yet the entire proceedings are considered legal The only legal sanction required is the signature of a police officer signed in the presence of two witnesses testifying that the bodies were unclaimed "Even the letterhead of the company is not used for this purpose" quips Mr D'Souza "Any old bit of paper suffices" On this piece of paper is stated the weight or quantity of the consignment Along with this is required a certificate from the importer stating that the skeletons will be used for educational and research purposes These two together serve as the passport and visa for migration

The smooth and prosperous functioning of the trade however, was interrupted by public protests a few years ago Strangely enough though the guilt lies with us it was Italy—a Roman Catholic stronghold—which raised the objections to the way the bones were obtained They even banned the imports

The trade had hardly recovered when Mrs Gandhi struck another blow by banning the trade during the Emergency, on "ethical grounds" and to save the "prestige of the country" The tables turned with Mrs Gandhi's downfall in the 1977 elections and lifting of the Emergency The Janata Government resuscitated the trade which was almost in its death throes Within less than three years, the Janata Government bowed out of office and Mrs Gandhi was swept back to power But this time the industry was allowed to continue, but with certain conditions

Tightening Regulations

The 'Skeleton Kings" had to furnish a certificate of procurement attested by the police authorities denoting its weight or quantity along with a note from the buyer that the skeletons were for educational purposes only According to the report quoted earlier "The tightening of regulations has hit one aspect of the business export of spare parts Earlier it was not just whole skeletons or skulls that used to travel abroad there was a roaring business in bones Selling a skeleton piecemeal would often prove more lucrative But with the present policy of acquiring a police procurement certificate it is no longer possible to cash in on spare parts exports

Regulations apart the recent innovation in the field has taken its own toll Some believe that with the introduction of plastic skeleton the industry may soon be facing troubled times The synthetic skeleton has the advantage of being more durable Whereas a human skeleton has an average life span of five to seven years, the plastic model lasts much longer

But Mr D'Souza had his own reservations about the success of the plastic skeletons He believes that there is a vast difference between a synthetic skeleton and a human one from the point of view of the porosity of bones, movements and above all, naturalness "Science of life is to be observed from living things and not from artificial things," he stated philosophically

In the same breath he condemned the whole business and made a strong plea for banning the trade altogether with immediate effect Meanwhile, perhaps due to the ignorance of the people about the bone trade and its questionable *modus operandi* Indian skeletons are still leaving our shores ■

Great Shakes! Cabaret Is Back!

A fascinating foray into the glamorous world of cabaret girls—behind all the glitter, the bumps and the grinds...

by Pradeep Shinde

WHEN Sadhana, a cabaret dancer performing at Uma Restaurant, buttoned on her skirts and barged into the Delhi High Court in 1979 to fight for "my freedom of expression", little did she know that her move would lead to an eye-popping verdict. Nor did she expect to be taken seriously when she appealed that "cabaret is not only a source of entertainment for a person with a tense mind but also a catharsis which prevents him from frequenting prostitutes".

However, the legal wrangle ended in March 1981 with Sadhana winning a trend-setting judgement. The learned judges held that "a customer who attends a cabaret looks forward to being entertained by cabaret and cannot complain of annoyance to which, if any, he shall be deemed to have given consent."

In one stroke of the pen, the ruling wiped out the tribe of bogus customers the cops used to sneak in prior to a raid on the floor show. These "bogus" men would enter a joint, watch and even enjoy the proceedings and then lodge a "complaint" of "annoyance" to provide the "reason" for the subsequent police raid!

The Delhi ruling inspired Bombay proprietor Dilip Chandiram Datwani (whose establishment had been raided) to file an application before Justice Sharad Manohar in Bombay High Court. The hearing saw a stream of bogus customers rendering juicy accounts of what "annoyed" them. One example should suffice:

When I entered the premises, a performance was on. The artiste, while dancing, removed her bra and started provoking sexual urges by fondling and caressing her breasts, making movements of the hips like in sexual intercourse, and by moaning and groaning. These obscene movements annoyed me...

After hearing a number of similar descriptions, Justice Manohar observed:

It is unnecessary to describe details... the fact remains that the person who went to witness the performance had himself volunteered. He went into the hotel knowing fully well what kind of stuff would be ladled out to him... even if everything stated in the complaint was believed to be true, still no offence under Section 294 of the Indian Penal Code could have been committed. The Section postulates not only that the act must be obscene but also that it must have resulted in annoyance to somebody.

The person to whom annoyance is caused himself gives evidence in that behalf... he himself has gone into the witness-box and stated that he witnessed the cabaret knowing fully well what kind of dish was likely to be served to him... therefore it would not lie in his mouth to say that he was annoyed by the performance.

Revival

The revival of cabaret in Bombay, after a lapse of 10 years stems from these judgments. A bevy of cabaret artistes who had left the city—Neetu, Loveena, Rani, Maharani, Payal, Sharmila, Liza and others exotically named—is again jazzing up advertisements, promising the best and the latest floor shows.

For Leena, an Oriental dancer who has been in the trade for 12 years, this means a wage increase of Rs 1,000 per month. Invited to perform in Meghraj, Ghatkopar, by proprietor Suresh Shetty for a salary of Rs 2,000 per month (along with board and lodging), she left her employer at Bangalore and accepted her new assignment with fresh enthusiasm. She has been married for 10 years and has no children. During this nomadic life, she has not stayed in any place longer than 6 months.

This gypsy-like existence can be easily explained. First, a cabaret dancer always works under a contract, upon the expiry of which she may have to leave for another place where working conditions may be better or worse. Second, employers like to introduce new artistes to attract customers (since "old faces and dances" lose their drawing power after a while). Third, a cabaret artiste may not find the working atmosphere "conducive".

Leena is one of the few artistes who does not strip. Although she says many of her proprietors did suggest to her—after a lot of hamming and hawing—that she make her act a little more "provocative". But Leena regards dancing as an art. "For a good dancer, stripping is not necessary... only those who can't dance remove their clothes," she says.

Rani from Hyderabad, on the other hand, is one who has made a smooth transition from an enthusiastic disco dancer to a bored strip-teaser. Not that she liked the change but she had no other job prospects which provided a satisfactory income. She tried her hand at telephone operating. But the returns were "bad". And then one had to also accept the invitations of the boss... Rani had even tried teaching mathematics in a primary school, but again the pay was poor.

Her life as a school-teacher in Hyderabad took a decisive turn when Rani bumped into a cabaret artiste at a jam session. The artiste, beautifully dressed and bejewelled, did a sinuous dance that spun out a fantasy punctuated by scintillating lights. She received thunderous applause and encore calls. *Out there in Bombay and Delhi, there is money. Lots of it. Isn't it better than being forced into prostitution by a fat, middle-aged boss? she reasoned.*

Fire Dance

Vicky's Fire Dance has hit Bombay like a heat wave. She dances with plates of lighted candles caressing her exposed flesh—the molten wax dripping like raindrops upon her bosom. Just when you are warming up, she takes on two flaming sticks, guides them all over her body, before extinguishing them in her mouth. For an instant, her tongue is on fire and then the lights come on to focus on an empty stage.

Backstage Vicky is different. Without face paint, mascara and rouge, she looks ordinary and worn-out. However, unlike most artistes, she regards her audience sympathetically. "They have worked all day, they are tense and want to relax. We

are just trying to make them forget their tensions."

Vicky's husband left her for someone else. Now she has a daughter in boarding-school. Dancing supports them both. "I like dancing. It's a job like any other. Dancing is my job," says Vicky.

Unfortunately, people believe that all dancers are prostitutes, trying to supplement their uncertain income with a fixed monthly wage. This is wrong. Floor shows naturally "bare" the dancer. And overtures *are* made by customers after the show. "A few allow themselves to be picked up," says Vicky. As for the others, loneliness and frustration sometimes drive them into affairs. Some end happily, others do not... but then this happens everywhere.

The majority of the people patronising cabaret belong to the 30-45 age-group. While a small percentage *do* lose control of themselves during the show, the majority sits still and watches the proceedings. Paradoxically, the most common reaction of this group is indifference. A psychoanalytical explanation of such behaviour maintains that the spectator has surrendered all responsibility to the woman on stage. She is the single active force in a roomful of passive people who seem to be saying in unison: *Make us respond, make us feel we challenge you.* The dancer and the watcher are unconscious adversaries in a sexual game.

Probably this also explains why artistes complain of lack of appreciation in Bombay. Their dreams of star-billing and recognition are quickly dispelled when they are made to realise that "you don't have to be a dancer to do strip-tease". Does that mean any female with curves in the right places is good enough for titillating male audiences? (For some watchers, the dancer conjures up fantasies of a mistress performing exclusively!)

The "kick" from cabaret does not stop at simple voyeurism. Sometimes, the fantasies evoked by the dancers become so compelling for some people that they physically attack the dancers. Then there are other irritants like bottom-pinching, hair-yanking or pawing that an artiste has to tolerate.

The organiser of floor shows also has his own problems. He has to shell out a municipal tax of Rs 45 per day...

in addition to a daily theatre tax of Rs 15 for holding cabaret shows. The authorities are obviously not averse to taxing "bare flesh". Then there's the 65 per cent entertainment tax. The tithe has the effect of taking away more than 50 per cent of the turnover. Then there are the *haftas* to be paid to the powers-that-be—from the local police to even customs and anti-corruption officials. Thus the organiser trying to cash in on naked flesh is himself stripped bare in a slow, tormenting strip-tease.

Moreover, you cannot conduct a floor show in a residential building. Nor should it be held near a school or a place of worship. If you wish to violate these provisions you have to pay the price!

Within the premises also, there are restrictions. *Thou shalt not touch a customer*, says the code of conduct for artistes. Tousling a customer's hair, shaking his hand—part of the dancer's repertoire and vital for rapport—is taboo. The law insists that the dancer be aloof and cold... "It's like asking Birbal to warm himself with a distant lamp," says an irate proprietor.

Another commandment forbids the use of "suggestive gestures" and still another prohibits the artistes from circulating among the clientele. These and many more provisions provide the cops with all the "nuisance value" they need to make their monthly appearances.

With so many obstacles, it is not surprising that there are only five establishments in the suburbs and two in the city offering floor shows. One at Nariman Point (Soniya Mahal) promises "angels, dances and wine". In a locale where white-collared workers shift files and receptionists sit with bored expressions, this small alcove stands out. As you enter the change-over from a staid, sober, setting to the decadent facade of the glittering floor show is sudden and incongruous.

The ear-splitting filmi song hits the visitor with an almost physical force. Dim lights soften the contours of the *nachnewaalis* as they perform what the manager ambitiously calls a *mujra*. The hall of mirrors looks like a →

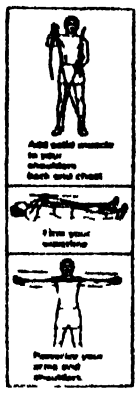
Another great muscle builder from BULLWORKER The NEW Body Shaper Feel the difference from the very first workout!

Shape up quickly with BODY SHAPER

Complete illustrated course included



Body Shaper can help you add inches of solid muscle to your arms, deepen your chest, broaden your shoulders, slim your waistline powerize legs and get that muscular handsome body you've always craved. -within the privacy of your own home.

Are you satisfied to go through life being just half the man you could be ? No matter how old or young you are.the 'sleeping' muscles already in your body can turn you into a real man with Body Shaper Body Shaper is easy to use with a step-by step illustrated chart It is convenient and portable and can be used anywhere

Just 15 minutes a day in the privacy of your room is all it takes to shape up with the Body Shaper —portable expander GUARANTEED SATISFACTION OR YOUR MONEY BACK Measure the difference in just 2 weeks If you do not find your body looking slimmer, masculine and strong simply return the Body Shaper within 2 weeks for an immediate refund (less P + F charges) No questions asked

BULLWORKER FITNESS EQUIPMENTS —keeps the world fit.

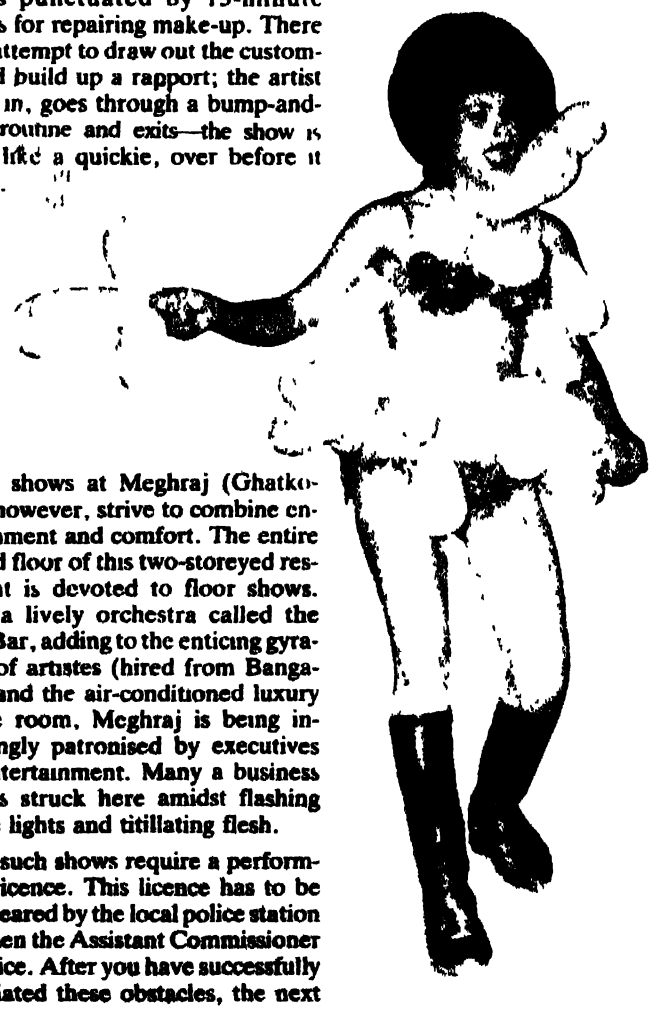
cracked leftover from a filmi set: you are not wrong. The manager is quick to point out that it was built by the man who created the Sheesh Mahal in *Mughal-e-Azam*.

The effusive hostesses are alert to refill the glasses that are quaffed eagerly under their gentle persuasion. It is a cheap trick. But there is nothing cheap about the liquor and the menu.

More bizarre are "drunk customers" who keep fishing money out of their pockets and, with a flourish, thrusting it down the dancer's dress. They are probably "plants", meant to "encourage" you to behave likewise What man can resist dancers fawning over him? *Aao huzoor tumko sitaron mein le chaloon* shrieks the loudspeaker as each dancer sways invitingly, promising the stars to the lavish spender. The promise is hardly ever fulfilled—certainly never until the show is over.

For the casual visitor, the moment of truth comes after the dancers and the select few have disappeared. At about 11.30 pm, while he is gathering his wits, scattered by the deafening music, gyrating bottoms, alcoholic fumes and cigarette smoke, a girl comes up to him, smiles coyly and places a highly inflated bill before him...

The other cabaret joint at Colaba goes under the label of *Blue Nile*. This Nile flows in a cramped area of about 300 sq ft, at the centre of which is a raised stage encircled by rows of benches. Between 6.30 pm and midnight, 6 artistes perform shows punctuated by 15-minute breaks for repairing make-up. There is no attempt to draw out the customer and build up a rapport; the artist walks in, goes through a bump-and-grind routine and exits—the show is more like a quickie, over before it began.



The shows at Meghraj (Ghatkopar), however, strive to combine entertainment and comfort. The entire second floor of this two-storeyed restaurant is devoted to floor shows. With a lively orchestra called the Odd-Bar, adding to the enticing gyrations of artistes (hired from Bangalore) and the air-conditioned luxury of the room, Meghraj is being increasingly patronised by executives for entertainment. Many a business deal is struck here amidst flashing strobe lights and titillating flesh.

All such shows require a performance licence. This licence has to be first cleared by the local police station and then the Assistant Commissioner of Police. After you have successfully negotiated these obstacles, the next stop is the Deputy Commissioner's office. A query posed by him will send the application back to the police station. If you are not "diplomatic", the application will meander in limbo.

By the time it reaches the Entertainment Department, Police HQ (which is authorised to issue licences), both the proprietor and his application are frayed at the edges. It is here that clerks dictate terms. Files may be lost or misplaced or even be "in transit"—often interminably—between the DCP's office and the Entertainment Department.

To go through this obstacle course may take one month or one year, depending on the proprietor's "diplomacy" or influence. The newcomer, with ideas of competing with existing floor shows and drawing away part of the market, is frustrated and, more often than not, deliberately defeated by this process. This defeat is not due to bad diplomacy but because of pressures exerted by a loosely knit floor show lobby interested in maintaining the status quo A newcomer means not only a loss of clientele and turnover but also the defection of cabaret artistes from one place to another.

Perhaps the shrewdest of them all is the proprietor of Soniya Mahal, Nariman Point. Cashing in on the Government's objective of promoting Indian art and culture, he provides a variety of what he fondly calls Indian classical dances. In exchange for this national service, he gets an exemption from the 65 per cent Entertainment Tax! ■

Hinduism In Crisis

By P.K. Nijhawan

IT was a traumatic experience I was passing through. The Himalayas of my faith were crumbling right before my eyes. Not just that. My basic identity as a Hindu—the man eternal—was being compromised.

What had happened? In a post-dinner speech to a sophisticated Bombay audience (time and place not to be disclosed), a young Maharaj of a preacher who claimed that he was born a Hindu in an orthodox Trinidadian Brahmin family explained with the help of a Biblical story how and why he became a Christian and found spiritual peace after everything Hindu had failed to allay his doubts. Without doubt, he was a great pulpit orator. But what followed was simply unimaginable. On his appeal, some 50 odd persons of all ages and both sexes stood up to be baptised. Some of them had done so spontaneously as if it was the easiest of decisions to make and others haltingly and with varying degrees of doubt and deliberation. I presume I had also been invited there for that very purpose. But to my great unhappiness, I had to let down my kind friend and host.

I could explain away the whole thing as far as I was concerned. Having lost my job and to a large extent my professional prestige and even self-esteem, I could be thought to be in great distress and hence could well be led to the altar. But what was the motivation of others who had stood up? Were they in similar circumstances as mine? Yes, some of them could be. But some others must also have made the great decision of their life purely as spiritual fugitives. It is their decision that should bother one concerned with the problem of God and man. So I continued thinking over it as long and as objectively as possible. My conclusions are somewhat disconcerting. One conclusion, however, is that the type of challenge Hinduism faces today perhaps never existed in this form before. Anyone could perhaps succumb to the new situation. Why?

Hinduism has faced persecution in its long and chequered history. Conversion from Hinduism to other religions is also not unknown. After all, from where have so many Indian Muslims, and so many Indian Christians come? Then what is this new danger I talk of? And what is special about this new danger?

If we go over the pages of Indian history, the conversions took place mainly for three reasons. First it was wholesale, ie large bodies of men got converted together. There was one main reason for this which was the conversion of the king or the chieftain. Since the Hindus have all along believed in the plurality of worship without a well-defined Church hierarchy, with or without the help of the local priest, many of those converted seldom bothered which type of worship they were now adopting. They just followed the king or the chieftain. It was not an individual decision.

The conversion to Islam in Kerala as well as Kashmir falls in this category. Sometimes the whole or a part of a tribe got converted, as for example happened in the tribal societies living on the fringe of the four-fold society. The conversion of Afghans and Punjab tribes to Islam falls in this category. In Punjab, it can be seen more clearly, for sometimes, if half of the tribe is Muslim, the other half is Sikh. The conversion of the Meos of Haryana near Delhi is another instance in point. In this tribe, the Muslims and the Hindus have maintained their common tribal links. Even today the Hindus and the Muslims of one *gotra* come together when they are pitted against the Hindus and the Muslims of another *gotra*.

The second type of conversion was on pain of losing something, even life. This was often linked with some reward as well. The convert was soon discarded by his Hindu kith and kin. But this type of conversion was not so widespread because the contrary pressure was often equally strong. Besides, it meant sometimes the involvement of the State which had to face repercussions.

The third type of conversion came mainly because the Hindus had gone into a defensive shell and shunned any type of social contact with the Muslims. Such cases of conversion were sporadic but always there. The Hindus continued to lose thier adherents because of their social weaknesses and in the main for their attitude towards women and pollution.

What I mean to say is that despite the second and the third type of conversion, the four-fold system of Hindu society stood up well to the proselytising onslaught of both Islam and Christianity. Indeed, very few of these Hindus, including Harijans, embraced any other religion. This society remained and even today remains the bedrock of Hindudom.

Then what is this new phenomenon that I recently witnessed? Those who opted to be baptised were middle-class professionals, well-educated and even reasonably well placed. There may be an element of worldly inducements but its effect cannot have been more than marginal. Hence this conversion cannot be explained away on the basis of what happened in earlier times.

The only explanation is that they have opted for Christianity because "Christ loves them" and they are in search of a God who is personally involved in their well-being. The new prayer groups holding prayers outside the Church have something to do with such cases of conversion. It is a revival of the cult of the miracle in which the subject feels that the ever-benign Christ is profoundly affecting them by personally attending to their problems.

Now whatever the meaning of life divine, for a man of the world a miracle as a proof of God's love and concern has much more significance. A man in search of a better career, health, success in love or the birth of a child would always crave for it. That is why people flock to a deity who grants them boons.

Normally, however, a miracle is a part of the dialectics of life. Almost every day a man can see (provided he is receptive) things happening which he had no idea would happen. There is a providential escape; there is a miraculous recovery, there is a sudden windfall—all these things are in the realm of the *miraculous*. I too am a witness to some great miracles. In fact, they happened to me whenever I prayed to a Muslim pir whose *mazar* is in far-off Haryana. It is all a question of personal identification.

So when I related my experience to my Christian friend, she felt doubly assured that this was an evidence of the fact that Christ had marked me out from the very beginning for His boundless love even if I was not a Christian and that He now wanted me to come to Him. But then I have seen similar miracles happening in the lives of so many others who do not think of religion at all! So to ascribe them to a new type of prayer is what does not convince me.

But miracles apart, it is the alienation of the elitist Hindu from his tradition and path eternal of *Dharma* that is making him more and more fugitive. As a man of the world he has been in and out of many things which give him the illusion of being sinful. Christian ethics have further strengthened this guilt complex. So he wants to get out of it at all costs. He wants someone to finger-lead him to where he might escape from his dichotomous duality and find a more normal equation of spiritual life.

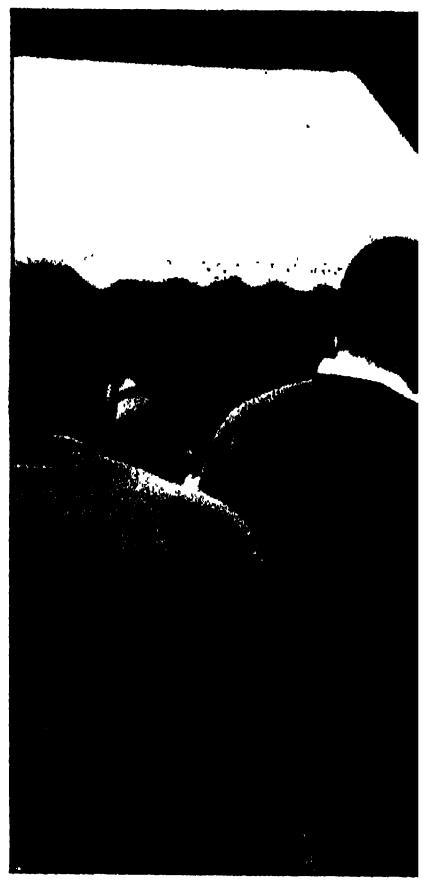
Suddenly, therefore, he finds Christ has much more meaning for him. The image of the Lord nailed to the cross, taking upon Him the load of sins of all the sinners in His flock, thereby rendering them pure, appeals to him instantaneously. He wants to escape from the tyranny of Karma-his actions of omission and commission that make him ever so miserable, ever so wretched. As a Hindu, he knows that no court of divine justice can absolve him of the fruit of his actions and that he is now a prisoner of the cycle of life and death for God knows how long. Life then starts appearing to him as a crippling experience.

In the Western ethos, there is conflict between instinct and rationality, for instinct becomes coterminus with the processes of life. Many Western young men, therefore, become hippies and seek escape in self-induced artificial trances and many a mature man commits suicide like Schopenhauer did in trying to defeat instinct with the help of rationality.

A modern, alienated Hindu has almost forgotton that the instrumentality of karma is the only spiritual substance he has in his possession for life spiritual. It is not so disjointed as it appears to be. It is one continuous activity which is an integral part of his dharma. In fact, in doing action (whatever it be) he is living the life of dharma. And thereby alone he is to move on to higher levels of consciousness, nay even spiritual transcendence which the cycle of births and rebirths so inexorably indicates. Hence action to a Hindu should be a matter of immense joy.

But the truth of the statement can only dawn upon him if he realises that means and ends constitute but one whole and, therefore, are the essence of life spiritual. Here he differs from others, including those who follow Christ. If dharma be the end then actions are the only means to reach that end. It is the moral law of the Hindus. To be able to jump the fruits of action through the grace of God is, therefore, not possible. It is a temporary delusion, for, life is not only what moves through aeons from end to end but also even beyond on either side of the scale.

■



The Third Eye

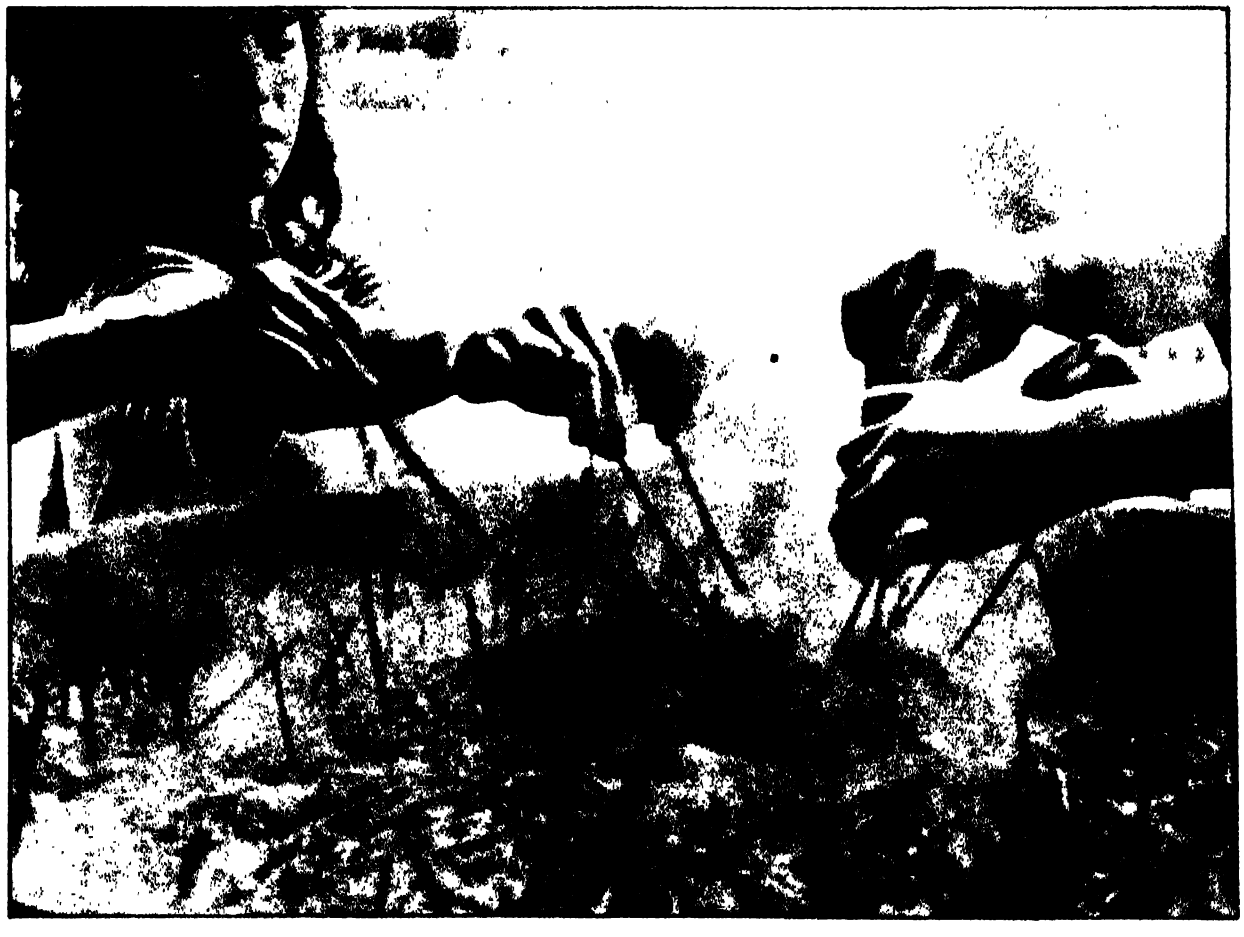
By Photographic Design

I AM an industrial designer by profession and learnt photography as a student, first at the Industrial Design Centre, Bombay, and then at the Royal College of Art, London, as one of the many skills a professional designer must have.

Photographs and Text by Kirti Trivedi

I've been using the camera as a professional tool since then—mostly for research, analysis and presentation of my design projects. Recently, I spent nine months in Japan on a Unesco fellowship, studying and documenting the design and craft traditions there. This turned into an almost full-time photography assignment.

I take pictures almost exclusively in available light. I have never really sent my photographs for competitions or publication before and the *Weekly* will be the first magazine to publish them. ■



Press And Cure

by Meera Pandya

ACUPRESSURE is the rediscovered therapy for staying healthy and curing illness which is fast catching the imagination of the people. "Acus" means depth and not needle as in acupuncture Pressure applied to specific points or the soles of the feet, the palms of the hands and on other parts of the body can bring relief from such ailments as polio, paralysis, migraine, backache, sinus, asthama and blood pressure. The treatment is simple, it costs nothing as no medicines are involved, and you can administer it to yourself at home

Take a blunt-edged metal instrument (the handle of a safety razor will do) and with its tip press hard on the area just below the nail on the soft edge of the big toe If it hurts, you are suffering from tension, a common complaint these days; if you just feel the pressure you are one of the very few lucky ones who don't have a care in the world. This method of diagnosis is known as foot reflexology, the more favoured branch of Acupressure. That which deals with points on the hands is called hand reflexology. In Japan acupressure is known as *Shi-atsu*

The idea of getting relief from pain or feeling relaxed when pressure was applied to any part of the body is not a new one and has been used since ancient times. In India reflexology or acupressure was practised even 2,500 years ago It caught the attention of the world when Dr William Fitzgerald of the United States started experimenting with it for anaesthetic purposes in the early part of this century.

Dr Fitzgerald found a connection between points or digits in different parts of the body. Pressure applied on these points or pricking them with pins succeeded in numbing the parts they were connected with. In his zonal therapy, Dr Fitzgerald divided the human body vertically into 10 zones—5 on each side Parts of the body falling in these zones had their corresponding zones on the ten fingers and palms of the hands.

Acupressure, as it is known today, was made famous in the USA by Dr Eunice Ingham, who is the author of *Stories Your Feet Can Tell* and *Stories Your Feet Have Told*, and by Dr Mildred Carter (*Help Yourself with Foot Reflexology* and *Help Yourself With Hand Reflexology*) The pioneer of this therapy in India is Chimanbhai Doshi. Mr Doshi took to this system after meeting Mr Brian Hurst, a spiritual healer and clairvoyant who visited Bombay in July 1977. Mr Hurst picked out Chimanbhai from the audience and told him he was a healer. Chimanbhai then developed this faculty, using the method of Foot Reflexology

This therapy is based on the body's own healing power. When pressure is applied on certain strategic points the arrested flow of blood is restarted. As stagnancy disappears the body gets reactivated, revitalised, rejuvenated and regenerated. A regular workout keeps the body fit and disease-free Since this system works through the blood circulation, it is useless for parts of the body that have been operated on—veins and arteries once cut break the cycle and cause setbacks.

As the trained worker in reflexology passes his blunt metal instrument, called "Gini," over the soles of the feet he watches the patients reactions to find out where the pains is. The therapist has a difficult time pin-pointing the disorder if the person has a good capacity to bear pain. On the other hand, those who squirm at the slightest pressure can easily mislead the therapist. Sometimes it takes time to reach points that are deeply imbedded and therefore diagnosis takes a lot of time. Points where pain is felt are termed "tender". An experienced person also tells when an illness is at an advanced stage.

Once the tender spot has been detected, the type of pressure to be used—whether with the thumb, finger, palm of the hand or a "Gini"—is determined. Usually pressure is applied for about five seconds, stopped for two seconds and applied again for five seconds. This is repeated for one to two minutes, three or four times a day till the pain or tenderness disappears. On the heart point, pressure should not be applied for more than two minutes in 24 hours. Pressure for more than three minutes has an anaesthetic effect.

For the last five years acupressure therapy is being practised by Chimanbhai and his co-workers in Bombay. There are some clinics operating in Surat and 20 are planned in Kutch. These will be run by the 40 workers that Chimanbhai and his team trained during the recent camp held there. Chimanbhai has so far handled 50,000 feet. Kishorebhai Doshi and his family who run the South Bombay centre have treated 2,000 patients in the last four years. They have succeeded in curing patients with polio, paralysis, spinal diseases, migraine, backache, sinus, asthama, blood pressure and ailments peculiar to women. Cancer, skin diseases, tuberculosis and kidney failure have, however, failed to respond to their treatment. Apart from pressure on points, exercises, lotions and mild ayurvedic medicine are sometimes prescribed—the last mentioned mainly to placate the patient

Although there are cases where patients have been cured after only three sittings, this is rare. A 40-45 per cent improvement is visible only after about three months. Daily sittings are given to outstation patients. The case of a 26-year-old youth who used to get fits every five to ten minutes since his sister's death was a challenge to the Doshis. After just three days of treatment under acupressure he was back at his job. Another interesting case was that of a man who had been bedridden with backache for three months and was carried into their clinic by four people. After the first sitting he walked out on his own feet.

Services at the clinics are free but Chimanbhai has now started charging for house calls. People sometimes call them just to get a message!

Chimanbhai plans to experiment with around 25 people in the age group 65-80 to rejuvenate them. The camp will be for six months and results will then be analysed. Even though Chimanbhai has seen several thousands cured through acupressure, he cautions that this system cannot replace the medical care of doctors—their guidance is a must.

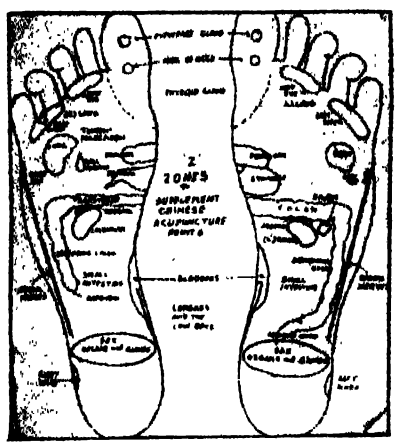


DIAGRAM shows pressure points at the soles of the feet

ACUPRESSURE—Chimanbhai's team

Cures That Endure

Just a spoonful of honey

Thank the bees for their industry—or where would we be for breakfast? Orange marmalade and strawberry jam are all very well, but there's no substitute surely for the liquid gold on a hot buttered toast or—if you're lucky—spread generously over waffles!

But honeydew ice-cream, honeyed-scones, walnut and honey surprise and honey-buns apart, the medicinal properties of honey are well known.

Take that awful cough for example, or that tickle in your throat that becomes embarrassing at a dinner-jacket black-tie supper! All you need is a regular dash of honey. For a dry cough try liquorice root with honey. Raisins, black pepper and honey may be licked for relief. For inflamed tonsils, a cough linctus prepared from ginger juice and honey can be consumed three to four times within 24 hours.

For a run-down, tired, over-worked person, a generous dollop of honey dissolved in hot milk can act as a marvellous restorative. And for a clean healthy feeling throughout the day try a spoon of honey and juice of one lemon in a glass of hot water early every morning.

As a beauty aid it is invaluable. If you want to banish those freckles, a face pack made of honey, lemon and egg white is excellent. Wash off after a few minutes with warm water and then apply ice cubes gently over the face. As a conditioner, honey with lemon juice makes the hair lustrous and gleaming. After a shampoo and wash, apply this mixture and let it remain for a few minutes before the final rinse.

Remember—just a spoonful of honey makes the medicine go down in a most delightful way!

Brahmanand: His Goal Is Perfection

Brahmanand is perhaps the best goalkeeper Goa has put in the field. And there are those who aver that he is also the best goalkeeper in India today.

by Ajit K. Moye

IS Bengal's Bhaskar Ganguly really a better goalkeeper than Goa's Brahmanand Shankawalkar? Or is it the other way round? The New Delhi Asian Games left this question unanswered, since it did not give Brahmanand a real exposure.

However, recall the 1980 Federation Cup Tournament at Madras which had seemed to tip the scale in favour of Brahmanand? Many connoisseurs of the game then rated Brahmanand as India's Number One Goalkeeper.

Unfortunately, soon after the 1980 Federation Cup, Brahmanand's left arm was fractured in the course of an exhibition match between India Blues and India Pinks at Patna. The injury was so serious that it all but brought this gifted goalkeeper's soccer career to an end. Brahmanand, however, had a real saviour in Dr Durga Prasad Bhattacharya of Calcutta. This doctor performed on him a truly remarkable operation.

Result: Brahmanand's left arm, in plaster for 2 months, became perfectly all right and the slim and rangy goalkeeper was fit enough to play for Salgaocar in the 1981 Federation Cup Tournament at Calicut. Following that, it was by sheer merit that Brahmanand found a place in the India Team for the tournaments at Seoul and Kuala Lampur, finally going on to win selection for the Asian Games.

Goa's Strong Point

Goalkeeping has ever been a strong point of Goan Football. And, since 1974, Goa has been served admirably by Brahmanand.

Benzino Fernandes and Subhash Sinari were the outstanding Goa goalkeepers before Brahmanand arrived on the scene. Sinari—who still has no parallel as far as diving saves go—was a pillar of strength for Salgaocar.

Just before Goa's liberation, Salgaocar were assisted by a Portuguese custodian called Mestre, while Palmela, who kept for Independents, was easily the best European goalkeeper to play on Goan soil. These outstanding goalkeepers undoubtedly had a positive influence on lads like Sinari, who in his younger days had Palmela as his idol. Sinari adopted Palmela's style of diving, which was indeed a treat to watch.

Subhash Sinari had to compete with that solid outstation custodian, Arvinder Singh, to earn the right to serve Goa as its number one goalkeeper in the Nationals. Arvinder, who played for Vasco, was a goalkeeper hard to match: he was robust, had a wonderful sense of anticipation and a remarkable "grip" over the ball.

It was in such a setting that Brahmanand had to make his mark.

Brahmanand actually shot into prominence under the bar of Panvel Sports Club, a small unit which then was doing extremely well in the Goa Senior Division Football League. Panvel Sports was considered the nursery of Goan Football: the up-and-coming players in its ranks were soon grabbed by the leading Goa teams.

The 1974 season marked Panvel Sports Club's finest hour, when it won the All India Bandodkar Gold Trophy Football Tournament from Sesa Goa, after having beaten the stronger contenders, in Bombay's Orkay Mills, in the double-leg semi-final. And the one who played no mean part in helping Panvel Sports accomplish the feat was goalkeeper Brahmanand, who has had the distinction of donning the India colours on no fewer than 8 occasions.

Humility: His Hallmark

One appreciates performers who, though unusually gifted, remain unassuming and simple. Brahmanand Shankawalkar undoubtedly is a performer in this category. Humility is his hallmark: to this day he thinks he has many more things to learn to be a goalkeeper of true class. He practises hard and keeps at it all the time in an effort to attain perfection, which is his goal.

The Shankawalkars reside in Talegaon (a few kilometres from Panjim)—in the neighbourhood of the famed Dr Remegio Pinto, who was once the Chief Patron of the Academica Football Club of Panjim. Dr Pinto had a photo album of the leading soccer players of the world which he would place at the disposal of football lovers. Brahmanand, during his school-days, was inspired by the example of these players and his goal in life was set.

Brahmanand was just 15 when he made his debut in the Senior Division. He was then picked for the Goa Team that participated in the Nationals at Ernakulam in 1973.

His entry into Panvel Sports Club came about in an odd way. One evening, Brahmanand happened to be there at the Campal ground in Panjim, where the Panvel boys were practising under Joao D'Mello. One of the two goalkeepers of the Panvel Sports' team was absent and so Joao asked Brahmanand to stand in for him. Brahmanand naturally jumped at the chance. Few knew then that a new star had risen on the horizon.

Joao D'Mello was soon convinced that Brahmanand would make a good goalkeeper and asked the lad to come down for regular practice. Brahmanand made rapid strides under Joao's guidance and soon became the number one goalkeeper for Panvel. He had the advantage of being tall where it came to dealing with the high balls, which rarely passed him. He also displays razor-sharp reflexes in pouncing on the ball to bring off spectacular diving saves. But he never indulges in acrobatics at the expense of efficiency. It is this gift of combining safety with flair that has put Brahmanand in the topmost bracket of goalkeepers in the country.

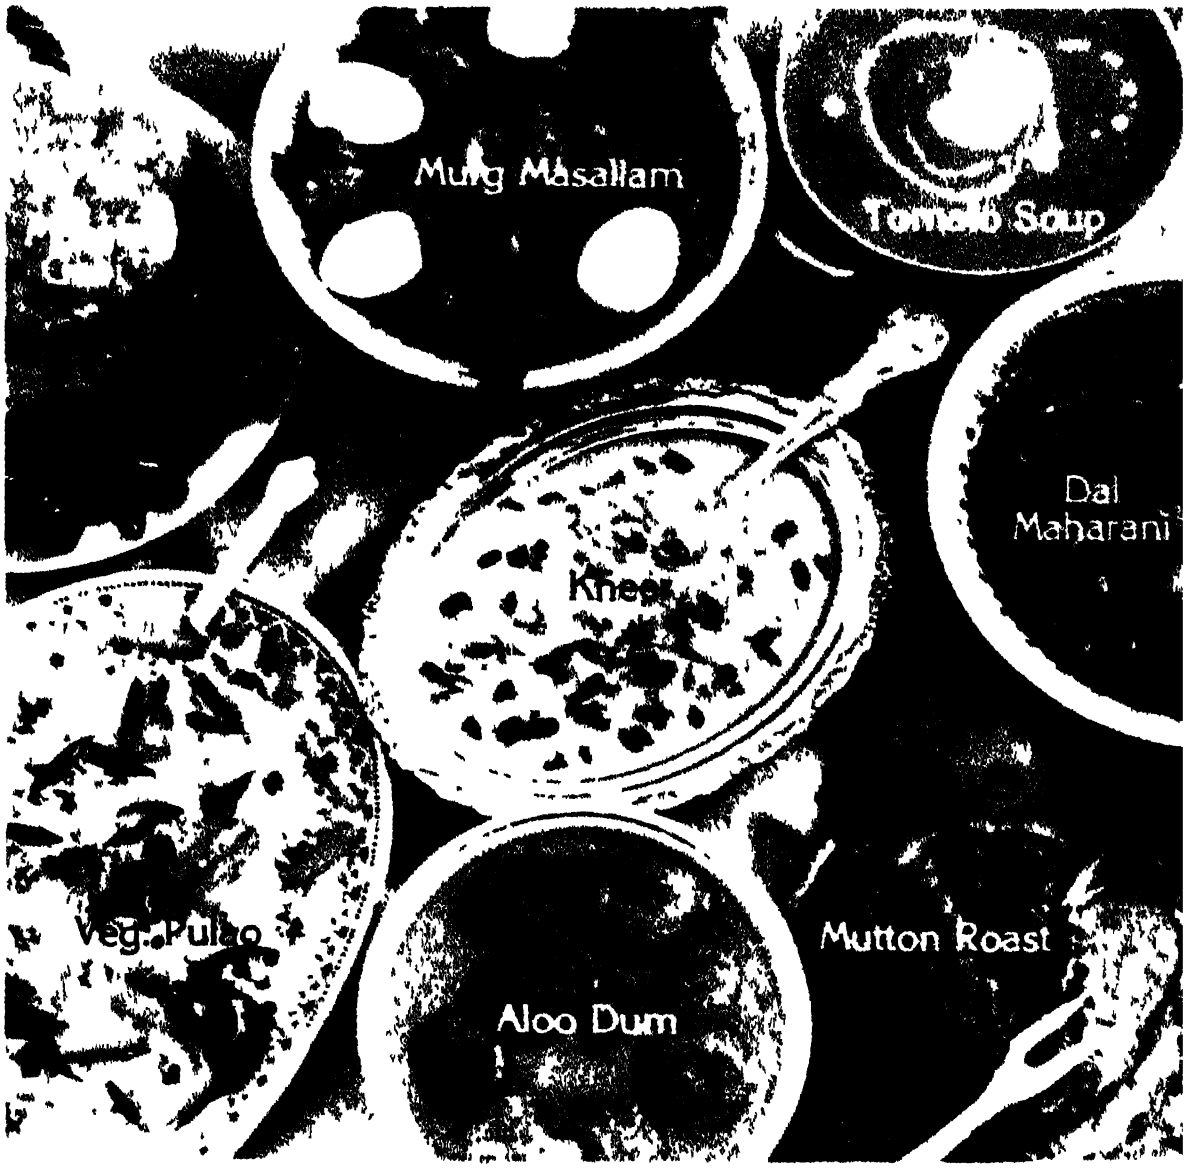
Automatic Choice

Brahmanand has been an automatic choice for India since 1976. The Goa team, which participated in the 1974 Jullundur Nationals, was coached by that great India goalkeeper, Peter Thangaraj, then with Vasco Sports Club. This proved highly advantageous to Brahmanand, as Thangaraj uncannily spotted out his weak points and assisted him in eliminating them. All leading teams of the country (including the giants from Calcutta) made offers to Brahmanand, who has, however, remained unswerving in his loyalty to Salgaocar, whom he joined in 1975.

Brahmanand is perhaps the best goalkeeper Goa has put in the field. There are those who aver that he is also the best goalkeeper in India today—spectacular and yet never so spectacular as to be unsafe. ■

Did you know that you could cook all these tasty dishes in the Hawkins Pressure Cooker?

Cook your favourite dishes in Hawkins— without any loss of taste. Save more time, more fuel.



Does your family find pressure-cooked food bland and tasteless? Do you spend hours cooking their favourite dishes? And a lot of money on fuel?

Here's good news! After years of research into cooking traditional recipes with pressure cookers, the Hawkins Cookery Advisory Service has succeeded in producing a wide variety of dishes relished by Indian families.

Every Hawkins pressure cooker is supplied with an Instructions and Cookery Book in English which contains 127 tested, tasty recipes Hawkins Demonstration Centres in many towns would be happy to guide you towards tasty and quick cooking

Choose from Hawkins Widest Range

To have a variety of tasty dishes at a meal, it is better to have more than one Hawkins pressure cooker Most dishes cannot be cooked in the same pressure cooker at the same time because they take different times to cook properly

By having different models of Hawkins pressure cookers, you can use the right capacity for your purpose at any time — thereby saving even more fuel. Choose from Hawkins' widest range of pressure cookers in the world — 33 models in 10 different sizes from 2-litre to 22-litre

Each Hawkins is the Best

Whichever model you choose you will benefit from Hawkins' unique design and most careful quality control Market Research has proved that most experienced housewives prefer Hawkins over all other makes for its durability and safety Hawkins is backed by 118 Authorised Service Centres all over India where expert service is free and genuine sealed spare parts are available

Hawkins for Rs. 90 Initial Payment

You may be able to get a Hawkins pressure cooker for only Rs 90 initial payment (the balance payable in six equal monthly instalments) from Hawkins Authorised Hire-Purchase dealers.

To get the address of your nearest Hawkins Hire-Purchase dealer or a free booklet giving the recipes of the eight exciting dishes shown above, or for any questions concerning Hawkins cooking or service write to the Manager Hawkins Cookery Advisory Service Group 4 Pressure Cookers & Appliances Limited P O Box 6481 Bombay 400 016.

"Come to Hawkins— the people who know pressure cooking best."

Crocodile Bank

The crocodile bank in Madras, established by the Whitakers, is the only one of its kind in the world.

by Sabita Radhakrishna

THE balance in wild life has been ordained by nature, and any tilt in it, thanks to man's interference for personal gain, causes an ecological disturbance which could trigger off a series of unpleasant happenings. It was this startling fact which spurred Romulus and Zahida Whitaker into dedicating their lives to a campaign for saving some of our valuable reptiles from total oblivion.

Whitaker, acclaimed in international circles as an expert herpetologist, is an American by birth and a naturalised Indian, having sown his roots in our soil when he schooled in Kodaikanal. He disrupted his university studies in Wyoming, USA, to work in a serpentarium run by Bill Haast in Miami. At 24, Whitaker returned to India with a dream of starting his own reptile farm.

Export Of Venom

He was first involved with venom export and the supply of snakes. It was at this time that he came in contact with the tribals of Tamil Nadu, the Irulas, who are expert snake catchers. After what seemed endless deliberation, dialogue and initiative, a dream was realised when Whitakar established the Snake Park at Guindy in 1971 with finanial help from the World Wildlife Fund. The Park is run by a private trust of which Rom is the Director. It was established on one acre of land allotted by the Tamil Nadu Forest Department and situated near the deer sanctuary at Guindy.

The Snake Park houses about 400 reptiles of 30 different species, with new additions every month. Over a million visitors flock to the farm every year to see the snakes; the poisonous ones include the cobra, the Russels viper, the krait, and the saw-scaled viper, and the harmless snakes are the vine snake and the rat snake.

It was during his visits to the World Wildlife Fund office that Rom Whitaker met Zahida Futehally who was working there. With their common love for wildlife, it came as no surprise when they married in 1974. At the time, the plight of crocodiles was pretty grim: There were no more than 100 gharial, 2,000-3,000 mugger and about 200 salt-water crocodiles in India. It was Zai's idea that they establish their own crocodile bank, but it did not seem financially feasible. When Mr Futehally gifted the young couple a sum of money as a wedding gift, the Whitakers straightaway purchased the seven-and-a-half acre plot near Kovalam. Later, a private trust was formed with Whitaker as the Honorary Director, and it bought the land off them. The Whitakers, however, kept a small portion of the land to build a home for themselves.

DEDICATED TO WILDLIFE. Romulus Whitaker, a naturalised Indian, on his crocodile farm.

CHOCK-A-CROC. Crocodiles breed in idyllic surroundings on the Whitaker farm.

Bank In True Sense

According to Whitaker, the Crocodile Bank in Madras is the only one of its kind in the world. There are farms which breed crocodiles, but this particular one is a bank in the true sense of the word. The adult crocs are the deposits and their offspring are the interest earned which, in turn, is later deposited to create more interest. Besides the crocodiles, the Bank houses an American alligator, chameleons, calotes, lizards, water-monitor lizards, turtles and Aldabra tortoises presented by the Government of Seychelles.

Crocodiles are the nearest living relatives of the gigantic lizards, the Dinosaurs, of the Mesozoic age 100 million years ago. Among all the endangered animals in the world, the crocodile ranks quite high. There has been large-scale killing, not only for their skins but also for the meat which is believed to have medicinal qualities. According to Whitaker (based on Papua, New Guinea, exports to France and Japan), a three-foot, three-year-old crocodile would fetch $100 in the international market. It is, therefore, not surprising that only 1 to 2 per cent of hatching crocs reach adulthood.

The sale of crocodile skins came down sharply with the ban on crocodile killing in 1972. The only available statistics on the Indian crocodile skin industry are for 1964-65 when a total Rs 25,948 worth of skins was exported to the UK and France. Under the Wildlife Protection Act, 1972, effective and thorough paper protection was accomplished for Indian crocodiles. The three Indian species are listed under Schedule 1 of the Act, rendering killing, trapping, transporting or being in the possession of a crocodile or its products without a special permit illegal, with a penalty of up to six months imprisonment and a fine of Rs 2,000.

Three Species

The three species of Indian crocodiles can be found on the Whitaker farm: the mugger or marsh crocodile (crocodylus palustris), the salt-water or estuarine crocodile (crocodylus porosus) and the gharial (gavialis gangetious).

The marsh crocodile is friendly by nature and not too fastidious about its habitat. Although termed "marsh" crocodile, it can even be found 1,000 metres above the Hima-

Who gave the Government the right to spend our money?

We did.
And you—our certificate-holders.
Rs 250 crores invested in Government custody help realise national priorities.

From the very first day of its launch, our Social Welfare Schemes have put the interest of certificate-holders above all else. Every paisa collected has been invested in Government custody—GP Notes and Fixed Deposits with nationalised banks. The figure for this year has already crossed the Rs 250 crore mark (and the Company's Total Assets have gone up to Rs 300 crores). This investment policy, unique to Peerless, apart from affording total security to the investor, is playing another major role in the national context. These funds are being utilised by the Government to meet urgent national priorities. So, each one of our 12 million certificate-holders is doing his or her bit to further the national cause—building a better, more prosperous India for the generations to come.

Yes, our certificate-holders are proud to have given the Government the right to spend their money.

In this Golden Jubilee year the Peerless Team renews a pledge—to work towards the greater good of the common man and our motherland.

layan foothills. It is so adaptable that it is at home in rivers, jungles, ponds, even man-made reservoirs and tanks if left undisturbed. Easiest to breed, the mugger grows to about six metres in length. The young have colourful black-and-yellow markings, but the adult is a dull grey. It is shy by nature and rarely becomes a man-eater.

The salt-water crocodile is a gigantic species growing up to nine metres in length and now extinct in south India. It is found in coastal mangrove swamps in north India, Bengal, Orissa and the Andaman and Nicobar Islands. This is a man-eating species.

The gharial, the sole surviving member of the Gavialidae, an all but extinct family of crocodiles, is found in the fast-flowing rivers and coastal mangrove swamps of north India. The gharial has distinctive features and is therefore easily recognisable, with its long, thin snout, jagged saw-like teeth and popping eyes and nostrils.

Like most reptiles, the crocodile's scavenging function is invaluable. They feed on large predatory fish which devour in large numbers the young, commercially-valuable fish.

Reptiles For Playmates

The Whitakers live in a beautiful rustic house in a corner of the Crocodile Bank, with walls of unplastered brick and stone. Their son, Nikhil, at four years, has made the baby crocs, chameleons, harmless snakes and turtles his playmates. He travels 25 km to school everyday, since the Whitakers cannot bear to live within the claustrophobic confines of city life. Rom feels that reptiles have been the most neglected of wildlife species. The main areas of his work include educating the million or so visitors to the Snake Park and the Crocodile Bank about practical husbandry, research and documentation, and the implementation of programmes to save more endangered wildlife species.

Research forms a vital section of the Whitakers' work, since it means a detailed study of captive breeding. Artificial surroundings are created to closely resemble the natural, and the right type of temperatures are maintained. Research and documentation of data are constant processes. Wildlife-connected personnel are always welcome to draw information or receive training at the Crocodile Bank or Snake Park. Zoology graduates and undergraduates are encouraged to specialise in the study of reptiles and are later absorbed into the staff. For instance, when sea turtles were killed in great numbers, the Whitakers collected about 14,000 eggs from the beach to save them. The project was taken over by the Central Marines Fisheries Research Institute at Kovalam (near Mahabalipuram), and the sea turtle has, since, received paper protection

Sylvan Surroundings

For two years Whitaker was stationed at Lake Murray as a UN volunteer. It entailed making detailed inventories of crocodile farms for the National Crocodile Project in New Guinea's Lake Murray District It was different from his work in India because it meant protecting the crocodile for the purpose of killing it later for its hide.

Zai supplements her husband's work; together they form an ideal team totally dedicated to wildlife. The Croc Bank, situated in sylvan surroundings, is clean and extremely hygienic. The Whitakers dream of a future when they will be able to activate breeding in this idyllic milieu. "We are nowhere in sight of our goal; we cannot afford it now," says Whitaker. ■

A Dying Breed

by T.S.N. Murthy

TIME was when the rivers and lakes of India teemed with thousands of crocodiles. But today the story is altogether different—these creatures may never again be seen in the enormous numbers described by early naturalists, despite the fact that they breed prolifically and have a sufficiently long lease on life.

The gigantic *Gharials*, the only surviving members of an ancient family of crocodiles, earlier swarmed the Ganges and its tributaries—from the Chambal in Rajasthan to the Mahanadi in Orissa. One could then easily count as many as 30 *Gharials* in a single hour merely by sitting patiently on the banks of the Yamuna. Today there are very few *Gharials* in these rivers, if any. Other Indian crocodiles like the *Mugger* and the Saltwater Crocodile also face a bleak future as India's rivers and giant lakes are no longer their thriving abode.

The Saltwater Crocodile, a giant among Indian crocodiles with a reputation as an occasional killer, was only a few decades ago abundantly found on the coasts of India. Today, this species is extremely scarce, confined to the mangrove swamps of the Sunderbans in West Bengal and the adjacent territory of Bangla Desh, a few solitary pockets in Orissa like Bhitarkanika and in the Andaman and Nicobar Islands. It might have become totally extinct but for certain protective measures taken in these areas. The numbers of the *Mugger* are considerably more—most of them live in jungle ponds, a few rivers and a large number of man-made reservoirs.

Survival Of The Fittest

Survival is the toughest task that crocodiles face today—the young are particularly vulnerable and fall easy prey to carnivorous fish, birds and mammals and at all stages of their growth they are attacked and devoured by the crocodiles themselves. The jeep and the gun and the comparative accessibility of their habitat also work to their disadvantage. Indeed, one army Colonel boasted that he had shot down a hundred crocodiles in a 100-mile stretch of the Kosi river. The opening up of vast tracts of scrub jungle and swamp lands, the setting up of gigantic multipurpose dams and the erection of hydroelectric projects have further caused their numbers to dwindle.

Today, fishermen continue to kill young crocodiles caught in their nets, considering them as a nuisance to their fishing interests. Poachers and hunters continue to harpoon and net them in remote forest rivers beyond the easy reach of the law. However, the greatest factor working against these creatures is the latest craze for fashioning women's shoes, handbags and other ornamental goods out of crocodile leather.

Greater Appeal

Crocodile hides are always in ready demand in the international market on account of their softness, durability and appeal. Indeed, crocodile leather is the most expensive of all

MUCH SOUGHT AFTER. Crocodile leather is the most expensive of all reptilian leather.

reptilian leather in any part of the world—a single crocodile leather bag can fetch as much as $6,250 dollars; men's belts range from $100 to 225. As if this were not enough crocodile flesh forms a delicacy in certain parts of the world and various parts of its body are used as charms, aphrodisiacs and for their supposed medicinal properties.

Because of the man-eating proclivities of a few giants, we tend to believe that all the crocodiles are killers. Though crocodiles are in general sulky and fierce by temper, the extent of their danger to man varies from country to country and species to species. However, even the most dangerous species of crocodiles attack man only in water; on land they are not as aggressive and make straight for the water if surprised. Crocodiles are more aggressive when their streams and ponds have dried up or when they cornered while guarding their young.

Timid Creatures

The most gigantic of crocodiles, the Indian *Gharial* dashes into water at the sight of man—it is a timid creature for all its size and agility. In fact, it is the most aquatic of all crocodiles, coming on land only to lay eggs. The *Mugger*—another burly representative—is also a timid reptile, floundering for shelter at the sight of man They should not, therefore, be included in the list of crocodiles endangering human life.

The Saltwater Crocodile is, however, a well-known man eater. A particularly hungry member of this species may even turn around and attack larger prey While on the subject, however, it is worth mentioning J. A. Frodue who said: "Wild animals never kill for sport. Man is the only one to whom torture and death of his fellow creatures is amusing in itself."

We believe falsely that crocodiles are responsible for depleted fish catches in our rivers, lakes and reservoirs. The fact that they actually function as nature's scavengers by eating up the dead and diseased fish is little acknowledged, however. This apart, crocodiles prey mostly on the coarser and more inedible variety of fish.

What is needed now is an intensive conservation programme that will help the crocodiles to recover their numbers from the point of no return There must be controlled harvesting of their meat and skin. And there must be no let-up in these efforts until the captive populations are in a position to meet the demand for their own captive breeding and reintroduction programme. ■

Hindsight

by Sudha Rai

She thought she belonged with Picasso. But alas, she ended up with anklets and a nose ring.

"MARRIAGE is for the moose in the ark. I opt for healthy friendships," said Rajkumari, on the first day of our acquaintance.

We were hostel-mates at *Maharani's*—that splendid citadel of the academic world and the feudal. Daughters of maharajas invariably came here to obtain degrees (though inevitably the body was groomed more than the mind). So did the offspring of plantation kings and business magnates. A very few "outsiders" like me, daughter of a mere Colonel, were waved into its stone portals. Wealth (old or new) came first. The army last. That was in the sixties, when art abounded in the drawing-rooms, but stopped short at the bedrooms. "Perfect understanding—as clean as a contract," Rajkumari was still continuing on the subject. I met her eyes admiringly.

That was what first drew me to Rajkumari. She was so decided. Sitting on her unyielding dunlopillo rectangle, in sculpted Padmasana pose, she oozed breeding. Her toes, which she gripped and twanged whenever driving home a point, were tender peanut pink. Her family and ancestral palace were but a transparent distance away. I could see the liveried butler, the champagne glasses and her father, the prince, without much suggestion from her. With her poison black eyes, she was Kaikayi, Cleopatra and Mata Hari, all three rolled in one. Six months after knowing her, I was still distracted in argument by the alabaster tint of her nose.

I had enough intelligence to hold Rajkumari's interest. I might be a stay-at-home, but my mind was not. And I clung to Rajkumari's lazy confidences with the tenacity of a leech, unconsciously arming myself for the battle against class.

Rajkumari's father was the Maharaja of a state rich in public gardens and antique museums.

"There was a time when Daj (that was Rajkumari's way of saying Dad) had a little ivory greenhouse overlooking a garden of *kesar*. I fell asleep to the whiff of *kesar* blowing in the wind," Rajkumari told me one nostalgic night. To me, her family were like wraiths trailing perfume. Never crudely physical. Always like misty photographs in a brocade-covered album. "But the greenhouse packed up." It sounded like the matter-of-fact ending to a fairy tale. "Now we have a croc-farm."

"Croc farm?" I asked, unhinging my transfixed elbows. I was new to the cycles of snobbery and didn't realise that certain animals were *a la mode*.

"Why, crocodiles. Baby crocs. They're simply sweet."

Today, the word "sweet" as well as the word "cute" trigger off a thousand negative feelers within me. But at 18, I was infinitely more generous and undiscerning.

"Daj and I often have beer by the croc-pool. We even got a little croc drunk on it once. Gave it straight *Nirvana*." Rajkumari's chocolatey voice dwelt lovingly on the episode. Suddenly she yawned, her fingertips darting like minnows on her barely opened mouth. "What does one do to freak off here?" she asked. "I wish they had a course in nude photography... I'm a good model myself. But only for friends." I took this last in stride without batting an eyelid.

TWO months together narrowed the gap of experience between us. When Rajkumari came to class, she scandalised the front benchers by coolly pronouncing Madame Bovary a "nympho". For the 'sixties female, that was talking.

Just across the road one came across *Maharani's* heterosexual counterpart—*Maharaja's*. Established in 1909. →

'I CAN'T GET DISTANT STATIONS SHARP'

'I'm the Chosen One for clearer reception.'

For transistors who cannot get distant stations sharp, Red Eveready is the answer. Red Eveready gets you even shortwave stations extremely clear and loud. Because it has a special EMD chemical mix which ensures super power and the sharpest clarity. No wonder 100% tamperproof Red Eveready is the Chosen One for clearest reception.

Red Eveready

The Chosen One. For your transistor.

UNION CARBIDE

Rediffusion/UC

"You scratch my back I'll scratch yours..." that about summed up the relationship between the two colleges. *Maharani's* had a Fancy Dress Night; *Maharaja's* had a Surprise Social. *Maharaja's* had a Shipwrecked Ball, *Maharani's* an Orphan's Night.

Kings and queens were legally supposed to be in bed by ten, but where the mind is without fear, ten is no time to turn in. And so had come into being the insider's joke about the *Maharaja* and *Maharani* suites. With a tip over ten percent, an obliging lackey would even arrange breakfast in bed. Rajkumari was "Raj" to the upper cream lads and to the more athletic among the girls.

Her cousin Pritam, incidently her "local guardian", drove up on Saturday evenings. I had seen him from the first floor balcony. He invariably drove up to the very edge of the portico steps, sending the watchman scampering away in fright. Within ten seconds Pritam honked seven times. Time was money. Rajkumari would slowly emerge, black eyes glinting greenly in the arbour of a chiffon outfit.

I knew, but none of the "authorities" did, that Pritam was usually only a decoy for Manu, tennis champ and toothpaste friend in one. Rajkumari returned on Monday morning with priceless details of a game of strip played at Manu's. "Manu was down to his wrist support. He's real sport".

I longed to spring the burning question but I never could. "Had she or hadn't she?" Her linguistic capers suggested a released virginity. But who could tell.

As for myself, I was lost in a maze of morality, truth and rebellion. Rajkumari seemed to have flown over the maze in a paint yellow two-seater plane. That was the image I had of her. I often expressed my respect for Raj's "guts" to others in our circle.

The first year of an Honours Course in Literature had crept by. Rajkumari returned from the summer vacation with back numbers of Playboy, a stack of Dunhills cunningly laid beneath thick wads of chocolate, and little cloud puffs of lace which resolved themselves into her underclothes.

She looked a little older. Or perhaps it was the altered vision which even a little time away brings. It was as she faced the mirror to lay out some new containers that it registered. Woe indeed! Her alabaster nose, that microcosm of perfection had lost its independence. It had yielded to a little flower dot of a diamond, which winked triumphantly. What did photography in the nude have to do with a slavish nose-ring and with a girl of Rajkumari's spirit? Try as I would, I couldn't make the necessary connections.

A WEEK after her return, there was a phone call for Rajkumari. She tripped it to the booth by the lounge and returned five minutes later, saying, "Daj's friend is coming to say hello and take me out tonight. He exports select items of jewellery." Her tone was casual.

That evening I had opened my door to let in a breath of fresh air. A black Mercedes swished into the drive, and as if in response to it, Rajkumari sailed by, waving casually to me. Absorbed in my book, I sat up with a jerk only when I heard a liquid trickle of anklet bells. Following their trail with my ears, I found they ended at the base of sooty black suede trousers which led up to Rajkumari's filling exteriors.
Rajkumari and anklets. Somehow they depressed me.

"Daj's friend was a dear," Rajkumari told me the following morning, carefully disarraying her swinging hair. "Look what I got out of him." And she carelessly flicked a bracelet at me. "That's the kind he makes." Almost in the same breath she continued, "I believe his son deals in art too. Rare miniatures in ivory. Only for the knowledgeable... Oh what a drag," she continued, cleaving her pillow with her breasts, "Imagine having to spend three eternities in this ossified dump. I belong with Picasso."

I thought she did too. Except for the nose ring and the anklets. During that Divali break, Rajkumari did not write to me at all. Two letters without a reply had left me hurt and clammed up.

Rajkumari returned two days later than the rest of the crowd. "Guests at home," she explained, "and anyway who wants college." ... I know I should have known. But not with Rajkumari.

"I'm leaving for good tomorrow," she told me a week later, meeting my eye.

I jumped, "What for?"

"Marriage, dearie. Might as well get it over with," she laughed with hard conviction.

"Whom to?" I asked, still flabbergasted.

"Here he is," she retorted, flicking open the cigarette pack and landsliding a snapshot of unconventional length. I turned to assess it. Brocade jacket, swelling moustache, glint in the eye.

The next morning Daj came to take home his pet. Salt and pepper beard, raw silk shirt, blaring stone on little finger... podgy, podgy, pudding and pie.

Rajkumari walked slowly by with a newly achieved harmony. Her nose ring gleamed with pride, her anklets served lovingly. A fancy mustard vehicle stood below. She stepped humbly into the waiting palanquin which serenely bore her away. ■

Amar Chitra Katha
Fascinating Picture Stories from Indian History, Legend and Folklore

AMAR CHITRA KATHA
What a wealth of information and entertainment for every child Page after page—the glory of India's past unfolds with colour and excitement.

Rama and Ravana Kalidasa and Kurukshetra. Mirabai Swami Vivekananda. A world of myth and legends, battles and bravery comes vividly to life In the 277 titles of Amar Chitra Katha. Available in 6 languages including English and Hindi.

Amar Chitra Katha. It's not only learning history while having fun. It's learning to be proud of a great country. In an age where we are fast losing our link with the past.

YOU'VE ALWAYS DREAMED ABOUT IT.

ESCORTS

Soon you'll ride it.

A gentle nudge of the kick-starter wakes this sleek sleeping giant.

Rev up the engine to a high-pitched whine and take off.

In fourteen seconds, as the gear meshes through six-speed positions, your speedometer indicates 150 kmph.

The engine rev-counter needle touches the 7000 rpm mark yet you feel no vibrations.

To people within earshot the approach of the Rajdoot 350 is like the angry buzz of a hornet—growing louder and louder, punctuated by the muted crack of a whip lashing in the air.

A brute of a machine, yet sleek and streamlined, weighing almost 25 kgs less than any other 350 cc motorcycle.

It's not for nothing that it is acknowledged as one of the most powerful, fastest accelerating sports machines in 350 cc class.

A dream machine that will satisfy

YAMAHA

RAJDOOT 350

In collaboration with Yamaha of Japan

India's first and only twin cylinder, two carburettor, 30.5 bhp motorcycle.

WHEN P. T. Barnum, later of circus fame, was running his famous museum in New York, he discovered people paying admission fees and staying for hours. The place soon became so crowded each day that others could not get in. Barnum wondered how he could empty the museum without offending his patrons, so that the turnover would be greater. Finally, he hit upon a plan. He had a sign made which he placed over a door leading to an exit into a rear street. It worked, for people soon began to follow the sign to see what new curiosity awaited them. The sign read: TO THE EGRESS.

A DELEGATION calling on President Lincoln to give him advice, was headed by a clerical gentleman who quoted at length from the Scriptures to prove his points. At last Mr Lincoln silenced him by remarking:

"Well, gentlemen, it is not often that one is favoured with a delegation direct from the Almighty!"

A RATHER damaged-looking Scandinavian was seated in the gutter in front of a Northwestern saloon, laughing hilariously as the blood dripped from his nose.

A passer-by stopped. "What's the joke?"

The wreck replied: "Aye bane in dar at da bar an' a faller come oop to me and hit me in da eye and say 'Take dat, yu dam Norvegian!' An hay poonch me on da nose and say 'Dat for yu, yu dam Norvegian?' An hay kick me into street. Ha, Ha!"

"Well, what's so funny about that?"

"Vy, aye bane Svede!"

MR Cylmer: "I see by the *Globe* that the exhibit we attended yesterday was a tremendous success."

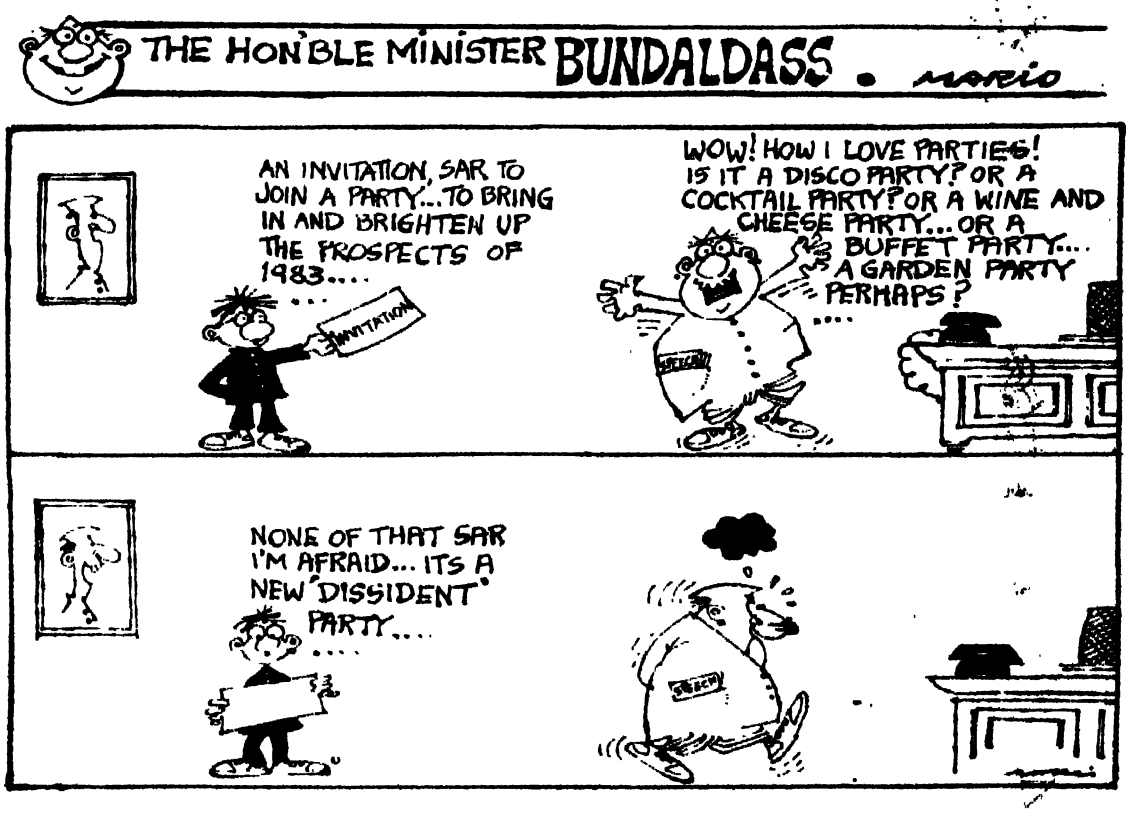
Mrs. Clymer: "Yes, I had no idea we were enjoying it half so much at the time."

"NOW I suppose they'll all get up and spout a while," remarked one diner to the man next to him. "Did you ever hear a really good after-dinner speech?"

"Just once. A friend of mine said: 'Waiter, bring me the check.' "

Oh! When did you arrive? Now *who will they turn to for advice?*

A SUSPICIOUS wife made a surprise call at her husband's office. Encountering his pretty secretary, she introduced herself and added: "I'm so glad to meet you Miss Shapely. My husband told me so little about you!"



THE English wit, visiting America, had a reputation for making puns no matter how terrible on all occasions. On viewing an orphan asylum, he was heard to murmur: "Thus far but no father." While having a breakfast roll, he declared: "The bun is the lowest form of wheat."

When he reached the Grand Canyon, his friends hoped that for once he would be silenced by the beauty and majesty of the scene.

He gazed about solemnly for a while, then remarked: "Gorgeous, isn't it?"

"YOU'RE a liar," challenged Muscles.

"Yeah", grumbled the thin man. "Say that again and I'll bust your jaw."

"Consider it said."

"Consider your jaw busted."

A CLERK at the employment agency liked to have his little joke occasionally at the expense of the applicant.

"Where were you born?" he asked Michael.

"Faith, in the auld Country down."

"Whatever for?" the clerk asked wittingly.

"At such a time," Michael answered, "twas me djootiful wish to be with me mother."

A SCOT went into a shop and bought a briefcase. "Shall I wrap it up for you?" asked the clerk. "Oh, no, thank you," replied the Scot; "just put the paper and string inside."

AN English tourist was on his first visit to Niagara Falls, and a guide was trying to impress him with their magnitude.

"Grand!" suggested the guide, but the visitor did not seem impressed.

"Millions of gallons a minute," explained the guide.

"How many in a day?" asked the tourist.

"Oh, billions and billions," answered the guide.

The visitor looked across and down and up as if gauging the flow.

"Runs all night too, I suppose?" he remarked nonchalantly.

IT was a beautiful evening and Ole, who had screwed up courage to take Lena for a ride, was carried away by the magic of the night.

"Lena," he asked, "will you marry me?"

"Yes, Ole," she answered softly.

Ole lapsed into a silence that at last became painful to his fiancee.

"Ole," she said desperately, "why don't you say something?"

"Ay tank," Ole replied, "they bane too much said already."

"HEY, mister, did you lose a wallet?" the little fellow asked a Scotsman.

"Noo that ye mention it, I did," replied the Scot. And then he began to feel his pockets anxiously. "Did ye find it?"

"No," said the tot, "I just wanted to see how many have lost them. You're the sixteenth today."

"I AM no hand at public speaking," said Wilbur Wright at a banquet in Paris in honour of the Wright Brothers' first demonstration of a successful airplane flight in France, "and on this occasion I must content myself with a few words. As I sat here listening to the speaker who preceded me, I have heard comparisons made to the eagle, to the swallow and to the hawk, as typifying skill and speed in the mastery of the air; but somehow or other I could not keep from thinking of another bird which, of all the ornithological kingdom, is the poorest flier and the best talker. I refer to the parrot."

"I WAS going," said the Irishman, "over Westminister bridge when I met Pat Murphy.

"'Pat', says I; 'how are you?'

"'Pretty well', says he. 'How are you Mike?'

"'Mike!, says I 'That's not by way of bein' my name."

"Faith," says he, "no more is mine Pat."

"So we looked at each other, an sure enough, it turned out to be naither of us."

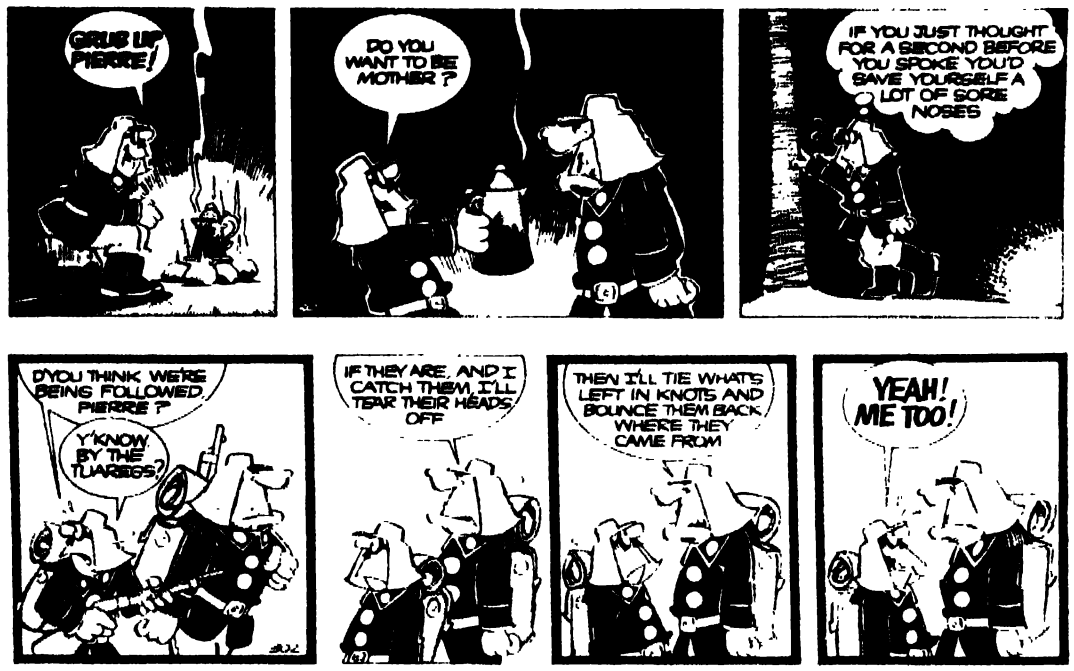
BEAU PEEP — the adventures of Legionnaire Beau Peep



Your key to finance

A FAMOUS speaker lectured to the members and at the end of his address the secretary approached him with a check. This he politely refused saying that it might be devoted to some charitable purpose. "Would you mind," asked the secretary, "if we add it to our special fund?"

"Not at all," said the speaker. "What is the special fund for?
"To enable us to get better lecturers next years.

THE minister called at the Jones home one Sunday afternoon, and little Willie answered the bell. "Pa ain't home," he announced. "He went over to the golf club."

The minister's brow darkened, and Willie hastened to explain:

"Oh, he ain't gonna play any golf. Not on Sunday. He just went over for a few highballs and a little stud poker."

We have one free benefit we wish people didn't have to use.

Free Accident Insurance Benefit up to Rs 50,000. Because tragedy may strike when you least expect it to.

Tragedy is no respecter of persons or places. But it has one common factor. It leaves behind someone bereft and numb with grief.

From its very start in business Peerless had resolved to do everything in its power to better the lot of the common man. Hence, the highly appreciated and very successful Social Welfare Schemes, which were aimed to encourage the common man to save. From this, the next step seemed natural and obvious. Free Accident Insurance Benefit. And so in 1972, Peerless reached another milestone—the Free Accident Insurance Benefit started operating.

Issued by arrangement with the National Insurance Co. Ltd., the free Accident Insurance benefit is provided with certain types of certificates on any single life for a maximum of Rs 50,000. To date, Peerless has been privileged to provide this free and timely assistance totalling Rs 32 lakhs, to nominees of our Certificate-holders who lost their lives in accidents or natural calamities.

In this Golden Jubilee year the Peerless Team renews a pledge—to work towards the greater good of the common man and our motherland.

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec 21-Jan 19

The week offers excellent opportunities for making a headway in career, profession or vocation Visitors and guests keep you occupied on Monday Tuesday is good for negotiations and interviews Clear all backlog by Wednesday Deal with Government officials and seniors tactfully

AQUARIUS
(Kumbha)
Jan 20-Feb 18

Great happenings are indicated both in personal life as well as in career You will acquire a tremendous reputation– good of course Artists and sportsmen may accept new contracts that promise fabulous money and fame Several new business opportunities come your way this week

PISCES
(Mina)
Feb 19-Mar 20

The week is full of promise—surprises and pleasant happenings all the way An elevation of status is likely in the case of politicians and those in service Teachers and eminent educationists will be honoured The early part of the week is full of outings and social functions All backlog must be cleared by midweek

ARIES
(Mesha)
Mar 21 Apr 20

A slightly better position than earlier in the month On the vocational front you will do well New friends and colleagues will extend their co-operation and make difficult tasks easy A difference of opinion with seniors on policy matters may cause much tension by the end of the week Mid week is excellent

TAURUS
(Vrishabha)
Apr 21 May 20

Whether you like it or not, certain changes in work life cannot be ruled out. Travel may prove profitable for those in service Army and police officials will come in for awards and rewards Marriage prospects are excellent for the eligibles The early part of the week brings exciting news in business .

GEMINI
(Mithuna)
May 21 June 20

New partnerships and alliances are in the offing Negotiations with foreign delegates will prove profitable in the near future The younger generation can look forward to merry making and settling down in life in the next couple of weeks All domestic jobs must be cleared early in the week

CANCER
(Kataka)
June 21-July 20

There are indications of continuing stress and strain in the next couple of weeks Near and dear ones may temporarily withdraw their support Even in personal life loved ones may drift away from you due to prejudices You may be whimsical and shoot off at tangents threatening to break off relations

LEO
(Simha)
July 21 Aug 21

A social high spot will soon come your way Sportsmen and actors will do full justice to their fans displaying their skill superbly Politicians must move cautiously and keep an eye on things behind the scene Tackle elders and seniors with intelligence and tact if you need their co operation

VIRGO
(Kanya)
Aug 22 Sept 23

You will, with the tact and wisdom at your disposal turn opponents into friends in the next couple of weeks and silence all criticism from the opposition Domestic duties will keep you extremely busy Property matters will be settled quickly and amicably in consultation with seniors and experts

LIBRA
(Tula)
Sept 24-Oct 23

A spirit of compromise and companionship will help to build up good will Youngsters will be appreciated by the opposite sex and forge pleasant ties Finances are good but do not be too rash and hasty while signing a business deal Those keen on marrying will succeed in securing the approval of seniors

SCORPIO
(Vrishchika)
Oct 24-Nov 22

The changes which you were contemplating in the recent past will take place suddenly and will seriously affect the future There will be many happy events in the domestic sphere A proposal regarding purchase of a vehicle or residental quarters will be hotly debated but the deal is likely to be put off

SAGITTARIUS
(Dhanu)
Nov 23 Dec 20

You will be in an expensive mood You are likely to go out of station visiting favourite beauty spots A rare distinction awaits teachers, philanthropists and heads of organisations Sportsmen, artists and other professionals will do well All backlog must be cleared early in the week Saturday is for rest

STAR FOCUS

Does Astrology Encourage Fatalism?

Astrology has been in existence since times immemorial but it is still a debatable point among learned men and women whether astrology encourages fatalism The stock argument of astrologers, however, is that the planetary positions at birth determine all the activities of the human being until his death.

This view is now being revised slowly, especially since the advent of new sciences like astronomy metaphysics and philosophy Indeed, the new approach has certainly helped human beings to try their utmost to overcome various odds through various devices yet there are certain situations where the human being becomes almost helpless and is tempted to refer to his or her horoscope in search of some solution to unsurpassable problems .

The various congregations of astrologers held in different parts of the world have discussed this aspect threadbare and there has been a general consensus of opinion that if a horoscope is judiciously studied by astrologers they can help to render some solutions to serious problems or can suggest ways and means to enhance prospects in career vocation and profession

The older concept of fatalism is, therefore, replaced by hope, ambition and other measures against adversity Hence it can be concluded that the science of foreknowledge suggests alternatives and helps one to act wisely in a particular set of circumstances thus avoiding disappointment and frustration

Birthday Forecast

Sunday, January 2

Most of you can look forward to a year of fulfilled desires Do not make rapid and radical changes in work life between April and July Guard against possible deception by the opposite sex in August September The last quarter is excellent

Monday, January 3

Quite an interesting year Financially and carrerwise you will do well Move cautiously between May and July for your judgement is likely to go wrong in this period Resist temptations and allurements in August/September

Tuesday, January 4

Those connected with newspapers advertising and mass communication will do extremely well You will venture out on your own in the last quarter of the year Mid 1983 is a slightly tricky period

Wednesday January 5

The key to success and the acquisition of a rare distinction in career is to maintain cordial relations both in and outside home Curb your tendency to drift especially in mid 1983 Tackle strangers with care and tact and tact

Thursday, January 6

A slightly disturbing year Abrupt changes are unadvisable, especially in mid 1983 It will be more prudent to maintain status quo and work your way round a difficult situation

Friday, January 7

A lucky and happy year for most of you Events occuring early in the year will bring you much renown and fame

Saturday, January 8

A year full of contentment and happiness Deal with elders and seniors tactfully so that you can secure the benefit of thier established practice, profession or business in the last quarter

THE PHANTOM

This air conditioner, consumes no electricity, needs very little maintenance, is invisible, and looks gorgeous.

Coir.
People are putting it to wonderful, new uses these days.
And the 'air conditioner' is just one of them.
Coir is an excellent thermal and acoustic insulator.
That is, it keeps you cool in summer and warm in winter.
Keeps noise away.
Coir carpets, wall panels, false ceilings, your natural 'air conditioners'.

The comfort you can trust

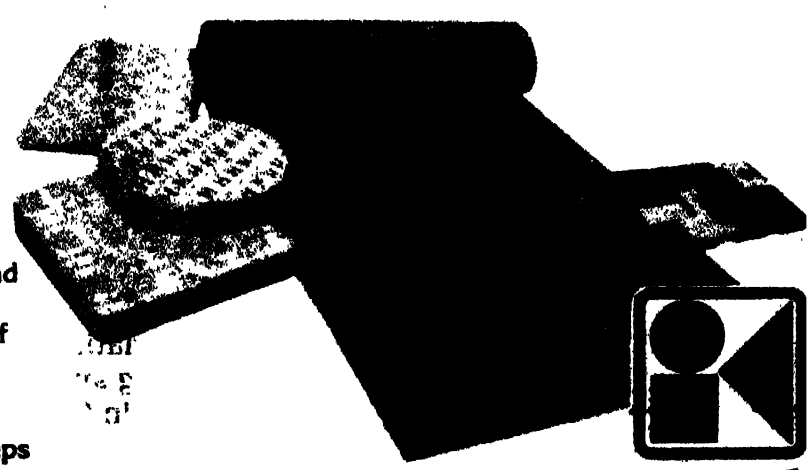
Rubberised coir is as comfortable as a foam mattress and a lot healthier. It's just a bit firmer, to support your spine.
And it 'breathes'.
Doesn't get too warm or too cold.
Bone specialists and doctors the world over, prefer rubberised coir to foam.

You can use rubberised coir in your home, car and office.

20th Century Coir

For quite some time now, coir has found favour throughout the world as an inexpensive and excellent acoustic insulator.
It's also used as an air filter in air conditioners.
And now, the Coir Board is experimenting with various, revolutionary new uses for coir.
As a filter for oil or water.
For applications in coal mines and tube wells.
The coconut tree has been one of Nature's finest gifts to man.
And as he progresses into spectacular new realms of development, his old faithful keeps pace with him.

SAA-CB-3102



Coir Board
Cochin 682 016

Coir — doesn't just look gorgeous, it works for you.

Toys that care.
Because you care

Open up a whole new world of imagination for your child. A world of warmth and love. Of caring and sharing. Of playing and learning. Of growing and developing. A world of fun, laughter and happiness.

That's the promise of Leo. Toys of a kind never before available in India. Toys that are designed to delight, amuse, yet educate your child. . . cater to his creative needs. Attractive, sturdy, yet safe to play with. In an ever growing range—pre-school, educational, action, puzzles and games.

Leo Toys. They could become your child's best friend. Today.

This Week's Bridge

Interesting Spade Suits

THE Poona Region Bridge Association recently held a selection tournament to determine the official Poona Region Bridge Association team for this years Winter Nationals. Bafana's team won the final Round Robin in comfort, although they just squeaked in from the Swiss League.

Of the many interesting hands from this tournament, quite a few involved the Spade suit.

This was one:

South dealer, Both Vul.

North South, a scratch partnership, were playing a strong Club, 5-card majors system, with Negative Doubles, 8-10, following a One Diamond opening:

	♠ KQ93 ♥ A7 ♦ J8752 ♣ 83	
♠ J85 ♥ 83 ♦ K6 ♣ AK10972	N W E S	♠ A76 ♥ 109542 ♦ 10 ♣ QJ65
	♠ 1042 ♥ KQJ6 ♦ AQ943 ♣ 4	

The auction was aggressive.

West	North	East	South
			1D
2C	D'ble (i)	RD'ble	2H
P	2S (ii)	P	3S
P	4S	All Pass.	

(i) Negative, 8-10, at least 4-3 in the majors.
(ii) Playing only one Way negative doubles, this usually shows 5 Spades.

East leads the ten of Diamonds.

Would you back yourself as declarer, or defender? Lay your bets.

As the play actually proceeded, declarer won the Ace of Diamonds, and tried to cash three Hearts West ruffed the third with the eight, so declarer over-ruffed, and exited with a Diamond. West won, cashed the King of Clubs, and returned a small Spade! North put up the Queen. East won his Ace, and backed a fourth Heart, ruffed with the Jack and over-ruffed with the King.

East's trump holding was now good enough to beat the contract one trick. If, instead of a low Spade, West had continued Clubs, declarer would have had to ruff in dummy, and eventually go two down. And when West led back a low Spade, even if declarer had judged to play low from hand, East would still have beaten the contract by ducking once and later tapping dummy with a Club.

But, going back to the beginning, if, after winning the Ace of Diamonds, declarer concedes a Diamond to West? If West plays two rounds of Clubs, dummy ruffs, and passes the ten of Spades around. East ducks, but a second Spade leaves the defence helpless, thanks to the 3-3 trump break. This line is certainly the indicated line of play.

Did you back yourself as declarer? And followed the suggested line of play?

But there is a defence to this play too. When West wins the King of Diamonds at trick two, he returns a Heart. Declarer can win in dummy and pass the ten of Spades, ducked, and another Spade, also ducked. He can't play a third Spade, because that would leave him with two Clubs losers, and the Hearts are blocked in hand. Down One.

And finally, if declarer wins the Heart switch in hand and plays the King of Spades? East ducks, so declarer crosses to dummy with a Heart and plays another Spade to his nine. East ducks again, as before, down one. Instead, if declarer plays the ten of Spades, West covers the Jack, Queen, Ace, and a third Heart comes back, West upper cutting with the five, promoting East's *Seven*.

If West does not cover the ten with the Jack, East must duck, and now dummy's good Hearts are played. West ruffs in, but declarer overruffs and reverts to Diamonds. East making only his Ace of Spades and one Club.

So on best defence, despite best declarer play, the contract is always beaten.

Laws Of Duplicate Contract Bridge

There is often some confusion about what constitutes a revoke, and what the relevant penalties are. Laws 61, 62, 63, and 64 deal with this topic from *Laws Of Duplicate Contract Bridge*

Law No 61 is reproduced here. Others will follow.

Failure to Follow suit—Inquiries Concerning a Revoke:

Law 61. Failure to follow suit in accordance with Law 44 or failure to lead or play, when able, a card or suit required by law or specified by an opponent in accordance with an agreed penalty, consitutes a revoke (but see Law 59). Any player, including dummy may ask a player who has failed to follow suit whether he has a card of the suit led.

AVINASH GOKHALE

This Week's Chess

Queen Smothered

SURROUNDED by his own men the King sometimes suffers a smothered mate. Likewise the all-powerful Queen is occasionally reduced to a chunk of wood when her own men obstruct her paths.

In position No 289 Black sacrifices a Knight to smother the White Queen. In position No 290 the White Queen's pathetic plight gives Black an opportunity to launch an attack with a Knight sacrifice.

Lobron — Hort

Played in an international tournament in Dortmund (1982) won by the Czech grand master Hort with 8½/11, ahead of Romanishin 8, Psachis 7½.

1.e4, e5 2.Nf3, Nc6 3.Bb5, a6; 4.Ba4, Nf6 5.00, b5 6.Bb3, Be7 7.d4, d6 8.c3, Bg4 9.h3, Bxf3 10.Qxf3, exd4 11.Rd1, Ne5! 12.Qg3, Nh5! 13.Qh2, d3! 14.f4...

Position No 289: Bh4!! 15.fxe5, Bg3 16.Qh1, Qh4! 17.Rxd3, Qxe4 18.Rd1, Nf4 19.Bxf7ch, Kxf7 20.Bxf4, Bxf4 21.g3, Qe3ch 22.Kf1, Bxe5; 0-1.

Ruy Lopez.

6...Be7) The distinctive Archangelsk Variation (5...b5) is 6...Bb7; e.g. Vasyukov-Mihalchishin, Volgodonsk 1981: 7.Nc3, Be7 8.d3, 00 9.Be3, d6 10.a3, h6; Sideif-Zade-Belyavsky, Tashkent 1980: 7.Ng5, d5 8.exd5, Nd4 9.Re1, Bd6 10.d3, 00.

After the text 7.Re1 or 7.Qe2 can transpose into regular lines.

8.c3) Even now 8.h3 can lead to regular variations.

9.h3?) Loses a Pawn; 9.Be3 or 9.d5 had to be played.

11...Ne5!) White probably over looked this move; after 11...dxc3? 12.Nxc3 the gambit would be worth while for him.

12.Qg3) If 12.Qe2, d3 13.Qe3, c5! 14.f4, c4 15.fxe5, dxe5 16.Bc2, Qc7 (threat ...Bc5) Black recovers his piece while maintaining the extra Pawn; in this if 13.Qe1 would allow 16...Qb6ch 17.Be3, Bc5 18.Bxc5, Qxc5ch 19.Kh2, dxc2

16...Qh4!) Threat 17...Bf2ch 18.Kf1, Ng3 mate.

17.Rxd3) Also inadequate is 17.Rf1, 00 18.exd6, Bxd6 when Black's d3-Pawn and the treats ...Bc5ch as well as ...Ng3 provide compensation for material.

19.Bxf7ch) A desperate remedy; after 19.Bxf4, Qxf4 20.Rd2 (or 20.Rf1, Qe3ch) Qxe5 mate is inevitable.

22...Bxe5) After 23.Qb7, Rhf8 or 23.Qd5ch, Ke7 a Black Rook check in the F-file decides.

Qufeld — Krogius Moscow 1967

1.e4, e6 2.d4, d5 3.Nc3, Bb4 4.e5, c5 5.a3, Bxc3ch 6.bxc3, Qc7 7.Nf3, Ne7 8.a4, b6 9.Bb5ch, Bd7 10.Bd3, Nbc6 11.00, h6 12.Re1, Na5 13.Nd2, 00 14.Qg4, f5 15.exf6 ep, Rxf6 16.Nf3, Raf8 17.Ne5, c4 18.Bf1, Nac6 19.Nxd7, Qxd7 20.Ba3, R8f7 21.Re2, Nf5 22.g3, Kh7 23.f4, Rg6 24.Qh5, Nce7 25.a5?, Ng8! 26.axb6, axb6 27.Rae1, Nf6 28.Qf3, Nh4! 29.Qh1, Nh5! 30.Bg2...

Position No 290: 30...Nxf4! 31.gxf4, Rxf4 32.Rf1 Rfg4 33.Rff2, Qa4! 34.Be7, Rxg2ch! 35.Qxg2, Nxg2 36.Rxg2, Qa1ch 37.Kf2, Qxc3; 0-1.

3...Bb4) French Defence, Winawer Variation.

8.a4) The main line here is 8.Be2, b6 (or 8...Nbc6 9.00, Bd7) 9.00, Ba6 10.Bd3, Bxd3.

17.Ne5) All this is book. If 17 ..Rxf2? 18.Bxh6.

20...R8f7) 20...Rxf2? would be met by 21.Qxe6ch, Qxe6 22.Rxe6, R8f7 (or R2f7) 23.Rae1 when White stands to win a piece.

25.a5?) Imperative here was 25.Bxe7. Now the Black Knight joins the attack while white's Bishopon a3 remains idle

28.Qf3) The White Queen's trouble begin; if 28 Qh3, Ne4 (threat 29...Nxg3) 29.Rg2, Nxc3 wins a Pawn.

29.Qh1) Foced; after 29.Qe3 (29.Qf2?, Ng4 traps the Queen), Ng4 30.Qc1, Nf3ch wins.

35.Qxg2) Equally hopeless is 35.Rxg2, Qa1ch winning the Queen.

Myth: Public Sector companies are ill-equipped to handle specific customer requirements.

Fact: Being a professionally managed Public Sector company, United India has developed the largest number of non-traditional and rural insurance covers.

First with poultry insurance. First with silkworm insurance. First with inland fish insurance First with honeybee insurance. . . the list is never-ending

From multi-crore ONGC and NALCO* insurance covers, to five-rupee Gramin policies, our range is indeed comprehensive.

No matter what your risk, United India can create an insurance cover just for you

Myth: Public Sector companies lack speed of response.

Fact: Being an enterprising Public Sector company, United India has the resources to attend to customer needs immediately. During 1981 we settled over 2,00,000 claims — averaging more than one a minute during normal working hours.

Myth: Public Sector companies lack the personal touch.

Fact: Service is a way of life for our 10,000 highly-qualified staff and 37,000 hand-picked agents.

A host of measures have been adopted to ensure that toddy-tapper and shipping magnate alike, get individual attention. To name a few complaints cell in every office, free risk management advice, customer seminars; pre-insurance surveys, etc

Myth: Public Sector companies show poor overall performance

Fact: Being a progressive Public Sector company, United India has constantly sustained a high growth profile

Our 26.8% growth in 1981 was clearly above the general industry average. Even overseas operations registered an increase of 41.5%

Seven divisional offices and twenty-five branch offices were opened in a single year — 1981. Now 407 United India offices take insurance to the remotest corners of India

You know the facts now. So why be a victim of myths? Our local office or agent will be happy to provide you with more information on our comprehensive range of insurance covers.

2000 'Early bird' Prizes

Nescheques worth Rs. 50 each for the first 250 valid entries received every week!

NESCAFÉ.

When you want nothing but the best

Contest closes 15th Feb, 1983

CAS 565 B

ALL YOU HAVE TO DO

In the Entry Coupon below are symbols of 5 of the world's currencies Underneath each one of them are 5 of the world's best-known landmarks. All you have to do is match the currency symbol with the landmark of the same country by writing the number of the landmark alongside the currency symbol.

For instance ¥ denotes Japanese Yen, hence ¥ matches the Mount Fujiyama. Thus No. 5 is written next to the symbol It is as simple as that. Now go ahead and match the others.

After you have matched the currencies and landmarks there is just one more thing to do. You know that Nescafé is the world's favourite Instant Coffee Suggest **one** word to either precede or follow the name 'NESCAFE' that denotes its superior quality

For example:
Super Nescafé or
Nescafé **Classic**

Put down your word in the blank provided in the Entry Coupon

Now fill in the coupon with your name and address and mail it to **"Nescafé Nescheque Contest"**
Post Bag No. 10
New Delhi 110 002

WHAT YOU NEED

Each entry must be accompanied by an inner seal of a Nescafé jar or an empty 50g sachet.

The inner seal of a **50g jar**
or an empty **50g sachet**
entitles you to 1 entry
The inner seal of a **100g jar**
entitles you to 2 entries
The inner seal of a **200g jar**
entitles you to 4 entries

You may use the Entry Coupon in this advertisement or get an Entry Form from your Nescafé dealer. Remember! More entries from you improve the likelihood of your winning a prize

RULES & REGULATIONS

1. All entries must be legible and complete.
2. You may send as many entries as you like but each entry must be accompanied by an inner seal of a Nescafé jar or an empty 50g sachet.
3. All entries must be mailed by ordinary post and not registered
4. The first 250 valid entries each week will receive a cash prize of Rs 50 each These winners will also be entitled to win any one of the other prizes.
5. The contest is open to all citizens of India except the employees of Food Specialities Limited, Clarion Advertising Services Limited, R.K Swamy Advertising Associates Pvt Ltd and their immediate relatives.
6. The decision of the judges will be final and binding. No further correspondence shall be entertained

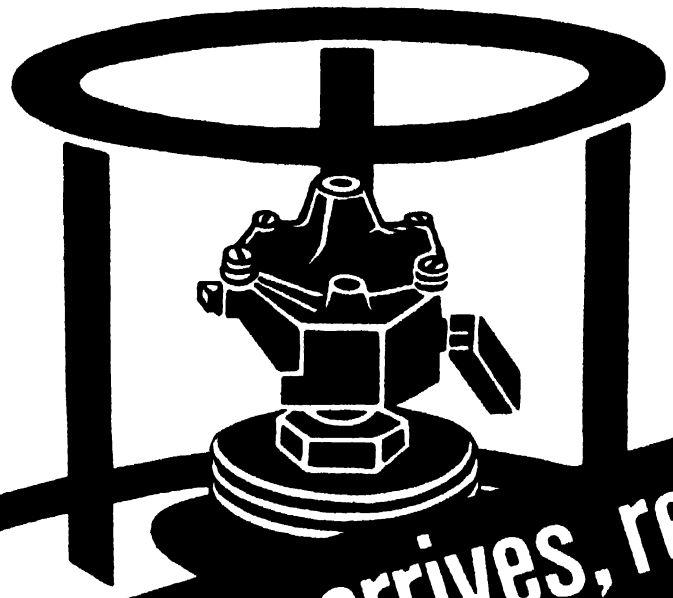
NORVICSUN



When your cylinder arrives, remember : THE RED CYLINDER DOESN'T MEAN DANGER; IT MEANS CAUTION!

Your gas cylinder contains a highly inflammable liquefied gas under pressure. So while your cylinder is being changed, remember to extinguish all naked flames–sigris, hot plates, diyas, agarbattis and cigarettes. For even a tiny spark can ignite the gas.

Also, ensure that your Delivery Man:

- Closes the cylinder valve before unscrewing the security nut to prevent any leakage.
- Does not hammer-open the cylinder cap or valve because the valve may get damaged and start a leak.
- Changes the rubber washer in the pressure regulator every time. A worn-out rubber washer can allow the gas to leak.
- Checks joints, connections and tube for gas leaks with soap solution. If the gas leaks, soap bubbles will appear.
- Lights the burners after changing the cylinder, to check if they are functioning properly.

Remember, cooking gas is the safest method of cooking today– if handled correctly. So take care. Don't misuse it.

In case of any difficulty contact your Indane Distributor or the nearest Indianoil Customer Service Cell.

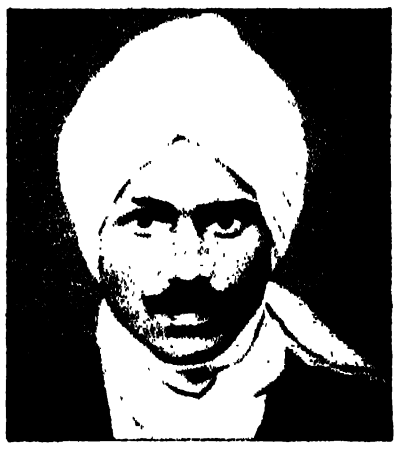
LETTERS TO THE EDITOR

Poet Of Freedom

Sir– RGK's tribute to Subrahmanya Bharati (December 12) was highly readable. His concluding remark, that he deliberately left out quotations from Bharati since he found the English translations atrocious, is indeed understandable! In fact, the way people are "remembering" Bharati there is every possibility that RGK's wish ("Let Bharati sleep peacefully in Tamil") cannot be fulfilled.

T.S. Sankaran
Nelumangala



Sir—RGK's suggestion to include one of the Bharati's songs as the unofficial national songs will be a fitting tribute to the "Poet of Freedom". I further suggest that the Government should appoint some organisation to translate all the works of Bharati into other Indian languages.

Vidya Sagar
New Delhi

Sir—The printer's devil is at it again. The year of Bharati's death should be 1918 and not 1981!

Azakan Aardra
Kanchipuram

Sir--Although Subrahmanya Bharati's stature as a poet of freedom is undisputed, RGK's contention that he has been India's *only* Poet of Freedom, is not borne out by facts. Veer Savarkar, a contemporary of Bharati, was an outstanding poet of freedom, sublime patriotism and martyrdom. He, too, began composing poems at the age of eleven. Savarkar had an unparalleled feat to his credit. He wrote ten thousand odd lines of first-rate poetry, on the walls of his cell, with a thorn or a nail during his "transportation" for life because writing material was denied to him. The epithet, poet of action, applies more aptly to Savarkar than to Subrahmanya Bharati.

Another outstanding poet of freedom who deserves recognition was Govind Trimbak Darekar. Though unlettered and physically disabled, he penned inspiring poetry of freedom. He was a close associate of and inspired by Savarkar.

Dr Arvind Godbole
Bombay

Car Or Cart?

Sir—Wonder! We want more of A.V.S. Reddys and less people like Dr Samant ("In The States", December 12). It seems Samant is happy to be in Bombay, where he is presented a Padmini to ride about in. In backward areas (where he is really needed) he may get a bullock cart and that too without bulls!

Davinder Singh
New Delhi

Of Sikhs And Slaves

Sir—After reading the reactions of our Hindu "brothers" (December 5) to the article by Sardar Ganga Singh Dhillon, I am reminded of Jinnah's observation about Hindu character. He told a Sikh friend, "Sardar Bahadur, you know the Hindu only as your co-slave; now, you will know the real Hindu when he becomes your master and you become his slave."

S.S. shergill
Patiala

"Yankee Doodle Boy"

Sir—Bhabani Bhattacharya's letter from America (December 5) was scholarly.

He has rightly said that India's image, now tucked away in a dark corner of American awareness, needs to be brought to light.

Incidentally, the picture of Raja Ram Mohun Roy captions him as the founder of Arya Samaj. He founded the Brahmo Samaj!

S.C. Mathur
Bichpur (Agra)

Saga Of Strength

Sir—S.R. Gokhale's piece on the transport debacle was impressive (Deecember 5). The transport services in our cities are in a shambles. You need superhuman strength to board a bus or train during peak hours. The photographs superbly depict the hardships and the risks the passengers have to endure.

B.N. Bose
Jamshedpur

Super Sam

Sir—In his resume (December 5) of UNCTAD's role in resolving the North-South tangle, C. Raghavan has ignored the substantive issue. The whole topic of North-South confrontation is surrealistic because of the basic imbalance of attitudes and judgement. The group of 77, (G 77) representing the South, is clamouring for favourable treatment from the North represented by the OECD countries, but why are they exempting the Soviet Bloc from any responsibility towards them?

The argument is: *because* the North is prosperous it *should* help the South. But then one should also ask: Why is the Soviet Bloc *not* prosperous, and why does it want to draw sustenance in trade and commerce from the North? Moreover, how can the Soviet Bloc "plead" with the South that it should adopt the Soviet model?

K. Susrita
Calcutta

Sir—The US has today warmly embraced Indian gurus and sects such as Hare Krishna and Mahesh Yogi's TM. Nearly a million Americans have adopted Hinduism and Sikhism and half-a-million Indians have been allowed to live and work in America honourably.

In contrast, the Soviet Union has not allowed any Indian to settle there. Mahatma Gandhi was branded as a reactionary by Stalin. It not only rejects Indian philosophy (KGB recently banned Hare Krishna) but also exports its own ideology of Communism by fair or foul means through high pressure propaganda. As a result, million of Indians now owe allegiance to the Soviet system. Yet India considers Soviet Union a close friend and USA a distant power.

Sujash Kumar Mie
Calcutta

Closet The Curves

Sir—"Curves And Contours" by Balkrishan (December 12) should have been hidden from public view. We expected more "eyecatching" stuff from him.

Nazar Krishan Bakshi
Gangapur City

Sir—By publishing photographs and paintings of the kind you did in October and November, you are no doubt, keeping pace with the changing times. But I and others find it difficult to read the WEEKLY with our family members.

Om Prakash Gupta
Dhanbad

Correct Kalima

Sir—Dinesh Mody's rendering of the Kalima in "Mughal Coins" (December 5) is erroneous. The correct version is: *La'ilaha illallah Mohammadur Rasulullah* (There is no God save Allah and Mohammad is His Prophet).

T. Abdullah
Vaniyambadh

Cabaret In Kashmir

Sir—Why do Indian painters, writers and other artists of the present day plunder our mythology to find themes to give expression to their creative urges stemming from their emancipated minds? ("An Adoration Of Apsaras", December 5). Why don't they seek new themes to exercise their liberated imagination? Why not leave our "obscurantist" Puranas severely alone?

Is it because of the quaint Indian fancy that many things modern could be found in the ancient lore? Do paintings of Rukmini Varma depict the first exponents of strip-tease in the Himalayas?

C.B. Dyuthikar
Bangalore

Good Guide!

Sir—"Another Western Wave" from Dev Anand by Suresh Kohli (December 5) was interesting. It seems Dev will go on forever. Everyone—from the granny to grand-daughter—just loves to watch him prancing on the screen, going around trees bubbling with youth, wooing the pretty girls. Still, one longs for a performance like the one in *Guide*. None of the films he has since made, can match it.

Devki Nandan Gupta
Gangapur City

A Sea Of Sense

Sir—While reading Mr Palkhivala's article (November 21) I was reminded of the late Robert Green Ingersoll's tribute to Shakespeare. "He is an intellectual ocean, in that the wave touches the shores of thoughts"!

T. Anil Kumar
Guntur

Sir—It is because of the stinking corruption in the Bombay Municipal Corporation that the pavement-dwellers set up their abodes there in the first place! The citizens of Bombay have been passive spectators to the deteriorating living conditions in Bombay. But the civic authorities have not only been negligent in their obligations, they have actually, unashamedly contributed to this sorry state of affairs; a case of fence eating the fields.

The Municipal Commissioner under his statutory responsibilities is unable to remove the hawkers who have virtually appropriated the pavements. He, in fact, went to the extent of suggesting that all hawkers should be licensed so that the BMC earned a good sum of money, and the pedestrians be allowed to walk on the roads (which anyway they do now)! Is this miscarriage of mercy or miscarriage of justice?

P.V. Venkateswaran
Bombay

Sir—By blaming the politicians, the labour leaders and the striking workers Mr Palkhivala offers a one-sided view of things. Strangely enough, he has hardly found any fault with the many industrialists and traders whose hoarding, profiteering and black-marketing are causing untold harm to the millions of ordinary citizens of our country. He has shown no way out of this corruption: who is responsible for it, how has it spread; and how does it thrive? He has not talked of the thousands of crores of "black" rupees generated annually

by the small minority of unscrupulous businessmen.

Will Mr Palkhivala write on the nefarious activities of "big" business now?

Vadilal L. Mehta
Ahmedabad

Crazy Communalists

Sir—"The Agony Of Meerut" (November 28) gives the impression that only one community suffered in the communal carnage. Dying declaration or not, the priest Rambhool could never have solemnly stated that he ripped open his own belly! All those who depend upon communal fires to roast their chickens should be kept under constant vigil and paralysed out of activity. The million-dollar question remains: which party will eschew the electoral temptation of wooing block votes?

Ajay Bhartiya
Allahabad

Old Hat

Sir—The article on Rita Ganguly (November 21) had nothing new to say.

C.S. Prabhu
Bombay

Feet Of Clay?

Sir—P. Ramaswamy has praised Jawaharlal Nehru and Indira Gandhi (November 21) for following a policy of socialism consistently. Since the father-daughter rule has been almost unbroken since Independence, they must also share the blame for the failure of this policy.

Interestingly, Nehru's contemporaries—Sukarno, Nasser and Mao—are all discredited in their own countries. One must go by results, and not by intentions. While 50 per cent of the Indian people are destitutes, most other Asian nations such as South Korea, Taiwan, Thailand, Malayasia, Singapore, Indonesia and even Philippines have done well and raised the living standard of their peoples.

Sujash Kumar Mie
Calcutta

In Memorium

Sir—The sudden death of Leonid Ilyich Brezhnev has left a void which will be felt not only in the Soviet Union but throughout the peace-loving world. Brezhnev had been constantly striving for world peace. ("Leonid Brezhnev And After" by K.C. Khanna, November 21).

Even at the age of 75 he was a mighty and an undisputed leader of the USSR. Rarely do we come across a man like Brezhnev. He enjoyed worldwide respect till the end of his days.

Crishna S. Kumar

COVER STORY

8 Showbiz Showdown
We seem to have reached the crossroads in Hindi cinema. The commercial cinema has had a bad shock and with the NFDC threatening to withdraw its support of the art cinema, the atmosphere in the Bombay film industry is electric. Anjali Ewing writes about the impending showdown.

14 FILMS-II: **The Business of Films**
Vir Sanghvi reveals how Hindi cinema has become a money-making racket and how this important artistic medium has been over-run by shrewd businessmen.

16 FILMS-III: **For Our Eyes Only**
India is getting films from the rubbish heap of world cinema—both popular taste and exhibitors are responsible for this. Lalitha Krishna makes a case for getting better films into the country.

12 FILMS-IV: **Critics' Choice**
Eight well-known film critics chose 10 important films in the last 32 years. A pictorial feature loaded with information.

20 INTERNATIONAL: **The Alienation of Baluchis**
Continuing exclusive excerpts from Air Marshal Asghar Khan's forthcoming book, *Generals In Politics*.

22 IN THE STATES: **Godman or Magician?**

Muslims: Persecuted Or Pampered?

In a debate on this controversial subject we have two eminent personalities, Member of Parliament Syed Shahabuddin and Professor Balraj Madhok, arguing for and against the Muslims.

Says Balraj Madhok, "A common law for all citizens and equality before law is the rule in all civilized countries. Article 44 of the Constitution directs the State to have a common civil law for the whole country but it has been flouted all these years to please the Muslim community... Secularism and territorial nationalism are anathema to Islam. No Islamic state has ever been a secular state and no true Muslim can subscribe to secularism and *Sarva Dharma Sama Bhava* because it cuts at the root of the assertion that Islam is the only true religion... This is the root cause of communal riots which continue to blacken the fair name of India."

To this Syed Shahabuddin counters, "The common Muslim rooted in the soil suffers in silence. He takes secularism as a joke, a meaningless charade. He thinks he is a second class citizen in a Hindu country... he knows nothing of equality before law. All he knows is that he is an Indian by birth, that he has nowhere to go and he has to struggle for his daily bread a little more than does his Hindu neighbour who can protest without being dubbed a Pakistani."

Hindi Cinema

SHOWBIZ SHOWDOWN

Art Cinema. Commercial Cinema. Middle-of-the-Road Cinema. The hostility between film makers of these three kinds of cinema has been growing ever since they started treading on each other's toes a few years ago. Now the National Film Development Corporation, which has been the only source of finance for the art cinema, is going to back the commercial film makers according to reports.

Why should the commercial cinema be financed by the Corporation? What will happen to the FTII graduates on whom the Government is spending Rs 70,000 each every year? What will happen to the middle-of-the-road film makers who have been promoted by the NFDC and have proved that audience tastes are definitely changing?

If the Government goes ahead with the proposed change of policy, a showdown between the three is inevitable.

by Anjali Ewing

THE Hindi cinema has reached a very important point in its history. Although business has been shaky the last couple of years—a natural concomitant of recession the world over—1982 will probably go down as one of the worst years for the Bombay film industry. The past year has witnessed some of the biggest flops ever. To name only two: Biddu's *Star* and Jeetendra's *Deedaar-e-Yaar*. Before the release of these two films, trade circles were agog with talk that they would prove to be the top grossers of the year. That they bombed at the box office is not in itself significant. Every year one hears of films which dashed expectations to smithereens, but what makes 1982 a landmark year is that so few have been received well by the audiences—one can only think of *Nikaah, Namak Halaal, Khuddar, Prem Rog* and *Angoor*.

The situation is not only serious, it is critical. Film makers might dismiss such strong sentiments as unnecessary exaggeration but the panic is on and indeed visible. One example should prove it: Take the three big names of commercial films—Manmohan Desai, Prakash Mehra and Ramesh Sippy. What have their last films been? *Coolie* (not yet released) with Amitabh; *Namak Halaal* with Amitabh; *Shakti* with Amitabh. Amitabh the anti-hero, the angry young man who has been raging since 1973. What are their next ventures going to be? Desai's *Lovebirds*, Mehra's (as producer only) *Pyaar Ke Dhaage* and Ramesh Sippy's *Sagar* which will resurrect Dimple Kapadia. All three smaller ventures than their last.

Top: Rekha and Anooradha in Shashi Kapoor's Utsav.

Formula Doesn't Exist

Since *Zanjeer* in 1973 (another landmark) the Hindi cinema has not progressed. (This does not mean that different films have not been made over the last ten years. There will always be exceptions to any rule.) The stupendous success of *Zanjeer, Deewaar* and *Sholay* were instrumental—no, responsible—for open-

ing the floodgate. Film makers, being the shrewd businessmen they are,entered the fray almost immediately. Scriptwriters like Salim-Javed (now separated) and Kadar Khan worked overtime to help film makers cash in on what they thought was the "formula" film. But as we know there is no such thing as a formula. There is always a search for one but it will never be found—because it doesn't exist. There is nothing to guarantee a film's success at the box-office Films with excellent music have flopped (*Amrapali*); films with excellent performances have floundered (*Shakti*); films with a strong subject have failed (*Reshma Aur Shera*); even a film with all of these vital ingredients has been rejected (*Baseraa*).

The commercial film makers—they like to call themselves the dream merchants—have always said that they give people what they want. A very practical method to adopt. From 1973 audiences had been lapping up what was served out. Then in 1980 came *Shaan*. The first indication that this was no longer what the audiences wanted. It is unfair to blame the director for pushing his luck too far after the blockbuster, *Sholay*. He probably thought he was still giving the audiences what they wanted. Change is usually gradual; here it was sudden. Change normally does not involve a victim; here the audience—unwittingly—chose one. Ramesh Sippy was the unfortunate man With another film the change would not have been so apparent. But *Shaan* was not any old film. Sippy had poured all his profits from *Sholay* into his next film. He promised the creation of a character that would surpass even Gabbar Singh's popularity. That was something to boast of! The publicity campaign for the film was staggering: right up to the film's release there were daily reports on *Shaan's* progress It was to be the event of the year. What happened? The answer will somehow always elude us. It will probably be one of the greatest enigmas in Hindi cinema.

Disbelief. That was the first reaction. How could it possibly fail? But fail, it did—miserably. Once the incredulity had worn off, the film makers, one and all, donned their thinking caps. If a film like *Shaan* had been spurned, what would be the fate of their films? They would be broken, ruined. But the audience, true to form, bewildered them all by making *Laawaris* and *Naseeb* big hits. So no drastic changes took place. Apparently the "formula" was still working.

Dawn Of Parallel Cinema

Cut back to 1969. An important landmark in Hindi cinema. The year of Mrinal Sen's *Bhuvan Shome*. The beginning of art cinema in India. Critically, the film was a success. It was called the dawn of the parallel cinema in India. Then came Mani Kaul's *Uski Roti*, Basu Chatterji's *Sara Akash* and Basu Bhattacharya's *Anubhav*. Later followed Shyam Benegal's *Ankur* and M.S. Sathyu's *Garm Hawa*. The film critics hailed the art cinema movement enthusiastically. Such was its impact on people who had already been exposed to similar movements in France, Italy, Sweden and Hungary that many of these films will remain all-time favourites. However, our average Hindi moviegoer was not quite ready for such films. The realism of a *Do Bigha Zamin* or a *Dharti Ke Lal* was a completely different kettle of fish. A social film with a coherent story they could understand. But what was this new breed of film makers trying to *say?* They soon gave up trying to find out.

Then, just as the art cinema seemed poised for a major breakthrough with the acceptance of *Ankur*, it lost its momentum. The reason was that most of these films had been financed by the Film Finance Corporation, a government body set up to help young graduates from the Film and Television Institute in Pune to make their first films During the Emergency, FFC stopped financing art films All the graduates from the Directors' Course went into limbo They were bursting with ideas, itching to make their first film, but who would finance their films but the Government There was nothing to do but wait for it to reverse the policy. In the mean while the commercial cinema was reaching new heights with Amitabh Bachchan. Then at last in 1979, just before the merger of the FFC and IMPEC (Indian Motion Picture Export Corporation) to form the National Film Development Corporation came the reversal. Once again the wheels of the art cinema began rolling.

During the four-year hiatus the only film worth a mention was Mrinal Sen's *Mrigayya*. With the revival came M S Sathyu's *Kanneshwara Rama*, Mani Kaul's *Duvidha*, Awtar Kaul's *27 Down*, Girish Karnad's *Godhuli*, Govind Nihalani's *Aakrosh*, K.A. Abbas' *Naxalites*, Rabindra Dharmaraj's *Chakra*, Tanvir Ahmed's *Chirutha*, Biplab Roy Chowdhury's *Shodh* and Saeed Mirza's *Albert Pinto Ko Gussa Kyon Aata Hai?* While the films made in the early years of the art

Critics'

The *Weekly* asked eight of Bombay's prominent critics and writers of the Hindi cinema to name their ten favourite Hindi films between 1950 and 1982. Although they jumped at the idea and quickly dug up their files and other jottings, it proved to be a daunting task. After much thought and many misgivings, they finally whittled down their lists to the required number. We present the results of the poll.

THE hands-down winner of the poll is *Aakrosh*, the 1980 film directed by Govind Nihalani, Shyam Benegal 's cameraman It got seven votes This film carried to the logical conclusion the movement *Bhuvan Shome* (also one of the Top Ten) began It was remarkable not only for its direction but also for its

cinematic excellence and powerful characterisation of Om Puri who spoke little but said much The small-town atmosphere was created very dramatically and Nihalani must be congratulated for being able to compress so much into each scene The interplay between the two lawyers—played by Naseeruddin Shah and Amrish Puri—was handled extremely well Although the film was powerful enough to jolt the urban viewer out of his complacence, it was also a catharsis, a cleansing of the mind and the soul But, above all, what makes *Aakrosh* a great film is its ability to take you beyond the frame and that there is something new to absorb each time you see the film

Two films tie for the second place with six votes each *Do Bigha Zamin*, made by Bimal Roy in 1953, was an old kind of film made with a new approach, neo-realism at its best in Hindi cinema It was a revolutionary film, the first to deal with a social problem in a forceful, dramatic and artistic way Sensitively handled, it would be a "big" film even if it were to be made today The suave and sophisticated Balraj Sahni was simply superb as the peasant forced off his land

The other film is M S Sathyu's *Garm Hawa* (1974), the best film ever on Hindu-Muslim tension It was the first Muslim "social" in the real sense of the word The problem of the Muslims in India was shown in all its complexities and Sathyu gave to a problem we are all familiar with a perspective which was very disturbing No one can ever shut his eyes to the Hindu-Muslim problem after seeing this moving film *Garm Hawa* was treated with great cinematic virtuosity and is *the* outstanding film of the last decade

Bhuvan Shome comes fourth with four votes Made by Mrinal Sen in 1969, it ushered in the parallel cinema in India It was a film with barely a semblance of a story, a film with a hero (played superbly by Utpal Dutt) who hardly looked like a hero Although Mrinal himself condescends to this film, its Chekhovian charm and sheer novelty are unsurpassed in Hindi cinema

The rest of the six films each got three votes Gulzar's *Aandhi* (1975) was one of those films where the actors rose above the director It was a film which went into the private moments of politicians and it was absolutely fascinating to watch Suchitra Sen and Sanjeev Kumar in a game of one-upmanship

Shyam Benegal's *Ankur* (1974) is probably the only film with a negative protagonist Anant Nag's character was fascinating, and rarely have we seen so complex a character on the Indian screen But the strongest quality of the film is the relationship between the peasant couple (played by Sadhu Meher and Shabana Azmi) This bold film was distinguished for its directorial skill, remarkable acting and camera technique

Mother India, made by Mehboob Khan in 1957, is a film which probably selects itself Nargis's performance invested this remake of *Aurat* with new significance A portrait of a strong woman conveyed by an uneducated film maker in the days when women were weak, submissive *satisavitris* Powerful, perennial, unforgettable—especially for its exquisite use of colour

It was amazing and gratifying that after saying for years he was not familiar enough with the language to make a film in Hindi, Satyajit Ray produced quite a little masterpiece *Shatranj Ke Khilari* (1978) was India's first genuinely historical film It is also much superior to *Junoon* and *Umrao Jaan* in its recreation of nineteenth century Lucknow This deli-

Choice

cious film had very un-Hindi filmic irony and satire One still feels moved four years after seeing it Certain individual scenes are imprinted on the mind and are worth much more than many of the films mentioned in this list

Awtar Kaul's *27 Down* (1974), though by no means a well made film, was sincere and moving and, in its own way, very uncompromising The metaphor that Kaul used in the film—that life is like a set of rails where we are unable to deviate from a predetermined path—was novel and striking The protagonist watches his life go to pieces in front of him It was a film with a certain anguish and very representative of the Indian people

Mani Kaul's *Uski Roti* (1969) rounds up the list of Top Ten films between 1950 and 1982 It was a film made without fear or compromise It broke with the convention of the narrative form and devised a new aesthetic of cinema in India It showed that cinema is an art form and proved it is possible to do it in this country

Aandhi

While ten films emerged with a clear majority, there were in all 32 films selected by the critics. Here is a list of the films with the name of the director and the reasons for choosing them. (Please refer to pages 10-11 for the names of the critics who chose these films.)

Awara - Raj Kapoor 1951 Chosen mainly for its theme values cannot be inherited genetically The best black and white film in terms of texture.

Nanhe Munne Datta Dharmadhikari - 1952 A film which did not try to have its big moments. A very touching example of neo-realism.

Ratna Deep - Debaki Bose - 1952. An interesting story handled well A classical Indian film with a certain amount of idealism and elegance.

Daera Kamal Amrohi - 1953. Very different (practically offbeat) from the films of that period A film full of silences. For Meena Kumari's performance

Parichay - Satyen Bose 1954. In any good film, there is always one character which haunts you, which remains with you. This film had such a character—played by Pranoti Ghosh

Mr and Mrs 55 - Guru Dutt - 1955 Top class, slick entertainment to which our *Naseeb* has never taken us back.

Hatimtai — Homi Wadia — 1956. Chosen for nostalgia and gratitude This film introduced me to the movies The colours and costumes are still etched in my mind.

Do Ankhen Bara Haath — V. Shantaram — 1957. The film made a very human point. Though the acting was stylised, it had great humanity.

Naya Daur : B.R. Chopra - 1957. For breaking away from the formula film and for the influence it had on subsequent films.

Pyaasa - Guru Dutt - 1957. For being the closest equivalent to poetry in cinema. Guru Dutt is India's Orson Welles. His films were made with great craft, feeling and truth.

Anuradha - Hrishikesh Mukherji - 1960. For Leela Naidu. She didn't act, she *became* the character.

Mughal-e-Azam - K. Asif - 1960. The closest a film came to being a genuine historical pageant. It was *meant* to be a great film. And most of all for Madhubala.

Gunga Jumna - Nitin Bose - 1961 A high-spirited film in which the dialect and folk music were haunting. Dilip Kumar and Vyjantimala were unforgettable

Sahib Bibi Aur Ghulam - Guru Dutt - 1962 The most successful adaptation of any novel. Beautifully structured, memorably performed.

Oonche Log - Phani Mazumdar - 1965. For its radical and novel approach. A triumph of the script and the direction.

Anand- Hrishikesh Mukherji - 1971. For taking a tragic theme and treating it cinematically, humanly and powerfully.

Chetna - B.R. Ishaara - 1971. The first telling document of a prostitute's life and her non-status in our society. Bold and frank for its time with dialogues that were startlingly brutal.

Dastak - Rajinder Singh Bedi - 1971. A shabbily mounted film but it had one of the finest screenplays ever written. Chosen for literary rather than cinematic reasons.

Sara Akash - Basu Chatterji - 1971. For its truthfulness, authenticity and attention to detail.

Anubhav — Basu Bhattacharya — 1972. Technically very competent. Of all his films on family life, this little one was the best.

Maya Darpan - Kumar Shahani - 1973. For the problem/situation it posed and the techniques employed to bring out the situation. For its camerawork.

Yaadon Ki Baaraat - Nasir Husain - 1973. For me, the 'compleat' film—with laughter, romance, tears, music and the revenge theme dovetailing into a perfect result.

Zanjeer - Prakash Mehra - 1973 For the first time a film with a tight script, a film with structure and form. For its anger. For Amitabh—the best actor I have seen on the Indian screen.

Amar Akbar Anthony - Manmohan Desai - 1977. For being the summation of what Hindi cinema is. Put together with such style that the entertainment we talk about is really possible in Hindi films.

Bhumika - Shyam Benegal - 1978. A film which grows in retrospect. Memorable for its episodic but tightly-controlled development and for Amol Palekar's and Smita Patil's performances. Marvellously directed.

Duvidha - Mani Kaul - 1979. For breaking new ground formalistically and going against all dictates of reason. I admire Mani Kaul for his courage to do it. Visually very beautiful.

Chakra — Rabindra Dharmaraj — 1980. As in the case of *27 Down*, a sad, human... story behind the making of the film. That film making exacts such a high price (in both cases the film maker died soon after his first film).

Satah Se Uthta Admi - Mani Kaul - 1980. Out of the knotted prose and verse of Muktibodh, Mani has created a world of intelligent light and poetry.

Albert Pinto Ko Gussa Kyon Aata Hai? - Saeed Mirza - 1981. For being gripping, true-to-life. For its identifiable characters who didn't seem to be acting.

Chashme Buddoor - Sai Paranjpye - 1981. One of the happiest films in recent years.

The first film to successfully and convincingly spoof the commercial cinema. For Ravi Baswani—a real find.

Bazaar - Sagar Sarhadi - 1982. For being more successful than even the formula films.

Shakti - Ramesh Sippy - 1982. The best directed film in the last decade.

(Continued from page 9)

While people were still queuing up and paying in black for a *Muqaddar Ka Sikandar* or a *Mr Natwarlal*, middle-of-the-road films were slowly gaining ground as the viable alternative between crass commercialism on the one hand and ambiguous art on the other. So what was the future of commercial films? In fact, what then was the future of the art cinema?

Slanging Match

This brief history should illustrate the kind of tussle which has been going on for some years now between the three forms of Hindi cinema in the country. According to the commercial film makers, the art cinema can never make a dent in their market; as far as the middle-of-the-road cinema is concerned, they say that these films have found a new audience, that their own audience has not been affected at all. The middle-of-the-road film makers, flushed with their success have declaimed that the time is not far off when theirs will be the popular cinema. On the other hand, the art film makers, despite their distaste for the commercial cinema, have never tried to lock horns with it. They have always conceded that they are destined to remain a minority. But the emergence of the middle-of-the-road film is to them the worst thing that could have happened They all agree that it is a compromise cinema and hold in contempt everyone involved in its movement

"In a world where people already feel alienated, the commercial cinema is alienating them further," hits out Mani Kaul. "Photographing is not cinema. We should stop the propagation of photographed threatre," says Vishnu Mathur, an FTII graduate who has completed his first film, *Pehla Adhyay*. But it is Kumar Shahani who makes the severest indictment of the commercial cinema. Says he: "It is being made by hooligans teaching hooliganism." The "artists" are equally, if not more, contemptuous of the middle-of-the-road cinema "It is an irrelevant cinema,"says M.S.Sathyu dimissively. "They are philistines," adds Mani Kaul for good measure.

The "entertainers"' in turn, have some pretty harsh things to say about the other two. "The art cinema is disgusting, nauseating," says Manmohan Desai. "A personalised cinema is not possible in this country." says B.R.Chopra. And, "let them bloody well try it," is Desai's angry reaction when he is asked whether the middle-of-the-road cinema can replace commercial cinema. "They are neither pedigree nor pariah," he rants They have one foot here and one foot there. Why don't they stick to one path? They want to be us but they can never be us"

Not to be outdone, Sai Paranjpye plugs strongly for the middle-of-the-roaders. "There is a paucity of imagination in the commercial cinema," she says flatly. "The problem is that one does not need any credentials to enter this industry," says Shashi Kapoor who makes his money from the commercial cinema and puts it into the middle-of-the-road cinema. "We have an audience," points out Basu Chatterji. "They still have to find one." So the slanging match gets bitter and more bitter.

This bitterness was inevitable when these film makers started treading on each other's toes. However, what has led them to the brink of a showdown is the proposed change in the NFDC's policy of financing small films, especially the art cinema. According to reports, the Minister of Information and Broadcasting, Mr N.K.P.Salve, has been horrified at the amount of money the NFDC is losing on financing such films and has decided to call a halt to such "waste". What has aroused the indignation of the art film makers is that the NFDC will now finance commercial films, something the FFC once tried to do and burned its fingers in the process. "It is humiliating to listen to such bull from these bureaucrats. The NFDC should stick to the Mani Kauls and Kumar Shahanis," says Shashi Kapoor.

Blow Hot, Blow Cold

But the Mani Kauls and Kumar Shahanis are used to the NFDC blowing hot and cold. And with elections round the corner, they know the Government is trying to appease the commercial film makers who dutifully pour large chunks of their black money into the election coffers each time.

What riles the art film makers is this constant talk about economic viability and profits. "The NFDC is making the film maker into a businessman," says Kumar Shahani. "Salve wants to be efficient," says Sathyu cuttingly. "The board should resign *en masse* and teach the Government a lesson," Mani Kaul states firmly. "The Government seems not to have learnt a lesson from the discontinuation of financing art films between 1976 and 1979," says Vishnu Mathur."The coming gap will be far more dangerous." "It is closing its doors to progress," says Suresh Jindal, the producer of *Rajnigandha, Shatranj Ke Khilari* and now Sai Paranjpye's *Katha*, and also the co-producer of *Gandhi*.

But is progress what the Government wants? The commercial cinema is doing a fine job of preserving the status quo by selling dreams. The art cinema, on the other hand, is making people aware that they are not destined to be subjugated forever and treated like chattel. "To question is the first germ of revolution," according to Sathyu. Then why is the Government financing art cinema at all? Because it earns our Government a very good name abroad. It sends the best of the art cinema to festivals all over the world. The dynamite. The pure TNT. And people are all admiration for a government which has the guts to promote such films. Little do they know that these films are sabotaged back home.

Not only back home but abroad, too. Channel 4, the third addition to British television (the other two being the BBC and ITV) wanted to buy a print of Vishnu Mathur's *Pehla Adhyay* and asked the Indian Government to send a subtitled print (for which they pay £8,000-9,000). Nine months have gone by but the Government has not taken any action. "They may explain in any bureaucratic language. I do not understand," says Mathur.

Common Adversary

It is not difficult to understand. Channel 4 is meant primarily for the minorities—and that includes Indians. The Government let an *Aakrosh* and a *Sadgati* slip through here in India. It is not likely to make that kind of mistake again. The NFDC, though it gives small loans at 15 per cent interest, does not distribute these films. Its own theatre—the Akashwani—which was built to show the best that Indian cinema has to offer, shows films like *Goodbye Pork Pie* instead which was much worse than the title suggests.

The proposed policy change has the comercial film makers all excited. If the terms are fair, they say, they will make films (and profits?) for the NFDC. The art and middle-of-the-road film makers (who have also received invaluable aid from NFDC) are biding their time. But the art

COOLIE, directed by Manmohan Desai. Rishi Kapoor (above left) falls into the clutches of the bad guys. Master Jugal Kishore (above right) in Shekhar Kapoor's Masoom *based on Erich Segal's novel,* Man Woman and Child. *Below, Vishnu Mathur shoots his first film,* Pehla Adhyay.

film makers are especially piqued. The NFDC has always been of help to young FTII graduates making their first film. The Government spends about Rs 70,000 per student per year at the FTII. And it is the FTII graduates in the main who have given authenticity to the movement of a new cinema. So far the NFDC has provided them with the means to experiment after the three years of training at the institute. What will happen to all the graduates who go out of its portals? The cameramen and editors are quickly absorbed into the mainstream cinema; it is the directors who depend on the Government to continue supporting their activities. After all, their contribution has not been meagre; films like *Bhuvan Shome* and *Aakrosh* will always figure prominently in any history of the Indian cinema. "I am sure that in some other country we would not be given such a hard time," says Mani Kaul dismally, "but I won't work for the existing distribution system." Saeed Mirza is more philosophical: "Every artist has to create in a hostile environment."

But why the hostility even among themselves? Wouldn't things be better for all if, as people using one medium, they put their differences aside and united against the common adversary—the Government? After all, it is the Government which is pocketing all the money and deciding what the people should or should not see. The reason is simple: film makers have no meeting ground. They are using the medium for entirely different purposes. Another reason why they are so hostile to one another is because they each have their own problems.

While it is questionable whether it is cinema that reflects the mood of the people or vice versa, there is no question that audience tastes are changing. Movie-goers are looking out for freshness in content and treatment. From being a captive audience they have become a discerning one. Film makers like Prakash Mehra will find it increasingly difficult to come up with glib statements like "There is only good cinema and bad cinema" and that they are making entertainers because there is an entertainment tax on cinema tickets. "Violence for the sake of violence is on the way out," says Manoj Kumar. "Big films are over but it is not the end. The trend is over," says Ramesh Sippy. They will continue to defend their films by saying that all this mindlessness is what the audience wants, but the fact is that that what the audience wants—or needs—will always remain a question mark.

Must Change With Times

So, now that audience tastes are changing with the success of the middle-of-the-road films, the NFDC, too, must change. The middle-of-the-roaders have shown that entertainment can be sensible and credible in India and that a film can be both artistic and financially successful. It is not fair to expect the NFDC to sustain losses over a long period of time and go on writing off loans made to the art film makers. It would do both itself and the country a lot of good by devoting its energies to the middle-of-the-road cinema instead.

This is not to say that we must let the art cinema movement die a natural death. It has been responsible for a whole lot of good films which might never have been made were it not for the NFDC's help. But if this movement is going to be creative and dynamic, it must become independent. After all, one cannot take money from the Government and then kick it in the behind. Abroad, there are foundations and business houses which promote the "other" cinema. Even theatre owners are willing to stake their money on films which they believe in. Here, in India, the entrepreneur is very conservative. Industrialists and business empires, though they are boosting music and the performing arts, have always turned their backs on cinema. However, change might be in the offing. It is believed that Larsen and Toubro is producing a film to be directed by Satyajit Ray. If this is true, it should kindle hope in the breasts of all serious film makers. All over the world, the parallel cinema is winning laurels mainly outside the countries in which they are made. It seems to be their fate not to be accepted in their own countries. An experimental cinema is necessary and relevant, and it must be fostered and allowed to grow unimpeded. But the Government is not the answer. They will have to look elsewhere.

As far as the commercial film makers are concerned, they can wallow in their own muck and continue to believe they are helping to uphold the values of our society and aiding communal harmony by keeping people out of harm's way. Let them be exploited by the distributors and the financiers, and let them face the threat from video on their own. They have always made their films, come what may. They can look after their own interests.

Anyway, whether it was intended or not, the Government has successfully pitted one against the other. Finance is a scarce commodity—even for the commercial film makers, much though it might seem to the contrary. But the impending showdown is not a game of dog-and-the-bone. It is a matter of who best deserves these loans—and naturally each film maker feels he is as much entitled to a government loan as the next film maker. The acrimonious debate will continue until the Government makes up its mind whether it is interested in furthering the cause of art cinema in India or whether it is interested in making profits. It should have realised by now that it cannot have its cake and eat it too. ■

The Business Of Films

by Vir Sanghvi

THERE is an aura of easy money around the Bombay film industry. Village boys are catapulted to instant wealth and fat producers change their limousines every year. Added to the profitability is the glamour. It is a business that retails dreams, that survives on romance and thrives on extravagance. Every occasion is celebrated with a champagne reception, production units take over entire five-star hotels and instant fame follows success

Small wonder then that the industry attracts lakhs of aspirants every year. Some, like the hopeful actors and actresses who crowd producers' offices, are noticed and picked up. Less well known are the rich investors who also flock to the business, drawn by its glamour and apparent profitability. These are not penniless, struggling actors looking for a break,but wealthy businessmen who have made their millions in selling ball bearings, jewellery or whatever. For them, the industry represents a rare opportunity to mix with celebrities like Sanjay Khan and Dev Anand and to still feel that their investment will multiply

Few—if any—of these glamour-struck moneymen ever recover their investment. Their fingers burned, they return to the security of their dreary businesses. Despite appearances to the contrary, the film industry is a harsh mistress. It ruins more people than it enriches—something like three-quarters of all films are box-office flops—and it lurches precariously from crisis to crisis, nearly always short of finance

Perennial Crisis

"I have been part of this industry for over 30 years," says Gulshan Rai, Bombay's most successful producer and distributor, "and there has always been a financial crisis. But now I think that the crisis has reached a climax. The industry is in a very bad shape and things don't look like they will improve"

Rai's pessimism is shared by most people in the business. Despite its glamorous facade, the industry has fallen upon hard times. Veteran stars like Sanjeev Kumar sometimes have no shootings for weeks on end, studios are rarely busy, cinemas have to revive old hits in the absence of new releases, and formerly successful directors are finding the going much tougher than they thought possible.

In a sense the present crisis is directly attributable to the nation-wide recession. In the city of Bombay, the nerve centre of the industry, the textile strike has caused a severe drop in cinema attendance. And in the rest of the country, theatres are half empty because people have less money to spend.

There are also other more specific reasons. At the best of times film making is a speculative business. "Sure-fire" formulas unaccountably fail at the box-office, hot-shot directors suddenly seem to lose their touch, and big stars turn into box-office poison overnight. Periodically, the film industry finds that public taste has changed too fast for it to react and films begin to fail with sickening regularity.

"The audience is fed up with action films," analyses Gulshan Rai. "In such films the director has little to do and it is the fight composer who dominates. How many fight composers are there? Three or four at the most So all films end up looking the same. The audience is now reacting against them."

Moreover, in the heady 1978-1981 period, the industry dug its own grave with its extravagance and profligacy. At that time, it was believed that a film could succeed only if it had a multiplicity of stars and expensive gimmicks like helicopter chases, underground lairs, unusual locations and glass houses that were destroyed pane by pane. Neither component came cheap. In his heyday in the early '70s, Rajesh Khanna used to charge Rs 12 lakh and he was usually the only male star in the film. Now Amitabh Bachchan has been known to ask for (and get) sums in excess of Rs 25 lakh per film. Along with Amitabh comes a co-star like Shashi Kapoor at about Rs 12 lakh, a couple of heroines at about Rs 8 lakh each, a villain in the Amjad Khan class at a minimum of Rs 8 lakh and other character artistes at varying rates. The cost of the major stars alone could easily go up to Rs 60 lakh or more.

Add to this the cost of the gimmicks ("items" in film parlance). A helicopter chase that lasts 15 minutes on the screen would require the hiring of special helicopters and foreign technicians, and would necessitate transporting the entire unit to London or some other foreign location where helicopters are available. Even locally produced "items" can be expensive. Sets (glass houses, villain's lairs, etc) can cost upwards of Rs 20 lakh each to erect at a Bombay studio.

The end result of such extravagance is an extremely expensive film. Sometimes the investment pays off. Manoj Kumar's *Kranti* cost Rs 3 crore to make and was a super hit. More often though, the film is just too expensive even to break even. G.P. Sippy's *Shaan* cost Rs 4 crore (his estimate at the time of release) to make, and sank without a trace at the box-office.

"The industry had got too top heavy" assesses Uday Row Kavi, Associate Editor of *Trade Guide*, the industry's bible. "There was too much money going into a few films." Agrees Rajinder Singh Hora, one of the industry's leading exporters: "After a while the extravagance turned into madness." What the producers did not remember was that, ultimately, the movie-goer paid the same price for a cinema ticket whether he was going to see a film that cost Rs 4 crore or Rs 40 lakh.

For the film to recover its investment, the same movie-goer had to see it ten times or it had to be so good that ten times the number of people came to see it. Moreover, because of cinema rentals and entertainment tax, a Rs 4-crore film had to make something like Rs 16 crore to recover the cost.

The odds were clearly stacked against the big-budget multi-starrer and nobody should have been surprised when films like *Professor Pyarelal* and *Ram Balram* began crashing at the box-office. Yet, such is the structure of the industry that these flops led to widespread panic that intensified in 1982 when Manmohan Desai's *Desh Premee* failed to repeat the success of his earlier films and Jeetendra's *Deedaar-e-Yaar* flopped in the very first week.

Financiers are now extremely reluctant to advance any money to new productions for fear that the producers will give up half-way and abandon the projects. Distributors are also too insecure to pay for the release rights to new films because many of them have lost large sums of money on the recent flops. The combination of these factors has led to a cut-back in productions so that far fewer films are being launched today than, say, two years ago.

Says Rajinder Singh Hora: "What has made things worse is the increase in the black money in the industry. It is becoming a very dirty business in which honour is fast disappearing." There has always been a certain amount of black money in circulation, but usually it has been restricted to payments to stars and directors. Now nearly everybody from the exhibitor to the set decorator is beginning to demand a portion of his remuneration in black. Adds Hora: "This further complicates the situation because there can be no legal record kept of such transactions."

The absence of legal safeguards is, in fact, a major problem in the industry. In recent years there has been a tendency on the part of distributors to refuse to accept delivery of films they have contracted to buy if the finished product seems to them to lack box-office potential. On the other hand, producers who are convinced that they have a hit on their hands, back out of agreements with distributors and sell their films at a premium to others. Notes a weary Gulshan Rai: "When an industry is in a crisis morality is the first thing to go. This is what is happening to us. Once upon a time, everything worked on word of mouth and trust. Now, those days are gone."

Threat From Video

Rai is pessimistic about the future of the industry because of the threat from video. Five or six years ago, the overseas distribution rights to a film were highly sought after and went for approximately the same price as the Bombay territory. The growth of video recorders has meant that pirated video tapes of Hindi films are now being sold freely all over the world. As a result, most people prefer to see the movies at home. This leaves the distributor with no audience for his films. A few years ago, there were over a hundred cinemas showing Hindi films in England. Today, there is not one.

While the threat to domestic box offices from video seems to be inconsequential, there are many people who share Rai's concern. As he says, "With colour TV coming in what will happen is that people will buy video sets, and then

Film Financing

In something as complicated as the film industry, generalisations run the risk of being a little misleading. Nevertheless, here is a broad run-down of how a film is financed.

To start with, there is the producer. He assembles the "components" of the film—a script, stars, music director, dance master, fight composer, etc, and also finds a director to make the package come to life. Sometimes, the producer himself may direct the film—as in the case of Prakash Mehra, Yash Chopra and others.

To finance the movie, the producer draws on three different sources. The first is the financier who lends money at an approximate rate of 50 per cent per annum. The second source is his own money—most financiers insist that the producer includes some investment of his own. The third source is the distributor who advances money in return for release rights.

The finished picture is sold to distributors for different regions such as Bombay, Delhi, UP, etc—known as "territories" in film parlance. The producer will aim to cover his entire cost, as well as a profit, in the price he finally charges the distributors. Usually, there will also be an understanding that if a film does more than a certain amount of business, the excess (or "overflow") will be split between the distributor and the producer.

Having bought the film for his territory, the distributor is landed with the risk. He will have to find cinemas to release it in, and then hope to recover his money from the box-office receipts. This is more difficult than it sounds because 55 per cent of the price of a ticket goes to pay entertainment tax. From the rest, the distributor must pay the cinema owner and recover his publicity expenses. Only then can he begin to earn back his own investment. Often the film flops and the distributor finds that he has no hope of recovering the price he paid. At this stage he can look for no help from the producer, and must bear the loss himself. Only then can he begin to earn back his own investment.

Generally, when a film's success is judged, it is in terms of the distributor's profit. A film like Raj Kapoor's Prem Rog, *for example, is doing well, but is not regarded as a super-hit simply because the distributor paid a hefty price (rumoured to be Rs 45 lakh for the Bombay territory) for it. Had the film gone for a more realistic Rs 25 lakh or so, then* Prem Rog *would have made the distributor a rich man and been regarded as one of the year's biggest hits.*

V.S.

will replace the cinema." Because circulation of pirated video tapes of films is difficult to prevent, such a trend could entail a substantial loss of revenue for the industry.

There are some optimists though.Uday Row Kavi is sure that things will get better. "We are so far down that we can only go up," he says. Kavi, and others like him, feel that the industry will switch to making smaller films with fewer gimmicks and fewer stars and pull itself out of the slump.

Need To Reorganise

Even if this is so, there is no real hope that the film industry will get out of its cycle of crises. This can only happen if it were to reorganise itself on more professional lines. At the moment it has no properly organised financial structure. The financiers it relies on tend to be Shikarpuris who charge interest at over 4 per cent per month. Because most films take at least two years to complete, such a rate of interest compounded can lead to a doubling of the production budget.

The alternative could be bank finance or credit from government-backed financial institutions. So far, banks have been extremely unwilling to risk any money on Hindi films. Amit Khanna is one of the few producers to have got a bank loan (to finance his *Naya Johny*). Others do not even bother to apply for one. The main problem is that banks are unwilling to become part of an industry where the failure rate is 80 per cent and where the finished product may well turn out to be worthless. In any other industry, the money they advance goes into machinery, land, raw materials and the like, which have some resale value in the film business, sets, stunts and salaries are ephemeral. Once the film is ready, the sets are pulled down and the salaries are paid out. Finally nothing is left except about 20 cans of celluloid. And if the film contained in those cans fails, then nothing is recoverable.

Financial institutions and government bodies would, presumably, work on different criteria. Many State governments (Bengal and Karnataka, for example) advance relatively small amounts for films to be made locally. Because the sums are small, they are usually recoverable. Were the State governments to increase the amounts,they would be left with the problem of having to decide whether big-budget films that serve no clear social purpose should be subsidised by the tax-payer.

Rather than subsidise the industry, it would make more sense to refrain from taxing it so highly (55 per cent of the cost of cinema tickets in Bombay goes in entertainment taxes). Were this to happen, films would find it easier to break even, and some of the air of crisis that envelops it all the time would dissipate.

But this is unlikely to ever come about. Entertainment tax is not likely to be reduced—the Government simply needs the revenue too much.

Instead, the industry will go on as it has done in the past, drifting from crisis to crisis. And while fortunes are being lost and crores of rupees being turned into worthless celluloid, the film business will continue to maintain its glamorous facade and pretend that the party goes on forever ■

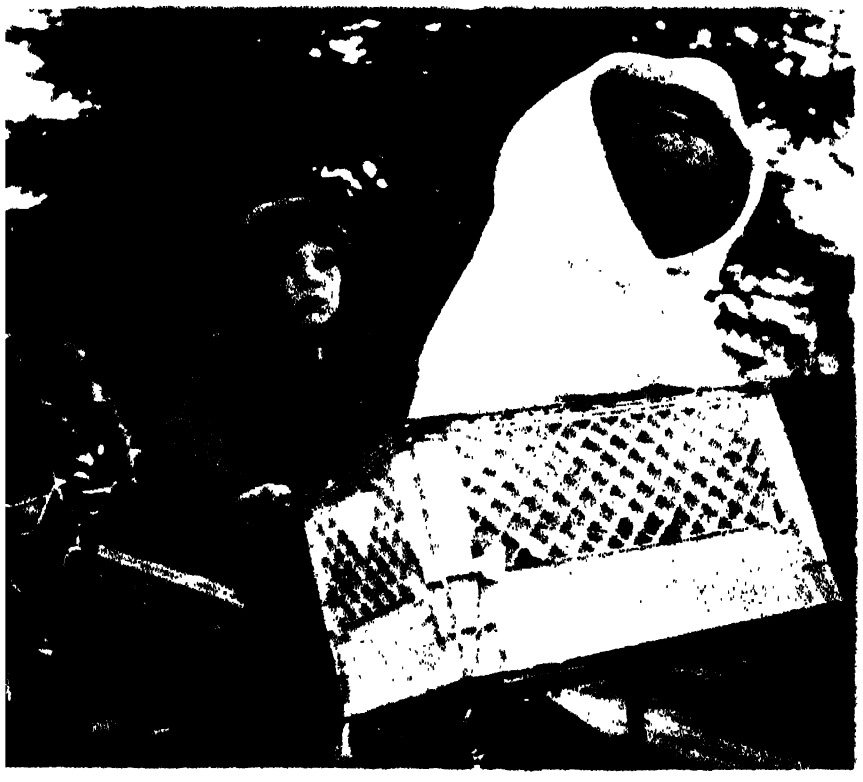
For Our Eyes Only



From the very beginning Hollywood films or Hollywood-like films have had a wide audience in India. Today the only films which run are comedies, children's films, the Kung Fu action films, science fiction films and films which have sex and nudity. Unfortunately, most distributors and exhibitors do not have the nerve to try something other than the run-of-the-mill. Some of the greatest names in world cinema have never been heard of in India. The few good films which do come here are slapped on the audience too suddenly to have any kind of impact. It is merely a question of tradition and training. But things cannot be changed overnight. It requires persistence and a far-sighted policy.

by Lalitha Krishna

MAD MONKEY KUNG FU. Just one of the many, many martial arts films that are attacking the country(above).

ET. Steven Spielberg's film about an extraterrestrial who is stranded on Earth and befriended by a little boy. The film is one of the biggest box-office hits of all time and has had everyone shedding a tear or two(left).

THE HAND. Michael Caine in this gruesome horror film which will either never be shown here or be released with drastic cuts (right).

TIM. Mel Gibson and Piper Laurie in the Australian film based on Colleen McCullough's book of the same name. The book was excellent. The film didn't quite measure up.(extreme right).

"I GO to the cinema when I don't think; I go when I want to think and need stimulus; I go to see pretty people; I go when I want to see life ginned up, charged with unlikely energy; I go to laugh; I go to be harrowed; I go when a day has been such a mess of detail that I am glad to see even the most arbitrary, the most preposterous pattern emerge; I go because I like bright light, abrupt shadow, speed; I go to see America, France, Russia; I go because I like wisecracks and slick behaviour; I go because the screen is an oblong opening into the world of fantasy for me; I go because I like story with its suspense; I go because I like sitting in a packed crowd in the dark among hundreds rivetted on the same thing; I go to have my most general feelings played on."

This statement on cinema by Elizabeth Bowen, an English novelist, sums up for me rather eloquently all the complex and contradictory reasons that make cinema the unique and pervasive medium that it is. Her sentiments are the sentiments of the general cinemagoer anywhere in the world who looks to cinema primarily for entertainment.

While film as fine art may have developed in various parts of the world at different times (in Russia after the Revolution, in post-war Italy, or in the '60s in France, Czechoslovakia and Poland), the traditions of film as entertainment have always been determined in America. Even those Russian films that are made today for the mass audience are not able to shake off this influence.

Thus from the time of the silent era to the 1950s and early '60s when Hollywood was at its peak, Hollywood films or Hollywood-like films (mainly British comedies) have always had a wide appeal in India. All the major cities have their swank "English" theatres. Less important cities have at least one major cinema house (usually the best in town) showing English films throughout the year, and even in the smaller towns the Sunday morning English fare is a must for the educated elite and their families.

But since the '60s the films seem to have lost the popular fascination they once had except for the occasional *Star Wars* or *Superman*. Today the Hindi films have overtaken the foreign films in popularity.

One great illusion that cinema audiences in India seem to have got over is in imagining foreign films to be better just because they have been made abroad. Today most people realise that their plot and content are as much dictated by commercial considerations as that of the Hindi films. And they, as much as Hindi films, except perhaps a little more subtly glorify the status quo in the society in which they have been made. They may not treat reality as fantasy, but most of them are still conventional, romantic fables with only the outer trappings of realism.

Shift Of Interest

During the late '60s, when the Government withdrew the import licences from the major importers for a period of 14 months, only a trickle of foreign films were coming into the country, most of them B-grade Westerns. At this time American film production, too, was going through a crisis, and by the time an agreement had been reached between the Indian Government and the film-importing companies, audience tastes had as subtly changed as the films themselves. For one, the old Hollywood star system had more or less faded away. The Indian Government, too, had decided to import a wide range of films from countries other than England and America. Today actors that we see on the foreign screen are less intimately known than the Rock Hudsons and Cary Grants of old. In fact, in the dubbed Russian films and the films from Hong Kong the actors are totally unfamiliar. This sudden break with the stars and star system was perhaps one reason for this major shift of interest among a certain section of the audience from foreign films to Hindi films.

Today the foreign films which appeal to Indian audiences are comedies, children's films, the Kung Fu action films or

RICHARD'S THINGS. Liv Ullmann, the Swedish actress, in this American film about a woman who meets her husband's lover and has a lesbian relationship with her. NFDC seems to be having second thoughts about the film's release.

A 3 Way Programme to Acquire

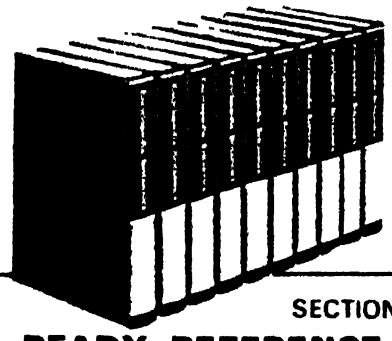
INFORMATION, KNOWLEDGE & EDUCATION

THE NEW

ENCYCLOPAEDIA BRITANNICA

LATEST EDITION - 1982

IN 30 VOLUMES

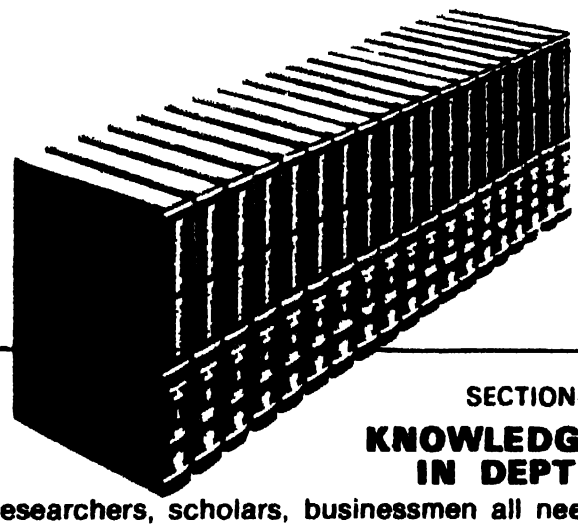


SECTION-1

READY REFERENCE

Children, students and grown-ups need a source where they can look up facts every now and then such as a date, an event, a personality, the answer to a question, the settlement of an argument.

This 10-volume section is a complete index to everything in the main body of the set, and at the same time is in itself a 14-million-word short-entry encyclopaedia for guide reference.

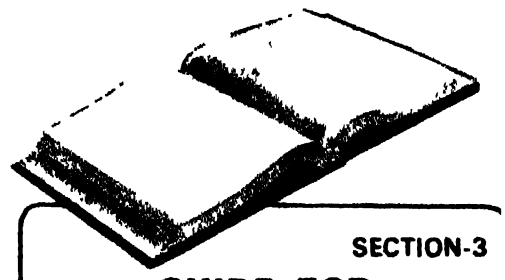


SECTION-2

KNOWLEDGE IN DEPTH

Researchers, scholars, businessmen all need an access to full knowledge about a subject and subjects related to it for a comprehensive study.

This section consisting of 19 volumes containing a 28-million-word collection of articles ranging up to book length provides coverage of all aspects of human wisdom, and gives new insights into new fields of knowledge and greater understanding of specific and general subject areas.



SECTION-3

GUIDE FOR SELF EDUCATION

An encyclopaedia should provide the means of self education, of acquiring knowledge in your home at your own pace.

This unique million-word *outline of knowledge* makes all the knowledge in the main text immediately accessible to you by subject—allowing you to tailor your reading and research to your precise needs.

those which show sex. The fact that Claude Goretta's *Lacemaker*, an art film, ran for a record number of weeks was largely due to the scenes of nudity the censors had so graciously let pass. Similarly we saw a record run for *Tarzan the Apeman* and for *Blue Lagoon*—both films mainly distinguished for their scenes of total or at least partial nudity.

Unfortunately, most films from America are made with a very large audience in mind, practically on a world scale. Since they have to involve themselves with such broad-spectrum entertainment they cannot help losing out on seriousness or deep involvement with the issues they take up.

Though one cannot help admiring these films for being able to combine entertainment with social issues, one has a sneaking suspicion that they only dwell tangentially on the need for social reform, leaving the major problems untouched.

Censorship Policy

The censorship policy followed for foreign films is very different from that followed for Hindi films. Although of late the censors have been refreshingly lenient about nudity, more foreign films than indigenous films get an 'A' certificate. Two Hitchcock revivals, *Dial M for Murder* and *Strangers On A Train*, got 'A' certificates. Both the films, as far as I could see, had nothing objectionable by way of sex and certainly there was a lot less gruesome violence than in many of our own films.

The few foreign films that do get a 'U' certificate seem to run on and on, often only because a whole family can enjoy an evening out together. In spite of the Children's Film Society, there is a dearth of films in India for children. It is mainly the foreign films that supply this need. Indian children's films, the few that are made, sacrifice fun and fantasy to drive home a moral message. Small wonder then that Walt Disney's *Jungle Book* and *Love Bug* proved to be so popular. A recent spate of revivals brought back three classics that many children were able to enjoy. Charlie Chaplin's *Modern Times*, the film version of Jules Verne's *20,000 Leagues Under the Sea* and that musical entertainment for all times, *The Sound of Music*.

The Sound of Music was the culmination of everything Hollywood had to offer, honed over the years to perfection. With a script worked out in great detail to combine humour, drama, history, romance and humanism in a perfect balance... songs with lyrics that would prove to be perennially popular... arranged to music superbly... excellent performances from the entire cast down to the smallest child... shot in the fairy-tale setting of Salzburg, Austria... one cannot think of a film that can top it for pure, clean entertainment. The recent re-run in Bombay proved as popular as its first run.

My Fair Lady, too, on re-release proved to be extremely popular in spite of a practically monochromatic print. Since the distributors do not have the professional ethic to release prints that subscribe to some minimum technical standard, I feel that control should be exercised by either the exhibitors or a government body. Since audiences in India are so passive about this aspect, the distributors often get away with totally sub-standard prints. The NFDC, too, recently released *The Flesh of the Orchid* whose picture as well as sound track were scratched beyond recognition.

Technological Wows

One more genre of film-making that is very popular in India is the technological sleights of hand from the West. These films simply wow you with their special effects—*The Black Hole, Alien, Galaxina, Battle Beyond The Stars, Close Encounters of the Third Kind*, besides *Star Wars, The Empire Strikes Back* and *Supermans I & II*. Among such films, two that must be singled out for special mention are *Star Wars*—for being the first of its kind to combine cult entertainment with technological prowess, and Steven Spielberg's *Close Encounters of the Third Kind* for the critical look it takes at American society. *Star Wars*, of course, had the much longer run because of its populist form.

The Western films score over our cinema, moreover, by carrying the hallmark of thoroughness in research and recreation which fascinates the more intelligent of our audiences. Whatever else we may achieve in the field of technical improvements, this is one area of darkness in our films. Of course American films (particularly) are backed by a tradition of wide and what often appears to be random academic research—sociological, psychological, economic, etc. Similarly, even their most popular novels and thrillers will always give you a wealth of information about the area, profession and social strata particular to the characters. Thus, while Francis Ford Coppola's *The Godfather* is undeniably a cinematic achievement, its success is also due to the information one gets of the lifestyle of an ethnic minority in America—and this information and more was already there in Mario Puzo's novel for the film maker to draw on.

Unfortunately most distributors in India do not have the imagination or the enterprise to attempt something outside of the run-of-the-mill. As long as the Kung Fu film runs or a Bo Derek can keep the audiences queuing up outside the theatre, the distributor is happy. Even the unexpected success of Bert Haanstra's documentary, *Ape and Superape*, has not taught them anything.

The behaviour of Indian audiences, too, is somewhat contradictory. The man who sneers at any author less serious than James Joyce or Saul Bellow may denounce attempts at art cinema as a waste of money. Besides, American cinema, with its strong populist traditions backed by expensive publicity all over the world, still debases popular tastes. In every other country, including Canada, France and Germany, people seriously interested in cinema have been fighting against the stranglehold of American films. In India the problem is two-fold because any Indian film that aspires to and achieves a Hollywood-like technical gloss is immediately hailed.

New Areas Of Production

But in Europe, at least, distributors are waking up to newer areas of film production. West German TV, for instance, has nurtured a whole crop of new film makers, including a sizeable section of women concentrating on women's problems. Australia, Switzerland, Norway and Finland, which have till recently only produced films sporadically, have an established film industry today. Some of the greatest modern names of world cinema are from Spain (Carlos Saura) and Italy (the Taviani brothers), but both the directors and their films are unheard of in India. Japanese films, known for their high technical and entertainment value, are very rarely seen here. Then there are countries or continents with similar economic and socio-historical problems whose films should be of special interest to India and Indians—Africa, Mexico, Greece, South America, Malyasia, Ceylon.

The NFDC, in spite of the facilities it enjoys, does not draw on this broad spectrum of films. By and large, it steers a middle course between art and B grade entertainment. The occasional "good" film—Bergman's *Autumn Sonata*, Tavernier's *Death Watch* or Fassbinder's *Despair* and *The Marriage of Maria Braun* are just randomly thrown at the audience. But can anybody who has not seen an Eisenstein, the neo-realists, a Bunuel or an early Godard suddenly develop a taste for, say, the films of Tarkovsky? In fact, the Russian Tarkovsky's science fiction classic, *Solaris* (released by Soviet Export), was shown in Bombay without any special publicity or information at morning shows at a theatre that otherwise exhibits only multi-star Hindi blockbusters. For obvious reasons there were barely 20 people in the house during its brief run.

Since the NFDC has an exclusive venue for its films (the Akashwani—which at the moment lacks in both character and technical facilities) it is in a position to organise releases differently from other distributors. We have already seen that whenever a festival is organised on a theme—of women's films or even a retrospective of Indian cinema—there is a tremendous rush for tickets, even for the documentaries. Thus a film like *Autumn Sonata*, for example, should have been seen along with other Bergman works for it to have excited more interest. Similarly, the NFDC could have regular festivals at the Akashwani, of silent films, Russian films, neo-realist Italian films, new-wave French films or early American films—John Ford, Orson Welles, etc, and even a festival of Dev Anand or Dilip Kumar or Guru Dutt films.

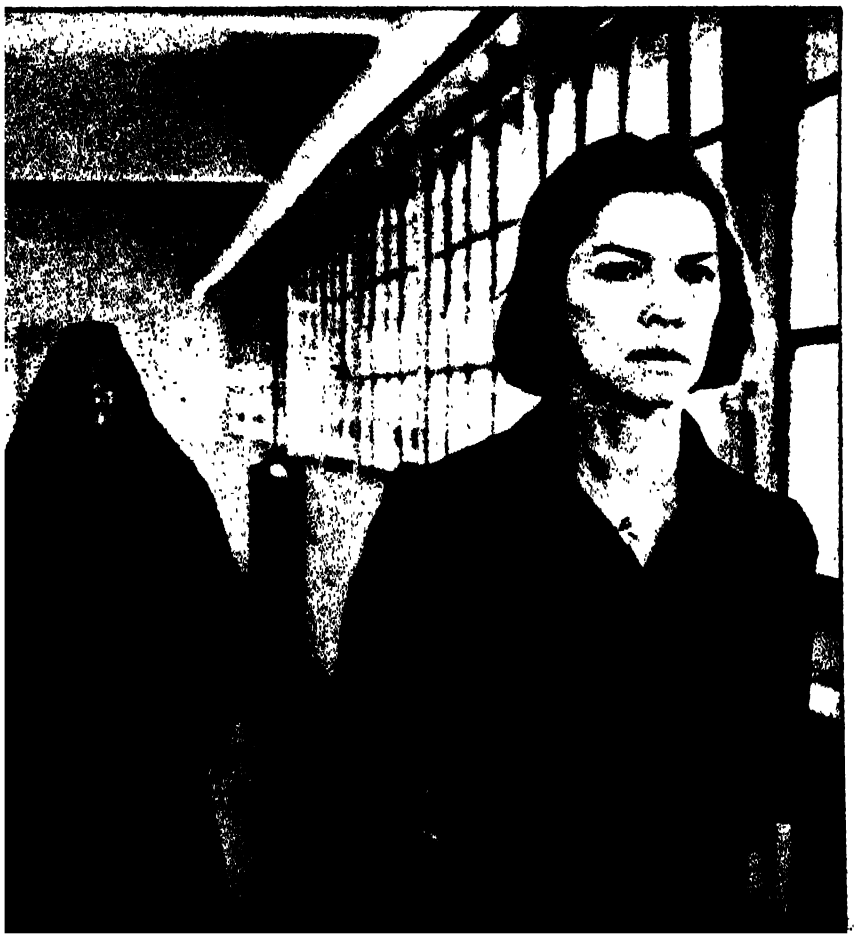
This would give the viewer a kind of historical perspective of the films that he watches, whether they are broad entertainment or high-brow art. *Autumn Sonata* was the first Bergman film to have a general release in India, so for many in the audience it must have been the first Bergman film they had ever seen in their lives. It is impossible to watch a film like that without knowing something of the director's philosophic or aesthetic preoccupations. One cannot smugly sit back and lament audience tastes when a film like that flops.

Impatient Ogre

The same audiences that watch action-packed Hindi films in India are willing to sit through three hours and more of serious classical music. Then why is it that a slowly expounding film always brings out the impatient ogre in them? It is obviously only a question of tradition and training. But changing cultural tastes cannot be achieved overnight. It needs both persistence and a far-sighted policy.

Cinema is both cause and effect. The experiencing of a film is not just of a story told but of a reality lived. The more mindless entertainment we see, the more we get addicted to it. Since it is physically impossible to acquire all the films made all over the world and since we are subjected to so much censorship in so many other areas of our lives and culture, why can't the Government exercise some strict control on the import of films so that audiences in India are exposed to both the best of the world's art cinema and the best of film entertainment rather than the middling range we are saturated with at the moment? ■

DREAM OF PASSION. *A Greek film directed by Jules Dassin with Melina Mercouri and Ellen Burstyn (seen in picture). Such masterpieces are indeed rare for audiences in India.*



BELLIGERENT BALUCHIS. Insurgents from the Marri tribe in Pakistan at a refugee camp in Kandahar.

In Pakistan Today—II

The Alienation of Baluchis

"By trying to find military solutions to political problems, successive Pakistani Governments have kept Baluchistan in a state of insurgency for over two decades." We present here the second instalment of excerpts from *Generals In Politics*, published by Vikas.

by Air Marshal Asghar Khan

ALTHOUGH the ambition of Generals has impeded the stabilisation of a constitution in Pakistan, certain historical factors are also contributory. That the urge to form a separate Muslim state in the sub-continent was strongest in the Muslim minority provinces of India was no accident, for it was here that the religious, linguistic, racial, cultural and economic differences between Hindus and Muslims were brought out in sharp focus. After the creation of Pakistan, the pattern of these differences in the new state changed but did not disappear. Linguistic, racial, cultural and economic differences between regions remained and were brought home poignantly in the separation of East Pakistan, barely two and a half decades after the birth of Pakistan. The assimilation of such powerful influences and their synthesis into one national entity inevitably takes time and the impatience of some Pakistanis with the delay has hindered rather than helped this process. Military action in Baluchistan between 1958 and 1969 and again on a larger scale between 1973 and 1977 did incalculable harm to the absorption of Baluchistan into a common national entity. Since 1978, developments in Afghanistan have further complicated the situation, requiring an intelligent and sympathetic understanding of the issue.

With an area of 134,000 square miles, roughly about 40 per cent of the total area of the country, Baluchistan is the largest of Pakistan's four provinces. Its area and population of about 3 million, is comparable to that of Norway. It is known to have unexplored mineral resources of copper, fluorite, limestone and oil. It is estimated that gold deposits in Baluchistan exceed the value of $ 5 billion and the proven iron ore deposits are in excess of 23 million tons. It has the reserves to expand considerably her existing production of natural gas, coal, limestone, magnetite, marble, sulphur and barite. Baluchistan has a coastline of 750 miles and her port of Gawadar is barely some 250 miles from the Straits of Hormuz, the focal point in the oil route from the Persian Gulf to Western Europe and the East. Her frontiers in the north and west border on Afghanistan and Iran, which have Baluch populations of 100,000 and 1,000,000 respectively.

The province of Baluchistan has three broad ethnic groups which differ racially and linguistically. The Pashtun who are about a third of the population are racially and linguistically akin to the people of Pakistan's North West Frontier Province and eastern Afghanistan. The Punjabi settlers who are of relatively recent domicile, number less than 5% of the population of the province. Both the Pashtun and the Punjabi are relatively more prosperous than the Baluch and have proportionately greater representation in lucrative jobs in Baluchistan. The Baluch are a collection of some five hundred tribes and clans who have lived in these parts for almost 2000 years. There are various theories about their origin. The one which is widely held is that they were living in the southern coast of the Caspian at the time of Christ. There is evidence to suggest that the Baluchi language is derived from a lost language which flourished in the Caspian area in the pre-Christ era. It is closely related to the Kurdish language in the area south of the Caspian at the conflux of Turkey, Iran and Iraq. Another theory of relatively recent origin is that they are of Semitic origin and came from Alleppo in present-day Syria.

Elusive Unity

Except for relatively brief periods in their history, the Baluch tribes have not been united in one national entity; the process having been rendered difficult by the unusually inhospitable terrain and vast distances separating sparsely populated centres of population. Mir Chakar Khan Rind, with his capital at Sibi, ruled over a Baluch tribal confederacy, from 1487 until his death in 1511. Subsequently, the tribes of Baluchistan, though they managed to preserve their independence from India's Moghul rulers' attempts to subdue them, remained disunited until a century and a half later when the Ahmadzai tribe established the Kalat confederacy in 1666. It remained a loosely knit confederacy until Nasir Khan, the sixth Khan of Kalat, who ruled for 50 years in the eighteenth century, formed an effective bureaucratic administrative machinery and a unified army...

Between 1805, when Nasir Khan died and 1876 when the British succeeded in obtaining treaty rights to station troops in Kalat, the Baluch confederacy assumed special importance in the "Big Game" between Czarist Russia and the British. The British lost no time in establishing themselves in Baluchistan after 1876, divided it into a centrally administered area, a reduced Kalat confederacy and smaller principalities with sardars owing allegiance directly to the British Raj through the British agent in Baluchistan. The Khan of Kalat, the descendant of Nasir Khan, had special treaty rights with the British Government.

When it was decided to partition India, the last ruler of Kalat, Mir Ahmad Khan opted for an independent Baluchistan and in 1946 submitted a memorandum to the British Cabinet Mission reminding them that in the treaty of 1876 the British Government had pledged to "respect the sovereignty and independence of Kalat". The matter was not resolved by the British to the Khan's satisfaction and on 15th August, 1947, the day after Pakistan emerged on the political map, the Khan of Kalat declared the independence of his state and formed lower and upper houses of the Kalat Assembly. In the first meeting of the Lower House, in early September, 1947, the Assembly confirmed the independence of Kalat, though it favoured an alliance on terms of equality with Pakistan. Amongst those who, in this meeting of the Kalat Assembly spoke in clear terms about the justification for an independent Baluchistan was Ghaus Baksh Bizenjo, who later became a leader of the National Awami Party and also the Governor of Baluchistan for a short period. On 1st April, 1948, the Pakistan Army moved into Kalat, forced the Khan to sign an instrument of accession and ended the 225 days' independence of the Kalat confederacy formed by Mir Ahmad Khan's ancestors almost 300 years earlier.

Although the flag of revolt was kept aloft by Mir Ahmad Khan's brother Mir Abdul Karim, who moved into Afghanistan, there was no significant military activity in Baluchistan for the next ten years. During this period the formation of "One Unit", uniting West Pakistan including Baluchistan into one province in 1955, created resentment and unrest in Kalat and the political circles of Baluchistan. The Khan of Kalat became active in demanding the dissolution of One Unit and, with the help of the Sardars, organised an agitation against the Central Government. On 6th October, 1958, only a day before Iskander Mirza and Ayub Khan overthrew the civilian government of Feroze Khan Noon, the Khan of Kalat was arrested by the army, as were also a large number of other Baluch leaders. From 1958 for about a decade, military action in Baluchistan continued until General Yahya Khan dissolved 'One Unit' and set the stage for the 1970 general elections.

The 1970 Elections

In the elections of 1970, the National Awami Party which maintained that Pakistan comprised four nationalities—Punjabi, Pathan, Sindi, and Baluch—won 3 of the 4 National Assembly seats and 8 of 20 Provincial Assembly seats in Baluchistan. The NAP was able to form a coalition government in early 1972 with the Jamiat-ul-Ulema-i-Islam and ran the affairs of the Province until their Government was dismissed by the Federal Government on 12th February, 1973. The military action that followed made the Baluch more conscious of their separate entity and hardened them in their belief that they could not expect justice at the hands of a non-Baluch majority personified in their eyes in a predominantly Punjabi bureaucracy and a non-Baluch army.

After the imposition of Zia-ul-Haq's martial law in 1977 and the tightening of his grip on the country, the fears of the nationalist element amongst the Baluch increased and they began to look around for an opportunity to shake off the economic and social domination of their province by the non-Baluch. The Soviet entry into Afghanistan in December, 1979, created a new situation and increased Soviet and United States interest in this area of now increased strategic importance. By 1981, the Great Powers' policy towards Baluchistan had become clear. The United States, after the induction of President Reagan's Republican administration, decided to prop up Zia-ul-Haq's regime with military and economic aid and use Afghanistan as a lever to bleed the Soviet Union the way Moscow had bled the United States in Vietnam. It did not appear to want to destablise their influence in Baluchistan and took comfort in the thought that communist cadres or communism had made no inroads into the feudal pattern of Baluch society.

Moreover, the Soviet Union, inspite of considerable discomfort in Afghanistan, did not appear to want to destablize Pakistan. The Soviet Union appreciated that developments in Pakistan and the long term trend of her economic and political growth are likely to bring the whole of Pakistan into the Soviet sphere of influence. She was, therefore, not for the time being at least, willing to take an initiative in Baluchistan that might provoke the United States to move into greater support of Zia-ul-Haq's regime or into taking an independent initiative in this area.

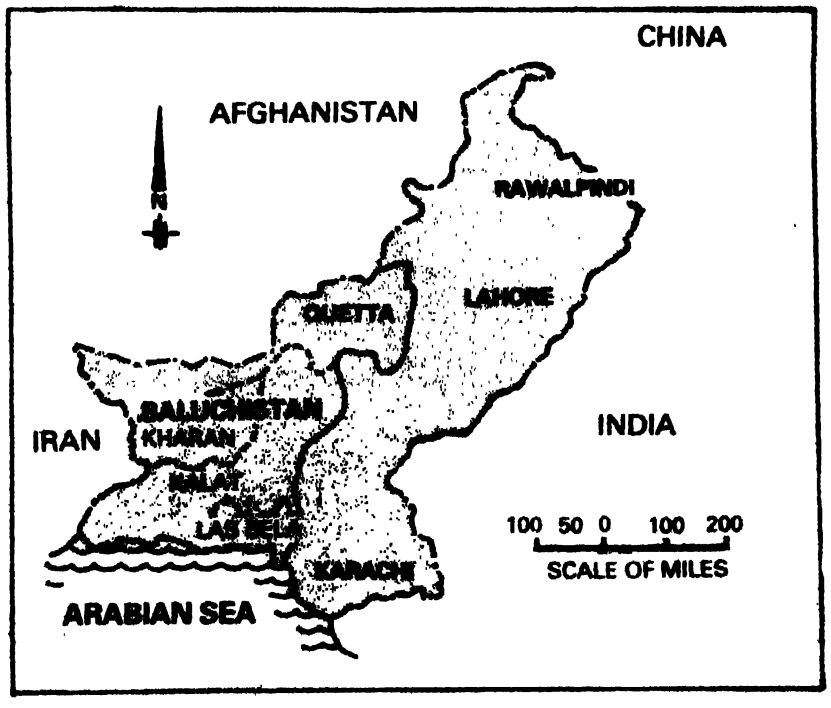
"Power Game"

In the "Power Game" the attitude of the more influential Baluch Sardars has now crystallised. Ataullah Mengal, the former Chief Minister of Baluchistan and Khair Bakhsh Marri, the former head of the NAP in the province, both at present in self-imposed exile, have been speaking of an independent Baluchistan and appear to have given up all hope of an adjustment within Pakistan. They appear to be convinced that no arrangement with the Islamabad Government, consistent with the honour and interests of the Baluch, is now possible.

Ghaus Bakhsh Bizenjo, a more flexible politician though an equally ardent nationalist, appears not to have abandoned all hope of a settlement within a federal structure. Now the head of the Pakistan National Party, he advocates a place for Baluchistan within Pakistan just short of a confederation. The main features of his proposal are the keeping of all residuary powers, except defence, foreign affairs, communications and currency by the federating units. He also advocates enhanced powers for the Senate comprising equal representation of the four federating units. Bizenjo suggests that the Federal Government should have no right to interfere in the affairs of the provinces except by a majority vote in the Senate. He also advocates that the Senate should vote the taxes to be levied for the purposes of meeting the expenses of the federal subjects. It is, therefore, significant that the sanctity of the 1973 Constitution—to which the Baluch leaders elected in the 1970 elections are signatories—has in their eyes eroded. This has happened because of the unjustified dismissal of the Baluchistan ministry in 1973 which was a flagrant violation of the Constitution by the Bhutto Government, military action in Baluchistan between 1973 and 1977 and the imposition of an unrepresentative and despotic martial law regime since 1977.

Despite the hardened position of these and some other Baluch leaders, there are certain factors which have, for the present at least, kept the centrifugal forces in check. The secessionists among the Baluch are finding no support for an independent Baluchistan among the world powers, who find their interests better served by maintaining the unity of Pakistan. Moreover, Arab countries for similar reasons, are not willing to encourage secessionist tendencies in Iranian Baluchistan. However, it does not necessarily mean that this will remain so and some of the Arab countries may under certain circumstances find the temptation to encourage separatist tendencies amongst the Iranian Baluch on Iran's eastern frontier too great to resist.

Significantly, the Soviet Foreign Minister, Gromyko, speaking in New Delhi on 12th February, 1980, has warned that "If Pakistan continues to serve as a puppet of imperialism in the future, it will jeopardise its existence and its integrity as an independent state" The United States too, could in certain circumstances accept the dismemberment of Pakistan as she did in 1971. Henry Kissinger, the US Secretary of State during President Nixon's administration, has said: "In my conversation with Ambassador L.K. Jha[1] (of India), I reiterated my constant theme that we considered Indian and American long-term interests as congruent ... I emphasised that the United States did not insist that East Bengal remain part of Pakistan. On the contrary, we accepted autonomy as inevitable and independence as possible. A war was senseless, Bangladesh would come into being by the spring of 1972 if present procedures were given a chance. *We differed over method not aim.* On October 7, I told WSAG meeting that if India would accept an evolutionary process, *it would achieve most of its objectives with our assistance* 'If they would cooperate with us we could work out 90 per cent of their problems, like releasing Mujib or attaining some degree of autonomy for Bangladesh, *and these steps would lead eventually to their getting it ALL'*[2]



Ten years later with the return of a Republican Administration and keeping United States global interests in mind, it would be prudent to assume that should US interests in the future be better served by sacrificing Pakistan or a part of it, Henry Kissinger's successors would not hesitate to do so. Pakistan must, therefore, strive to keep itself together by weakening those forces that are pulling it apart and this cannot be done by force of arms. The use of strong-arm methods for almost thirty years has shown that the situation has not, to say the least, improved. By trying to find military solutions to political problems, Baluchistan has been kept in a state of insurgency for over two decades. Her contacts with political thought outside its own area have, therefore, not developed. Military action by successive governments and martial law has impeded the integration of the Baluch into the Pakistani nation. By branding some Baluch leaders as traitors or by ridiculing their grievances, the problem has not been solved nor can it ever be. The important thing is not whether they are right in what they feel, what matters is that they feel as they do. Wisdom would suggest that the situation should be so handled that the people of Baluchistan should have no grounds to feel that their future lies outside Pakistan.

The only sensible course appears to be to give all Pakistanis including the Baluch an opportunity to live in freedom and allow all political parties to function so that the Baluch are given more than one alternative and are woven into the political fabric of national politics. After this process, the view of those who enjoy the people's support must be given due weight through a constitutional process which still enjoys some sanctity in the minds of the people—the 1973 Constitution. If the elected representatives of the federating units want greater powers for the Senate, this must be done. It must be recognised that nations are not made in a day nor necessarily in 30 years. Some times the process takes much longer and rushing through it can destroy the unity of the country. The interest that the world powers are taking in this area suggests that the rulers of Pakistan move with wisdom and restraint—qualities they have not shown in their handling of this problem over the last thirty years.

In The States

Godman Or Magician?

by G.S. Reddy

HYDERABAD: Leaving behind the passionate problems of Punjab, and escaping from the political heat of Hyderabad, the Punjab Governor, Dr M. Chenna Reddy, retreated to the placid Prashanti Nilayam (the headquarters of Satya Sai Baba) on November 24. Situated 100 miles from Bangalore, this place wore a festive look on that day as the previous day happened to be the birthday of Baba. Ten days later, the Punjab Governor announced his decision to quit his post. Informed sources, who suspected the influence of Baba in forcing a reluctant Dr Reddy to accept the gubernatorial assignment, are now convinced that the Godman has helped the godfearing former Chief Minister in arriving at this decision. Dr Chenna Reddy, a decisive force in Andhra politics, is among the innumerable celebrities whose decisions are guided by Satya Sai Baba—a self-proclaimed incarnation of the Hindu-Muslim saint Shirdi Sai Baba.

Scientists and rationalists have been challenging Satya Sai Baba's claims for decades. But he is not prepared to dispel their doubts. He reminds his followers, "Do not be misled by what you see (scientific truths); what you do not see with your eye is much more important. Scientists—with a view to acquiring certain advantages for themselves—spread disbelief in God. You should not accept such rules and say that nothing can be truth unless you are able to have *pratyaksha* (exhibition) as your authenticity." Hitting out at the Marxists, he says, "The Marxist thought and the psychoanalytical thought are spreading fast among the people. They do not represent me. They represent ignorance about the original human nature. None guided by these thoughts will ever reach me."

Among Baba's followers are some of the best known names in this country. The reasons that impel the famous to seek solace in Baba's companionship are diverse. For example, former Air Chief Marshal O.P Mehra writes: "I was extremely unhappy and depressed when, much against my wish, I was ordered to take over the Chairmanship of HAL in 1971. In my limited estimation, this move spelt the end of a long career in the Air Force without so much as a 'by your leave'. In March 1971 when I met Baba, he seemed aware of the agitation and turmoil within me. In his disarmingly charming manner his advice was, 'Every man has a mission to fulfil and specified tasks to perform. These are ordained. Wisdom lies not only in accepting responsibilities cheerfully and with grace but in discharging them with equal cheer, dedication and devotion.' He exhorted me to do my best in carrying out the responsibilities allotted to me and leave the rest to him."

Born 57 years ago, Baba—a young rustic named Satyanarayana Raju—walked out of his house in Puttaparthy on October 20, 1940 and bewildered villagers heard him say: "I am going. I have my work ahead. Those devoted to me are calling me. The task for which I have come is yet unfinished. I am starting now."

Since then, his fame has travelled far and wide, transcending national boundaries. For the last 40 years, the devotees have been singing *Bhajans* and driving themselves into divine ecstasy (*Bhakti Marga*). But Rabindranath Tagore, among others, had no faith in *Bhakti Marga*. In *Gitanjali* he says: "Leave this chanting and singing and telling of beads!... He (God) is there where the tiller is tilling the hard ground and where the pathmaker is breaking stones. He is with them in sun and in shower and his garment is covered with dust. Put off the holy mantle and, even like him, come down on the dusty soil!"

But despite Tagore's famous caveat, bigwigs flock to Baba. There is no dearth of Christians who equate Baba with Jesus. Rev. Robert E. Pipes, an ordained Baptist Minister in the US and a consultant to the US Department of Health Education and Welfare, says that Jesus Christ and Baba are one and the same. He quotes the Gospel of St John, wherein it says, "Now Jesus did many other signs in the presence of disciples, which are not written in this book! But these are written that you may believe that Jesus is the Christ, the Son of God and that, believing, you may have life in his name." Rev Pipes thus alludes to the miracles performed by Jesus. Baba, too, proclaims: "Do not try to compare my power with the powers of magicians. My power is divine and has no limit. I have the power to change the earth into the sky and the sky into the earth. But I don't because there is no reason to do it. Even if all the 14 worlds and planets tried to join up against me, they would not be able to thwart my mission."

SATYA SAI BABA scoffs at science and Marx and would have us believe there is no greater person than him in this universe.

But these claims have been disputed of late by a former vice-president of the Satya Sai Kingdom—the organisation promoted by Baba to reform the world. He says that he has studied Baba at close quarters for several years and is convinced that the powers of Baba are no greater than those of a magician. This former aide of Baba, who prefers to remain anonymous, said: "In 1980, I had been to Kashmir with Baba. The venue was Dachigam. It was summer and the Baba was there with about 15 students of his colleges, a few military officers and others. During the sumptuous picnic lunch, Baba remarked that if there was a dry river bed or a patch of sand nearby, he would like to perform a few miracles. A few scouts were immediately despatched to scan the countryside and find a suitable spot. None was found and so a truck was sent to get some sand. The sand was spread over a 10' x 10' area on the grounds adjoining the Dachigam guest house.

"Word about the arrival of sand reached Baba. He made haste to the grounds followed by his entourage. While walking upto the sand, Baba held with his left hand his flowing outer gown and the dhoti inside at well above knee-level, ostensibly to ensure that the dhoti would not come loose during the brisk walk but actually to hide two objects he was to materialise from out of the sand a few minutes later."

Be that as it may, many others are genuinely impressed by Baba's extraordinary powers. Among them Pandit Ravi Shankar, the internationally known sitarist, composer and music director, for instance, says: "I, along with my colleagues, Allarakhaji, accompanying me on the tabla, was helped to give a very inspired performance (at Brindava, Bangalore). Swami (Satya Sai Baba) immediately got up and in his own characteristic style waved the palm in the air and produced a *Navaratnahaar* with a locket embossed with the image of Durga..."

But the former vice-president of Baba's Kingdom is not the only sceptic. Tal Brooke, one of Baba's disillusioned American disciples says in his controversial book *Avatar Of Night*, "If Satya Sai Baba were to go to the Lawrence Radiation Laboratory at Berkeley and then step on a large scale atomic balance where his weight would be noted to the last microgram and if then and there, before the key physicists of the world and in front of CBS and NBC television cameras, he were to materialise ten, twenty, thirty, forty pounds, yes even a ton, of any substance known to man, anything from chunks of plutonium to intricately etched diamond spheres to ash... It would explode around the telecommunications media of the entire world and cause pandemonium of a kind not seen since the last World War."

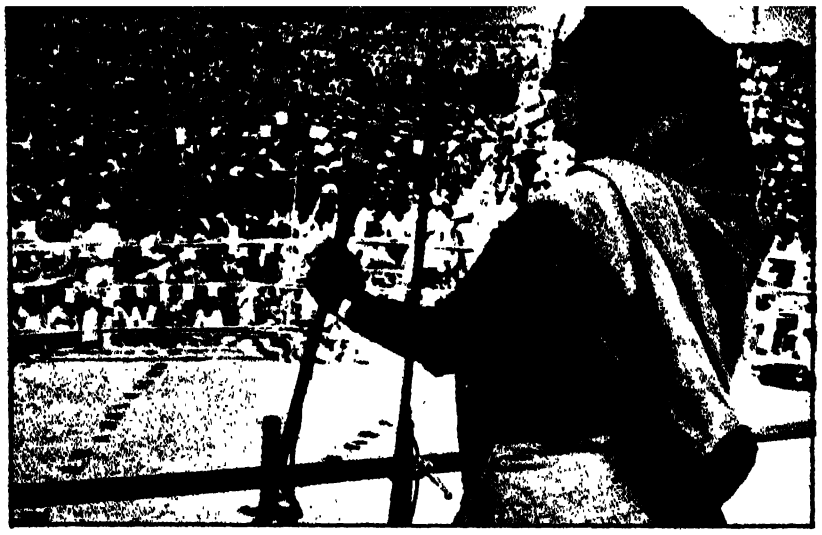
For all that, among Baba's followers, those who retain implicit faith in his divinity still outnumber those who have turned away in disgust by 100 to 10.

Why do more than 400 million Indians go to bed hungry, for instance, if Baba can create anything if he wishes? To this, film actor Manoj Kumar counters, "Lord Krishna could have easily avoided the war of Mahabharata... He could have easily saved the lives of millions... He could have easily influenced the minds of the evil Kauravas. Right at the beginning Lord Krishna could have easily used his Sudarsana Chakra to kill Duryodhana and his followers. But he did not do so... Why? Those who question Bhagwan Sri Satya Sai Baba... have they ever thought of the happenings recorded in the Mahabharata or the teachings contained in the Gita?"

Poised For A Photo-finish

HYDERABAD: With 1,719 candidates contesting for the 294 seats, the stage is set for the Andhra Pradesh polls. On the face of it, with so many "rebel" ruling party candidates joining Telugu Desam or contesting as independents, the Congress(I) is in for a tough time.

But if history repeats itself, it will be a different story. During the last ten years, Mrs Gandhi has contested three Lok Sabha elections from Andhra. In 1971, she secured 54.8 per cent of the vote. The figure went up to 57.5 per cent in the 1977 polls. In 1980, she secured 56.2 per cent. These figures reveal that Mrs Gandhi has not only been winning the elections with a convincing majority, but that she secured the maximum votes in 1977, the year when the



IN FOR A TOUGH TIME. The main contest in Andhra Pradesh will be between Mrs Gandhi and N. T. Rama Rao. Either could be the victor.

Janata wave was at its peak. Thus, there is a chance that the so-called NTR wave may suffer the same fate as the Janata did five years ago.

Even during the last Assembly elections in 1978, the Congress secured more than half of the votes polled. While the Congress(I) was voted to power with 38.2 per cent, the Brahmananda Reddy group or the Congress (R) which later merged with Congress(I), secured 16.05 per cent of the vote. In other words, the Congress party effectively secured more than 54 per cent of the vote.

In the ensuing elections, due on January 5, the Congress(I) may not be able to retain the Congress (R) votes. Because of the covert support that Brahmananda Reddy is lending to the regional party and the defections of a few prominent Congressmen to Telugu Desam, the Congress(R) votes, which are basically anti-Indira votes, may be cast in favour of N.T. Rama Rao rather than the splintered Janata.

The Janata party secured 28.05 per cent of the vote in 1978. With the subsequent split and the migration of a few Janata leaders like Anam Venkata Reddy to Telugu Desam, NTR will cut into the Janata vote bank. This is more so because of the favourable attitude of Sanjiva Reddy, formerly a Janata MP, towards the regional party. Even if the BJP is able to retain 10 per cent of the Janata vote, a charitable estimate, NTR will grab, according to knowledgeable sources, another 10 per cent of these votes.

The Communist parties cannot hope to improve much over their previous performance, though they contest as a front. They secured 51 seats in 1962 (before the split into CPI and CPM), but now they may retain at most their 14 seats. In fact, thanks to the migration of communist workers into Telugu Desam, basically due to the caste loyalty, the Reds will have to fight hard to avoid a decline in their votes.

With several rejected ruling party candidates, including three former ministers contesting as independents, the dent made by the Independents (9.5 per cent of the vote), in the last Assembly elections is likely to be repeated.

The ruling party concedes that the glamour of NTR will attract at least ten per cent of the voters. These votes will come mainly from disenchanted Congress(I) voters. So, according to some political pundits, Telugu Desam will secure 36 per cent of the total votes (NTR's own ten per cent plus the Congress(R)'s 16 per cent plus Janata's ten per cent).

If the Congress(I) can retain its votes, say these pundits, it should secure 38 per cent of the total vote. But the figure may actually come down because of the tarnished image of the party and the novelty of NTR's party. As such, the electoral battle will become a close fight between Mrs Gandhi and NTR. The bunglings of the ruling party leaders of the State have cost the Congress(I) dearly, depriving it of the initial advantage. This January 5 contest is now poised for a photofinish.

G.S.R.

Of Inhuman Bondage

VIJAYAWADA: A letter from a young lawyer (Jayakumar of Krishnagiri in Tamil Nadu) to a Supreme Court judge has induced the Supreme Court to institute an inquiry—conducted by the District Judge of Krishna—into the living and working conditions of the quarry workers of Kilasapuram, near Vijayawada in Andhra Pradesh. The campaign to free them was launched by Mr P. V. Bhakthavatsalam, advocate of Tirupathur and Mr T. S. V. Hari, a freelance journalist and member of the People's Union for Civil Liberties, Tamil Nadu.

The quarry owners admitted before the District Judge that they had been paying advances of Rs 500 to Rs 1,000 to procure each worker through a commission agent at Salem. They also admitted that the indebted labourers were paid about Rs 10 less than others per unit of work. The owners remained silent when they were asked why the workers remain indebted forever if 50 per cent of their wages are deducted regularly.

The workers, belonging to Salem district in Tamil Nadu, suffer serfdom and are in perpetual debt. Years ago, they were brought to Kilasapuram. These men, women and children work for nearly 13 hours a day but their wages are so low that their best meal is only broken rice and rotten dal. Since they cannot repay the advance, they remain bonded to the quarry owners for all times to come. As children help their parents at work, they never go to school.

The workers earn Rs 35 per unit of metal produced (the owners deduct 50 per cent of their earnings towards repayment of the advance they had made), allowing a margin of Rs. 18 to the quarry owner and Rs 75 to the crusher owner. A couple can crush a unit of stone in five days and they are paid just Rs 40. They incur an expenditure of Rs 5 for detonation. Thus, a couple gets Rs 7 per day for their hard work.

Indeed, there is a vicious circle: the workers take advance from quarry contractors who in turn take advance from the crusher owners. Thus, the workers are bonded to the contractors who are bonded to the crusher owners. The workers work harder and harder only to double their debts! Mr Bhaktavatsalam has described the quarries as jails without walls where people live and die in debt.

The conditions under which the labourers work are deplorable. Not all workers who were disabled while discharging their duties get compensation. The quarry workers cannot even run away because their children, between the ages of 5 and 10, are separated from their parents at night and confined in locked rooms. The movements of the elders, too, are closely watched. Only a few members of each family are given a month's festival leave in January to go to their native place. This ensures their 'safe return'.

Five hundred and thirty-eight quarry workers left for Salem on October 2, 1982 following court orders. Arrangements are being made for the release of others. Now there is need to dispense with the services of middlemen. The so-called advances and debts standing in the name of workers should be written off by the contractors. Ensuring better working conditions through unionisation of workers seems to be the only solution to their problem—an assured future.

I. Satya Sundaram

Resin Pines Overtapped

SRINAGAR: The three States that contribute to the resin resources in the country—Uttar Pradesh, Himachal Pradesh and Jammu and Kashmir—have overtapped their pine trees for this invaluable industrial raw material and virtually bled their pine jungles to death.

Rudely jolted out of their stupor, the Jammu and Kashmir Government belatedly announced the suspension of all random resin tapping. Such operations will henceforth be undertaken strictly in rotation in different pine tree areas.

Reckless and unscientific tapping of pine trees for resin began some years ago. By now the asystematic methods have permanently damaged many trees.

Faced with public outcry against such indiscriminate tapping and opposition from conservationists, the authorities in Jammu and Kashmir started taking remedial measures. Among these are a ceiling of 25,000 tonnes on the overall resin tapping,

BLED TO DEATH. Unscientific cuts such as this (marked by an arrow) on pine trees have virtually exhausted our resin resources.

tapping only of mature trees of certain girth, limiting the yield per tree et al.

At the same time scientific methods of tapping are also being tried. The Jammu and Kashmir Government has had its forest personnel trained in Portugal for the purpose. The all-India gathering of scientists, forest officers and industrialists organised in Jammu two years ago by the Regional Research Laboratory was also of great importance and gave many useful suggestions. Jammu and Kashmir is the richest State in respect of resin-yielding pines.

According to estimates of experts in the field, the demand for resin in India will rise to 1,15,000 m. tonnes by the next year. That is also the optimum that the *chir* pine forests in all the three States might yield after the improved technology is adopted. How will the demand in later years be met? Experts have no answer to the question.

Suraj Saraf

INDIA 82

January

WORLD CHAMPIONS IN JANUARY 1982—downgraded to 6th best by December 1982! The year saw Pak Hockey scale the heights and plumb the depths. When on January 12 their captain, Akhtar Rasool, received the World Cup from President Sanjiva Reddy *(above)*, Pakistan were on top of the world following their 3-1 victory over West Germany in the final at Bombay. After that, the Asia Cup was theirs for the taking. When they followed this up with that 7-1 sweep of India in the New Delhi Asian Games, Pakistan seemed to have regained their status as world-beaters. But along came the Esanda 10-Nation Tournament in Melbourne, Australia, and Pakistan were not only dramatically beaten by India 2-1 but were reduced to battling for the 5th place with West Germany! They lost to West Germany 2-3 and thus finished 6th.

February

THE VELVET RIVALRY between Lata Mangeshkar and Noorjehan *(above)* was subtly in evidence as the *Malka-e-Tarannum* returned to India after a gap of nearly 35 years. Noorjehan said she had come to India only to meet old friends, not to sing. But they pressed her to sing "at least one song" at the *Mortal Men—Immortal Melodies* programme in Bombay. Noorjehan is said to have finally agreed to sing only on condition that her hero of *Jugnu*, Dilip Kumar, would introduce her. Whereupon Lata, too, came to be introduced to the audience by Dilip Kumar! Lata was in splendid voice that evening, demonstrating to Noorjehan the strides that she had made since the days she was a mere vocal shadow of the *Malka-e-Tarannum*. Most of the applause may have been reserved for Noorjehan as she sang *Awaaz de kahan hai*. But Lata was equal to the occasion.

March

THE FESTIVAL OF INDIA was a sound success despite the many misgivings expressed about it. It proved to be the cultural event of the year. It got off to a flying start as three giants of the musical world, M.S. Subbulakshmi, Ravi Shankar and Zubin Mehta, performed before a captivated audience. The musical extravaganza featured the European premiere of Ravi Shankar's Second Concerto (for sitar and orchestra).

July

ALL CONTROVERSY CEASED as Giani Zail Singh was finally sworn in as the Seventh President of India on July 25. The new President pledged that he would spare no effort to live up to the noble traditions set by his predecessors. After the drama that preceded the Presidential contest, the poll itself was something of an anticlimax. Zail Singh secured 754,113 of the total value of votes (72.7 per cent) as against 282,685 of the Opposition's candidate, H.R. Khanna (27.3 per cent). This gave Zail Singh a majority of 471,428—a margin nobody anticipated. The first Sikh President of India, in his speech after being sworn in, said: "We must strive to achieve the unity of minds and hearts among people of different states, religions, castes and languages."

August

THE INDIAN MYSTIQUE. Prime Minister Indira Gandhi returned after a successful visit to the US during which she asked for nothing and gave away nothing. President Reagan told her that the Americans always associated a certain mystique with India. There was nothing of the stiffness of previous years in Washington. There was no acrimony or self-righteousness—just an effort to understand each other. A major irritant in bilateral relations, over the supply of nuclear fuel to Tarapur, was resolved. Reagan said his wide-ranging discussions with Mrs Gandhi had "reaffirmed the inherent strength of our relationship". While acknowledging this, Mrs Gandhi said: "We take cooperation in defence from wherever it suits our national interest."

September

THE LION OF KASHMIR FELL SILENT on September 8, but any hopes Pakistan may have entertained of a Valley in ferment were scotched by the smooth manner in which the Indian PM managed a transfer of the reins of power to Sheikh Abdullah's son, Farooq. All Kashmir was impressed by the promptness with which Mrs Gandhi personally came down for the Sheikh's funeral and the patience with which she stayed back for the event. President Zail Singh, too, lost no time in reaching Srinagar. The Sheikh's passing marked the end of an era which would go down in the history of Kashmir as at once turbulent and eventful. The Sheikh played a leading role in Kashmir politics for nearly half a century. Over 250 MPs were present at the funeral.

April

THE NOW-ON, NOW-OFF LAUNCH OF INSAT-1A, India's multipurpose national satellite, proved a a non-event with its premature collapse in September—less than 6 months after it took off. All seemed fine when the INSAT was declared ready for operational use on June 15. Then, on August 15, the satellite went into full-scale operation. However, on September 4, the INSAT facilities had to be suspended owing to loss of attitude orientation. By September 5, the fuel was completely depleted. Finally, on September 6, the satellite had to be abandoned. INSAT-II was originally scheduled to be launched in July 1983, but the failure of INSAT-1A has necessitated a major review of the entire programme.

May

IN A BITTERLY CONTESTED POLL, the 9-party Left Front won a massive mandate—238 seats in the 294-member State Assembly of West Bengal. The combined strength of the Opposition worked out at only 56 seats, though the Congress (I) doubled its strength in the Assembly while the Janata was totally routed. Characteristically, Chief Minister Jyoti Basu's first statement, on assuming office for his second term in succession, was that the people of West Bengal should never forget that there still was a Government in New Delhi which did not believe in democratic principles and norms. "You should always be careful," he said. "The more the votes we get, the more do we feel weighed down by a sense of responsibility." This was West Bengal's 9th poll.

June

NO COMEBACK FOR ANTULAY. Abdul Rehman Antulay continued to remain a live force in Maharashtra politics until a verdict was finally delivered (on June 10) on his appeal against the January 12 judgment of Justice Lentin in the famous cement case which led to his dramatic resignation as Chief Minister. On Antulay's appeal, a Division Bench of the Bombay High Court, comprising Justice S.K. Desai and Justice B.J. Rele, concluded that the former CM was responsible for the arbitrary allotments of cement and that there *was* a nexus between the allotments and the donations to his trusts. In separate judgments, both judges held that Antulay had acted in an "illegal, arbitrary and capricious manner".

October

THE SPIRIT IS WILLING—and the flesh isn't weak either! That Grand Old Man of Indian Aviation, J.R.D. Tata, made history when he re-enacted his first flight in a Leopard Moth (from Karachi to Bombay via Ahmedabad) to mark the golden jubilee of that event. His single-engine aircraft came in from the Ghodbunder Road side, circled the Juhu Airport and then made a touchdown in an exact replay of what had happened 50 years ago. J.R.D. Tata said that he had re-enacted the flight "to rekindle enthusiasm amongst the younger generation to do something for this country", adding: "When they're 78, I hope they'll feel as I do now: there's a lack of faith in ourselves." Reliving the experience was "like marrying a number of times", he said amidst loud applause.

November

THE GAMES MUST GO ON—so must the Akali agitation. As the talks with the Akali Dal failed on the eve of the Asian Games, the fear was widespread that the event would be disrupted at some point or other. But these fears proved unfounded as, except for the rounding up of demonstrating agitators in the Capital, nothing untoward happened. On the day preceding the Games, there was hectic political activity in the capital. The Union Cabinet met that evening to consider the situation but failed to find any basis for making a statement that could help ward off a confrontation. The unexpectedly small gathering of volunteers at the Gurdwara Bangla Sahib in Delhi, from where a protest procession was due to start on the day the Games got under way, probably influenced the Government in its stand.

December

THE SENSE OF TIMING for which Mrs Gandhi is famous was yet again demonstrated—this time in the sports arena—when she contrived to be there on the spot as the Chinese claimed the gold in the Gymnastics Team Championships. Mrs Gandhi presented the gold medal to the Chinese and the silver medal to the Japanese. It was noticed that, throughout the New Delhi Games, Chinese visitors to the Capital went out of their way to befriend Indians, making it a point to offer them small souvenirs as "tokens of our friendship and love for India". There was considerable suspense as Mrs Gandhi waited for the gymnastics results to be announced. When the verdict finally went in favour of the Chinese, Mrs Gandhi's presence in the stadium suddenly acquired added interest.

Where Have All The Heroes Gone?

by Ashok Mitra

THE problem has partly emerged in the other major cities too. What is an occasional malady elsewhere has however assumed the form of an epidemic in Calcutta. In recent years, the Corporation of Calcutta has specialised in a particular version of cultural renovation. Under its auspices and direction, almost every week, old street names in the city are wiped off, and these thoroughfares given a fresh name. The names that go out are mostly associated with the British period in Calcutta, Bengal and India: Clive Street has become Netaji Subhas Road; Dalhousie Square, named after the Governor-General preceding the outbreak of the 1857 rebellion, has been re-named Benoy-Badal-Dinesh Bagh, to commemorate the three martyrs who stormed the government secretariat in 1931. The new names, as is obvious, generally pay homage to the heroes from the days of our struggle for independence. The rationale for this splurge of re-christening old street names is weighty enough. Today's youngsters take things for granted, or else are not told what is what. When Sanjay Gandhi threatens to take precedence over Mahatma Gandhi; it is easy to understand why heroes, not so well known, tend to drift into oblivion; if nothing is done about it, soon nobody would know their names. By naming thoroughfares after them, we ensure to enshrine their memory. Those belonging to the present and future generations would now be forced to enquire who these heroes were, and what they did. A nation, if it has any pride in itself, must honour its heroes.

Must honouring heroes be at the cost of history? The British were in this country for two centuries. They built Calcutta. The city's ambience, even taking into account today's precarious condition, is a gift of the British. Besides, the imperial exploitation they indulged in is part of the historical process: it would be altogether unscientific to ignore such bits of essential data that are part of that history. Should we, at one fell sweep, obliterate all the British names: what kind of historical truth will that serve? The British are no longer here, but why should we be bashful in acknowledging that they were here? We can re-interpret history, but we cannot re-write it; we cannot re-enact historical developments simply by re-naming the streets. During the peak of the American intervention in Vietnam, Harrington Street, where the U.S. consulate in Calcutta is located, was re-named Ho Chi Minh Sarani. The wry humour in the act was of course hugely enjoyed; however, were the ploy to be repeated indiscriminately, it could begin to wear thin. The Lansdownes and the Loudons, the Ochterloneys and the Swinhoes, the Cannings and the O'Connours, each and all contributed to the raw material of Calcutta, maybe in their own imperial manner. Have we the right to deprive history of what legitimately belongs to it?

Cultural Vandalism?

It is not just alien-sounding names which have attracted the Calcutta Corporation's wrath. Local eminences pass away, but they bequeath the Corporation with a problem. Their offspring and admirers are left behind. Life is not worth living for them if a lane, road or street in the area where they lived could not be named after the departed eminences. The re-christening of streets with British names is not able to take care of the entire problem: demand exceeds supply. Lobbies then set to work. So it happens that Parsi Bazar Lane gets converted into Doctor Akhil Chandra Neogy Road. Week after week, the familiar landmarks of Calcutta continue to disappear in this manner. Sometimes, lobbies are also at work to upgrade a neighbourhood socially by changing the existing street names into what are thought to be respectable-sounding ones; thus Emdad Ustagar Lane is rendered into, let us say, Sunil Gavaskar Road. The assumption here is that to associate a road with the name of a long-departed mason or tailor or sweeper or pickpocket is *infra dig* for the present residents in the area; they deserve better, the Corporation must allow them a better-sounding name. Cultural vandalism here is therefore a by-product of cultural snobbery.

A lot of social and cultural history is packed in the fact that a particular lane or road was named after this or that person, who was not perhaps famous in the conventional sense, but whose reputation or notoriety was associated with the area in general, and with the road in particular. If he were a pickpocket, perhaps he did his first snatchings in the lane; if he were a mason or a smith, perhaps he operated from an outlet on this road; and in case it was a she, and she was a madam, perhaps once upon a time this street was part of the by-gone red light glamour over which she presided. Take Fancy Lane, which has nothing to do with a shopping arcade where fancy goods are sold; it is the thoroughfare leading on to the spot where hardened criminals used to be hanged in the eighteenth century. Or take Crooked Lane or Serpentine Lane; the name immediately helps you capture the winding contours of the thoroughfare. Umpteen such precious ingredients of history—and geography—are strewn among Calcutta's street names. Allow the Corporation to continue with its vandalism for a few more years, and much of this will be gone.

The flurry of anti-imperialism and patriotism aside, why should problems of this genre crop up at all? **Much of the difficulty arises from the fact that, in the thirtyfive years since Independence, little growth has taken place in Calcutta.** A growing city can accommodate, with relative ease, the whims and foibles of those who want streets to be named after their favourite heroes and pets. Once a city keeps expanding, each year scores of new thoroughfares come up. Nothing is then simpler than naming these thoroughfares after freedom fighters and other honoured ones. If, towards the end, some streets are still without names, one can always draw from a reserve list, consisting of names of, for example, football and cinema stars.

The problem Calcutta is facing is the morose one of retarded growth. The city is stagnating, there is little expansion either in income or in employment, whatever new construction has taken place has not broken new ground, but is confined to areas already established. Once lobbies begin to operate to have streets named after heroes, the Corporation is easily flustered. It cannot produce new roads. It can only shuffle, much in the manner of cards in a pack, the given number of thoroughfares, and, for a few, cross out the old names, and substitute them by new ones. There is also an additional problem: the demand for naming roads after eminences is, most of the time, location-specific. The stretch of New Alipore, easily covering an area of four square miles, is still largely covered by the portmanteau address of Diamond Harbour Road, and is parcelled out in a number of ugly-sounding blocks. Here is an opportunity to name at least thirty-odd roads or lanes after this or that hero. But rigidities will be rigidities. A football hero belonged to Shambazar; it will not do to name after him a road in New Alipore—which is six miles way south—; he must be given a road in Shambazar itself, otherwise there is every danger of a civil disobedience movement, which, these days, hardly stays civil for long.

Inverted Snobbery

There you have, in a microcosm, the dilemma facing Bengali society. Perhaps because a great deal of the economic, social and cultural directions the Bengali has traversed towards has had a British source of inspiration, there is a latent insistence on disowning that heritage. To be fair, this is only one part of the story. The fervour to be a nationalist, true to the grain, is there too, and, lately, thanks to the spreading influence of the Marxist movement, is combined with a genuine passion for international awareness. And yet, and this is the tragic aspect of it, Calcutta is a declining city, from both the industrial and the commercial points of view, nothing grows here, your effulsions of nationalism as much as internationalism lead you, for the present, to nowhere, developments continue to pass Calcutta by.

Stalled and frustrated in this manner, Calcutta reacts with an inverted snobbery which, sadly, also bears traces of some of the worst forms of parochialism. It withdraws into itself. It cannot create new history, it is unable to evolve new contours of geography either, so it has as putty clay only some road and place names. It keeps arranging and re-arranging them, crossing out old names for new, crossing out humble-sounding names for snootier-sounding ones. And, if it can neither get rid of religiosity nor immediately usher in the revolution, it re-styles Dharamtola Street and calls it Lenin Sarani.

The renaming of streets is a common phenomenon in most cities today, and Bombay is no exception. Apollo Street is named Bombay Samachar Marg.

General Agreement on Tariffs and Trade (GATT)

Spectre Of Trade War

The GATT Ministers adopted another "Declaration" at the November meeting. The gains for the Third World, however, are minor; and, the ghost of a trade war continues to loom large, says the author.

by C. Raghavan

GENEVA: Trade Ministers have come and gone. The dust and din of the controversies around the Gatt Ministerial meeting — which often looked like a Roman Circus — has settled. After considerable wrangling privately, and public posturings through the media, GATT Ministers have adopted another "Declaration" which has no legal value. At the most it might mean that everyone will make their "best endeavours" to do what they have "contracted" to do as an "obligation" by signing the General Agreement. The next six months will show whether in fact they would do so, and specially whether the three major trading partners—the USA, the EEC and Japan—will keep the multilateral trading system going or continue to form trading blocs and a "nonsystem" working in tandem with the present monetary "nonsystem" to push the world economy further towards the days of a Great Depression like the one in the 30s.

The GATT Director-General, Arthur Dunkel, told the opening session that the 80-odd GATT members accounted for 80 per cent of the 2000 billion-dollar world trade in 1981. But some current studies under way show that in fact only about 30 per cent of world trade or 600 billion dollars are conducted under GATT trading rules and obligations. Any assessment of the outcome of the Geneva meeting has to keep this in mind.

Trade War

Both before the meeting, and since then, there is renewed talk of a trade war—whether one would actually take place depends on other forces than the outcome of the meeting and the merits of the "Declaration" adopted. A trade war and a breakup of the world economic system would be the outcome of the deep-seated causes straining the international economy. They are beyond the ken of the Trade Ministers to solve.

On the whole, however, the GATT Ministerial discussions and the Declaration will be helpful to the Third World. Going beyond this, the Third World had some "negative" gains in what they prevented being put into the "Declaration", and some "positive" gains in what they managed to include. Both will be of some benefit to them, if the tattered multilateral trading system survives.

The GATT Ministerial meeting was not sought by the Third World. The rich countries did not implement their promises of 1963, 1965 and 1972 when they were prosperous, and are even less likely to do so now. The meeting was initiated by the industrialised nations. In the preparatory phase since early this year, and in the negotiations since October and in the meeting, the Third World faced "demands" to agree to start a process of reversing its gains, very limited as they are, of the past two decades within the system. This the Third World managed to stave off.

The demands on it were for legitimising the concepts of "selectivity" to replace the fundamental GATT principle of Most-Favoured-Nation (MFN) treatment, to agree to a round of North-South negotiations to phase out through "graduation" the benefits of the General System of Preferences for its imports in the markets of the industrialised countries, and to replace the "special and preferential" treatment to it, incorporated in GATT, by the principle of "reciprocity" between the rich and the powerful on the one side and the poor and the weak on the other. These would help to restructure international economic relations not towards the New International Economic Order but towards the prewar colonial and neocolonial relationships.

The "selectivity" principle was sought to be injected into a decision on "safeguards" — the import restrictive actions that a country can take in an emergency when imports cause or threaten serious injury to domestic production. Apart from the criteria set in the relevant GATT provision in its Article XIX, now such actions can be taken only on a non-discriminatory MFN basis i.e. against imports from all sources. The industrialised nations want to be able to pick and choose the various sources to be restricted. The EEC and Europe have always favoured this, and the US has now joined this group. Very strong pressures were put on the Third World which successfully resisted it.

The North-South round of negotiations, proposed by the US and Switzerland, were also rejected, and with it the concepts of "graduation" and "reciprocity".

Ever since the ministerial meeting was decided upon in mid-1981, the US has hijacked the meeting, and has been trying to bring into GATT new issues—"trade in services", "investment" and "high technology and services". The first two, and the application of the GATT principles of "free trade" under MFN rules and equal treatment to national and foreign enterprises would have resulted in a free hand for the Transnational Corporations in the Third World, re-establishing in India another "East India Company" that came to trade and set up "factories" and took over the country. The "high technology" is aimed at the moment against Europe, but in the medium term the Third World, too, would be the target.

"Investment" Issue

The "investment" issue, cosmetically changed into "trade-related performance requirements" had to be given up by the US before any serious negotiations could begin at the ministerial level. The nigh technology issue is now to be discussed in the GATT Council, where the rule of consensus operates even more strongly. There was a decision of sorts on "services" but one that could give no satisfaction to the United States. Countries have been "recommended" to undertake national studies on various sectors of "services"—and the Third World has made clear that these will cover for them also "labour services" or labour migration. The results of the studies are to be exchanged through "international organisations such as GATT", and the 1984 GATT annual meeting will consider whether a multilateral framework for "services" is appropriate and desirable. All the threats and bullying tactics of the US could get no more than this. The Third World has maintained its fundamental position that GATT has no jurisdiction, and despite Brazil's "weakening" under US pressure, and the Philippines-led ASEAN wobbling, the Third World stood firm. Directly and specifically by countries like Tanzania, Uruguay, Uganda and Nicaragua, or indirectly like India and Sri Lanka, reservations about the "competence" have been entered and stay.

SHIVRAJ PATIL. India's Union Minister of State for Commerce.

In all these matters, India played a major role, and by standing firm, emerged with enhanced reputation from the GATT Ministers among the Third World countries. Brazil, the ASEAN and some of the far east's so-called newly industrialised countries (NICs) were seen to lack much influence. Apart from the earlier hard work of Indian official negotiators, credit must be given to the Indian Minister, Shivraj Patil, who made his debut in international negotiations, and acquitted himself well. Apart from the forthright stand he took in his speech on these issues, Patil was involved in a small ministerial group chosen by the Canadian Foreign Minister Mceachen who chaired the conference. The group was so constituted that India was somewhat isolated (the only two other Third World countries were Philippines and Brazil). The two proposals put forward by Mceachen after this—one for selective safeguards by consent, and the other on services—were rejected by the Third World group where India's "silence" was rightly seen as non-support and had more effect than Phillippines pleas and Brazil's wobbly support. The lesson was not lost on the industrialised countries.

The positive gains of the Third World out of the "Declaration' lie in the mechanisms that have been created to pursue implementation of the past promises and some of the committments enshrined in the General Agreement. In the preparatory phase, in a committee chaired by Canada's Donald Mcphail, the opposing viewpoints on these and other issues had been so solidified that by end of October, the outlook for the meeting had become bleak. India's Bhagirath Lal Das, Chairman of the GATT Council, then took over the task of trying to reconcile viewpoints, and between him and the key group of Third World negotiators chaired by Colombia's Felipe Jaramillo, the spokesman of the group, considerable headway on some of the Third World issues had been made. Das was singled out by all for encomiums at the GATT meeting.

In the fight between US and EEC, and between the North and the South on some new or non-issues, these gains remained, and have been incorporated in the final "Declaration"

Firstly, all the promises and commitments to the Third World have been brought back into the GATT agenda and work programme for the 80s. There is now a renewed promise to bring about a general understanding to be adopted by the 1983 GATT annual meeting on the issue of "safeguards" based on the principles of the General Agreement, and incorporating some six important elements. This has been the Third World's demand since the Tokyo Round negotiations.

Secondly, the industrialised countries have been reminded of their "obligations" in the commitments entered into by them in part IV of GATT and specially Article 37 on trade policy measures favouring the Third World. The GATT Trade and Development Committee (TDC) has now been asked to enter into "consultations" (which in GATT means more than its normal usage would convey) with industrial countries, individually or collectively, on a regular basis, to examine how each of them have responded to the special provisions and responsibilities cast on them by Part IV.

Thirdly, the Contracting Parties (members of GATT), on the basis of studies and work programme already done by the TDC, will hold consultations and appropriate negotiations, for liberalizing the trade in tropical products, including in their processed and semiprocessed forms, and review the elimination or reduction of existing barriers to this trade.

Special Group

A special group is to be created to review the quantitative restrictions (QRs) and other non-tariff barriers maintained against Third World countries. These QRs and other barriers are tabooed by General Agreement, but have remained and proliferated, despite repeated promises of the Industrial Nations to remove them. The new group will enable the Third World to exercise some pressure for their removal, or force the industrial countries to bring them under GATT discipline-which means multilateral surveillance, justification, compensation etc.

The entire textiles and clothing trade (now covered by the MFA III till 1986) is to be studied on a priority basis, aimed at further liberalisation of trade, including the possibility of full application of GATT provisions to this sector. The study is to be completed in time for examination by the GATT annual meeting in 1984.

There were also a few minor gains, including one for use of the notification procedures of GATT asking all Contracting Parties to advise the GATT about goods produced and exported by them that are banned for sale domestically on grounds of human health and safety. The list of these hazardous and toxic products will now be available in one place, and the GATT is to consider what further action may be needed. ■

Special Attention of Investors

The East India Hotels Ltd

(AN OBEROI ENTERPRISE)

Regd. Office : 4, Mangoe Lane, Calcutta-700001

Issue of 15% Non-Convertible Debentures of Rs.100/- each redeemable at a premium of 5% on the face value of the Debentures.

Here is an investment opportunity for SHORT TERM as well as LONG TERM investors to earn 15% yearly interest payable quarterly in advance plus 5% extra (tax free) Investment 100% secured

The Company is receiving application for subscription from the investors in the Company.

Applications will be accepted at the offices of the Company between 10 AM and 2 PM on working days at

- 4, Mangoe Lane, Calcutta-700 001
- Hotel Oberoi Maidens, 7, Sham Nath Marg, Delhi-110 054
- Hotel Oberoi Towers, Nariman Point, Bombay-400 021.

For further particulars please contact your Brokers or the above offices.

Why should you invest ?

FOR THE FIRST TIME

* Debenture Interest payable quarterly in advance
* Investment can be made at your convenience as the issue will remain open till fully subscribed.
* No danger of blocking your fund without return as interest will be paid from the date of receipt of application. This interest will also be paid in advance.
* No restriction on application for any number of Debentures irrespective of your holding without any risk of reduction in allotment.

AND MANY OTHER ATTRACTIVE FEATURES

* Investors have the option to invest for shorter periods under the buy back scheme.
* An extra five percent (tax free) premium if investment continued for 10 years.
* Effective Rate — If you keep the Debentures for ten years the average return per annum will be 16.77%
* Debentures are transferable and transmissible.
* Debentures are marketable in three Stock Exchanges and are eligible as a security for loans.

Hook Line And Sinker

Fishing is a lucrative way to earn foreign exchange, says the author.

by Asha Suri

FISHING is among the oldest of human activities, dating back to the time when man was still living in caves, hunting animals for food and using their skins to keep warm. He used the crudest of weapons—he either clubbed the animal to death or used a spear with a stone or flint head. Catching fish was very much a hit or miss game requiring a great deal of patience, as any angler will tell you even today.

The very first "hook" was probably just a stone used as a bait which was meant to get stuck in the gullet of the unwary fish. The earliest hook was in all likelihood just a thorn, and the first rod a sapling from a tree, connected by a vine or tendril.

As the commercial possibilities increased, man devised means to catch fish on a larger scale What was more, as his horizons widened, he realised that fish is not exclusive to rivers and ponds, but is found in even greater abundance and variety in the oceans.

It was still a far cry indeed from the large scale commercial fishing of today, where fish caught by mechanical means in thousands of tonnes, is cleaned, processed, packed and sent to the supermarket.

Large-Scale Fishing

The methods commonly used now for large-scale fishing include trawling and seining. The trawl is a bag-shaped net, dragged on or near the bottom of the sea. Its mouth is kept open by a beam across the head, or by the pressure of water on wooden kites known as *otter boards* attached to the sides of the mouth, or the wings of the net. The beam trawl is used only on small fishing craft, whereas the otter trawl is to be found on all but the smallest of trawlers. Basically, trawling involves the use of a hemisphere of netting to surround the fish, in which they are trapped and brought to the surface. Trawling is known to have been practised in Britain as early as 1640. The industry was enlarged during the last century, and given a tremendous boost by the advent of the steam trawler.

Seining also involves the use of a net. Both seining and trawling involve surrounding the shoal with a strong wall of netting, and drawing together the bottom of the net by purse-lines to trap the fish. The most efficient form of seine to catch demersal fish is the Danish seine. This method involves first encircling an area of the seabed with two ropes of equal length (at times as much as a mile long), which are attached to each wing of a trawl-shaped net, and secondly, drawing in the rope to an anchored ship, thus cutting down the area of seabed that is surrounded. Fish are driven before the moving ropes of the encircled area, and subsequently entrapped in the net and drawn up to the fishing vessel.

With the introduction of mechanisation in all spheres of commerce and industry, fisheries have also made tremendous strides in the last few years, along with its subsidiary industry of processing, freezing, canning and oil extraction.

Fortunately, most fish are extremely prolific; for example, a female turbot can produce more than eight million eggs in one spawning season, and a cod as many as four-and-a-half million.

The South African fisheries were developed about 50 years ago, and just prior to the Second World War, the Japanese fisheries were supplying half the total of the world's fish. The United States fisheries were then the second largest in the world. The situation has not changed, and Japan still leads the world in the field of fisheries.

USA, the Scandinavian countries, Britain and Japan have well established fishing industries. Unfortunately, we cannot say the same for India We have made a late start in this field and the industry is beset with problems.

India has as many as 120,000 small fishing craft to its credit, but it can boast of only 13,000 mechanised vessels, out of which the proper trawlers number just 52. This is a paltry figure when seen in the context of India's population and the length of her coastline.

Five years ago India declared a two-hundred-mile Exclusive Economic Zone to "explore, exploit, manage and conserve the resources of her seas" but this is another case of progress lagging behind good intentions.

The Indian Ocean covers 74,947 million sq km and has a potential yield of approximately 14 to 15 million tonnes of fish. But though we complain of depleting land resources, only ten per cent of this sea has been exploited. Our yield could easily be close to four million tonnes. The most productive region is that of the continental shelf; and thirty per cent of this potential could come from the 50-metre depth, over 5 per cent between this and the 200-metre depth, which is unexploited, and 15 per cent from waters beyond this zone. The coasts of Gujarat, Maharashtra, Goa, Kerala, Tamil Nadu and Andhra Pradesh account for almost the entire fishing in the country.

The Export Scene

Out of the potential yield of the Indian Ocean, India could comfortably account for very much more than it does. Two-thirds of sardine oil, 90 per cent of the mackerel catch, 80 per cent of the prawns, almost all the Bombay duck come from the Indian coast.

India exported marine products worth Rs 32.5 crores between April and September last year. However, though this figure shows an increase of Rs 23 crores, there is no cause for complacency, as the actual amount of fish exported had dropped by 3,000 tonnes. In other words, though the foreign exchange earnings showed a rise of about 20 per cent, in actual fact the exports had dropped by almost 8.5 per cent. One of the major reasons for this was the termination of the Indo-Thai charter of Deep Sea fishing vessels which were operating in the Andamans, as well as poor catches of commercially important fish.

Frozen shrimp, frogs' legs and lobster tails are always in great demand as export items. Out of these, frozen shrimp heads the list, and our main market for this is Japan. Here again, because of the rising world prices, the deceptive index shows an increase of foreign exchange earnings, while the actual quantity had dropped. To offset this, the export of this item to the USA has fortunately shown an upward trend both in terms of quantity and export earnings. The demand for frogs' legs, an extremely popular item in the Western hemisphere, has suddenly doubled, from 650 tonnes to more than 1300 tonnes. To the USA alone the export has quadrupled, while the monetary value of this has gone up seven times. These are markets which could very easily absorb a far larger quantity of our exportable marine life.

BOUNTY FROM THE SEA. Mechanised fishing has overtaken age-old net and line methods

Fishing Vessels

The trawlers in India are both Government-owned as well as operated by private sector undertakings. Konkan Fisheries heads the list with eight such vessels, and Union Carbide is next with seven to its credit. Next come New India Fisheries with five, and Pron Magnet with four. West Bengal also operates four trawlers and Gujarat, Andhra Pradesh, India Tobacco, Dolphin Fisheries, Phoenix International have two trawlers each.

A major problem as far as India is concerned is the inadequate number of suitable fishing vessels.

Fortunately, the Union Government has taken some action in this matter and the Shipping Development Fund Committee has finally sanctioned the necessary loans for the import of 20 trawlers from the Netherlands.

Some of the larger modern trawlers in use today are marvels of mechanisation and efficiency; far from being mere fishing vessels, they are self-contained, mobile, processing and canning factories, ensuring that the catch reaches the consumers as fresh as it was the minute it left the ocean bed. In keeping with the jet age, India too should have a far larger number of such vessels, making the village fishermen and their melodious chants an item to be consigned to poets or to the past. ■

SUCCESS
Centaur is the star

Every man wants to reach for the stars. In business. In life. In love. And no dream is an impossible one. Because life is full of proof. Be it a new industry. A new home. Or an exciting new adventure in an enterprise, unknown. Centaur Syndicate Corporation knows the rules of life. The norms of success.

Centaur Syndicate Corporation offers the fast finance solution. Long term loans are available at reasonable rates of interest.

Term loans are also available for expansion or diversification of business or for starting new ventures against the mortgage of real estate (including land & building), machinery, factories, plantations, theatres, hotels, restaurants, shops, ownership flats, mills and private & public limited companies.

Centaur also solicits inquiries for sale & purchase of land, buildings & flats. And also undertakes to solve import-export problems of any nature related to any product, any country.

Success is the constant factor with Centaur.

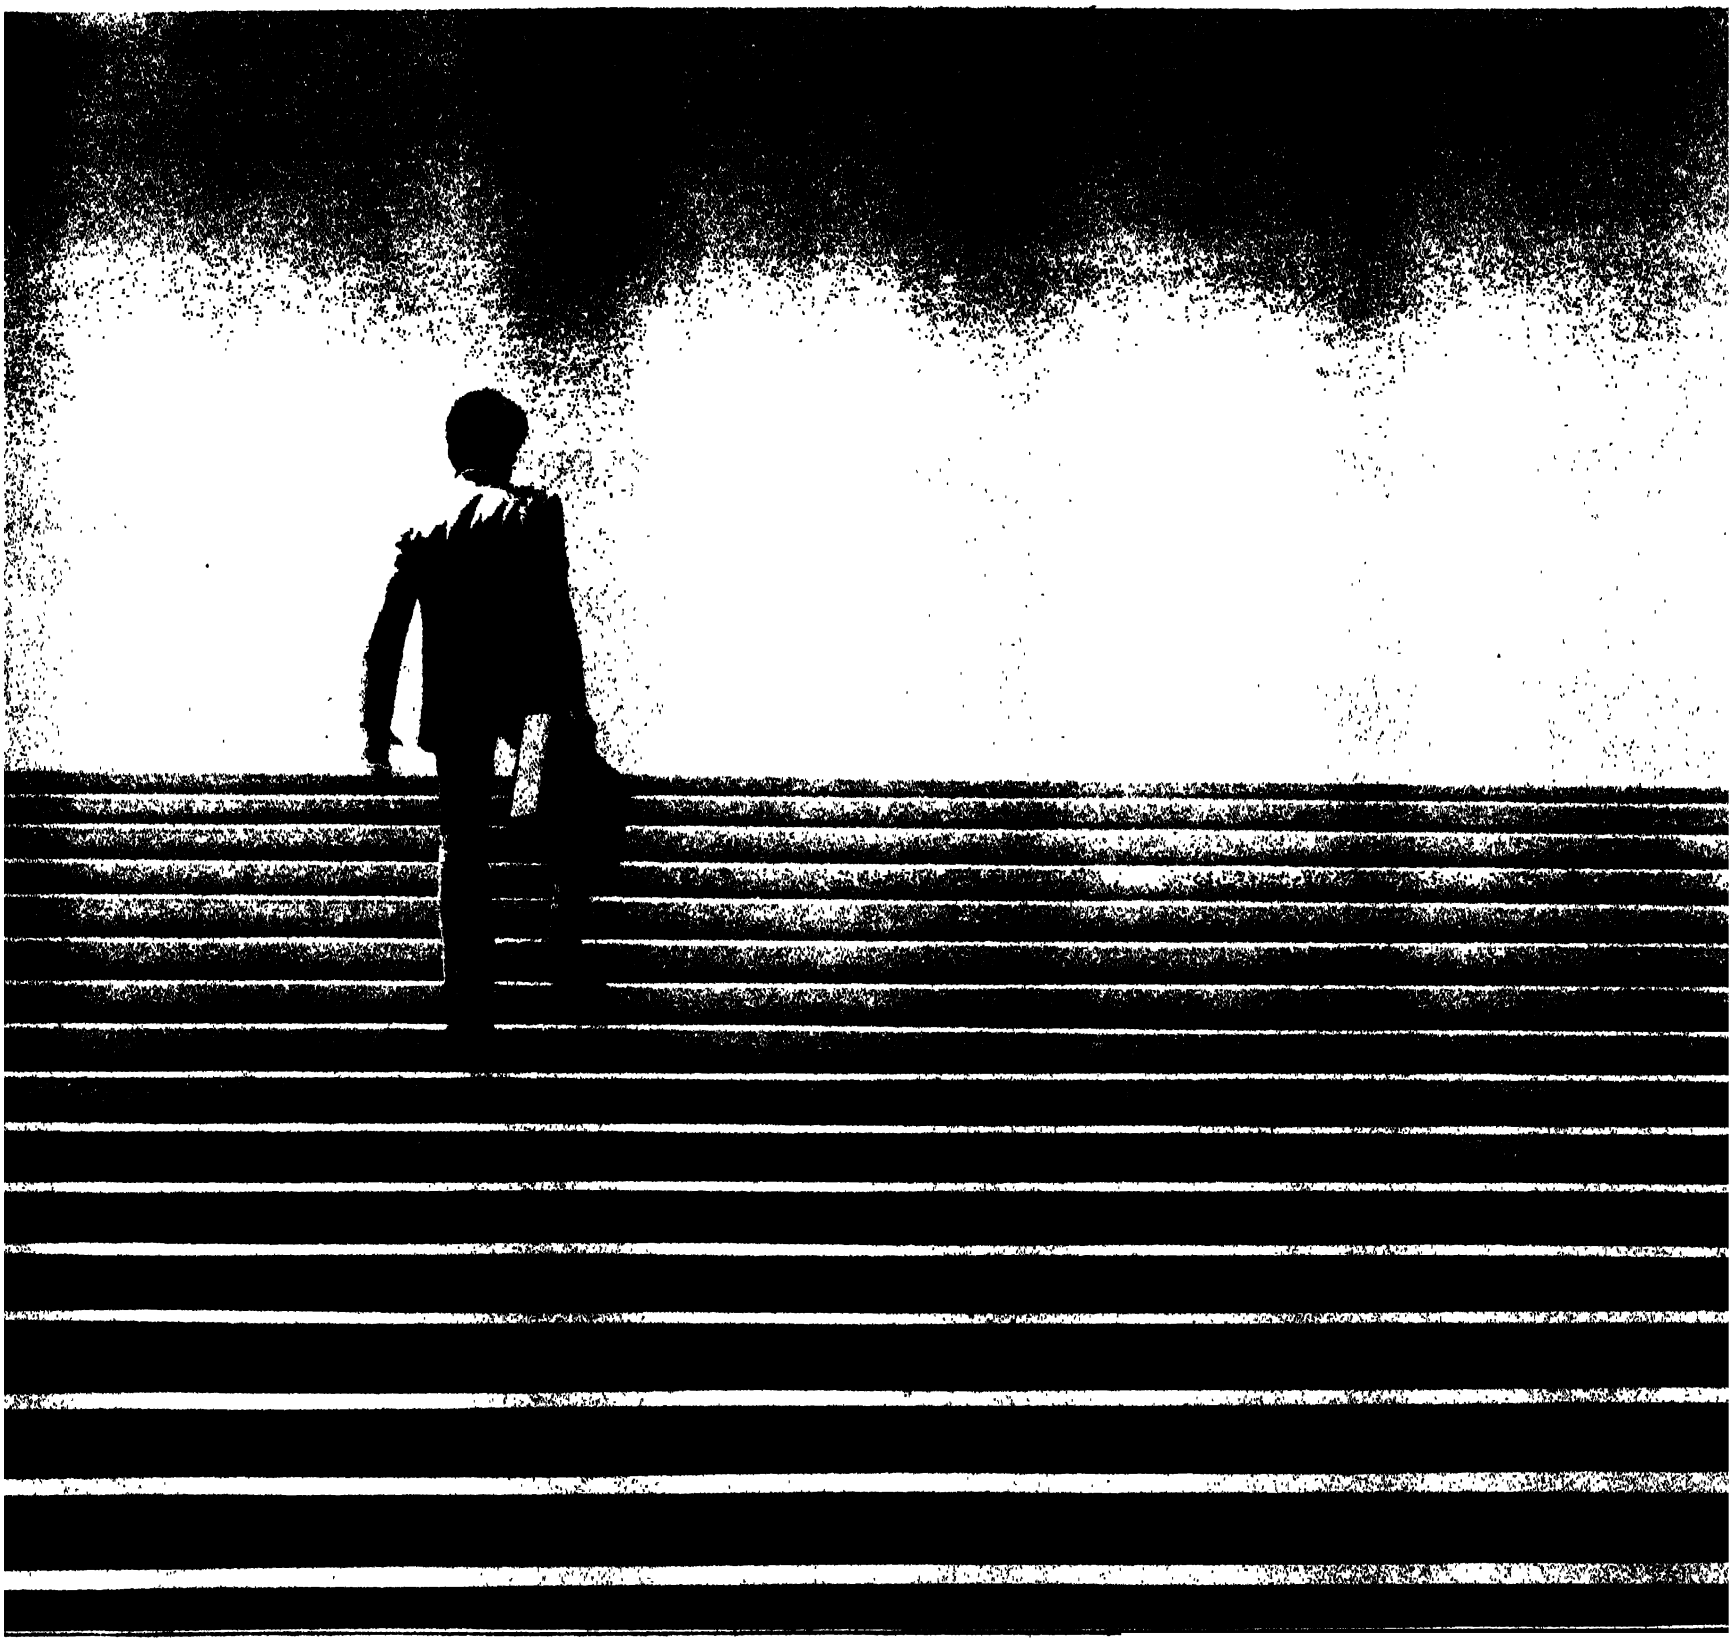
The fast finance solution



That's Business

From Our Special Correspondent

Pakistan Forging Ahead

—V.P. Punj

"They look well-fed and well-clothed," observes Mr V.P. Punj, President of the Punjab, Haryana and Delhi Chamber of Commerce and Industry, who recently led a 22-member business delegation to Pakistan. The observation echoes, as it were, the World Development Report 1982, which points out that whereas Pakistan's average per capita GNP growth rate for 1960-80 was 2 8 per cent, India's was only half as much.

Mr Punj says that Pakistan may be behind India in heavy engineering, but that country's consumer goods and light engineering industries have made notable progress. The Indian team visited a foundry and a tractor factory in Lahore, an electrical equipment unit in Gujranwala and a textile mill in Faisalabad.

Trade and industrial collaboration between the two countries is, of course, virtually non-existent, having been sacrificed at the altar of political hostility. Even in global tenders, Pakistan tends, mechanically, to reject Indian bids unless it is a World Bank-aided project. Mr Punj, whose main business interests are air-conditioning and refrigeration, has done an industrial insulation job worth $ 1 million for the Fauji Fertiliser Company of Multan.

"I wish the Wagah border could be opened," says the PHDCCI chief, ex pressing a sentiment that is shared by many businessmen on both sides of the border. "The two countries should also collaborate in West Asia, Pakistan supplying Muslim labour, not an unimportant consideration in that region."

"What happens to them when it comes to implementing economic programmes?" is the question that many businessmen are asking in the wake of the Asiad. The answer, as everyone knows, is that implementation of economic programmes is not treated as a prestige issue and is, therefore, devoid of political will.

"Why were ten luxury hotels planned?" is another question quivering on many lips. That occupancy in the new hotels was not even 50 per cent is scorcely surprising. Adding 2,690 rooms to the existing 3,000 rooms for the Asiad (eventually, when the hotels are complete, the additions would be 4,354 rooms) was based on the expectation that tourist traffic in November 1982 would be 15 per cent higher than in November 1981. Inquiries at the Department of Tourism reveal that the increase was only 5.5 per cent—from 80,371 to 84,898.

Wide publicity abroad of the Akali agitation in India and the outbreak of dengue fever cannot fully explain the shortfall. It seems that the planners, under the impetus of unstinted support from the top, simply overshot the mark. Waiting in the wings to take advantage of the host of concessions on offer for the construction of hotels for the Asiad were promoters, some of them with known links with the ruling party.

Now the promoters are worried, along with the Industrial Finance Corporation which acted as the lead institution for financial assistance to the hotel projects. The following companies received loans: Asian Hotels Rs 22 crore; Bharat Hotels Rs 16.4 crore; C.J. International Hotels Rs 24.5 crore; Cosmopolitan Hotels Rs 9.5 crore; Hotel Corporation Rs 13.5 crore; India Tourism Development Corporation Rs 9.7 crore; Northern Enterprises Corporation Rs 8.6 crore; and Siddarth Intercontinental Hotels Rs 6.1 crore. These loans have a substantial foreign exchange component. The total cost of the ten hotels is estimated at over Rs 200 crore.

Paper Crisis

India's per capita paper consumption is among the lowest in the world, being only 2 kg compared to 257 kg in the US. "And yet the industry will soon face a raw material crisis unless we go in for man-made forests, which could be developed in the joint sector or, preferably, on the basis of leases given to paper mills," says Mr L.M. Thapar, Chairman of the Development Council for Paper, Pulp and Allied Industries.

Recycling of waste paper and use of wheat and rice straw cannot, according to him, fill the gap in raw material supply. Nor does he visualise bagasse emerging as a viable alternative source of raw material. The sugar factories, crushing over 150 million tonnes of sugarcane, yield around 15 million tonnes of bagasse, which could be converted into 2.5 million tonnes of paper—twice the present production. But the snag is that bagasse is being used by the sugar industry itself as a source of energy. Nonetheless, this has not discouraged

MR L.M. THAPAR, Chairman of the Development Council for Paper, Pulp and Allied Industries.

the Tamil Nadu Newsprint and Paper Limited from entering into an experimental agreement with sugar mills in the region.

Mr Thapar's Ballarpur Industries, the second-biggest manufacturer of paper in the country, is now expanding into production of electrical grade paper. A plant is coming up at Yamunanagar in Haryana in collaboration with Messrs Tervakoski Osakeyhtio of Finland. Trial runs are scheduled for March. At present the entire requirement of special grade paper is met through imports costing Rs 6.5 crore.

More Shut Than Open

Efforts are being made to sell India to the West European investor. Three in-

MR V.N. CHANNA, Secretary, India Investment Centre.

vestment seminars held recently in West Europe—at Dusseldorf, Paris and Stratford-on-Avon—are to culminate in a major conference in New Delhi from January 16 to 18.

Mr V.N. Channa, Secretary, India Investment Centre, says that the New Delhi conference will focus on four areas of collaboration—automative components, electronics and component equipment, telecommunications and engineering plastics. He is expecting 100 businessmen and industrialists from the EEC countries to meet with 300 Indian counterparts. Says Mr Channa: "The European seminars were encouraging, particularly the one at Dusseldorf."

However, ritualistic invitations to foreign investors will not suffice. The attitude may have changed slightly, but the rules remain the same, which means that the door is still kept more shut than open. The scepticism of the foreign investor yet again found expression in the critical remarks of Dr Shigeo Nagano, President, Japan Chamber of Commerce and Industry, who headed a 60-member Japanese delegation at the joint meeting of the India-Japan Business Cooperation Committee in New Delhi on December 7.

Secret Of Success

As the only public sector fertiliser unit which has shown sustained profits over the last six years, how is Madras Fertiliser Limited different from the others? It's unusual equity composition—American Oil Company and National Iranian Oil Company each hold 24.5 per cent shares—may have something to do with it.

MR P.N. ARUNACHALAM, Operations Manager, Madras Fertiliser Limited.

Mr P.N. Arunachalam, Operations Manager of MFL, says: "Although the Americans left long ago, we inherited an excellent system of professional management. Further, we have never compromised on job specifications. Therefore, our capacity utilisation is 85 per cent, whereas the average for the public sector units is 60 per cent. A'so, steam drives based on waste heat recovery meet 80 per cent of the plant's energy requirement, making it almost self-sufficient."

He further points out: "Our plant has the best safety record among the 104 fertiliser units in the world, having run 19 million man-hours since 1974 without a single loss-time accident."

Merchant Banker's Coup

Mr William Knight is possibly among the world's most successful merchant bankers (men who arrange credit packages). Till recently, Mr Knight looked after the operations of Lloyds Bank International in Hong Kong. For the last few months, most of the giant international banks have been getting increasingly nervous about the world's precarious financial system. At the same time, they continue to compete frantically with one another to lend money!

During one typical six-week period last year, Mr Knight stayed at 15 hotels in nearly as many countries. He has dropped normal banking practices and prefers to go and grab business. He once staged a psychological and financial coup by changing planes in Bangkok so that he could fly on to Hong Kong with a senior Thai official who was going there to secure a loan. When the plane landed at Hong Kong, the other bankers who had arrived at the Kai-tak Airport to greet the Thai official found they had already lost the initiative.

When Mr C. R. Sengupta, the Executive Director of the IDBI, stopped in Hong Kong for a day, Mr Knight contrived to spend most of that day with him, thus pre-empting the other bankers.

Lloyds had been lobbying for months to arrange IDBI's first international syndicated loan, and thanks to Mr Knight they later succeeded in arranging the 25-million loan as planned. ■

Mountains Of Fire

by Shyamala Mahadevan

Volcanoes are the mavericks of mountains. Though they are generally thought of as synonymous with death and destruction, in so far as they benefit the earth with minerals and energy they are also a symbol of life.

IT was once believed that the God of Fire resided in volcanic craters and vented his wrath on those who offended him. And, fearful of this anger animists and pagans resorted to human sacrifices to appease the god. Even today, in some of the islands of the Far East, animals are sacrificed and agricultural produce is offered with prayers to invoke the protection and blessings of the God of Fire against explosions and destruction.

The very word "volcano" seems to reflect man's version of the fire-breathing mountain. The Latin word *Vulcanus* is said to have been derived from the name of an ancient island called *Vulcano*. The early Romans believed that the smoking mountain was the home of Vulcan, the Roman God of Fire. He was also regarded as the Blacksmith of the Gods and the noise and impact from the explosions were believed to have been caused when he pounded on his anvil.

About 500 active volcanoes are known to us and they are scattered the world over—in the Arctic, Antarctic, Atlantic, Pacific and Mediterranean shores besides the Equatorial belt. The Indonesian archipelago has the largest number of volcanoes, and it is closely followed by the Philippines, Japan and Hawaii. Still others are located in the Americas, South-

PUFFS OF FURY. A volcano in Mexico. Below: *"A Jack In The Box"on a vanishing island, near Iceland.*

ern Africa, the West Indies, Iceland, Italy and Turkey. There are volcanoes in the sea as well.

Pattern Of Activity

Volcanoes do not all behave alike—each has its own pattern of activity. Some erupt in cycles whereas some are perpetually active. Mt Galunggung, in Central Java, erupts once in eighty years and has the largest series of eruptions. Some of the Hawaian volcanoes display predictable intervals. On the other hand Mt Merapi in Java has been spewing lava continuously for more than half a century. Some volcanoes, like Vesuvius, are marked by violent blast-ups which litter the surrounding areas with debris. Intermediate eruptions that occur in some are characterised by intermittent phases of explosions followed by quieter outpourings of lava. In still others, the volcanic matter is ejected from the fissures on the cone instead of through the vent.

The earth's crust consists of large areas of relatively light rock called plates. These float on an area of denser rock called the mantle, which covers the liquid outercore of the earth. Explosions occur when lava is expelled from the earth's interior.

A typical eruption results in the formation of either a cone with a funnel-shaped opening called crater or a larger basin-shaped depression called caldera. These in turn are connected with the reservoir of magma, a substance found deep down in the earth, through a shaft. Magma is called lava when it spills out. The smoldering mountains throw out enormous quantities of molten rock emitting massive clouds of burning cinders, hot ash, dust, smoking gases and steam from the various minerals embedded in the rocks.

Red Or White Hot

Lava is red or white hot when it bubbles over but turns darker as it cools down. The landscape around presents striking evidence of the type of eruption and the quality of lava. In the volcanic belts, new material from the interior is forced up to the surface creating new forms in some areas whereas in some others the surface sinks. It has been observed that Mt Merapi in Java has increased in height from 2,911 mt to 2,965 mt due to lava deposits over its summit recently. The consistency of lava also differs from volcano to volcano. However,if the lava is thin, the gases escape easily and if thick, the release of the trapped gases turns out to be forceful resulting in violent explosions

Volumes of gases, both poisonous and non-poisonous, released along with ignitious matter shoot up to thousands of metres during an eruption. Mt Merapi once threw up waves of sooty smoke reaching a height of 3,000 metres. The heavy smoke pervaded the atmosphere in massive dark clouds covering a radius of 20 km with layers of soot, ash and dust, one metre thick.

The kinds of gases that are belched out not only vary from volcano to volcano but also from region to region. However, it is steam which is the main force behind the explosions. Volcanic gases consist of carbon dioxide, hydrogen sulphide, fluorine and chlorine. The gases emitted from the deposited mineral matter react on the surrounding surface.

Volcanic eruptions are no doubt highly destructive, but, at the same time,they do benefit our earth. They abound in minerals and energy, and their presence ensures the fertility of the soil. The rocks are used for constructing buildings, bridges, roads, etc. The pumice stone found in abundance is useful as an abrasive and the sulphur deposits are being commercially exploited. The basalt layer, in the lava flow, and volcanic ash are potential sources for tracing geological dates, age and history of the earth. Above all, from these natural steam-boilers, geo-thermal energy is being successfully utilised for heating purposes and generating power in Japan and Iceland. All this indicates how full of potential the volcanoes are.

■

The Roman God Vulcan

Vulcan, from whose name the term "volcano" is derived, is the Roman God of Fire and, in particular, of furnaces. The destructive nature of fire bred in the ancient Romans an awesome fear of incurring the wrath of this god. So, every 23rd of August the feast of Vulcan, Vulcanalia, *was celebrated. On this day devout Romans offered tiny fish to the flames. The fish symbolised human lives for whose preservation they were offered.*

Vulcan married Venus; and his Hellenic counterpart is Hephaistos. Strangely, Vulcan had no legends of his own. So, he remains a "tough, practical Roman craftsman."

Know You Not Pompeii

The ruins of Pompeii are world famous. Pompeii owes this fame to the catastrophe which struck in AD 79—the eruption of Mt Vesuvius.

A vivid eyewitness account of this event is preserved in two letters written by Pliny the Younger to Tacitus. We learn how his uncle Pliny the Elder, commander of the Roman fleet in Naples Bay, went ashore on learning of an unusual cloud formation. His curiosity aroused, the Elder Pliny was anxious to discover the cause of this seemingly unnatural phenomenon. And, fascinated by what he saw, Pliny strayed too close to the mountain; collapsed, "choked by the thick vapours", and died—one of the 16,000 believed to have been killed in Pompeii alone.

In this, the first detailed record of any volcanic eruption, Pliny the Younger writes, "You might hear of the shrieks of women, the screams of children and the shouts of men ... some lifted up their hands to the gods; others were convinced that there were no gods at all and the final endless night of which we have heard had come upon the world." But Pliny (the Elder) "steered directly for the dangerous spot whence the others were flying, watching it so fearlessly as to be able to dictate a description and take notes of all the movements and appearances of this catastrophe as he observed them."

G.P.

A DECEPTIVE CALM. Below left: *East Java alone knows the full fury of Mount Batok.*

WHITE WITH RAGE is Mount Bromo, also in East Java.

The Weekly Pick

Curry And Rice

Capt G.F. Atkinson Time Books International Rs 375

The "Ingredients of Social Life" it is — and is it spicy! The list of 40 subjects include "*Our* Doctor's Wife", *Our Bath*, *Our Burra Khanah* and *Our Tiger Shooting*. Each contemporary account about the mid-nineteenth century is accompanied by a sketch — characteristic of British understatement and perhaps some superiority, particularly in the sketches of the "natives" Although, humour is not totally absent

Temples And Legends Of Kerala

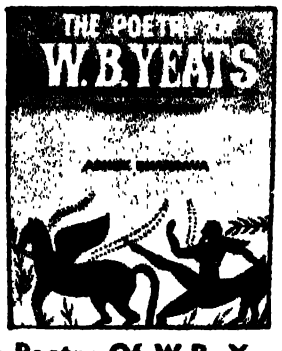
K.R. Vaidyanathan Bharatiya Vidya Bhavan—Rs 30

The author has selected 25 outstanding temples of Kerala and he speaks of their legends, origins, rites and festivals. *The Lord of Guruvayur* and *A Temple For Serpents* are the more interesting chapters. As all temple specialists are only too well aware, the temples of Kerala are better known for their rituals than their architecture. Vaidyanathan also points out that despite the influence of Marxism, "the gods and goddesses in Kerala seem more real than elsewhere."

Rudolf Steiner On The Bhagavad Gita

Shakuntala Publishing House.

Two lecture series are included: *The Bhagavad Gita And The Epistles Of St Paul* and *The Occult Foundations Of The Bhagavad Gita*. Rudolf Steiner can, in the context of the 20th Century, be compared to Leonardo da Vinci in his own time. Such elemental ideas as cosmology, godhead, Christ-impulse and Krishna-impulse are explained and analysed. In an age of materialism, it may prove rewarding to look at life once again from a universal *guru's* point of view.

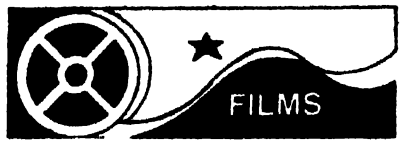


The Poetry Of W.B. Yeats—

Ashok Bhargava Arnold—Heinemann Rs 50

Yeats means more to the litterateurs of this country than just another English poet of the early 20th century With his death anniversary coming up towards the end of January, it is perhaps appropriate to reassess him as a myth-maker. In his poetry, myths are a compound of different mythologies, rituals, histories and dreams. The Indian influence is unmistakably there.

Julie



A Complete *Devdas*

Bangladesh's archives have been able to put together a full print of P.C. Barua's Bengali film, *Devdas*, thanks to Syed Najimudin Hashim, the Minister of Information and Broadcasting, Bangladesh. His decade-long search, which took him through places like New Delhi, Paris, London, Bonn, Moscow and Tashkent, ended when the print was found—two reels in June 1981 and ten this month—from the store dump of the Bangladesh Film Development Corporation.

—Trade Guide

Cagey Miss Swanson

If it's true that all the world loves a loves a lover then Gloria Swanson need not be cagey about an affair she once had with old Joe Kennedy. The 83-year-old actress has just given 100 items of memorabilia pertaining to her life and career to the University of Texas, including love letters from Mr Kennedy. But she has insisted the letters remain sealed till 2000 AD so as not to hurt the feelings of 92-year-old Mrs Rose Kennedy. Now the world will have to wait till the turn of the century when both Miss Swanson or Mrs Kennedy will either be dead or beyond caring to find out if it is all in the lady's mind.

—Sunday Mid-Day

Intermittent Love

Italian film maker Franco Zefferelli counted 18 advertising breaks during a late night showing of his *Romeo and Juliet*. One of them interrupted the balcony scene. Zefferelli called up his lawyers to sue the television company for $2 million. Now the protest has swelled to 25 leading film makers, including Frederico Fellini and Ermmano Olmi. They are looking for legal means to curb ad inserts during their films and hope to have all advertisements run only at the beginning and end of the film

—The Sunday Observer

Wine Line

If any celebrity endorser had seemed snug in his position, it was oracular, oratorial Orson Welles, who boasted that Paul Masson vineyards let nothing go "before its time". But the winemaker let Welles go, and has now replaced him with that quintessential enunciator, Sir John Gielgud, whose first two ads put him in an art gallery and amid a forest of football players. Gielgud would seem more at home with a Mouton Rothschild than a Masson party jug.

—Time

Peace Of Mind

Hollywood actor Martin Sheen, who plays an American reporter in Attenborough's *Gandhi*, found the whole experience so moving that he says he will never again appear in a war film like *Apocalypse Now* or one that extols violence.

Celebrity

Book Controversy

Mystery surrounds the postponement of the release of a pictorial book on Sanjay Gandhi on his 36th birth anniversary due apparently to a controversial chapter written by Mohammed Yunus.

The book contains 1,000 rare photographs and articles on the life of Sanjay and was to be released at the Son of India exhibition at Pragati Maidan by the President on December 14.

—Indian Express

House Journal?

Rajiv Gandhi is likely to back yet another magazine. The tentative name is *India 2000* and the initial work on the magazine is being done by Salman Khurshid (son of Union State Minister Khurshid Alam Khan) who till recently was Officer on Special Duty in Mrs. Gandhi's secretariat.

Rajiv's idea is to have a magazine which will counter the criticism the Congress (I) (and more particularly he and his mother) gets from sections of the press.

In short *India 2000* is going to be the house magazine of 1, Safdarjung Road.

—The Sunday Observer

Imperturbable Mrs G

A small pandal put up near the helipad to receive Prime Minister Indira Gandhi on her arrival in Gulbarga was suddenly blown off due to gusty winds produced by the helicopter as it landed.

Unmindful of the incident, Mrs. Gandhi exchanged pleasantries with State Ministers who were there to meet her and drove to the meeting ground where a big crowd cheered her braving the afternoon sun.

—Express News Service

'Black' TVs

The Government of India's 'gift' colour TV scheme has had several unexpected consequences. It has led to the blackmarketing of colour TVs in Dubai, Hong Kong and Singapore, where the premium per set is $ 300/-.

The Civil Aviation Ministry's policy decision that freighter charters to India would be carried by Air India alone has been relaxed in case of imported TVs, resulting in huge foreign exchange losses.

Meanwhile *Sony* of Japan has started manufacturing colour TV sets for the Indian market at a furious pace.

—Sunday

Goldie

Humane Or Horrible?

The case of Charlie Brooks Jr (the first person in the US to be executed by injection) seemed so unfair to former District Attorney Jack Strickland who had prosecuted him, that he joined Brooks' lawyers in seeking stays of execution. The lawyers' plea was that the authorities had never determined whether it was Brooks or his accomplice, Loudres, who had actually fired the shot and neither man volunteered the information. "Only one shot was fired," said Strickland. "And you don't know who fired it." "One guy lives, and one guy dies (and that) strikes the citizen as unfair."

—Michael Reese

Extravaganzas And Unemployment

At the opening of "La Belle Epoque, 1890-1914," the costume exhibition at the Metropolitan Museum of Art in New York, William F. Buckley, whose wife, Pat, was chairman of the event, said, "If there were more extravaganzas like this, there would be less unemployment. Cole Porter was once condemned for having 30,000 candles at one party. Porter said he was simply employing 30,000 candlemakers."

—Cathleen McGuigan

Stylish Flogging

Pakistan may not have the nuclear bomb yet, but it does have plenty of whips—and it uses them. When Zia was asked to justify Pakistan's widespread practice of flogging people convicted of political crimes or offenses, such as drinking, thievery and sexual immorality Zia said flogging is allowed under Islamic law. He mentioned "a style of flogging" and was asked if there was a difference between "flogging with style and flogging without style." Flogging with style, he explained, meant taking precautions to avoid causing permanent physical injury: "how long the whip should be, where the person should be struck and where the body should be placed." Flogging, Zia added, was "not a matter of degradation of a human being, but a matter of deterrence."

—Newsweek

"I Looked, I Saw, I Did"

For a man who has spent a lifetime battling the odds, the legendary photographer Andre Kertesz is remarkably casual when he talks sabout his work. "I knew this couple from the beginning," he says, pointing to his famous picture of a boy and girl locked in loving embrace. "I took this picture in Hungary in 1915. I knew them, that's all. I looked, I saw, I did."

—Douglas Davis

The Art of Dying

The freethinkers joked about dying. In place of spiritual exercises, they practised famous last words. Duclos, who enjoyed the advantage of having a curé named Chapeau, resolved to die saying, "I came into the world without breeches, I will go out without Chapeau."

—Robert Darnton

Gigi

A Look At Asian Attitudes

Visions Of Death

by Bhabani Bhattacharya

THE axe trembled in the age-worn hand as the woodcutter woman toiled in the forest all through the day, and at dusk she sank down exhausted, a prayer on her lips. "Death-god, come to me and give me release from this misery."

In the next instant she saw the apparition and heard the voice: "Your wish will be fulfilled. What do you ask of me?" The astounded woman, speechless awhile, stirred herself out of her shock, staggered to her feet and cried out, "Sire, will you give me a hand and pile up all that firewood, then place the load upon my head? That is all I ask."

That fabled woman, figuring in diverse cultures with slight variations, timeless as well as rootless, makes a vivid symbol of one meaningful aspect of human behaviour. She marks out the death-wish, so common and so prevalent, as basically fake. Men and women, battered in body and spirit, cling on to a frail thread of life, whatever the cost in terms of pain

The Vedantic Connection

This phenomenon of the longing to keep alive at any cost gathers all the more gloom in the Indian context. Since the Vedantic age, nearly 30 centuries ago, Hinduism has laid great stress on the transitoriness of life. One life span is simply an inn, in the spirit's long journeying toward the *nirvana* stage. The doctrine of *karma* gives a bright halo to suffering itself. The more you experience pain in body or in spirit, the more you wash off your transgressions; the process continues through the cycle of birth, death, rebirth. Death, the law of the physical universe, cannot therefore hold any terror for the Hindu, moving through the millennia of lives toward the ultimate, the finale of submergence in the supreme *All-Soul*

Many among India's great, deeply motivated by this ancient heritage, have spoken of death with utmost warmth. Two instances may be cited. Rabindranath Tagore wrote in his youth a lovely lyric on "Death, My Lover." Set to music, it is one of the most well-known songs in Bengal. Yet, no poet has ever given life with all its colour and joy a more ardent celebration. In the decade before he passed away, he wrote a series of equally ecstatic verses in celebration of death. In his prose works too Tagore had spoken of death, viewing it as a transition, a change, a bridge to another life-form.

Mahatma Gandhi made encounters with death an integral part of his *satyagraha* struggle. He underwent fasting in prison or outside for long periods at the risk of his life—the fasting was the means to effect a change of heart in his opponents. The most crucial of all was his *fast unto death*. He withdrew when he was a hair's breadth from the end of his life, his opponents having conceded at last his demand for the removal of a certain social injustice.

The Mahatma dramatised his attitude to death with no less force even after India had won independence. He had completed his mission, but had gained as much failure as success. India was free from alien rule, but that was not what *satyagraha* was all about basically.

Nonviolence as conceived by Mahatma Gandhi was a moral value and an end in itself, not the means to an end, howsoever worthy.

Warned about imminent attempts on his life, he forbade all police protection at his mass meetings. And as, inevitably, the bullets struck him on the chest, he lifted an arm to the assassin in the gesture of blessing before he staggered and fell

In the ashrams of Gandhi and Tagore, Sevagram and Santiniketan, the words of a Vedantic prayer that had flung its echo from age to age found its re-echo:

> "Lead us from untruth to truth
> Lead us from darkness to light
> *Lead us from death to immortality.*"

Between the Vedanta and the Buddha it is several centuries in terms of time. The sight of Death—a corpse riding the shoulders of men chorusing a mournful chant—was one of the four sights of life's grim realities (known in Buddhist annals as the *Four Signs)* which impelled Prince Gautama to give up his royal inheritance and seek through metaphysical search the way of deliverance from "the trauma of birth, the pathology of sickness, the morbidity of decrepitude, and the phobia of death."

Immersed in the most severe yoga discipline, after eight years of strenuous search for the cure of huamn suffering and of death, the prince-mendicant in his lotus posture of meditation attained a sunburst of insight.

Gautama turned Buddha had attained nirvana for himself. But that was not enough. He was going back to the people to lead them to self-discovery, to the realisation of the mystique of suffering, sickness and death. Arnold Toynbee has called this event a highpoint in humanity's development. A sentient being, having attained nirvana for himself, turned back from "the open door" toward his fellow men who needed to be directed to the same inner stage,

So, as the Buddha lay dying, he told his grieving disciples that he was soon to disappear. The *Sangha* was not to mourn his passing but just get on with the work of spreading knowledge about the cause and cure of suffering and the attainment of enlightenment.... "Therefore, be ye lamps unto yourself. Betake yourselves to no external refuge. Look not for refuge to anyone beside yourselves. Hold fast to Truth as a lamp... Decay is inherent in all compound things... Work out your own salvation with diligence." And, in complete peace, the Buddha departed from his earth-form, bequeathing his immortal spirit to the world.

The first Asian countries beyond India to accept Buddhism were Tibet and China (first century A.D.). Korea and Japan followed centuries later. A reference to the *Tibetan Book of the Dead* will be valid. It highlights the state of consciousness of a person in the pre-death hours—that state determines the person's rebirth pattern. The pre-death hours belong to a dream-like realm, an intermediate world between death and the new life to follow In those hours the dying person may or may not be able to find release from the *karmic* pull back into an earth-life. The supreme goal is release from the earth-form, awakening into a "consciousness, which is the clear light of the void." The light is visible to the dying man and he has to concentrate upon it the full measure of his psychic force.

Buddhism has ceased to exist in the new China. In Japan, it has bifurcated into two systems—the orthodox and the Zen. The Zen has in recent times made an impact on Western thought and is acclaimed as a kind of Far Eastern existentialism.

What is especially relevant to the present account is the unique attitude to death evolved in Japanese cultureways, an attitude not to be seen anywhere else in the world It is integrated in the tradition which views life under certain conditions as no more worthy than old clothes fit to be discarded; in the reckoning of this value system, there is nothing sacro sanct about physical existence When the purpose is spent, there are no grounds for life's prolongation. If the physical form, a mere shell for the spirit, could be used for a higher purpose (national interest comes to the fore) even to the point of extinction, it is a matter of privilege and pride, not misgivings and sorrow, for the owner of that form to sacrifice himself. Sacrifice is not the right word, though Dedication? Consecration?

Western Ways

The recent self-killing of two Japanese writers of world renown exemplifies this total apathy toward physical existence even at the topmost level of material fulfilment. That fulfilment is not all. A Japanese man who has gained all the recognition and riches that the world can provide may yet remain starved within, desperately seeking release. And his self-chosen way of release may be pain-racked, a dagger plunged into a vital part of his body-shell.

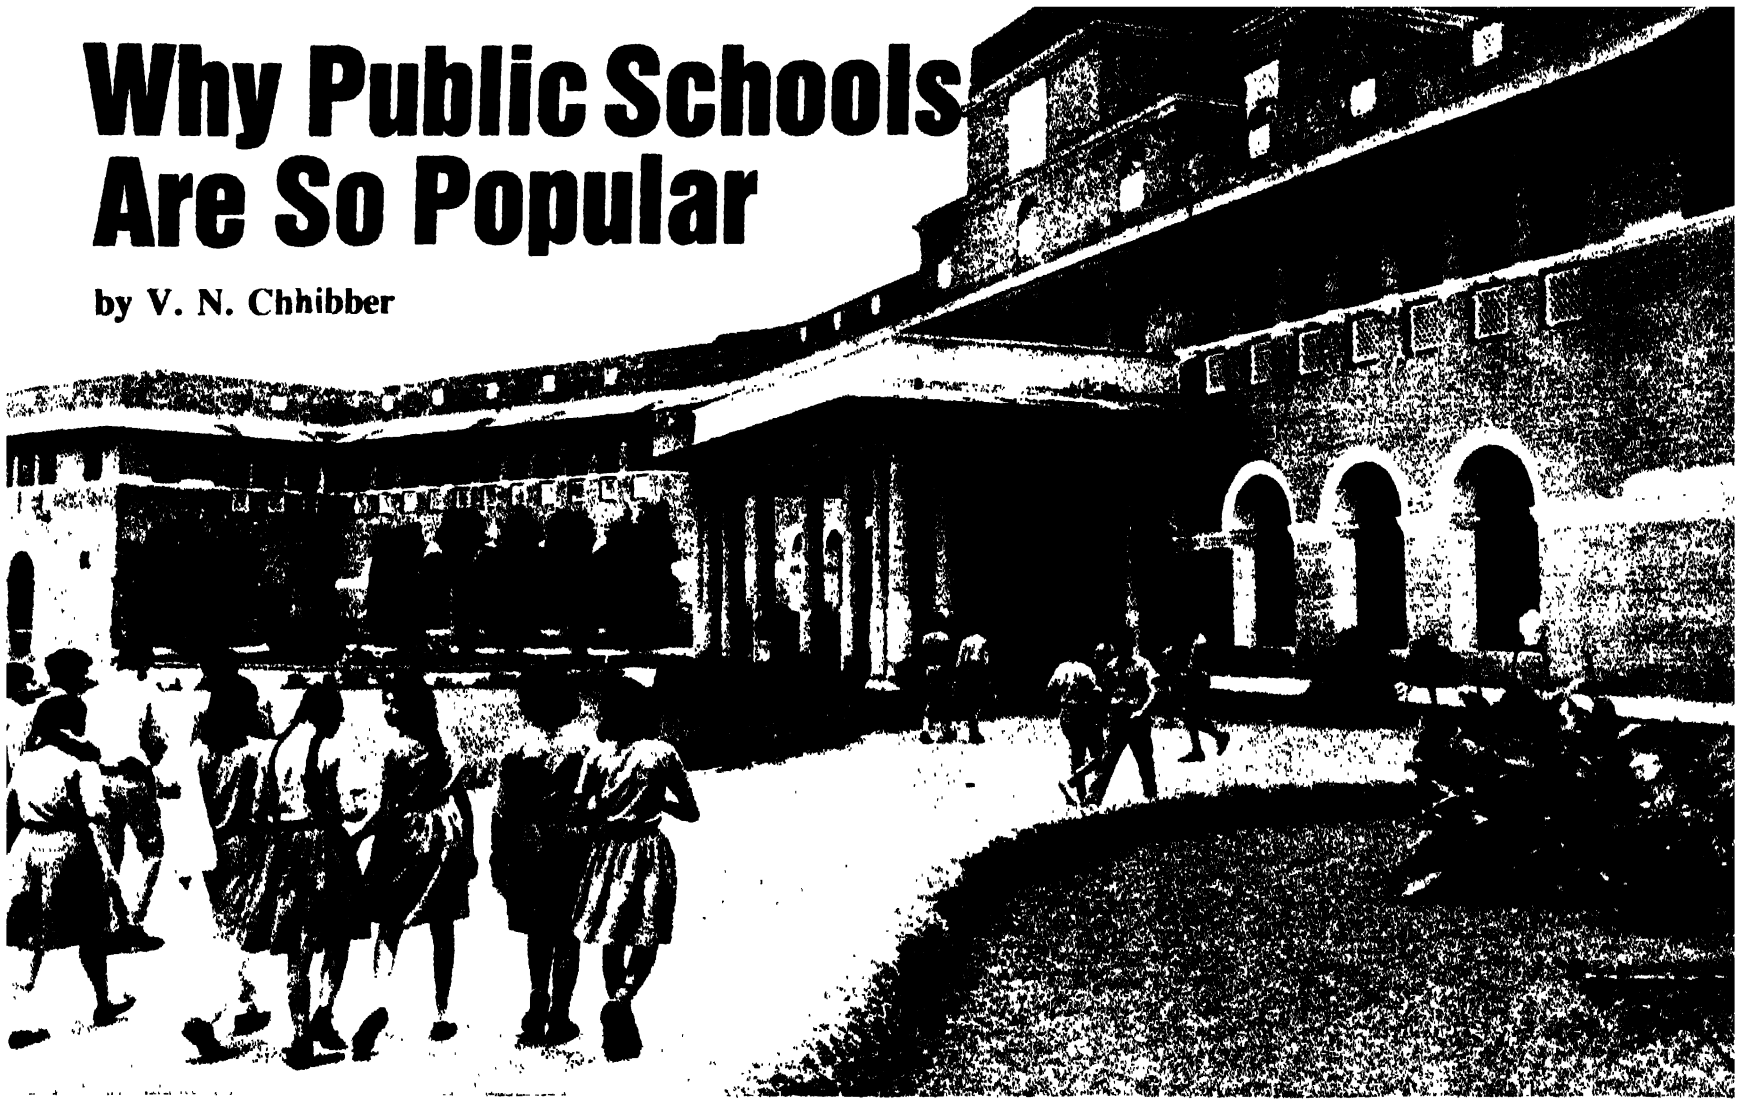
Admittedly, this attitude of "the conquest of death," this *samurai* spirit which has certain comparable variations among other Asian peoples as well, is not as rigid, iron-hard, as it was a generation ago. The advent of Western technology has been creating profound social and psychological changes in a country like Japan. The somewhat sudden liberation of women is a vivid instance. It is hard to conceive that in a society where from time immemorial the role of women was merely to please the domineering menfolk, there is now a divorce rate exceeded perhaps by that of the United States alone.

So, in a scene of sharp reassessment of values, one might reasonably expect a tilt towards the prolongation of life by purely medical means, even if that life is nothing more than the electrical response of a few brain cells. That would signal the pendulum's violent swing from value to value, or, as some critics of the change would say from value to non-value.

As the Asian and Western attitudes to death become less and less polarised under the powerful impact of medical technology, two questions demand answer from all peoples: Why keep alive by mechanical means a body that is all but dead and will never return to its most elementary functions? Who shall decide that such a body be deprived of the means that preserve a dim life spark and be allowed to perish? It is futile to expect unanimity in the answers, so long as there is a wide variance in basic beliefs.

Why Public Schools Are So Popular

by V. N. Chhibber



Public schools fulfil a pressing need for meaningful education in India.

ALONG with the English language and the game of cricket, the institution of 'public' schools is a legacy which has been bequeathed to us by the British Raj. The epithet 'public' is of course patently inappropriate in this context, as not a rupee from the public exchequer goes into the coffers of these privately managed schools.

Their entire budget is met by the funds they gather by way of pupils' fees (and other incidentals), which are thus necessarily very high.

A noticeable socio-academic feature of the modern age is the phenomenal growth of public schools (in what were erstwhile British colonies). Here the expression "public school" does not denote a member of the Indian Public Schools Conference but a school not getting a grant-in-aid from the state and using English as the medium of teaching.

There are at present over 1,000 public schools in our country and each year some 50 are being added to this number.

Preparatory schools (nursery and kindergarten)—which are forerunners of these public schools—are also proliferating. These prep schools thrive on the excellent reputation that their parent-schools consistently maintain.

Public schools (main) strive to develop the all-round personality of their pupils with emphasis on character building and leadership qualities. Moreover they enjoy both fiscal freedom and academic autonomy and periodically introduce progressive methods of teaching. Due to these in-built features, they succeed in ensuring a high quality of education.

It is argued that the continuing existence of public schools in post-independence India has led to a kind of polarism in our education. On the face of it the argument appears convincing as polarisation is not conducive to egalitarianism and makes for a stratified social fabric. But how foolproof is it?

The Education Commission (1964-66) accused our educational system of having failed to fulfil its obligation—to bring about harmony and cohesion in the different social classes and groups and thereby help the emergence of an egalitarian, integrated society. It was critical of the fact that instead of doing so, education itself is tending to increase social segregation and to perpetuate and broaden class distinction.

At the primary stage, the free schools to which the masses send their children are generally of a poor standard. Some of the private schools are on the whole, certainly better (not all are recognised, though)—but since many of them charge high fees, they can be availed of only by the higher middle and the higher classes.

At the secondary stage, a large proportion of the better schools are privately run. Invariably they charge high fees which are normally beyond the means of any, save the top ten per cent of our population; some of the middle class parents, bent upon 'keeping up with the Joneses' make great sacrifices to send their children to them.

There is thus segregation in education itself—the minority of private, expensive schools catering to the needs of the upper classes while the larger bulk of schools-publicly or government maintained—being used by the rest.

What is worse, this segregation has been increasing and tends to widen the gulf between the classes and the masses. There is a dichotomy in terms of quality of education provided by different schools. Thanks to the constraints of fees, hardly any link is noticeable between public schools and the lower strata of our society.

An extreme reaction to the situation is the proposed Public Schools (Abolition) Bill (1982) which seeks to abolish all public schools in the country. The draft bill stipulates that the state shall not provide any aid, financial or otherwise, to privately run 'public' schools; no 'public' schoo shall be recognised by the Govern ment and no educational certificat awarded by a public school shall hav validity in the eyes of the state

The *raison d'etre* of this drasti step is that public schools are out o tune with the spirt of social democra cy, particularly in India where at leas 50 per cent of its population is belov the poverty line; that these school are the cloistered sanctuaries of th privileged few and exist solely for th children of high dignitaries who alon can afford so costly an education fo their children; and finally that it i birth and not worth that determine the admission of children to thes schools.

These strictures are much harshe than those of the Education Commis sion. Will chopping off of bette schools as is envisaged in the bi bring about egalitarianism? Shall w then turn a blind eye to the socia realities in an attempt to find a jus solution to this apparently intractabl problem?

What sustains public schools, i spite of the onslaught of critics, is th increased concern these days amon parents for the education of their chil dren (half a century ago parents wer not so concerned about the future c their children). This increased in

MODERN SCHOOL, DELHI, i among the most prestigious publi schools in the country.

Daly College, Indore

The Daly College, Indore, was established in 1882, to commemorate the services of a pioneer of education in Central India, General Henry Daly. Situated near the Indore Residency College, set up earlier by General Daly for the exclusive training of the sons of the Chiefs of Central India, Daly College was initially just a building where some classes of the Residency College were conducted. In 1940 it was converted into a full-fledged public school, becoming the first Chief's College to throw open its doors to all students (girls and boys) irrespective of caste, creed or social status.

The school is now a member of the All India Secondary and Senior Secondary School Certificate Examinations under the 10+2 scheme. Students of the school strive to maintain a consistently good academic record. But games-outdoor and indoor-are an integral part of its syllabus while due importance is given to cultural and extra-curricular activities.

Table below shows the expenses incurred by a parent in educating his child at the Daly College in 1967 and 1982.

	Then	*Now*
Tuition fees, boarding, text-books, stationery, games, and medical expenses.	*Rs 3,500-00*	*Rs 5,500-00*
School uniform, blazer, sports and evening dress (one new wardrobe every 3 years).	*200-00*	*350-00*
Travel twice a year with school party (average).	*160-00*	*400-00*
Pocket money, including postage, library, tuck shop expenses etc.	*90-00*	*135-00*
Extra-curricular activities, like shooting etc.	*50-00*	*100-00*
	4,000-00	*6,485-00*

Fees for Day Scholars has risen from Rs 2,000 in 1968 to Rs 3,000 now.

TRACK RUNNING — students of the Daly College, Indore. Founded by General Henry Daly, it celebrated its centenary last year.

terest in education may be attributed to the growing bourgeois element of Indian society in recent years.

It is not just the rich who send their children to public schools. The middle class too prefer them. Even parents from the lower middle classes are found paying through the nose to send their wards to these schools. Obviously these parents feel that the future of their children is secure if they are sent to public schools.

The way these schools conduct their affairs, the exacting standards they lay down for selection of teachers, the independence allowed to them with respect to teaching methods, and the techniques adopted to motivate the students, make these schools model educational institutions. In fact, they stand out as a class by themselves in contrast to government or aided schools. Today they are more or less feeding our administrative services and the higher echelons in the private sector.

These public schools are thus satisfying a pressing social need of the times. A number of model schools on these lines—with emphasis on the English language and personality development—are being established with partial or total subsidy from the Government.

Prominent among these are the Sainik schools sponsored by the Ministry of Defence, the central schools supported by the Ministry of Education and the model schools run by the Punjab School Education Board.

A persistent criticism levelled against public schools is that they are very expensive and thus not accessible to all sections of society. A detailed analysis of the economics of education will show that it is not so.

Another criticism is that they create and perpetuate an elite. The harsher aspect of this criticism is that they turn out snobs and inculcate alien values in them.

The fact of the matter is that these schools do not promote elitism; on the contrary they uphold the values of the middle classes which constitute the bulk of their clientele.

The charge of fostering alien values is also not tenable. Most of them are steeped in Indian culture and have based their educational philosophies and projects on local and national requirements. Its a lot of hard mental work together with lots of play and extra-curricular activity that rounds off a student's personality here.

English as the medium of instruction has often become the target of severe criticism. There is little doubt that any information or learning can be imparted best through the mother tongue. However this fact has to be viewed in the context of India being a multilingual country.

As social mobility increases we shall have more and more people living in regions where the local language is different from their mother tongue. The English medium is a natural response to this situation. It is generally recognised that a well educated person in the country will have to be at least bilingual (if not multilingual).

With a strong bias in favour of English, public schools can claim some supremacy in ensuring this bilingualism as well as imparting the best education to their pupils.

Finally, if the whole question of education is viewed in the context of regionalism versus nationalism, public schools would stand high above others by virtue of their medium of instruction alone. ■

CLIMB EVERY MOUNTAIN···

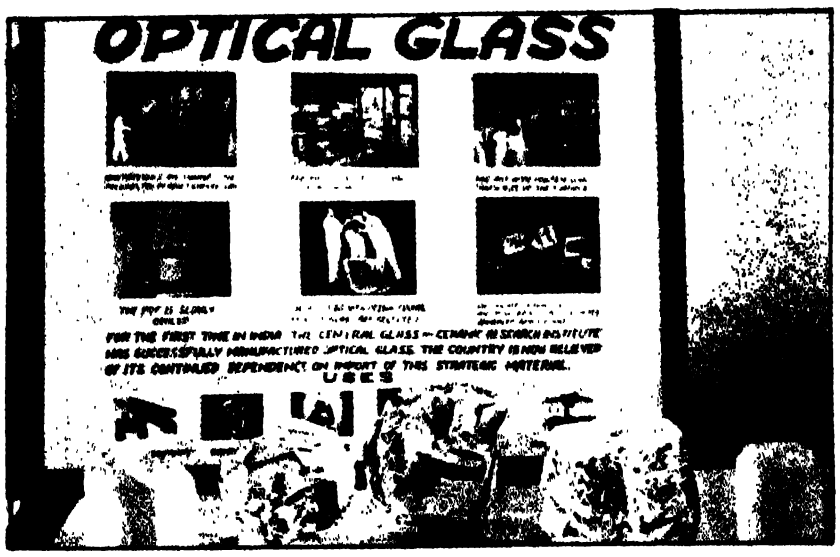
Contact The Lensman

by Dhirendra Kumar Dixit

ONE out of every three persons in India needs visual aids. Yet the very thought of putting on spectacles discourages many people, especially the fair-sex! The 20th century approach to beauty, as regards vision, is the convenient, unobtrusive, watch-glass shaped disc, known as the 'contact lens'.

About 20,000 persons are contact-lensing themselves every year and with a growth forecast of 10 percent per year, the total domestic market for contact lenses is likely to double before the turn of the century. India is not lagging behind in the contact lens technology. In the early sixties, contact lens was a revolutionary concept shrouded in skepticism and the demand was none-too-impressive. With the burgeoning indigenisation of contact lens technology, heavy unwieldy spectacles are being pushed away. People are now increasingly relying on them for both cosmetic and ophthalmic reasons.

There are various types of contact lenses available today. The most noted are 'hard lenses' which are manufactured out of transparent, non-toxic plastic; 'soft lenses' (hydrophilic lenses) which are manufactured out of water-swelling, pliable polymer hydroxyethyl methacrylate. The latest arrival are CAB (Cellulose Acetate Butyrate silicone) lenses which can be easily maintained as hard lenses while simultaneously providing the comfort and prolonged wearing time of soft lenses. Although millions of



people today wear hard lenses, the lens of choice — comfort-wise and otherwise — is a soft lens. The latest arrival on the contact lens scene is the CAB lens (degree of hydration being 80 per cent more than in the soft variety). Gas permeable lenses (oxygen passes through the lens for nutrition of the cornea) are also being given a trial.

Distinguishing between the two major types of CL viz hard and soft, Dr. Vinayak S. Saoji observed: "Hard lenses are made of circular tiny plastic discs with average diameter of 8 to 10 mm. These lenses don't touch the eye balls, but remain lodged due to capillary action and surface tension of the tears. Available in different tints e.g., gray, blue, green, brown and pink, hard lenses are comparatively economical (Rs. 400-600), more durable and probably the most researched lens today.

Soft lenses, also called hydrophilic lenses, are flexible and more comfortable to the eyes because of their water-absorbing property. Larger in diameter (13 to 15 mm) than hard lenses, soft lenses call for meticulous care and hygiene and are relatively dearer (Rs. 1200-Rs. 1500).

Also, the wearer can take to the soft lenses instantly. The adaptation period ranges from one to three days as compared to 2-3 weeks taken to get accustomed to the hard lenses. In the normal soft lens the water content is 40 to 70 percent. The The higher the water content, the more comfortable is the lens to the eye. These can be worn continuously and comfortably throughout the day.

Contact lenses should be removed before one goes to sleep, while swimming and in the presence of irritating vapour. Soft lenses are safer in the dusty environment. A great deal of caution is called for when using eye-make-up like mascara or 'kajal' or other cosmetics like hair spray.

The latest invention is extended or continuous-wear soft lens. Extended-wear soft lenses, also called permanent lenses or Calender lenses, are prescribed in special cases when the patient is infirm or infant who can't handle this eyewear properly. Their distinctive feature is that they can be worn in the eye continuously upto three months. They cost around Rs. 2500. Bifocals have also made their appearance now but the results are not very encouraging.

Insertion and removal of contact lenses is pretty easy and with the first or second trial the patient can learn it and with practice, lenses can be put on or removed in a few seconds only. The patient should clean the lenses with a specially formulated anti-bacterial solution before insertion or else the eye may catch an infection. Sensitivity and sophistication of the hand that inserts the lenses is also very important.

Dr. V.S. Saoji waxes eloquent on the merits of contact lenses vis-a-vis the time-honoured spectacles. He says: "The field of vision of the eye and its depth of focus increase with the use of contact lens and the image size on the retina is nearer normal because of the lenses' closer proximity to the eye."

Optical-and eye-centres (pupilary) are always in alignment irrespective of the position of the eye. Ideally, geometrical, optical and pupillary centres must coincide with each other. But with spectacles, the geometrical and optical centres do not coincide because the current fashion is to go in for large frames.

Contact lenses give an unrestricted field of vision because they move along with the eyes. Ordinary glasses being steady on the face, give a restricted field of vision. Being very close to the eye, the contacts restore the normal size of the image of the object. With the conventional glasses, higher the number, more is the minification or magnification depending upon minus or plus specs respectively. For instance, after cataract operation the magnification is 33 per cent with ordinary glasses, thus giving a lot of discomfort to the patient. On the contrary, magnification with contacts is almost negligible. Hence such patients feel more comfortable with contacts.

Yet another advantage of contacts over spectacles is the significant fact that they arrest the progress of myopia (short sightedness). There being no further increase in the minus number, frequent changes as in the case of glasses are not necessary. Admittedly, contact lenses are ideal for all kinds of sports and activity. They also serve as protective guards to eyes in the event of an accident. Rain, snow, mist or water vapour do not have any effect on the contacts in blurring or obstructing the vision as is the case with spectacles. That contact lenses lend themselves better to correction of deformities and distortions of vision is now fairly well established.

Contact lenses have now come of age and are poised for a great leap forward. Unfortunately, they are at present, essentially an affluent preserve. A lot of wastage of material in manufacture accounts for high costs. Being a precision engineering product, calls for absolute perfection.

But all said and done, contact lenses have a bright future. Being conscious of the ungainly look of the heavily rimmed glasses, constantly sliding down the delicate nose, more and more women are opting for contact lenses — both from aesthetic and utilitarian considerations. This trend is likely to continue—and pick up.

Cures That Endure

Balms for tired eyes

EYES—gleaming, [illegible] black, chestnut or [illegible] tinted, blinking, winking or [illegible] heavily kohl-lined, [illegible] mystic with the come-[illegible] one important thing—care.

There's little use in long lectures on how strong light, draughts, excess [illegible] strong vapours and of course late night films must be avoided to preserve your eyesight. In the [illegible] carousel-courses we plough through every chock-a-block day, we can [illegible] avoid the inevitable watering [illegible] vision or mild irritation of the eye, because the eye being an [illegible] organ is bound to be affected by [illegible] injury or irritant. What it primarily needs is hygiene and a great deal of [illegible]

But that is not all. You need a [illegible] diet of cheese, milk, butter, carrots, greens and foods high in protein. And in addition to this, regular eye-care with a few home remedies can soothe those tired eyes. Make an eye-drop of a little alum in rose water—filtered and bottled. For a sore eye roasted turmeric, a pinch of opium and a squeeze of lemon juice, slowly dried to a soft mass on a low flat, and then made into tiny [illegible], gently dissolved in water and painted around the eyes can give you a great deal of comfort. If your eye is inflamed, kajal from the soot collected from (a sterile wick, placed on a pure ghee lamp is very effective.

Or else you could follow the [illegible] yogic procedure of rubbing your palms together and placing your warm hands gently over the eyes. In fact a good way of soothing tired eyes is by regular palming for at least ten minutes a day. Sit down in a relaxed posture and cover your palms over both the eyes. You can do it anytime, perhaps snatching [illegible] between your office work or [illegible] mailing by bus or train.

If you belong to the category [illegible] glasses—do not despair. [illegible] worn to correct optical [illegible] necessarily indicate any [illegible] ware. Be sure to avoid reading [illegible] light is poor and ensure that you [illegible] enough rest every day.

Chilled cucumber [illegible] on wool pads and placed [illegible] for twenty minutes after a [illegible] work room can work [illegible] aching overworked eyes.

A word of caution [illegible] fanatic fetish who [illegible] the eyes, pencils, [illegible] glass or dark [illegible] [illegible] [illegible]

Perils Of Playing Chess Against Oneself

A review by Dr Shashi Tharoor

IT is an established maxim of literary criticism that one must always judge the book, not the author. Unfortunately Ravi Rikhye does not make it easy for even the best-intentioned reviewer to adhere to this precept. For he launches the first salvo in his *The Fourth Round* with a three-page "dedication" which seems almost calculated to offend. After announcing that were it not for the inadequacies of the Government of India and a number of publishers this would be his fifth book, not his first, he declares that had he been willing to change a single sentence in one of his unpublished works, he would have "become, at age 25, one of India's most well-known authors." If you don't think this sort of presumption is embarrassing, you need only wait for Mr Rikhye's confession that "one of my wives left me because she couldn't sleep at night, with the halo round my head so bright." And there is more of the same to squirm through, including an equally gratuitous homily directed at "all the young women and men who one day will ask me for advice (because this book will make me rich and famous)" and a rather bizarre aside to his infant: "this one will get us a zillion cans of Lactogen, kiddo, heh heh heh." It will not be easy for the unwary reader to emerge from this dedication with an unshaken faith in the author's judgements or balance.

Fortunately the rest of Mr Rikhye's book is rather unlike its beginning. It is, for one thing, less wildly original: the basic idea is that of General Sir John Hackett's "The Third World War" applied to the subcontinent, and the core of the book is more soundly rooted in verifiable data. Mr Rikhye is one of the new war-game theorists who are doing to the study of international affairs what econometricians have already done to classical economics.

The main characteristic of both breeds is an overwhelming technical expertise in a narrow field (in Mr Rikhye's case the conduct of war) almost completely divorced from any understanding of how the rest of the world really works (see, for instance, Mr Rikhye's astonishingly schoolboyish view of Pakistani decision-making.)

The central idea of The *Fourth Round* is an Indo-Pak war in 1984, triggered off by a pre-emptive Indian air-strike on a Pakistani nuclear installation and ending in stalemate just over a month later. The events are naturally fictionalized, but the book is not a novel. Its dust-jacket calls it a "Future History" and certainly it reads more like history than like fiction. There are some imaginative sequences (like the catalytic defection of a Pakistani nuclear scientist to India) but these are few and far between the narrative, without background or follow-up, so that the reader cannot get involved with any of the characters.

The bulk of the book consists of painstakingly prepared, laboriously detailed accounts of imaginary campaigns in Mr Rikhye's war, complete with maps and details of divisional dispositions. Despite sporadic attempts by the author—such as an unconvincing two-page narrative by a fictional American journalist caught up in the fighting—these fail to come alive.

One is therefore left, for the most part, with dreary war-room models epitomised by this battle situation of pg 106: *At Sialkot, most of Pakistan 23 Division and its 15 Division opposed Indian 10 and 26 Divisions. Along the Chak Amru-Jassar axis most of Pakistan 8 Division and part of its 17 Division faced Indian 38 and 39 Divisions. Pakistan 2 Armoured Division less one of its two armoured brigades had been shifted to the Multan sector, where on October 24 India had begun its largest offensive of the war. That left Pakistan two armoured brigades in the area, but because of continuing attrition they were at half strength. Indian armour consisted of two over-strength armoured brigades, the 3rd and 16th....*

How much of this can the general reader (the main target of the book, judging by Mr Rikhye's remarkably candid dedication) take? And what is the point of it all? Sir John Hackett and his company of hawks conducted the same sort of exercise in *"The Third World War,"* but at least they had a few right-wing points to make about NATO preparedness and the direction Western strategic planning should take. Ravi Rikhye makes no such case; indeed, he has no case to make. (In his introduction he says characteristically that in its devotion to "matters purely military" his "work is superior to Hackett's"). Since all the crucial facts and assumptions are Mr Rikhye's alone, the conduct and outcome of the "war" become a sterile ritual, like playing chess against oneself. Except that in this sort of game "real" deaths are involved, and here Mr Rikhye displays the macabre insensitivity to the loss of human life that has come to bedevil the work of the bomb-counter school of international strategic scholars.

For all that, *The Fourth Round* is impeccably researched, and Mr Rikhye reveals a thorough and wide-ranging familiarity with several aspects of India's defence capability. There is an excellent section on defence warfare and a couple of summarising "briefings" which lay the ground for the military actions to follow. The book falls between two stools. As a work of strategy it is excessively dependent on the vagaries of Mr Rikhye's imagination; as a work of fiction it is insufficiently free from the minutiae of military history.

Expertise cannot always beget excellence. One wishes the author all the success and Lactogen he desires. Indeed *The Fourth Round* has already made him well-known. But Mr Rikhye must do better in his sixth (or second) book before he can also be well-respected.

The Fourth Round: Indo-Pak War 1984 by Ravi Rikhye; ABC Publishing House, Rs 75

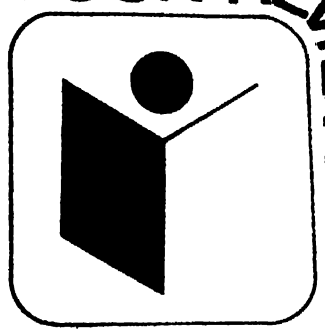
"Sentimental Frivolity"

says Minnie Vaid

FOR a novel that purports to be an exposé of the vicissitudes and travails endured by harassed middle-class urbanites, "Who Walks With Me" is deplorably off the mark.

Valiant attempts are made to analyse or at least exhibit the bleak existence of the city's tired toilers—crowded commuting, dreary job schedules, cramped homes or lack of homes with release possible only through escapist films etc. But these are submerged under the excessive importance given to the trivial crises faced by the book's two main characters. Shanta is a frivolous woman, overfond of "movies" and masculine appreciation. She is predictably torn between her love for materialistic fripperies and her emotional insecurity caused by flitting from one man to another. Pankaj is her "brotherly" friend, a supposedly naive college professor, with a pitifully inadequate command over his subject and language. His ideas of work are restricted to moralistically defending the peccadilloes of his colleagues and drinking tea with his favourite female students.

BOOK REVIEW



And so both meander along, living their mundane lives, which are again reflective of their extreme loneliness, the pathos of which is sadly lost on the reader who has problems enough of his own, having to plod through reams of self-pitying statements and self-created tensions.

In addition to its lack of any kind of plot or structure, the novel contains painful descriptions of the relaxed tempo of the city (which incidentally is Bombay) in the evening, the daydreams indulged in by the frustrated men in the novel, and sundry inanities.

The novel's major flaw lies in its schoolgirlish language (though even schoolgirls may take umbrage at this) and non-existent style—colloquialisms are used at random with jarring effect—and the book is replete with grammatical errors.

A subject (the seriousness of the seemingly mundane problems of a busy city) which calls for a certain amount of sensitive handling is instead superficially glossed over to make room for sentimental frivolity.

"WHO WALKS WITH ME" by Maheep Singh; Vikas, Rs. 75.

Here it is!
New Cherry Instant Shine – the liquid shoe polish with the unique 'instant' formulation that's taken the world by storm. Just what you've been looking for – a super shine ... super fast.

And it's so easy to apply, you can do it yourself. Simply dust your shoes and after shaking the bottle, press the built-in sponge applicator right on to them. As the polish flows out, spread it evenly. Then sit back – and watch the sparkle come through!

Easy, isn't it? No mess, no fuss. Just shine up and go – instantly. Anytime. Anyplace.

Available in black and dark tan.

New **Cherry Instant Shine**

No mess. No fuss.
Just a super shine . . . instantly.

Endangered Terracottas Of Vishnupur

by Hugh & Colleen Gantzer

RECENT questions in Parliament point to our legislators' increasing awareness of the need to preserve our heritage. Monuments all over India are being destroyed by "progress", vandals or mere neglect: the Archaeological Survey of India is woefully under-funded for the enormous task before it.

The danger is greatest to Vishnupur. For the Vishnupur temples are delicate and brittle. If they are not protected with great vigilance, soon, they will be destroyed beyond recovery. And the Vishnupur temples are too precious to be lost.

They had drawn it from the earth, those ancient builders, and from the timeless little villages around. Like twin village huts, joined, it sat on a plinth. Its walls had the roughened texture of reed matting; its doors were framed in the bent-bamboo idiom of rural architecture; its roofs were cloche-curved in the Bengal village style. But no bamboo had been used in this expression of a folk ethos. Every part of this exquisite shrine—plinth, walls, doors and roof—every bit of it had been created out of the rich, wet, clay of Bengal. Each soft brick had then been delicately carved. And then the carved bricks had been fired in kilns till they hardened to the scorched red of terracotta. Elephants, trunks raised, trumpeted defiantly; lions, manes bristling, roared in reply. The court, with its sycophants, seers and serfs went about their intrigue-filled lives with smooth urbanity. Above them, Hanuman's monkeys trooped in homage to an enthroned Rama. And then, all by himself, a muscle-flexing warrior struck a heroic pose.

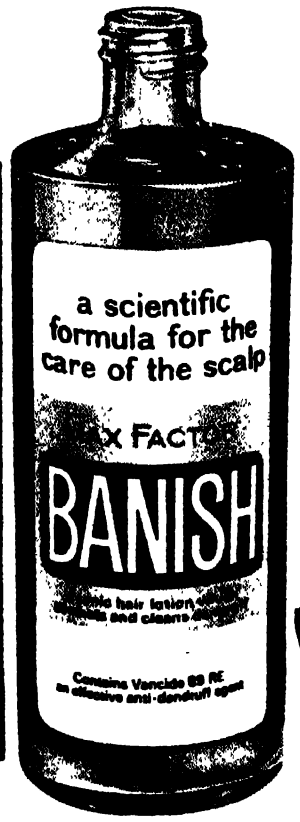
It was a tour de force of an earthy and creative age.

And it will all be lost unless we do something about it now..... ■

Embarrassment comes in white dandruff flakes

BANISH gets to the root of it

BANISH



BANISH, the hair lotion that controls and cleans dandruff, relieves itchiness and discomfort. BANISH contains **Vancide 89 RE**, a special anti-dandruff agent that's safe and effective.

Just clean your scalp and rub BANISH in. No special rinsing or massage necessary. No need to shampoo your hair each time you use BANISH. You can use shampoo just as often as you normally do! And BANISH won't even interfere with your regular grooming or beauty aids! With BANISH in your hair, watch your dandruff problem vanish!

Only from the beautiful world of Max Factor . . . naturally!

Above Rise

by Anjana Appachana

In the matrimonial advertisement her husband's family had insisted that they wanted a working girl. What they really had in mind was bonded labour.

Illustrated by P. B. Kavadi

LAST evening my husband told me that he was tired of seeing me looking so washed out and sick. When I come back from the office the least I can expect is a smiling face, he said. You don't even give me that. It's bad enough that the house is in a mess, but you don't seem to have time to entertain my friends properly either, when they come home. They must be wondering what sort of a wife I have. I tell you, I'm tired of all this. And he walked out of the house slamming the door behind him.

My baby looked up and went back to her toy. My darling, I told her, my *rani beti*, do you like the toy, do you like it baby? Next time I'll get you a big doll that will open and close its eyes just like you. I nuzzled her and she gurgled with pleasure.

What I say doesn't even affect you, groaned my husband, returning to the room. Look at you, your face unwashed, your hair uncombed, lying on the bed like that, that's not what I married you for. For heaven's sake get up and prepare something, my friends are coming home for tea. Today? I said. Yes, today, today, he mimicked. Is the Maharani too busy to look after them?

I got up and went to the kitchen. O God, where do I begin? the dishes had to be washed, the dinner to be made, also snacks for his friends... I put the potatoes to boil, best that I made some *aloo sabji* and used the rest of them for *tikkies*. Then I took out the *sooji* to make *halwa*, that should be enough for them. Why did they have to come today? I was tired after a day at the office. The dishes were so dirty, I didn't expect my mother-in-law to wash them, but she should have soaked them in water at least. I suppose I should be thankful she remembered to fill the buckets before the water finished. Please God, don't let the electricity go off too, I prayed, these power cuts will be the death of me.

I put the *dal* in the pressure cooker and began the dishes. I was so tired. How could I smile... what was there to smile about?

The bus back home had been so crowded. More so than usual, because the previous bus was held up by some college boys who were protesting about the irregular service. I could hardly get in and once I got in I couldn't move.

It was horrible. I don't understand these men. Even if you are sitting they edge closer and closer to you and you can't do anything. When the bus reached my stop I couldn't get out because I was stuck in the crowd and by the time I reached the door, the bus had started moving again. I told the driver to stop and he said something rude, but did. The air, how fresh it was, and the slight breeze against my face so cleansing. I walked home slowly, this is the only time I ever get to myself. Sometimes I wished that I didn't know typing so that I didn't have to work, but if I didn't work we couldn't make ends meet. In my husband's matrimonial advertisement his family had insisted that they wanted a working girl, so I suppose it wouldn't be fair at this →

stage to say that I just couldn't cope. When I was working before marriage, Ma would pack me a lunch of soft *parathas* with *sabji*. And when I came back she would make me a cup of hot tea and ask me how her *rani beti* was. Then she would talk to me and tell me all the day's gossip... how lazy the *jamadarani* was... how Mrs Sharma next door had a fight with her husband... I always had a good laugh about Mrs Sharma's fights, she had such a loud voice that very often we could hear her in the house. I wondered what she fought about. Sometimes I wish that I could fight too but I don't know how to, so whenever I'm upset I just go to the bathroom and cry instead.

They all think that nothing bothers me. Let them. I long for Ma to come here and stay with me for some time but when I last wrote to her and asked her to do so she was very angry. *Beti*, she wrote, now you are a married woman and you must understand that a mother does not stay with her daughters, it is not the right thing to do. I miss her so much. No one talks to me here, oh they do in one sense, but not like Ma.

MY mother-in-law called me then and I went to her room where she was lying down. She is always lying down. What are you doing, she asked me. She always wants to know what I'm doing whether I am in the kitchen or in the bathroom. Cooking, I said. Do you want any help, she asked as she did every day. No mummy, you rest, I replied as I did every day and returned to the kitchen.

I remember once when I had said that I did need some help (some people were coming over for dinner that day), she never let me live it down. This poor child is still young, she kept telling the guests, she just can't cope with the housework. She smiled gently as she said this and the guests all looked pityingly at me. Later my husband reproached me for letting such an old woman do all my work. I felt so guilty.

The potatoes were ready. I kept half of them for the *sabji* and began to mash the other half for the *tikkies*. Vegetables were so expensive these days, not to mention essentials like sugar. With the fall of the last government we all thought that prices would go down, one needs another emergency to get our country out of this mess, my husband had said as he cast his vote. But they've gone up still further. Once economy meant buying a saree or two less, now we have to cut down on things like fruits and sugar.

Household stuff is almost impossible to buy. At the time of my marriage my parents gave me a refrigerator and a TV set. We would never have been able to buy them on our own. In the beginning my family was against giving the set, but my husband's side insisted and as they weren't taking any cash my parents said that they might as well. Still, it was all so expensive... they spent about Rs 30,000 on the wedding and even then people said that they could have married me off in better style, considering that there were just two of us.

Now my husband has taken out a policy for our daughter so that when it matures in another 20 years, we will have Rs 50,000 for the marriage expenses. The price of gold has gone up so much... my parents gave me four gold sets. I doubt if I can give my daughter even two. God knows how we'll ever have money to build a house after that. And house rents are soaring, too, our tiny two-bedroom

house costs us Rs. 900 a month and that is supposed to be cheap! No wonder people are corrupt... how else can they build such huge houses in a city like this? That way my husband is not bad, he doesn't take bribes, but when he sees other people doing it he gets mad and takes it out on me.

I put the oil on the gas and began frying the *tikkies*. They should be here any minute. O God, time for baby's milk... I put the milk to heat and got the bottle ready. Is everything ready, asked my husband from the next room. Almost, I replied.

He never entered the kitchen. On principle. He can't even heat a glass of milk. That's a woman's job, he said when I once asked him to heat the milk for the baby while I was engaged in some other work. Once when I was ill and my mother-in-law away, there was no one to look after the house. What chaos. My husband lived for two whole days on bread, butter and cheese, while I, in bed was given the same. I had no alternative but to get well and stagger about the house cleaning up the place and washing the dishes which had mounted alarmingly. During those two days he used twelve cups and saucers, six plates, seven glasses, four knives, eight spoons and two forks—all of which awaited me. Also two trousers, two shirts, four banyans, one pair of pyjama kurta and three handkerchiefs. Thank God you're all right, he sighed when he heard me in the kitchen that evening. It is the nearest he has ever come to paying me a compliment—if you can call it one.

Well, the *tikkies* were ready now. Just a few minutes for the *halwa*, too. I quickly gave baby her bottle, went back to the kitchen and heard my husband yell that they had come. For heaven's sake get dressed, he said coming into the kitchen, you should have finished everything by now, once you get stuck in the kitchen you get stuck, learn to be systematic.

I rushed to the bedroom and feverishly washed my face and combed my hair. Should I change my saree or not... might as well, or he'd say something again. I changed and went to the drawing room with a smile.

NAMASTE, Bhabiji, namaste, his friends said, nice smells coming from the kitchen. Oh it's nothing, I murmured, what will you have, tea or coffee? Please don't bother, they said. No bother at all, I replied, you must have something. Oh well, said one, I'll have coffee, the other said he would have tea, but not to bother about anything else, no formality please. No, no, not at all, I said and went to the kitchen.

I put one vessel for the tea and another for the coffee. Why couldn't they have asked for the same thing? Sometimes I felt glad that I was working, it provided some variety to this life of cooking and washing and cleaning. In the morning I got up at 5 am, made bed tea for everyone, milk for baby, then got breakfast ready for the family. Sometimes my husband wants *parathas*, sometimes toast and eggs, sometimes he gets this craving for *dosas*. Then I pack my lunch for the office, make the beds and rush to catch the bus to work. No time to talk to baby or cuddle her.

I took the tea and coffee to the drawing room. Thank you, thank you, they said, perfect weather for hot drinks. I looked out of the window. It was raining... I hadn't even known. Yes, perfect weather for tea and *pakodas*, they exclaimed, Good idea, excellent idea, beamed my husband, let us have some *pakodas*. Ah, this is what you would call doing poetic justice to the weather. So I went to the kitchen to do poetic justice to the weather.

When they were ready I put the *pakodas*, *tikkies* and *halwa* on the tray and took it to them. Wonderful, wonderful, they said. What a feast you have laid out for us, you really shouldn't have bothered. No bother, no bother at all, I said. So, they enquired, how is your office? Fine, I smiled.

It wasn't. Not now. In the beginning when I started working, it was all so interesting. I met new people, got a salary, felt independent. But people are so strange. One day I happened to talk to one of my colleagues longer than I usually do. He was telling me about a book that he was reading and I got so caught up in what he was saying that I hardly realised how time passed. So you had a nice chat did you, the girl who sits next to me said that evening. Yes, I replied, and then something in the way she was looking at me made me go red.

The next day when he lent me the book I noticed another of my colleagues (male) looking meaningfully at me. Now whenever by chance I happen to talk to him everyone in the office watches and I feel so wretched. The men, especially, gossip so much. At lunch time they sit amongst themselves and giggle. They seem to

notice everything, who is talking to whom, who is wearing what and who the boss favours.. everything They never seem to discuss books or music... and I miss both. We get bored *yar*, they say, we don't know what to do on week-ends Oh how I long to be bored Or just lie in bed with a book and listen to music. That's my idea of heaven

It's nice to be independent, said my husband's friend, women like you will change the face of this country Very nice *pakodas*, very nice indeed Thank you, you're very kind I murmured. We don't feel like leaving, he added as he settled more comfortably into his chair Stay for dinner, said my husband at once, then we can all relax and *gup-shup* That will be too much of a bother for your wife, said his friend No problem, no problem, said my husband heartily, what is there, the food is ready, there is no such formality in this house

They all looked at me Of course, I said, it's no bother. I excused myself and went to the kitchen Would there be enough food for them? I felt like flinging the *dal* and *sabji* into their faces and was shocked at the force of the feeling My husband followed me into the kitchen Will the food be enough for them? It had better be, I replied. What is wrong with you, stop acting difficult, he hissed Stop breathing down my neck, I said, you invited them, not I This is the limit, my husband said, I don't understand you. Is this the time to make a scene, why don't you make another *sabji* and some *khir*? Because there is no other *sabji* and no milk for *khir*, I replied.

We stared into each other's faces I should have expected this, said my husband. Even my friends are not welcome in this house If you are not prepared to look after them you should have warned me earlier This last minute hysteria I will not stand for

I sank back against the sink Then go and get the milk and *sabji*, I said How do you expect me to go, he said furiously, then who will look after them? That's your problem, I said, we don't have a servant You're always creating problems, said my husband, this is what comes of being unsystematic. But, you told me not to buy more vegetables or milk than was absolutely necessary because of the prices going up, I reminded him and this made him even angrier

What is the matter, can I help you, asked my husband's friend walking into the kitchen No, no, please, I said, I can manage I wondered what he would do if I had said, please help, the thought made me smile and my husband, seeing my face, gave a sigh of relief and ushered his friend out of the kitchen

FOR dinner there were *puris, aloo, dal, karelas* and mangoes with the cream that I had been collecting for the week's butter. I was so tired by the end of it that I could hardly eat Then I put baby to sleep and gave them all coffee They finished the coffee and said, *chalo, chalo*, let us go for a movie. Now, I said? Of course, they said, if we rush we can get tickets for the night show, *chalo*, let us go Let us, agreed my husband, these impromptu decisions are always so enjoyable, one shouldn't always plan

I have to wash the dishes, I said Oh do that tomorrow, they said, you mustn't always work so hard But I have to go to office tomorrow I said, and I'm tired Don't make a fuss, my husband replied, you are not the only one who has to go to office, even I have to go That is the trouble with you, you don't know how to enjoy yourself And Mataji will look after the baby, don't make *her* an excuse now *Chalo, chalo*, let us hurry

I put the dishes in the sink and then we rushed The tickets were not available so we bought them in black—eight rupees each In spite of that we were just four rows away from the screen As the hero and heroine sang their first song to each other I fell asleep A deep sleep My husband woke me up when it got over They were all amused Even here she sleeps, said my husband indulgently

We reached our colony at 1 am, just managed to get the night service bus back home I slept in the bus too As we walked back home from the bus stop my husband's mood expanded What a night what a night, he exclaimed He stopped and looked up at the heavens

Palace-roof of cloudless nights!
Paradise of golden nights!
Deep, immeasurable vast

he quoted dreamily I leaned sleepily against his arm and he looked at me with something akin to pain Sleep always sleep, he said, why can't you rise above such purely physical reactions .. you lack soul

When we reached home I made the beds and sank into mine with a groan of satisfaction Heaven The trouble with you, said my husband, is that your whole attitude is wrong You'll never get tired if you change your attitude to work Learn from Kahlil Gibran, and he quoted—

Always you have been told that work is a curse,and labour a misfortune
But I say to you that when you work you fulfill a part of earth's further dream, assigned to you when that dream was born,
And in keeping yourself with labour you are in truth loving life,
And to love life through labour is to be intimate with life's innermost secret

That is poetry, philosophy, truth, mused my husband So were the *pakodas*, I sighed and slept ■

Refreshing water 24 hours a day...

with WASP Pumping systems.

No matter where you live you can get water with full force from any source—underground tank, deep borewell or open well (as deep as 85 metres), lake, river, etc

Wasp has the widest range of pumps—Centrifugal, Self-Priming, Ejecto Jet Pumps, Submersible Pumps—to suit every requirement We offer sound technical advice on how to select the right pump We have a countrywide network of branches and dealers to give you quick and efficient service

The Captains Of India

THIS is the beginning of a refresher course on the Modern History of India. Whether we have made any history in the cricket field or not, you have the benefit of history in cricket jargon.

Now the match starts...

The then British captain, a right-handed royal bat, sent us out to field after winning the toss. But instead of batting, he created a sensation by declaring the Indians fielding at the deep-third-man boundary and the square-leg boundary *(see map)* to be Pakistanis! Then he boldly pushed along the score by deliberate padding despite rioting by the crowd. That wasn't cricket, of course. Still Lord Mountbatten was declared Man of the Match.

Control Board Chairman Gandhiji was extremely upset but no one was in a mood to listen to him. While he went away to calm the crowds at the Eastern Stands, Chacha Nehru became the first Indian Captain.

This great all-rounder had always thrilled the crowd. He is still a statistician's delight. He entertained and at the same time tried to educate the crowd. He planned and built many stadia, big and small, for the crowd. He toured all over the world and gained fame as the best non-aligned and non-maligned captain.

His love and affection for the crowd were essayed in every shot he played and every ball he bowled. His only miscued shot was in what he thought a friendly match with China. His long innings ended only when he ran himself out.

Shastriji, who followed, was a freak spinner. He had an uncomplicated rhythm and he loved to bowl to a conventional field.

Ill At Ease

He seemed to be ill at ease with captaincy at first but, in the fierce match against Pakistan, he rose above his height. When the going was good, the Russian umpires stopped play following a bad-light appeal by Pakistan. Just as he was settling into captaincy, Shastriji was fatally hit by a mysterious ball while touring Tashkent.

The Control Board (otherwise known as "The Syndicate") had become powerful by now. They made old Morarji Vice-Captain and gave the cap to Nehru's daughter in the fond hope that she would deliver only maiden overs in her spell. Some hope! When they wanted to remove her from the captaincy, she hit them all out of the ground!

She played a distinguished innings all right, with occasional sixes, a few fours and lots of singles. She carved out a resounding victory in the 1968 Pakistan series and drove them out of Bangladesh grounds.

She also hit an atomic sixer in a peaceful Rajasthani match. But towards the end of her "first" innings, she had become so despotic that she could not bear to hear a "No" even from an umpire!

When she was declared out LBW by Umpire Allahabadi to a Raj Narain yorker, she refused to leave and stood her ground. Moreover, she allowed the crowds to spill into the grounds and sent all the other players to the pavilion.

To top it all, she called for a runner. She and the runner went on hitting sixes and went on bowling bouncers all over till they found more crowds outside the stadium than inside. Clearly the game was over.

Old JP reluctantly took over the Chairmanship of the Control Board, but the struggle for captaincy was so strong that he could not push in his bearded disciple. While both Charan and Ram were warming up to go to the crease, in came Morarji, fully padded up.

If at all Morarji got time to play, he did it in his unbending style. He believed he was the opening bat, opening bowler, night-watchman, even the umpire, all rolled into one. He banished the "drinks" interval thus incurring the wrath of both the players and the crowd.

He advised the bowlers to be fearless but, when they attacked, he threw the ball back at them. Once Raj Narain delivered a well-concealed googly at him and Morarji declared it wide—aimed at his body! When Raj Narain continued his spate of googlies, Morarji promptly banished him from the grounds along with his Jat team-mate.

The kisans in the crowds rallied round these two—and how! King Killer Raj Narain continued to bowl armers and leg-breaks from the stands!

While Morarji was at the crease, he spent most of his time taking guard or covering his stumps or playing with his fads (sorry pads), but the scoreboard showed nothing.

On the other hand, ex-Captain Indira scored a painstaking century at a Chikmagalur tie, while the discarded vice-captain scored 77 huge runs at a New Delhi match. But Morarji was neither able to get on with the game nor inclined to hand over the captaincy to the waiting Ram. Ultimately, after surviving several catches and stumping chances, he retired hurt!

The President of the Control Board tossed for a new captain. However, the ambitious Charan held up the coin midway and put it into his pocket. In his brief spell, Charan remained Non-Playing Captain. He resigned even before entering the stadium for his first Test. The disappointed President asked the crowd to choose the captain themselves.

Ex-Captain Indira was watching with her pads on. She immediately took to the field and hit sixes and fours with her bare hands!

Most of the spectators were thrilled to have their favourite captain back in the field and breathlessly waited for her to display her famous square-cuts and straight-drives, but she was content to play half-hearted cover-drives. Her thoughts were more on building up a team of "loyal" players.

She has shuffled and reshuffled her team, but seemingly to no avail since the rules have remained unchanged. She would like to change the rules but the pitch is also taking a funny turn with every passing day.

Rival teams have begun attracting crowds.

Matches are being cancelled due to the law-and-order situation.

Her own team-mates are carping and cavilling. Why not? Any player who scores a century is automatically shunted out of the team!

The crowd is waiting for her to come up with an inspired knock, for her to play her natural shots.

Will she or won't she?

The umpire alone only knows!

—S.M. Sivaraman

THE GULLS COME A-CALLING

THE Gazetteer of Bombay City and Island, published in 1909, devoted hree full pages to listing a large variety of oth land and water birds then found in lombay. Over the years, industrial pollu- ion and indiscriminate cutting of trees as driven away most of them. The gull as survived the onslaught, but the num- er visiting the city is decreasing each ear. They arrive around Diwali and emain in Bombay waters till the onset of he monsoon.

Distinguished by slender bodies and ong, narrow, pointed wings, gulls belong o a group comprising 85 species. Only wo species visit Bombay—the black- eaded gull and the brown-headed gull. Gulls cannot dive deep but they float uoyantly on water and fly and soar wonderfully. It is a joy to watch their erobatics, following one another or walt- ing round, taking of and touching down. With the arrival of the gulls, Bombay's otherwise dull and drab seascape is gay nce again.

India, a country with 700 million people. A large work force. In which Nirlon has been helping create a self-sustaining economy. We have invested heavily in Research and Development for new methods and products, bearing import substitution in mind.

In textiles, we are Nirlon Nylon Yarn — our largest contribution, and Nirester, India's first polyester yarn. In the automotive industry, we are Nircord, India's first nylon tyrecord giant. In power and materials transmission, we are Nirbelt Conveyor, V and Fan Belts. In fishing, we are the world-wanted catch of fishnet twine.

Growth of these high-technology industries bears testimony to our continuous innovation and diversification. Along with industry, Nirlon gives impetus to India's developing regions, by situating plants, their infrastructure and employment and welfare facilities around them as in Roha.

We back our innovative spirit with our management teams, technology and R&D breakthroughs ... unleashing further growth. For indigenous materials, our people and industry.

1958	:	Company born

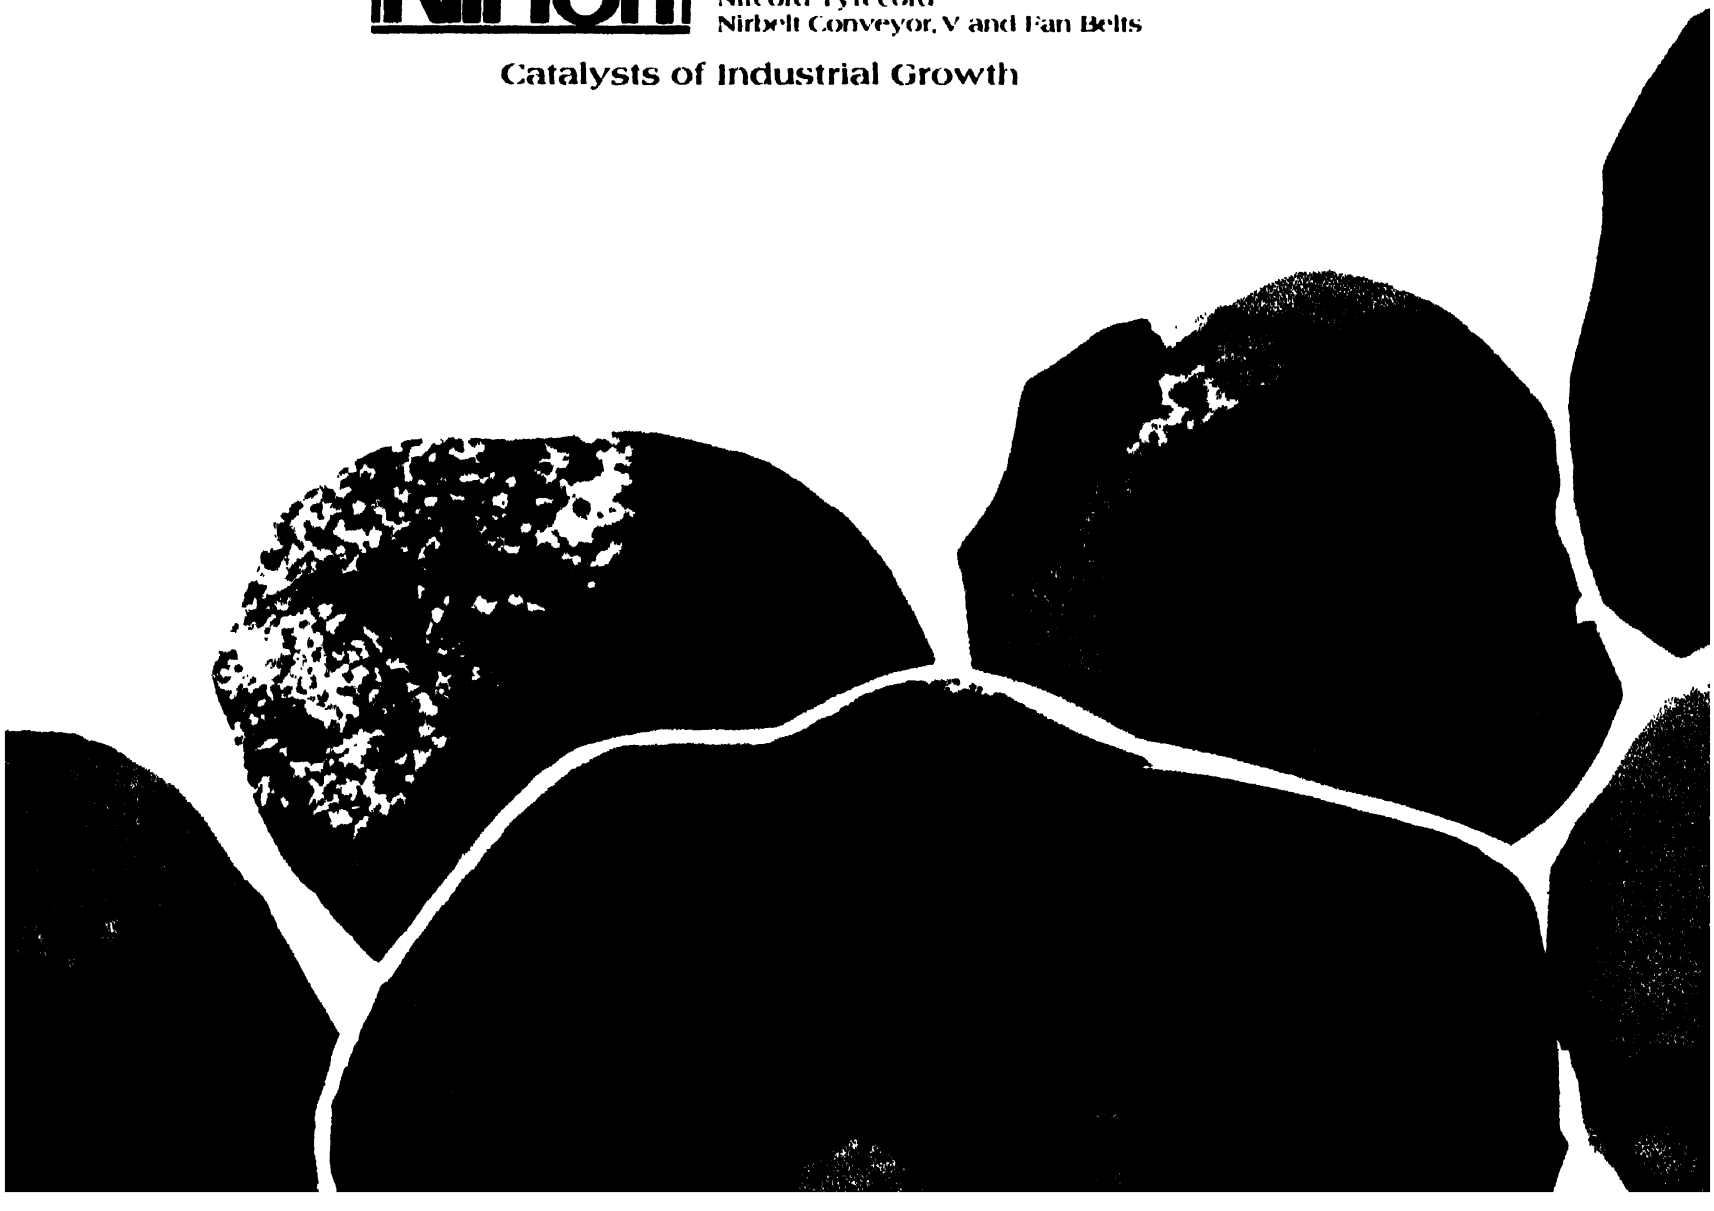
Catalysts of Industrial Growth



We've worked for 25 years
as though India's growth depended on it

THE Duc de Nivernois, a French diplomat who was a widower, had struck up a firm friendship with the widowed Countess de Rochefort, whom he visited every evening without fail. This constancy became a joke among his intimate friends, one of whom suggested to the Duc that he'd save a lot of footsteps if he married the lady.

"Oh yes, certainly," his Grace agreed, "but where should I then spend my evenings?"

TWO veterans were discussing a political busy body who usually campaigned on the sole issue of his war record.

"The trouble with Peabody," one observed, "is that he's always yelling about being ready to spill his last drop of blood—but he took mighty good care of the first drop."

"I dunno," said the second veteran. "In France, he was always where the bullets were thickest."

"Where was that?"

"In the munitions depot."

"WHAT are you studying in college now?" asked the fond mother of her son, who was a freshman.

"We have just taken up molecules."

"That's fine. I hope you will like them. I always tried to get your father to wear one, but he could not keep it in his eye."

CLERK (to customer): "No, ma' am, we haven't had any for a long time."
Merchant (angrily breaking in): "We have plenty in reserve, ma'am, plenty downstairs."
The customer bursts into laughter and leaves the shop.
Merchant: "What did she say to you?"
Clerk: "We haven't had any rain lately."

A STRUGGLING author had called on a publisher to inquire about a manuscript he had submitted.

"This is quite well written," admitted the publisher, "but my firm only publishes work by writers with well-known names."

"Splendid!" shouted the caller in great excitement. "My name's Smith!"

"HOSKINS, the cook advises me that you were badly intoxicated last night and that you were trying to roll a barrel out of the basement. Can this be true?"

"Yes, my lord."

"And where was I during this time?"

"In the barrel, my lord."

A SWEDISH farmer was in search of a horse. "I've got just the horse for you," said the liveryman. "He's five years old, sound as a dollar and goes ten miles without stopping."

The Swede threw his hands skyward.

"Not for me," he said, "not for me. Aye lif eight miles from town, and mit dot horse aye haf to valk back two miles."

THE two tramps were stretched out on the green grass. Above them was the warm sun, beside them was a babbling brook. It was a quiet, restful, peaceful scene.

"Boy," mused the first tramp contentedly, "right now I wouldn't change places with a guy who owns a million bucks."

"How about five million?" asked his companion.
"Not even for five million," drowsed the first tramp.
"Well," persisted his pal, "how about ten million bucks?" The first tramp sat up.
"That's different," he admitted. "Now you're talking real dough!"

IT was an opening appearance of the Philadelphia Symphony Orchestra, with Stockowski at his most majestic. The music was crashing and thunderous, when suddenly there fell an abrupt and complete silence, beginning a brief but absolute rest in the music. Out of the stillness there came a high pitched feminine voice, full of reproach.

"But," it said "I always fry mine in lard."

"I HOLD in my hand here a bright and shining silver dollar," announced the candidate to a group of young Americans. "That dollar goes to the lad who is levelheaded enough to belong to the same party as I do."

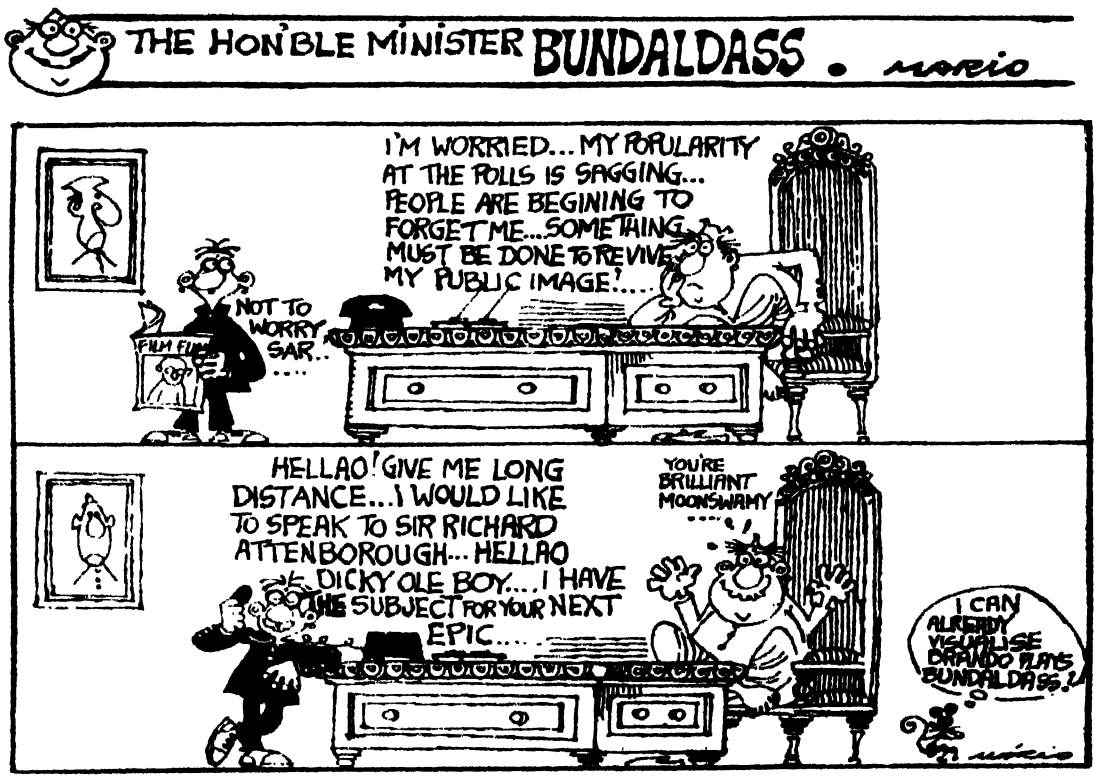
Then turning to a bright-eyed urchin at his left, he asked: "What's your politics, son?"

"What's yours?" piped the young opportunist.

"HE drove straight to his goal," said the political orator. "He looked neither to the right nor to the left, but pressed forward, moved by a definite purpose. Neither friend nor foe could delay him nor turn him from his course. All who crossed his path did so at their own peril. What would you call such a man?"

"A truck driver," shouted someone from the audience.

PRISONER: "The judge sent me here for the rest of my life."
Prison Guard: "Got any complaints?"
Prisoner: "Do you call breaking rock with a hammer a rest?".



HE: "If you'll give me your telephone number, I'll call you up sometime."

She: "It's in the book."
He: "Fine! What's your name?"
She: "That's in the book, too."

AN Indian in Arizona returned to the village for the third time to buy half a dozen bottles of cough syrup.

Druggist: "Someone sick at your house?"
Indian: "No sick."
Druggist: "Then what on earth is all this cough syrup for?"
Indian: "Mm-me likeum on pancakes."

THE hotel clerk was astonished to see a guest parading through the foyer in a pair of pajamas.

"Hey! what are you doing?"
The guest snapped out of it and apologised: "Beg pardon. I'm a somnambulist."
"Well," sneered the clerk, "You can't walk around here like that, no matter what your religion is."

BOARDER "Ah, your steak is like the weather this evening, madam, rather raw."

Landlady: "Indeed? By the way, your account is like the weather, too, unsettled."

A MOTORIST stopped in at a little restaurant late one evening and ordered a cup of coffee.

"Without cream," he added, as the waitress headed for the kitchen.

Presently the waitress came scurrying back, empty handed and apologetic.

"I'm awfully sorry, sir," she said. "There is no more cream. Do you mind having it without milk?"

"WHY, Bridget," exclaimed the housewife, "I can write my name in the dust here."

"Deed, ma' am," replied Bridget, admiringly, "that's more than I can do.There's nothin' loike education after all, is there, ma' am?"

Dahling, *where do you think the newshounds get all the scandal about us filmfolk?*

EDITOR: Did you write this poem yourself?
Contributor: Yes every line of it.
Editor: Then I'm glad to meet you, Edgar Allan Poe, I thought you were dead long ago.

FIRST Soldier: "What made you volunteer?"
Second Soldier: "Oh, I had no wife and I love a good scrap. Why did you do it?"
First Soldier: "I have a wife and I'm looking for peace."

SAID a monk, as he swung by his tail,
To the little monks, male and female,
"From your off spring, my dears,
In a few million years,
May evolve a professor at Yale."

JOHN Smith happened to witness a minor hold up. In due time, the police arrived and one officer asked the witness his name.

"John Smith," said Smith.

"Cut the comedy," snapped the cop. "What's your real name?"

"All right," said Smith, "put me down as Winston Churchill." "That's more like it," said the officer, "You can't fool me with that Smith stuff."

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

Much depends on luck. The events of the week affect your career favourably. Those who were opposing your schemes and projects in the past will now wholeheartedly support you in everything you do. Coincidence brings you into contact with influential persons on Sunday whose good-will you will secure.

AQUARIUS
(Kumbha)
Jan. 20-Feb. 18

Quite an enjoyable week both in personal life as well as on the social front. Your presence will be much in demand in political fields. Business in general is satisfactory. Your expenses on luxuries, cosmetics and good living will be on the rise. Do not hesitate to express your views. Do not disclose the details of secret talks.

PISCES
(Mina)
Feb. 19-Mar. 20

The week promises much on the vocational front. The domestic atmosphere, too, is pleasant. Important business transactions early in the week prove profitable. Your hunches and intuition may give you an insight into the coming events. Midweek is excellent for group activities. You may have to go on tour at the weekend.

ARIES
(Mesha)
Mar. 21-Apr. 20

Material wealth and professional gains are yours this week. Social contacts will flourish and you are likely to grace a function or lead a team of experts early in the week. You will meet foreign experts midweek. Work life will be pleasant. Deal with seniors and elders carefully and with tact. Saturday may bring a windfall.

TAURUS
(Vrishabha)
Apr. 21-May 20

The accent this week is on physical and mental well-being. Your inherent confidence will help you get through difficult times. New contacts developed will help to boost up business. Certain secret information coming your way early in the week will help you secure additional gains in business.

GEMINI
(Mithuna)
May 21-June 20

A somewhat monotonous week. Utilize the time at your disposal to clear the backlog and sort out family tangles. New business offers are in the offing but will materialise only in the next week. The early part of the week will find you on tours. Minor health upsets take place late in the week. A piece of good news comes your way on Saturday.

CANCER
(Kataka)
June 21-July 20

You will be in two minds about breaking existing ties and forging new relationships. You are better advised to maintain status quo until you have a firm grip on the situation. Curb unnecessary expenses on luxuries. Every step in business should be taken with care and precaution. Do not be forthcoming with strangers.

LEO
(Simha)
July 21-Aug. 21

Irrespective of age and sex, youthful enthusiasm prevails upon you. Sportsmen and artists will float on the tide of popularity. Financially, this is a most satisfactory week. Tuesday finds youngsters involved in a chase and challenge game. Your hunches will prove profitable. Health upsets are likely late in the week.

VIRGO
(Kanya)
Aug. 22-Sept. 23

Domestic life is under favourable stars. You will be in a generous mood. Near and dear ones will rely upon you to solve their problems. Consult seniors while dealing with strangers. Guests and relatives keep you busy early in the week. Midweek is good for financial gains. Avoid speculation.

LIBRA
(Tula)
Sept. 24-Oct. 23

A thrilling and exciting week. Friends plan an outing early in the week and you join them with a great deal of enthusiasm. Writers and sportsmen will be at their best. Neighbours and relatives tax you heavily for time and money, midweek. The ill health of seniors may cause much tension. Saturday is good for finances.

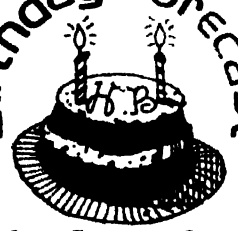
SCORPIO
(Vrishchika)
Oct 24-Nov 22

You are likely to be thrown into a new environment and may therefore feel like a fish out of water. Your imagination and tact will help you to mix well with new colleagues and associates. You may strike a challenge early in the week and win over your rivals. Money by a stroke of luck comes your way early in the week.

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20

Adopt a sporting and jolly outlook on life. Your judgement and hunches will prove right. Physicians, surgeons and sportsmen will be at their best early in the week. Midweek is good for a social get-together. Finances are good as well. Deal with strangers and money matters carefully. Clear all backlog.

Birthday Forecast



Sunday, January 9

Quite a favourable year for most of you. A stroke of luck in March will enhance your status and remarkably improve your business. Be cautious between April and July. Another spell of good luck is in store after October. November is excellent for finances.

Monday, January 10

You will enjoy a lot of success in your chosen profession. Sports, music, literature and newer art forms will keep you occupied. May, June and July are slightly disturbing when you should concentrate on your duties and responsibilities.

Tuesday, January 11

A wonderful year. Rare achievements and distinctions await most of you. The artistic and business faculties will render rich dividends and enable you to turn a new leaf in career. Mid-1983 is slightly tricky.

Wednesday, January 12

This is a year full of novelties. Do not break existing ties while forming new alliances. Business in general will be profitable. July and August are months of temptation, so be on guard.

Thursday, January 13

A confusing and perplexing year. Try to maintain status quo until August. In July you are likely to make changes with a view to improving your position but things may go wrong.

Friday, January 14

The lunation on your birthday does not indicate smooth sailing. Be more sporting than critical and prejudicial. In June, July and December guard against possible accidents.

Saturday, January 15

This is going to be a far more satisfactory year than the earlier one. Politicians, artists and sportsmen will secure brilliant success in their respective fields.

STAR FOCUS

1983 For You—I

Capricorn: A lucky breakthrough in career, profession and vocation is foretold. Politicians and heads of institutions will progress wonderfully in the course of the year. Budding industrialists and amateurs will establish themselves in their respective fields. They will be listed among the successful ones. Seniors and elders will extend their co-operation and assistance.

Aquarius: In the next 12 months a fine blending of your efforts and good luck will effect long-awaited changes and important decision-making. For some, it is a challenging year since they will have to fight hard to turn things in their favour. Youngsters should make stringent efforts to acquire additional qualifications and settle in a career. Sportsmen will do well.

Pisces: A happier and more prosperous year than 1982. Physicians, actors and those connected with cosmetics and advertising will make rapid strides until April and after October. Musicians, astrologers and mystics will flourish beyond expectation. The prestige and popularity which you have temporarily lost will be regained. The period between May and August is tough.

Aries: Your solar horoscope does not contain any aspects indicating restrictions, restraints or curbs. Although no retrograde steps are in evidence, you are likely to be confronted with difficult problems and confused while expanding your business activities. It will be prudent to maintain status quo, in order to avoid any possible disappointments between May and August.

DIPLOMA IN MEDICAL LABORATORY AND X'RAY TECHNOLOGY

- Medical Laboratory Technician Course -8 Months
- Medical X ray Technician Course - 10 Months
- A Combined Course in Both the subjects with seperate Diplomas - 1 Year

Applications are invited in the prescribed form for admission for the above REGULAR AND CORRESPONDENCE COURSES Commencing shortly. Practical trainings are given in well established Laboratories and in 300-M. A. X'ray Unit under the direction of the Pathologist and the Radiologist.

Radiologist

Season's Greetings

from

ALLAHABAD BANK

(A Government of India Undertaking)

This Week's Bridge
State Of The Game

RECENTLY, at a Bombay Duplicate tournament, I came across the following deal, which has more than one point of interest:

West dealer, E-W Vul.

West	East
♠ K76	♠ A5
♥ 92	♥ KJ10543
♦ KQ3	♦ AJ
♣ AKJ63	♣ Q94

I would up in six Clubs, as West A trump was led, and after trumps broke 3-2, the only point of the hand was how to play the Hearts.

I played to dummy's King, lost to the Ace, and went down. If I had guessed to finesse the Jack, I would have made the slam.

Was I unlucky, or did I misplay the Heart combination?

To answer this question, a look at the state of the match, and a look at the opponents bidding system needs to be taken. We were playing in a 24 board—Round Robin match, and at half time we were up 16 imps against a none-too-strong team. When this board appeared in the second half, the opponents had not given anything away, but nor had we.

Our opponents on the other table were playing a system in which one Club was 19 plus, one Diamond 16-18 with any hand pattern, and weak No Trumps.

What, you may well ask, does all this have to do with playing the Heart suit? The point is: What contract were the opponents likely to reach on this hand? Very likely Six No Trumps, or Six Hearts, on an auction:

West	East
1D (16-18)	2H
2NT	3H
3NT	4NT
5D	6NT
	or
	6H

In Six No Trumps, the Heart suit needs to provide at least 2 tricks; in Six Heart, the Hearts have to be brought in with only one loser. The percentage play, in the Heart suit, in either contract, is obviously to finesse the Jack.

Which means, that if I had judged that the match was going reasonably well, and that the prime need of the hour was to avoid an adverse swing, rather then to gain a swing, I should have finessed the Jack. If, on the other hand, I had judged that the match was going badly, and that we needed a big swing. I should have played as I did, putting up the King.

Thus the answer to my first question is clear—since we were not doing badly, I should have finessed. In other words, it wasn't totally bad luck—it was bad play too!

Supposing this hand had occurred in a Pairs event or Board-a-Match event, what would the right play have been? In both these events, even a difference of 10 points is a big difference in your matchpoint score. Since Six Clubs making six would be a poor score with Six Hearts and Six No Trumps likely to be the popular contract, the play in Six Clubs must be opposite to the play in Six Hearts or Six No Trumps! Thus the King would be the correct play at Pairs or Matchpoints.

Attempting later to justify my play of a Heart to the King, to my teammates, I did try and claim that I thought I was playing a Board-a-Match event. For some reason, they remained unconvinced!

Correction of Revoke:
Law 62. A player must correct his revoke if he becomes aware of the occurrence of the revoke before it becomes established To correct a revoke, the offender withdraws the card he played in revoking and follows suit with any card A card so withdrawn becomes a penalty card (Law 50) if it was played from defender's unfaced hand The card may be replaced without penalty if it was played from declarer's or dummy's hand or if it was a defender's faced card. Each member of the non-offending side may, without penalty, withdraw any card he may have played after the revoke but before attention was drawn to it (Law 47). Except as provided in the next paragraph, the partner of the offender may not withdraw his card unless it too constituted a revoke.

After the eleventh trick, a revoke, even if established, must be corrected if discovered before all four hands have been returned to the board; and if the revoke occurred before it was the turn of the offender's partner to play to the twelfth trick, (penalty) declarer or either defender, as the case may be, may then require the offender's partner to play to that trick either of two cards he could legally have played.

AVINASH GOKHALE

This Week's Chess
Rare Queen Sacrifice

QUEEN sacrifice for two minor pieces is of rare occurence. In the following games of position Nos 289 and 290 we come across such a Queen sacrifice by White. The beauty of the games lies in the fact that in the prolonged play after the sacrifice, the defender possessing the Queen is reduced to utter helplessness.

Speelman-Martin

Played in this year's British Championship won by Miles with 9/11 points in a field of 56 players. Speelman was 2nd with 8. India's IM Ravi Kumar with 7½ tied for 3-5 places with Keene and Kosten.

1.Nf3, Nf6 2.c4, g6 3.g3, Bg7 4.Bg2, d6 5.00, 00 6.b3, e5 7.Bb2, c5 8.Nc3, Nc6 9.d3, h6 10.e3, Bf5? 11.h3, Qd7 12.Kh2, Rab8 13.Qd2, g5 14.Rad1, a6 15.d4!, cxd4 16.exd4, exd4.

Position No 291: 17.Nxd4!, Nxd4 18.Qxd4!!, Ng4ch 19.hxg4, Bxd4 20.Rxd4, Bg6 21.c5!, Rbe8 22.Nd5, f6 23.Ne3, Qb5 24.cxd6, Qe2 25.Bc3, Qxa2 26.d7, Rd8 27.Rd6, Kh7 28.Nd5, Qa3 29.b4, Qa4 30.Ra1, Qb5 31.Rd1, Qe2 32.Nxf6ch, Kh8 33.Re1, Qc4 34.Ba1, Qa2 35.Kg1, Qc4 36.Bf3, Qb3 37.Kg2!, Qc4 38.Ne4ch, Kh7 39.Nxg5ch!, hxg5 40.Rh1ch, Kg8 41.Rg6ch, Kf7 42.Rg7ch, 1-0.

Reti opening.

7...c5) Possible is 7...e4 8.Ng5 (or 8.Ne1 or Nd4), Re8 9.Nc3, Bf5.

10...Bf5?) 10...Be6 and if 11.d4, exd4 12.exd4, d5 should give Black equality.

15.d4!) Justified only because of White's deeply planned Queen sacrifice for only two minor pieces!

20...Bg6) Black rejects 20...Bxg4 fearing 21.Ne4.

21.c5!) Assures the creation of a passed d-Pawn.

23...Qb5) Out of his next 15 moves Black fruitlessly makes 12 with his Queen!

31.Rd1) Not 31.Nxf6ch, Rxf6 32.Rxf6, Qxd7; or 32.Bxf6, Rxd7.

32.Nxf6ch) The strength of White's game lies in the action of Queen Bishop on the long diagonal in combination with other pieces.

39.Nxg5ch!) A splendid final combination with a further Knight sacrifice.

Gutman-Wyss Biel 1982
(Notes based on those in the Swiss magazine "Schachzeitung")

1.Nf3, f5 2.g3, Nf6 3.Bg2, d6 4.00, g6 5.c3, e5 6.d3, Nc6 7.e4, fxe4 8.dxe4, Bg7 9.Qb3, Qe7 10.Nbd2, Rb8 11.Nc4?!, Be6 12.Ng5, Bg8 13.a4, h6? 14.Nf3, Nxe4? 15.Nh4!, Nc5 16.Bxc6ch, Kd8 17.Qb5, a6

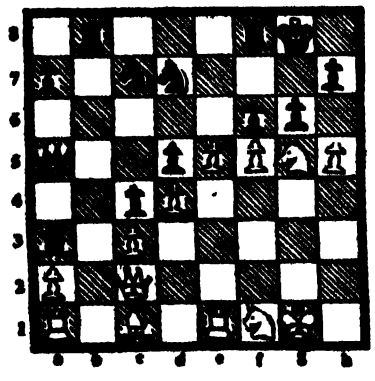
Position No 292: 18 Qx5!!, dxc5 19.Rd1ch, Kc8 20.Nxg6, Qf6 21.Bd7ch, Kd8 22.Ncxe5, Bb3 23.Bf4!, Bxd1 24.Rxd1, Rf8? 25.Bg4ch, Ke8 26.Nxf8, Rd8 27.Nfd7, Qd6 28.Bh5ch, Ke7 29.Ng6ch, 1-0.

1...f5) Dutch Defence, but with 5.c3/6.d3/7.e4 White enters into uncharted paths.

5.c3) Here 5 d4/6.c4 would lead into regular Dutch lines while 5.c4/6.d3 would transpose into variations of English Opening.

8...Bg7) White's e-Pawn is indirectly protected, i.e. 8. .Nxe4? 9.Nxe5!

11.Nc4?!) This move allows an unpleasant pin on the Knight. A better plan would be 11.Re1 intending Nf1-e3 aiming at d5.



No 293 White to play

13...h6?) This move weakens Black's g6-Pawn. Far stronger would have been 13...Nd7! (Threat 14...Na5) and if 14.a5, Nc5 15.Qa2, Nxa5 16.Qxa5, Bxc4 17.Qxa2, 00.

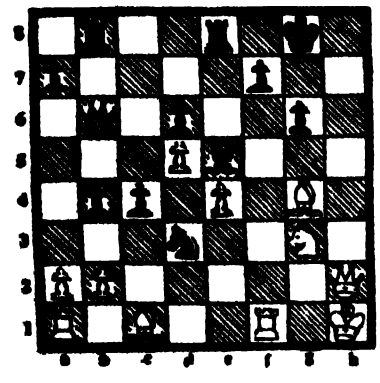
14...Nxe4?!) Black cannot resist this temptation since now on 15.Nxe5?, Nxe5 wins White Knight on c4. But 14...Nd7 was still preferable.

20.. Qf6) If 20.Qe6 21 Be4 and Black has no answer to 22 Bf5 (21...Qxc4? 22.Ne7 mate)

23.Bf4!) Further sacrifice of the exchange! After 23 .Bf8 24.Nxh8, Bd6 25.c4! Black is better-off in material (25.. Qxh8? 26 Nf7ch).

26...Rd8) Black cannot take on f8, e.g 26...Bxf8 27.Bg4ch, Ke8 28.Bh5ch, Ke7 29.Rd7ch, Ke6 30.Bg4ch; or 26...Qxf8 27.Bg4ch, Ke8 28.Bh5ch, Ke7 29.Ng6ch.

R. B. SAPRE



No 294 White to play

RECORD-BREAKING ACHIEVEMENT

This achievement par-excellence stems from product excellence. Manufactured under the most stringent quality control conditions, Hero-Majestic Mopeds today are way ahead of others and attaining increasing popularity with each day that goes by. The reasons are not far to find Fuel economy at 60 Kms to a litre, elegant looks in a wide spectrum of colours, extra pick-up for quicker speeding with a virtually noiseless air-cooled petrol engine and a dual seat to carry two of you ! WHAT ELSE YOU DESIRE IN A QUALITY MOPED ? IF YOU DON'T HAVE ONE, GET ONE !

When we entered the field of mopeds 4 years ago, the total production of mopeds in the country was around 45,000 units per annum...

...THIS YEAR, WE ALONE PRODUCE

80,000

NORVICSUM

Time stands still here in silent tribute to the glory of a by-gone era.

Uttar Pradesh is one state in India where history can be read in stone, dating from as early as the Gupta dynasty to as recently as the pre-independence era.

AGRA: The capital city in the days of Mughal rule, it retains traces of the magnificence that was the Mughal age. The Taj Mahal, a mausoleum of sheer elegance in marble, the delicate artistry of Itmad-ud-Daulah and the imposing proportions of the Fort are some of the reasons why tourists flock to Agra year after year.

LUCKNOW: Situated on both banks of the river Gomti, it derives its name from Lakshman, the brother of Lord Rama. A city of gardens, parks, and palaces, Lucknow retains its old-world charm and is famed for its exquisite courtesy and chikan-work embroidery. The Great Imambara with its enormous vaulted hall, the Turkish Gate with its expressive architecture and the Residency with its canon-shot ridden walls are just a few of the many sights that lend importance to Lucknow as a major tourist attraction.

ALLAHABAD: Situated at the confluence of the rivers Ganga, Yamuna and the invisible Saraswati, Allahabad is one of the most ancient cities in India. The original ancient name of this holy city was Prayag. The modern name of Allahabad was given by Emperor Akbar who built a fort near the confluence of the rivers Ganga and Yamuna after he had paid a visit to this holy city in the year 1547 A.D. Anand Bhawan, Bharadwaj Ashram, The University, Nag Basuki Temple, Fort, Khusru Bagh, Patalpuri Temple, Sangam and Museum are the places of interest for the tourists.

HARIDWAR: Nestling at the foot of the Shivalik mountains and skirted by the Ganga, Haridwar has been a sacred place for pilgrims from the Pauranic age.

AYODHYA: Ayodhya, situated on the right bank of the river Saryu is one of the greatest religious centres of India. It is a city of immense antiquity full of historical significance and sacred temples The city is intimately connected with the epic hero Rama Chandra of Solar Race, who was the King of Kosala with Ayodhya as its capital.

LETTERS TO THE EDITOR

Stunning Spreads

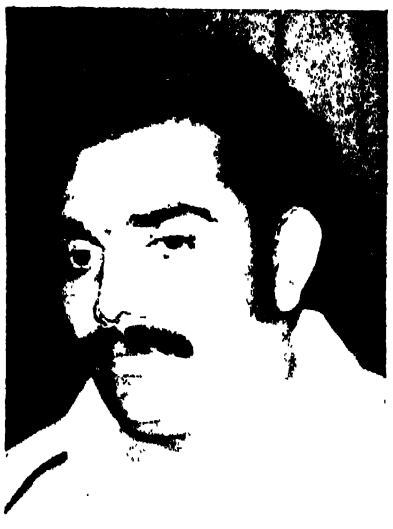
Sir—The centrespread has made every issue of your magazine worth preserving. Please keep it up and don't be misguided by puritanical views.

S. Vikram Kumar
Morabad

Missed Cue?

Sir—Mr Khanna is wrong on many points. ("Poll Prospects In Karnataka", December 5). Firstly, it is absolutely incorrect to say that Mr Gundu Rao does not interfere with the bureaucracy. He deals with bureaucrats in such a way that he can play the game of dice to his advantage. Secondly, the Supa Dam is very far from Bangalore—it is in Uttar Karnataka—a neglected district of the State. This project was a crafty design of Devaraj Urs to woo the people of this area. Thirdly, the celluloid patriot Rajkumar wants Kannada to be the State language, but most of the time he lives in Madras! Fourthly, it is uncharitable to say that Rao smiles occasionally at the Brahmins. Fortunately, this state is not as vulnerable as Tamil Nadu to the ravages of communalism. It still has a halo of cosmopolitanism. Finally, Mr Khanna says that the government employees are fond of their Chief Minister. People rightly say *Yatha Raja Thatha Praja.* Karnataka is the most corrupt State in India. Nothing moves without money. Naturally therefore, the employees are happy with the Chief Minister.

U.S. Iyer
Madras



Sir—"Poll Prospects In Karnataka" was very well-written. However it is difficult to agree with the optimistic forecast of the author. Both the opposition parties in the State are capable (whether united or otherwise). The ethos of the Karnataka people, which is of a peace-loving and docile nature, is the surest guarantee of the Congress (I) victory in Karnataka.

K. Govind
Kuttippuram

Lo The Lensman

Sir—Don't ever stop your visionary Third Eye Feature!

R. K. Ramanathan
Rameswaram

Sir—I am surprised that there is so little feedback from the readers of the WEEKLY on the excellent regular feature "The Third Eye". With the introduction of this feature you have given a boost to Indian photography in general and to individual lensmen in particular. Moreover, it has added a vital, new dimension to the WEEKLY which, unfortunately, is not drawing the appreciation it deserves from your readers. I, for one, would beseech you to carry on with the feature, regardless.

S. K. Nag
Editor
Publications & Information Directorate
New Delhi

Right On!

Sir—David Gunston's advice (December 5) to those who wish to enlarge the horizons of their knowledge to "write down all important facts they gather" is indeed valuable. As a free-lance journalist, over the years, I, too, have become compulsively addicted to this practice and it has paid me rich dividends. My special thanks for publishing such sterling counsel.

M.A. Aziz
Madras

Vintage Carts

Sir—Whenever I am held-up on the road by a bullock-cart while driving my car, I tell myself: "Here I am in a modern invention, stuck behind and reduced to the speed of transport model of Indus Valley vintage."Isn't this the story of our country in almost every field of activity? ("Transport, The Coming Debacle", December 5).

C.P. Belliappa
Coorg

Sher Shah Suri

Sir—In his otherwise well-researched article, "Mughal Coins" (December 5), Dinesh Mody has omitted the name of Sher Shah, the great administrator who became famous for his fiscal reforms. Though he was an Afghan, no study of Mughal Coins would be complete without acknowledging his contribution. Actually, Sher Shah's reformed currency lasted throughout the Mughal period and even the East India Company maintained it for a fairly long time. His reign was well-known for superbly minted coins of pure silver which bore the king's name. When Sher Shah came to the throne, he was disturbed by the debasement of the earlier coins. He abolished the old and mixed metal currency.

May I also quote the famous words of the historian Edward Thompson to support this view? "Sher Shah's reign constitutes an important test point in the assortment of Indian coinage not only in mint reforms but in correcting the progressive deterioration of previous kings and in introducing many reforms which the succeeding Mughals claimed as their own."

Ms Prabha Padmanabhan
Bombay

"Superficial" Suicides

Sir—Anoop Babani dealt with the subject of suicides in a very superficial way, merely offering the views of various "experts". The article read more like student's notes with some statistics. An analysis of psychosocial factors might have been more appropriate.

Amarnath Sinha
Wazaribag

"Callousness" Clarified

Sir—Apropos the article "Callousness That Caused Capsize" (November 28), I wish to make certain clarifications on behalf of the Bhakra-Beas Management Board.

As soon as the news of the boat accident was received, the BBMB authorities rushed fire brigade and ambulance services to the site of the accident. The rescued children were brought to the BBMB hospital for first aid. The BBMB divers along with the diving equipment were called from Bhakra Dam (13 km away). Our divers who participated in the rescue operations with the Navy team, recovered 17 out of 22 bodies. Suitable arrangements were made for boarding and lodging the bereaved families. The BBMB officers and their families, stationed at Nangal, also rendered all possible help to these unfortunate families.

The ferry crossing where the accident occurred is not within the jurisdiction of BBMB and is managed by the State Government under the Ferries Act; the license was issued by the civil authorities of District Ropar who are responsible for checking the water worthiness of the boats operating on such ferry crossings.

O.R. Mehta
Secretary
BBMB
Chandigarh

"Middle-of-the-Road Cinema" published in our December 12 issue was by Mr Suresh Kohli.

—Editor

"Mistaken" Mayfield

Sir—Some of your readers seem to have misunderstood Marlys Mayfield's poem "Animals" (Letters To The Editor", November 21). They imagine it implies an insult to Indians by comparing them with animals.

Actually, the poem praises Indians for accepting animals as part of the human scene, urban and rural. I presume the poet sees this as a contrast to the tendency in the West to exclude animals, except as pets, from the normal human routine.

Nissim Ezekiel
Bombay

Sir—Ms Mayfield's poem "Animals" (September 26) was not half as shocking as the indignant reactions of your readers one of whom even sought refuge in our age-old culture. Has our culture taught us to be so sensitive to criticism and so callous about our actual thoughts and conduct? Isn't it this very thought process which lies at the roots of the draconian Bihar Press Bill? The Marathi Saint Tukaram has said that one should always have a critic for a neighbour. That would make one constantly aware of one's drawbacks, which in turn could possibly initiate a process of improvement and elevation. We resent Americans criticising poverty and squalour in India. Nonetheless do we not avidly criticise foreigners? The fact remains that while we are very fond of praising our great heritage and culture all the time we in fact are mentally and spiritually a degraded people, having scant concern, much less respect for our very own down-trodden fellow-beings.

N.R. Bhatwadekar
Nagpur

Injured Feelings

Sir—Rukmini Varma may have sincerely wished to portray the beauty of the Hindu gods, goddesses and other celestial beings. But communal Hindus may fail to accept the explanation. Although the Hindus are less communal than any other community, it is not advisable to misuse their generosity. You should desist from baring at least their gods and goddesses.

P.M. Mehta
P.K. Patel
Gandhinagar

Postman, Please...

Sir—Aroon Tikekar's article "The Changing Face of Advertising" (September 19) along with fascimiles of old ads was not only extremely interesting it was almost too "credible".

Ever since the publication of our old 1910 advertisement (on page 25) to illustrate the article, we have been besieged by requests from readers to send them the "illustrated catalogue" advertised in the 1910 ad.

The post office has also been very efficient as the letters addressed to the Gramophone Co, Post Box 118, Bombay-1, our 1910 post box number have been correctly delivered.

May I, through your columns, take this opportunity to thank all the readers who wrote to us and regretfully inform them that the 1910 offer of the illustrated catalogue was valid only for the year 1910.

Rima Kashyap
Manager
Creative Services
The Gramophone Co of India Ltd
Bombay

Et Tu Cho?

Sir—"Cho" S. Ramaswamy in "The Rot in Tamil Nadu", (July 3) has erred on two counts. The first one is of propriety, in mentioning me by name. As an Editor of two decades' standing, he should realise the consequence of such mention which is also against accepted journalistic practice. Secondly, and more seriously, Mr Ramaswamy has got his facts wrong when he alludes to a wholly fictional sequence of events leading to my resignation. At no time was VIP's car booked nor was I reprimanded for it. My resignation was entirely due to personal reasons and has since been withdrawn. It is regrettable that a journalist of Cho's standing did not verify his facts before penning them and it is also saddening to note the lack of editorial discretion on the part of the WEEKLY.

Balachandran
Madras

Sir—The original report regarding Mr Balachandran's involvement in the incident mentioned by me, was published in the Madras edition of the *Indian Express* on March 29. Apart from this, a Tamil evening daily *Ethiroli* had also published a detailed report about the incident. For at least five months thereafter Mr Balachandran had not contradicted any of these reports. If, as he now claims, the incident to which I have alluded in my article never happened, then Mr Balachandran should accept the blame for having, by his failure to issue a denial, led me and the public of Tamil Nadu to believe the reported incident to be true.

Mr Balachandran has now shown himself in very bad light. If the incident had not happened, he has suppressed facts by not contradicting the earlier newspaper reports published in March. If the incident had happened, what he has now written to you is at veriance with facts. In either case, truth has become a casulaty. I wish that Mr Balachandran should regret his lepse instead of asking me and you to express regret.

CHO
Madras

Mr Balachandran's letter and Mr Cho Ramaswamy's comment are self-explanatory. The correspondence on the subject is closed

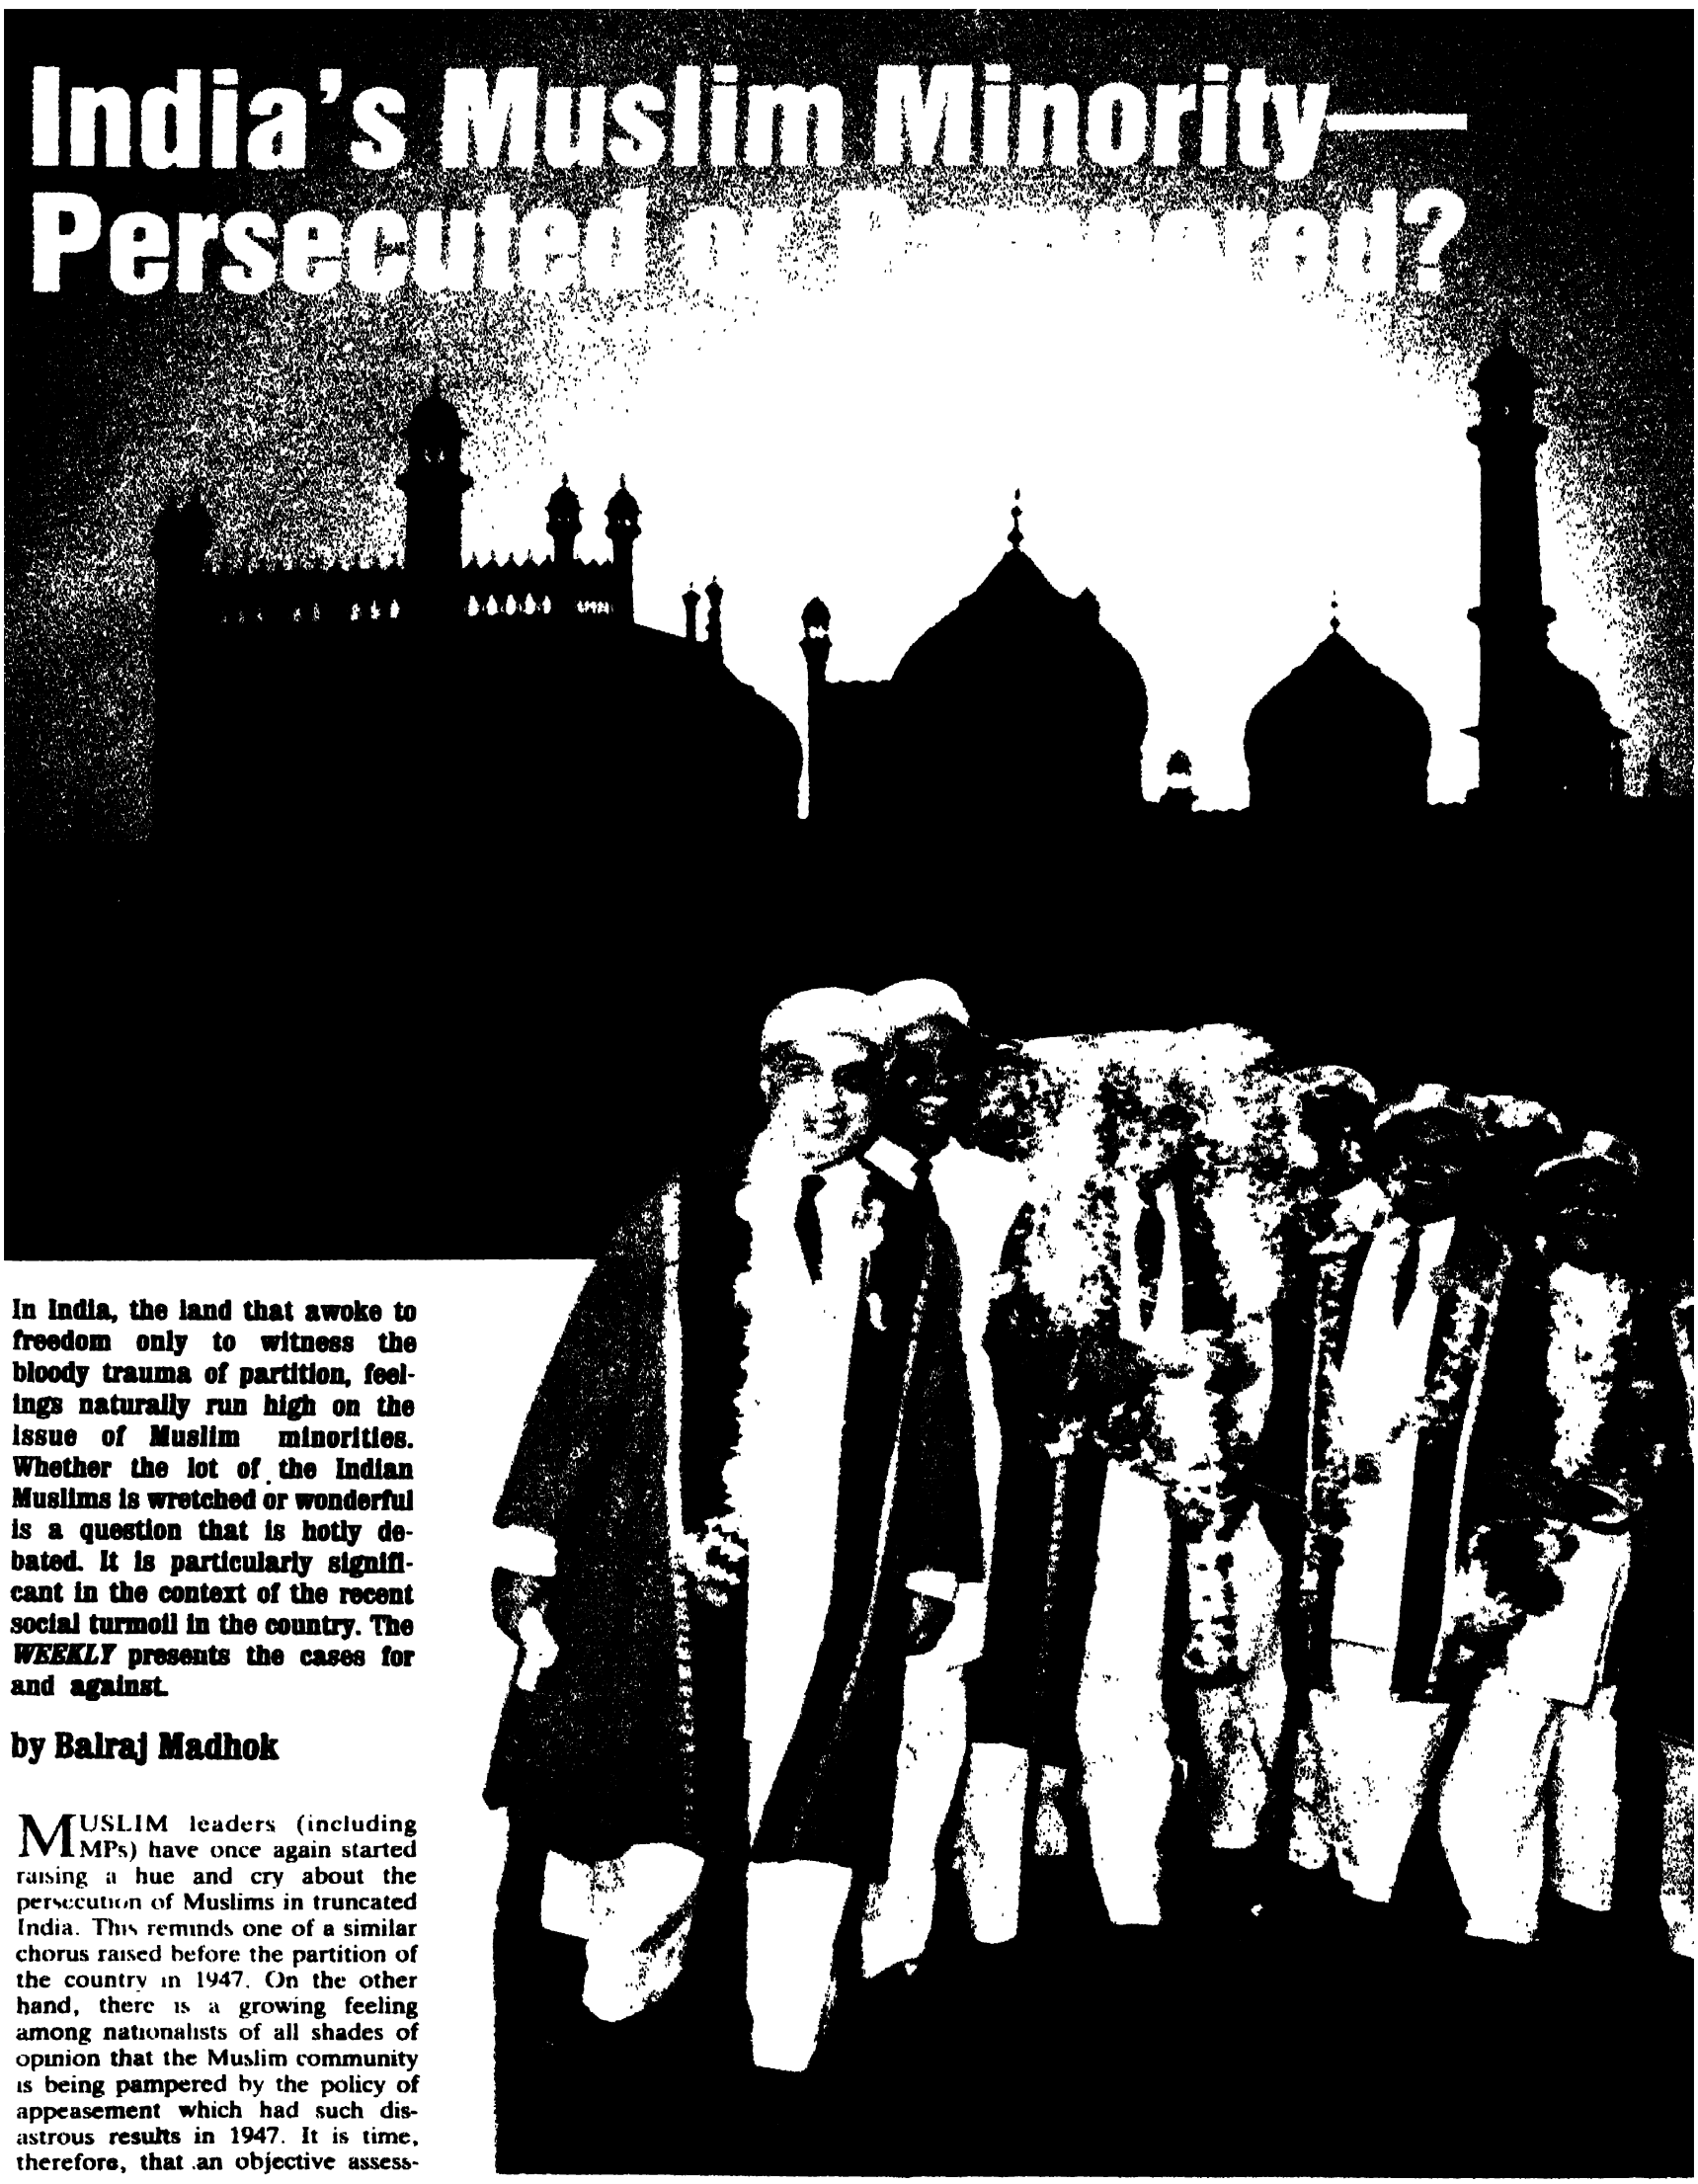
India's Muslim Minority—Persecuted or Pampered?



In India, the land that awoke to freedom only to witness the bloody trauma of partition, feelings naturally run high on the issue of Muslim minorities. Whether the lot of the Indian Muslims is wretched or wonderful is a question that is hotly debated. It is particularly significant in the context of the recent social turmoil in the country. The *WEEKLY* presents the cases for and against.

by Balraj Madhok

MUSLIM leaders (including MPs) have once again started raising a hue and cry about the persecution of Muslims in truncated India. This reminds one of a similar chorus raised before the partition of the country in 1947. On the other hand, there is a growing feeling among nationalists of all shades of opinion that the Muslim community is being pampered by the policy of appeasement which had such disastrous results in 1947. It is time, therefore, that an objective assess-

nent of the situation on facts were nade to determine if the Muslim ommunity is indeed being perseuted or pampered.

The first thing to be noted in this egard is that Muslims living in India ave no legal or moral claim or right n this country. According to the nalysis of the results of the crucial eneral elections of 1946 made by Asoka Mehta in his book, *Political Mind of India*, 93 per cent of the Muslim voters had voted for partiion; 7 per cent, who voted against, nainly belonged to Sindh, Punjab nd the NWFP which now constitute Pakistan. Muslims, who constituted ust 23 per cent population of the hen united India, got 30 per cent of he common territory, which then ecame the Islamic state of Pakistan. Even if Gandhiji's view, that partiion was just a division of assets etween brothers after the father's leath, is accepted, the 23 per cent of he Muslim population which reeived 30 per cent of the common erritory forfeited all legal claim to he 70 per cent of the land that is runcated India. Therefore, as Dr Ambedkar put it in his *Thoughts on Pakistan*, complete exchange of 25 nillion Muslims who were left beind in India with the equal number of Hindus left behind in Pakistan was he "logical corollary of partition".

The argument that the sins of the athers cannot be transferred to the ons does not hold good in this case. Once a property or a territory is livided between two brothers, the livision becomes legally binding on heir progeny as well. If the Muslims who stayed behind in India after partition feel persecuted in India, hey have the choice to go to their slamic heaven in Pakistan. They annot have the cake and eat it too.

It is to the credit of India and the Hindus that they not only tolerated he minority but even treated it as nore than equal. This is proved by he threefold increase in the Muslim population in India during the last 35 years. In 1951, the Muslim populaion in India was about 30 million. It jumped to 42 million in 1961, 57 million in 1971 and has now touched the 80 million mark in the census of 1981. Thus 11 per cent of the population of India are Muslims.

During this period, India has had wo Muslim Presidents, two Muslim Chief Justices of the Supreme Court, a Muslim Chief of the Air Staff and scores of Muslim Governors, Ministers and judges of High Courts. At present, India has a Muslim Vice-President and 3 Muslim Governors. There have also been Muslim Chief Ministers in the predominantly Hindu States of Bihar, Rajasthan and Maharashtra.

Even the Muslim League, which masterminded the two-nation theory and the partition of the country, has been allowed to revive itself and is sharing power in Kerela. New mosques are coming up all over the country and old mosques are being renovated. Loudspeakers blare *azan* at odd hours with impunity. Does all this point to the persecution of Muslims in India?

Compare this with the fate of the Hindus left behind in Pakistan. Hindus (including Sikhs numbering some 10 million) formed 23 per cent of the population of West Pakistan in 1947. They have now been reduced to less than a lakh and live as second-class citizens with no rights at all. Also, in East Pakistan (now Bangladesh), Hindus constituted 30 per cent of the population in 1947, numbering some 15 million. The population of Bangladesh has since doubled; but the Hindu-Buddhist population, instead of increasing proportionately, has been cut down to half. Millions have been killed or converted to Islam and about 10 million have been driven out as refugees into India. Recurring pogroms and persecution have made the life of the remaining Hindus and Buddhists miserable. Their extirpation is now only a question of time. Those who clamour about persecution of the Muslims in India have never uttered a word against the genocide of non-Muslims in our neighbouring countries.

The Aligarh Muslim University played a major role in the creation of Pakistan. This would be brought out by even a cursory glance at *Pathways to Pakistan* by Chaudhury Khaliq-Uz-Zaman, who was one of the architects of Pakistan. The University provided the intellectual leadership and the manpower for propagation of the two-nation theory in the country. No wonder, therefore, that about 90 per cent of its students and staff went away to Pakistan. It was then suggested that the campus be exchanged with the equally big campus of DAVCollege and allied institutions at Lahore. Instead, this University has been expanded without altering its communal and anti-national character. Ten crores from the public exchequer are spent on it annually to preserve it as a hotbed of Muslim communalism and separatism

Urdu, a Turkish word meaning army, was the name given to the language used by the foreign Turkish soldiers in their dealings with the local population in India. All its verbs are Hindi. But it has a good admixture of Turkish and Persian words and is written in the Persian script. As such, it is not a separate language but only a variant of Hindi which was primarily used in military camps and courts. It is not the spoken language of any region of India. The Muslim League used it as a vehicle for creating a sense of separatism among Muslims by projecting it as the language of all Muslims. So it played an important role in bringing about the vivisection of the motherland.

Urdu is again being projected as the language of all Muslims to perpetuate their feeling of separatism. The demand for giving Urdu the status of the second official language is fraught with grave dangers for national unity. It has already been conceded in UP and Bihar much against the will of the large majority. Even in Delhi, where people who claim Urdu to be their mother tongue constitute less than 5 per cent of the population, it has been given special status to the neglect of such national languages as Tamil and Bengali which should have been encouraged in the national metropolis to strengthen national unity Huge funds have been earmarked in other States also for the promotion of Urdu. Even the rational suggestion about Indianising Urdu by adopting the Devnagri script is being opposed.

A common law for all citizens and equality before law is the rule in all civilised countries. Article 44 of the Indian Constitution specially directs the State to have a common civil law for the whole country. But this constitutional directive has been flouted for all these years to please the Muslim community which wants the Islamic law to be applied to Muslims in regard to marriage and other related matters. The aim is purely political: to safeguard the right of polygamy and easy divorce for Muslim males much against the wishes of Muslim women,

FREEDOM FROM FEAR?...

—S.N. Kulkarni

.. OR SECOND-CLASS CITIZENSHIP?

—Ramesh Sanzgiri

FAKHRUDDIN ALI AHMED: Does a Muslim President of secular India symbolise the privileges enjoyed by the minorities in India?

so that the Muslim population may grow faster! As a result, we have the ludicrous situation in which a polygamous judge can try and punish a Hindu for infringing the law about monogamy

Emotional integration is an imperative necessity for national unity. One big impediment to it is the perpetuation of the depredations committed by certain Muslim rulers in places that the Hindus regard as holy. Mosques still stand at the sites of birth of Sri Krishna at Mathura and Sri Rama at Ayodhya and at the site of Vishvanath temple at Kashi. These are places of great emotional value for the Hindus but have no such value for Muslims. Repeated pleas have been made for their restoration to Hindus. I even made the offer on the floor of Parliament that Hindus would gladly build new mosques for Muslims if they vacated these places. But nothing has been done so far in this regard for fear of displeasing the Muslim community.

Some of the so-called Muslim monuments are really buildings built by the Hindus before the advent of Islam in India. For example the Qutb Minar in Delhi is a Victory Tower built by the Hindu rulers of Delhi before its occupation by Muslim invaders in 1192. Qutb-ud-Din-Aibak, who ruled over Delhi for just four years, destroyed the temple complex around it and built a mosque. His successor tried to build a replica of this Victory Tower but could not complete even its first storey during his reign of 20 years. No contemporary record makes any mention of Qutb-ud-Din Aibak having built this Tower. I raised this question in Parliament and suggested that a committee of historians should be appointed to go into the question. The Minister concerned kept mum in the House but later told me that the Government could not accept my suggestion because it would displease the Muslims!

Muslim rulers not only destroyed libraries and temples, they also renamed some of the cities conquered

→

by them. For example, names of Bhagnagar, Karnavati, Devgiri and Ramgarh were changed to Hyderabad, Ahmedabad, Daulatabad and Aligarh, respectively. The Union Government has changed many names given by the British rulers to their original form. But all suggestions to restore the original names of the cities mentioned above are frowned upon for fear of incurring the displeasure of the Muslim minority.

Islam nowhere enjoins cow slaughter as a religious duty. On the other hand, total ban on cow slaughter has been an essential attribute of freedom of Indian States. This is clear from the treaties between Hindu princes with the Mughal emperors and British rulers. In an agricultural country, the cow has been the mainstay of the Indian economy. Cow's milk comes nearest to mother's milk. The cow has therefore been compared to mother in Indian tradition and literature. "You shall not kill cows" was the only condition laid down by Hindu rulers when they gave shelter to Parsis who sought refuge in India after Islamic persecution forced them to flee from Iran. Gandhiji is on record as saying that cow slaughter would be stopped totally as soon as India became free. A total ban on cow slaughter was the last wish of Vinoba Bhave, too. A large majority of the people of India have been demanding it for long. But the fear of Muslim displeasure has been staying the hands of the Government.

Jammu and Kashmir is the only State in India where Muslims have an overall majority of about 65 per cent. Although, the Kashmir valley is overwhelmingly Muslim, Jammu and Ladakh regions are predominantly Hindu and Buddhist. This State has never had a Hindu Chief Minister during the last 35 years despite the Gajendragadkar Commission's recommendations. The claim of D.D. Thakur, an able administrator and an ex-judge of the High Court, who was No 2 in Sheikh Abdullah's cabinet. to to the Chief Ministership,even temporarily, was ignored because he was not a Muslim.

Moreover, although the population has been rising in all parts of the country, the Hindu population in Kashmir valley is declining continuously. It was one lakh and ten thousand in 1971. It came down to 73 thousand in the 1981 census, for reasons that are obvious.

Lakhs of Hindu refugees from Pakistan in Jammu region have not been given citizenship rights even after 35 years of stay there They can vote for the Lok Sabha but not for the State Assembly. Yet steps are afoot to bring back Muslims who had gone away to Pakistan 35 years ago and even grant them full citizenship rights in the State! The patriotic opposition to the anti-national Resettlement Act is being decried as "Hindu communalism" and cited as an example of persecution of the Muslim community.

Secularism and territorial nationalism are an anathema to Islam. They go counter to the Islamic concepts of *Millat* and *Kufr* and *Dar-ul-Islam* and *Dar-ul-Harab*. No Islamic state has ever been a secular state and no true Muslim can subscribe to secularism and *Sarva Dharma Sama Bhava* (respect for all religions and their places of worship) because it cuts at the root of the assertion that Islam is the only true religion, that all other religions are false, and that their followers deserve no quarter. That was the basis of the two-nation theory and the partition of India. It is also the root cause of communal riots which continue to blacken the fair name of Bharat even after Muslims got Pakistan and British left India for good in 1947. All riots start in areas in which Muslims happen to be strong and are invariably started by them. The recent riot in Meerut is the latest illustration of this painful reality. Here a planned attack was made on police personnel but for whose timely action Meerut might have been reduced to a shambles.

In its craze for block Muslim votes, the Ruling Party, as also most of the Opposition Parties, are afraid of calling a spade a spade. Even enquiry commissions are scuttled when it is found that their reports are going against Muslims. This is what happened with the Aligarh Riots Commission. The Moradabad Riots Commission has not been able to start its work yet because the Muslims have decided to boycott its proceedings lest the truth be out.

Small wonder then that this has encouraged the Muslims as a community to revert to their pre-partition game.

The intolerable enormity of the situation is being felt by all patriots including the officers and jawans of the police and security forces who have to bear the brunt of communal riots and recurring Pakistani wars with India. It is time, therefore, the Government and the people paid heed to what the veteran Saint Prabhudatt Brahmachari of Jhusi (Allahabad) said in his recent communication to the Prime Minister. He wrote this letter after his Ashram was ransacked on October 28, the Moharram day, in the presence of the police which looked on as helpless spectators because of instructions not to displease the Muslim processionists. The octogenarian Brahmachari has written: "I was a companion in jail of your grandfandfather, Motilal Nehru, and your father, Jawaharlal Nehru, during the freedom struggle. Now I am very old. I do not know why my Ashram was attacked and why the police could not raise its little finger against the goondas. Have Hindus no rights in their own country even after partition and freedom?"He has ended his letter with the warning: "The situation has become intolerable. Even the police and the army is feeling the pinch. If nothing is done to remedy the situation, there will be an explosion which may blow up everything."

—Syed Ahmed

THE AURANGZEB MOSQUE at the site of the Visvanath temple in Benares.

It is clear that the Muslim community in India is pampered. Its problems spring partly from the fact that it had become accustomed to favoured treatment under the Muslim and British rules. Besides, it has been so pampered by the continuance of the policy of appeasement even after it got its pound of flesh in the form of Pakistan that it cannot brook equal treatment and accept the reality that India is a Hindu country committed to *Sarva Dharma Sama Bhava* and not an Islamic state in which Muslims have special rights. It wants to keep out of the national mainstream and preserve its religio-political identity as distinct from the Indian identity. Its sympathies lie with Pakistan, as was clear from the slogan raised by Muslim spectators at the time of the hockey final in the recent Asiad. It also wants full freedom to Islamise India and convert it into a *Dar-ul-Islam*, like Pakistan. The Hindu resistance to its plans irks it and it starts complaining about persecution. ■

A State Of Siege?

by Syed Shahabuddin

THE Muslim Indians are neither a pampered nor a persecuted community but a community which is subject to persistent discrimination, to occasional violence, and a permanent threat of cultural annihilation. It is a community which is fearful of the erosion of the Islamic dimension of its cultural personality.

For those who consider the Muslim Indians a privileged class, or a pampered community or a preferred group, the very existence of a Muslim in India as a Muslim is not acceptable. It goes against their understanding of the logic of partition. To them the Muslims are a hard nut to chew and swallow: other minorities they can deal with but it is the Muslims who in their eyes constitute the main obstacle in the path of transforming of secular India into a Hindu Rashtra. For such people, the Hindus are tolerance personified, the Muslims are congenitally fanatic. For them, a Muslim, as a Muslim, cannot be a reliable and useful element in the construction of a multi-religion democratic polity. To them Islam is the religion of violence, a divisive force. To such people, I have nothing to say.

But the common masses of India, who are indeed tolerant and practise peaceful coexistence as a norm of everyday life, for whom, till their religious passions are roused, all life is sacred and who, till the Hindu *rashtravadis* impinge on their mental horizon, believe that all paths lead to God, and that all world is one family, to such people, who are the bedrock of our secular and democratic order and who are its future, I have something to say..

Is it a privilege to live in the shadow of terror and insecurity? Is it a privilege to be subjected to pogroms every now and then, with no early warning system, with nothing to foretell the place of the next outbreak? Is it a privilege to see your father and brothers being butchered, shot down in cold blood before your very eyes, your mothers and sisters raped, your sons beaten up, tortured and taken to jail, your belongings looted, your house burnt? I know it does not happen every day and even when it happens in one little corner somewhere, the rest of the country is at peace. But violence casts a long shadow and the fear is in the air.

Is it a privilege to have your mosques desecrated and turned into houses, godowns, schools and temples? Is it a privilege to have your graveyards illegally occupied and built upon or turned into common pastures? Is it a privilege to have the bones of your ancestors bulldozed for the construction of flyovers? Is it a privilege to be refused permission to repair your mosques or denied burial in your own graveyards or to fence them? Is it a privilege to be refused use of loudspeakers for 3-minute *azans*, while *bhajans* and *kirtans* and film sangeet go on, night after night? Is it a privilege to be refused permits for *Qurbani*? Is it a privilege to have your religion insulted, your Prophet abused, your Holy Book misinterpreted, day in and day out, in books, posters, booklets, leaflets and be unable to seek redress? Is it a privilege to see history being rewritten in order to run down your ancestors, belittle their contribution and achievements, create a guilt complex in one group and inculcate hatred and revenge in the others?

The common Muslim, rooted in the soil, suffers in silence. He takes secularism as a joke, as a meaningless charade, a tale told by an idiot. He thinks that he is a second class citizen in a Hindu country, that "they" are the rulers and he is among the ruled. He knows nothing about the Constitution and the rule of law or of equality before the law. For him, the law is the police and in the police he has no place. Does he know or understand the theological distinction between *Dar-ul-Islam*, *Dar-ul-Harb*, *Dar-ul-Aman* and *Dar-ul-Ahad*? All he knows is that he is an Indian by birth and he has nowhere to go and he has to struggle for his daily bread, for his livelihood, for his job, for selling his products, a little more than does his Hindu neighbour, who has better connections, who has more contacts, who wields more influence, who has a say, who can protest without being dubbed a Pakistani. No wonder he feels frustrated. He cannot figure out the sins for which he is being penalised. Is it the sin of his forefathers who embraced Islam or the misdeeds of the rulers, who bore Muslim names and who kept harems and sometimes broke temples, or his own folly of having made the choice of making India his home? Is it a privilege to nurse a sense of deprivation and a sense of helplessness to change the order of things?

The Muslim Indian knows so little about and, in any case, has no leverage with Iran's Khomeini or with Arab princes, despots and assorted dictators ruling Muslim countries and yet he is at the receiving end because Khomeini executes his people mercilessly, because Iraq and Iran fight, because Muslim communities in Eritrea or South Philippines wage wars of liberation, because Sunnis and Shias are sometimes at each other's throats, because Pakistan ill-treats its Hindu minority, because there is an exodus of Hindus from Bangladesh, because there is revivalist or fundamentalist pressure in some Muslim countries. Does it make sense? And yet it is a fact of life that intelligent and educated Hindu Indians justify communal riots and Hindu chauvinism, as a "reaction" to all these. The Muslim Indian has no place in Pakistan and yet he is accused of being pro-Pakistan and asked to take himself away. Is it a privilege to have one's loyalty questioned, to be an object of suspicion and distrust, to be an "outsider", living at the margin of things, to be made to feel an alien in one's own land?

Balraj Madhoks think—perhaps they are just a wee bit jealous—that Muslims are permitted the "privilege" of polygamy. Of course, they deliberately blind themselves to the fact that polygamy is less prevalent among Muslims than among non-Muslims, without taking into account extra-marital and customary relationships. But they go further, from the institution of polygamy they draw absurd conclusions. It is all a part of the master plan to convert India into a Muslim majority state. A recent refinement is the paradoxical statement that India can be secular only as a Hindu Rashtra and so the master plan is a conspiracy to destroy secularism. Scientifically, the rate of growth of an endogamous community is independent of the marriage system, monogamy, polygamy or polyandry. Growth depends upon the male female ratio (even that is a little higher among Muslims than among non Muslims), upon the degree of utilisation of the fertility period of the female (early marriage and widow or divorcee remarriage are thus relevant), and finally, upon such economic status. If two random samples were taken from Hindus and Muslims of same economic levels, in the same social setting, there would be no differential at all between their family size. The higher inter-decadal rate of growth of Muslims which is the bogy raised by the Hindu chauvinist to frighten the Hindus, may very well be partly due to systematic under-numeration in the later census reports.

THE VICTIM of arsonists during the Jama Masjid riots in Delhi.

The Muslim Indian is at the receiving end also because he supposedly ill-treats his wife and divorces her arbitrarily. Alright I beat my wife, does it give you any right to take my life? I daresay that if a socio-economic survey were taken, perhaps the quantum of abandoned wives and of regular divorces taken together would be higher among the non-Muslims than among Muslims at the same socio-economic level.

Let us turn to the question of bread. Can anyone explain why, 35 years after Independence, the second largest community of India, 12% of the population has but a marginal presence in salaried jobs. I am not speaking of the private sector but about Government and the public sector from secretaries to chaprasis, from managing directors down to unskilled workers. Yes, the Constitution does not permit reservation on religious ground but the Constitution also grants equality of opportunity and prohibits discrimination on the basis of religion. But that is theory.

How about practice? One can understand the under-representation in early years after Independence. The Muslim Indian was in a dilemma, even when he looked around for a job, he did so half-heartedly: at the back of his mind was the call to the promised land, Pakistan. A few knocks and he would give up and run across. One can also understand why in a particular year, Muslims taken in are less than their proportion in the catchment area. But why are they never more? And why are they less, even in non-competitive jobs, as drivers, as constables, as jawans? And why is the same story repeated year after year, for 35 long years? Statistically this pattern amounts to systematic and persistent discrimination, reduces equality of opportunity to a mockery, to an illusion. What else can it signify? Is such discrimination an evidence of being pampered?

The Muslim industrialists and traders (and there are so few at the national level) complain of discrimination in grant of licences and quotas and of bank loans. The Muslim weavers complain of unfair competition and unsympathetic treatment in supply of inputs; the Muslim artisans complain of the economic exploitation by the Hindu intermediary, the Muslim drivers complain that they can get no bank guarantees for purchasing vehicles to ply. Check the number of telephones, cars, radios, TV sets and in any town, big or small, you will find the myth of Muslim "affluence" exploding.

Yes the Muslim are well-represented, as Prof Theodore Wright Jr has chronicled, in marginal occupations, in film, music and smuggling! So it would be, if the economic mainstream was closed to them. Is economic backwardness a sign of preferential treatment?

→

Yes, there is one group of Muslim Indians—miniscule in size which has undoubtedly prospered since Independence—the group which provides the fig leaf to the system to cover all its anti Muslim manifestation Call them courtiers, or collaborators or profiteers they are self-centered traders of the name and honour of their community fattening themselves on its blood and tears Some of them adorn Parliament some of them hold party positions, some of them are raised to the Bench some become millionaires, some are included in boards of directors and delegations, some even become Ministers Governors and Ambassadors Very few are those who had the inherent merit to reach the dizzy heights, they all prospered because they had Muslim names

They are handed down the crumbs from the table of power and serve as drum-beaters and paean-singers and as comforters or as mute spectators, in times of crisis The common Hindus generally regard them symbols of appeasement of preferential treatment they have hit the bull's eye Ultimately, they serve to still the inner doubts of the system and calm its conscience What does it matter if in the Central Secretariat, the Muslims do not constitute one per cent of the work force? After all two out of 7 Presidents of the Republic have been Muslims What does it matter if in the Armed Forces the Muslims are not even one per cent of the officer-corps? We had a Muslim as the Air Force Chief What if out of the 500 fellows of the National Academy of Sciences only 6 or 7 are Muslims? A Muslim Indian led our first expedition to the Antartica!

And the wheels of assimilation go on churning The Muslim Indian feels that his contribution to the national cultural heritage is systematically underplayed, Urdu is a dying language because in its *watan*, the land of Ganga and Jamuna, it has received step-motherly treatment and a whole generation of Urdu-speaking population has come out of school without the Urdu language and literature The modern syllabus does not permit inclusion of Arabic and Persian as classical languages but a way is found to import Sanskrit Sanskrit also takes the cake when Government funds for development of classical languages are allocated

The Muslim personal laws are under constant attack as archaic, obscurantist, undemocratic Most State functions and ceremonies have a Hindu content in the name of culture, even office elevators and government buses have idols and pictures of gods and goddesses The Muslim's role in the freedom movement is ignored, even Maulana Abul Kalam Azad is forgotten In films and theatre, the Muslim stereotypes are caricatures, objects of fun or pity like the old man with a young wife, ready to believe that every one was ogling his wife, quick to take offence but quicker to apologise when faced with a tough! Then there is the young wastrel who runs after girls and recites *ghazals*! Is it a privilege to be depicted in this manner, to be projected as the very image of decadence and fanaticism?

No the Muslim Indians are not a persecuted minority because the object is not physical elimination—they cannot all be killed or thrown into the sea or driven across the border The object is cultural assimilation That is what proponents of Indianisation mean when they ask Muslim Indians to belong to the mainstream For them, India equals Hinduism and, therefore, Indianisation means Hinduisation If only the stupid Muslim would forget the Islamic dimension of his identity, adopt Hindu names and show reverence to Hindu gods and forget that he is part of the world community of Islam Here we are, prepared to recognise Mohammad as an avatar, but he is impossible!

It is not enough that the Muslim Indian joins a mass struggle against escalating prices or rising unemployment or worsening law and order or even if he lay down his life defending his country It is not always his privilege to bear arms (look at his proportion among the officers and jawans) but it is his privilege to have his loyalty questioned, to have himself labelled as a Pakistani spy, to be treated as a traitor, or as a fifth columnist What does it matter if most spies caught since independence happen to be non Muslims?

This old cat and mouse game of "Indian first or Muslim first" that Balraj Madhok loves to play is another trap, rather worn out with excessive use

This is a ridiculous game Human personality is multi-dimensional, multi-level, multi faceted The situation determines which dimension, level or facet is to come into play When I am with my children, I am a father first, when I am going to the mosque, I am a Muslim first, when I am working as a public official, I am an Indian first, and so long as India is secular and there is religious freedom, so long as Islam is not shackled, there is no conflict between Islam and the State, no dilemma exists in any Muslim mind But take away the secular foundation, force India away from multi-chrome plurality into drab monochrome wilderness of a Hindu Rashtra, the dilemma crops up Any effort to force 70 crores living beings into a common mould may further splinter rather than consolidate our national consciousness

And now the Muslim Indian has another cross to bear—the change of faith to Islam by some Harijans in quest of social equality Nothing to worry about, if the Harijan chose to become a Buddhist or a Jain or a Sikh, but Islam! No sir, the Hindu mind simply cannot accept it (so said the PM to a Muslim MP) And once again the search for alibis begins—foreign money, foreign hand, Islamic cultural centre, London, World Muslim Congress, Karachi, the Jammat-e-Islami, the Tablighi Jama'at, the Ishaat-e-Islam Sabha and the word goes round "Hindu dharma is in danger" There is a dark conspiracy time-bound, well-funded to convert 120 million Harijans and to turn the Hindus into a minority

Who cares if communal tension rises to a new pitch? It is time to give the Muslim Indian a few knocks on his head he has become too big for his boots, he even questions the Government reports How impudent! Ask for the evidence, there is none! Ask why the Government does not control entry of foreign agents, ban foreign contributions, there is no response! Ask why the Government cannot control misuse of foreign contributions, the law is weak! Ask why the Government cannot publish an annual list of recipients of foreign contributions, oh, the computer is occupied! The real reason is that if the

Government did tell the truth, how will the myths be generated? And if there were no myths, how will the Hindu masses be mobilised in the great task of defending the "dharma". Who will join the Raksha Dals? Who will come to Virat Sammelans? Who will send his sons to the RSS Shakhas?

And in the open society—that we are so proud of, the data, the statistics, the information about Muslim Indians are slowly becoming harder to come by. The flow is being deliberately choked. In communal riots, whose major brunt is undeniably borne by the Muslim community, they would not tell you the Muslim share of lives lost, bodies broken, houses burnt, shops looted. The fiction of Hindu-Muslim parity in physical loss is maintained. In government employment, they would never tell you the number of Muslims in any service, department, in any cadre at any level, so that the myth of equality of opportunity is maintained. In education, they would never tell you the number of Muslim graduates; in professions, never the number of Muslim doctors, lawyers, chartered accountants, architects so that no one can raise the difficult question of Muslim backwardness and demand remedial action under article 16. In economic activities, they would never tell you of the share of bank credit available to Muslim Indians (neither would they let Muslims open banks of their own) so that no one can ask for more. They would never tell you whether the school dropout rate, the incidence of tuberculosis, the infant mortality rate or the life expectancy is higher or lower among Muslim Indians as compared to the general population; for then the uncomfortable fact of Muslim *mohallas* turning into ghettoes shall stare you uncomfortably in the face and smash your mask of self-righteousness.

They would never tell you how many Urdu-speaking children are being taught through the medium of Urdu at the primary stage or given an opportunity to learn Urdu at higher levels, for that will divert attention from the *mushairas* and the *ghazals* to the ugly fact of a dying language! They would not publish the statement of foreign contributions because that would reveal that a very small share comes to the Muslim community. They would not publish the statistics of Indians working in the Gulf, for that would prove that Muslim Indians are under-represented even in that area. India is the land of philosophy: we have the most secular Constitution in the world; that should be adequate proof of our secularism. Take your gaze away from the facts of life, they cease to exist, like the slums of Bombay fenced out of sight on your route from the city to the airport! After all, the world is but a play of illusions.

How terrible, the Muslim Indian, of late is not content with promises, guarantees, manifestos; he wants them fulfilled, applied and implemented, as well.

Yes, this is the privilege the Indian Muslims enjoy, a privilege that many Muslims across the globe do not: to protest, to criticise, to speak out, to denounce, to condemn, to complain. That is his right as a citizen. If only he had more education, a little more political consciousness, if only he knew how to plead his case!

I am reminded of the Muslim delegation from Himmatnagar in Gandhiji's Gujarat which had its first taste of communal riot last year—25 shops burnt, no life lost. The leader began his tale with the words "We have never been in politics, we have done no one any harm....." I cut him short. "No minority can survive in any country or can get its due in any society, without political consciousness, without participation in politics.

"Everything depends on politics and no one shall care for you if you are not in politics or if your politics is tied permanently to a single pole. Politics is the game of hope and fear. Some party should be afraid of losing your support and some should be hoping to get it."

Yes, this democratic privilege is his—that is all he has and his destiny depends on the use he makes of it, how, how much and when. ■

Problems Of Power

by Sitanshu Das

ANY generalisation about the vast and diverse communities of Indian Hindus and Muslims is bound to be somewhat unreal at the micro level. Yet the community, Hindu or Muslim, has a distinctive persona. At the risk of over-categorisation, it is possible, none the less, to draw general conclusions about that persona. Without these—call them conclusions or hypotheses—a discussion on Hindu-Muslim discord is bound to lose its focus and become a slanging match about who starts the communal riots—the Hindus or the Muslims.

Extreme manifestations of communalism—violence, ghettos and the injection of the irrational in politics—are another set of problems. The communal bodies, having taken their birth in existing antagonisms, deepen them in order to satisfy the political ambitions of groups which are currently out of power. Goons and lumpen elements whom ghettos breed are the combatants in these gang wars. Politicians behind the scenes guide these gangs. But the genesis of Hindu-Muslim discord is not to be found in communal riots alone. Its roots go deeper in the psyches of the two communities and explain why there is so much mutual incomprehension between these two social groups which have lived together for centuries.

Contemporary Indian thinking is mystified by the fact that not even partition of the country has stanched the running sore of Hindu-Muslim quarrels. It is easy to explain this puzzlement. To many Indians, the very thought of "vivisection" of Mother India was a blasphemy. When the die was finally cast and the partition was conceded in 1947, a vast number of Indians felt that they had paid an extremely heavy price to get rid of the tensions, troubles and tribal killings between the two communities. Now it seems that the sacrifice has been made in vain. All the evils of communalism are still with us.

To be sure, Pakistan has no Hindu problem. The land comprising today's Pakistan was the earliest settlement of Aryan Hindus. But that country has been denuded of Hindus and Sikhs. If there are minority problems in that part of the subcontinent, they concern languages, ethnic and regional identities—not religio-cultural divisions. Bangladesh has a Hindu-Buddhist minority whose number as a percentage of the population is dwindling steadily over the years.

In any event, in the absence of democratic rights, the Hindu-Buddhist minority has never been able to play its legitimate part in the new nation, nor has it been given a proportionate share in any branch of the Government. The Hindu-Muslim problem, in the sense in which it is understood in India, is not an issue in Bangladesh or Pakistan, the two frankly Islamic countries which have rejected the concept of equal rights for all citizens.

The puzzlement over India's failure to solve this problem derives from a gross error in (Hindu) Indian thinking. Even informed thought processes on social questions are attached to stereotypes. One stereotype in Indian thinking regards all socio-religious groups which are numerically smaller than other similar groups as "minorities". Arithmetic alone seems to be the decisive criterion, though the number alone should not decide the character of a group in relation to others. There have been elite groups which are numerical minorities but do not partake of the other attributes of a minority. Indian Muslims are a minority only in an absolute numerical sense. They do not, however, share some of the other attributes which are normally associated with minority status of a community or group.

One characteristic of a minority—the term in the context has a connotation of deprivation—implies that the group in its recent history has not had an adequate or proportionate share of political and economic power in the society of which it is a part. This test does not adequately qualify Indian Muslims for minority status.

In India's history, the present phase of Hindu-Muslim tension began when the Mughals—and with them Muslims—ceased to be the paramount power in the subcontinent. Before the lapse of Mughal power, tensions, rebellions and conflicts which had their origins in religious differences, were between subjects and their paramount Muslim rulers. These were no "communal troubles" but conflicts between the rulers and the ruled.

What happened roughly in the next 100 years has been interpreted mainly by two groups of Indian historians in widely divergent terms. Those who see Partition as the ultimate failure of the inadequately secularist nationalism pursued by the Congress and interpret the final division of the country in terms of tactical errors—amounting, they say, to a lack of gener-

—Mukesh (Courtesy "The Daily")

BANNER IN BARODA. The transfer of the Police Commissioner sparked off a frenzy of communal riots in the city

osity on the part of pre-Partition Congress leaders—also happen to have been born Hindus. Another group offers an economic interpretation of Hindu-Muslim group tension, seeing Indian Muslims as the underprivileged section Curiously, neither explanation—the one wistful and the other simplistic—has been wholly acceptable to Indian historians who happen to be Muslims

This divergence is probably to be found in the Hindu failure to comprehend that patriotism can have different connotations for the two communities. The Hindu concept of patriotism is geographic--devoted to the configuration of India Although the geographic configurations of the deified India have varied from time to time in history, there is a continuity in the Hindu identification of India with the holy land of Hindu legends, myths and scriptures. It so happens that the modern concept of nationhood, derived from Europe's experience after the breakdown of universal Christendom, coincides with the geographic content of the Hindu's sense of patriotism To this extent, the Hindu is lucky there is no conflict between his modern commitment and pre-modern beliefs embedded in his historical memory and religious thought.

The Islamic concept of patriotism is not geographic but ideological, related to true faith. There is thus a conflict in the Indian Muslim mind between geographic patriotism—which is what the European concept of citizenship and Indian nationalism enjoin on him—and the ideological pull the non-geographic concept of Islamic brotherhood exercises on him.

In countries where Muslims are in a majority the rigours of this contradiction are diminished in the sense that the issue there is how to fashion a political order in accord with Islamic thoughts and how best to conduct relations with other Muslim-majority states. In practice, of course, the contradictions between geographic nationalism and the pan-Islamic world-view cannot be satisfactorily resolved. But those problems are vastly different from the ones Indian Muslims have encountered after the collapse of Mughal power. In India, Muslim citizens *qua* Muslims cannot decide the political order they will live under. In this incapacity the Indian Muslim perceives a threat to his Muslim identity because he does not yet accept the dictum that give unto God what is God's and to Caesar that which is Caesar's.

It is best to keep this backdrop in mind if the basic dilemma of Indian Muslims is to be comprehended intelligently. It goes to the root of the sense of alienation which Indian Muslims and others complain about To say this is not to claim that all Indian Muslims suffer from this feeling of estrangement or that it is born of a conscious commitment to pan-Islamic ideals But great religions like Islam not only offer simple verities but also lay down intangible parameters of thought processes for their adherents. The latter are not easily modified, the less so when the call of reform appears to ensue from external sources in a hostile environment.

A reference to the Indian Muslims' sense of insecurity is inevitable in any discussion of the Hindu-Muslim problem. But, strangely enough, it is seldom admitted that the Hindu mind too is troubled by a deep collective sense of fear and inadequacy. And this contributes to the aggravation of the communal tangle. Let us not forget that after a lapse of many centuries Hindus are for the first time playing a predominant part in the exercise of sovereign power in peninsular India.

They are new to power, still a bit goggle-eyed and breathless about the reality of the changes that have taken place in their historical circumstances. Since democracy has rehabilitated them in their own homeland and democracy is head-counting, Hindus are apprehensive about their numerical superiority which alone can sustain their political power History has taught Hindus to fear the structural weaknesses of their society, though their capacity to remove those frailties appears to be limited. a hopelessly divided Hindu society is unsure of its future.

There is no other nation—save Nepal—from which Hindus can expect empathy on grounds of religion. A similar situation has induced among the Jews a strident bigotry. Paradoxically, the same situation predisposes Hindus towards secularism. There is no organised Hindu Church or priesthood to claim state support. Since, unlike Islam or Christianity, Hinduism is not an international force, Hindus, even those who are orthodox, see in secularism the only guarantee against persecution and discrimination on religious grounds.

That is why the secularism practised in India is, in some respects, more uncompromising than what is possible to enforce in more homogeneous Western Christian industrial societies. A British Labour Party Conference can begin with a Church service and nobody will think twice about the effect this produces on the secular and radical Labour movement. It is possible to levy a cess on the rate-payers of London for the maintenance of a Church. But this would be, should be, unacceptable in India.

Hindu secularism is the result both of Hindu catholicity and the practical consideration that Government neutrality towards religious matters, if practised by many states, will benefit adherents of Hinduism which is confined to one geographical area and cannot possibly secure international backing on the same scale as is available to Islam and Christianity.

A majority community, unsure of its standing and future, thus encounters the other and, in the Hindu estimate, a more cohesive community. The latter, which has lost political power comparatively recently, is still viewed as a threat by the Hindu majority. A great deal of neurosis in Hindu-Muslim relations derives from this. Indian Muslims are not just another minority. If there is in them a sense of deprivation, it stems as much from the community's perception of its lost power as from its economic backwardness. Those who see the problems of Indian Muslims only in terms of jobs, Urdu and mismanaged Waqf charities are in fact being frivolous about the community's deeper feelings. ■

The Roots Of Conflict

by K. C. Khanna

THE flare-up of communal violence in Baroda, Alleppey and Trivandrum is one more grim reminder that Hindu-Muslim conflict has increased, not diminished, since the early 'fifties. The tally of lives lost, people maimed and property destroyed no doubt varies from year to year. But the trend is unmistakable: it is up. This is a great shame. For communal eruptions, more than any other kind of lawlessness, undermine national self-confidence and tend to fracture the national psyche. Thinking people get infected by the incubus of religious chauvinism—as the three articles on the foregoing pages show—and begin to advance bizarre propositions to buttress, in a way the arguments that hooligans of both communities try to settle in the street with the knife or the gun. The Government has so far taken the view that the best way to deal with such "intellectuals" is to ignore them. The *Weekly*, however, believes that an ostrich-like approach will be self-defeating. Half-baked theories, rationalising rank communalism, are gaining currency at an alarming rate. They cannot be expected to die a natural death. They must be fully exposed and tested in the crucible of public controversy to restore a measure of sanity on an explosive issue.

Balraj Madhok, for instance, has propounded the amazing thesis that, since the majority of Muslims had voted for Partition, their progeny have no legal or moral right to live in India. The contention passes comprehension. For it implies that, even in a democracy, no one has the right to change his mind, that father and son cannot vote differently, and that if anyone votes for, say, the Congress, he automatically forfeits his claim to live peacefully under the successor regime if it happens to be Janata.

Nothing could be more absurd. True, millions of Muslims living in what is now the territory of India did vote for Partition and many of them did migrate to Pakistan for one reason or another. But hundreds of thousands of others weighed the costs involved, believed in the secular and democratic protestations of the Indian leaders and elected to stay. To suggest that they and their children have ceased to be Indian citizens is to hack at the roots of Indian polity.

Worse, it is to spit at the values that have been sacred to the Hindus through the ages. Tolerance, above all, has been the *leitmotiv* of Hindudom since time immemorial. Without this prime virtue, Hindu society could not have survived so many savage onslaughts on it from without. Nor could it have sustained and nurtured itself despite the myriad divisions and sub-divisions within itself. Indeed, if the essential unity of Hindudom transcends its seemingly fragmented structure, it is basically because Hinduism is not a proselytising religion. In a sense, it is not even a religion but a way of life that encompasses within its fold many ways of life. The Hindu has not one but several identities. That is why he is so assimilative and resilient. He was thus spiritually and mentally better equipped to absorb modern influences ushered in by British rule than the Indian Muslim. To suggest—as Sitanshu Das does in all seriousness—that the spectre of a revival of Muslim domination haunts the Hindu psyche today is to fly in the face of history. For, in the quest for modernisation, the Hindu had overtaken the Muslim long before the end of the British Raj. No one can say that, in pursuance of their policy of divide-and-rule since the middle of the 19th century, the British discriminated in favour of Hindu "laggards" and against "advanced" Muslims. In fact, they favoured the Muslim because only then their policy could work. Even so, the Hindu chauvinist who felt that Hindu society was under siege was in a hopeless minority in the community during the British Raj; he is even more so today. Madhok and others who raise the bogy of Hindurashtra are isolated even from their own political milieu—the Jana Sanghis and the like.

It is the greater pity, therefore, that sections of thinking Muslims who recognise and applaud the fact that Hindu society is basically tolerant are not above accusing it of brazen discrimination. Deliberately or otherwise, they burke the harsh truth that in India every section of the community—the worker, the peasant, the Harijan, the Brahmin, the small or middle entrepreneur, the big industrialist and so on—feels discriminated against. To claim, as Syed Shahabuddin does, that communal conflict in the country stems from a systematic attempt by the majority community at cultural or economic annihilation of the Muslims is utterly wrong; indeed, tension is generated and often erupts into violence precisely because the Muslims are making progress in an atmosphere of cultural and economic freedom and that they, like the Harijans and other backward castes, are claiming their rightful place under the sun.

In a word, the root causes of communal clashes in the country are secular, not religious. Competition for jobs, land, economic gain or political power is their mainspring. To cite desecration of mosques or temples by goondas as evidence of a systematic pogrom by one community against the other is as grotesque as to make out that depredations of hired hoodlums serve to promote Marxist ideology or that dacoits and *pindaris* indulge in pillage or murder for a lifetime only to vindicate Sarvodaya ideals by surrender. ■

AKALIS GHERAOING the Secretariat at Chandigarh Their demand for Khalistan is risible says the author

The Punjab Imbroglio

by Darshan Singh Maini

THE changes that have been wrought in Chandigarh during the last 15 years as a result of overt political attitudes and covert societal pressures are phenomenal This is no place, of course, for determining the psycho-cultural and covert social character of these changes though even a casual eye cannot miss the subtle chemistry at work For, appearances are, after all, related to essences and, in a manner, constitute the characteristic *address* or *signature* of both *persons* and *places* To put it differently even a city acquires a *persona* over a period of time, and the mask *becomes* the place, so to speak The fair face of Chandigarh, then, at once reveals and hides a host of dreams and distempers, a whole range of new amenities and new problematics

In an earlier write up some years ago I compared the city to a teenager conscious of her beauty and bounce, of her charm and promise, though a bundle of nerves when facing "the assault of reality, to use a Jamesian phrase To be sure, the period of her prolonged adolescence isn't quite over and there's still a hint of *hauteur* about her but she appears close to achieving "the age of reason" If she hasn't quite arrived it's not for want of will or opportunity or talent It's chiefly a question of time, for the settled serenities of life and culture are not had as a gift they have to be earned through continual effort and engagement

Which brings me to the point that culturally speaking, Chandigarh today has a fair amount of classical dance and music, *avant garde* art and drama, quality sports and fun fares, etc The really disquieting thing about it is the murkiness and the pettiness of its 'politics' And it's to this aspect that I must address myself at the outset As Thomas Mann once put it "In our time the destiny of man presents its meaning in political terms

The "politics" *of* Chandigarh and the "politics" *in* Chandigarh somehow do not cohere for certain obvious reasons The "City Beautiful" has become, thanks to the Akali *morchas* and the irrationalities generated by it among communities, State Governments and the Centre something of an international *couse celebre* All its multiple enticements and felicities seem to have brought to the fore the unsleeping rivalries between politician and politician, between faction and faction

There are, indeed, so many wheels within wheels, so many "screens" and "blinds" and feints in this whole business that newspaper analysts and "mediators" are forced to take back their words even before their copies reach the teleprinter Whosoever is laughing now will not laugh beyond nightfall or daybreak Momentous news and rumours fill the air, making nonsense of nocturnal parleys and all such proceedings

In short, tragic as the *impasse* is, what we are witnessing here amounts to *the Indian Absurd* But, then, the Theatre of the Absurd has its own pathos and "gallows" humour The sad "comedians", I guess, do not require to be named

But let me be a little more specific, for the tribe of politicians is seldom known to have any taste for ideas, or for the metaphysics of politics In fact, most of them are too *small* for the *large* ideas they unwittingly set into motion To Chandigarh, then, I come Not to Corbusier's city of light and line, of colour and concrete but to that city which rises like a dream to the tumult of ancestral voices With Lahore gone, the surrogate capital was created to appease the wounded spirit of a proud and restive people When Chandigarh was born Haryana wasn't even conceived and the palpable irony of this fact cannot be lost upon those who keep playing the Haryana card This State whose record of political prostitution and buffoonery has made it the laughing stock of the country was as we all know a *by product* of the demand for the Punjabi Suba It had properly speaking never acquired its own steam or *raison d etre* till then

The Shah Commission's verdict had to be reversed because it was patently unethical in spirit, if not in letter It had violated all norms of language geography and history Plainly the Indira Gandhi award of 1971, too, was governed by the politics of expediency It was meant to complicate matters and make the Chandigarh issue almost intractable And we see the results now One recalls with admiration and nostalgia Jawaharlal Nehru's forthright denunciation of the Punjabi Hindus for their duplicity and doublethink in relation to their own mother tongue That mischief, unfortunately abides and so does the agon of it all

The roots of this reverse 'colonialism" lie deep in the psyches of the pre Independence communities inhabiting the then Punjab Both the Hindus and the Muslims confused their cultural language (Hindi or Urdu) with their mother tongue in a bid to meet the assault of English It was left to the Sikhs to make their mother tongue the organ voice of their dreams and poems and fabulations Essentially each community needed to affirm its identity and what happened at that time was perhaps the need of the hour

However, this confusion was allowed to grow into a powerful fiction even in free India when, indeed, it had lost its rationale To be sure, Sikh chauvinism, which has a tendency to get out of hand in moments of their identity crisis, has not a little to do with this regressive attitude but the right thing does not become wrong only because the wrong people are saying it That way the Punjabi Hindus have wronged themselves wronged the State and above all wronged a beautiful language—a language which informs their life from the cradle to the cremation pyre Their lullabies their wedding songs their 'keening and mourning are in their mother tongue and they may disown it at the risk of violating their own imaginative life

If the disingenuous and covert communalism of the Punjabi Hindus is now a matter of recorded history the communalism of the Akali Sikhs is so open and loud and abrasive as to need little comment On the face of it the demand for Khalistan which some of the extremists propound seems almost laughable except that sometimes even absurdities acquire a strange halo At any rate the analogy with Pakistan is entirely gratuitous if not mischievous No the Sikhs are not a separate nation but only a separate community within a congress of communities The great Indian nation subsumes all manner of peoples and religions and cultures

In any case Hindus and Sikhs have not only ties of blood and bone but also those of culture heritage and history Even the talk of discrimination against the Sikhs (except in Haryana) is largely a rhetorical ploy The discrimination in fact is against the Punjabis as a whole Their affluence and their enterprising spirit are resented by the less fortunate States and the Centre It may not be irrelevant to add here that the Akalis when in power push all these issues under the plush carpets for it does not suit their book at that time Clearly, they will not be required till they have a substantial part of the power cake

The question of Chandigarh thus brooks no further delay It ought not to be allowed to go the Assam way The two related issues—the future of the Abohar Fazilka area and the Ravi Beas water dispute—need to be tackled at the juridical level, not at the political Since each party suspects the *bona fides* of the other, there is no other way of restoring confidence and goodwill If the Centre continues to drag its feet in this regard, the unmistakable conclusion will be that it has a bad conscience about its past decisions and revisions

And finally a word about that prize political 'highjacker' called Bhajan Lal His calculated affront may yet cost him dearly in the end In imposing a blanket ban on the movement of the Sikhs *per se* for the period of the Asiad he has insulted a great religion and a great community It will not be easily forgotten or forgiven To my personal knowledge even a senior IAS Sikh officer an eminent Sikh surgeon and a visiting Sikh family from Kuwait were harassed and humiliated by the Haryana police One can imagine the plight of countless other Sikhs who suddenly found themselves aliens in their own land! The Akal *faux pas* regarding the Asiad was regrettable but more regrettable was the insanity engendered by it The Haryana Chief Minister perhaps exceeded his brief from Delhi But that's the man and his style He ought to have been bridled before the mischief had gone too far

From confused world of politics to the luminous realm of philosophy would appear something of a trip from the nether regions to empyrean heights The 57th session of the Indian Philosophical Congress held at the Punjab University had an unmistakable moral for the warring parties in the surcharged atmosphere of Punjab As Professor K S Murthy who inaugurated the Congress opined philosophy had little relevance if it was to remain tied up to mere abstractions and theorisings In the words of a Central Asian divine 'Knowledge begins where religion ends' This memorable and mystic aphorism which Professor Murthy quoted is so apposite in our present context that both the Akalis and the Hindu leaders would do well to ponder over it

As a postscript to this piece I am tempted to quote the following lines from W B Yeats' poem, "A Reason for Keeping Quiet"

I think it better that at times like these
We poets keep our mouths shut for in truth
We have no gift to set a States man right
He's had enough of meddling who can please
A young girl in the indolence of her youth
Or an old man upon a winter's night ■

Toys that care.
Because you care

Open up a whole new world of imagination for your child. A world of warmth and love. Of caring and sharing. Of playing and learning. Of growing and developing. A world of fun, laughter and happiness.

That's the promise of Leo. Toys of a kind never before available in India. Toys that are designed to delight, amuse, yet educate your child . . . cater to his creative needs. Attractive, sturdy, yet safe to play with. In an ever growing range — pre-school, educational, action, puzzles and games.

Leo Toys. They could become your child's best friend. Today

Brought to you by
Blow Plast Ltd.

The Fabulous Aga Khan

The 45-year-old Prince Karim, the incumbent spiritual leader of the Ismailis, is celebrating the 25th anniversary of his accession to his Imamat with a tour to visit his followers all over the world. He is expected to be in India in the second week of January.

LIKE his famous grandfather, Sir Sultan Mohammed Shah (Aga Khan III), 45-year-old Prince Karim, the incumbent spiritual leader of the Ismailis, is known for his phenomenal wealth, a well-stocked stable of Derby-winning thoroughbreds outside Paris, and a vast business empire that includes the fairy-land holiday resort he has created in Sardinia.

Though he rubs shoulders with royalty, business tycoons and the jet-set, he also displays a remarkable passion for social welfare programmes in the Third World. And yet he manages to stay out of politics—and scandal.

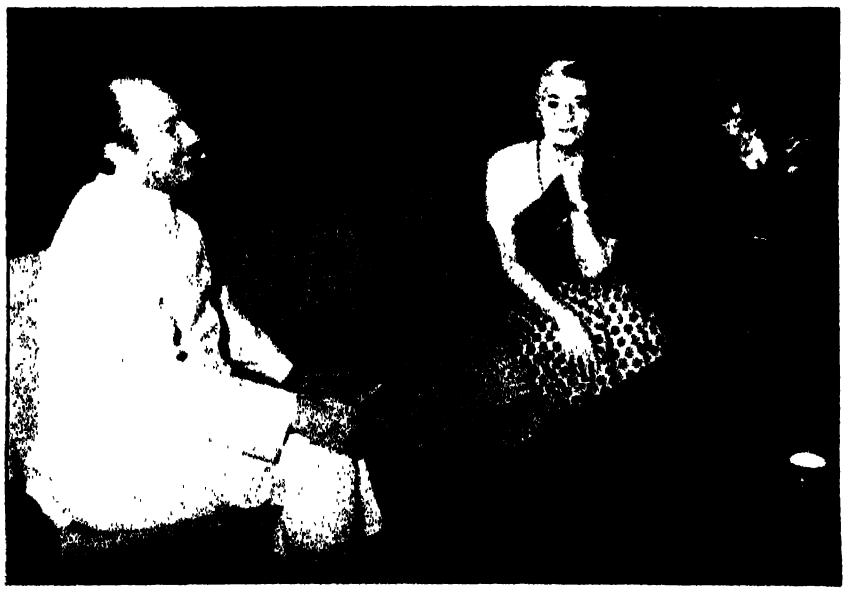
The 49th Imam of the world's approximately 15 million Ismailis is celebrating the 25th anniversary of his accession to his Imamat now with a tour to visit his followers. He is expected to be in India in the second week of January.

Non-Stop Work

The Aga Khan is not all charm, glitter and pervasive influence. Entrepreneurship and love for holiday resorts—he works non-stop for days together—led him to develop a chunk of Sardinia's coast into an emerald paradise. Twenty-two years ago he discovered this island tip, a piece of moonscape, where there were no roads, little fresh water, no electricity and, of course, no drainage. All it had was a 55-km-long ribbon of lovely snow-white beaches lapped by the crystal-clear waters of the sea. There he planned to build a de luxe holiday resort. And now it has everything one can aspire for—from a private police force to a subsidiary airline in which the Aga Khan shuttles in and out. Almost 2,000 villas, low-rise apartments and other buildings nestle in the craggy landscape with 6,500 more planned by 1990. Already people flock there for golf tournaments, sailing regattas and automobile rallies (on Sardinia's rough roads) and many more will come to work when the new 500-seat convention centre is complete.

From his father, Prince Aly Khan, whose spectacular life was snuffed out in a car crash, Prince Karim Aga Khan inherited the family's enormous fortune in bloodstock. "I knew nothing about horses and had no interest in them, unlike my grandfather and my father," he says, "but out of respect for family tradition, I decided to try it." The red-and-green colours of the Aga Khan have flashed home enough winners to make the "hobby", as he calls it, a multi-million dollar enterprise. He formed a syndicate and sold a million dollars' worth of shares. He is generally in Paris during the French racing season, and takes off to his other retreats—on the Mediterranean for a cruise, a little house in Normandy or the Swiss Alps for skiing.

Another colourful event in his life was his wedding to Lady Sarah Crichton Stuart (now Begum Salima). It came in the wake of many rumoured romances—including one with a Mexican heiress, Sylvia Casablances, and another with Mona Bedrawi, the daughter of one of Egypt's wealthiest landlords of the fifties! It was described in the international press as the Wedding Of the Year in 1969. The guest list read like a roll call of international celebrities.



WEST MEETS EAST. Lady Sarah Crichton Stuart (now Begum Salima), the wife of the Aga Khan, meets President Zail Singh (above).

A COMMON INTEREST IN THE THIRD WORLD. In both the Aga Khan and Prime Minister Indira Gandhi, a sense of Western urbaneness fuses easily with a personal history rooted in the East.

The Aga Khan has been moulded by manifold influences. Islam, Western education, hereditary reverence for private enterprise, coupled with the insistence that the material and spiritual aspects of his leadership complement one another. In him a sense of Western urbaneness fuses easily with a personal history rooted in the East.

Welfare Projects

Sir Sultan Muhammad Shah founded the welfare projects that his grandson now administers. His followers used to weigh the old Aga Khan in gold, diamonds or platinum, and the funds thus raised financed a number of orphanages, hospitals, health care centres, schools, cooperative banks, investment companies and housing programmes in Bangladesh, India, Pakistan and East Africa. Even now a 721-bed hospital and medical college is under construction in Pakistan. Many such development programmes are administered by the Aga Khan Foundation.

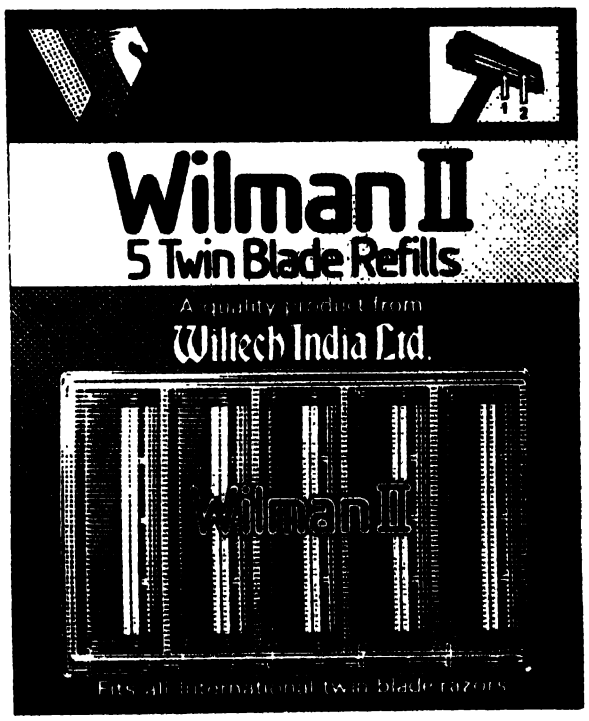
Season's Greetings

Now, Wilkinson technology gives you the smoothest, closest shave every time.



Each cartridge has two gleaming ultra-sharp blades presented at the perfect shaving angle.

These cartridges are made by Wiltech India Ltd. in technical collaboration with Wilkinson Sword, U.K. On machines designed by Wilkinson Sword.

To monitor quality, Wilkinson Sword's engineers work very closely with Wiltech. Samples of Wilman II are regularly sent to Wilkinson Sword U.K. for quality control checks. So that you get the closest, smoothest, safest shave every time. For a long, long time.

Fits all international swivelling and fixed twin-blade razors.

Wilman II

The cutting edge of Wilkinson technology.

Wiltech India Ltd.

HTB-WIL-8495

tion. Indeed, Prince Karim devotes much more of his time to its ramified activities than to his personal business interests.

The Shia Imami Ismaili Muslims, generally known as Ismailis, belong to the Shia sect of Islam. Ismailis believe that Muhammad was the last Prophet of Allah and that the *Quran* was revealed through him. They also affirm that, after the Prophet's death, Hazarat Ali, the Prophet's cousin and son-in-law, became the first Imam, the spiritual leader of the Muslim community, and that his leadership—known as Imamat—continues thereafter by heredity through Ali and his wife Fatima, the Prophet's daughter.

Succession to the Imamat, according to the Shia doctrine and tradition, is by way of designation *(Nass)*. It is the prerogative of the Imam of the time to appoint a successor from amongst the male descendants. His Highness Prince Karim Aga Khan, the 49th Imam of the Shia Imami Ismaili Muslims, succeeded his grandfather, Sir Sultan Mohammad Shah, to the Imamat on July 11, 1957, at the age of 20. Ismailis the world over are celebrating the Silver Jubilee of his succession by launching a number of new development projects.

For, as the young Aga Khan observed, "It is the developing world which is suffering from the debilitating effect of recession. The projects marking my Silver Jubilee are conceived within the framework of this universal concern, and will emphasise that it is the people who are the greatest assets of the poorest countries."

The Aga Khan had created the Industrial Promotion Services group of companies (IPS) in 1963. IPS now operates in Kenya, Tanzania, the Ivory Coast, Zaire, Bangladesh and Pakistan. In an effort to stimulate economic development, IPS promotes industrial, financial and tourism projects by bringing together modern management, advanced technology and local know-how. With the participation of private investors, both foreign and local, and of government and international bodies, IPS has launched over 100 enterprises in areas ranging from the production of building materials and textiles to mining and tourism.

Promoting Muslim Values

As a Muslim leader, the Aga Khan is concerned about promoting an objective understanding of Muslim values. So he has instituted the Aga Khan Award for Architecture, the Aga Khan Programme for Islamic Architecture, and the Institute of Ismaili Studies. The eminent Indian architect, Charles Correa, for instance, is on the steering committee of the Aga Khan Award for Architecture which disburses prizes totalling $500,000 every three years. The Aga Khan Programme for Islamic Architecture was established in 1979 with an endowment of US $11.5 million at Harvard University and the Massachussets Institute of Technology (MIT) to promote Islamic art, architecture and urbanology. Earlier, the Institute of Ismaili Studies was set up to promote scholarship and learning in Islam and a better understanding of other faiths, beliefs and practices.

A SPECIAL RELATIONSHIP WITH INDIA. The Aga Khan has gifted his palace at Yeravada in Pune to the nation and has donated generously for the relief of flood and cyclone victims.

In India, the Aga Khan has donated his prestigious palace at Yeravada, Pune, to the nation, and it is now a national monument for it was here that the father of the nation, Mahatma Gandhi, was held under house arrest. He also gave generous donations for the relief of the victims of the Andhra cyclone in 1977, the flood in Morvi in 1979 and, again, the cyclone in Gujarat late last year. He has also made large contributions to the All India Women's Conference in New Delhi.

The funds collected on the occasion of the spectacular Platinum Jubilee of the late Sir Sultan Mohammed Shah were used *inter alia* to help launch several cooperative credit societies in India, as also an 87-bed modern hospital and nursing home in Bombay and 64 health centres all over India. These are open to all, regardless of caste, creed or colour.

In a word, the Aga Khan, much like his well-known forbears, is a unique combination of a spiritual leader, statesman and philanthropist. And, unlike some of them, he is no playboy. ■

In The States

And Now "Gorkhastan"

DARJEELING: Politics in the hills of Darjeeling has centred, for decades, round two issues separate administration and recognition for the Nepali language. The local politicians know only too well that nothing can rouse the hill people as the question of that identity. It is claimed that even when the Nepali-speaking region of North Bengal was forcibly tagged on to West Bengal by the British as early as 1907, the hill leaders had demanded a separate administrative set-up for the area. In 1946, the undivided CPI manifesto had asked for "Gorkhastan" to be carved out of the hill areas of West Bengal. In 1973, the CPI (M), then out of power in West Bengal, had agreed with the Gorkha League's aspirations for Darjeeling district's autonomy; 45 subjects were to be under the control of a district autonomous body. However, the body would be under the overall control of the West Bengal administration.

Curiously, when the CPI (M) came to power in the State in 1977, it chose to forget its earlier commitment and this has been a bone of contention between the Marxists and the Gorkha League ever since. After the death of D.P. Rai, the Gorkha League's most respected leader, in 1980, the party called for the boycott of the Assembly by-election that year to press its demand for a separate identity. That, however, proved a costly mistake. The popular response to the call was poor and some radicals, like Mr Madan Tamang, General-secretary of the District Gorkha League, were expelled. Moderates, like J.D.S. Rai, now General-secretary, and Mr. P.T. Lama, President, took control.

The expulsions gave a new twist to hill politics and finally led to the birth of a radical party, Pranta Parishad, in August 1980. Its leadership includes former Gorkha League members like Mr Madan Tamang, ex-Congressman I.B. Rai and even a dissident Marxist, Mr Abdul Fazal. The Parishad claims that it is not a political party but an open platform for all those seeking a separate State for Darjeeling. With great fanfare, it gave a call for the boycott of the 1982 Assembly elections. Even today, the walls in and around the queen of hill stations bear some terse slogans: *No State, no vote. We want political separation from West Bengal. Vote hamro Shatru ho* (the election is our enemy).

The Pranta Parishad, violent in its approach, had one of its supporters, Krishna Subba, killed in police firing in September 1981. The police contend that they were merely trying to prevent a clash between supporters of the Parishad and members of the Students' Federation of India in the main Darjeeling bazar. The Parishad promptly erected a small minar in his memory and succeeded in getting a judicial inquiry instituted. This April, the Parishad clashed with the ruling CPI (M) in Sukay Pokhari and the police had to intervene. Also in April, the Parishad's members obstructed Chief Minister Jyoti Basu's car in Kurseong. Just before the May Assembly elections, large arrests had to be made in Walimpong before the Gorkha League candidate from there, Mrs Renu Leena Subba, could file her nomination papers. The Pranta Parishad took its boycott call one step further when it prevented Kurseong voters from exercising their franchise. So great was the fear psychosis that in several booths in that constituency just eight to 10 votes were cast.

Despite all this, the Parishad's call proved a failure. The May elections saw the setting of some records. Darjeeling could boast of a 60% polling, the highest in the history of the hill station; never had the polling percentage exceeded 42. Yet the Parishad, which had all along been saying that it would wind up if its boycott call failed, exists. But the coming Panchayat and Civic elections, probably in April or May 1983, are likely to see a vertical split in its ranks. Moderates, like Mr I.B. Rai, are certainly in no mood to let the radicals, like Mr Madan Tamang, dominate its councils.

In any case, it has little standing compared with the CPI (M) with its strong pockets of influence in the tea gardens and the Gorkha League that commands formidable respect even to this day. It has a long way to go before it can find its place on the political map. Some sources feel that the Parishad is at best a temporary affair, in spite of the fact that it has touched the core of Nepali hearts by voicing its demand for a separate State.

The aim of the Gorkha League, established in 1943, is not very different. It is also in favour of a separate State, though its leaders are guarded as far as words go. Besides, they point out that the demand is not new and was, in fact, given shape by British tea planters some 120 years ago. There were two causes for this. First, tea garden workers were mostly Nepalis, who frequently left Darjeeling for home in Nepal. The planters felt that if a separate State could be carved out for them in Darjeeling they would feel more at ease and visit their own land less often. Secondly their divide-and-rule policy envisaged the creation of a separate pocket of loyalty—Gorkha loyalty—in the midst of Bengal.

Another demand of the Gorkha League has been the inclusion of the Nepali language in the 8th Schedule of the Constitution, without which, it says, the local children will have to continue studying Bengali and Hindi, ignoring their mother tongue. It has other grouses against the Left Front Government of West Bengal. It argues that the money earmarked for the development of the hill areas either remains unspent or is diverted elsewhere. Unemployment among the locals has touched a new high and even the State Minister for Hill Development, Mr Dawa Lama, admits that the percentage is 25 to 30. The last four years have seen the closure of 10 tea gardens, further depressing the economy of Darjeeling. The hill

THE CALL THAT FAILED. This Pranta Parishad slogan forms part of the graffiti plastered on the walls of Darjeeling by the militant party. Inset: The memorial erected for a member of the Pranta Parishad allegedly murdered by the party bigwigs

UP CM's House Grab

LUCKNOW: For Begum Saeeda Wajahat Hussain, 75, widow of a Reserve Bank Deputy Governor, that particular Sunday dawned like any other winter day. Sipping tea with her daughter and daughter-in-law on the sprawling, lush green lawns of her 7, La Place bungalow, overlooking posh Hazratganj, the Begum first did not realise why two truckloads of Provincial Armed Constabulary jawans, some 150 hired labourers and officials of the Lucknow Development Authority (LDA) suddenly erupted all over the place. They had come to evict her from the house she had been living in since 1953 when her husband's friend, Rafi Ahmed Kidwai, had given this mansion to her. And C.B. Gupta, then Civil Supplies Minister, and a political foe of Rafi Saheb, had regularised the allotment in her name.

For the next two-and-a-half-hours the gangmen went about in a planned, seemingly rehearsed fashion and cleared the huge, spacious rooms of all their belongings, including her telephone connection. Soon the open lawns were littered with rare paintings, precious crockery, now in smithereens, furniture and, of course, the rich library.

The Begum was granted a stay order by Mr. Justice Umesh Chandra Srivastava of the Allahabad High Court's Lucknow Bench from his A.P. Sen Road residence on the Sunday but still the LDA officials would not be deterred. They insisted before the Court the next afternoon that the eviction was completed before they had received the stay order. The High Court, however, turned down the plea and ordered immediate restoration of the house to the Begum.

Why were the LDA officials in such a tearing hurry to take over the house? Their plea was that Begum Wajahat Hussain had built a house and rented it out to a private company and, therefore, she had for-

areas require more colleges and why couldn't North Bengal University be located in Darjeeling instead of in the plains, the Gorkha League leadership wants to know.

Despite such strong resentment, the Gorkha League differs from the Pranta Parishad in its approach. It would rather seek redressal of its grievances through the Parliamentary process than through bloodshed and violence. The party's present leadership admits that the boycott of the 1980 Assembly by-election was a costly error. Countering the boycott call has been time-consuming. Moreover, the party, faction-ridden after D.P. Rai's death, could not concentrate on electioneering.

Its General-secretary, J.D.S. Rai, lost to the CPI (M) candidate, Dawa Lama, in May 1982 by just 309 votes. Elsewhere, too, the League's performance was poor. Barring the tea gardens, where the Marxists are very well entrenched, the Gorkha League's prospects are bright, provided it gets over factionalism before the next polls. At the moment, there are signs of curious alignments. The Congress (I) at the Centre would aid the League to keep the Marxist influence in check and the CPI (M), too, would toe the Gorkha line to counter the Pranta Parishad's activities.

While these political forces are at work, one wonders if the common man in Darjeeling feels strongly for a separate State. Perhaps, not the Bhutias and the Lepchas, the original inhabitants of the Darjeeling hills, for they are sure to be bypassed by the later settlers, the Nepalis.

The Lacemakers

NARSAPUR: For the two lakh women lacemakers of Andhra Pradesh the word 'worker' is repulsive. Though they spend six hours a day making lace, they prefer to call themselves 'housewives', to maintain their social standing.

Mostly belonging to forward caste *kadpus*, they are an invisible work force. Unorganised and helpless, they are exploited by the lace exporters, who pay just 80 paise per day to each worker.

The mansions of the lace exporters in Narsapur testify the huge margin that these traders make out of this business. While a 12' x 12' lace napkin priced at Rs 75 yields a profit of Rs 25, the lacemaker hardly makes Rs 20 for all her labour lasting 25 days. Even this paltry sum is paid after two months. Says a lacemaker Subbamma, "We know that we are being exploited. But we have no choice. This small amount supplements our income."

Many of these women, who work in dim lamplight during nights, ruin their eyes. Old women continue to crochet the lace, wearing glasses. Girls are taught the skill at the tender age of six. For them leisure is a luxury. They spend all their spare time making the lace and swelling the exporter's purse. The exporter, virtually living on the labour of these women, has no obligation towards the workers. When the strain of work tells upon the health of these women, they have to fend for themselves.

The exporters, who call themselves 'manufacturers', are free from any guilt, inspite of this brazen exploitation C.G. Rao the oldest exporter says: "The women should be grateful that we are providing them with work during their spare time. They need not come out of their houses. Our agents go and collect the finished product from their homes and pay them their money. They are housewives and not regular workers. What we are paying is reasonable because the work does not involve great effort."

In fact, these exporters, who have made it big during the last ten years, have a vested interest in sustaining the caste consciousness among these women and promoting the 'housewife' psychology. Being respectable figures in society with their newly acquired riches, they wield considerable influence in perpetuating the existing social norms. With their high connections, they have even silenced the district officials.

An effort was made to organise the lacemakers into a cooperative society. But bureaucratic wrangling turned it sick. The State Trading Corporation, which assists this society in marketing its products, has delayed payments and dissipated the members' enthusiasm. With a growing foreign market (Rs 10 crores turnover in 1980-81) this society could have succeeded if the officials took genuine interest.

A RAW DEAL. Lace exporters reap heavy profits out of the hours of painstaking work put in by needy housewives. Inset: A sample of their work.

The lace exporters need only Rs. 10,000 to get into the business. When a consignment for export is booked, he can immediately draw 60% of the value from the bank. Even after paying for the raw material, he will be left with at least 20 per cent of this amount. As payments to the lacemakers are usually delayed, he has plenty of money to turnover. The poor lacemakers are at his service.

G. S. Reddy

feited the right to stay in a rented house belonging to the LDA. But then there are at least some 500 bigwigs in U.P.'s capital who also have huge mansions in the growing suburbs, fetching them attractive rents every month and still they enjoy tenancy rights, living in Government and Municipal bungalows. Why was only the Begum evicted?

The High Court found that the bungalow was alloted to Rakesh Misra, son of Chief Minister Shripat Misra, living at 13 Mall Avenue, Lucknow. Mr. Uma Shankar Dikshit a former Union Home Minister and Karnataka Governor, who lives in B-6 Park Lane, a first-floor apartment in Hazratganj was originally allotted the La Place bungalow and Rakesh Misra was allotted another flat in Park Road. Misra swapped it with Dikshit but had to wait till the court case against the Begum by the LDA was decided. The allotment already stood in Rakesh Misra's name but the time to implement the order came finally when his father became the Chief Minister. Earlier, Shripat Misra was the Speaker of the State Assembly

BITTER DISORDER. PAC Jawans and LDA officials swooped without warning on Begum Husain and within moments reduced her tasteful furnishings to nothing. Inset: Chief Minister Shripat Misra.

Clearly the LDA wanted a cover-up. It cancelled the allotment order just a few hours before the eviction operation was launched so that the Chief Minister or his son would not be implicated. The plan, of course, was to take possession of the bungalow as its own property and later reallot it to Misra.

Things, however, did not go the way the Chief Minister evidently had envisioned. The High Court intervened in the Begum's favour to his chagrin and also that of the LDA.

What the CM did, observers say, is no different from what others before him have done, particularly his old mentor Chaudhuri Charan Singh who even had serving senior civil servants thrown out of their homes.

Mrs. Mohsina Kidwai, presently Union Minister of State for Labour, was one such victim. She was living in a Vidhan Sabha Road bungalow when the first (and also the last) Janata Party Chief Minister Ram Naresh Yadav ordered her eviction because she had lost both the ministership and the Vidhan Sabha membership in the 1977 Janata sweep. Her luggage and household articles were similarly scattered outside on the lawn. But then public opinion prevailed and the Janata Ministers intervened to bring Ram Naresh Yadav to his senses. There was no such political initiative in the case of Begum Wajahat Hussain, however.

And now ebullient DSP legislator and former State Minister Mukhtar Anis, 36, has dug out from official records shocking information.

Says Anis: "Mr. Shripat Misra, after the fall of the Charan Singh ministry in 1970 (in which he was the State Education and Law Minister), had obtained a court's stay order when he was asked to vacate the official ministerial residence on the prestigious Kalidas Marg. Rent arrears to the tune of Rs. 57,000 have yet to be realised by the U.P. Estate Department from Mr Shripat Misra. But the Chief Minister is now proposing to bring forward in the budget session of the State Legislature, a bill writing off all rent arrears of all people."

The Assembly session, which Mr Shripat Misra has been delaying, is likely to be a stormy one. He has not summoned the winter session. It appears now that he will call only the budget session, for he has a lot to fear and answer for.

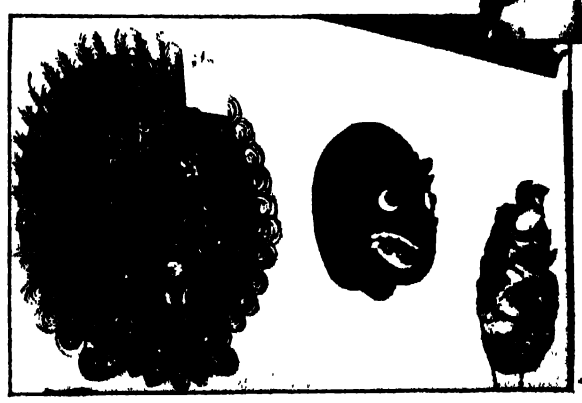
Letter From Calcutta

—Mona Chowdhury



CALCUTTA sports a new look with CMDA traffic lights.

ANANDAMATH—Bankim Chandra's historical masterpiece.

HANDICRAFTS at the Rural Development Fair held in Calcutta.

Not A Fair Day

FROM December to the end of February a pleasantly tingling cool lasts and the smog that hovers over Calcutta can easily be mistaken for the mist that used to rise from the Hooghly. It is the time for open air fairs and exhibitions. Most are inaugurated with dreary ministerial speeches, all are gaily festooned with coloured lights. Another feature in common is that the displays within are sadly disappointing.

Those with long memories will recall the exciting circuses, carnivals and fetes that used to enliven the Calcutta season—together with races, polo, Christmas shopping and late and hectic nights in restaurants—comprising its basic fare. More recently, the vast and exhilorating sprawl of the Bangiya Sanskriti Sammelan used to give a fillip to the city's cultural life. It brought us singers and instrumentalists of excellence, revived the old films of Madhu Bose or Pramathesh Barua, showed endless Laurel and Hardy shorts, and brightened up the shopping with puppet shows, magic and displays of classical and modern dance.

But the Left Front so exorbitantly raised fees for hiring a patch of the Maidan that the Bangiya Sanskriti Sammelan was forced out of business, much to the regret of all Bengalis. Instead, we were given a dull commercial series of trade fairs, export exhibitions and expositions of rural development under official patronage. But whatever the name, they are all equally uninspiring: a handful of familiar businessmen are always assured of stalls to sell handloom fabrics, stainless steel utensils, ceramics, readymade garments and leather goods at more than the market price. They don't even bother with permanent shops any longer, moving from fair to fair with dusty stocks that Calcutta has seen many times over.

Last Bastion

Mr Jyoti Basu is understandably indignant about the Congress (I)'s wooing of the Tripura Upajati Yuva Samity. For with Kerala gone, West Bengal is in danger of being isolated as the country's only Marxist ruled state. Tripura is a sociological oddity. Its adivasis — the "upajati" — once enthusiastically responded to the CPI (M)'s egalitarian philosophy which promised them economic redress, but the picture changed when thousands of Bengali Hindu refugees from erstwhile East Pakistan flooded Tripura and took over control. Marxism then became the creed of the rulers.

Tripura is also the stomping ground of the Amra Bengali party which believes that while one part of the Bengali homeland was lost at partition, West Bengal has been taken over by the Hindi-speaking north and by "Madrasis", which here means anyone who comes from south of the Vindhyas. They are right too in a sense; for if unashamed middle class Bengali living survives anywhere outside Bangladesh, it is probably in Mr Nripen Chakraborty's Marxist Tripura. The struggle, therefore, is for linguistic survival even more than ideology.

All For A Ball

Whoever said that politics should be kept out of sport? In Calcutta we know only too well that politics may not be sporting but sport is never anything but political. West Bengal discovered and exploited the nexus with a Minister of State for Sports under the United Front, long before New Delhi created the portfolio for Mr Buta Singh. The flamboyant Mr Ram Chatterjee, the first incumbent, was a familiar figure at football matches as he walked round the field, acknowledging the cheers of the galleries with a boxer's salute.

Mr Subhash Chakravarti, the present minister, obviously had an eye on next May's soccer season when he announced that the Left Front would spend a handsome Rs 40 lakhs on distributing 50,000 footballs and 5,000 volley balls, and that 37,000 villages, 10,000 schools and 350 colleges would benefit from the Youth Welfare Department's committee of experts guided by the veteran footballer, Sailen Manna.

Cricket and hockey do not evoke the same mass fervour and thus do not attract official support. And the government was downright cheeseparing with young Dibyendu Barua, West Bengal's brilliant young chess prodigy. But soccer is popular theatre. The three main clubs — Mohun Bagan, East Bengal and Mohammedan Sporting — inspire passionate group loyalties. The game draws big money, creates folk heroes and, in short, shapes youth power. Investing in this branch of sport is investing in votes.

Forever Amber

The Calcutta Metropolitan Development Authority is really going to town with complicated traffic management schemes and even more tortuous ads that promise "though late, let us move on into the 20th century (which is already four-fifths gone!)". Obviously, we are chasing the fag end of the century with signals of which the ad somewhat bewilderingly remarks: "If traffic management is not impossible in this city, to explain the signals by words, is".

The attempt is not outstandingly successful. The lights and signs set up on December 15 are even less so. Chowringhee and BBD Bagh (the old Dalhousie Square) are even more snarled up than before because of endless digging. But it is reassuring to note that in the four junctions where CMDA signals have been introduced, manpower is still in effective use. Constables stand beside the lights, and it is the arm of the law that cars and pedestrians obey.

Bankim Chandra

The unfortunate controversy over the Bankim Chandra Chatterjee celebrations, especially over his stirring romantic novel *Ananda Math*, again revealed the fragility of communal harmony and, even more, Congress (I) readiness to fish for goin in every stretch of troubled waters. West Bengal's Minister for Higher Education, Mr Sambhu Ghosh, organised the festivities which were attended by another Left Front minister. But when some Muslims took umbrage, the Left Front hastily disavowed the occasion, whereupon Mr Pranab Mukherjee, the Union Finance Minister, at once accused the Front of being unpatriotic.

Muslim touchiness is not at all justified since Bankim Chandra had nawabi feudalism in mind when he wrote at the novel's beginning of rescuing Bengal from tyranny. No one, for instance, has accused him of toadying to the British even though *Ananda Math* ends with the claim that a spell of British rule would enable Indians to shed introversion and become a more practical people. All such arguments have to read against the contemporary historical background, and cannot be twisted out of context.

There is no reason, therefore, for the Left Front to be apologetic. But the Union Finance Minister's fulminations are even more unconvincing since, as Mr Saroj Mukherjee, the CPI (M) secretary, tartly retorted, it was the Congress Working Committee under Nehru that decided against Bankim Chandra's nationalist song, *Bande Mataram*.

Liberal Vision

Off hand, I can think of two distinguished Muslims — both in the news at the time of writing — who would have been greatly pained by this unnecessary dispute over one of the greatest Bengali writers ever. Professor Abu Sayeed Ayyub, the eminent scholar and critic, who died on December 21, transferred his academic interests from physics to philosophy, published the first anthology of Bengali poetry, and angrily rejected all suggestions that Islam gave him an international identity. On the contrary, he claimed, the anglicised English-speaking Bengali was far more pan-national in outlook.

An editor of *Quest* before the Congress for Cultural Freedom was dragged into disrepute, Professor Ayyub can have had little in common politically with his brother, Dr M.O. Ghani, who was for many years a CPI MLA. But both brothers were equally committed to their different beliefs, honest in their opinions and able to explain their philosophies with erudition. Professor Ayyub was also convinced of the equality of the sexes long before Women's Lib became fashionable: his gifted wife, Gauri, continued to use her maiden name of Datta.

The other man of enlightenment is Bangladesh's much younger Mr A.Z.M.Obaidullah Khan, a member of the old Civil Service of Pakistan and now Agriculture Minister, who also came from a family of liberal beliefs: one brother is a noted Marxist-Leninist politician, another one of Dhaka's most outspoken editors. Mr Obaidullah, who is leading his country's delegation for the Joint Rivers Commission meeting in New Delhi at the time of writing, wrote his thesis at Oxford on the influence of the Upanishads on the later poetry of W.B. Yeats. He justified calling his elder son Parthasarathi (after Sri Krishna, Arjuna's chariot-bearer in the *Mahabharata*) on the grounds that such names belong to the common literary heritage bequeathed by the Bengali language. ■

Sumita Sandilya

The Comet Is Coming

by R. Ramadorai

OPEN your windows. Set up your telescopes. Zooming through the chill depths of star-spangled space, here it comes... the celebrated cosmic wanderer—Halley's comet, for yet another rendezvous with terrestrial astronomers...

Of the 600 odd comets known to man, Halley's is the most famous. And only a handful are as spectacular. Nor do we know how many times it has made its voyage around the sun. Its first recorded appearance was in 250 BC. Since then it has awed, terrified, and delighted mankind once in every 76 years. Its last grand show was in the year 1910. It started receding from the sun and the earth in the beginning of 1911 and it was seen fleeing into outer space at a mind-boggling speed of 58,000 km an hour! It disappeared in the month of May, 1911, among the stars.

Even with this frenetic speed, the comet could reach the outer limit of its wildly eccentric course around the sun only in 1948! It has since started its return journey toward the inner part of the solar system. It is still more than 1.5 billion km away from us!

Since 1977, almost every large telescope in the world, including the mighty 200-inch instrument on Mount Palomar, in California, has been aimed time and again at the same star-flecked region of the sky just north of the star Procyon to locate the reappearance of Halley's Comet! It will be a lucky astronomer who will spot it first! No wonder comet-hunting has reached such a feverish pitch.

To the Greeks comets were *aster kometes*—long-haired stars. The head or the coma of the comet was thought to be a star and the "fiery" tail of the comet was believed to be composed of hair. Comets are fuzzy tramps of the solar system. While the planets go around the sun in slightly elongated circular paths, the comets prefer to travel in a highly elongated elliptical "beats". In their peregrinations they wander so far that the sun's light may even take a full month to reach the place! (Think of the prodigious distance considering that light travels at the speed of 2,97,600 km per second!) From such far-flung "outposts" the comets sweep past the outer planets and become progressively brighter and grow in majesty and splendour for a short time when they get warmed up by the sun. Then, as if wearying of the glory, they begin to recede from the sun and hurry back into the cold, dark reaches of outer space away from the burning sun.

Although; spotting comets is held to be a spectacular pastime today, an earlier age saw no delight at all in comets. Men have been rather fearful of the spectral appearance of the comets. They came up unexpectedly. Their movements in the sky looked apparently erratic. Their appearances changed sometimes rapidly, all of which contributed to the halo of mystery, superstition and fear that surrounded the comets. Thus men refused to admire the strange beauty of the comets and evinced no interest in the phenomenon for a long time.

Although some ancient Greeks believed that comets were conglomerates of stars, there were others—Greeks and Romans—who thought that the comets were not in any way connected to the stars. Demokritos believed that comets were born when two planets came too close together. Artistotle, thought them to be "blazing exhalations" in the earth's upper atmosphere. According to Seneca, comets were heavenly bodies like the planets. But Aristotle's view prevailed until 1577. We will come to this later.

The common man however, associated cataclysmic upheavals, outbreaks of plague or ill luck with the appearance of comets. Some believed that comets were the bad breaths of the Gods. When a comet appeared, everyone of any importance—the kings, the nobles and the vassals, conferred anxiously with the astronomers and astrologers about the portends and the prophylactic measures to be taken. In Shakespeare's *Julius Caesar*, Caesar's wife Calpurnia warns him on the day of his assassination to heed stormy apparitions of the night before. "When beggars die, there are no comets seen; the heavens themselves blaze forth the death of princes."

Astronomers in the East recorded comet sightings more accurately than Europeans did until the 15th century. Indeed, when European astronomers started studying the comets seriously they had to rely on the Babylonian, Chinese, Japanese, and Korean annals for statistical studies and early sightings.

The Aristotelian view of the comets was overturned in the year 1577. In that year a great comet flashed across the sky. It was accurately observed by the Danish astronomer Tycho Brahe and the German astronomer Michael Mustlin. By comparing observations made from different places (called the parallax method: to measure a heavenly body's distance from the earth one determines the change of its position relative to the "fixed" stars), they proved that the comet of 1577 was further beyond the moon, out in interplanetary space. This discovery not only shattered the Aristotelian view of the comets but also the notion of the "crystal spheres" that held the planets, stars, and astronomers' minds in an earth-centred universe.

Although comets were shown to be celestial bodies, one important aspect of the comets remained unsolved—their paths. Luckily a bright comet appeared in 1682 when Sir Isaac Newton was alive Before the appearance of that comet, Newton had already published his famous theory of gravitation. While the astronomers were busy observing and plotting the course of that comet, one British astronomer, Edmund Halley, who was then 26 years old, goaded Newton to utilise his new theory of gravitation to calculate the Comet's path. Newton proved that the comet of 1682 followed a near-parabolic path around the sun. His work showed that gravitational attraction that explained the nearly circular, elliptical motions of the planets also solved the riddle of the comets' orbits.

In 1703 Edmund Halley accepted the chair of geometry at Oxford University. While writing a book on the topic "Synopsis of Cometary Astronomy", Halley calculated the parabolic (open-ended) orbits for 24 comets seen between 1337 and 1698. He noticed that the trajectories of the comets which appeared in 1531, 1607 and 1682 were similar and that their appearances were separated by nearly equal intervals. Later, Halley noticed that a bright comet had appeared in 1456—an impressive object which struck terror in the hearts of the Turks during the battle of Belgrade—and probably another in 1378. He came to a bold conclusion and announced that the comets which appeared in the years 1378, 1456, 1531, 1607 and 1682 were not different comets at all but the successive apparitions of the same comet, whose orbit must be an ellipse (a closed orbit) with a period of about 75 years. He also confirmed that the comet was a member of the sun's family and it circled the sun as planets do. Halley predicted that the comet would return in the year 1758.

Halley wrote: "Candid posterity will not refuse to acknowledge that this was first discovered by an Englishman." Halley did not live till 1758 to see his prediction come true. But posterity acknowledged him by naming the celestial wanderer Comet Halley.

Halley's comet figured prominently in ancient and medieval chronicles. The comet had been observed at every apparition as far as the year 240 BC. It should have been visible in 315 BC and 391 BC., but there are no actual records of its appearance in those years. The advent of Halley's comet was usually discussed in ancient and medieval chronicles in connection with some calamity or other, which it is supposed to have ushered in. It was seen in the year 66 AD, a few years before the destruction of Jerusalem by the Roman Emperor Titus and was described by the Jewish historian Josephus as the "Sword of God" over the doomed city. It appeared in 451 AD, at the time of Attila's invasion of Western Europe and again in 1066 when William the Conqueror invaded England. In the eleventh-century Bayeux tapestry,commemorating William's conquest, Halley's comet occupies a prominent place.

Halley died in 1742. Soon after his death three French astronomers independently worked and computed the comet's path in greater detail. Their calculations and conclusions came handy to astronomers in searching for the reappearance of the comet in 1758 in advance.

Charles Messier was known as the great French comet hunter. Night after night he searched the skies through his telescope to spot the "reborn" comet. He succeeded in January 21, 1759. But his jubilation soon soured when he heard one Johann Palitzsch, an amateur German astronomer spotted it on December 25, 1758!

This time the astronomers made extensive observations of the comet, which revealed that the predicted date of *perihelion*-closest approach to the sun—had been wrong by only 32 days...

The astronomers started their feverish bid to locate the comet as the winter set in the year 1908. Apart from a telescope they had another powerful tool at their disposal this time — photography. They started searching the sky as well as photographing it. One Max Wolf of Heidelberg spotted the small diffuse image of the comet on a plate exposed on 11th September, 1909.

The comet put up a spectacular show in 1910. More than that, what interested the earthlings was the news that earth would pass through the tenuous 80 million km tail of the comet. The Westerners became nervous as they thought that the tail contained poisonous gases like cyanogen, carbon monoxide, etc. Many people sealed their windows to protect themselves from the deadly gases!

How big is it going to look when it appears in the year 1986? Halley's Comet had a tail averaging 15° to 20° in length during its known appearances. Its tail had a record length of over 100° when the comet came very neur to earth in 334 and 837. It is calculated that the comet's tail will be 20° to 40° long when it appears in 1986. Yet this time the comet is not going to put up spectacular show There are reasons for it.

In November 1985, Halley's Comet may be visible to anyone with a pair of binoculars. As it moves towards the sun the comet will become brighter and its tail longer. Unfortunately, the nearest it can come to the earth as it approaches the sun would be 90 million km. Because of this huge distance between the earth and the comet, it would be visible to us only as a faint, small comet. When it comes closest to the sun— at perihelion — it will be at its maximum radiance and its tail at its maximum length. This would be around 9th February, 1986 But at this time, the earth would be on one side of the sun and the comet on the other, so the comet will not be visible at all to us! After perihelion the distance between the sun and the comet will gradually increase and so its brightness will diminish and so its tail. Simultaneously the comet will start coming closer to the earth. On 11th April, 1986 it is expected to reach the nearest position to earth but by that time it will be more than 160 million kms away from the sun.

The position of earth at that time will be such that only people residing in the southern hemisphere will sight the comet. They will have a grand view of the comet and its appearance may turn out to be a spectacular one. The tail may be 20° to 40° long. They will remember the comet for a long time to come. When it again becomes visible to the people residing in the northern hemisphere (which will be in early May 1987) its brightness will have dimmed to such an extent that the comet will not be easily visible to the naked eye.

DRAMATIC FORM. Fr Proksch teache students how to combine different danc forms.

A German Scholar-Dancer's Fifty Years In India

On January 9 this year, Fr Proksch completes 50 years in India, 50 years of love and devotion to his adopted land.

by Miriam D'Souza

A LITTLE boy and his mother were rowing across a lake in Silesia (then an eastern province of Germany, but after World War II, Polish territory) when, out of the blue, the mother said, "Son, one day you will row along the Ganges like this." The child did more than that He made the land of the Ganges his own

He arrived in India on January 9, 1933, as Fr George Proksch, SVD missionary—and proceeded to fall in love with the country

How did it start? Assigned to work with the tribals in MP, he was frustrated that despite long years of hard work he had not been able to put across his message of Christ's love to the villagers Seeing that visiting sadhus attracted a crowd of eager listeners, he began joining the groups around them, hoping to discover the secret of the sadhus' success. He observed that the sadhus did not merely speak of Hindu deities, but used music, dance, poetry and drama as well In short, they put Indian art form at the service of this message

The zealous priest made up his mind to do the same And that was the beginning of a beautiful romance with his adopted land

He began singing basic Christian truths to Indian folk tunes It had so much appeal that he was soon receiving invitations to sing even to purely Hindu groups in Lucknow and Indore. Transferred to Bombay in 1947, he began learning Indian classical music.

When he came to India 50 years ago, he knew Latin, Greek, Hebrew, French and German, but no Hindi at all. Such is his capacity to master any subject, that just a year later he asked for and received permission to preach his sermons in Hindi

Interned by the British Government during World War II, he continued with his study of Hindi and developed a love for the language. Inspired by the *Ramayana*, he wrote *Christayana* in the camp. "His main contribution to Indian literature is *Christayana*, a unique biography," says Virendra Kumar Jain, a well-known poet and for ten years the Assistant Editor of *Dharmayug*, now the Editor of *Navneet* "Every event in the life of Christ is narrated. Such a detailed book was not available in Hindi before."

When released, he continued with his writings. Today he has around 35 books to his credit: poems, songs, plays, a novel, translations of the psalms, etc. They cover cultural, liturgical, religious and spiritual themes. All are published in Hindi.

Wishing to imbibe the wisdom of ancient India, Fr Proksch decided to study Sanskrit as well, and approached a renowned institute in Bangalore. He was refused admission on the grounds that Sanskrit was taught only to Brahmins! The scholarly priest thought it ironic that while the Principal of the institute had a degree in Sanskrit from a Berlin university, he should refuse admission to a German in India.

So he learned Sanskrit privately. He has read the *Vedas, Puranas, Upanishads* and other sacred Hindu texts His circle of friends grew larger and included such well-known figures as Mahadevi Verma, Sumitranandan Pant Maithili Sharan Gupta, Bhagwati Sharan Verma in the field of literature, Ravi Shankar, Laxman Prasad Jaipurwalla in the field of music and Krishna Pannikar Raghav Rao, Satya Vati, Bankin Sinha in the field of dance.

The Germans have a strong nationc sense. When Fr Proksch came to work in India, he gave his love and devotion to his adopted land. Someone once said of him that he loves Germany as his mother bu India as his bride.

Indianisation Of Christianity

He saw that Indian Christians, with their Westernised ways, lived like aliens in their own country. He wanted the people he had come to serve to be proud of their heritage. He believed that Christianit could and should be practised within th culture of one's own country.

In 1949 he set up the Hindi Sanskri Sangam in Bombay to teach India music, dance and Hindi. Occasionally the Sangam put up a cultural prog ramme.

The dedicated German has done great deal to encourage the use of Hinc in the religious services of the Roma Catholic Church in India. His bhajans compiled in *Mukti Marg*, are very popular He has even written a High Mass (wher all the prayers are sung) in Hindi.

He was, in fact, one of the pioneers c the Indianisation of Christianity. By blaz ing a trail, he made it easier for those wh followed. At first, his ideas seemed re volutionary to the majority of Christians and he had to face a lot of criticism an opposition. Fortunately he had the stron support of Cardinal Gracias.

Fr Proksch now began experimentir with different dance forms. Dr K.(Ginde, Principal, Shreevallabh Sangeet laya (Academy of Music and Dance who has worked with the priest for mo

SHEPHERD DANCE.

BHANGRA DANCE being performed for tribals in MP

MARWARI DANCE

than 20 years, is all praise for the German's genius. "When Fr Proksch started working on his dance dramas," Dr Ginde told me enthusiastically, "he took the bold initiative of combining, in the same programme, different styles depending on which would most effectively portray the character or the scene, eg Kathakali for the devil, Manipuri for a village scene, Bharat Natyam and Kathak for other roles. He also included folk dance so that these, too were given prominence.The impact was fantastic.This innovation has been an important contribution to Indian dance and has since been adopted by other Indian artistes."

"The credit for presenting Indian dance and music to an international audience must go to Fr Proksch," Dr Ginde told me animatedly. "The first time was in 1960 at the 337th International Eucharistic Congress in Munich, and then in 1964 at the 38th International Eucharistic Congress in Bombay. And on such a large scale! The ballet in Munich was an instant success. In addition it created history For the first time in the liturgy of the Church, dancers performed in the presence of the Holy Eucharist.

"There was yet another important contribution by Fr Proksch on this occasion. For the first time, western choral form was applied to Indian vocal music Traditionally, Indian music, even if sung in groups, is always in unison and not in voices."

So far, traditional Indian dance and music has had only Hindu themes. The German priest enriched it by bringing in Christian themes, so that now, apart from Krishnaleela and Ramaleela, there is also a Christaleela.

His artistry is astounding. Though he engages professional musicians and dancers to train his troupe as well as to perform in his dramas, the final directions are his.

Fr Proksch writes the music for all his dramas himself. He saw in Indian music a great potential for spirituality. In July 1961, at the World Congress for Church Music held at Cologne in Germany, he stated before world-famous authorities that Indian classical music is similar to the traditional Gregorian chant used in the Church. He went on to say that the development and extension which Indian classical music gave to Church music could not be achieved by the music of any other country. Naturally, this caused a stir. But when he demonstrated what he meant, the other representatives were full of admiration for his learning. Not that he gave up Western music completely; he still occasionally stages cantatas

Songs For Children

Fr Proksch was so versatile that not only could he stage spectacular dramas for an international audience, but could also write simple songs for kindergarten children In fact, this is another of his important contributions to Indian music. Traditionally, children were taught conventional songs (usually containing some moral element). On the lines of nursery rhymes, Fr Proksch wrote short, simple poems (about a butterfly or a train) and set them to attractive melodies These have become very popular. Some of them have been published in his book *Raag Parag*

A special contribution in the field of drama are his Hindi plays for children He translated German fairy tales and dramatised them Both *Himani* (Snow White) and *Chumchanan Chumantar* (Rumpelstiltskin) have been staged several times.

Fr Proksch's dream of having his own cultural and spiritual centre was realised at the Gyan Ashram in 1955. It is situated at Andheri amidst jungle surroundings. At present, the Guru has about 20 chelas—Christian men and women dedicated to spreading the Gospel through Indian dance, music and other fine arts.

So far, the Guru and his troupe have been to Europe six times, serving as ambassadors of Indian culture. Their popularity can be gauged from the fact that in 1965, their third trip to Europe, the group had engagements almost every day for a whole year! They have so far performed in Germany, Italy, Austria, Holland, Switzerland, Ireland, Belgium, Rome, London, Paris, besides many smaller places

They have performed all over India as well, inspiring Indian Christian youth to take up Indian music and dance. Following their conversion, Indian Christians had adopted a Westernised style of living, but viewing his dance dramas, they have begun to appreciate their own culture.

Another activity of the Ashram is Sangeetayan (Institute of Music and Dance). It is a three-month condensed course ending with an examination. Successful students get a certificate from the Bhatakande Sangeet Vidyapeth, Luck now, to which the Ashram is affiliated

As he made the transition from staging *Messiah* (at Indore in 1934) to *Christaleela*, Fr George Proksch also adopted the Indian way of life He changed his name to Guru Gyan Prakash Sharman He wears a sanyasi's garb (kurta and lungi) instead of a cassock and greets people with a namaskar He even celebrates Mass Indian style – sitting on the floor, with agarbattis, etc

On January 9, 1983, he completes 50 years in India Deeply spiritual, he continues his practice of spending much time in prayer. Every spare moment is spent in reading and writing

In his prime, the Guru was a dynamo with a commanding, impressive, radiant, magnetic personality which inspired people to work with him and for him devotedly. However, years of pushing himself too hard have left their mark For the past couple of years, his health has been failing and, at 78, he is rather frail

Asked if he would like to return home to Germany to recuperate, he said "No" For him home is India! ■

THE MAGNIFICAT by Mary in Kathak style

Afghanistan and Pakistan's Western Frontier

by Air Marshal Asghar Khan

This third instalment of excerpts from *Generals In Politics* forms a definitive chapter of the book to be published by Vikas. In it, the former Pak Air Chief takes a perceptive look at the Afghanistan-Pakistan problem vis-a-vis the Soviet Union and the United States and goes on to plead for a more rational relationship between Pakistan and India in their own enlightened self-interest.

THE FLOODGATES WERE THROWN OPEN, as it were, when Pakistan could only look on passively as Russia walked into Afghanistan. According to Air Marshal Asghar Khan: "The collapse of the US position in Iran and the political gains that the Soviet Union has made in recent years in countries of the Middle East and Africa make a Soviet presence in Afghanistan a matter of considerable importance in her global plans. The large population of Muslim ethnic origin in the southern states of the Soviet Union and the proximity of the oil-rich Gulf to the southern borders of Afghanistan, which is barely 300 miles away, lend special importance to Afghanistan in Soviet eyes."

PAKISTAN mishandled the Afghan problem and showed an arrogance in relations with its neighbour which its bureaucrats had inherited from their British masters. They appeared oblivious to the fact that such behaviour did not have the backing of an empire.

The point is perhaps illustrated by my own experience. I was invited to visit Afghanistan in 1967 as the Head of Civil Aviation in Pakistan. During my tour, the Afghan authorities asked for help on three main issues: they asked for the overhaul of their aircraft engines in our maintenance facility in Karachi; the training of some technicians; and permission for their airline to fly from Kabul to Delhi by the direct route over Pakistan, instead of a longer circuitous route to Delhi.

I took up the question of the overflights of their aircraft with the Foreign Office and other relevant agencies and met with opposition everywhere. It was argued that, by allowing them to fly to Delhi by the direct route, their increasing contacts with India would be facilitated and that this would not be desirable. Eventually, I saw President Ayub Khan, who appeared to agree with his advisers. I expressed the view that this attitude towards Afghanistan was not in Pakistan's long-term interests and, when he seemed adamant, I said that it appeared to me that we were being "bloody-minded" "There's no harm in being blood-minded sometimes," Ayub Khan replied.

Ayub Khan was perhaps right—that, occasionally, there is no harm done in being bloody-minded. However, I cannot help feeling that, in regard to Afghanistan, Pakistan has adopted this attitude more often than was necessary. We have at times behaved in a manner more befitting our imperial predecessors.

Afghanistan's request to extend the railhead at Landi Kotal a few miles into Afghanistan was repeatedly refused and restrictions were put on their transit trade—an attitude that they found irksome and irritating. Kabul's friendship with India was frowned upon and our Foreign Office, instead of endeavouring to draw Afghanistan closer by being friendly with her, tried, whenever it could, to punish her for what it considered undesirable connections with India. Afghanistan's spurious claim of "Pakhtoonistan" and her close and friendly relations with India were considered valid reasons for this attitude. As Pakistan continued to be "bloody-minded", Afghanistan moved closer to India and the Soviet Union. Pakistan closed its borders with Afghanistan in 1950, 1955 and 1960 and Afghanistan began to rely increasingly on Soviet technical and economic assistance. Her Armed Forces were equipped more with Soviet equipment and her defence personnel and technicians began to be trained in the Soviet Union in increasingly large numbers.

By 1966, the Soviet Union had constructed a first-class highway over the Oxus from the border of Uzbekistan to the principal Afghan towns. By 1967, more than 50 per cent of Afghanistan's trade was with the Soviet Union and, by the mid 1970s, a number of modern airfields and hydroelectric stations had been constructed with Soviet aid and supervision and natural gas from the gasfield of Mazar-i-Sharif was being supplied to meet Uzbekistan's industrial needs. By the time President Daud was overthrown in 1978, Afghanistan was squarely in the Soviet camp and both President Taraki and Hafeezullah Amin had little room for manoeuvre. However, in Pakistan's two wars with India in 1965 and 1971, Afghanistan maintained scrupulous neutrality.

Need For Vision

The present Afghan problem should, therefore, be seen against this background of neglect and a lack of understanding by Pakistan of her own interests in what—she should have realised—was a country of great importance to her security. Having got herself into a position in which she has at least contributed to the Soviet presence in Afghanistan, it is important that Pakistan should conduct her policies in this area with a clearer realisation of her strength and weaknesses, as well as the interests of the world powers in this region. Only then can Pakistan avoid the mistakes of the past and save herself from dangers in the future.

The collapse of the US position in Iran and the political gains that the Soviet Union has made in recent years in countries of the Middle East and Africa make a Soviet presence in Afghanistan a matter of considerable importance in her global plans. The large population of Muslim ethnic origin in the southern states of the Soviet Union and the proximity of the oil-rich Gulf to the southern borders of Afghanistan, which is barely 300 miles away, lend special importance to Afghanistan in Soviet eyes.

To the United States and her allies, a threat to the oil supplies from the Gulf, represented by Soviet control of bases within easy striking range of its sea-lanes, is a matter of serious concern. It must also see that the spread of Soviet influence in Pakistan would further erode the US position in what is now an area of great interest to her.

The limited extent of military aid to Pakistan—to which the United States has committed herself—suggests that she does not see any likelihood of overt military moves by the Soviet Union, directly or by proxy, in this area in the foreseeable future. The military and economic aid-packet of $3.2 billion over the 5 years is intended more to keep Pakistan in the Western camp than to confer any significant defence capability on her. Moreover, since the more important

items of military equipment are not likely to start to flow in quantity until 1984-85. It would be reasonable to conclude that the United States does not envisage any military threat that Pakistan may be required to face in the near future. In any event, it would be unrealistic to expect the United States to commit her land and air forces to fight in defence of Pakistan in any *local* conflict with a Soviet-backed country such as Afghanistan.

The aid that the United States has committed to Pakistan is, therefore, all that should be taken into account when planning the country's defence against a military threat to its western frontiers. In the event of hostilities with India, the United States is likely to discontinue the supply of spares and sophisticated equipment to Pakistan. China's interests in the area and her desire to keep Soviet influence out of Pakistan are likely to ensure steadfast support from her in the form of equipment and supplies. This capability is, however, limited and cannot meet Pakistan's major needs. In view of the interests of the major powers in this area, it would appear desirable for Pakistan to follow a policy that ensures her survival, without assuming a commitment that is beyond her capability. The cost of modern military equipment is exceedingly high. Pakistan is, therefore, faced with a choice between keeping herself equipped with whatever she can get with an increased political commitment or reducing her political commitment and making some adjustments in her foreign relations.

F-16: Effective Only In 1985?

The first alternative should be examined in the light of what the United States has found desirable to meet the defence needs of Pakistan. With each F-16 aircraft costing in the range of $20 million, $800 million of military aid would secure 40 aircraft. With spare parts, maintenance and test equipment and the cost of improving the ground environment, at least another $400 million would be required. The flow of such items of hardware is not expected to commence in quantity before 1984, so the F-16 aircraft would only begin to become effective some time in 1985.

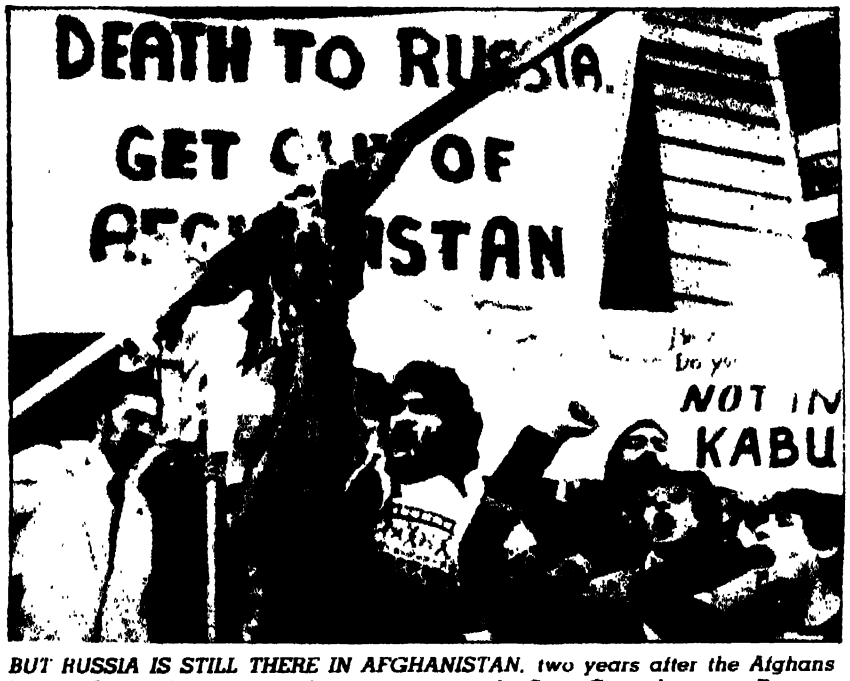
Similar, if somewhat lesser, problems will be faced in the induction of other equipment in the defence services. Considering Pakistan's defence problems, the small number of F-16 aircraft that the United States is committed to supply cannot be expected to make a significant contribution to Pakistan's defence against the threat visualised by her. Indeed it would be unrealistic for Pakistan to expect from the United States the level of aid and the quality and quantity of equipment that would meet her needs, consistent with the political posture that she has adopted in the Big Power tussle in this area. On the other hand, the political price that Pakistan would be required to pay is out of proportion to the strength that she would acquire.

The second alternative—that of reducing her political commitment with an attendant reduction in her military posture—is befogged with prejudices and fears that Pakistan has hitherto found difficult to overcome. No appreciation of Pakistan's defence needs is realistic without taking into account her assessment of the military threat posed by India to her security. With a population and resources at least 6 times those of Pakistan and land forces 3 times, air forces 5 times and naval forces roughly 10 times those of Pakistan, India is undoubtedly much stronger than her smaller neighbour. However, the answer for Pakistan does not lie in meeting the Indian military strength by building up her defence forces to match India's strength, because that could only be done by breaking the country's back economically or by agreeing to a mercenary role for a major power by mortgaging freedom.

"With a population and resources at least 6 times those of Pakistan, and land forces 3 times, air forces 5 times and naval forces roughly 10 times, India is undoubtedly much stronger than her smaller neighbour. However, the answer for Pakistan does not lie in meeting the Indian military strength by building up her defence forces to match India's strength, because that could only be done by breaking Pakistan's back economically or by agreeing to a mercenary role for a major power by mortgaging freedom."

Pakistan, therefore, has no sensible option but to improve her relations with Afghanistan and the Soviet Union. The question of Pak-Afghan relations, however, is complicated by the reality of the Soviet presence in Afghanistan and the presence of a large number of Afghan refugees in Pakistan. Afghanistan has never had a democratic representative government and the country has been ruled by various dynasties and, lately, by socialist parties of different hues. They have all come to power by the strength of their arms. The Soviets have argued that their involvement in Afghanistan is in response to the wishes of the people to support the socialist regime in Kabul and to prevent foreign interference in Afghanistan's affairs. The present Afghan Government, like its predecessors, cannot however claim to have been brought about by any constitutional process or by an expression of the popular will. The large-scale exodus of refugees from Afghanistan must also be taken as an expression of the Afghan people's disapproval of Soviet involvement in Afghanistan.

However, the stakes that the Soviet Union has in Afghanistan now make it most unlikely that she would abandon an Afghan Government of her choice and pull out of the country without reaching an agreement she considers reasonably satisfactory. Circumstances could, however, persuade her to agree to a solution that would, whilst ensuring Afghanistan's neutrality, provide reasonable guarantees for allowing her to maintain her links with that country. The neutrality of the Afghanistan Government would, however, have to be very real to persuade the refugees to return to their homes and it would be in Pakistan's interests to move towards a position that would make such an agreement possible.



BUT RUSSIA IS STILL THERE IN AFGHANISTAN. two years after the Afghans burnt a Soviet flag during a demonstration on the State Capitol steps in Denver, Colorado (on January 3, 1980)! "Having got herself into a position in which she has at least contributed to the Soviet presence in Afghanistan," notes the author, "it is important that Pakistan should conduct her policies in this area with a clearer realisation of her strength and weaknesses, as well as the interests of the world powers in this region. Only then can Pakistan avoid the mistakes of the past and save herself from dangers in the future."

Pakistan's stand not to negotiate with the Government of Afghanistan but her preparedness to meet with representatives of the Afghan Ruling Party was a continuation of the attitude that has bedevilled Pak-Afghan relations for over three decades. The argument advanced has been that the Afghan Government is not a legal government, for it has not been popularly elected and does not represent the people of Afghanistan. Unfortunately, this stand does not have any force, since the military government of Pakistan had itself not been elected by any constitutional process.

Pakistan's position would have been immeasurably strengthened if it was represented by a lawfully elected government which could speak with the backing of the people. The argument that negotiations could take place with representatives of the ruling political party but not with the Afghan Government—even if both are represented by the same people—was an example of political hair-splitting that could only obstruct the solution of the problem. It was also illogical that, while the Pakistan Government preferred to deal with the ruling political party rather than the Afghan Government, it did not permit its own political parties to function. That Pakistan had received international support on this absurd stand was not necessarily a measure of the correctness of her position but was more indicative of the extent to which some powers are prepared to adopt ridiculous positions if only these serve their interests. It suits them to have Pakistan adopt an intransigent attitude on this issue so that she could be built up as a base in South Asia to promote their own requirements.

Pakistan: A Test-Case For US

If Pakistan is prepared to move towards a truly neutral position, an agreement could hopefully be reached with Afghanistan that would safeguard Pakistan's interests as well as solve the problem on her western border. The major powers would also find that their interests are adequately served by denying this area to each other. James L. Buckley, the US Under Secretary of State, concluding his testimony (on September 16, 1981) before a Sub-Committee of the House Foreign Affairs Committee about US economic and security cooperation with Pakistan, said:

Unlike the Soviet Union, we do not seek a position of dominance in South West Asia. What we do seek, in admitted pursuit of our own self interest, is to prevent the Soviets from achieving their goals. This we can do by helping the nations of the area contribute to regional defence by making them better capable of looking after themselves. We believe this approach is not only the one most likely to succeed, but also the one most consistent with our own national principles of non-interference in other people's affairs. Pakistan is a test-case of this approach to regional security. We propose a balanced programme of economic assistance and military sales and credits to help Pakistan play its essential role. It is appropriate to Pakistan's needs and commensurate with our own interest in the area. I urge the Committee's understanding and support.

If this reflects accurately the United States' position in this area, there is no reason to believe that the interests of the United States in Pakistan would diminish with Pakistan moving towards a truly neutral posture in the Big Power struggle in this area. Moreover, there is no reason to think that a security agreement cannot be reached with the Soviet Union on the lines of that with the United States and, if this was done, it would reduce immeasurably Pakistan's defence burden and would give her effective

→

security against foreign aggression She could reduce her own military expenditure from the present staggering figure of Rs 19 5 billion to one that makes some sense in economic terms and one which is not a crippling burden on her economy

It is possible that the United States as a quid pro quo would demand from Pakistan's military rulers an agreement to obtain certain facilities in Pakistan to strengthen her military position in the Middle East In that event James Buckley's testimony before the House Foreign Affairs Committee could be the first step —as the US sees it—in a graded response to her geopolitical interests in this area Such planning has important politico military implications for Pakistan as well as the United States and should be seen in the light of the history of relations between the two countries •

The Position Then

When Pakistan became a member of the Baghdad Pact (later known as Central Treaty Organisation) in February 1955 she was not regarded as a front line state Her north western border was at a relatively safe distance from the Soviet Union and Afghanistan was neutral in the East West tussle in this area Pakistan's position on Iran's eastern border however conferred on her an importance in the eyes of the Republican Administration of the United States that merited special consideration Moreover her position close to the southern states of the Soviet Union regarded at that time as the soft belly of the Soviet Union made her convenient for locating certain monitoring facilities Soviet intercontinental ballistic missile launching and nuclear test sites were being developed in this area and these could be watched with relative ease from Pakistan based monitoring equipment

As a quid pro quo for the military and economic aid that Pakistan received in the late 1950s and early 1960s, she allowed the United States to develop the so-called "communication facilities" which were, in fact, monitoring stations The most important of these was Badaber, close to Peshawar Badaber did not have an airfield but contained highly sophisticated electronic equipment. Its establishment was negotiated at the highest level and I believe that the Foreign Office knew little or nothing of its role or equipment. The Pakistan Air Force had nothing to do with it and was so divorced from its activities that no one from the PAF could enter its premises. Badaber gained prominence when a U2 plane which had "staged" through Peshawar on May 1, 1960, was brought down over the Soviet Union and Nikita Khrushchev, at a Foreign Embassy reception in Moscow told the Pakistan Ambassador that he had put a circle around Peshawar

U2 aircraft used by the CIA were fitted with monitoring equipment and powerful cameras and had an abnormally long range as well as a very high ceiling These aircraft could therefore, fly non stop from airfields as far apart as Peshawar in Pakistan and Bodo in Norway At its cruising height the U2 could not be intercepted by Soviet fighter aircraft For staging through Pakistan they were required merely to inform civil aviation authorities The particular U2 aircraft that was brought down over Soviet territory had staged through Peshawar in accordance with this practice In addition to providing bases for monitoring facilities for the United States Pakistan provided continuity to the defence of the so called Northern Tier (stretching from Turkey to Pakistan) and provided a cordon between the Soviet Union and the Persian Gulf Since Egypt was not well disposed towards the United States Saudi Arabia as yet not aligned fully with her and Israel not as yet secure within her borders the United States relied heavily on Turkey and Iran and to a lesser extent on Pakistan for strengthening the defence of her interests in the Middle East

The Position Now

Now a quarter of a century later the situation has undergone some important changes The Soviet Union has a foothold in Afghanistan and from there is within easy range of the entrance to the Persian Gulf The United States on the other hand although it has lost Iran as an ally has secure base facilities in Egypt Israel and Saudi Arabia in addition to her facilities in Oman and further south in the Indian Ocean- in Diego Garcia Moreover the development of communication satellites renders unnecessary any elaborate communication or monitoring facilities on Pakistan territory

Considering the environmental limitations and strengths of different countries in the area Pakistan would appear to offer facilities for the stockpiling of equipment and the launching of United States naval land and air forces for operations in the Gulf area It has the minimum defence infrastructure for US needs and presents possibilities for further development of her base facilities With the present severe restrictions on the press and the public it should be possible for the military junta to turn Pakistan into a launching pad for US military forces in the area This would not only be a quid pro quo for the US military and economic aid that Pakistan is receiving but would also satisfy the peculiar needs of a military machine direly in need of a morale uplift

It is, however, for the people's representatives to determine whether Pakistan should pay a price for military assistance which is inconsistent with the country's interests. Such an initiative on the part of an unrepresentative and unpopular regime would have no moral sanction and it is only a matter of time before such a commitment is repudiated by the people. The US would be unwise to make such an arrangement with Generals who have no right to speak for the people of Pakistan.

"It is for the people's representatives to determine whether Pakistan should pay a price for military assistance which is inconsistent with the country's interests. Such an initiative on the part of an unrepresentative and unpopular regime would have no moral sanction and it is only a matter of time before such a commitment is repudiated by the people. The US would be unwise to make such an arrangement with Generals who have no right to speak for the people of Pakistan."

Regardless of the nature of her relations with the United States and the Soviet Union, Pakistan must make certain basic changes in her defence concepts if the country's security is to be ensured By shedding colonial concepts of defence and evolving a strategy based on the needs of a free nation, a great deal can be achieved at lower cost The vast reserve of manpower can be mobilised to play its full role in the country's defence It is significant that no government has thought it fit to mobilise this great defence potential for only a popular government enjoying the genuine support of the people can trust its civil population sufficiently to arm them Modern wars are not fought only by professional armies Public participation at the national level in the fullest measure is necessary and a nation that can do this to a greater degree can influence the outcome of a conflict The highly professional land naval and air forces can then be organised with the armed backing of the nation

This backing has never been mobilised in Pakistan and no government which does not have full faith in its own people can ever try to do so Until such a government is established Pakistan will be forced to maintain large formations to do jobs which can be done infinitely more economically and more effectively by the mobilisation of the country's manpower Following a reorganisation of its defence services the highly disciplined and trained manpower rendered surplus could be used with advantage on productive work in the great task of nation building

THE PICTURE IN FEBRUARY 1980 a 10 year old Afghan girl holds her baby brother in front of a tent that is home to their family of 10 in Chitral An estimated 1 4 million Afghans have sought refuge in Pakistan following the Soviet intervention in December 1979

If India continues with her present level of defence expenditure this would undoubtedly further tilt the military balance in her favour, but public criticism in India, which is becoming increasingly conscious of the absurdity of Mrs Gandhi's assertion that Pakistan poses a threat to India's security, would be further strengthened In any case, Pakistan's security agreements with the United States and the Soviet Union and her long-standing relations with China should induce India to reduce her defence expenditure to a level more in step with her real defence needs It is also to be hoped that India will succeed in solving her border dispute with China so that the need for her to keep large forces against a possible threat from the north is removed

Having taken the fundamental decision Pakistan could seek economic and military assistance from the Soviet Union as well as the United States both of which since they would be vitally interested in her neutrality are likely to assist her with the modernisation of her reorganised defence services There is every reason to believe that the enlightened self-interest of the United States in this region (as expressed by James Buckley on September 16 1981) would require her to maintain her links with Pakistan to the mutual benefit of both countries For similar considerations and keeping in view the friendly ties that have existed for over two decades between the two countries China is also likely to continue her close links with Pakistan The national interests of both the US and China would be served if Pakistan survived as an independent country The Soviet Union if it is satisfied that Pakistan is not a base for the United States in this region should also be interested in seeing that it survives as an independent neutral nation

Key To The Problem

This policy would demand courage and imagination on the part of the country's leadership So long as this leadership is in the hands of an unrepresentative government and so long as it is with people who have a vested interest in feeding an overgrown military machine this change is not likely to occur The chances therefore are that until such a change takes place defence expenditure will continue to increase—until it has further impoverished the people and Pakistan has become a client state of those powers who need this piece of territory as a base for the furtherance of their national interests It could also be that the economic burden on the people of Pakistan and India, brought about by a senseless arms race, could bring nearer an explosion that could have unpredictable repercussions for the future of the people of these two countries One thing is certain that the next few years will prove crucial for those who inhabit this part of the world and who represent a large part of the human race

The key to the problem lies first, in converting Pakistan's western frontier as a border of peace. If Pakistan can make this change on a border that has for centuries been traditionally a turbulent area, she can also transform the climate on her eastern frontier and thus make a major contribution to the peace of the world

To Be Continued

THE WORLD AROUND US

Loneliness In America

Louise Bernikow

Loneliness may be one of America's most serious sources of disease in the 20th century. Besides causing emotional pain and self-destructive behaviour such as dependence on alcohol, cigarettes and drugs, researchers say, loneliness is also linked to such serious ailments as heart disease and hypertension.

JASPER EVIAN is the pen name of a New York author, divorced ten years ago. His daughter moved with his former wife to California, and Jasper's longing for his child is constant and dull, like a toothache. In spite of a web of connections with friends, business associates and transient lovers, Jasper has suddenly begun waking up at 4 am consumed by loneliness. "My ambition," he says, "is wholly personal now. I can't understand people pursuing worldly success. All I want to do is fall in love."

Linda, a Dallas bank executive, is driving home on the freeway. She has had a busy day at the office, handled a tricky negotiation, lunched with a colleague, dined with clients. It took years to achieve her current position as the highest-placed woman in the bank. She plans to work at home on Sunday, but she still thinks of Sundays as family days, and being alone then is like being a dateless teenager on Saturday night. "I've become a workaholic because I'm so lonely," she admits privately.

As early as the 1830s, Alexis de Tocqueville wrote about the loneliness of Americans, describing the citizens of this country as "locked in the solitude of their own hearts".

Lonely In A Crowd

The dictionary defines loneliness as "an absence of companionship or society", but anyone who has ever been lonely—and that's just about everyone—knows that it is not quite so simple. People can be lonely in isolation or lonely in a crowd; lonely because they have no one to be with or lonely because they are with someone they can no longer reach.

Yet Americans are also more than a little ambivalent about loneliness. Self-made men who battle to victory in business without aid or comfort are pointed out for emulation. (Women are not as often praised, in our history, for going it alone.)

A growing number of social scientists and mental-health professionals are now studying contemporary American loneliness. Some say that we are more lonely than in the past; others argue that we just think we are. More persuasive is the evidence that the physical and emotional consequences of loneliness pose greater dangers than anyone thought. Dr Stephen E. Goldston, Director of the office of Prevention at the National Institute of Mental Health in Washington, believes that "persistent and severe" loneliness can lead to alcoholism, drug abuse and suicide.

Current research reveals that the people who are loneliest don't necessarily fit the popular stereotypes. Adolescents appear to be more plagued by loneliness than anyone else; older people, surprisingly, may be less so. Success seems to offer scant protection against loneliness—especially for women. Geography has little to do with it either. The psychologists Carin Rubenstein and Phillip Shaver surveyed several rural communities and large metropolises and found no less loneliness in the small, friendly towns than in the big, unfriendly cities.

Experts say that the culture places so much emphasis on the acquisition of possessions and status that most people devote little time or energy to forming and maintaining relationships. Exaggerated expectations created by the idealised versions of life on television, in films and in the scores of "self-help" books on the best-seller lists may also play a role. And because of increasing freedom and mobility, ties to spouses, family, church and community unravel more easily.

More people live alone today than ever before—almost one-fourth of the population. Within this group are a large number of people under 40 who, for a variety of reasons, have chosen not to marry. The women in this group are often the first women in their families to live alone. A generation earlier, they would have become housewives; now they are working or going to school instead. Pursuing a career undoubtedly brings many women new fulfilment. But it may also take a toll that, until recently, has gone largely unexamined.

Many of those who live alone are divorced, separated or widowed, and the rising number of people in this category is also a cause for concern.

Ordinary people cope with loneliness in ordinary ways. They keep the radio or the television on for company. They smile back at the anchorman on the evening news when he says, "See you tomorrow". For companionship and society, they turn to soap operas that offer the illusion of involvement in other people's daily lives. People take tranquilisers and go to bed, read or go to a movie, join churches, evangelical movements or even cults, buy things they don't really want, go to doctors more often than necessary and dial the weather report just to hear a friendly voice. They think lineliness is to be lived with, like the weather. They don't think they are in danger.

Loneliness And Health

Dr James J. Lynch, a specialist in psychosomatic diseases at the University of Maryland School of Medicine, thinks they are wrong. Loneliness is dangerous, he believes, especially to the heart. A broken heart, Dr Lynch argues, is not a metaphor. His 1977 book, *The Broken Heart: The Medical Consequences of Loneliness*, made frightening connections between lack of human companionship and heart disease. A nurse's hand can slow a patient's pounding pulse; the simple routine of pulse-taking often calms arhythmic heartbeats. People often develop heart ailments when they lose love or companionship.

"The rise of human loneliness," he concludes, "may be one of the most serious sources of disease in the 20th century."

Since then, Dr Lynch has been studying other "loneliness diseases", especially hypertension and migraine headaches. In each case, he has found connections between loneliness and illness.

"Pain turned inward," is Dr Lynch's medical definition of loneliness, and "ruptured patterns of discourse". We are experiencing an epidemic of this, he says, and you see it "especially in self-destructive diseases like cigarette smoking and drinking".

Dr Robert N. Bellah, a Berkeley sociologist, sees the epidemic as a continuation of national tradition, intensified by recent history. A team of interviewers under his direction has been asking people what they believe in and finding that we still hold certain truths to be self-evident.

"Personal freedom, autonomy and independence are the highest values for Americans," Dr Bellah says. "You're responsible for yourself. We place a high value on being left alone, on not being interfered with."

Yet individualism is "a terrifying demand", Dr Bellah says. Throughout the country, he finds, "there is an element of loneliness not far below the surface".

There are profits to be made from all this loneliness. The promise of companionship and society sells everything from banking services ("You have a friend at Chase Manhattan") to phone calls. The telephone company's advertising aims directly at the lonely: "Reach out and touch someone."

Price For Companionship

A large and growing industry promises romantic companionship for a price. Increasing numbers of single people are willing to pay $400 or more to subscribe to video dating services. *Intro*, the first national singles magazine, claims an initial circulation of 100,000.

There lies a cross-fire between the sexes, a stalemate in expectations that explains, in part, why so many men and women who say they are lonely and looking for companionship never seem to find it.

Dr Sol Landau sees this stalemate at his Mid-Life Services Foundation, an organisation he has just set up in an office building near Dadeland, in south Miami. Dr Landau had been a practising rabbi for 17 years. Now he mostly counsels people in "mid-life" and finds the lack of companionship between husbands and wives a direct consequence of the women's movement and the inability of men to change.

"Men need to be mentors," he says, "and they're married to women who now need to throw off their mentors. The men I see are threatened by their wives working or going to school. They can still only function from the throne."

Unable to attach themselves seriously to someone else, often because men and women don't know what to expect of each other anymore, many people immerse themselves in their work. The most acute loneliness Dr Landau sees is in "the most successful men, workaholics, men unconnected to their personal lives". But an increasing number of women now fall into this category as well.

When researchers note that women say they are lonely far more often than men do, they interpret this, in part, as a greater willingness of women to talk about feelings, but it also suggests different expectations of companionship and intimacy.

When the Berkeley sociologist Claude Fischer asked adults whom they talked with about personal matters and whose opinion they considered in making important decisions, he found that women, married or not, were likely to have several confidantes. Many unmarried men said the same, but a substantial number indicated that they had no one in whom they could confide. The most significant difference, however, was that married men usually named only their wives as confidantes. And the older a man was, the less likely he was to have a friend or relative in whom to confide.

Adolescents, more than others, complain of having no one to talk to.

The elderly, on the other hand, may not be as badly off as we expect. A Harris poll conducted last year showed that 65 per cent of non-elderly persons considered loneliness "a serious problem" for the aged. But only 13 per cent of people over 65 agreed. This may have something to do with lessening expectations in old age. But it may also show, according to Dr Anne Peplau, a psychologist at the University of California at Los Angeles, that "older adults value privacy and independence. They view living alone as an achievement rather than a sign of rejection by others."

Friends, she says, are more important to older people, in terms of

away, women replace them. Men don't as often."

Working has traditionally offered opportunities for companionship and society, but increasing numbers of people work alone, and some suffer immensely because of it. This was made clear one recent sunny Sunday morning in Houston. Volunteers were answering the "crisis-line" telephone in a small, partitioned office. Most of the volunteers had come to work at the "crisis-line" because they were new to town and this was their way of being around other people.

A man called, weeping. He didn't give his name. His wife, he said, had left him because "I blew up and hit

No one who cares. Dr Harvey Greenberg, a specialist in adolescent psychiatry and a professor at the Albert Einstein College of Medicine in New York, believes loneliness in adolescents stems from "a breakdown of the family, the fact that there are now lots of only children, lots of older parents and working mothers".

Dr Greenberg adds that loneliness in adolescents is an important factor in the increase in teenage suicide, which has risen 300 per cent over the last 25 years.

companionship, than children or relatives. Indeed, several studies have found greater loneliness among those who live alone or with friends.

Dr Peplau, who has been studying loneliness and aging, finds gender differences significant in terms of how people handle loneliness. "Men rely on wives and girlfriends for social relationships, for intimacy. If their wives die before they do, men are in trouble. Women usually have both a heterosexual relationship and a reliance on friends. They seem to keep making friends throughout the life cycle. If friends die or move

her". The volunteer on the phone suggested he find someone to talk to, perhaps a friend at work. He was silent. Then he said, "I can't. Where I work I stare at dials all day. There's no one around."

Eroding Families

Yet out there in the desert of eroding families and unfulfilled hunger to connect with other people, oases are being discovered or built.

Crystal Lugo found one. She lived in a section of east Los Angeles that, she says, "was all retired people. There was no one to talk to". She watched soap operas and talked on the telephone. Then her marriage broke up and she was left with a 4-month-old daughter. A social worker told her about the community's Displaced Homemaker's Programme. Now she is learning office skills, but she is also learning how to be with people.

This is a precarious solution because the programme, federally funded, is in danger of being cut next year.

Mildred Murray has found yet another kind of oasis. A 68-year-old woman, she has been divorced three times and is not interested in another marriage. A year ago, she was living in a trailer on property owned by one of her three sons. "I thought I had it licked by the tail," she says, "but I started feeling very lonely. All my friends died off or I just lost touch with them."

She heard about a new programme in southern California matching senior citizens with each other as housemates. Gene was a widower living in his own home in Van Nuys. Neither of them had ever thought about such an unconventional arrangement, but they decided to try it.

Older Housemates

The night Mildred Murray moved in, she lay staring at the bedroom door. "I knew he was clean, but I didn't know if he was a moral person." A year later, she can't imagine living any other way. Sometimes she makes Gene's bed and cooks his meals. She likes visiting her children or taking a trip and "not having to report to him". She is not lonely.

The people creating such oases have several things in common. They don't deny their loneliness, they don't castigate themselves for being alone, and they recognise the need to build bridges to others, rather than waiting for their loneliness to simply go away. Too many of us, however, are ambivalent about the spaces between us. We want independence and a faithful lover, we want the support of a family but not its demands, we want a community but we don't want to conform to its codes.

We speak of "networking" and "interesting", but underneath that we're really looking for people we can depend on, people who will laugh at our jokes and listen to our nightmares. We don't really want to interface with our networks. We want to cuddle our grandmothers and take walks with our lovers. Above all, we want some to talk to.

By special arrangement with *The New York Times*.

The Third Eye

New Inroads Of Perception

I really began taking photographs only two years ago. I like photographing nature, but I especially enjoy taking pictures of people. I learnt photography from my father, from enjoying what I see and from enjoying good photographs—and also with the help of a good book on the subject. Nevertheless, some of my work is mediocre or worse. These I keep to myself.

From my own collection, my favourite photographs are those which come off unexpectedly or unintentionally. Because the mind has not explored their possibilities before,their full impact comes suddenly, like the first slap of cold water. They create new inroads of perception and suggest new ways of using the camera.

Useful Products And Processes

Making Life Easier

Prestidigitation!

USING microvascular surgery a team of plastic surgeons from the Stanley Medical College Hospital, Madras, recently restored the function of the amputated fingers of a 10 year old boy by successfully transferring a toe from the patient's own foot to the mangled hand.

Four fingers from the right hand of the boy, Govindan from North Arcot, had been reduced to pulp by a sugarcane crusher a few months ago. With just a thumb intact his hand had been was rendered useless for all practical purposes. His case was taken up by Dr Professor R Venkataswami, a dedicated plastic surgeon who has specialised in hand reconstructive surgery. Prof Venkataswami was assisted by Assistant Professor Dr Nirmala Subramaniam.

Microvascular surgery involves the suturing of the minute micro vessels and can only be conducted with the aid of a microscope. The instruments and materials required are also miniaturised to the point of invisibility to the naked eye. The incredibly intricate operation on Govindan's hand lasted a gruelling 10 hours and demanded prodigious concentration, stamina and a high degree of skill, previously rehearsed only on animals. The reward: the functional use of Govindan's hand is largely restored and the progressive Stanley Government Hospital team, so far the only one of its kind in the country, extends a definite hope to those who have suffered the loss or damage of a fundamentally essential extremity.

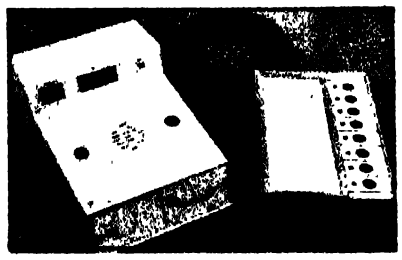
—Rina Kamath

"Electronic Election"

HERE is ECIL's electronic voting machines with which we can choose our rulers. (It was used experimentally in the Parul constituency of Kerala in the Assembly elections on May19—the first time in the country when an electronic voting machine was used at the polls.)

It is based on the latest microprocessor technology and is very simple to operate. It consists of two units—the control unit which will be with the presiding officer or senior polling officer and the balloting unit which will be in the polling booth where the voter will cast his vote in total secrecy.

The names of the candidates and their symbols will be on the balloting unit. There is a button and a light against each name. The voter votes by pressing the button provided for the candidate of his choice.



The recording of the vote is indicated to the voter when a light is lit in the balloting unit. Simultaneously a beep sound alerts the control unit. The control unit and the balloting unit are so interlocked that a voter cannot press more than once.

The control unit has a register giving the total votes polled for the benefit of the presiding oficer and polling agents.

The voting machine also makes it possible to declare the final result on the same day.

Beating The Bacilli

EVER since the discovery of the leprosy bacillus in 1874, scientists have been trying to cultivate the organism in an artificial medium but to no avail. Now that epochal breakthrough has been achieved by an Indian Researcher, Dr N. Veeraraghavan of the Voluntary Health Services Centre, Madras.

According to Dr Veeraraghavan, the synthetic medium he has developed is simple to prepare. It does not contain proteins and is non-toxic to guinea pigs and mice. the sensitivity of the medium is such that isolation and cultivation of the organism could be made from the material collected by the slit and scrape method routinely used for making smears for diagnosis. The method of cultivation itself is amazingly simple and can be carried out in any clinical laboratory having an ordinary household refrigerator. The organisms multiply quickly—2 to 6-fold in 18 to 40 hours—thereby making diagnosis easy and rapid.

The Veeraraghavan technique opens up enormous possibilities: synthetic vaccines can now be produced in large quantities. The testing

Dr Veeraraghavan

of anti-leprosy drugs on bacilli in culture can be speeded up. A close watch on drug resistance can also be maintained. And as Dr Veeraraghavan says," Apart from the leprosy bacillius the technique (with some modification) has been found effective in the case of tuberculus bacteria too"!

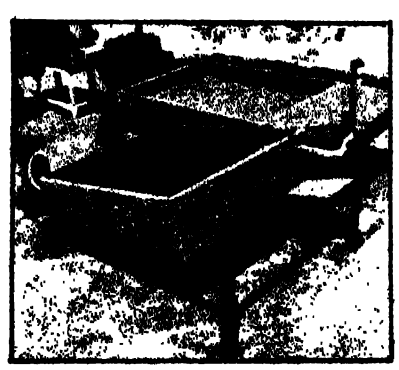
"Solar" Papadams

A Solar papad dryer has been designed and developed for the first time in India by the Field Research Unit of Tata Energy Research Institute, Pondicherry, headed by Dr C.L. Gupta. It is useful for drying papads on a large scale small space. The prototype has been designed for the final drying (*i.e.* after sun drying) of papads to increase their shelf life. Clearly it is meant for the manufacturers alone.

It consists of a solar water heater with inbuilt storage which absorbs radiation. The hot water is circulated through a fan coil heat exchanger by a pump. The air is drawn in by the blower. It passes between two glass sheets and is first heated up by direct solar radiation and then by the additional heat supplied from the fan coil unit in the dryer-cum-preheater unit. The hot air then passes over the conveyor belt on which the papads are placed. The belt can be hand-operated.

There is provision for coupling auxiliary heat from a fuel-fired boiler for use when there is insufficient or no solar radiation. To operate the blower and the pump electric power is required, 0.25 and 0.05 H.P. respectively.



Two hundred papads per hour can be dried but only between 11 AM to 4 PM.

—Dhirendra Kumar Dixit

Jolly Good Ply!

NOT too long ago, a young entrepreneur, Arvind Jolly, had the bright idea of manufacturing prepainted sheets called "Jollywood" and "Jollyply", they now come ready to use in various thicknesses, woodgrain patterns and pastel shades. They are cheaper than laminated sheets. They can be directly glued or nailed on to the batons. Because of their thickness, they do not require the conventional plywood backing required for laminates. Moreover, such pre-finished sheets need no maintainance or finishing. They are heat-fire-and-moisture-retardant and termite-proof.

Besides panelling they can be fashioned into furniture, wardrobes, cabinets, bed backs, office tables, kitchen cabinets, bus interiors, television and radio cabinets or whereever a durable, washable and dentproof sheet material is required. These sheets do not chip or warp.

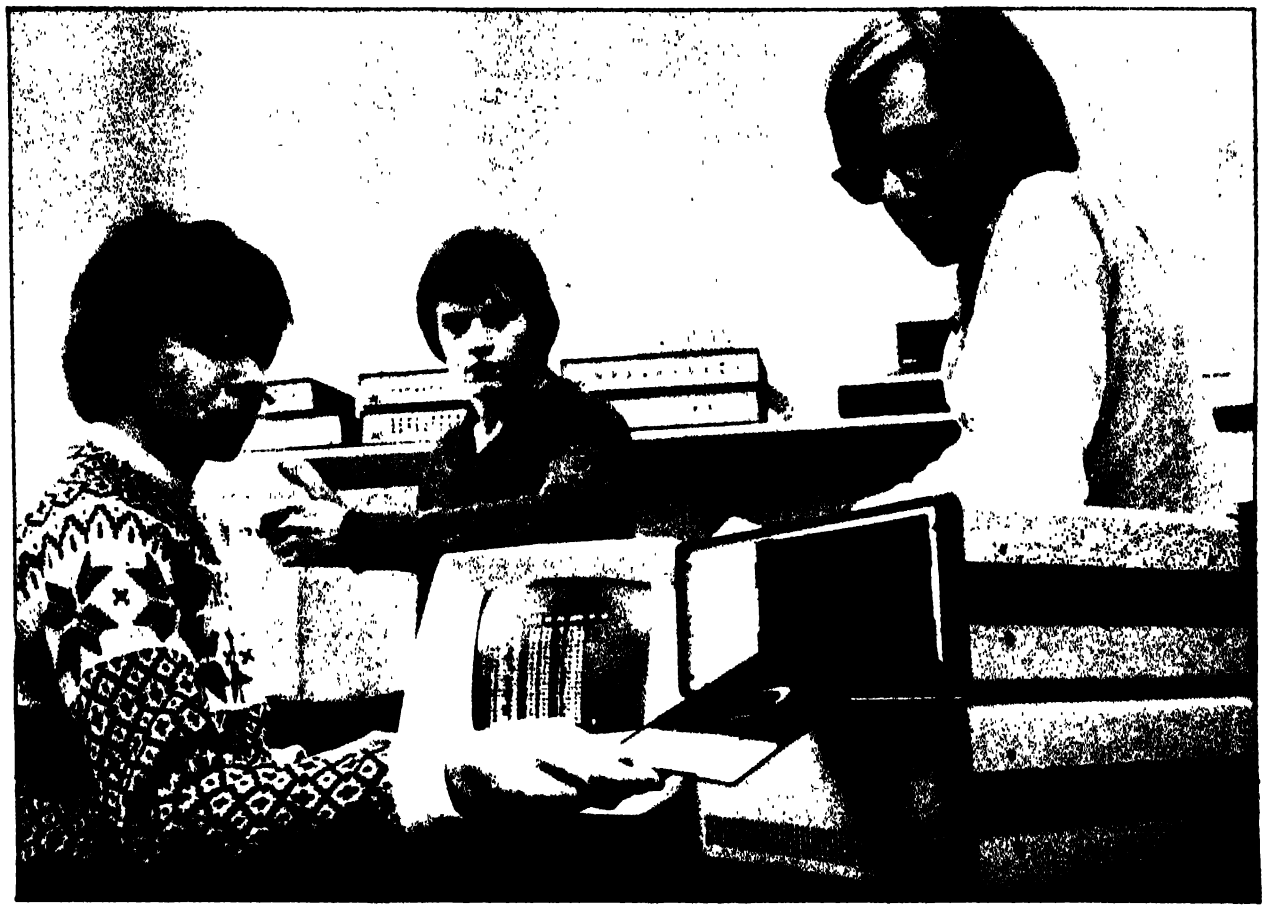
"Jollywood" is also available in perforated patterns as tiles with a mineral wool backing—the ideal acoustical and thermal insulation material. These tiles provide an optimum balance of sound absorption, lightness, strength and dimensional beauty. They are available in varied patterns and designs to make ceilings of enduring beauty.

—H. K. Varma

Towards A Paperless Office!

Today, Ramesh Sharma needs to shuttle only between his office and home for his livelihood. Tomorrow, he may never have to—in fact, he may not even need to go to his office to keep his business going!

by Rajib Ranjan Sen



WHEN Ramlal wants to communicate with someone in his village, he simply goes down to Delhi's General Post Office. There he dictates his letter, pays his fee and walks out.

Ramlal dictates to a man who knows Hindi, English, Punjabi and Urdu. Without being a scholar in any language, this man has developed his own expertise in understanding the thoughts of his clients and transcribing them with pen and paper into written missives.

Ramlal is satisfied with his system, if not his lot.

Not so Ramesh Sharma. Ensconced in his 15th-floor, centrally air-conditioned chamber in the heart of Delhi, Sharma no longer dictates to his secretary. He is far too busy adding to his earnings even to notice her flashing smile. He dictates only as and when he is able to and at places convenient to him. For the greater part, he uses a pocket-sized cassette recorder.

In office, at home, on the ground or in the air, this handy gadget is always with Sharma. Its miniature cassettes record everything he says, allow Sharma to pace and correct himself without embarrassment and it is a facility available to him 24 hours of the day. All this without having to make his secretary work overtime or taking her off *other* jobs she could get done when not "wasting time" on avoidable dictation.

The cassettes that Ramesh Sharma gives to his steno-secretary are clicked into a desk-top unit that plays back the recording. In order to type and simultaneously control the flow of words, she uses a foot-pedal control that frees her hands for typing.

Only, she does not use a typewriter. She uses a word-processor that resembles a typewriter only to the extent that the keys are in the same chaotic sequence. Beyond that, a complexity of electronic gadgetry makes her output the ultimate in perfection.

Magnetic discs, for instance, record everything she types. Apart from doing away with the need for carbon copies and filing, this facility enables Ramesh Sharma's secretary to project whatever is on the disc on to a television-like screen before her. There, every communication that is to go out is refined for clarity, construction, grammar, punctuation and all the little niceties that literally make it letter-perfect. Only then does actual typing start—without the typist having to type at all!

Letter-Perfect!

The machine can do more than merely type the text corrected on the screen. Depending on the "instructions" it is given, the word-processor will type out *identical* personal letters to *different* people so that each believes he got the *original*! Or it will make minor changes in each letter so that, for instance, appointments do not clash. It will even retype an entire multiple-page legal document (already done for one client) by *automatically* substituting one name for another. What is more, it will make short work of complicated, time-consuming forms that need filling—complete with the relevant arithmetic.

All this done at about double the 40 words-per-minute of the average typist! And Ramesh Sharma has merely to ensure that the first draft (which is seldom the last anywhere) is properly proof-read and perfected on the screen.

In this fast-moving world, Sharma is waiting for the day when telecommunications will make it possible for the product of his word-processor to be flashed on the screen of the person to whom his letter must now go by post. It would then be automatically filed in the electronic memory of that word-processor—as would its reply to Sharma. Loss of documents through human error would be eliminated because no files would *physically* exist. The records would be available on tapes and discs, each of which could be duplicated in a matter of minutes from an inviolable master—for recall or reference.

According to their advertisements, UCL word-processors use discs (resembling gramophone records) that concentrate 500 pages of text in just 20 cm (8 in). With such 500-page discs, it is easy to see how 4 such devices can send a 4-drawer filing-cabinet into oblivion and make the expensive office space it occupies available for *other* purposes. It follows then that the obsolescence of the filing-cabinet will herald the advent of the paperless office.

Already, vast volumes of paperwork (including personal correspondence to family and friends) have been excluded from Ramesh Sharma's life. Subscriber trunk-dialling has made that possible. Abroad, sitting in Manhattan, he holds simultaneous conferences with his managers in Chicago, San Francisco and New York without troubling any of them to come down to New York.

The dictating machine, the word-processor and the telephone are only three elements in Sharma's futuristic world. Years ago, he had called in an international computer company to streamline his company's functions to feed him up-to-the-minute information for snap decisions. Constantly updated and upgraded, his system now encompasses every aspect of his corporate operations. Every employee has a number and is paid without mistake. Full 10,000 items of inventory have been codified and costs reduced through timely and economic purchasing procedures. Unprofitable products have been lopped off Sharma's range even if they provide the most revenue.

Similarly, the discovery that his best sales territories were not the most profitable have resulted in a radical restructuring of Ramesh Sharma's entire distribution network. Finance, R & D, sales promotion and advertising—there is no aspect of corporate activity that is not touched by the fingernail-sized silicon-chips in Sharma's computer system.

Today, Ramesh Sharma needs to shuttle only between his office and home for his livelihood. Tomorrow, he may never have to—in fact, he may not even need to go to his office to keep his business going! ■

"Ours is a Forhan's Fluoride family"

Amit loves the taste. His father wants strong teeth and I use it for healthy gums.

Forhan's protection for the gums

If gums are weak and spongy, even your healthy teeth may loosen and fall out. The special astringent in Forhan's strengthens gums to help you resist gum troubles.

Fluoride protection for the teeth

In children, fluoride hardens tooth enamel, protecting it against cavities. In adults, the fluoride in Forhan's strengthens the resistance of enamel to decay causing germs.

Forhan's Fluoride

protects both gums and teeth.

That's Business

From Our Special Correspondents

DR RAM GOPAL AGRAWAL's untimely demise on December 19 has removed a well-known figure from the capital's economic scene. His home-spun ubiquity and considerable erudition will be sorely missed at business get-togethers and in the inner councils where decisions are made.

Poignantly, it was only in November that he took over as Secretary-General of the Associated Chambers of Commerce and Industry, shifting there from the Federation of Indian Chambers of Commerce and Industry, which he had joined in 1947 and where he had risen to the position of Deputy Secretary-General. Dr Agrawal's long tenure at FICCI was, however, marked by an interregnum when, in an ill-advised move, he resigned to go to Zambia in West Africa as an economic adviser. Soon there was a coup and he singed his fingers, returning hurriedly to resume his old job at Federation House.

Dr Agrawal's expertise was not infrequently utilised by the Government as well as United Nations agencies like UNDP and UNCTAD. His forte was foreign trade. Perhaps his friends would like to bring to fruition a book on Indian joint ventures abroad which he was planning to have published in early 1983.

Unproductivity Year

1982, designated as the Year of Productivity ended on an unproductive note. Agricultural production is down, industrial growth rate has slackened, the trade gap has widened, foreign exchange reserves are eroding, tax collections are poor, expenditure has soared and, therefore, the budgetary deficit has increased.

The *coup de grace* to the beleaguered economy is provided, of course, by the 11-month-old Bombay textile strike involving 1.50 lakh workers. Perhaps the biggest and longest strike in world history, it has given 1982 the dubious distinction of recording the highest number of man-days lost—about 60 million—since Independence. The production loss can be gauged from the country's inability to supply the Soviet Union more than 150 million square metres of cloth in 1982 against a commitment of 200 million square metres.

Foray Into Indonesia

The Raunaq Group is making a notable foray into Indonesia. Construction work on two joint ventures, for producing nylon tyre chords and plasticisers, is to start in March, according to Mr Raunaq Singh.

The nylon tyre chord unit will cost $62 million and have an initial capacity of 6,000 tonnes which will eventually be doubled. The plasticisers unit will cost $14 million and have a capacity of 30,000 tonnes. The two units will be located on adjoining sites about 30 kilometres outside Jakarta.

In accordance with that country's law, both the ventures will have a minimum of 20 per cent Indonesian equity to be held by banks. The Raunaq Group will control the ventures, holding 50 per cent equity in each through a mix of financial participation and machinery exports. The rest of the money will come from overseas banks, led by the European Asian bank of Singapore, and non-resident Indians.

RAUNAQ SINGH

Technology for the plasticisers unit is being provided by West Germans who are doing a lot of business in Indonesia. For the nylon tyre chord unit, the technology will come from the South Koreans who have established a world-wide reputation in the field. The South Koreans are also likely to put in some money. "I will be going to Seoul towards the end of January to formally sign the agreement," says Mr Singh.

Hard Bargaining

The fresh textile agreements entered into by India, under the Multi-Fibre Agreement with the EEC, USA, Canada, Finland and Australia came into effect on January 1—initially for a period of four years. The agreements are extendable by one year.

Mr B.K. Zutshi, Joint Secretary (Textiles), who was the principal negotiator for India, says: "The agreements were reached after a lot of hard bargaining, particularly in the case of the EEC and the USA. We have struck a better bargain than before."

According to him, the number of restrictions on garments may not have changed, but the quantitative limits have been raised. The dispute whether machine-stitched handloom garments should be categorised as hand-made products or not has been resolved by skirting the classificatory issue and fixing quotas on an *ad hoc* basis for these items. "In the event, we managed to secure higher limits than would otherwise have been the case." Mr Zutshi estimates

B.K. ZUTSHI, Joint Secretary (Textiles)

that India's access to these garment markets should increase by Rs 250 crore from the present export level of Rs 550 crore.

In the case of made-ups and fabrics, there has been liberalisation and few limits remain. How much our exports of these items can increase from the present levels of about Rs 200 crore and Rs 300 crore, respectively, depends on our production capability

Ding-Dong Battle

Thanks to the support of share-holding financial institutions, the Walchand group has, for the time being, managed to frustrate the efforts of the Goenkas of Duncan to wrest control of Premier Automobiles Limited. However, if market reports that the Goenkas have cornered over 80,000 PAL shares are not exaggerated, the ding-dong battle is likely to be resumed sooner than later.

The widely-published tussle—reminiscent of the battle of yesteryear between Mr C.H. Bhabha of Spencers and Mr Mallaya of United Breweries—brings to the fore the need to have a proper regulatory mechanism for take-over bids. At present, under Section 111 of the Companies Act, a management can refuse to transfer shares if it suspects a take-over bid, and under Section 113 of the same Act the purchaser can appeal to the Company Law Board. If the matter is not settled, it goes to the High Court.

Officials in the Union Finance Ministry candidly admit: "There is need for a stipulation that a party trying to corner shares by offering a high price should be obliged to offer the same price to the minority parties as well. This is stipulated in the City of London Code of Conduct on Takeovers and Mergers, which is based on convention but has the force of law."

In a financially less mature country like India, the stipulation could only be enforced through law. The Companies Act or the Securities and Contracts Regulation Act could be amended. Alternatively, the rules pertaining to listing of companies could be amended to provide for de-listing of companies which do not play the take-over game fairly. Why, then, the delay? "We are aware of the problem but presently our hands are full with setting up stock exchanges in Rajkot, Ludhiana and Jaipur, all of which should start functioning within six months."

Beyond The Golden Triangle

Mr P.L. Kirloskar, who branched out into hoteliering instead of joining the manufacturing empire of his brother, is sore that nothing is being done to tap Maharashtra's tourism potential.

He says: "Uptil now efforts have been concentrated on promoting tourism along the so-called golden triangle of Delhi, Jaipur and Agra. Now that tourism has been categorised as an export-oriented industry, they should also look in other directions."

In a paper entitled "An Integrated Plan for Regional Tourism", and submitted to the tourism departments both at the Centre and in Maharashtra, Mr Kirloskar makes three points: Since Bombay is overcrowded, develop Pune into a centre for holding international conventions; develop the coastline into beach resorts by building cottages and approach roads; and provide tourism infrastructure at hill stations like Mahabaleshwar, Matheran, Lonavala and Khandala.

P.L. KIRLOSKAR

Mr Kirloskar's five-star hotel in Pune, the Blue Diamond, is sustained mainly by businessmen.

Country Of The Future?

The *World Money Analyst*, published from Hong Kong, is one of the world's leading newsletters on gold, silver, stock markets, diamonds and other investments. Commenting on India for the first time, its editors state: "India is Asia's new sleeping giant. Watch India." India's highly entrepreneurial population is best evidenced by the many Indians operating their own businesses in the rest of the world. As the world's second-most populous nation (after China), India has a potentially huge domestic market, with most of the skills in one form or another poised for rapid economic growth.

"But marginal evidence suggests the Government is moving towards deregulation. Some controls have been relaxed (not lifted), with encouraging results. It's too soon to know if this is the beginning of a new trend. Should it be, India could become the new powerhouse of Asia."

Any takers?

Growing babies
need a special solid food...
Farex

Because Farex is the more nourishing solid food for babies' rapid all-round growth

Farex is rich in protein for your baby's growth.

To protect the baby from protein deficiency, the World Health Organisation has laid down certain standards for protein content in, and feed preparation of, branded solid foods. A Farex feed, when prepared as directed, is rich in protein — so essential for your baby's growth.

Farex has extra iron for healthy blood.

"The baby is born with a large store of iron from the mother, but these deposits gradually decrease after birth. Although milk is a good diet, it is not a complete food because it lacks iron. This is why he needs solids containing iron."

— Dr. Subhash C. Arya

Iron is essential for your baby's blood, for his resistance to infection and for his general health and growth. That's why, Farex contains more iron than any other branded solid food.

Farex has the right ratio of Calcium and Phosphorus for building your baby's teeth and bones.

Your baby needs Calcium and Phosphorus for the development of his teeth and bones. But these can best be utilized by your baby if they are present together in the ratio of 2:1. Farex contains both these essential elements in this ideal ratio, ensuring healthier bones and stronger teeth for your baby.

And Farex is so easily digestible.

Farex has been specially pre-cooked to suit your baby's tender digestion.

Osteopathy is the New Way!

Simple Cures For City Ills

by J. Radhakrishnan

It is not surprising that the city-dweller of today is condemned to a life of aspirins, analgins and all sorts of "pain-balms"? Mental tension, migraine, stiff-necks, eye strain, slip discs have all become a part of urban existence. The bus queue in Calcutta and Delhi, the train queue in Bombay and Madras, the ration queue and the school-admission queue everywhere! Soaring prices, non-availability of daily necessities, as also all the unrequited desire of life are enough to cause mental and physical misery to millions of city-dwellers.

But there is no need to despair. The most nagging urban ailments can be obviated by osteopathy. Osteopathy is essentially "manipulative therapy"—because the treatment is based on the theory that most of the ailments are due to structural abnormalities of the body, and can be cured by p proper manipulation of the muscles in the affected parts.

Osteopathy is nothing new, either. It is as old as Sushruta, the 10th century BC Indian medical seer He called it *Asthi-Chikitso*—treatment by manipulation of the ailing part with his finger. An osteopath's hands are his instruments.

Long ago, an Indian ruler is said to have suffered from a severe backache. He turned, tossed and rolled in bed because of the unbearable pain. The best ministrations in the kingdom proved to be of no avail. About this time, an unknown physician arrived from nowhere. He ordered the royal horse to be kept without food or water for four days. The horse was then brought to the king who was asked to mount it. The thirsty animal noticed water in a ditch nearby and galloped towards it. As the horse bent to drink, the king had to grip hard to save himself from falling. In the process, the king's back "clicked" and the ache was gone!

Besides legend, there are two recorded cases involving historic personalities. Napoleon Bonaparte, who generally enjoyed good health, once suffered from lumbago The court physician asked Napoleon to disrobe and lie across a table. He then administered a sound and well-aimed slap on the hips. The stunned Napoleon turned in fury and during that sudden movement the painful contraction of the lumber muscles disappeared! The painful lumbago was gone.

Another European potentate of recent memory, Adolph Hitler, is known to have suffered regularly from severe body pain. This could be relieved only by osteopathic treatment. And so, an osteopath was always with Hitler even during visits to the war fronts.

Why then has osteopathy not received due recognition? Why is it not so widely practised? For the simple reason that the curative manipulation is generally attempted by laymen. Lack of recognition may also be due to osteopathy's strange "revival" towards the end of the 19th century, and its haphazard growth since then.

The "father" of modern osteopathy is Dr Andrew Tailer Still, born in 1828 in a Virginia farming family. When 10-years-old, Andrew suffered a severe headache. In desperation he took a rope, made a swing between two trees about 6-inches above the ground, and placed his neck on it. He lay flat on the ground with his head hanging over the swing and went to sleep. When he got up 20 minutes later, the headache was gone! Thereafter, whenever the headache recurred, he used the swing-sleep method. Though he went on to secure a medical degree, he realised that medical science was not so advanced and people were subjected to purges, emetics and strange concoctions, often with dangerous consequences.

Dr Still was determined to develop a system of treatment to enable the body to heal itself in accordance with the laws of nature. His experiments in osteopathy were simple. He fitted a stout bench-like table in his consulting room. It was long enough for a person to lie on, but not wide enough. The patient was placed on the table. Sensitive fingers would run over the spine, there would be quick movements, and the agonising pain was gone The patients could not understand why a doctor would only push and pull to treat a patient, instead of prescribing the usual pill or a bottle of mixture.

The news spread fast and with it Dr Andrew Still's fame. With the cooperation of other doctors attracted to his new method, he founded the Osteopaath Medicine Group and launched the first College of Osteopathy in Kirksville, Missouri, in November 1892. From America osteopathy soon spread to England and Europe The British Osteopathic Association was formed in 1911, and then came the London College of Osteopathy

Dr Modi began as an orthopaedist at the Safdarjang Hospital in New Delhi In treating complicated cases, he became aware of one anomaly "We are so effective in the treatment of fractured bones and other ailments Yet why is it we cannot help the patients with chronic aches and pains?" This led Dr Modi to specialise in osteopathy at the London College.

Dr Modi regrets that while in America and England osteopathy is encouraged in its "homeland" of India, it is neglected A pity, he feels, because with simple osteopathic treatment, millions of people, specially in the lower income bracket can get relief from chronic aches and pains that afflict city-dwellers ■

NAPOLEON BONAPARTE also depended on osteopathy.

ADOLF HITLER, believe it or not, took his osteopath along with him even to the battlefield

Cures That Endure

Bust The Myth

Breast feeding like stilettos goes in and out of fashion for reasons certainly not medical! But whatever else changes in the field of infant rearing, there is no doubt at all that milk from the breast is ideal for a baby's intake of nutrients. And of course, the natural mechanism of the human body is so perfect, that the temperature is always regulated. So no heart-breaks over scalding milk or reheating in sub-zero conditions.

Like every other organ in the human body, the breast is a marvellous organ—in fact you might be slightly surprised to know that it is basically only a gland, that too a sweat gland, modified of course but understandably enough, extremely complex: it has 17 milk producing units! The stems of these units end in a nipple and the main constituents of this organ are fat (which gives it the necessary protection) and connective tissue (which acts as an *internal bra).*

The breast is almost utterly dependent on hormones—mainly *oestrogen* and *progestin*—during pregnancy, and they help in increasing the growth of the milk ducts and units while *prolactin* (as the name suggests) secreted by the pituitary gland induces milk flow after the birth of the baby. Initially, the two breasts together produce about a pint of milk a day. This requires the circulation of several gallons of blood each day.

From the blood the alveoli pluck glucose, or blood sugar, which the enzymes change into lactose and other sugars acceptable to the infant body. It is the same process for amino acids, building blocks for *casein* and other complex milk proteins that the baby needs for its development and for tissue repair. Fats undergo other transformations. From the circulating blood the alveoli also pick out minerals, particularly calcium for bone building and vitamins essential to health.

The usual fears that the infants sucking might ruin your contours are groundless. Nursing has no effect whatever on stretching the ligaments of the internal bra. After the nursing period (usually about two months, although lactation can easily continue for six months) with no stimulus from a hungry little mouth the glandular components drift off to sleep again and the breasts resume their normal weight. The immunity of the baby is also enhanced because it is exposed from an early age to the germs already on the mother's breasts. Undoubtedly, it learns to face the world—fortified!

Julie Bijaipita Chatterjee

THE JAPANESE, supreme in Asian Gymnastics up to now, never really challenged the Chinese at *ASIAD 82*, so much so that they had to rest content with the 3rd place--behind China and North Korea.

Photographs by Amiya Taraidar

India's position in Asian Gymnastics was succinctly summed up by the Chinese coach when he said that, to surface on the international scene, our gymnasts must practise 8 hours a day for at least 2 years from now. At the moment, our performances are marred by faulty landing and lack of grace and rhythm.

by Barid Baran Misra

FINESSE, fitness, callisthenics and grace were at their height at the Ninth Asian Games. So much so that the audience at the Indraprastha Stadium sat enthralled by the wonders created; yet never once forgot to come out of the trance and applaud whenever the performance touched a peak meriting a hand.

Records at *ASIAD 82* significantly showed China's almost unchallenged domination of and Japan's fading away from the gymnastics discipline. Pictures of perfection, grace and con-

fidence, the Chinese gymnasts meant business from the word go and ultimately romped home with a rich medal haul of 12 gold, 9 silver and 2 bronze.

As for India, despite a 2-year tenure with East German Coach Dieter Struck, our gymnasts were nowhere in the picture. How far do we lag behind and when we will be able to make an impact on the gymnastics scene are the two questions that must have racked the brains of the think-tanks, the cynics and the critics. In this regard, the coach of the Chinese Gymnastics Team said pointedly that, to surface on the international scene, the Indian gymnasts must practise 8 hours a day for 2 years from now.

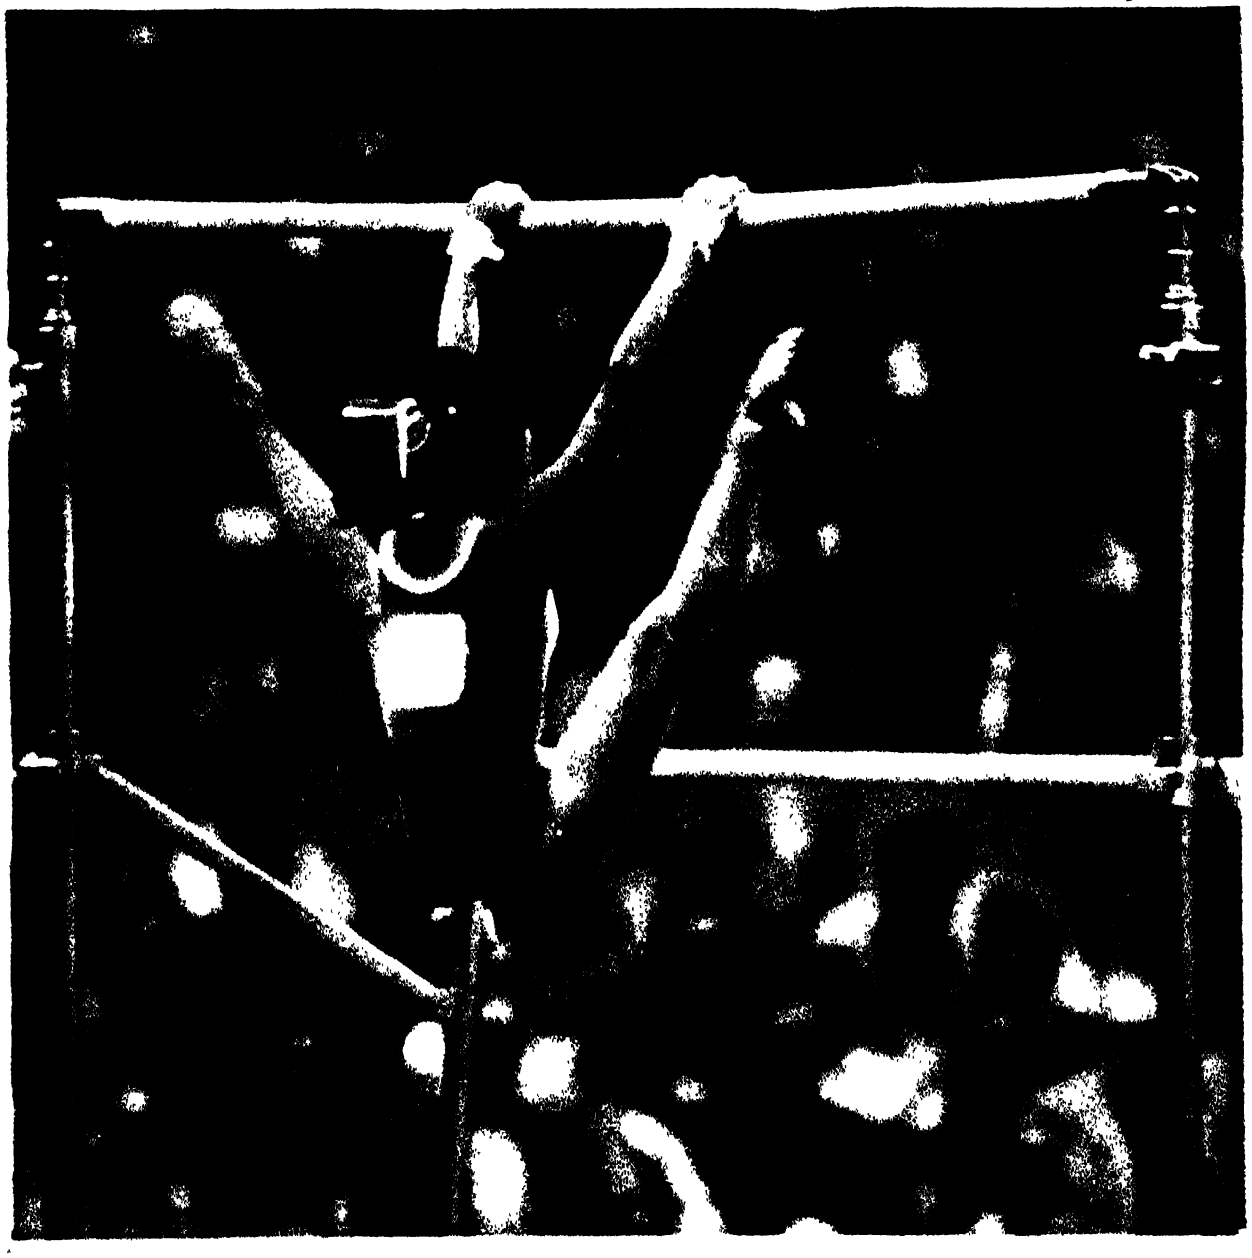
Our limitations have been exposed, but one should not forget that our gymnasts had their *baptism* at the 1982 Asiad Gymnastics Championships. By and large, their performances were marred by faulty landing and lack of grace and elegance. Women's National Champion Sanjivini Karandikar and Men's National Champion Balram Sheel suffered visibly in comparison with those leading the Asian field, but our gymnasts are catching up and one can only keep one's fingers crossed for the next Asian Games.

There were altogether 14 golds at the 4-day championship. China ran away with 11 of these 14 crowns—they got the bonus gold in a rare triple tie in the Men's Vaulting Horse Individual Event, where the 19-year-old World Champion, Ning Li, his compatriot Li Xiaoping and North Korea's Li Chol Hon shared the title,being locked at 19.800 points.

The 1982 Asiad Gymnastics Championships not only produced class but also a chestful of wonders, besides two unprecedented Perfect 10s scored by China's 16-year-old wonder girl, Wu Jiani, and Japan's male gymnast, Hirata Noritoshi. A jampacked stadium saw the 16-year-old Golden Girl, Wu Jiani, chalk up the first Perfect 10 on the Balancing Beam in the Overall Individual Women's Championships, equalling Romanian Nadia Comaneci's record, set in 1976 at the Montreal Olympics. On the 10-cm-wide beam, Wu Jiani showed perfect poise and balance, performed immaculate flick-flacks, two belly-circles, a neat handstand split, followed by an impeccable double-back somersault dismount.

Japan's Hirata Noritoshi tamed the Horizontal Bar in the Men's Individual Apparatus Championship. Before Horitoshi performed, China's explosive boy, Tong Fei, did his favourite one-hand giant circle, reverse splits and triple-back somersault dismount to send the electronic scoreboard spinning and notch up 9.95 points. Generally, it affects a gymnast's performance when an opponent has already registered 9.95, but Noritoshi had an ace up his sleeve Whatever Tong Fei did Noritoshi emulated, but punched his manoeuvres with greater risk, finesse and ease to score the Perfect 10

THE CHINESE received their Team Championships medal at the hands of Prime Minister Indira Gandhi. It was noticed that the Chinese performers *(below)*, slim and slender, made their body subservient to their intellect. On the Uneven Bars, they vaulted, split, somersaulted, belly-circled, landed perfectly and did every other thing with grace and poise. This was especially true of China's Golden Girl, Wu Jiani, who chalked up the first Perfect 10 on the Balancing Beam in the Overall Individual Championships



The Championship belonged to China's 19-year old sensation, Ning Li, who came to India with the World Cup title in his bag—won at the Zagreb meet in Yugoslavia early this year. Ning Li got the largest number of medals in the gymnastic meet of *ASIAD 82*, including the Individual Championship crown Ning Li bagged 3 gold (Individual Championship, Side Horse and Roman Rings) and 1 silver (Parallel Bars) Gifted with extraordinary physical abilities, Ning Li kept the audience on the edge of their seats with his whiplash flying-scissors on the Pommell Horse, as also floor, triple somersault dismounts and inch-perfect vaults, all off the apparatus Nobody in the stadium could challenge Ning Li s superiority

Although the Overall Individual Event in the Women's Section was won by China's Yongyan Chen, her more graceful compatriot, Wu Jiani, stole the show Elegantly paving her way to 2 gold and 2 silver, Wu Jiani made her body subservient to her sharp intellect Slim and slender, Jiani excelled on all the apparatuses, especially on the Balancing Beam and the Uneven Bars. After taming the Balancing Beam, Jiani gave a golden performance on the bars. She vaulted, split, somersaulted, belly-circled, landed perfectly and did every other thing with the grace of a Bolshoi ballerina. She made the others look mediocre with her radiance.

Slowly but firmly making their presence felt are the relatively unknown North Koreans, who clinched the 2nd place, behind China, thanks to the 17-year-old girl, Choe Hong Sil, and her male compatriot, Li Chol Hon. Both gymnasts performed superbly and were in hot pursuit for the top honours. But, besides sparkling once in a while, they gradually faded away in front of the Chinese. That is to say, the Japanese never really picked up the gauntlet, although they came 3rd. ■

Hafeez Jalandhari

Poet Of Eternal Youth

by P.K. Nijhawan

THE name Hafeez Jalandhari evokes among the literate, several images a king of *mushairas*, a poet of many moods, an experimentalist with diction and prosody who evolved his unique idiom and style, an editor of a top literary magazine, a master of children's verse, a Government media officer, *Shair-e-Islam*, and the *Shair-e-Pakistan* which means the Poet Laureate of Pakistan Which one truly represents him? Going by what most people think of him, none of these perhaps! They know him best as the poet of *Abhi To Mein Jawan Hun* (I am still green, I am still young)

For over two generations now, commercial services of the Radio Sri Lanka has been broadcasting a highly popular weekly programme of hit songs of Hindi films under the title *Sada Bahar Geeton Ka Programme* As this programme opens, it greets the listeners with the mellifluous voice of Mallika Pukhraj, pulsating with a very evocative beat without any encumbrance of the usual orchestra Soon the notes *Abhi To Mein Jawan Hun* fill the room The young and the old start humming the tune or even repeating the *words in chorus In fact, it is a fitting* protestation of love, full of desire, before the lover takes his beloved to the bed What greater tribute can the common people pay to Hafeez Jalandhari? The poet lightens the mood by saying

Strange are you O Sheikh!
Tell me what you may
The age called youth
Can you separate ever
From living in love?

I have transcreated these two lines of this immortal song for the benefit of those who do not follow Urdu or Hindustani (Let the readers judge for themselves if this can not be the theme of a hot disco number!)

Another equally famous song of Hafeez is *Jaag sax-e-Ishq Jaag, Jag kam Devta* The famous song of *Anarkali, Jaag Dard-e-Ishq Jaag* is a crude version of this very song

Hafeez Jalandhari was as much gifted as his talents came to be recognised Among his peers in the sub-continent—and he belongs to a generation that produced giants like Josh Malihabadi, Firaq Gorakhpuri, Jigar Muradabadi, Faiz Ahmad Faiz and Ali Sardar Jafri—he could be described as the most natural poet He did not have to strain for his verse, it came to him almost naturally

Ripe Old Age

Born in Jullundur at the turn of the century (January 14, 1900 to be exact), *Abdul Asar alias Hafeez Jalandhari lived* up to the ripe old age of 82 and saw Urdu poetry develop from one plane to a different plane—from Maulana Hali to Kumar Shah and even the modernists At that time, in its highly conventional world, to go into the world without some great Ustad was like running the race with a big handicap But maybe this stood Hafeez in good stead He could feel free to experiment—and he did a lot of it

He was born in a family of Hindu Rajput converts (he kept up the taboo and did not eat beef) with no pretensions If he had started life as a petty official in the Municipal Committee or the local court, that would have perhaps been more than enough for the down-and-out family But he was cut out for a different type of life His first verse came to him at the very young age of seven years It must have boded ill for the family's future (for he was roundly thrashed for it!) But he could not do anything better than running away from home by taking away whatever he could lay his hands on and that, too, as often as possible, even though he was deeply attached to his mother He left school after he failed in the seventh grade examination Earlier, he had changed as many as four schools in Jullundur Not that he was not intelligent In a way, he was even precocious But then, like Tagore, arithmetic was his undoing Perhaps it is so with many other poets!

To curb his irresponsible ways, the family employed the same strategies as the Buddha's father in his day He was married This did make him a family man though he hardly knew how to keep the wolf from the door He did many odd jobs, including working as a supervisor in the Railway Labour Force

During all this time, poetry remained his first love There was no good Ustad he could have There was a group of Urdu poets in Jullundur but they were mostly Hindus Many of them followed Pandit Labbo Ram Josh as Ustad Mulsiani

But Hafeez did not look to him Perhaps Josh Malsiani himself was not duly established at that time Eventually, Hafeez sent a few of of his ghazals to Maulana Girami, a Persian poet of Jullundur who was then in the Deccan He refused to correct them but advised him that it would be better if he submitted them to the dictates of self criticism This was a tall order for someone still well under 20 To be self-taught in the conventional Urdu poetry is one of the most difficult things to achieve but he did it

Too Critical

As the reputation of Hafeez spread, the purists in Lucknow and Delhi started noticing him, with a somewhat too critical eye But he was too natural a poet to accept defeat At the young age of 21, when most other poets start with first lessons in poetry, Hafeez had taken to experimenting with new forms—and succeeded beautifully He brought back into Urdu poetry those sweet Hindustani words that Nasikh, the Great of Lucknow had ruled as banished from Urdu poetry between 1830 and 1850 He adopted *geet* (lyric) in Urdu poetry Embellished with utterly soft Hindustani words of utmost beauty and sensuousness these lyrics attained instant popularity It was around this time that he also shifted to Lahore, a big enough metropolis and quite a rival to Lucknow and Delhi as a centre of Urdu poetry

In Lahore, Iqbal was the unrivalled king of Urdu poetry He was a philosopher poet In fact, he provided a new *raison d'etre* to the Muslims of the sub-continent and goaded them to recapture their old ardour Those were also the days of the *Khilafat* movement which galvanised the Indian Muslims into a united, organised political force Those were also the days of Mahatma Gandhi and his non cooperation Heady talks of Hindu Muslim unity were in the air Hafeez absorbed all these influences He wrote some patriotic verse His poems on Lord Krishna made him very popular Then the spell of Iqbal's thought impelled him to write *Shah Nama-e-Islam*—a history of Islam running into thousands of verses Iqbal was known as *Shair-e-Mashriq* (The Poet of the East) and Hafeez came to be known as *Shair-e-Islam* or the Poet of Islam—a rare tribute for a Muslim

It was at Lahore that Hafeez started reciting his compositions in poetical symposia with *Tarannum* He was gifted with a singer's voice The type of lyrics he was writing are admirably suited for this type of soulful renderings The result was that in no time at all he became the undisputed king of *mushairas* He quit here Sagar Nizami, though Sagar's patriotic verse and style was also pretty popular Soon Hafeez was invited to revive and edit *Makhzan*, once the top literary magazine of Lahore About this time he also had the privilege of becoming the court poet of Khairpur state in Sind But he could not stomach the moral depravity prevailing in the atmosphere there He wrote a stinging poem *Raqassa* (The Dancing Girl) and was forced to quit the State within hours Hafeez did remarkable work in the field of children's literature when he became the editor of *Phul* His verses for children are unique because his diction is simple and direct While his literary verses appeared in three collections, his verses for children were published in four volumes Though not a pioneer in this genre, these verses of his bear the hall mark of spontaneity

Guileless Child

Yes, in many ways he reacted like guileless children do In 1938, he went to England There he asked a friend of his, "You have been living here for 14-15 years now When do you propose to return home?" The brown saheb asked in return, "What is there in India to go back to?" Stung by this answer he wrote a long poem I reproduce the transcreation of the first and last stanza of this poem captioned *To The Indians Living In England*

This Motherland mine
Has everything one can ask for
This garden of ours verily excels
The Garden of Eden
Not only in flowers
But in flower like damsels—
Delicate of structure,
Silken of touch,
Their mouths opening like buds,
Their gait more majestic than Leila's
Their tongue more honeyed than Shirin's
(Leila and Shirin—the two best of beloveds)—
And still you call it
Deserted and desolate!

Conceded
The present is not as resplendent
As was the past
Still it's the home of
All learning and arts
Through Tagore spoke
The magic of Bengal
And through Iqbal
The pride of Punjab
And though the lowly me
Is down and out
Yet
Come and see everything is here

With Hafeez's death ends an era He was a unique representative of that era in the matter of language, rhythm, music and spontaneity of his verse His heart ached at the unseemly Urdu-Hindi controversy of the 1930s and 1940s and so he summed up his anguish better than, perhaps, the best when he said

Hafeez apni boli muhabbat ki boli
Na Urdu, na Hindi, na Hindustani

(O Hafeez! It is the language of love that we the poets of India are known to speak It is neither Urdu, nor Hindi, nor Hindustani) ■

Who helps send out India's broadcasts loud and clear?

BEL.
And that's not a minor role!

Undeniably! BEL's role in developing radio communication and telecasting has enabled India to achieve technological self-reliance. Its transmitters, tape recorders, cameras and other related studio equipment send out India's message through the length and breadth of the country. Building for India, a contemporary communication network with an effective reach

And the story doesn't end there. BEL is also tunedin to other diverse manufacturing activities like fire control systems, radars, defence communication systems, weather monitoring radars, vacuum tubes, semiconductors, ICs and crystals, among others.

Being a multiproduct company, BEL has created a spectrum of specialised support facilities intrinsic to its manufacturing practices. Facilities like Environmental Control, Ultra-pure Water, Oil-free Dry Compressed Air, Dry and Ultra-pure Gases, Stand-by and No-break Power Supply all developed for BEL's technological self-sufficiency

Further, the necessity for import substitution, minimization of inventory and capital investment; the need to conform to a single set of manufacturing norms; and the necessity to assist Indian electronic component manufacturers has led to the development of BEL Standards—Component Standards and Workmanship Standards.

Today, BEL is a Rs.128 crore enterprise. Its role is ever widening, ever growing. Plans for further expansion include an investment of Rs.90 crores.

BEL's record—profits since 1960, a steady 12% dividend since 1970, order books full for four years—owes much to its 17,000 dedicated, goal-oriented people. People who have made it a company equipped more than adequately, to confront the challenges of the future, in tomorrow's India.

BEL: building India's future through electronics

Bharat Electronics Limited
(A Government of India Enterprise)
Bangalore·Ghaziabad·Pune

Sale 'n'Save

by Ranjit Lal

AMERICA will convince you that the only way to save money is to spend it at a sale. The newspapers scream this at you and forget to give the news; the television makes you feel like a fool for sitting on your behind and watching it instead of being out and saving a fortune by buying (ironically) a Japanese car even if you've already got three. And if you don't want another car never mind! Sooner or later you can send your saving shooting up as sooner or later every item on the market goes on sale — be it *Wrigleys Spearmint*, a meal at a junk food restaurant or an excursion to Hawaii. Even the supermarkets with names like *Payless*, *Thrifty* and (for the obtuse) *Pay 'n Save* (but akns no *Don't Pay*) reassure you that you save as you splurge.

And you do of course. A simple thing like a luggage trolley marked as $ 15 is yours for five, saving you a tenner. Which you can spend on a pair of jeans, which after being marked a horrifying $ 25 have been scratched down to $ 15 and then coyly offered to you for $ 9.99..... But then as you look around you, it becomes increasingly obvious that the great US economy is not being done out of ten dollars on a luggage trolley and fifteen bucks on a pair of jeans, recession or no recession. And the first ego-deflating doubts begin to surface about exactly *who* has got the better of the bargain. Do the salesgirls give secret, laconic snorts as you pounce excitedly on a 'Sale' tagged item and slam down your cash before the management takes the stickers away? And then, when you walk into the next shop and see those identical jeans being offered to you for $ 7.99... No siree, you know something's not right and you have a nasty suspicion that its a mark up.

The one place where you *can* positively get the better of the bargain however, is at the Garage Sales held in the gardens and backyards of hundreds of American homes every weekend. There are thousands of American households where things are threatening to stage a coup and in order to avoid this inglorious materialistic end — must be got rid of. In most cases however, it is *old things* (brand new onwards) that are threatening the takeover and in order to be taught a lesson must be sold off and replaced by *new things*. (Which maybe bought at fantastic savings at a Sale..:) The net result is a Garage Sale.

Reality, Suspicion, Distrust

For a visitor from India, clutching a cache of $ 500 that must often provide, wine, women and a bit of song, there could be no better place for the accumulation of things imported. And particularly if you've got a sharp eye and are swift at maths. But first, there's one thing you've got to jettison. Coming from a country where no one sells anything unless its to fleece you naked or pass you off with a no-no, you bristle with suspicion and distrust. You eye the colourful array of clothes hanging on sale and are convinced that they are full of moths, lice or both. That cutglass decanter and the sparkling set of six wine glasses are obviously full of invisible cracks. The moment you fill them they'll split and spill the wine in your lap and cut your hand in the bargain. There's no point checking out the music — the records are bound to be scratched and warped beyond belief.

In reality — and fortunately for you — the general level of middle-class honesty and trust bobs up at a rather higher level than it does at home. Articles that are defective in any way have their defects clearly advertised on their price tags — a policy that would make any self-respecting entrepreneur weep. You can fill that decanter and all the glasses as many times as you want — (and if you are a sport would drink a toast there and then). You can examine the clothes as closely as you can for rips, stains or dirty collars (and can fit out in the bathroom). Electrical goods (no use to us unless dual voltage) can be plugged in and tried A lady selling a digital clock-cum-radio said that it worked fine — but warned that the alarm might prove defective. When tried out, the alarm like the rest of the clock worked fine. Basically you've got to remember that the chief purpose of selling these goods is not to make a killing or an ass out of you, but to get them out of the owner's hair. And obviously, any right-minded American who has to spend his precious weekend mucking around with things he does not want, must be paid for his trouble. Sure there's beer and lemonade going round and a bronze tan being laid on the limbs but then every job has its perks.

Dream Prices

And the prices are marvellous. Here you can shop guilt-free and keep the exchange rate in mind without flinching. A Rosenthal coffee set that may have been used once, goes for fifteen dollars. You may not want a Rosenthal coffee set—but just the concept of one going for $ 15 makes it worth it. A top quality tote bag is yours for $ 4. Two days later you spot the same thing in a shop in much the same condition going for $ 40. (Saving you $ 34... here we go again!). An immaculate 20-year-old pair of brushed steel binoculars that fit in your palm is yours for a fiver. A three-piece suit for $ 15. Beer glasses at a quarter (25 cents) apiece. And so on.

Obviously a number of items being sold *are* genuine junk, but the degree of its junkiness generally depends on the *'neighbourhood'* of your garage sale A *depressed* neighbourhood (one battered *'69 Impala* in the driveway) naturally has more down-at-heel offerings than a relatively better-off one (last year's *Buick Skylark* and this years' Honda Accord in the driveway).

Cheaper By The Dozen

A cardinal rule about Garage Sale shopping is never to pick only a single item. Instead, pick up two or three, add their prices, divide by two, and suggest the price to the owner as though you're doing *him* a considerable favour. If you are lucky, he will be without a calculator and therefore quite helpless. However, he will play up your ridiculous suggestion a bit, you will play it down in turn, and soon enough an honourable compromise will be reached. Even if he *is* armed with a calculator the hassle of pressing all those buttons on such a glorious morning will prove to be too much and he'll give up in exasperation midway.

Sometimes however, you encounter resistance to comply with your absurd suggestions. So you promptly feign immediate disinterest and proceed towards your car or the next Garage Sale across the street. (Garage sales are arranged so that all houses in a particular neighbourhood wanting to hold them agree to do them over one particular weekend). Then halfway through, you pause, turn back and re-suggest your price. A couple of such trips and you're through, clutching your spoils and reeking with triumph You can however carry your triumph too far. Just because the prices are so silly — and your ego has been ballooning because of your bargaining prowess — you tend to buy up a lot of things that you will never need. To justify that, you create a need and when you do that, you generally have to spend a lot more money. And what is worse, by collecting so much clutter, you, a frugal ascetic from the East who abhores materialism, will have fallen headlong into the trap of Offlooding Materialism... and be a disgrace to your race.

As a visitor, another problem could be one of time. These sales are held only over weekends and you generally have precious few of them to go gallivanting about residential suburbs. In such cases it is worthwhile to keep a lookout for the Flea Markets which are basically a macro version of the same thing. Here, hundreds of stalls are set up in parking lots along with such truly American entertainment as sledgehammering a 1960 Cadillac at 25 cents for three blows. The prices quoted will be higher here — remember the stalls cost money to set up — and there are professionals who make a living out of Flea Market Selling! But you *do* get a wider variety of things (from tortoise shell combs to Morris Minors) from one place.

Another problem you could run into if you overdo things is with the dear old Customs. They're going to be highly sceptical when you tell them that the sophisticated stereo system in your baggage cost only $ 50 and that the swanky decanter and wineglasses all came for five bucks. True as that may be But then go take a walk down the Green Channel...

The Weekly Pick

Mahatma Gandhi, His Life And Influence

Chandra Kumar and Mohinder Puri
Heinemann £ 5.95

The book is essentially an illustrated biography with extracts from Gandhi's own prolific writings. *The Formative Years* is a recounting of *The South African Connection* and poignantly handled.

The photographs are good — especially in the chapter entitled *India Observed* — where Tagore is prominently featured. The Mahatma is the "in" thing now. And with the film about to be released it would be a good idea to do your homework prior to the screening.

Crime in Our Society

S Venugopal Rao
Vikas Rs 75

Crime has always had that compelling power behind it! Rao has now added to his list of bold and provocative books on criminology. Contemporary trends are effectively exposed — even white-collared workers and their Black money! The perspective is political and the studies are made more interesting by bringing forth the *culture conflict* . Sociological questions are posed and the emerging analysis is quite unique.

The Arya Samaj

Vable—Vikas 125

Innumerable youngsters have found shelter and solace in the Arya Samaj in recent years. Most socially disapproved matches have been solemnized under this banner. Unfortunately, that is all we care to know about this "sect" which began as a tremendous reformatory movement in the last century. The author's thesis says that this movement is entitled to the Same freedom as is granted under the Constitution to other religious minorities.

The Dean's December;

Saul Bellow; Pocket $ 3.95

Assessed as one of the greatest since Faulkner and Frost, Bellow once again gives us a wonderful sensitive story. The novel opens with Corde in Bucharest, sipping plum brandy as he watches the snowfall. Minna has a power latent in her and as her character unfolds the effect is gripping. The wheel turns full circle and we travel to America at the end. With Malamud and Updike, Bellow is surely the best US can offer by way of literature

Julie

Dr Kotnis In Chinese

China has made a colour feature film on Dr Dwarkanath Kotnis who was a member of the Indian Medical Mission sent by the National Congress in 1938 to help the Chinese fight against Japanese aggression. The film will be shown in Beijing as part of the activities to mark his fortieth death anniversary. The part of Dr Kotnis is played by a young actor, Zhu Smao, who won great acclaim for his role in the film *The Herdsman*.

—The Times of India

Lemmon Tree, Very Funny

When Jack Lemmon did his first picture, *It Should Happen To You*, he was called by Harry Cohn, the boss of Columbia Pictures, who told him he would have to change his name from Lemmon to Lennon if he wanted to work again. Cohn told the actor he was afraid people would say Lemmon was a lemon, the studio was a lemon and the picture was a lemon. Jack told him, jokingly, that the name Lennon might make people think he was a Russian revolutionary. Cohn, in all seriousness, said that would be Leneen.

—American Film

The Lady's A Perfect Whore

Alfred Hitchcock on Grace Kelly: "Poor Marilyn Monroe had sex written all over her face Brigitte Bardot wasn't very subtle either. But Grace Kelly was something different I was after the drawing room type, the real lady who becomes a whore once she's in the bedroom. She was perfect for that. Perfect "

—The Guardian

Count 'Dracula' Carandinis

The English-born actor Christopher Lee, who shot to fame in the Dracula role, is actually a Count in real life too, coming from the best Italian aristocratic stock, and when he is in Italy he can use the title Count Carandinis. The family name is prominent in the 1,000-year-old history of the Holy Roman Empire and the Carandinis were descendents of Charlemagne.

Old Is Gold!

Tamil Nadu Express, one of the earliest of the superfast trains, is losing its charm while the Grand Trunk Express continues to occupy a "grand" position among the services run between Madras and New Delhi.

There used to be a craze for TN Express ever since its introduction in 1976 but the GT, in the run for a number of decades, has stood the weather as reflected by the shift in preference in its favour — it is no longer rare to observe berths in the TN Express going vacant when at the same time passengers wait to get accommodation in the GT Express.

—Indian Express

Much Married

An Indian who allegedly cheated over three dozen young girls at home and abroad on false promises of marriage was arrested in New Delhi.

Forty-five-year-old P.N. Kashyap alias Hala alias Frank Phillips used to make "lofty" promises to the girls and their parents seeking life partners for their daughters through matrimonial columns of Indian newspapers. A divorcee with whom he has lived since 1975 cheated him in marrying at least five women.

He has duped many girls and their parents of lakhs of rupees.

—Free Press Journal

A Security Risk?

Sonia Gandhi should herself ponder over the matter of changing her citizenship now that her husband is a possible successor to Mrs. Gandhi. It does look odd that the wife of a person who aspires to be the Prime Minister should continue to be a foreign national.

—Kuldip Nayar

Ingrate Hippo!

A helping hand by the Zoo keeper to feed a hippopotamus proved fatal at the new zoological park at Vandalur near Madras.

The hippo suddenly caught the keeper by his shoulders and threw him to the ground.

The keeper bleeding profusely from the fall died on the way to hospital.

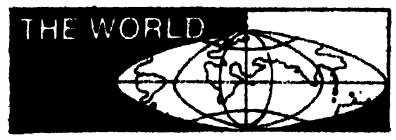
—Indian Express

Tail Piece

Instead of New Delhi, General Zia ul Haq of Pakistan should have stopped over at Patna; he could have taught Dr. Mishra a lesson or two on how to gog the press.

—Last Letter In Sunday

Goldie



Parting Shot

In his last state-of-the-nation speech former Chancellor Helmut Schmidt said, "You always make friendly remarks, Mr Kohl, but you don't say what you are thinking. Perhaps you don't think at all."

—Newsweek

Bereft And Beleaguered

Monaco's citizens have become increasingly concerned about the effect that Princess Grace's death may have on their royal family. The tragedy seems to have quieted the once-rambunctious Caroline. Its effect on a grief — ravaged Prince Rainier cannot yet be measured. Still, it never pays to underestimate a Grimaldi. Back in 1297, when the family first conquered Monaco, its strategem was to disguise attack troops as Franciscan monks. Two monks with raised swords still adorn the family coat of arms — a reminder of an imposing track record for surmounting unpromising odds.

—Elizabeth Peer

Respecting Ike

Eisenhower's frequent obscurity at press conferences was deliberate, says Professor Fred I. Greenstein He wanted to preserve his freedom of manoeuvre and had a profound horror of the unguarded presidential remarks. Warned by his press secretary, James Hagerty, not to be too explicit regarding a delicate matter likely to be raised at a news conference, Eisenhower replied: "Don't worry, Jim, if that question comes up, I'll just confuse them." And he did.

—The Economist

Sports Films

Canberra: Techniques used by the Commonwealth's best athletes, photographed in slow motion by a University of Queensland team during the Brisbane Commonwealth Games, will be studied internationally to improve sports training.

Under what is now the Commonwealth Games Biomechanics Project, about 20,000 ft of film were taken at high speed during the Games; and the film is expected to provide researchers round the world with one of the most complete slow motion records of elite athletes in top-grade competition.

"Small Is Beautiful"

A Review by Kishore Valicha

THIS is not a book of scholarship or erudition, but a practical, down-to-earth treatise based upon common sense.

The author, John Papworth has a diagnosis and a solution for the evils that govern modern societies and political systems. While one may question his solutions, his diagnosis will determine the merit of the book. He belongs to a school of thinkers who believe in the tenet laid down by the late G.F. Schumacher: 'Small is Beautiful". Any creed that advocates a radical solution arouses scepticism and doubt and, yet,anyone who is seriously concerned with the social realities of today can hardly afford to overlook what Mr Papworth has to offer.

Papworth holds "giantism", or the scale of political and economic operations responsible for almost all the ills that afflict man and society. Mr Papworth begins by noting that the modern world has created new forms of political power, embodied in the radio, television, mass newspapers, mass advertising, transport, electricity and, above all, party structures, trade unions, retail and wholesale marketing, semi-monopolies, etc. Each of these has tremendous political power that compared to them, the citizen has become so microscopic as to be a non-entity that he is unable to influence any of the decisions claimed to be made on his behalf. This is the absolute and total march of power.

There is something frightening in this. For man in a mass society lacks identity which is only an indication of his helplessness. State power and citizen power are related inversely. As one grows more and more powerful, the other grows more and more powerless. Citizen powerlessness is the price man pays in a mass society.

Mr Papworth certainly has a point when he says that just as in the economic field, division of labour leads to diminution of democracy and the riches derived from the vastly expanded productivity accrue to the owners of the capital employed and not to the workers, so in politics the increase in the factor of power from growth accrues to the centre and not to the citizens.

However, Mr Papworth ignores that it is the inevitable dissensions and conflicts within the political structure which give it a semblance of democracy by posing a constant threat to the ruling party. That is what may be called a de-stabilising factor in democratic polity.

Notwithstanding this, Mr Papworth makes out his case with splendid skill. While on freedom, he rejects the classical notion of freedom as the absence of restraint, describing it instead as *"its condition is one of perpetual and active opposition to the forces that would accomplish its negation... freedom requires minimally citizen access to undiluted information, a way of life that enables citizens to determine things that jointly and locally affect them..."*

This is in keeping with his humanistic perception of the balance between individual and society where he states, *'In a genuinely humanistic society we must surely expect a balance to prevail between the forces that promote the interest of the collectivity and those that enable the individual members to express their humanity and individuality."*

Papworth finds the future of man rather bleak in this structure. Man is crushed by the enormity, and the impersonal and terrible power of the myriad social organisations that have sprung up and keep growing more and more complicated and vast. The trade union, for example, has its tentacles so widespread and so invisibly that the member-worker has hardly any genuine sense of participation.

Advertising is another very powerful media which is able to condition and control the way people think and act. It is one of the most formidable institutionalised affronts to human dignity and freedom. *"In modern times,"* writes the author, *"the destruction of the power of large-scale advertising has become a principal precondition of freedom."*

And the scale of operations or the scale of economic and political organisations is itself determined by the moral nature of man. Therefore what the author wants is in effect a moral transformation of man, a new man who will find fulfilment in the small-scale organisations of society and to whom the social and political organisation will have an immediate and intimate meaning. Ultimately, this is what Marx, Russell and Schweitzer stood for. Mr Papworth is therefore in good company.

"NEW POLITICS" by John Papworth; Vikas; Rs 125

An Eclectic Humanist

A Review by V.N. Chhibber

WHAT made Balraj Sahni different amongst our celluloid fraternity was his passionate commitment to causes outside the sphere of the tinsel world of make-believe. Given the glamour, public adulation and the money which a successful film career brings in its wake, it is indeed a rare actor who would refuse to submit himself wholly to its demands.

In what is Bhisham Sahni's maiden publication in English, he analyses his elder brother's complex personality with intuition and insight and an uncommon objectivity. The work fills certain vital lacunae left in Balraj's autobiography published posthumously in an English translation in 1979 (where there is hardly any reference to the personal trials he had undergone or to his marital life).

Balraj, the man, was a student of life itself, and a very gifted student at that. He had that rare faculty to combine in his geist such diverse disciplines as the revolutionary thesis of Marx and the down-to-earth, humane philosophy of the Sikh gurus.

Yet Balraj the versatile character-actor—of such memorable films as *Do Bigha Zamin* and *Garam Hava*—has all along tended to make both the Indian intelligentsia and the public at large oblivious of Balraj the progressive intellectual who had made a study of almost every problem that confronts a tradition-bound society in its march to socialism.

The first half of the book, describes Balraj's gradual alienation from the orthodox influences which had moulded his childhood and early adolescence. The process of alienation was accelerated in the mid-thirties when he joined the elitist Government College, Lahore, where as a student of English literature he excelled both in the class room and on the college stage.

His mental horizon thus began to widen till finally at the end of a stint as a teacher at Santiniketan and his subsequent stay at Sevagram, followed by a four-year assignment with the Hindi News Service of BBC, London, he emerged as an eclectic humanist. Later when he tried to secure a foothold in the cine industry, he had to face several disappointments and setbacks, which however merely fortified his resolve to succeed.

The author quotes from the many letters Balraj wrote to him from time to time—which help the reader to get to know the actor sans his grease paint. His personal tragedies—the unexpected deaths of both wives, especially the blow of the second death from which he never really recovered, also figure in this work.

It is as well that the junior Sahni (a well-known Hindi writer in his own right) devotes a whole chapter to an evaluation of Balraj's essays, travelogues, pen-portraits and polemical tracts.

Balraj's stature is revealed when it comes to light that he was once offered a nominated seat in the Rajya Sabha which he declined on the ground that politics was not his cup of tea. Among other honours that came his way was an invitation to address the convocation of Jawaharlal Nehru University in New Delhi and a membership on Guru Nanak University's senate. Premature death in 1973 deprived him of the principalship of the Film and Television Institute at Pune.

Bhisham Sahni writes in an easy, informal genre which makes the life story absorbing. The National Book Trust deserves credit for the choice of the biographer.

BALRAJ MY BROTHER by Bhisham Sahni; National Book Trust; Rs 9.

BOOK REVIEW

"For Expensive Palates"

says Thangam E. Philip

A RECIPE book is written for two purposes: to preserve traditional recipes and to introduce innovative recipes. *Cooking Delights of the Maharajas* by Shri Digvijay Singh, has certainly achieved the first objective in presenting to the world some of the traditional dishes of his own State and some of the neighbouring States. This book will be specially welcome to Chefs who want to introduce regional recipes in the menus of gourmet restaurants.

The recipes are presented lucidly and the description of the ingredients (type or kind) is clear, concise, accurate and readable. Anyone with a reasonable skill can follow the instructions easily. The preparation time and the cooking time given for the precise yield of each recipe will be very helpful to housewives and novices alike.

The book is attractively brought out and the illustrations add to its appeal. But there is a snag. A few sample dishes selected at random were tried out by this reviewer and they were rated against similar dishes normally prepared by households, institutions and commercial establishments. In all cases, there was no increase in acceptability, although the costs were most often three times or more! For those who would like a change and do not mind the expense, some of the dishes will certainly provide an interesting variety, although, personally I prefer to "keep it light".

COOKING DELIGHTS OF THE MAHARAJAS by Digvijay Singh; Vikas; Rs 98.

Get on to the world's latest... Vespa XE

Vespa XE, for greater power, greater economy,
greater safety and comfort... a performance
that's engineered to last a lifetime.

He laughed uproariously. He simply could not conceive of a state of affairs under which woman could be equal, let alone superior, to man.

Money-Lender In Love

by K.P.S. MENON

QUEEN Elizabeth, having seen Falstaff in one of Shakespeare's historical plays, is said to have expressed the desire to see him in love. And so *The Merry Wives of Windsor* was written. If Her Majesty had expressed a desire to see Shylock in love, I doubt that even the bard would have been able to comply. Yet I once saw a money-lender in love.

That was in Sri Lanka, or Ceylon as it was then, where I was the Agent of the Government of India fifty years ago (1929-33). That was the most idyllic period of my service.

In Ceylon I came in contact with one Kabir Bhai. He was one of that tribe of money-lenders who used to prey on Ceylon in British days. Among them were some called Afghans.

The Afghans charged exorbitant rates of interest. Peter, our Sinhalese servant, told me that once he had borrowed twelve rupees from one of them to buy a birthday present for his wife and that he agreed to pay interest at one rupee per month and the principal at the end of the year. He could not, nor did he care to, calculate how much the rate of interest came to.

The Afghan flourished, because no one else would lend to the kind of people who borrowed money from him. He lent money without any security whatever. He seldom went to court for the recovery of his dues;he collected money through the sheer force of his personality. On pay-day, and on succeeding days, a couple of hefty Afghans could be seen, patiently sitting like hawks in front of every office, ready to pounce on their debtors as soon as they emerged from the office with the pay in their pockets. More often than not, they would pay it up out of fear—not so much physical fear of the Afghan giants, armed with sticks, but fear of an un-

Illustrated by P.B. Kavadi

seemly altercation in the presence of their colleagues and possibly superiors.

The Ceylonese regarded the Afghans as a lower order of creation. I, however, had spent a number of years among them on the North-West Frontier, and liked them. I was aware of their weaknesses, but they had many virtues as well. They made good friends. If an Afghan, or a Pathan, was your friend, he would be your friend unto death. He was eminently hospitable; he had a code of honour in which hospitality came first. He was distinguished by his courage and his capacity for endurance. He was independent, too, in his own way; the British, who conquered all of India, found it impossible to subdue the Afghans. And they remain intractable to the present day.

Before I went to Ceylon, I had spent three years on the Frontier and I knew that I would be posted back again there. I had picked up Pushtu in Peshawar and wanted to keep it up. I was on the look-out for someone in Kandy with whom I could speak Pushtu. Peter, overhearing our talk, introduced Kabir Bhai to me.

One day Peter announced Kabir Bhai's arrival and asked me where I would like to receive him. I said, in my office room in the house.

"That won't do, Master," said Peter. "You can see him in the garden or at the most on the veranda."

"Why not in the house?" I asked.

"It's never done," said Peter.

I said that after all Kabir Bhai was going to be my teacher or Guru and that in India one ranked one's Guru with one's parents.

"As Master likes," said Peter, with a quizzical look which seemed to say, 'What an eccentric master I have!'

AT first Kabir Bhai appeared a little lost in a well-ordered room inside the house. I greeted him with the Pathan greeting, *Sthademashe*, which means 'May you never be tired!' and he replied *Khawarmashe*, which means 'May you never be poor!' I spoke a few sentences in Pushtu, and this at once established our relationship on a footing of cordiality. I told him I would like to have a talk with him for an hour on three days of the week and asked him how much he would charge. "We can think of the charges later," said Kabir Bhai.

At the end of the month I asked Kabir Bhai what his fee for the month was.

"Fee, Sahib?" he said, "fee for you? What do you think I am? It is I who should give you a fee for the honour of your company."

I tried to put three ten rupee notes into his pocket, but he brusquely refused.

"No, Sahib," he said. "You and I are friends. There is no question of a fee between friends. We regard even a friend's friend as a friend."

Just then Peter entered the room with a cup of coffee for Kabir Bhai and myself, and Kabir Bhai ostentatiously tore up the pronote for twelve rupees which Peter had given him.

I gave Kabir Bhai a handsome present and he gave me a present of equal, if not greater, value. Every now and then he would bring my wife presents such as an embroidered handkerchief or a silk purse or a pair of Peshawari slippers. Once he gave us a small Bokhara carpet.

The Ceylonese simply could not understand the relationship between Kabir Bhai and myself. They borrowed from the Afghans, but kept them at arm's length. Whenever Kabir Bhai met me, he would greet me joyfully and embrace me in the true Pathan style. One day, a Ceylonese friend went to my chauffeur, Rama Kurup, and told him, "Your master must be getting a good pay. Why does he borrow from these Afghans?" That was the only relationship they could conceive of with an Afghan.

One day I was at the railway station in Kandy and had just got a first class ticket for Colombo. Kabir Bhai happened to be there.

"Why do you buy a ticket," he told me. "Come with me and you won't need a ticket."

"Why not?" I asked. "Perhaps you have a season ticket."

"I haven't," he said, "we Afghans can always travel without tickets. No one will ask us for tickets." That was only too true. The entire railway officialdom in Ceylon was in debt to the Afghans, and no railway official dared to ask them for tickets.

I always enjoyed my lessons with Kabir Bhai. Our conversation opened a new world to him, a world of which he had no inkling at all. Very often it opened a new world to me, too. Sometimes we talked of politics and personalities in Ceylon and in India. Kabir Bhai listened wide-eyed, and his occasional comments were shrewd and spicy. Sometimes we talked of more personal matters. When I had known him long enough, I reminded him that Islam had prohibited usury. Kabir Bhai called himself a Muslim and yet he was practising usury. Wasn't he committing a sin?

"No, Sir," he said. "I don't commit usury on my co-religionists."

"Then you wouldn't mind committing usury on me?" I asked.

"But you are a friend," said Kabir Bhai, "and a friend is more than a co-religionist. On the contrary the people here treat us as barbarians, so we behave barbarously towards them."

On another day we talked of the state of women in society. I asked him why his people paid so little respect to women, whom they seemed to treat as chattel.

"But we buy our women," said Kabir Bhai. "Among us the bride-groom has to pay a dowry for the girl. Among you, on the contrary, the bride has to buy you with a dowry. This shows that among us women have more value than men."

"That is simply because there are fewer women than men on the Frontier," I said. "In my own community of Nairs, dowry never existed."

I explained to him that we followed the matriarchal system, under which the woman was the head of the family and property descended through the woman.

Kabir Bhai laughed uproariously. He thought I was pulling his leg. He simply could not conceive of a state of affairs under which woman could be equal, let alone superior, to man.

These tri-weekly talks with Kabir Bhai were wholly delightful. Our lesssons were ostensibly for one hour. Kabir Bhai would stay for three hours, sometimes for four.

IN the third year of my stay in Ceylon, however, I noticed a change in him. He did not seem to have his heart in his talks with me. Often he was absent-minded. Something seemed to be oppressing him. Perhaps he was feeling homesick, I thought; he had not been home for eight years. Once or twice he seemed on the verge of telling me something and then thought better of it.

One day Kabir Bhai took me aback by saying, "Sahib, I want to tell you a secret. A woman is in love with me. She says she cannot live without me."

"What about you?" I asked.

"I like her, too," he said shyly. "I thought I did not love her, but now I think I love her."

"Then, why not marry her?" I asked.

"But she is already married," said Kabir Bhai.

"What does that matter?" I said. "After all you people are Muslims and you can have more than one wife."

"But she is not a Muslim," said Kabir Bhai. "She is a Christian and she has three children."

The situation was getting more and more complicated. So I asked Kabir Bhai to tell me the whole story.

He said that her husband was in Government service. "He borrowed a hundred rupees from me to start with," said Kabir Bhai, "and now he owes me a thousand. I often used to go to his house to collect the money. Sometimes, a young and rather handsome woman would look down at me from the window and I would look up at her. She would smile at me and I would smile back. My visits as well as her smiles became more frequent. Last month, when I went to the house, her husband was not there and the children had gone to school. She came out and told me she was fond of me, that she loved me, that she could not live without me and I must take her away. What shall I do, Sahib? What shall I do?"

"What do you want to do?" I asked, "and what do you want *me* to do?"

"She will come to you one of these days," said Kabir Bhai. "I have told her that you know me. You must speak well of me to her. You must also speak well of my people and my country. I told her that you knew my country well. These people here have such fantastic ideas about us."

"I shall certainly speak well of you to her," I said. "Also about your people. As for your country, well, I like it personally, but if the idea is for her to settle down on the Frontier I shall have to tell her that she will be most uncomfortable there."

"Please don't tell her that," said Kabir Bhai. "If you don't want to tell a lie, don't say anything about my country. But please don't tell her that she won't be happy there."

IN fact I did not have to tell her anything. She came and saw me. It was quite clear that she had made up her mind.

"I love Kabir Bhai," she told me. "I cannot live without him. If he goes away without me, I shall kill myself. I am prepared to go anywhere with him—even to hell."

I wished her good luck.

The next day Kabir Bhai went to her house. Seeing Kabir Bhai, her husband, who thought that he had come to claim his money, tried to hide.

"Don't run away, Sahib," Kabir Bhai shouted to him, "I have some good news for you."

He came out. Kabir Bhai told him that he was going home in a few days, that he had already got enough money from him by way of interest and that he did not want his capital back. Saying so, he tore up the pronote for Rs. 1000.

The husband was happy. He went to his wife and told her that after all Kabir Bhai was a decent fellow.

"An uncut diamond," he said.

"I always thought so," said his wife.

The next week Kabir Bhai left Colombo for Karachi en route to the Frontier in an Arab dhow which had been engaged in smuggling gold, and she went with him.

Many years later, I went to Ceylon and enquired about her and Kabir Bhai. She had come back, a physical and mental wreck, and was in an asylum. And he had become an outlaw.

The course of true love never runs smooth. ■

(This story is published as a tribute to the fluent pen of the late author who was a great diplomat, a brilliant civil servant and, above all, a man of wide sympathies.)

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

You will turn a new leaf in your career within a week or so. Those retiring from existing jobs will prefer to start a new business rather than enter into another employment. Financially although a draining week, you will also earn enough to replenish the empty coffers. You may have to travel in the early part of the week.

AQUARIUS
(Kumbha)
Jan. 20-Feb. 18

Try to keep yourself away from the busy schedule of work this week and mix up with your friends and family members. Job activities will be rather slow. You are likely to involve yourself in a neighbour's activities by token of discharging obligations. Money gains are satisfactory early in the week. You will generously spare funds

PISCES
(Mina)
Feb 19-Mar 20

The drive and initiative within you will make a surprise appearance in the next week. Your services will be recognized and honoured. Actors and sportsmen will make a mark in their respective fields. Youngsters will convince elders of their choice of a partner early in the week and elicit their consent for marriage by midweek.

ARIES
(Mesha)
Mar 21-Apr. 20

Consistency and patience will pay good dividends in the next two weeks. Be tactful while dealing with outsiders. You may find yourself on the defensive while doing social work. Financially, no specific worries provided you curb extravagance early in the week. You may hold secret meetings midweek. The weekend is good.

TAURUS
(Vrishabha)
Apr. 21-May 20

Forget the past and keep up with the present in coming weeks. A new and ideal partner will suddenly emerge on your horizon and help you to make a headway in business. The terms and conditions of any contract you make must be framed in consultation with legal experts. Enormous physical resources will be at your disposal.

GEMINI
(Mithuna)
May 21-June 20

Journalists, authors and lawyers have a very lucky six weeks ahead of them. Appreciation of work and job satisfaction will bring extreme happiness. Do not break old ties while forming new alliances. Clear all government and court matters early in the week. Midweek brings certain surprises. Money gains will ensue.

CANCER
(Kataka)
June 21-July 20

Although a tiring week you will rejoice with new friends and associates. A new job will be in sight but make it a point to take it up only in late February. Seniors will extend whole-hearted support to your schemes and projects. You will make a good bid early in the week but similar luck does not hold good for later.

LEO
(Simha)
July 21-Aug. 21

Your health may be delicate and may handicap your activities in the next few weeks. Trusted friends and co workers will have to be entrusted with responsible jobs in your absence. Do not precipitate quarrels for petty reasons with family members in the early part of the week. Midweek brings some consolation career-wise.

VIRGO
(Kanya)
Aug. 22-Sept. 23

Do not expect any leisure in the next few weeks. Tiresome travel and dealing with the opposition will be your chief activities and these may considerably exhaust you. However, domestic life will be blissful and family members will help you to maintain the tempo. Make the best use of all the available resources. Conserve your energy.

LIBRA
(Tula)
Sept 24-Oct. 23

A lucky period for those in service. Social activities will flourish but normal professional activities are likely to be unwittingly neglected. Finances are good in the early part of the week. Certain new developments in business emerge. Grasp the changes. Do not rub up seniors the wrong way. The weekend is for rest and relaxation.

SCORPIO
(Vrishchika)
Oct. 24-Nov 22

Things begin to change in your favour now and the tide of luck runs your way in the coming weeks. Put greater emphasis on building up finances rather than expanding business. Domestic chores keep you busy early in the week. Certain financial gains are likely. A steady and matter-of-fact attitude could get you places.

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20

Vehicle, property and land matters will occupy you considerably in the next few weeks Youngsters can look forward to settling down in life in the near future. Rents, interests and dividends will all come your way together, adding considerably to your finances. A long put-off family reunion will bring bittersweet experiences your way

STAR FOCUS

1983 For You-II

Taurus: Everything hinges on how you adapt to the changes already effected or whether you are still willing to effect more adjustments in the near future or in the last quarter. You must be cautious and careful in all walks for better success in the month of April and October. Health and finances should not be neglected. In brief, this is a year of preparation rather than execution.

Gemini: You may find it difficult to project your personality effectively. You are likely to be swamped and eclipsed by others. However, you will manage to run the show successfully. Your partners, relatives and those interested in your well-being will voluntarily come forward to render all kinds of assistance and aid. You should take of care of health and conceal any rancour.

Cancer: A year when you must be very cautious. Family responsibilities will recede into the background but business and career will occupy your mind considerably. Do not neglect your job by involving yourself too heavily in social and group activities. Dealers in liquids, chemicals and medicines should take maximum care while investing fresh capital. September is likely to be tough.

Leo: A more prosperous and colourful year than 1982. An elevation of status lies in store for sportsmen, political leaders, actors and chief executives. All the same, there will be tiresome domestic burdens which can be dealt with well with tact, wisdom and patience. Older people will celebrate a family occasion in the first or last quarter of the year. Youngsters will settle in career as well as life.

Birthday Forecast

Sunday, January 16

An eventful year which will bring independence in career, profession and business. You may go in for a new venture if opportunity beckons before March, otherwise it will be more prudent to wait until October. Financially, a good period.

Monday, January 17

The prospects are bright for a career in the next few months and again in October/ November. All the same, you will aspire to establish your own business rather than continue with a partnership. No specific problems with regard to finance.

Tuesday, January 18

It is absolutely essential that you work steadily and purposefully with a view to keeping up the existing business until July and thereafter to expand it. In August and September be discreet about your personal affairs.

Wednesday, January 19

You have ahead of you months full of contradiction but nevertheless it will be a progressive period. Calculate all your moves, especially in June and July. Be careful with your investments in August and September.

Thursday, January 20

A year full of mixed happenings You will have to struggle hard to maintain status quo. Be prudent in all actions you take. You will be taxed hard in every single effort you make to establish your business on a small footing.

Friday, January 21

A year full of happy occurences. Both in personal life as well as in career, you will forge ahead. Mid-1983 will usher in a new phase but do not effect any radical changes until October. The last two months are excellent.

Saturday, January 22

Budding industrialists and amateur artists and sportsmen will find themselves enlisted among experts. Of course, actual success comes

THE man went to his doctor and said, "I am not well."
"What is wrong? What are you feeling?," asked the doctor.
"You are the doctor, you have to find that out," said the patient.
"Then you've come to the wrong place. You should go to a veterinary doctor. Only he can diagnose without asking questions," quipped the doctor.

THE rather fat man had difficulty playing golf. If he put the ball where he could see it, he could not reach it, and if he put it where he could reach it, he couldn't see it.

HE wanted to reply to a rude letter, in the same language, but he was a gentleman. So the reply started as follows—
"I, being a gentleman, cannot say what I want to say, and my secretary being a lady cannot take it down even if I say it, but you being neither will understand what I want to say."

THE election agent knocked at the cottage door. It was opened by a giant of a woman, who growled, "What do you want?"
"I want to know which party your husband belongs to," said the agent. "I'm the party he belongs to," roared the woman.

BEING a career woman is harder than being a career man. You have to look like a lady, act like a man, and work like a dog.

DOctors will tell you that if you eat slowly you will eat less. Anyone who grew up in a large family will tell you the same.

IF a man owes Rs. 50 he is in debt;
If he owes Rs. 50,000 he is in business:
If he owes Rs. 5,000,000 he is a big industrialist;
If he owes Rs. 50,000,000 he is Government.

TWO sheep were grazing in a meadow.
"Baa-baa," said one.
"Moo-moo," said the other.
"What do you mean, Moo-moo?," asked the first.
"I am learning a foreign language," said the other

A CIRCUS elephant had broken its tether, and wandered into the town. At night, it entered and began eating up an old lady's cabbage patch Hearing the noise the lady woke up, and never having seen an elephant reported to the police on the phone. "There is a big black animal in my garden. It is pulling up my cabbages with its tail, and stuffing them you know where..."

THE professor of medicine held up the sample of urine to his students.
"And so," he said, "To test acidity"—he dipped his finger in. The students did so in the samples they had.
"You put your finger in the mouth," and as he did, they also followed wryly.
"but you'll notice that I didn't put the same finger in," continued the professor.

"MUMMY, how was I born?" asked the little school boy.
"A big white stork brought you," said mummy.
"And how were you born?" he asked again.
"A big white stork brought me to granny," said Mummy.
"And how was granny born?" the boy continued.
"The same stork brought her," said Mummy.
Next day, in school, he began an essay on his family as follows: "There has been no natural birth in our family for three generations".

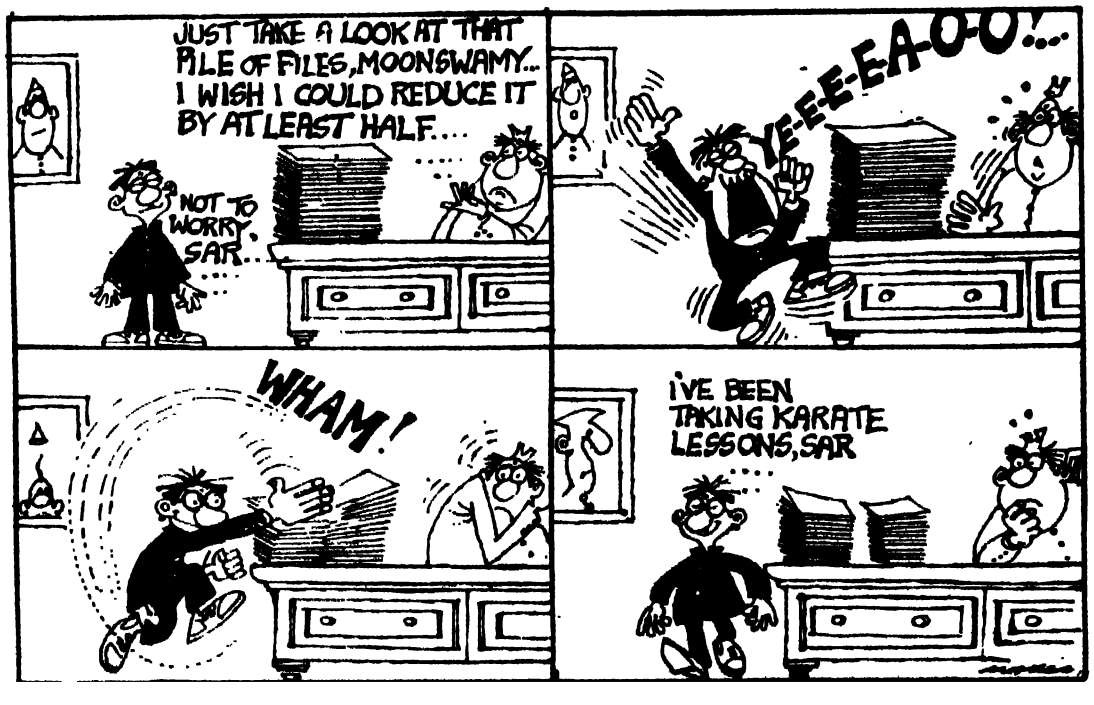
WHEN supplies were air dropped in the North-east, the airways were paid by the distance in a circuit. The bill for one such drop showed much more distance than the standard circuit. Naturally, the accounts department asked why. "The pilot lost his bearings due to fog," was the reply. The accounts department sent a note. "The bill is passed, but the cost of bearings must be recovered from the pilot."

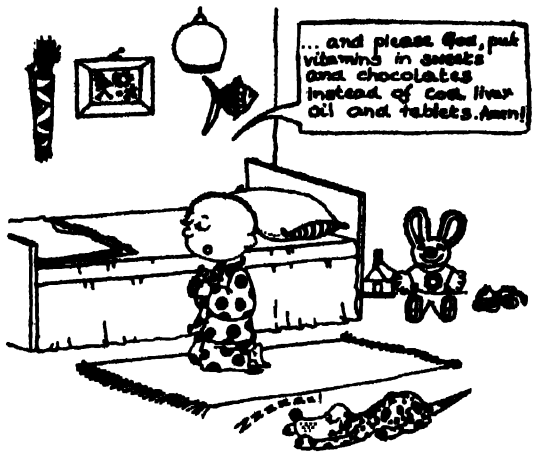
NEWS item in a Women's Lib paper—"A policeperson fell into a person hole today".

HE was going to that city for the first time and all his friends told him about the hotel he was to stay in being famous for its soups. But he did not like soup.
The first night at the hotel he went down to dinner, and the hostess asked him what he would order. "No soup," he said. "No soup, Sir?" the hostess was aghast, and sent for her manager but he could not persuade the diner.
After dinner, he went to his room and went to bed. Now it so happened that there was a power failure that night. And in the next room there was a sick man who had to have an enema. In the dark, the doctor blundered into our man's room by mistake, and gave him the enema.
He returned home and the friends came to ask him about his stay. "You are right," he said, "It is better to have their soup, for you will have to take it, one way or another."

THE reporter was phoning in his story of a visit to the nudist colony.
"I went to the hotel and knocked. The butler opened the door..."
"How do you know it was the butler?", asked the editor.
"Well, it certainly was not the maid..." continued the reporter.

THE HON'BLE MINISTER BUNDALDASS . mario





Babs

"I AM happy to hear you play that Bhajan every morning", said the old man to his young neighbour.
"Oh, I play it daily. It gives me the exact timing to boil eggs".

THE politician ridiculed his rival and said, "You've only to give him dinner, and out comes a speech."
The rival retorted: "In his case, give him a speech and out comes your dinner."

A CLEANER in an office had taken up a job in the neighbouring office and asked his wife to work for him in the first office. In due course this was discovered, and being against rules, a memo was issued: "It has come to notice that you are working elsewhere and that your wife is carrying on here..."

GENERAL Choudhry, as Chief of Staff, used to ask ordinary jawans for their views on plans. When there was an idea to have regiments made up of men from each State, he asked a Gurkha, jawan what he thought of the idea.

The Gurkha was against it. "See, Sir, look at the Bengali babus. They can't fight." Then he realised who he was talking to and recovered beautifully, "but, Sir, they make g-g-good Generals."

TACT: The plumber walking in on Memsab in the bathroom, and withdrawing, saying, "Sorry Sir."

THE lunatic caught hold of his warder on the sixth floor terrace and hugged him saying, "Let us fly away like birds."
Nothing the warder said would change his mind, and they were slowly moving to the edge. Suddenly the warder had an idea. He told the patient: "Look, anyone can fly down from this height. But to be really great we must go down and fly up here," And thus he escaped.

A LADY went upto Bernard Shaw at a party and gushed: "Mr. Shaw, I have taken a bet that I'll make you say at least three words to me."
"You lose," said Mr. Shaw.

EINSTEIN's neighbour apologised, as her little son was always with the great man.
"It is all right," he said, "I like the way he arranges my papers and he likes the way I do his sums for him."

THE patient asked the doctor his advice on what to take to control the sexual urge.
"Take tomato juice," advised the doctor.
"Before—or after?" asked the patient.
"Not before, or after—instead of," said the doctor.

HE was interviewing candidates for the post of Secretary. He selected a pretty girl and asked her what salary he expected.
"rs. 1000 a month", he said.
"With pleasure," he said.
"With pleasure it will be Rs. 2000," she said.

"THAT is where the enemy is," hoarsely spoke the young officer pointing over the trenches
"Where? How far is that?" whispered back the press reporters with him.
"There, that is one kilometre away," said the escort hoarsely.
"Then why are you whispering?" asked a press man.
"I don't know about you, but I have a bad throat," said the officer.

BPL-TV COLOUR TELEVISION

A new dimension in Colour, Vision and Sound

BPL-TV is manufactured with the latest Japanese technology. And is brought to you by the **BPL GROUP** Which, with over 17 years in the electronics business, 5 companies and 7 integrated factories, has vast experience in six sophisticated areas of electronics: Computers, Communication, Components, Instrumentation (Industrial, Medical, Measurement), Office Equipment and Consumer Electronics.

Six Fabulous Features:

- Protected from voltage fluctuation from 130 to 290V.
- Pin-cushion distortion-free colour picture tube from Japan. Ensuring high quality picture.
- Electronic VHF/UHF tuning with 12 soft push buttons.
- Latest LSI technology. Ensures high reliability.
- Fire Retardant PCBs and Fusable Resistors. Eliminate fire hazards.
- Prompt and effective after sales service.

This Week's Bridge
1982 WORLD PAIRS OLYMPIAD-I

THE 1982 World Pairs Olympiad, held every four years, took place at Biarritz, France, in the first fortnight of October. Open Pairs, Ladies Pairs, Mixed Pairs and Open Teams were the main events played at these Championships. India had a fairly sizeable contingent, participating in all the events, but barring one or two flashes of brilliance, the overall performance was disappointing.

The first event was the Mixed Pairs. A record number of 450 pairs started this event played over 4 sessions. With the same boards played in different sections, and matchpointing somewhat different from the usual methods used in one local pairs event, the top on each board was 388. At the halfway stage Mrs. Rao and Vishwanathan of Bangalore were seventh, with a score of 12084, and Nina Bonnerji and Robi Roy were fortieth with a score of 11412.

Mrs Rao and Vishu then fell away, but Nina and Robi kept climbing, and at the three quarter stage were eighth, with 17825, only 800 matchpoints or a little over two tops behind the leaders. Ultimately they finished 12th with a score of 23031, 1000 points behind the eventual winners Dianna Gordon and George Mittelman of Canada. No other Indian pair finished in the first fifty.

Gordon and Mittleman's win was the first ever for Canada in a World Championship.

Dianna Gordon and George Mittelman, both of Toronto, have been partners for 12 years, George is a bridge pro, and Dianna a Travel Agent.

They play a relatively Natural system, souped-up of course with plenty of gadgets.

Here are some of their hands, taken from the Daily Bulletins of the Championships, brilliantly produced and eidted as usual by Dorothy and Henry Francis of the A.C.B.L.

On The Road To The Championship:

The first deal is a repeat of the hand on which Gabriel Chagas of Brazil executed his Angel Coup—but Dianna made 11 tricks a different way. The deal took place in the first session.

Board-20: Dealer West, Both Vul.

	♠A764 ♥AJ43 ♦Q652 ♣4	
♠J109 ♥85 ♦10984 ♣AKJ 10	N W E S	♠KQ ♥KQ976 ♦AK73 ♣87
	♠8532 ♥102 ♦J ♣Q96532	

The Bidding:

West	North	East	South
Dianna		George	
P	P	1H	P
1NT	P	2D	P
2H	P	2NT	P
3NT	All Pass.		

The Spade lead was taken by the King, and Dianna cashed the Diamond Ace, noting the fall of the Jack. The Club finesse then worked, and she successfully passed the Diamond ten. She led a Heart to the Queen, then knocked out the Spade Ace. North continued with a Spade to the Jack, but now Dianna had 11 tricks—four Diamonds, four Clubs, two Spades and a Heart. That was 350 points.

Three boards later the champs got to a minor suit game that was worth 303 points.

Board-23: Dealer South, All Vul.

	♠AQ92 ♥9873 ♦107 ♣QJ10	
♠4 ♥A654 ♦AKJ ♣A8732	N W E S	♠873 ♥KQ ♦Q984 ♣K96
	♠KJ1065 ♥J102 ♦6532 ♣5	

The bidding:

West	North	East	South
Dianna		George	
			P
1C	P	1D	P
1H	P	3C	P
3D	P	3H	P
4S	P	5C	All Pass.

The one Diamond response was nebulous—sort of like a waiting bid. But, with the Kaplan—Sheinwold structure being used, Dianna's rebid of one Heart showed four Hearts with at least five Clubs—unless she had a 4-4-4-1. She bid three Diamonds to show a fit, then when she heard the welcome three Hearts, she splintered in Spades. At this point, George had a choice—Four No Trumps would have said "I have the best hand I could have for this bidding," but his five Clubs bid carried the message that he had nothing to add to what he had said already. Armed with this information, Dianna passed—for a fine result.

...(to be continued)

AVINASH GOKHALE

This Week's Chess
Bishop Has To Wait

IN the conduct of a King side attack the Queen Bishop has sometimes to wait for a long time to play its part. In position No. 293 White's Queen Bishop's first move is the 29th move of the game forcing Black's resignation. In position No. 294 the Bishop comes out as late as the 30th move with decisive effect.

Manoj Kumar-Dr. R. Nagendra Calicut 1982

1.e4, c5 2.Nf3, d6 3.Bb5ch, Bd7 4.Bxd7ch, Nxd7 5.00, Ngf6 6.Re1, e6 7.c3, Be7 8.d3, 00 9.Nbd2, d5 10.Qe2, Qc7 11.e5, Ne8 12.Nf1, b5 13.g4, c4? 14.d4, b4 15.Ng5, bxc3 16.bxc3, Qa5 17, Qc2, g6 18.h4, Nc7 19.f4, Ba3 20.f5, Rab8 21.h5!, exf5 22.gxf5, f6.

Position No. 293: 23.hxg6!, fxg5 24.Qh2!, hxg6 25.fxg6, Rxf1ch 26.Rxf1, Nf8 27.Rxf8ch, Kxf8 28.Qh7, Ke8 29.Bxg5!, 1-0.

3.Bb5ch) Sicilian Defence; Nimzowitsch-Rossolimo Attack.

4...Nxd7) Theory prefers 4...Qxd7 5.00, Nf6 7.Nc3, g6 8.00, Bg7.

9...d5) To be considered is 9...Re8 and Bf8/...g6/...Bg7 leaving to White the onus of acting in the centre.

11.e5) This Pawn wedge cramps Black's position on the King side and gives White attacking chances.

13...c4?) The fixing of the centre suits White; after 14.d4 he has a free hand on the King side with his e5-Pawn well guarded and a line of attack for his Queen in the diagonal b1-h7.

A reasonable continuation for Black would be 13...Rb8 intending ...b4 as well as ...Rb6 (to support e6) and ...f6.

17...g6) Preferable seems 17...Bxg5 getting rid of an attacking piece.

19...Ba3) There is not enough punch in Black's Queen side attack to divert White's attention from his King side attack. 19...Nb5 to increase a force on c3 can be met by 20.Re3.

21...exf5) Even after 21...Bxc1 22.Raxc1, Qa3, 23.Qh2, Rb2 24.Qh3 White's attack is unmeetable.

23.hxg6!) A nice sacrifice leading to a speedy conclusion.

29.Bxg5!) Here comes the Bishop with the inevitable mate threat 30.Qf7.

Broine-Frois Groningen 1981

1.d4, Nf6 2.c4, g6 3.Nc3, Bg7 4.e4, d6 5.Be2, 00 6.f4, c5 7.d5, e6 8.Nf3, exd5 9.cxd5, Bg4 10.00, Re8 11.h3, Bxf3 12.Bxf3, Nbd7 13.g4, Nf8 14.g5, Nfd7 15.h4, Rb8 16.h5, b5 17.Ne2!, Qb6 18.Ng3, c4ch 19.Kh1, Nc5 20.Qc2, Nd3 21.f5, Be5 22.Qg2, b4 23.hxg6, hxg6 24.f6, Nh7 25.Qh2, Nxf6 26.gxf6, Bxf6 27.Bg4, Be5?

Position No. 294: 28.Rxf7!!, Kxf7 29.Qh7ch, Bg7 30.Bh6, Rg8 31.Be6ch, Kf6 32.Nh5ch!, Ke5 33.Bxg7ch, Rxg7 34.Qxg7ch, Kxc4 35.Nf6ch, Kf3 36.Bg4ch, Kf2 37.Qh6, Qd4 38.Qd2ch, 1-0.

6.f4) King's Indian Defence; Four-Pawns' Attack.

9...Bg4) More frequently played continuations are 9...Na6; 9...Re8; 9...b5.

10.00) 'Kurs Dyebutov' gives 10.e5, Bxf3 11.Bxf3, dxe5 12.fxe5, Nfd7 13.e6, Ne5.

13...Nbd7) The Knight may be more usefully deployed via a6-c7 to support ...b5.

16...b5) It seems necessary to break White's Pawn roller by 16...f6.

21.f5) Despite his advanced Knight on d3 Black is helpless against White's menacing King side Pawns.

24.f6) The threat Qh2-h6 compels Black to give up his Knight for two Pawns.

25...Nxf6) If 25...Kh8 26.Qh6, Rg8 27.Kg2, followed by 28.Qxh7ch!, Kxh7 29.Rh1 mate.

27...Be5) Permits a crushing Rook sacrifice. 27...Bg7 might have offered some chances of resistance.

32.Nh5ch!) 32...gxh5 33.Qf5ch, Ke7 34.Qf7ch, Kd8 35.Qd7 mate.

A nutritionally complete feed should contain all the nutrients in the right proportion...

Cerelac provides a nutritionally complete feed –in one delicious form.

When your baby is about four months and ready for solids, consult your doctor about Cerelac. You'll find it reassuring to know that every Cerelac feed you give your baby is nutritionally complete.

Which means every Cerelac feed has all the necessary nutrients, proteins and calories he should get from a single solid feed. You do not have to supplement it nutritionally.

Cerelac owes this nutritional completeness—and taste—to its delicious blend of wheat flour, full cream milk and sugar. Cerelac provides proteins for body building, carbohydrates and fats for energy and all the essential vitamins and minerals for all round development.

Give your baby Cerelac—for his full, healthy growth.

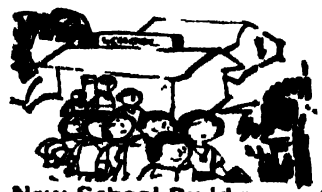
Houses for Harijans

Rural Dispensaries

Power supply to houses of Harijans.

Maternity Homes

Link Roads and Culverts



New School Buildings

Director of Information and Public Relations
Government of Tamil Nadu, Madras-600 009.

We shall lead the people to prosperity through the road of self sufficiency to build an egalitarian society.

LETTERS TO THE EDITOR

Excellent X'Mas

Sir—Congratulations for the excellent Christmas issue (December 19). In our struggle for the Indianisation of our Church amidst strong opposition, such issues help us immensely. The cover page of Mary in Indian style as also the article "Christianity In India At Crossroads" were much appreciated by us.

Fr Hilary fernandes
Director
Jeevan Darshan Kendra
Hassan

Sir—Mathai Zachariah's article "Christianity In India At The Crossroads" (December 19) was a lucid and analytical study of the plight of Christianity in India today. It is no longer an alien religion here. Actually, conversions have done more harm than good to the ideals of Christianity. We hear much about the conversions of Harijans and Girijans these days. They are converted with the lure of money and other benefits. They are totally ignorant about the birth, life, teachings, death and the ultimate resurrection of Christ.

There are so many Hindus in India who accept Jesus Christ as their Saviour, Guide and Master. They need not get baptised or change their Hindu names. *Give Christ charge of your life "God is our refuge and Strength, a very frequent help in trouble* (psalm 46:1).

K.N. Sudhakaran Pillai
Belgaum

Sir—Mathai Zachariah's vision of Christianity in India envisages another Parsi community which created no communal problems in India ever since their migration here a thousand years ago. But Christianity resembles Islam in India as it also arose with political invasions of foreign powers. Naturally these imported religions find it hard to merge with the national mainstream, which erupts into communal riots frequently. If only the Christians had developed national consciousness apart from mere religious consciousness, they would have produced very many national leaders and would have raised the nation high up among the comity of nations. But alas! their only aim seems to be convert poor Hindus to enable them to reach "father in heaven". Now as Hindus also are becoming communal (thanks to the RSS) Christianity will one day find itself in the same position it "enjoys" in China and Russia.

C.T. Vairavan
Madras

Sir—He belongs to the Society of the Divine Word, does Francis Barboza (December 19) and so he makes it his business to make the Word known through the means which are his forte. Doubtless one can't please everyone—least of all the Fundamentalists and Traditionalists—and so it is not at all surprising that the "Laity" should have had something to say. It and its adherents are all confused in trying to maintain that progress in the direction in which Francis is going is "Hinduisation" when it is actually "Indianisation". Mercifully his superiors have allowed full rein to his ideas and all right-thinking people should welcome Francis's venture into this field. Sylvester Lobo has done well to bring into focus this new trend.

A. Brito
Bangalore

Sir—According to the Bible, salvation for mankind springs up from the redemptive act of Jesus on the Cross. It has nothing to do with the dictates of conscience and innovations of the Vatican Council.

C. Vijaya Kumar
Machilipatnam

Sir—Christianity emerged and flourished as a world religion with its unique Gospel of salvation in the name of Jesus. The apostles never preached that salvation is available outside the Church (*ie*, in other religions). No Protestant can be pleased at the way in which some theologians are downgrading Jesus as the saviour of the world.

P.M. Ratna Bai
Vijayawada

Sore Sikhs

Sir—Sitansu Das has aptly analysed the Akali agitation (December 12) which strongly resembles the Muslim League's method of bargaining before partition and independence. The Akali case seems to be even worse. Many Muslim intellectuals had actively opposed the Muslim League's policies in the former case not a single Sikh intellectual is coming forward to condemn the obscurantist Akali demands which are based on a brand of religious fundamentalism like Ayatollah Khomeini's.

K. Sunita
Calcutta

Sir—The author has missed some alarming aspects of the explosive situation in Punjab. There may or may not be merit or sanctity in the claims and demands of the Akalis but there can be no gainsaying that their activities are fiercely anti-national. Their obstinate stance to disrupt the ASIAD and thereby bring national humiliation and disgrace was rightly and effectively rebuffed by the public and the authorities.

Time has now come when it should be made known to all sects and people of our great nation that a fanatic, extremist and violent approach to obtain acceptance of demands would just not pay. It would be an act of indiscretion and weakness on the part of the Centre to reward the Akalis for their intransigence at the expense of those who are non-violent.

Summoning the services of the ex-army personnel by the Akalis is absolutely the last straw. This is intolerable under our Constitution and the Centre should act before it is too late.

Jagdeep Dhankar
Jaipur

Lemme Die!

Sir—Apropos Anoop Babani's "The Growing Menace Of Suicides" (December 11), in the animal world only lemmings and human beings are known to commit suicides. Lemmings rush into the sea and kill themselves when their population shoots up. This seems to be a form of population control. No such biological instinct drives human beings to take their own lives. It is the lack of identity that forces one to take the extreme and irrevocable step.

Dr M.K. Koul
Srinagar

Watch The Language!

Sir—The intro to the article ("Observations Of An Itinerant Bird Watcher", December 12) makes an attempt to do away with the difference between birdwatching and ornithologist. The article has more or less proved that Mr J. Banerjee is not an ornithologist but a mere birdwatcher.

Ornithology is a science, birdwatching is merely a hobby, which many a times supplements the science with firsthand observations of great importance. However the terms are by no means interchangeable.

S.J. Naik
Margao

True Titan

Sir—Girija Prabhakar deserves our thanks for the piece on Auguste Rodin (December 12), without a blemish of doubt, a genius of sculpture. To be frank, I was thrilled to see the marvellous sculptures, I would have cried if they were in colour.

Prakashakumar M.
Mulky

Daring Dacoit

Sir—The story "One More Dacoit" by G.P. Nagar (December 5) kept me glued to the WEEKLY till the last word.

Vishal Maheshwari
Jaipur

Old Man And The Tree

Sir—What is Suresh Kohli trying to do? Kill your magazine? Delude the readers? First that atrocious article—"Bombay By Night" (October 31)—and now a downright absurd one ("Another Western Wave From Dev", December 19). I have seen the movie; how can anyone stoop to compare a 60-year old man prancing around like a youth less than half his age and the Father of our Nation? The day you stop publishing Dennis and Phantom, you might as well close down your office.

Veena Krishna
New Delhi

Whither WEEKLY?

Sir—What benefit you are providing to the society by publishing such patently obscene photographs in your recent issues! It is beyond our comprehension. We are mortified to see your magazine stooping so low.

S.S. Agarwal
Hon. General Secretary
Cine Film Reform Association of India
Calcutta

Hail Hinduism!

Sir—Mr Nijhawan's article (December 26) could have well been titled simply "Hinduism", for it is one religion which has never been nor can ever be in a crisis. Hinduism, the oldest of the world's great religions has stood the test of time. It maintains that the cosmic cycle cannot be altered even by God Himself. Each one must find one's own salvation. It is *Karma* which decides our fate. It requires a rare type of moral courage to be a real Hindu. Apostates who turn to other religions are seldom led by spiritual reasons or genuinely theosophical considerations. The three reasons given by the author leave out the most potent of them all—money! For a poor man, bread is more real than subtle God. From Aurangzeb's *Jizia* days to modern times, people have been enticed and seduced by wealth.

K.M. Tandon
Kota

Sir—Prolonged foreign domination has caused the grafting of many myths and legends upon Hinduism. It is made out to be a dogmatic religion, inferior to other teachings. It was conveniently forgotten that Socrates and Copernicus only followed the rich Indian tradition of enquiry and research followed by the ancient Indian *rishis* who held that everything must be put to the test of reason and relevance before applying it in real life situations.

Brahm P. Gupta
New Delhi

Sir—The article further complicates an already tangled thicket of issues. The author marvels at a worshipper of the Bhagvadgita praying to the

demi-gods. But hasn't the Gita dealt with this? ("For verily whosoever worships other gods worships me because "I" am the object and Taker of all worships.")

However, no one can deny that the modern Hindu is indifferent about his religion. He is thus rendered rootless and exposed to foreign ideologies like Marxism.

Sujash Kumar Mic
Calcutta

Sir—The author's analysis is entirely based on semitic faiths. In fact Hinduism is a corrupt and degenerate version of a much older Vedic religion. In modern times Swami Dayanand re-interpreted it and showed that unlike the semitic beliefs', Hinduism was based on pure monotheism. And it did not need the mediation of a Prophet or a Messiah between Man and God.

Dattatreya Vable
Ajmer

Sir—Mr P.K. Nijhawan is guided by a narrow concept of religion. No wonder he is unable to fit Hinduism into his concept. Vivekananda rightly described Hinduism as the "mother of all religions", although Mr Nijhawan considers this a blasphemy. Hinduism is like sunlight which, though white in colour, comprises all the colours of the spectrum. The ancient *rishis* of India discovered the highest truth, "That art Thou". This is the central message of all the Upanishads. To see God in oneself and also in everything in the universe is the highest realisation. Religion is meant to help us on the path to this Truth. It is the spirit and not the form of religion that matters. I agree with the editorial comment that tolerance is not enough. Let us love all.

G. V. Sastry
Ranchi

Model Middle

Sir—"Middle-of-the-Road Cinema" (December 19) was readable. In a country like India with its vast population of illiterates, isn't it worthwhile to produce and screen commercial films than the so-called "art" films? After all, one goes to a theatre for entertainment and not to strain one's mind!

Husain E. Beguwala
Bombay

Not A Blunder?

Sir—You have referred a news item culled from *The Hindu* under the title "What A Blunder" in your "Weekly Pick" (December 19).

The picture of Krishna aiming an arrow at a moving fish by looking at its reflection with archer Arjuna looking on is not a misrepresentation. The only mistake it was stated to be a scene from Mahabharata, while it actually from Bagavatham.

The stamp *is* available for sale. I purchased the stamp at New Delhi Head Post Office on 22nd December.

9 COVER STORY: Focus On Tamil Nadu
It's MGR vs DMK
MGR is AIADMK and AIADMK is MGR, whereas there will be a DMK, whether M. Karunanidhi is around or not. On a visit to Tamil Nadu, S.V. Mani takes a close, hard look at the MGR Government and its performance.

8 MGR Deserves The Nobel Prize
[redacted] actress-turned-politician Jayalalitha, recommends in all seriousness that MGR deserves the Nobel Prize for introducing the Midday Meal Scheme.

12 ECONOMY: A None Too Flattering Record
S. Viswanathan, Editor, *Industrial Economist*, presents a revealing balance-sheet.

20 HISTORY: Rediscovering Tamil Nadu. RGK examines how Tamil Nadu represents the synthesis of Aryan and Dravidian ideas.

14 PHILOSOPHY: Home Of Theosophy
Rukmini Arundale has the credentials to speak on the subject and does so with authority and penetration.

15 CULTURE: Its Cultural Heritage
Tamil Nadu is a land of temples where some festival or the other is always being celebrated. A survey by Sabita Radhakrishna.

10 SATIRE: The Matinee Idol Knows His Crowd
Famed satirist Cho S. Ramaswamy on some of the recent profound pronouncements of MGR.

16 CINEMA: Where Cinema Is Politics And Politics Is Cinema
Brian Laul tells us how the two Kazhagams have effectively harnessed cinema to politics.

23 HAPPENINGS: Verdict Against Corruption
Stunning as the results of the Andhra and Karnataka Assembly elections are, they once again testify to the collective wisdom of the electorate, says K.C. Khanna.

30 IN THE STATES: When Government Fiddled While Trivandrum Burned
Sujata Anandan visits the scene of the Kerala riots and reports that it was Government and police inaction that resulted in the large-scale escalation of violence.

24 ARCHAEOLOGY: The Pharoah Who Woke After Thirty-three Centuries
The fascinating story of the discovery of this legendary Pharoah's tomb in Egypt's Valley of the Kings. By Partha Basu.

26 INTERNATIONAL: Generals Play Havoc
In the concluding instalment of excerpts from *Generals In Politics*, Air Marshal Asghar Khan discusses how the power politics of the Generals has reduced Pakistan almost to the level of a client state. He also reveals how these Generals have ruined the nation's economy.

41 PROFILE: Hotelier Extraordinaire
Ellen Chau on Hari Harilela, one of Hong Kong's wealthiest men who began as a small Indian boy selling newspapers and ended up with a number of hotels and trading companies.

43 LITERATURE: The Lebanese Vates
With Lebanon still blistering in the aftermath of the war, Kahlil Gibran, the Vates, still exercises universal appeal. Hari Prasad Nayak writes an appreciation.

32 DANCE: South Korean Ballet—Spirit In Motion
The traditional dances of a country reflect the cultural ethos of its people; the dances of Korea belong to the northeast Asian cultural sphere and the traditional repertoire includes items that trace their origin to the courts as well as community celebrations. By S.V.V.

37 HEALTH: Stammering In Children
J.P. Gupta on how care, attention and correct speech therapy can cure it. Also tips on Golden Turmeric by Bijalpita Chatterjee.

39 PHOTO FEATURE: The Dancing Desert
A collection from the album of Shivji.

49 FICTION: Brahmin Is As Brahmin Does
Short story by Indira Parthasarathy.

Plus: *That's Business:* 35; *The Weekly Pick:* 45; *Hal:* 46; *Stars:* 55; *Bridge & Chess:* 59; *Comics:* 56

Next Issue: Republic Number

Our Freedom In Peril?
On the 33rd anniversary of the Republic, regional and communal forces seem to be stronger than ever before. External threats are menacing and the economy is in a bad shape. Is all this merely part of a passing phenomenon or does it portend a darker future? Will our sovereignty as a nation get eroded by foreign pressures and internal discord or will we muddle through as in the past? An agonising soul-searching by a galaxy of writers and thinkers including R.G.K., Dr Ashok Mitra, Sitanshu Das, Shobha Kilachand and K.C. Khanna.

Troubled North-East: Assam Imbroglio.

Today, 62 years after Mahatma Gandhi's eulogy to Assam, the Assamese still nurse a wound—an injury caused by the invasion of their land by "foreigners" and by the consequences that flowed from it, says H..S. Sethi, while Kirit Bhaumik insists that Assam provides a unique example of how political instability can encourage different interest groups to adopt irreconcilable positions giving rise to knotty and insoluble problems.

Also: H.S. Sethi writes an accompanying piece on Mizoram.

EDITOR: K.C. KHANNA ASSISTANT EDITORS: RAJU BHARATAN ELIZABETH RAO CHIEF SUB-EDITOR: VITHAL C. NADKARNI SUB-EDITORS: PREETI CHATURVEDI, RAJIV SHANKAR, ANJALI EWING, SUJATA ANANDAN, GIRIJA PRABHAKAR ART DIRECTOR: RAMESH SANZGIRI ASST MANAGER, PRODUCTION (GRAVURE): PURNENDU SEN NEWS COMPOSING SUPDT: K.A. BEAUTY-TURNED-BALSEVIKA: Jayalalitha, M.G. Ramachandran's co-star in 28 films, says "the charge that MGR has introduced the Nutritious Noon Meal Scheme only to boost his personal popularity just does not wash". It may interest readers to know that Jayalalitha was Dharmendra's unsuccessful Hindi co-star in T. Prakasa Rao's *Izzat* (1968).

Midday Meal Scheme

MGR Deserves The Nobel Prize

After Mother Teresa, who? None other than MGR, if those who award the Nobel Prize are to accept the recommendation of the most glamorous personality [redacted] Jayalalitha is also a member of the High Power Committee set up to implement the Midday Meal Scheme.

by Jayalalitha

THE time is a few minutes past noon. At a primary school in the Chengalpattu district of Tamil Nadu, 200 children (between the ages of 5 and 10) are seated on mats laid out on the floor in neat rows. The cook and an assistant (both Harijan women), aided by two teachers, are serving them a hot meal of boiled rice with *sambar*, vegetables and a side dish of greens. At the doorway stands a woman, bejewelled, wearing a Kanchipuram silk sari, obviously well-to-do. Clutching her hand is a little 5-year-old. A teacher looks up and notices the lady. "What are *you* doing here? Surely, your son doesn't need *this* free meal?"

The mother looks embarrassed. Helplessly, she says: "What am I to do? He simply refuses to eat at home. He insists on eating here, together with all the other children. I brought his lunch from home and tried to feed him here, but he demands the same food as is served to the other children."

The incident is not so trivial as it may seem. It comes, in fact, as a revelation. It speaks volumes for the efficacy of the Free Nutritious Noon Meal Scheme in achieving one of its major objectives: the creation of a casteless society devoid of communal and sectarian prejudices, as envisioned by MGR, its author. This programme was inaugurated in all districts of Tamil Nadu on July 1, 1982. It is aimed at providing at least one square meal a day to 67 lakh underfed children in the 2-10 age-group living below the poverty-line.

The Nutritious Noon Meal Scheme is comprehensive. It is a major socio-economic measure aimed at establishing a hungerless, egalitarian society through promoting the healthy growth of young children by nourishing not only their bodies but their minds as well.

The scheme has won universal acclaim and sparked a chain reaction. Prime Minister Indira Gandhi and the CMs of other States—notably those of Karnataka, Andhra and Gujarat—have evinced keen interest in it. The Andhra Government has even announced implementation of a similar scheme in the State from November 11.

The scheme has had a tremendous impact on the enrolment of children in primary schools. An additional 2.63 lakh children in the 6-11 age-group had been enrolled in Standards I to V within 10 weeks of its inception. The target set by the Planning Commission for the year 1982-83 is enrolment of an additional 1,00,000 children in this age-group. This target has not only been reached but surpassed! The scheme has, in addition, generated gainful employment for some 1,47,000 people—mostly widows and destitute women. The total number of beneficiaries under it are 66,27,643 children (as of October 31, 1982), divided into two age-groups: 2 Plus to 4 Plus & 5 Plus to 9 Plus.

The total number of Noon Meal Centres in the State is 62,852. At each centre, a trained Balsevika, a cook and an assistant attend to the work. The Balsevika is paid Rs 175, the cook Rs 90 and the assistant Rs 60 per month.

The Balsevika in charge of a centre is also entrusted with the responsibility of imparting pre-school education to the children. Educational aids and toys are supplied at a cost of Rs 600 to each centre, cooking utensils, plates and tumblers at Rs 2,000 per centre. Each centre catering to children in the 5 Plus-to-9 Plus age-group is staffed by one cook and one assistant. Here again, cooking utensils, plates and tumblers are supplied at Rs 2,000 per centre. In the case of schools with a strength of over 500 children, one additional cook is permitted.

The centres are being built according to a Government-approved type design, which includes a kitchen, a storeroom and a dining hall, with provision for a kitchen-garden and a playing-ground. It is proposed to teach the children gardening as well.

It has been stipulated, after consultation with a panel of nutrition experts, that the midday meal should comprise: rice 100 gm, oil 7 gm, *daal* 15 gm and vegetables 50 gm per child for those in the age-group 5 Plus to 9 Plus; for the age-group 2 Plus to 4 Plus, the quantum is: rice 80 gm, *daal* 10 gm, oil 7 gm and vegetables 50 gm. The cost of a meal has been fixed at 45 paise per child.

In terms of narrowing social differences, we find that food cooked and served by some 27,000 Scheduled Caste women is freely eaten by 66.27 lakh children belonging to all castes and communities. This is a significant achievement in any context.

The scheme has come as a godsend to the poor of Tamil Nadu. Most of these children had never eaten vegetables before—in fact, even a daily meal of rice and *sambar* was until now a pipe dream for them. Their staple diet till now consisted only of *cholam* (maize) or *ragi*. As one poor farmer in the North Arcot district admitted: "Previously, we could afford to cook rice in our homes only one or two days in the year—on the festival days like Pongal and Deepavali. It seems unbelievable that our children are at last getting a full meal of rice and *daal* and vegetables every day. God bless MGR!"

Charismatic Leader

The charge that MGR has introduced this scheme only to boost his personal popularity simply does not wash. Why, even before the inception of this scheme, MGR's numerous achievements had already secured for him a permanent niche in history. This charismatic leader has no need at all to resort to any cheap publicity gimmicks.

The scheme is undoubtedly a signal achievement and a great personal triumph for MGR. With regard to its impact and effect on society, it is no less noble and humanitarian in intent than the work done by Mother Teresa, which won for her the Nobel Prize for Peace in 1979.

Here, in fact, is the most deserving contender for the Nobel Prize in the same category: MGR, Chief Minister of Tamil Nadu. ■

It's MGR vs DMK

They are ceaselessly at each other's throat—MGR and M. Karunanidhi. MGR is evidently working for a mass exodus from the DMK. One political commentator summed it up succinctly when he said: "Without MGR, there *won't* be an AIADMK but, without Karunanidhi, there *will* be a DMK." However, while the two Kazhagams fight it out furiously, Tamil Nadu still groans under the burden of grinding poverty. The economic outlook is far from bright and, 5 years after he came to power, MGR's "Man-Clean" image lies shattered.

by S.V. Mani

AFTER MGR who? Jayalalitha? No Karunanidhi? No The answer (that would nonplus even the most seasoned political quiz master) must remain a progression of negatives For, although MGR's All-India Anna DMK is dubbed a one-man affair, nobody is as yet gazing into the future minus the matinee idol "MGR will go on as long as he likes," is the cryptic remark one often hears in Madras

MGR is over 65 A routine of physical exercises and a diet of sizzlers would seem to have enabled him to maintain a schoolgirl complexion But, looking closer, one can see pouches under his eyes and jaw

There lies some mystery behind those goggled eyes and under that merino-skin fez-cap These are constant subjects of gossip, with some saying that MGR's vision is so bad that special machines are used for typing matter meant for him to read

Mystery lurks behind Karunanidhi's dark glasses, too The grapevine has it that his eyes have been affected by a dreadful disease and that the self-confessed atheist went to Tirupati and offered a pair of golden eyes to Lord Venkateswara

Fierce Rivalry

Talking about the future of the two DMKs, the argument one confronts is this The fierce rivalry between MGR and Karunanidhi is nothing but a clash of personalities However, talking to the *WEEKLY*, Karunanidhi maintained that the fight was not between MGR and himself, "it is MGR versus DMK", adding "But, if MGR thinks Karunanidhi is the DMK, I can't help it MGR is my friend "

The rivalry is fuelled by the continuing quest for the spoils of office in the case of the AIADMK and by the accumulated spoils of yesteryears in the case of the DMK Gullible, fanatic supporters add muscle to the two sides and a dazed populace watches on

This being the case, will the two parties come together in a spirit of brotherhood once either or both quit the scene? Efforts to merge the two DMKs during the 1980 Assembly Elections failed Recently, Karunanidhi himself ruled out a merger But, as one leading political commentator pointed out, when MGR quits the scene, the two Dravidian parties might indeed merge though, without him, they would have lost much of their clout "It's then that some national party might try to cash in," notes this commentator, who also believes that Karunanidhi will finally end up as a Dravida Kazhagam (DK) leader, anti-Brahminism being his main plank

Whatever happens, as a highly respected scholar-journalist (who wished to be anonymous) said "Without MGR, there *won't* be an AIADMK but, without Karunanidhi, there *will* be a DMK " Because, he said while the DMK was a solid cadre based party, the AIADMK was just a network of former Fan Clubs Once the two parties come together, the 70-year-old Dravidian movement, now bereft of vim or vigour may gain a fresh impetus Under a new generation of leaders and thanks to mounting socio-economic pressures (as manifested in the controversy over reservation and the like), the movement may acquire a new militancy Already, the DK as well as the DMK—which sees itself as more Dravidian than the AIADMK—have strongly opposed MGR's moves for concessions based on income Reservation for jobs is as high as 68 per cent though a Supreme Court ruling clearly states that in no case should it exceed 50 per cent (In professional colleges, reservation is 50 per cent, though)

Subnationalism: Still A Force

Should, however, the Congress, which was wiped off the State's map in 1967, rear its head again and adopt authoritarian tactics, the circumstances might throw up a dark horse—Bhindranwale style.

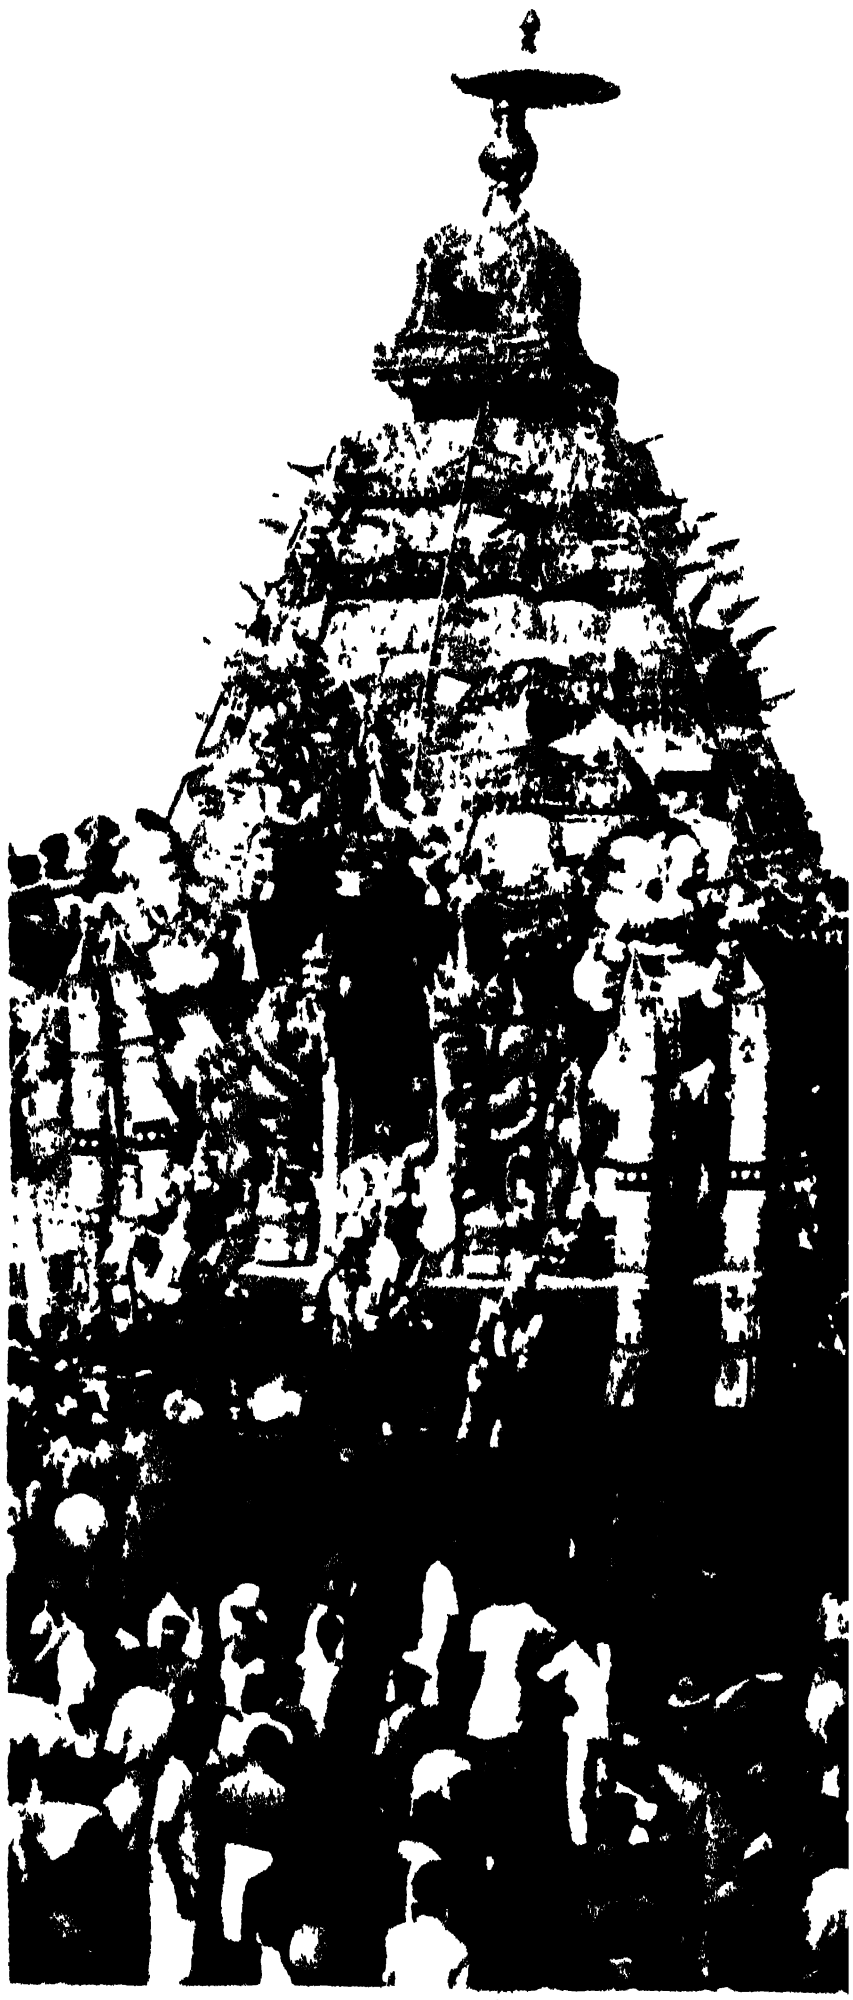
It is noteworthy that the DMK [redacted] given up its slogan for State Autonomy Strident outbursts by Dravidian leaders—"If Northerners continue to amass wealth in Tamil Nadu, it'll become another Assam!" and so on—are few and far between today and they make no impact anyway But then Tamil subnationalism (despite all the treachery of the two DMKs as regards the Tamils in Sri Lanka) has yet to die down

The beauty and richness of Tamil poetry, literature and culture might have been swamped by bawdy film lyrics and the all-round prurience spawned by film culture; Tamil culture may be decaying, yet Hindi continues to rouse passions So far, the language issue and a fierce hate campaign based on racism alone have sustained the Dravidian parties The Brahmin—who was, in any case, never wealthy—has been thrown in the dumps, but the lot of more than 70 per cent of the Tamils has become worse over the years

All talk of the future is in the realm of speculation, since one cannot see a counterforce to the Dravidian party (ies) emerging in the distant future The Congress (I) has no organisation worth the name and the base of the two DMKs is pretty solid

For the present, however, they are at each other's throat. The DMK, whose

⟶



THE HOLD OF RELIGION continues to be strong as ever in Tamil Nadu for all the atheism propounded by the Kazhagams.

popularity has been sliding since 1974, has been rocked by defections to the AIADMK. MGR is working for a mass exodus from the DMK—something which has yet to happen. It is significant that Karunanidhi's second-in-command, K. Anbazhagan, who was given an open call by MGR to join his party, was recently appeased by Karunanidhi. A glittering show was launched the other day to mark Anbazhagan's 60th birthday at which an Ambassador car was presented to him. Going by the DMK formbook, pretty soon he may be weighed against gold or currency. (Karunanidhi has been weighed in this fashion several times.)

Moon-faced actress Jayalaitha has emerged as an extra-constitutional authority, though epithets like "heir-apparent" may be far-fetched. But MGR has been exploiting every opportunity to project her. On December 16, State power was deployed to organise a 5-lakh-strong procession of women to mark Poet Subrahmanya Bharati's birth centenary. Leading the line-up—which marched through Madras City's main arterial road, the Mount Road, to the accompaniment of revolutionary songs and film tunes—was Jayalalitha. She is the manageress of the multi-crore midday meal scheme, so close to MGR's heart.

Dehumanising Poverty

While actors, actresses, con men and assorted politicians are engaged in feathering their own nests, Tamil Nadu groans under dehumanising poverty. At a time when several other States are experiencing an industrial boom, in Tamil Nadu even existing industries are being closed down. Many technocrat-entrepreneurs are in the dumps. Having invested sizeable sums in small and medium units, these young men with drive and enthusiasm have had to down shutters because of the crippling power cuts.

It is pointed out that the AIADMK administration lacks a sense of urgency in tackling problems. That files keep piling up is old hat. Owing to MGR's meekness towards New Delhi, Central investment in recent years in the State has become negligible. Prestigious projects (like the one of the Railways at Karaimedu, near Coimbatore) have been lost. And now a Hindustan Photo Film unit, which was to be set up at Ooty, has been all but given to Uttar Pradesh.

The ill-conceived meals scheme is proving to be an albatross round MGR's neck: he has already announced that, for 19 days in a year, the children will not get Government meals. (While launching the scheme, he had promised to feed them all the 365 days, including holidays. Also, the scheme has cast a heavy burden on the teachers, who spend more time at ration shops and groceries and kitchens than in classrooms.

More importantly, it has put immense pressure on the food stocks, the public distribution system and the price line. Even AIADMK Ministers and officials see a food shortage on the horizon. However, at one level, schemes such as this have become necessary because of long years of neglect.

Improvisation of the masses, especially rural, has produced its own violent backlash. Tamil Nadu has witnessed one of the country's strongest left extremist movements and the most disturbing conversion of Hindus to Muslims at Meenakshipuram. That this should have happened in a State where the Dravidian parties have reigned supreme has its own implications.

The extremist movement is being met with unprecedented repression. Even those like the eminent jurist, V.M. Tarkunde, who tried to expose incidents of police torture and deaths in jail, have been dealt with severly. Tamil Nadu has become notorious for its attacks on the press and civil rights activists.

Damage To Image

Corruption has not yet become a way of life (as under the DMK regime), but there *is* corruption at *all* levels. The "Man-Clean image MGR enjoyed not long ago lies shattered. Though he had levelled grave corruption charges against Nedunchezhian, Rajaram, Madurai Muthu and a whole lot of others when they were on the other side of the political fence, MGR did not have qualms in admitting them into his fold when it suited his designs.

MGR himself is now facing serious corruption charges, which are being probed by the Ramamurthi Commission. Its sittings and the depositions before it have received wide publicity and evoked great interest. That the outcome may have little impact on MGR's popularity is quite another matter.

From Dindigul in 1974 to Periyakulam in 1982, it has been a long and eventful journey for MGR. His nominee, Maya Thevar—who crushed the DMK, the Congress and splinter parties (in fact, all these parties put together could not muster the number of votes the AIADMK alone got)—is now with the DMK. Indira Gandhi, who was with MGR in the 1977 elections, tossed him overboard in 1980. She teamed up with the DMK in the elections held subsequently. Now she keeps both the Kazhagams guessing.

The Periyakulam poll held last September convincingly proved that MGR even now enjoys great popularity: his good-guy image from films still clicks. Men like Sivaji Ganesan are no match for him. Sivaji's character roles—especially in tear-jerkers over the years—have become a liability for him. MGR cleverly stuck to his roles as the swinging saviour of the downtrodden and of damsels in distress.

Still witness the rapidly expanding poverty scene: the thousands living like worms in the slums and pavements of Madras; the hundreds walking miles for a pot of drinking water in the villages or long water queues in cities; human beings suddenly emerging from sewerage wells and shaking off the muck and slime while Ministers jaunt abroad, allegedly to study waste disposal; the crater-ridden, ribbon-sized two-way roads in Madras; the early-morning serpentine queues at Fair Price Shops for a can or two of kerosene; the flourishing tribe of pawnbrokers in every nook and cranny of the State; the overflowing grog joints at the rate of two a street, wasting bodies lying outside these, mouths frothing, dhoti askew, senseless and lost to this world.

This is the reality, the outcome of the politics of illusion. ■

YOU'VE GOT TO HAND IT TO MGR! However, the Midday Meal Scheme, though immensely welcome at the "common-man" level, is supposed to have brought an immense pressure on the food-stock position, the public distribution system and the price-line. The detractors of the Scheme see a food shortage on the horizon.

The Matinee Idol Knows His Crowd

The author, in his own inimitable style, divides the MGR reign into *BC* and *AD* periods: *BC* standing for *Before Crisis* and *AD* for *After Dismissal*.

by Cho S. Ramaswamy

BEFORE the crisis of facing Indira's wrath and losing office in 1980, MGR's Fan Club, known as the AIADMK, ruled Tamil Nadu for 2¼ years from 1977. And, coming back to power after getting sacked by the Centre, MGR's AIADMK Government is now 3 years old. His two terms in office, which could be conveniently differentiated as the one *Before Crisis (BC)* and the one *After Dismissal (AD)*, are as different in character as the two periods of history: BC and AD.

During the *BC* years, MGR did try to keep his rule free from graft, perhaps out of the unfounded fear that otherwise he would meet the same fate as Karunanidhi, who had been thrown out by the people because of his corrupt rule.

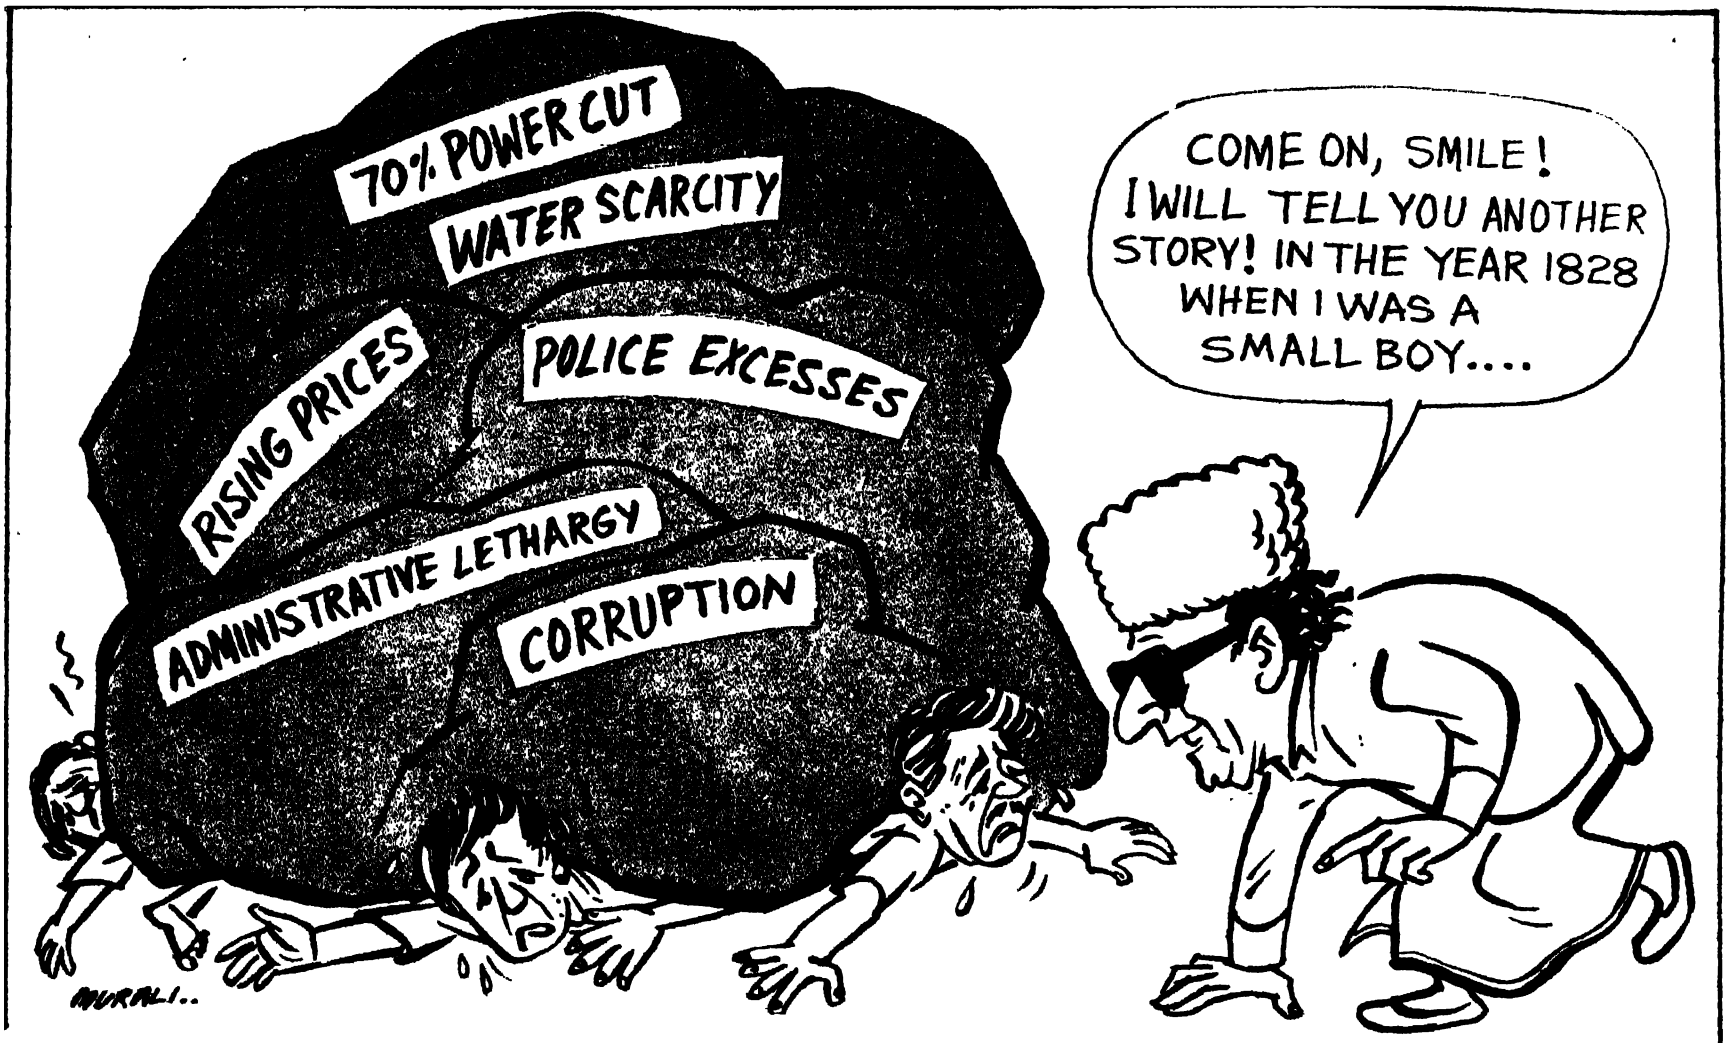
In total contrast to this amateurish approach of the first term, now, in the *AD* period, MGR has realised that corruption is bad only if it gets exposed.

While the *BC* period saw MGR attempting to be as different a Chief Minister from Karunanidhi as possible, now he has transformed himself into a great disciple of Karunanidhi, emulating all the techniques of the latter for perpetuating himself in power and amassing wealth.

In his *BC* rule, MGR exhibited a lot of hesitancy in administrative matters. A favourite argument of his apologists then was that he was only trying to avoid being misguided by a corrupt bureaucracy.

The hesitant MGR has now, in his *AD* rule, become a man in a hurry. His administration is now a scramble to make hay while the rising sun—the election symbol of the DMK—is not shining.

If during MGR's first tenure the files did not move, now they travel with great acceleration in the reverse, so that the person who is interested in the forward movement



of any file would be prepared to pay the price demanded.

Remarkable as these changes are, they are but mundane developments when compared with a revolutionary trait which MGR has started unfurling now. He is creating history—liberally. To be more precise, he is rewriting history. If Karunanidhi was MGR's magnificent obsession during the first tenure, it is now necessary to rewrite history. Undaunted by the criticisms of the DMK supporters, he is going about the task with a singular determination, as if he is a man with a mission.

The Tamil Nadu Chief Minister recently recalled the patriotism of the Justice Party leader, P.T. Thiagarajan, and his involvement in the National Movement by telling the people how the Justice Party leader had gone about distributing khadi clothes to the Congress workers during their picketing of arrack and toddy shops in the year 1932. The political history of Tamil Nadu would now have to be revised. This character, P.T. Thiagarajan, passed away in 1927 but, as MGR has resurrected him to play a role in the 1932 Congress movement, authors of political history have to prolong the life of the dead Justice Party leader by at least 5 years.

The Communist leader, P. Jeevanandam, died in 1963. But MGR has claimed that, when he resigned his seat in the Upper House of the Tamil Nadu Legislature in 1964, Jeevanandam came to him with words of appreciation and consolation.

Historians, please take note. Jeevanandam lived one year after his death to provide consolation to MGR!

Let not the people of other States complain that the Tamil Nadu Chief Minister is confining himself to the political events in the State alone. In the latest exercise of MGR, in his self-appointed task of setting history right, he has travelled North. The Tamil Nadu Chief Minister last month condescended to take the public into confidence regarding a political secret. He said: "When Netaji Subhas Chandra Bose and Pattabhi Sitaramayya were locked in a contest for the Congress Presidentship, I was a 15-year-old boy and an active member of the Congress Party. Bose lost that election because Gandhiji said that Pattabhi's defeat would be his defeat. Unable to bear Gandhiji's interference in the electoral process of the Congress Party, I left politics."

Rewriting History

For anyone who wants to have a second look at history, there cannot be a better justification than this statement of the Tamil Nadu Chief Minister. That MGR has given his year of birth as 1917 in his autobiography, that having been born in 1917 it was a superhuman achievement on his part to have reached only 15 years of age in 1939, and that, anyway, the Congress Party never had persons below 21 years as active workers are all insignificant data compared with the crucial one—that, in the election referred to by MGR, it was Bose who won, and not Pattabhi! Now that MGR has made this revelation, the ball is in the court of the political historians of this country. Let them revise their narration of national events.

As far as MGR is concerned, he cannot be less concerned with dates. In fact, he announced his decision to revolutionise history by saying, a couple of years back, that he had seen the 1914 floods in Madras as an 8-year-old—unmindful of his autobiography, which said that he was born in 1917. Who knows? He might have been referring to a *Poorva Janma* of his.

MGR's new-found zeal for rewriting history has spread like an infection in the State. He has made every political party delve deep into the historical records by offering to prove that it was the Justice Party which started the Free Meal Scheme, not Kamaraj. The Congress (I) entered the fray with the assertion that it was a Chola king who thought of it first. The burning topic of discussion in Tamil Nadu now is not the drastic power cut which has plunged the State into darkness. Nor is it the scarcity of drinking water in Madras City. Every political party in the State is now bent on proving that the Free Meal Scheme, which has converted all schools into canteens, teachers into cooks and students into beggars, was originated by *its* leader.

Not satisfied with having initiated this great debate, MGR is now frantically in search of an incident which he could flaunt as the seed that has flowered as the Free Meal Scheme.

History tells us that Asoka, because of his remorse on seeing the dead and maimed in the Kalinga war, walked away from his palace, renouncing his kingdom, because, we are told, he was touched by the misery of the people. In history, every effect has a cause. So it is but natural that MGR, having presented the effect called the Free Meal Scheme, should now be anxious to disclose to the people of his State the cause also.

MGR has been trying many alternatives. When the Scheme was launched with fanfare, he said: "Myself and my brother underwent untold misery in our boyhood due to want of proper food. It is only the memory of our plight then that has inspired me to launch the Free Meal Scheme."

Not satisfied with the appropriateness of this cause, after about a week, MGR proclaimed that he had implemented the Scheme only because doctors had told him, years back, that the hospitals would not be so crowded if only people had taken nutritious food in their boyhood.

A lesser man would have remained content with having advanced two entirely different reasons as the one reason which compelled him to act in a particular way. Not so MGR. Being the perfectionist he is, he continued his search for a dazzling reason and then said: "When I went to the United States and France, I saw children being provided with free meals there. That is why I've formulated this Scheme in Tamil Nadu."

History As Recreation

Tamilians are sure that they have not heard the final pronouncement from their CM on this subject. The Great Chronicler is capable of coming out with a new theory, equipped with a new date and armed with a new anecdote.

History may repeat itself elsewhere but, in Tamil Nadu under MGR, history is getting recreated.

Yes, recreation—that is what MGR in his second tenure is dishing out to the Tamilians. Entertainment drives away worries and problems. The matinee idol knows his crowd. ■

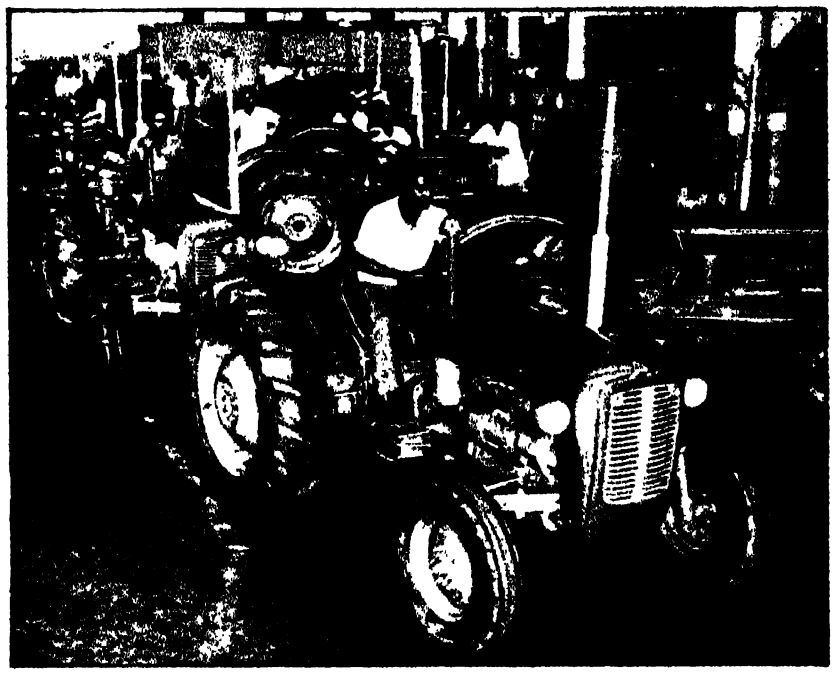
The Industrial Scene

A None Too Flattering Record

A combination of factors has contributed to the current state of stunted growth: neglect by the Centre; a State leadership indifferent to industrial investment; an entrepreneurial class that seems to be conservative and contented; and an administration that is evidently demoralised and reduced to inaction by maltreatment at the hands of the political leadership.

The author, Editor of *Industrial Economist*, presents a revealing balance-sheet..

by S. Viswanathan



TRACTORS ROLLING OUT OF THE ASSEMBLY SHOP at the TAFE Sembiam Factory. The present recession in demand for commercial vehicles has affected Tamil Nadu most, with its overconcentration of industries built around the automobile. The author points out that between 1967 and 1976, when the DMK was in power, not a single new unit was set up in the public sector in the State.

HOSUR was a sleepy, small town on the border of Tamil Nadu, just 40 km from Bangalore. It had a Government cattle farm that was sick and stagnant And some sericulture. This was Hosur of the early 1970s.

And then Hosur was notified a backward area. An imaginative Area Development Programme was launched. The infrastructure was improved. Incentives were provided for locating industries. And, for a while, there was also the ban on industrial expansion in and around urban centres. Which also directed investments to Hosur.

In just over 5 years, Hosur became one of the fastest-growing centres in Tamil Nadu. Today, it accounts for an investment of over Rs 200 crores and for employment to over 7,000 people. There is practically no major industrial group in Tamil Nadu that has not located its new projects in Hosur. The Hosur experiment also helped Tamil Nadu get Rs 10 crores (out of the total of Rs 65 crores provided by the Centre) as subsidy for siting industries in a backward area.

Now look at the current scenario. Hear the wail of a representative of small-scale industrial units in Hosur: *Since November, owing to the severe power cut and worse, owing to total stoppages extending up to 20 hours a day, there's near paralysis of industrial production!*

Reeling under a 60 per cent power cut and with the outlook for the coming months far from bright, the industrial scene of Tamil Nadu is indeed gloomy. Production in several industries—aluminium, automobiles, cement, caustic soda and textiles, among the major ones—is much below projections. Understandably, there is no great enthusiasm on the part of entrepreneurs to expand or diversify. An index of this is provided by the relatively small number of new issues for public subscription for locating industries in Tamil Nadu despite the tremendous spurt in activity on the national scene.

A combination of several factors—such as neglect by the Centre, largely as a result of the loss of a political base for the Congress (I) in the State, a State leadership not alert in encouraging industrial investments, a class of businessmen that seems to be conservative and contented and an administration that appears demoralised and reduced to inaction by maltreatment by the political leadership—together seem to have contributed to the current state of stunted growth.

Excellent Start

The State had an excellent start, though. In the 1950s and 1960s, among the States, Tamil Nadu recorded perhaps the fastest rate of industrial growth. From the very small base of textiles and a few engineering units it had in the early 1950s, new investments flowed into a variety of sophisticated industries: automobiles and ancillaries, aluminium, cement, heavy chemicals, paper, viscose...

The State leadership played a key role in catalysing these. The State Financial Corporation, the oldest in the country, took the initiative and boldly participated in the equity of several units, which provided a timely fillip and confidence to a new class of entrepreneurs. A number of Development Corporations were set up, charged with the special task of aiding large, medium and small industrial units. A programme of setting up industrial estates all over the State also helped in dispersing development.

Tamil Nadu holds to this day an enviable record in this area. Its industrial development is not overconcentrated in a couple of districts, as in West Bengal or Maharashtra.

Central investments played their own part in this development. The setting up of the Neyveli Lignite Corporation (NLC), with an investment of nearly Rs 200 crores, contributed substantially to the production of power. The NLC is among the earliest and best examples of a pit-head thermal station with mining and production activities well integrated. One of the best-operated power stations in the country, this 600-MW thermal station has been consistently meeting some 40 per cent of the power needs of the State for several years.

The high-pressure boiler plant of Bharat Heavy Electricals, set up in the 1960s, soon grew into a model for corporate growth. The policy of contracting out production of less sophisticated structural fabrication, sub-assemblies and components to smaller units helped the Tiruchi unit of BHEL record vast increases in the tonnage and value of its production right from the beginning. And this policy was of immense benefit to hundreds of small-scale industrial units in Tamil Nadu.

The State also witnessed a rapid growth of the automobile and ancillary industries. The location of Ashok Leyland and Standard Motor Products, both in collaboration with British firms, helped in the establishment of a large number of ancillary industries, mostly with British collaboration. Today, several of these have grown into major suppliers of components to the Indian automobile industry.

Some Bright Spots

There are a few areas in which the State provides the model for development elsewhere. Handlooms offer the most striking example. Nearly 1,000 Primary Weavers' Cooperative Societies have been federated under the Tamil Nadu Handloom Weavers' Cooperative Society (Co-Optex). Co-Optex provides inputs—such as credit at low rates of interest, quality yarn, dyestuffs, silk, polyester fibre and *zari*. It helps co-ops in dyeing, processing and finishing. And it markets their products through some 500 retail outlets spread all over the country. Polyester-blends account for some 30 per cent of the sales of Co-Optex, testifying to the vast strides made in keeping pace with consumer demand. And Co-Optex is a mighty business enterprise, with the sales in the current year targeted at Rs 100 crores. The well-integrated operations in the handlooms sector, apart from encouraging traditional skills, have improved the lot of nearly 3 million people of the State dependent on handlooms.

Equally impressive progress has been made by the State in setting up khadi and

village industries Their output, at around Rs 120 crores, accounts for a fifth of the total all-India production The most striking of these is the safety-match industry, concentrated in the Sivakasi-Sattur belt Production of safety-matches from the village industries of Tamil Nadu in 1979-80 amounted to Rs 26 crores, which formed over 80 per cent of the total production from this sector in the country

However, in other areas, the State missed the opportunity to build on the excellent base laid earlier In the 1970s, the record has been dismal

Significantly, between 1967 and 1976, when the DMK was in power, there was not a single new unit set up in the public sector in the State Even the crying needs of the NLC for the provision of some essential blancing equipment were delayed It was only during President's Rule in 1976-77 that the investment proposal on the Salem Steel Plant was cleared for a cold roll-mill to produce stainless steel out of imported hot rolled-bands. And, thereafter, the much-delayed Neyveli expansion plan was sanctioned

Ancillary Units In Distress

The present recession in demand for commercial vehicles has naturally affected Tamil Nadu most with its over-concentration of industries built around the automobile Likewise, the slowing down of power development programmes and the fall in growth of revenues of the Electricity Board owing to crippling shortages have caused widespread distress among suppliers of power equipment to the Electricity Board

The State lacks large consumer industries Though its textile industry is an old one, it is predominantly a producer of yarn The large composite mill of Binnys seems to have become incurably sick (with an awful lack of modernisation) and is kept alive by continuous oxygenation

Tamil Nadu has limited natural resources and, even in areas where it has some special advantages (as in sugar or cement), there is near stagnation Compare, for instance, the record of the sugar industry in Tamil Nadu with that of Maharashtra During 1972-82, the number of sugar factories in Maharashtra increased from 42 to 78, the average annual sugar production for the 3 years ending 1971-72 was 10 35 lakh tonnes, which increased to an average of 21 68 lakh tonnes for the 3 years ending 1981-82 In this period in Tamil Nadu, the number of sugar factories increased from 16 to 21 and the 3-year average production increased from 2 72 lakh tonnes to 5 18 lakh tonnes. This 9 per cent annual growth over a small base was rather modest for the potential, Tamil Nadu has the advantage of the longest crushing season

AS A CROWD-PULLER, MGR may still be a great force but, on the economic front, the State has been steadily sliding. Since November, owing to the severe power cut and total stoppages extending at places up to 20 hours a day, there is near paralysis of industrial production

Again there has been poor growth of the cement industry in the 1970s The years of severe power shortages and low retention prices pushed the industry towards sickness and there has been little enthusiasm on the part of entrepreneurs to avail of the handsome concessions offered for setting up cement units, as there has been, to such spectacular effect, in neighbouring Andhra Pradesh

Wasted Opportunity

For a State lacking in basic raw materials, the easy availability of naphtha from the Madras Refineries and a range of coal chemicals from Neyveli should have triggered impressive development in chemicals and petrochemicals downstream But failure to comprehend the tremendous scope for these provides a glaring instance of wasted opportunity Madras Refineries and Madras Fertilisers in the public sector, set up in collaboration with American and Iranian interests, have been among the best-managed public sector undertakings, with enviable records of production and profits Even now when the capacity of the Refineries is being doubled at a cost of around Rs 225 crores there is little activity to set up downstream units to take advantage of the copious availability of naphtha

Again, the State did pioneering work in introducing the concept of the joint sector. The Southern Petrochemicals Industries Corporation (SPIC), the largest producer of urea in the country is among the most interesting instances of joint ventures. Yet Tamil Nadu did not persist with the experiment and seems to have been stupefied by some of the earlier reverses Neighbouring Andhra Pradesh seems to have taken up the cue and provides a glorious instance of joint sector development

The abundance of skills available in Tamil Nadu, it was thought, would trigger the growth of the electronics industry In the 1960s, the State conceived of an industrial estate exclusively for electronics and instruments The Centre's policy on production of television sets was also put to excellent use by the small-scale sector in Tamil Nadu The State today accounts for nearly half the production of television sets in the country But it seems to stop just at that. The share of Tamil Nadu in the total production of the electronics goods in the country is less than 5 per cent

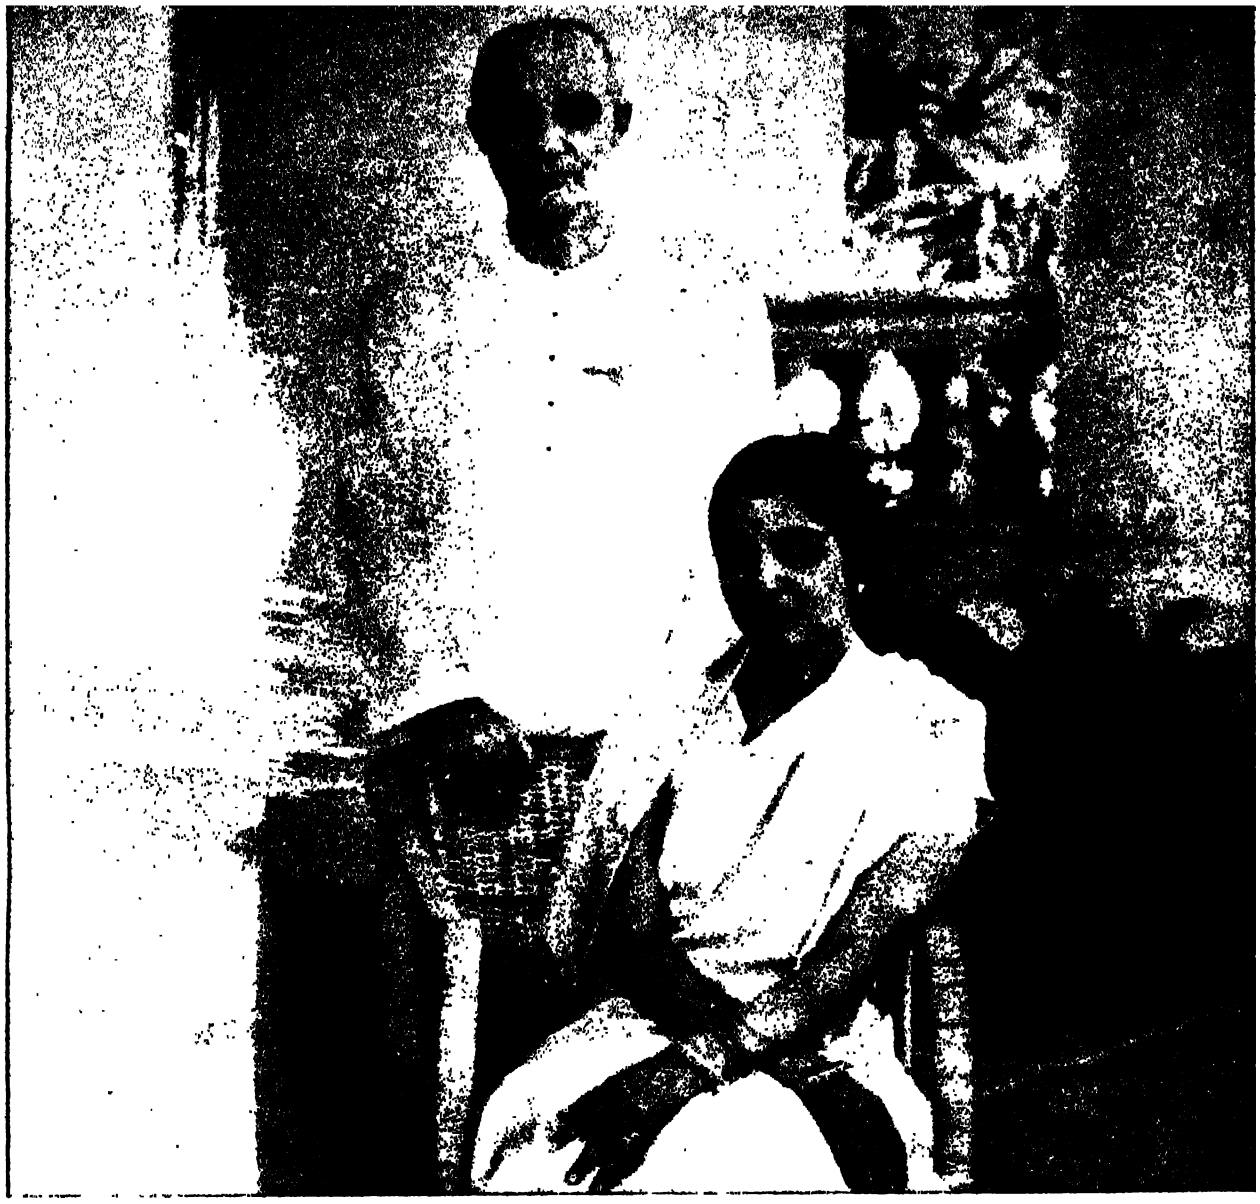
Demoralised Civil Service

There is an overconcentration of bureaucracy in the shape of heads of industrial units, Development Corporations, the Electricity Board and even the State Electronics Development Corporation While this in itself may not be objectionable, the DMK leadership and its successor have treated the Civil Service with scant regard bordering on contempt The power and the independence of the Civil Service have been curtailed, and there have been frequent transfers The State Electricity Board with its complex generation and distribution network (a manpower of nearly 100,000 on the payroll and mounting losses), has seen a dozen Chairmen (all IAS officers) in 13 years The demoralisation in the Civil Service ranks is illustrated by a number of brilliant officers opting for voluntary retirement

A senior industrialist reminisced with nostalgia

R Venkataraman as Minister for Industries in the Kamaraj Government set a target of opening at least one industry a day He ensured this by maintaining regular contacts with industrialists, by meeting them frequently or by telephoning them The rapport thus created was highly beneficial for the rapid industrialisation of the State In several cases, Venkataraman backed up our efforts by bold commitment of Government support In contrast, it is so difficult today to have access to the Chief Minister in whom all powers are concentrated He meets industrialists very rarely and has little time to understand or appreciate their problems

The effect seems to be quite damaging to Tamil Nadu Several of the industrial houses, frustrated by the apathy of the State Government and crippling power shortages, hint at plans to move out of the State In this, they are also very considerably influenced by the pressures brought to bear on them by the Union Minister for Industry, who seems successful in putting subtle and sometimes not so subtle, pressures on locating such expansions in and around UP ■



FLASHBACK. The author with her husband, G.S. Arundale—two names indissolubly linked with the Theosophical movement. It was the association of Madame Blavatsky and Col H.S. Olcott that resulted in the establishment of the Theosophical Society in India. Col Olcott was a man of erudition and the Adyar Library in Madras is a standing monument to his vast love of learning. (Rukmini Arundale, it may be recalled, was favoured by Morarji Desai to become the President of India soon after the Janata came to power in 1977. However, the party's final choice fell on Sanjiva Reddy.)

HOME OF THEOSOPHY

"Theosophy is a philosophy and the Theosophical Society was founded for a global effort to foster brotherhood and bring true knowledge to the world. The organisation is not an end in itself. As in every organisation, the individual—great, dynamic and dedicated—is the only true representative of Divine Knowledge, whether he be a member of the Theosophical Society or not."

by Rukmini Arundale

WHEN we assess the effect that Theosophical teaching has created in the minds of men, it would be well to consider the background against which the Theosophical Society was established by H.P. Blavatsky and H.S Olcott.

It will be remembered that the Society was established in 1875, though the formulation and the idealism preceding the foundation had gone on in Madame Blavatsky's mind for many years before that. The Industrial Revolution had turned men's minds to the amassing of wealth. Materialism had conquered the world in the wake of growing production and prosperity. The exploration of nature's laws by the great scientists, especially the advances made in evolutionary science following the publication of Darwin's *Origin of Species*, had made serious inroads into the realm of religious beliefs. Even faith in God was called into question by such great intellects as Huxley, Tyndal and Herbert Spencer.

It was into this world of material, intellectual and spiritual revolution that Madame Blavatsky was born. From early childhood, her interest centred on the world that could not be easily perceived by the ordinary senses. This interest flowered and bore fruit as she grew. She travelled in inaccessible parts of the world (such as Tibet and Peru), met outstanding men and women, was a disciple of the spiritually enlightened and amassed, in her very retentive memory, an enormous amount of recondite knowledge. This amazing wealth she displayed at all times—the great intellectuals of the age, the great scientists who were her friends, were struck with wonder at the range and depth of her knowledge. She was of the opinion that, for a true understanding of the spirit, one had to turn to the East and not to the West. She also held that great sages, *rishis* and saints directed the destiny of the world. These great ones, whom she called masters, inspired her.

Col H.S. Olcott

H.S. Olcott was a distinguised American lawyer. He held the military rank of Colonel because he had enlisted in the Federal Army during the American Civil War. He was also interested in life beyond death, had studied the problem thoroughly and was spiritually mature. He and Madame Blavatsky came together in a common investigation of psychic phenomena. Their association resulted in the establishment of the Theosophical Society. Olcott was a man of erudition and the Adyar Library, which is one of the great libraries of the world, is a standing monument to his vast love of learning.

In the early beginning, the objects of the Theosophical Society were stated as follows: *To collect and diffuse a knowledge of the laws which govern the universe*. The final form of the objects, as known all over the world, came to be:

1. To form a nucleus of the Universal Brotherhood of Humanity without distinction of race, creed, sex, caste or colour.
2. To encourage the study of Comparative Religion, Philosophy and Science.
3. To investigate the Unexplained Laws of Nature and the Powers Latent in Man.

It would be safe to assert that Western familiarity with Eastern religions and philosophy is mainly due to the spread of Theosophical teachings and to the work of the great leaders of the Society, such as the two main Founders, Annie Besant and others. The idea of the common basis of all religions, the unity of all life, the teachings of *karma*, reincarnation, etc, now so well known in the West, have become widespread for the same reason.

From the earliest years of my life, I had heard of Madame Blavatsky, the great seer and teacher born in Russia whose vision brought to the world what we now call Theosophy. Although this word was coined by her, the meaning is age-old—*Brahma Vidya-Theo-Sophia*: meaning Divine Wisdom. The ideal translation would be Divine Wisdom, as all religions believe in the wisdom coming from religious teachers, philosophers and mystics. It is not Theosophy which is new but the interpretation, the application and the presentation, for all ancient truths need to have a new form in order that new generations may understand the teachings even of their own religious philosophy and culture, particularly as applied to the times in which they live.

Madame Blavatsky was a dynamic seer of truth and a messenger of great spirituality who revolutionised modern thinking and inspired even the greatest people of the world. Though born in Russia, she seemed more to be a bridge between the East and the West and between nations. Like all great pioneers, she was misunderstood and persecuted by the people of the West, especially by the fanatically orthodox. Her pronouncements explaining the laws of nature, *karma*, reincarnation and in general the teachings of the Eastern religions, as well as of other faiths, were considered so heterodox that the Theosophical Society was at first started as a secret Society. Added to all this was her capacity to prove the unlimited powers of man and nature by performing what would be called miracles.

Today, this is considered neither miraculous nor witchery, as thousands of Westerners crowd round Sai Baba, Panrimalai Swami and others who similarly perform these miracles, either for helping others or to create a belief in God. I know at first hand from those closest to me—such as Annie Besant, Miss Francesca Arundale (who adopted Dr Arundale whom I married later) and, even more, from my father and others of his generation—that Madame Blavatsky's intention was merely to prove that there were powers greater than man and that there is an unfathomable existence beyond us which we must recognise and revere. This higher knowledge should affect us to live a greater life to serve humanity.

Madame Blavatsky, whose character was like a sparkling diamond, so convinced thinking people that great scientists like Flamurian (the astronomer), Sir William Crooks, A.R. Wallace, Annie Besant and other accepted these truths she called Theosophy. In India, where through her travels and adventurous life the doors of Inner Knowledge were opened to her, hundreds revered her, called her blessed, termed her Saraswati. It was a new experience for Indians who had been belittled by foreign rulers to listen to a woman of Russian birth speak-

ing on the Vedanta, the Upanishads, Buddhism, Christianity and Sufism, thus making it clear that she was one who knew answers to much of life's mysteries. Swami T. Subba Rao, a great sage, and others accepted her. Among this galaxy of learned people was my father who remained a deeply convinced Hindu or, as he called himself, a true Hindu, because of the light that was shed by the truths revealed by her. Madame Blavatsky truly chose a wonderful motto: *Satyad Nasthi Paro Dharma* ("There is no religion higher than Truth"), for behind all forms is the One Truth, the One Life and the One Unity.

Madame Blavatsky had as her associate Col H.S. Olcott, a great man, a marvellous organiser and a compassionate leader. Though born an American, Col Olcott became part of India and the East. No Buddhist can forget him as it was Col Olcott who showed to the Buddhists of all persuasions the truth behind the Sakyamuni's teachings as represented by different sects, such as Hinayana, Mahayana, Vajrayana, Zen and other groups.

Annie Besant should not need an introduction to Indians. She was British, offered her total service and energy to Madame Blavatsky and came to serve her motherland, as she called India.

I regret to say that many false stories are spread even about her. Madame Blavatsky was indirectly a promoter of the Indian National Movement The National Congress was established by A.O. Hume, who was her disciple. The cause of freedom was taken up by Dr Besant in order to encourage constructive reforms, the Home Rule Movement, true education, the starting of colleges and schools along Indian lines (including the Central Hindu College which was the seed of the Banaras Hindu University to come), the Indian Women's Association, Montessori Education...

Social reforms of every kind were initiated by Annie Besant. Her services to this country are too numerous to mention. In the early period, she brought outstanding people to India, such as Dr G.S. Arundale (my husband), his adopted mother, Francesca Arundale, Dr James Cousins, Mrs Margaret Cousins and many others who remained in India and worked for her till the end of their lives.

Col Olcott's and Madame Blavatsky's teachings followed by that of Dr Besant's transcendental work brought many members into the Theosophical Society including Gandhiji—as told to me by him—Motilal Nehru, Jawaharlal Nehru, Bhagavan Das and his son, Sri Prakasa. Though these were inspired by the leaders of the Society, they discovered their own way of Service—as they were meant to do

It must be understood that Theosophy is a philosophy and the Theosophical Society was founded for a global effort to bring brotherhood and true knowledge to the world. The organisation is not an end in itself. Like in every organisation, the individual—great, dynamic and dedicated—is the only true representative of Divine Knowledge, whether he be a member of a Theosophical Society or not If they are members—as some were—they brought credit to the movement The criterion is not only the teachings but the practice and the example and their application in daily and national life. Ultimately, as the Upanishads and the Gita say, what matters is the knowledge of the One Life, the realisation of brotherhood and the service rendered to humanity, to every living creature, because brotherhood must be understood to mean the brotherhood of all life, not only the brotherhood of humanity. ■

Its Cultural Heritage

Tamil Nadu being a land of temples, some festival or the other is celebrated almost every month in the State. The author touches upon the more popular of these festivals.

by Sabita Radhakrishna

THE rich heritage of Tamil Nadu going back several centuries flows through many channels of culture. Besides literature and poetry, cultural landmarks of Tamil Nadu included architecture, crafts, Carnatic music, classical dance (like Bharata Natyam) and popular folk-dances (like *Kummi, garakam, poikal kudirai* and *bommalattam*).

One of the most colourful aspects of the Tamil Nadu heritage is the Temple Festival. Time has not obfuscated its splendour nor have the rituals been diluted very greatly. The romance of the related legends lingers in the minds of the people to this day.

The Temple Festivals were sociological events, knitting together the entire community, obliterating caste differences and family squabbles—as organised effort was necessary to ensure success. Rituals connected with domestic festivals fell to the lot of the womenfolk, who were happy to indulge in the festivities, with the menfolk sometimes away from the home. Those who had their men at home had support not only from them but from the older children as well. The children delighted in the merry-making and learnt the legends and folklore. The philosophical aspect of festivals has been kept alive for centuries.

At home, certain disciplines are practised on the day of the festival. The early-morning purifying bath is a must. The courtyard is cleaned and intricate patterns in rice flour are drawn at the entrance of the house. The doorways are festooned with green mango-leaves and other leaves dextrously patterned into imaginative forms. The lamp with the oil-wick is kept continuously burning. And sandal paste, turmeric and *kumkum*, with *agarbatti* and camphor, are kept ready for worship. Flowers, plantains and other fruits, along with coconuts, form an important part of the *puja* rituals. The *mantras* which are recited are supposed to set up certain cosmic vibrations, which strengthens the soul of the worshipper.

Land Of Temples

Since Tamil Nadu is a land of temples and since temples and festivals are hardly dichotomous, some festival or the other is celebrated almost every month of the Tamil calendar. Since each one of these festivals cannot be documented here, I have touched upon the most popular. The Tamil word for festival is evocative. it is *vizha (vizhavu)*, arising from the root *vizhai*, meaning to desire and to love.

Tamil New Year's Day (the month of Chitrai) falls somewhere in mid April. It is a red-letter day when old accounts are closed and new ledgers are opened. One legend describes it as the first day of Brahma's work of creation, the other claims it to be Rama's victorious day of return from Ayodhya.

The Thiruvannamalai Legend

Kartikkai Deepam is observed, in households and temples, in the month of Kartikkai, originating from the Thiruvannamalai legend. Vishnu and Brahma quarrelled as to who was the superior of the two. Siva appeared before them, in the form of a brilliant column of light, and said that the one who could find the limit of the light—that is, the crown or the foot—would worst the other. Brahma promptly assumed the form of a swan and flew up, while Vishnu became a boar and burrowed into the earth: to find the foot. When neither could succeed, they realised their folly and, bowing to Siva, beseeched him to be ever present in that place in the form of a *linga*.

The entire hill is considered to be the *Siva linga* and the legend is celebrated on Kartikkai Day in all Siva temples, with a lighted column of fire in front of each temple. Devotees fast. And they break their fast only after dark. The houses and the temples look very festive, with a host of little lamps twinkling in the dark. The symbolic fire at Thiruvannamalai can be seen for miles, as it burns all night. Sri Arunachaleswara (Siva) is taken out in procession round the courtyard.

The dancing Nataraja has always inspired concepts of art (besides philosophy and religon) and his various dance-forms are sculpted documents of stone in the panels of the Chola Temple at Thanjavur and on the Chidambaram Temple. It is here that the Ardradarsana Festival is celebrated—for 10 days, being an important one for the Saivas. Beginning with flag-hoisting, the deity is taken out in a Temple Car drawn by thousands of devotees.

Harvest Festival

Thai, which is considered to be an auspicious month for the Tamils, ushers in Pongal, really a harvest festival, with prayers offered to the Sun God for bountiful giving. Pongal brings in a 4-day celebration and special *abhishekas* are offered to Lord Siva in temples.

Devotees of Ramalingaswamy of Vadalur celebrate Thai Poosam, as this was the day the saint disappeared from the earth. His form is worshipped as a *jyoti* (flame). Tamilians the world over also celebrate Thai Poosam in honour of Subrahmanya as Kartikeya. Small processions with the Lord's image are taken out, some devotees pierce their tongue and other parts of the body with small spears, as they carry the *kavadi* (a symbolic arch borne on the shoulders).

Kumbakonam celebrates the Mahamagam Festival once in 12 years, an event similar to the Kumbha Mela at Prayag. All the holy rivers are supposed to have their confluence on this particular day and the festivities take place in the temple tank

The legend goes that Siva advised Brahma to place seeds of all forms of life in a clay pot, soaking in nectar, and to position the pot on the peak of a particular hill. The *kumbha* (or pot) floated to Kumbakonam. Siva's arrow split the pot, scattering the seeds all over the earth. The spreading nectar settled in a place now called Mahamagam Tank. Kumbeshwarar is the leading deity. The *utsava* lasts 10 days and is witnessed by a large crowd of devotees. Lord Kumbeshwarar and his consort, Mangalambikai, are taken out in procession and all the presiding deities of the Siva Vishnu temples are brought out and stationed in erected pavilions. The holy dip marks the conclusion of the festival.

Velankanni (near Nagapattinam) draws tremendously big crowds to its shrine (dedicated to the Virgin Mary) during the Velankanni Festival, so also the 14-day Nakur Kanturi Festival, which marks the anniversary of a great Muslim saint, Hazrat Syed Shakul Hameed Kadir Ali. There are fireworks and the symbol of a boat is carried to remember the saving of a stranded ship by the great saint.

Cultural Symbiosis

Appreciation of our culture combined with the need for unity is a message that gets across to even the unlettered through these visual extravaganzas. Status, caste and family differences are all levelled out at the time of rejoicing, when Brahmin and Harijan rub shoulders as they wheel out the Temple Car.

Indeed, the festivals of Tamil Nadu have created a kind of cultural symbiosis, with their age-old legends, music, dance, temple sculpture and colourful pageantry. It is this that has kept the Tamil way of life both stable and vibrant through the centuries. ■

SRIDEVI IN *DEIVA THIRUMAGAL*. Hindi film buffs will recall Sridevi as the heroine of *Solvan Sawaan* (opposite Amol Palekar). That film was directed by the South's Bharathiraaja. Now Sridevi is to appear (opposite Kamalahaasan) in another Hindi film, *Sadma* (remake of the Tamil *Moondram Pirai*), under the direction of cineaste Balu Mahendra. Scoring the music for *Sadma* is Ilayaraaja, the R.D. Burman (or is it now the Bappi Lahiri?) of the South.

Where Cinema Is Politics And Politics Is Cinema

The influence of the cinema in the body politic of Tamil Nadu is so powerful that no aspirant with a purely *political* base can apparently dream of effectively winning over the masses. That is why perhaps MGR recently inducted Glamour Girl Jayalalitha into the hierarchy of his AIADMK.

by Brian Laul

AUDIENCE tastes are changing Or so the "newer-wave" directors of Tamil Cinema would have us believe s they dish out their genre of non-ero oriented, realistic film. With char-cteristic aplomb, directors like Bhar-thiraaja and Mahendran search out ew talent and grapple with 10,000 netres of celluloid spanning unem-loyment, hunger, suicide and sadism n quest of the loaves and fishes of ox-office. Cinegoers now no more ve in a land of fantasy "They want levant down-to-earth themes pre-nted well on the screen," says Bhar-thiraaja, blinking his way out of the ubbing theatre. Naturally, in the cir umstances, the "star" name hardly natters to them any more.

Even so, the political hold of the nema in Tamil Nadu seems strong as ever-- of distinct use to political rivals M.G. Ramachandran and M. Karunanidhi (both from tinsel backgrounds) to refurbish their sagging political images. At a time when there was no end of mudslinging from the Opposition, MGR swiftly released his old films in the districts to arrest the tarnishing of his image. Set screenings today dot the routes of his tours, so prefixed by the State Government as to ensure that documentaries show the capped matinee idol donating something or other at some public function or other to some charity or other The effect is electric. MGR draws mammoth crowds wherever he goes. Public criticism is thus muffled.

Take K. Balachander's recent film, *Thaneer Thaneer*, centring on the water problem in a certain village and focusing on various bureaucratic idiosyncrasies and fallacies, a film ostensibly scripted to denigrate the MGR Government. Much to my amusement, however, I heard someone in the audience wryly comment that, if only MGR had acted as the hero instead of playing "a common man" (Guhan), it would all have been a different story. (For then MGR would have, by some supernatural means, broken the rock and channelled the water to the village, with the officials standing there and shouting an enthusiastic encore!)

Jayalalitha's New Role

The message is loud and clear. The influence of the cinema in the body politic of Tamil Nadu is so powerful that no politician with a purely *political* base can apparently dream of effectively winning over the masses. That is why MGR recently inducted Glamour Girl Jayalalitha into the hierarchy of his AIADMK—not already without its fair share of film luminaries: S.S. Rajendran (leading actor of over 100 films), lyricist Pulamai Pithan, Musuriputhan (Chief of the All-World MGR Film Fans' Association), producers Jaypeeyer and R.M. Veerapan (the Information Minister).

"MGR hasn't yet told me what exactly he expects from me, but I suppose the task will mainly be to build up the party's women's wing," smiles Jayalalitha. In short, her role in the party will obviously be to enhance MGR's charisma by *personal* contact—capitalising on her double identity—through bouts of extensive touring. For, considering their close relationship in the past (a relationship that flourished through 28 films and survived a suicide attempt by the actress during 7 years of estrangement), Jayalalitha is undoubtedly one of MGR's closest confidantes.

Jayalalitha's appearance in the local political galaxy is unique—two other Tamil actresses, Padmini (Congress 1967) and Latha (another of MGR's heroines with whom he was romantically linked), *have* dabbled in the business before her. But Jayalalitha's re-emergence certainly picks up the threads of a tradition—a tradition of a close, powerful link between Tamil movie stars and local politics.

For a true insight in such matters however, we have to go back to the early 1900s. It was a time when the talkie was fast gaining ground in the South. Stage personalities, with their stylised acting and eloquent oratory were beginning to desert the theatre to try their luck in movie studios like Vel and Srinivasan Cinetone. "The need of the hour in the talkie is a producer who has the genius to translate the gripping questions of social and political life into the language of talking pictures," said Satyamurthy who was later to be instrumental in forming the South Indian Film Chamber of Commerce.

KAMALAHAASAN IN K. BALACHANDER'S *VIRUMAYIN NIRAM SIVAPPU*, which has now been remade in Hindi under the title of *Zara Si Zindagi*. Kamalahaasan now a superstar in the South and the North alike, managed to reach the top in Tamil Nadu without any sort of political base.

Satyamurthy thus realised early the immense political potential of this nascent medium. As did another Congressman named Narayanan, a sound engineer, producer and studio-owner. The group soon included most other Congress leaders of the Madras Presidency and famous film men of their time, like M.V. Mani, K. Gopalakrishnan and Subbaya Bhagavathar. In fact, in the first Tamil talkie, *Kalidas*, T.P. Rajalakshmi sang a totally out-of-context song in praise of khadi: *Ratinam kai baanam* (The chakra is a hand-weapon), just because its concept was pro-Congress.

With the 1930s came the era of the Tamil social: *Menaka* was for women's rights, *Dumbachari* was anti-prostitution (both lay claims to being the "first" Tamil social), *Sati Leelavathi* (scripted by S.S. Vasan) focused on the labourer's plight and marked MGR's screen debut. With censorship coming down on nationalist propaganda, "social reformers" seized the opportunity to project their views in tell-tale detail, tackling burning issues calculated to fire the public imagination. From here grew the power of the Dravida Kazhagam.

Some 'Street Performers'!

But then there was trouble among the heroes themselves. When in 1949 "Periyar" E.V. Ramasami Naicker married a girl almost 40 years his junior, he committed sacrilege in the eyes of his righteous DMK followers. Popular script-writer C.N. Annadurai (whose *Vellaikaari* launched Karunanidhi and MGR on the road to success) and actor K.R. Ramaswamy led a revolt. N.S. Krishnan, the legendary comedian, decided to play Big Daddy to the "new party". And the Dravida Munnetra Kazhagam (DMK) was formed. It was dismissed by the Congress as "a party of street performers"—till the street performers turned round and trounced them in the 1967 General Elections.

Inspired by Satyamurthy, Annadurai, too, decided to cash in on "filmi" glamour. The Dravidian movement, being essentially anti-Brahmin, had all along been denied use of much of the Brahmin-controlled local press as a propaganda medium. And the DMK electorate, being largely an illiterate one, could not be reached effectively by what was left of the press to the party.

This is where the *visual* medium of the cinema came ready to hand. Through films like *Manthiri Kumari* (Minister's Daughter), fans were encouraged openly to give vent to their feelings—boo the villains and cheer the heroes (who always stood for DMK ideals in some dubious way). Heroes became heroes all the more with calculated party build-up.

Thus Karunanidhi's *Parasakthi* skyrocketed to fame "Periyar's" protege, Sivaji Ganesan, in 1952. An MP today (he replaced Nargis in the Rajya Sabha), Sivaji got his first sniff of the political wind as a lad of 7. "E.V. Ramasami Naicker was a neighbour of our drama school," recalls Sivaji. "Every evening, he would give lectures to his *sishyas* (like Annadurai and E.V. Sampath Kumar) and, after my classes were over, I'd run up and sit down on the verandah with them."

Sivaji does not quite recall what exactly fascinated him so much about the bearded EVR: "Perhaps it was childish fascination, so that I, too, might one day be a Kattabomman!" (*Kattabomman* was a role Sivaji later played with signal success.)

Sivaji vs MGR

Then suddenly, one day, Sivaji broke off from his mentor, EVR—probably the result of his new religious qualms breaking through a stoic atheism that was characteristic of the DMK. Following the break, Sivaji joined the Congress under Kamaraj—who has remained his hero ever since. When Sivaji so "rebelled", an infuriated Karunanidhi put all he had into an MGR starrer. *Malaikallan* (Bandit of the Mountains)

The film clicked and how! MGR's bandit characterisation captured the mass imagination and, with subsequent hits shrewdly created for him, was formed an image of the "Messiah of the Tamils", an unfailing upholder of the poor man's rights, a man who, like the Phantom, could never die! And, on and off the screen, MGR was careful to live up to his new image, refusing to die even when the film villain and his political rival, M.R. Radha, shot him, wounding him critically in the gullet. (The scene was, of course, later recreated with scornful symbolism in *Engal Thangam*—a film in which MGR leapt out of a coffin to sing: *I died and came back alive... I laughed at Death!* And the people laughed with him.)

The poor little boy from Kumbakonam had grown into a compelling reality. "If MGR shows his face, the DMK will get 40,000 votes; if he utters a word, 4 lakhs!" Annadurai had acknowledged. Most political meetings of the DMK would have MGR on the dais—mainly to bring the crowds in. Following Annadurai's death, after the DMK had barely come to power, an unsure Karunanidhi stuck to the same formula of using MGR. So much so that MGR graduated from being a consistent contributor of funds to the party into the office of its Treasurer.

And then, somewhere along the line, the link snapped—over a question of party leadership after Annadurai's death. But, even as MGR broke away from Karunanidhi's band to form his own Anna DMK, his political rivals sniggered at his political aspirations and underestimated his fan following, gloating over his "administrative inadequacy"

The Gimmick Worked

The tug-of-war had begun. MGR saw it all as a befitting real-life climax to the populist role he had time and again essayed on the screen—that of a messiah. And he was not going to allow any sniping to deter him. Shrewdly, he repeatedly took refuge

→

"NADIGAR TILAGAM" (GEM AMONG ACTORS) SIVAJI GANESAN with K.R. Vijaya in *Dharma Raja*. Sivaji, long considered a political lightweight, has grown in stature following his entry into the Rajya Sabha (at the expense of Amitabh Bachchan?). Without quite bidding for the Nobel Prize, Sivaji has managed to make the voice of Tamil Nadu effectively heard in Parliament.

Make your gums strong. And give your teeth a long life.

Only Forhan's has an exclusive astringent to strengthen gums.

Forhan's special taste tells you it's working.

Forhan's astringent actually works to make gums strong. By shrinking gum tissue the astringent keeps gums firm and healthy, checking inflammation and swelling. Only strong gums can give your teeth a firm foundation and a longer life. Even healthy teeth need the support of strong gums. That is why you need Forhan's...the unique toothpaste with astringent.

Trust Forhan's

It's the toothpaste created by a dentist.

in his greasepaint charisma—something with which he was sure of at least initially drawing the women to him. (They have since formed the core of MGR's "people's" support.)

"I may not know the intricacies of high finance and I don't claim to be a pundit in economics," MGR declaimed. "But what I do know is hunger and starvation. I've felt it for days on end, as my mother had nothing to offer us children when we returned home from school. I also know how it feels to be without work—without the money it brings. I've gone up and down countless steps, looking for a job, and I've been confronted a thousand times with the dreaded words: *No Vacancy.* I'll do everything I can so that mothers in Tamil Nadu don't suffer as my mother did years ago."

The gimmick worked. When The Messiah finally left the screen to head his own AIADMK Ministry, Karunanidhi did try to set up his son, M.K Muthu, as a hero to counter MGR's popularity. But the gambit failed.

And Karunanidhi's latest attempt to boost his own film image, too, has failed. The film, *Thooku Medai* (The Gallows), for which he wrote the dialogue, has not been successful. (Karunanidhi, incidentally, sneaked into this film 190 metres of his Madras-to-Tiruchendur march, hoping to mobilise public opinion in favour of his demand for action on the Paul Commission Report. But the censors scissored this portion off as being totally irrelevant.)

The same censors had, not too long ago, almost fouled up Information Minister Veerappan's anti-Naxalite evangelism. When the State was in the throes of the Naxalite problem, Veerappan, a former producer and manager of the MGR-controlled Sathya Studios, scampered back to the celluloid world to make a Rajnikanth starrer: *Ranuva Veeran* (The Army Hero). The film had an anti-Naxalite theme that was said to be inspired by none other than MGR himself.

The New Order

All in all, the sudden boom in new faces and unknown directors in Tamil Cinema has certainly had its effect on the Ruling Party. Result: a new set of film men from the political scene have stomped their way into the movie industry. For instance, AIADMK MLA Kovaithambi provided the story and the dialogue for *Payanangal Mudivathillai*, which took the box-office by storm. Another MLA, Pollachi Ratnam, too was associated with this film. While yet another prominent MLA, Navaraasan G.K. Subramaniam, is all set to make his film debut, party strongman Tirupur Manimaran has already scripted *Nizhal Thedirum Nenjangal*. Vijayabalan and Samarasam (two more AIADMK MLAs) are trying their hand at acting.

Meanwhile Sivaji Ganesan, long considered a political lightweight, is growing increasingly in stature, thanks to his new links with the Centre. With 225 films to show in 30 years, Sivaji has the distinct advantage of still being active on the screen—as always, as the hero. His Fan Clubs (1,500 in all) are being subtly used to burnish the image of Indira Gandhi and her Congress in Tamil Nadu. The fan power that this *Nadigar Thilagam* (Gem Among Actors) commands was amply evident when AICC (I) General Secretary G.K. Moopanar deserted him to recommend Amitabh Bachchan for the Rajya Sabha seat: Moopanar discovered that he had lost a plus-2 lakh following overnight!

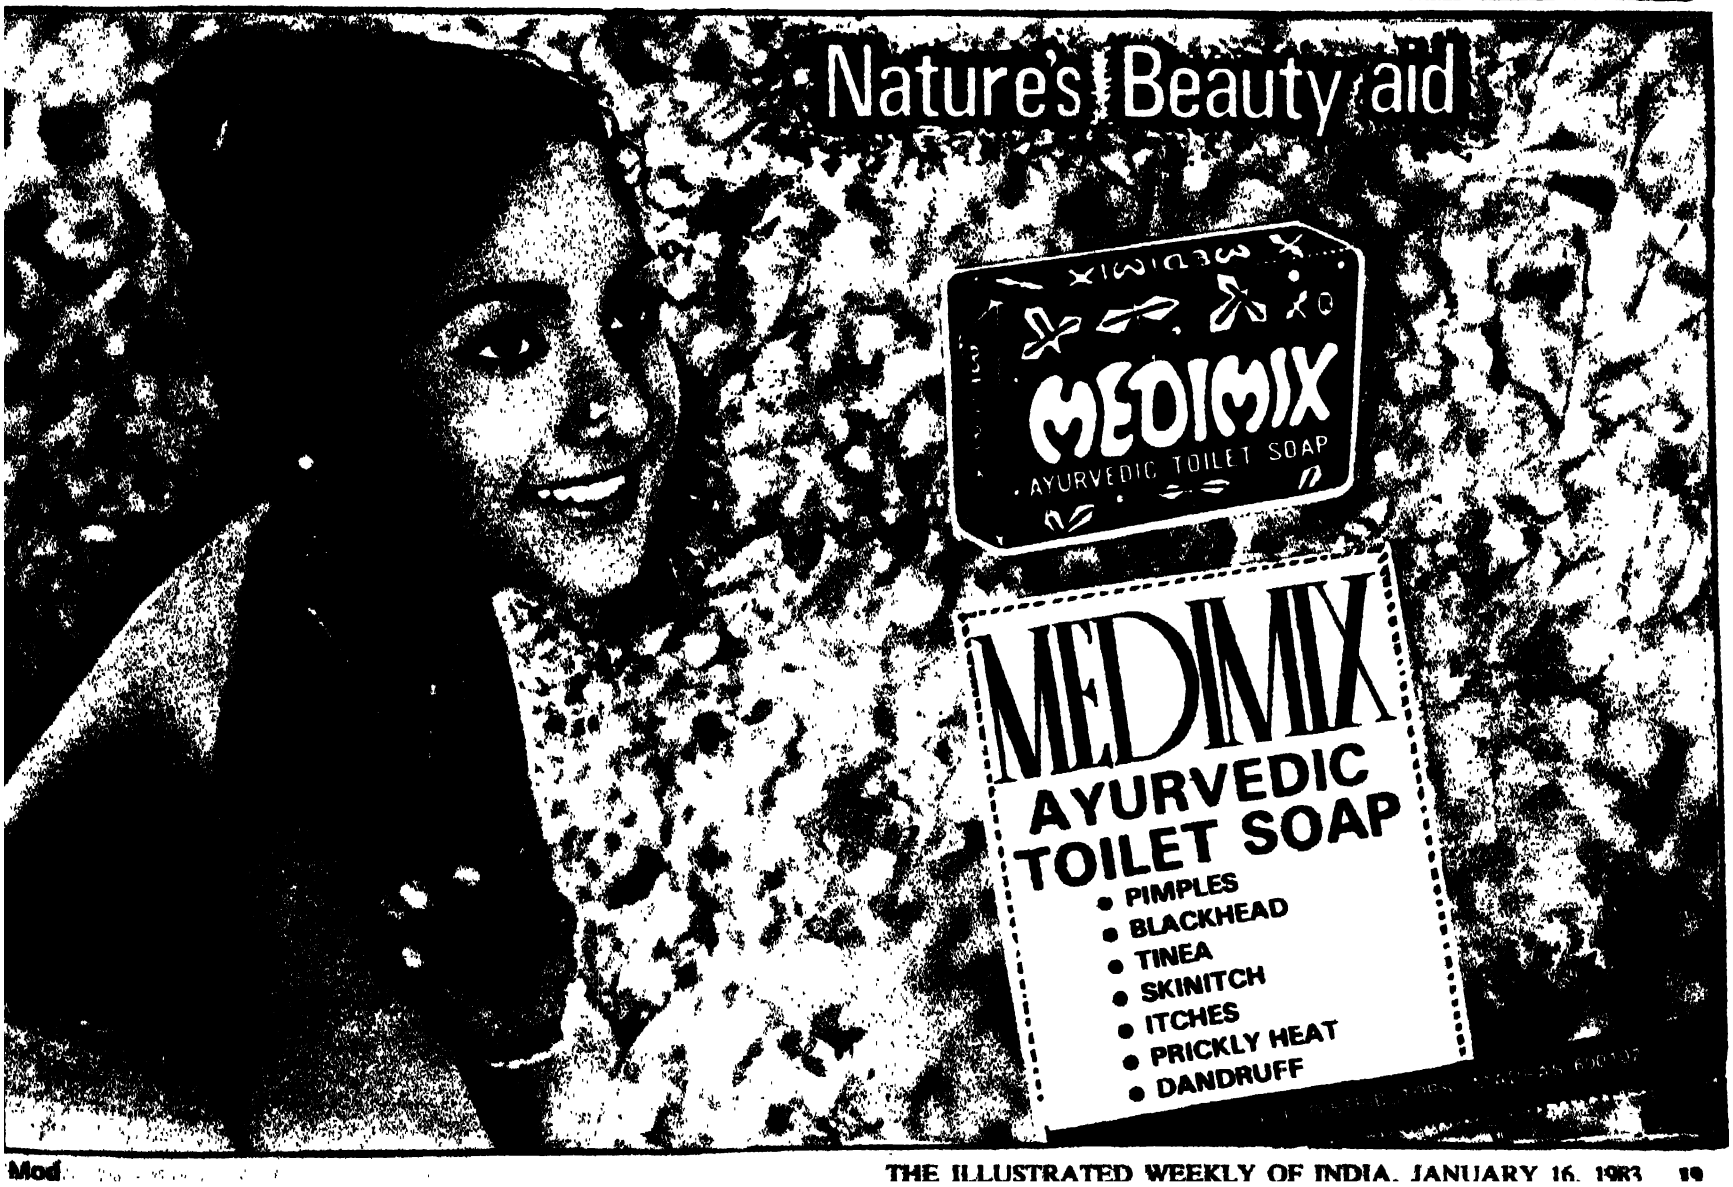
Then there is Bhagyaraaj—another to break box-office records—who is living out a rags-to-riches story with aplomb, careful all the while to see that the lower-middle-class public identify with his celluloid characters. "I've never given a thought to politics so far, but now that you ask me..." exclaims this actor uncertainly.

And who knows? After all, in MGR's Tamil Nadu, don't they all start off this way and end up screeching out election promises?

Truly is the cinema the mother of politics in Tamil Nadu. ■

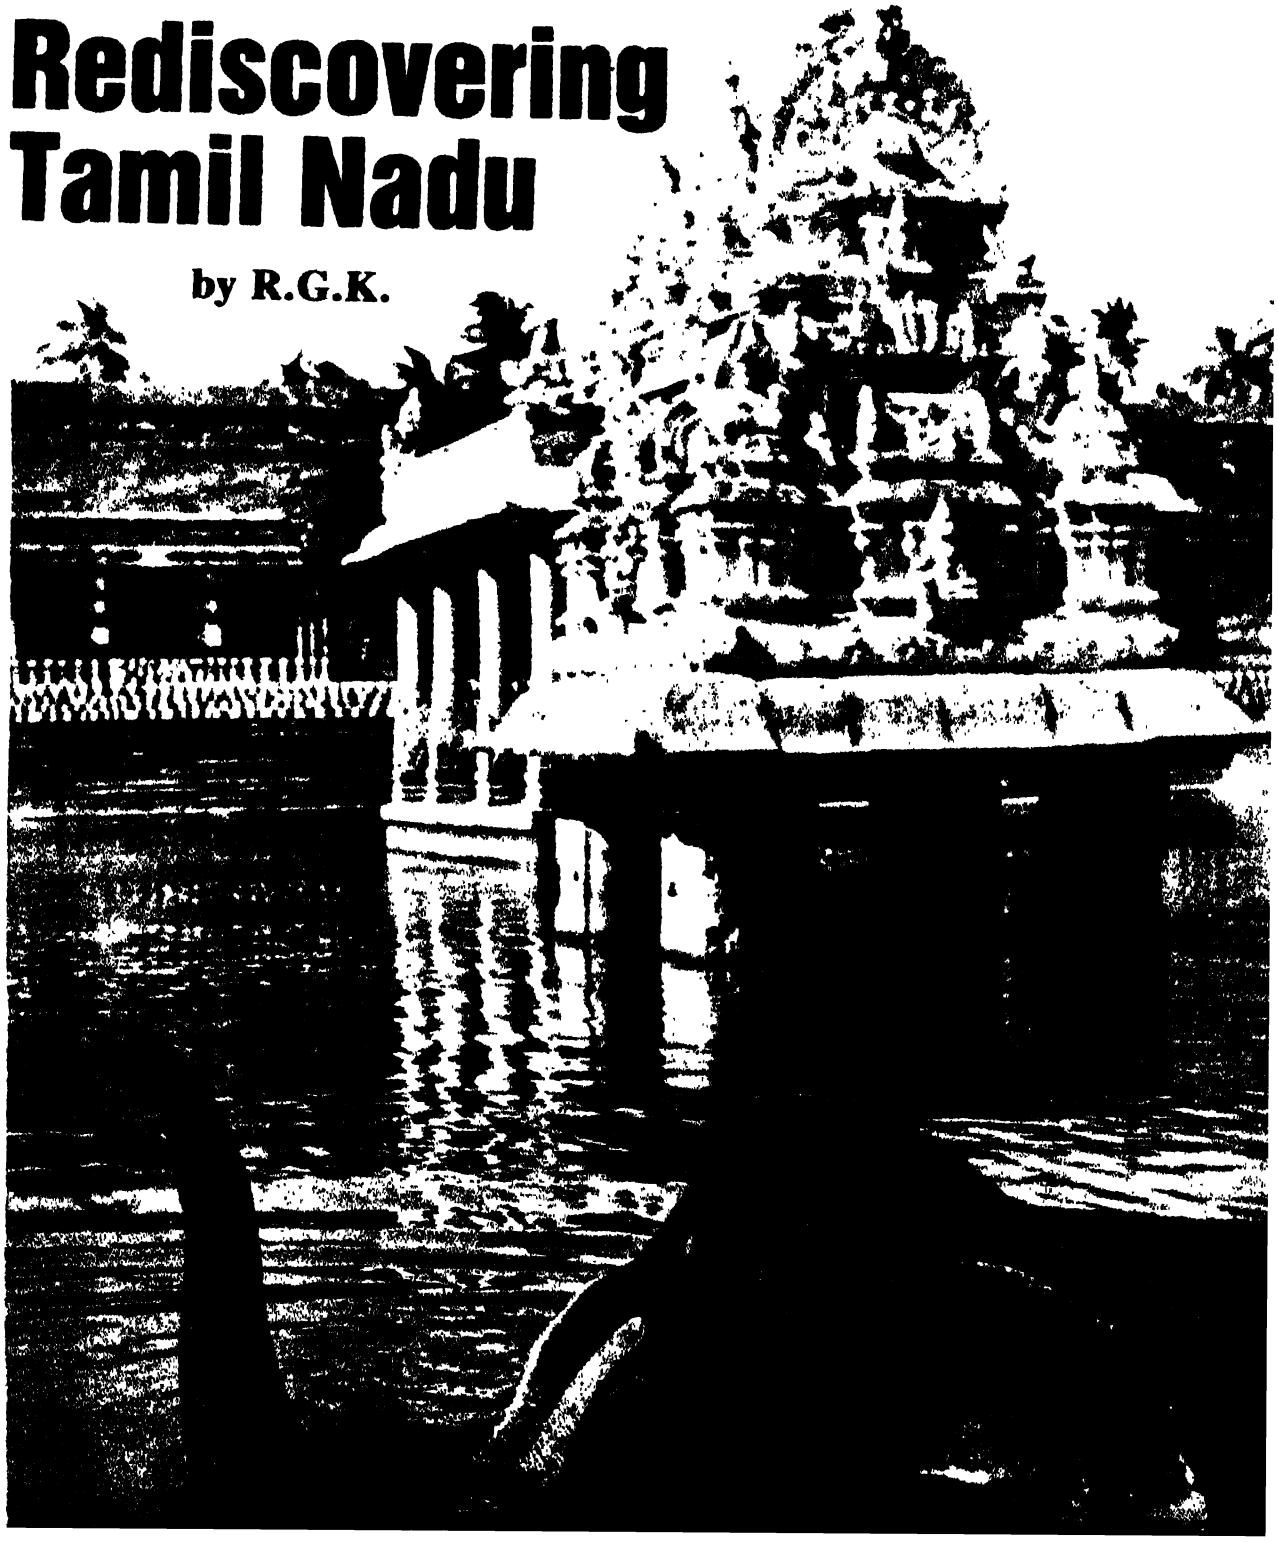
—P.G. Anandan

WATER, WATER EVERYWHERE... K. Balachander's *Thaneer Thaneer* (centring on the water problem in a certain village) was ostensibly a film designed to denigrate the MGR Government. But the effect was evidently the opposite: the CM's fans in the audience commented: "If our MGR had been the hero, the water-pots wouldn't have remained empty!"



Rediscovering Tamil Nadu

by R.G.K.



THE South today does not have a sense of participation in the affairs of the nation. So far as Tamil Nadu is concerned this has been largely due to the separatism nurtured by the Dravidian movement. Let us briefly recount the origins of this movement. In 1914, Dr C. Natesa Mudaliar founded the Dravidian Home, a hostel for non-Brahmin students. Later he and his associates—Sir P. Theagaroya Chetty, Dr T.M. Nair and the Raja of Panangal—were encouraged to form the Dravidian Association. In 1916, they constituted the South Indian People's Association which issued the Non-Brahmin Manifesto. A year later saw the birth of the South Indian Liberal Federation which became better known as the Justice Party.

The JP, when it passed into the hands of Periyar Ramasami Naicker, was transformed from a body of upper crust non-Brahmin caste Hindus into an instrument of mass action. In 1944 it was reborn as the Dravida Kazhagam. Periyar had under him a band of young men, including C.N. Annadurai, who were ready to lay down their lives for the Dravidian cause. The DK managed to awaken the Tamil people and instilled fear in the Brahmins (even physical assaults were not infrequent), but it could not be an effective political force against the Congress. In frustration it raised the bogy of Northern domination and demanded a separate Dravidian state. "Anna" himself was a secessionist and a fearsome opponent of Brahmins and Brahminism *(parpaniyam)*. But he mellowed a bit and changed his stand on India becoming independent: he broke away from Periyar to start the Dravida Munnetra Kazhagam. In 1967 he was unexpectedly propelled into power. His party was voted to office solely on account of the anger of the electorate with the Congress arising out of the declaration of Hindi as the official language of India in pursuance of Article 343 of the Constitution—the declaration in 1965, when Lal Bahadur Shastri was Prime Minister, triggered anti-Hindi riots all over Tamil Nadu (then still Madras).

Tamil Nadu at present is ruled by the all-India Anna DMK which claims political lineage from Periyar and Anna. The fear of the "impositions" of Hindi and anti-Brahminism are still the major factors that keep the Dravidian factions alive. The Dravidian movement has contributed to the growth of racism and pulled away Tamil Nadu from the mainstream of national life. At the same time it has failed to generate forces capable of bringing in egalitarianism

There is need today to re-examine the roots of the social and cultural conflicts in Tamil Nadu. This is a difficult task since it means rediscovering the history of Tamil Nadu and India, a history often made up of conjectures. My own thinking, however, is that we will discover enough to show that, during the past few decades, we have been engaged in thoughtlessly pulling down an edifice built millennia ago—a religious, cultural and social edifice jointly built by the inhabitants of India.

We still do not know enough about Aryans and Dravidians. The Aryan invasion of India is a theory that has received wide acceptance, but it has not been conclusively established as a fact. The original belief that the Indus Valley Civilisation was Dravidian has of late been questioned by some archaeologists. Who were or are the Dravidians? If the Aryans pushed out the Dravidians, whom had the Dravidians pushed out before?

The Agastya legend deserves to be studied as containing a possible clue to the origin of the Tamil people. The rishi is traditionally believed to be the creator of the Tamil language and of the river Kaveri. The poet Villuputtanar says that the "beautiful lady", Tamil, is a gift of Agastya. In Tamil literature the sage is often affectionately referred to as "Kurumuni", the short-statured rishi. He is thought to have composed a work on Tamil grammar, music and drama. *Tolkappiyam*, the earliest extant work on Tamil language and grammar, is said to be the work of one of his disciples. References to Agastya are so persistent in Tamil literature and among the Tamil people that the Agastya myth cannot be dismissed as of no value.

Some years ago I wrote in the *Weekly* an article on the Aryan-Dravidian conflict in which I made a wild suggestion—that Agastya had a connection with the Augean Sea. The idea occurred to me on the basis of the theory that the Dravidians were a Mediterranean race. Legend also claims that Agastya drank up the ocean and that he pounded down the Vindhyas: it points to the exploits of a hero, his conquest of the sea and the mountains. During the marriage of Siva and Parvati, when everyone flocked to the Himalayas to see the pageant, Agastya was sent to the South to keep the balance. My idea appealed to Dr Suniti Kumar Chatterji. I myself, though, feel that phonetic resembalances are not often the surest guide in the writing of history.

Remember also Agastya's encounter with the "Aryan" Nahusha when that ruler was on his way to take up the reins of temporary Indrahood. The Agastya myth thus tries to unite three elements: the foreign "connections" or origin of a short-statured hero who came into conflict with an Aryan personality, his becoming a rishi and his being one of the associates of the gods and his work among the people of the South. If we think the Aryan-Dravidian theory has any validity, the story of Agastya goes to illustrate how the two races came to be integrated.

The relations between the Indian subcontinent and West Asia and

Egypt are a fascinating subject for study. Tamil manuscripts have been discovered in Egypt but the significance of this canot be exaggerated. It must, however, be noted that there are similarities in the hieratic systems of temple worshhip in Egypt and the South. The resemblances between Egyptian and Dravidian architecture cannot be dismissed as accidental. Caldwell and Rask held that Dravidian is allied to what they called Scythian languages, Turkic and Finno-Ugrian. John R. Marr says: "The most promising archaeological link with the admittedly tenuous theory of the Mediterranean affinities of the Dravidian is provided by the South Indian megalithic culture... Gordon Childe has seen possible links with Mediterranean and Caucasian megaliths of sites such as Brahmagiri *via* the Sialk B graves, in Iran; this connection may have been by sea."

An important point to consider is whether the Dravidians, whoever they were in early times, were to be met in all parts of India. The Brahui language in the north-west of the Indian subcontinent is, according to some scholars, proof that the Dravidians, once upon a time, inhabited parts of the country other than the South. It is, however, wrong to correlate language and race. According to D.D. Kosambi, "the Brahuis are not of Dravidian race, so far as I am aware of the results of modern anthropology". Is it, then, right to say that all South Indians—particularly all Tamilians—are Dravidian racially? The theory that Tamil Brahmins are Aryan and that Tamil non-Brahmins are Dravidian is absurd. It is as absurd as claiming that all North Indians are Aryan. No one can claim racial purity in India. Unfortunately politics in Tamil Nadu revolves around racism which has no scientific basis.

Leaders of the Dravidian movement ridicule Hindu gods and goddesses. Periyar himself expressed his contempt for Hindu mythology by breaking images of Ganapati. He debunked the Ramayana and the *Puranas*. In his preface to his "True Reading" of the Ramayana he says: "The veneration of the story any longer in Tamil Nadu is injurious and ignominious to the self-respect of the community and of the country." Naicker did not realise that some of the gods and goddesses he wished to destroy are, according to some authorities, the products of the very Dravidians whose cause he had taken up. And Ravana, whom he glorified, was the son of a Brahmin, the grandson of a Prajapati or "progenitor" of mankind.

One of the problems of the evolution of Hinduism is the rise of the so-called non-Vedic gods: Siva, Krishna, Ganesa, Durga, Kali, etc. Whether or not the Indus Valley Civilisation was Dravidian, the figure shown with animals is taken to be "proto-Siva" (Siva as Pasupati). To emphasise the non-Vedic character of Siva, scholars point to contemptuous references to the lingam as *sisnadeva* in the Vedas. How do we explain the acceptance of Siva and some other deities in the Hindu pantheon? The only explanation for this, according to the view now predominantly held by indologists, is that what is called popular Hinduism is not exclusively Vedic Aryan in origin but the product of various racial strains. It especially reflects a synthesis of Aryan and Dravidian beliefs.

I have had occasion to write in the past about the word *puja*. The origin of this word is of crucial importance to the question of the evolution of Hinduism. According to Dr Dandekar *puja* is derived from the Dravidian *pusu*, to anoint. It refers to a form of worship not perhaps known to the Vedic Aryans. It is reasonable, then, to think that the very rituals—associated with the worship of deities—condemned by men like Naicker and Anna originated among the Dravidians. The name of the repository of Hindu rites, the *Agamas*, suggest tradition, folk-lore, custom handed down from generation to generation. the *Agamas* are a compendium of Dravidian-Aryan beliefs and practices.

Tamil, as is well known, is a very ancient language. Its antiquity is a matter of pride for Dravidians. South Indian Brahmi inscriptions date from the third century BC. The grammar, *Tolkappiyam*, is believed to be by Tolkappiyanar. *Tol* means old (one is tempted to find in this prefix an echo of the Greek *tele* meaning "at a distance"). But is *kappiyam* derived from the Sanskrit *kavyam*? The terms for grammar and literature—*ilakkanam* and *ilakkiyam*—are from the Sanskrit *lakshanam* and *lakshyam*. The influence of Sanskrit can be seen in some of the earliest Tamil works.

The fact is Sanskrit and Tamil, Aryan and Dravidian thought, interacted more than two thousand years ago. *Chilapatikaram*, one of the great Tamil epics composed in what is now Kerala between the second and the fifth centuries AD, describes a festival in honour of the great Aryan god Indra held at Pumpuhar. Tamil has a considerable volume of secular poetry which is in some respects superior to Sanskrit for its spontaneity, terseness and freedom from sentimentality. The classification of poetry into *akam* (inner or interior) and *puram* (outer or exterior) is one of the special insights of Tamilians: it is original and not suggested by Sanskrit poetics. Tamil has an immense corpus of religious or sacred poetry. In no other language, barring Sanskrit, is the volume or quantity excelled. These Tamil poetic works, relating to the Hindu, Jaina and—to some extent—Buddhist traditions are an eloquent expression of the Aryan-Dravidian synthesis. They are not all of them translations or commentaries of Sanskrit or "Northern" texts but original contributions to the development of religious thought.

The leaders of the Dravidian movement are proud of Tiruvalluvar's *Kural*. This work indeed deserves a place among the world's classics. But it is not as if—as claimed by some—the *Kural* stands in isolation from the heritage that is common to India and its search for values. S. Gopalan says in *The Social Philosophy of Tirukkural*: "... it is not surprising at all to find in the *Kural* ideas which may be identified either as typically Brahmanical, or as characteristically Jaina, just as they may also be referred to as basically Buddhist." Tiruvalluvar, in one place, uses the term *tenpulattar* for *pitrs*—a clearly Vedic idea for departed ancestors. (In the Vedas the terms for *uttarayana* and *dakshinayana* are *devayana* and *pitryana*.)

The elder Sankaracharya of Kanchi makes a point of the utmost importance: that Tamil is the only language which has its own words for Vedic terms. The Vedas themselves are known as *Marai* (that which is hidden), *yajna* or *yaga* is *velvi*, the chanting of Vedic hymns is *ottu*. Brahmins are called *Parpans* (seers)—the word has become a pejorative, almost abusive, term. They are also referred to as *arutozhilor*, i.e. those who are engaged in the sixfold duties or *shadkarma*. The rebel poet, Subrahmanya Bharati, described Tamil Nadu as a land of the Vedas—or to translate his words clumsily as a land "filled with the Vedas".

Tamil, actually, has the status of a sacred language: it may be regarded as the only sacred language in India other than Chhandas (the language of the Vedas) and Sanskrit. For Vaishnavas, especially the Tenkalai sect, the *Nalayira-diyva-prabandham* has a sanctity that is no less than that of Vedic texts. Other Vaishnava and Saiva hymns are also *ceremonially* recited in temples and homes. *Triuppavai, Tiruvempavai, Tiruppukazh, Tirumantiram*—these are indeed sacred and have kept alive the faith of thousands of people in Tamil Nadu. This reminds me of another important fact. Tamil Nadu is the home of the *bhakti* cult. The concept of *bhakti* probably originated with the Bhagavadgita. But it is recognised that *bhakti* as a movement got to a start in the Tamil land with the songs of the Saiva Nayanmars and the Vaishnava Alvars (sixth to the tenth centuries). They were all saint-poets whose outpourings are unmatched for their fervour and depth of meaning and poetic imagination. They roamed Tamizhakam or Tamilakam and spread the message of love, devotion and moral excellence.

Some of the great minds of Hinduism belonged to Tamil Nadu. Among them was Tirujnansambandhar, a name not sufficiently known in the rest of India. He was a child prodigy like Jnanesvara latter in Maharashtra and is perhaps referred to as *Dravidasisu* (the Dravida infant) in *Saundaryalahiri*. It may be claimed that Sankara himself belonged to Tamilakam. The age in which he lived is still a matter of controversy. But even if we accept his period as the 8th century, it was a time when Kerala was a part of Tamilakam. It is believed that Sankara first proclaimed his Advaita doctrine at Tiruvidaimarudur (Madhyarjunam) in Thanjavur district. According to one version he attained *samadhi* in Kanchipuram. Ramanuja (11th-12th centuries) was another great philosopher, the founder of Visishtadvaita, who belonged to Tamil Nadu. His teachings, which provide a philosophical basis for *bhakti*, have influenced Indian thought no less profoundly than the teachings of Sankara.

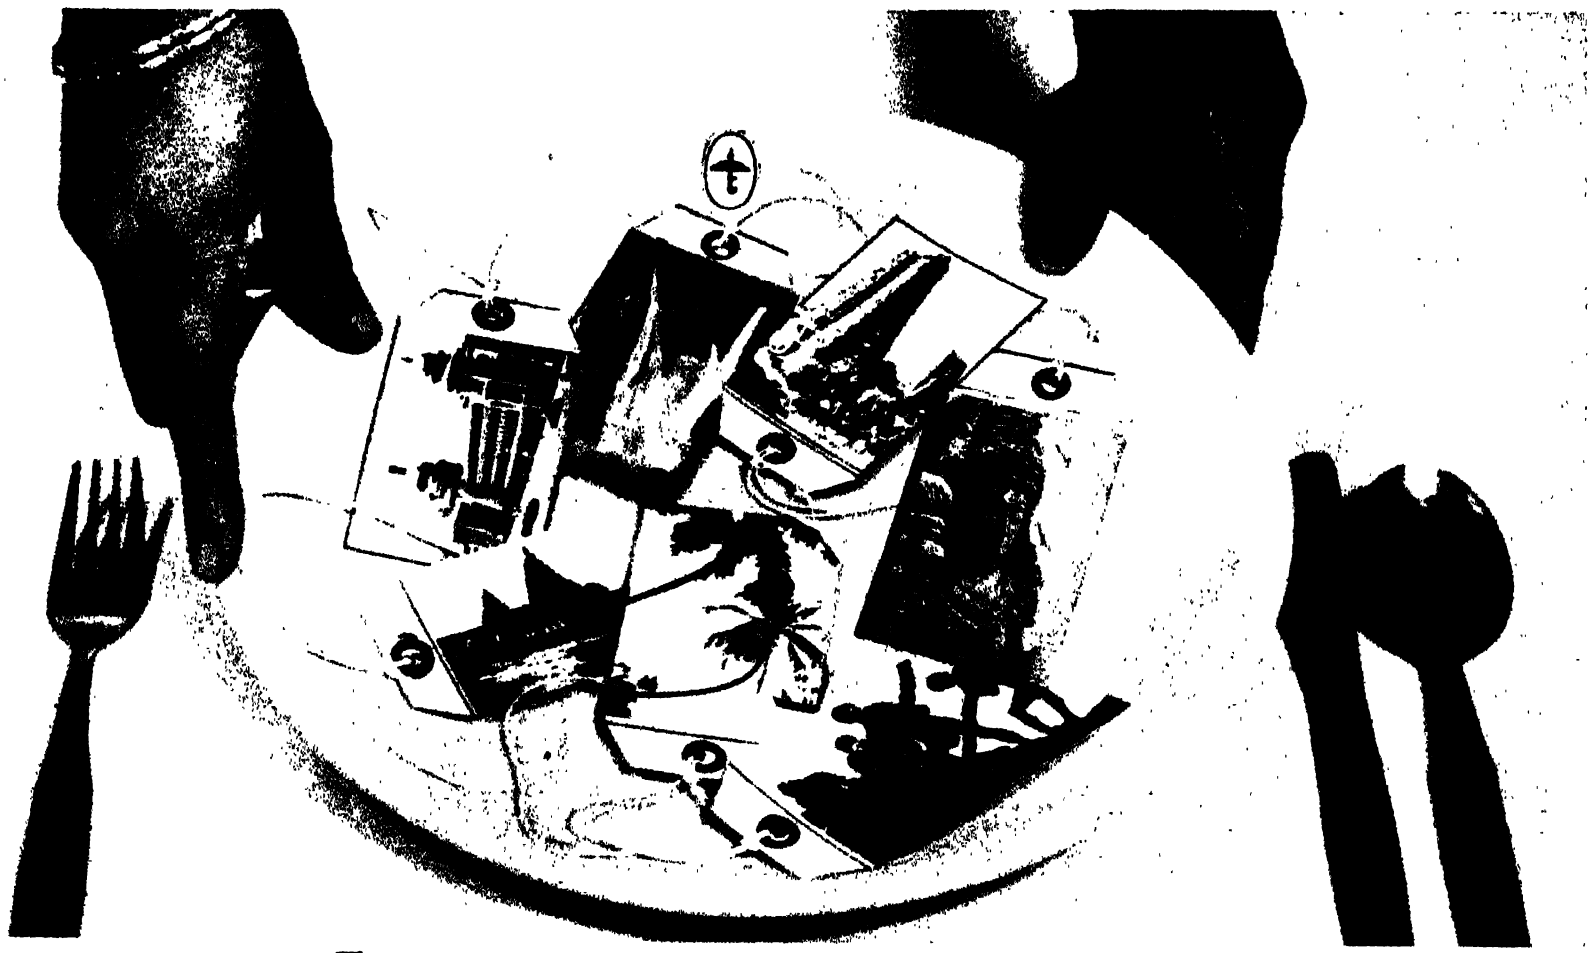
One often hears that Tamil, unlike the other three Dravidian languages, has developed without being influenced by Sanskrit. This is only a half truth. Admittedly Telugu, Kannada and Malayalam contain more Sanskrit words than Tamil. But it is forgotten that Tamil has more *tadbhava* Sanskrit words than the other three Dravidian languages. I am referring to words like *ilakkiyam* and *ilakkanam* which are indeed the Sanskrit *lakshyam* and *lakshanam* that underwent a mutation, so to speak, by long usage. (Such examples could be multiplied.) The predominance of *tadbhava* words in a language is a sure indication that it has been longer exposed to Sanskrit than another tongue in which there is a preponderance of *tatsama* words. There is no need to count the two types of words to realise that there has been an interaction between Tamil and Sanskrit. The traffic was not one-way: Sanskrit also borrowed from Tamil or its proto-Dravidian predecessor.

In my rediscovery of Tamil Nadu I do not want to mention the heritage of the State that is there for all to see. For example, its great temples, its world-famous bronzes, its music and dance. All these have a characteristic Dravidian flavour, but at the same time they belong to the common Indian patrimony.

The Dravidian genius and the Aryan genius together wrought a common heritage. Aryans, Dravidians and other racial or ethnic groups together fashioned Hindu religion and thought, Hindu art and philosophy. The fabric so beautifully woven together and embroidered with loving and infinite care by different communities is now sought to be destroyed by thoughtless and ignorant politicians and chauvinists. The ignorance, thoughtlessness and chauvinism have taken such monstrous shape that we are all intimidated. Tamilians use—consciously or unconsciously—Arabic, Persian, Protuguese, English and French words. They have a Hindi word even for a music recital—*kacheri*, as they say. But they want to turn down such a beautiful Sanskrit-Hindi word as "Akashvani".

In the din created by politicians the Tamil people have become deaf to the voices from their own past, the voices of wisdom. They will be able to listen to the voices of ether or the sky only when they regain their faculty to listen to their own inner voice. ■

Good organisation



and warm Hospitality

The Qualities of our Head and Heart...

blend harmoniously and unobtrusively in all our activities, both in our Hotels Division and our Tours Division

We operate the following tours —

- 7-day Tamilnadu tour covering Tiruchi, Kodaikanal, Madurai, Kanyakumari, Rameswaram, Thanjavur etc.

FARE: Rs. 680/- for sharing a double room
Rs. 750/- for single room

- 7-day South India tour covering Bangalore, Mysore, Mudumalai, Ooty (Udhagamandalam), Coimbatore, Cochin, Thiruvannamalai etc.

FARE: Rs. 680/- for sharing a double room
Rs. 750/- for single room

- 2-day week-end tour covering Madras, Myladuthurai (Mayuram), Velankanni, Nagore, Thirunallar, Chidambaram (night halt) Vaitheeswaran Koil, Pitchavaram, Pondicherry, Madras

FARE: Rs. 150/ for sharing a double room
Rs. 175/- for single room

- Daily tour to Tirupati and back Breakfast and cottage facilities at Tirumala at no extra cost.

FARE: Non AC Rs. 105/-
AC Rs. 130/- (including Rs. 25/- for special darshan)

- Daily Excursion Tours Kancheepuram - Tirukazhukundram - Mamallapuram

FARE: Non AC Rs. 40/-
AC Rs. 55/-

- Madras City Sight-Seeing Tour

FARE: Rs. 25/-

Enjoy our hospitality all over the state!

We operate our Tamilnadu group of Hotels, Motels and Resorts at Chidambaram, Hogenakkal, Kanyakumari, Ranipet, Thanjavur, Madurai, Mamallapuram, Rameswaram, Tiruchendur, Tiruchirapalli, Ulundurpet, Kodaikanal, Ooty and Yercaud, where we offer

- airy, comfortable, well-maintained AC and non AC rooms, Suites cottages and dormitories
- tasty and wholesome vegetarian and non-vegetarian fare and
- well-organised, efficient, personalised care and service.

TTDC also operates a chain of Youth Hostels for the benefit of low-income tourists

Leave everything (short of packing) to TTDC!

Verdict Against Corruption

by K. C. Khanna

A MIGHTY wave of anger has swept the Congress (I) out of power in Karnataka and Andhra Pradesh, the two States that were the party's strongholds for almost 35 years. With the force of a tornado, the Southern voter has demonstrated—even as the Northern voter did in 1977—that he will not tolerate feudal rule. Most pollsters and pundits, beguiled by his gentle exterior, had grossly underestimated the fury of his rage against the coteries of corrupt, inept or nondescript Chief Ministers foisted on the two States by New Delhi. This writer is no exception. Stunning as the results are, they testify once again to the collective wisdom of the electorate. Every thinking Indian must salute its perception and the feelings that moved it.

And that includes Indira Gandhi. Since Sanjay Gandhi's death, and for some years even during his lifetime, she has been living, in a sense, in Cloud-cuckoo-land. She has taken too much for granted. Though perhaps she knew better than most of the sycophants with whom she has chosen to surround herself the odds against her in both of the Southern States, she did too little too late to repair the damage. She possibly thought that, when it comes to the crunch, her personal charisma will carry the day. In the event, a man whom she had contemptuously dismissed as a "regionalist" and a "celluloid hero" has decisively trounced the Congress (I).

Though her party has fared a lot better in Karnataka, it is nowhere near an absolute majority. Indeed, it even trails behind the faceless Kranti Ranga-Janata combination, which had only about 18 members in the outgoing 224-man State Assembly. In both States, money power has failed to work. The caste barriers have been broken. The vote-banks have crumbled. Mrs Gandhi's own strenuous 15 days on the campaign trail have proved to be of no avail. It has been her personal defeat.

—Hasmukhrai

RIDING ON THE CREST of the N.T. Ramarao wave in Andhra Pradesh, the Sanjay Vichar Manch of Maneka Gandhi, too, managed to win 4 of the 5 seats it contested in the State Assembly Elections that proved such a rout for the Congress(I). Mrs Gandhi well knew the odds against her in Andhra Pradesh and Karnataka, but did too little too late to repair the damage. She banked on her personal charisma carrying the day.

"Stunning as the results are, they testify once again to the collective wisdom of the electorate. Every thinking Indian must salute its perception and the feelings that moved it."

Obviously, the consequences for the country and the Congress (I) will be far-reaching. As it is, the party does not control the State Governments of Jammu and Kashmir, Tamil Nadu, West Bengal and those in most of the North-East. Worse, it is riven by internal dissension and plagued by scandal in just about all States. In fact, if elections were held tomorrow, it may lose everywhere. In any case, now almost the entire South is out of its grip. This is bound to weaken the authority of the Central Government, the Congress (I)'s dominance in Parliament and Mrs Gandhi's leadership in the party over which she presides, not to speak of the country at large.

We Still Need Her Strong Hand

It is tempting, in the circumstances, to suggest that Mrs Gandhi should resign, call a Parliamentary election and seek a fresh mandate. The nation needs a strong hand at the Centre, particularly when its sovereignty is being threatened by a sharp deterioration of its strategic environment and domestic economy. The resurgence of sectarian, secessionist, regional or parochial forces in Punjab, Assam and elsewhere, on the face of it, only reinforces the argument.

But Mrs Gandhi is not the sort of person to be daunted by defeat. Nor is it certain that she will be well advised to throw up the sponge. No party or combination of parties is in sight that can be relied upon to form a stable, let alone a strong government at the Centre. It is possible that, given the opportunity, the electorate may throw up a leader who can govern the country with greater wisdom than Mrs Gandhi has displayed since her comeback. But will it be a reasonable gamble when the present Government has only two years more to go and, in the event of a mid-term poll, the Central authority will virtually cease to exist for a few weeks before and after elections? In any event, the odds are that Mrs Gandhi will not harbour any thought of resigning under pressure but summon her inner resources and fight back.

For all her weaknesses, Mrs Gandhi is the tallest and most skilful of Indian political leaders and she can even now win back her popularity if she takes a true measure of the crisis that looms so menacingly large on the horizon. The challenges she faces are basically moral. For the smooth functioning of democracy, specially in a country in the throes of rapid social change, mere hoisting of electoral trappings is not enough. They must be clean and *seen* to be clean. But, as things are, they have been smeared over the years by big daubs of black money. All parties may be to blame. The fact remains, though, that the Ruling Party is always the worst culprit and, in the last three years, the Congress (I) has beaten all previous records. Its penchant for collecting electoral funds by means fair and foul is the biggest single cause of rampant corruption and inefficiency at all levels of authority.

Secondly, apart from holding periodic elections, the Congress (I) Ministers at the Centre or in the States have displayed no concern for the sanctity of the institutions that form the bedrock of our federal polity. They have viciously attacked, abused and tried to corrupt the Judiciary, the Bureaucracy, the Press and even the Opposition. And, more often than not, they have done so with impunity, thanks to support from the top. As if this were not enough, the party itself has been allowed to degenerate in many areas into a rabble of known wheeler-dealers, time-servers and hoodlums. All too often, the High Command itself encourages defectors and dissidents. It makes not the slightest attempt to build a hierarchical structure, much less a viable chain of command.

Finally, and above all, nothing has eroded Mrs Gandhi's personal popularity more than the impression that she is trying to foster dynastic rule. She is, of course, only prudent when she says that the choice of a successor will not be hers and that it will be for the people to decide. For all one knows, Rajiv Gandhi may have no such ambition either. But the way he and the band of "bright young men" around him are functioning only feeds popular suspicion. No one will give it a thought if they were to operate like a "think-tank". But they do more than inform or advise the Prime Minister: at the Government as well as the organisational levels, they execute, interfere and direct. And they are often accused of being capricious or arbitrary or high-handed or naive. Perhaps, after the verdict in Karnataka and Andhra Pradesh, the idea of inducting Rajiv Gandhi as the Congress (I) President will be abandoned. Given the current state of popular feeling on the issue, this will be wise. But it will not suffice. The spectre of the so-called extra-constitutional authority, in whatever garb or form, must be exorcised once for all.

With her resilience, energy and skill, Mrs Gandhi *can* still regain lost ground pretty quickly if she firmly tackles the main problem: deviations from the accepted norms of probity in her own backyard. ■

The Pharaoh Who Woke After Thirty-Three Centuries

Exactly 60 years ago Howard Carter discovered the tomb of the 18-year-old Pharaoh, Tutankhamun in Egypt's Valley of the Kings. The tomb was opened on 26th November, 1922 and found, against all odds, to be unviolated. It is a remarkable story full of suspense, melodrama and tragedy...

by Partha Basu

NASA's LANDSAT satellites which orbit the earth once every 18 days transmit computerised pictograms in which vegetation shows up in a virulent scarlet. A picture of the Nile region has the delta in dull red glowing against the stark white immensity of the Egyptian desert. Four thousand years ago, the red areas would have appeared as narrow ribbons on either side of the great river squeezed against the press of dry sand and rock. It is a shocking landscape which, amazingly, cradled one of the greatest cultures known to man Here, for four milleniums before the birth of Christ, great Egyptian kings ruled and built and died and were buried.

Thebes was their capital, an ancient seat of power which connected to the world. Across the river, on its east bank, were the temple cities of Luxor and Karnak and Tell el Amarna, the site of one of the most astonishing upheavals in Egyptian antiquity in the 14th century BC The art of ancient Egypt is not generalised, it always reflects the immediacy of an event, a moment in the lives of its gods and kings and commoners, thus communicating itself in a pervasive and palpable presence The obelisks, steles and colossi of the area tell of the glory of the great Pharaohs and their charismatic Queens The west bank extending in a massive arc from Biban ul Maluk in the north to Malkata in the south was a vast Royal necropolis

To narrow down the perspective of Egyptian antiquity to what has an immediate bearing on our story is as difficult as focussing only on the profile of the Apostle Simon in Leonardo's The Last Supper. However, the vital XVIIIth Dynasty, and particularly the Amaran line, has a specific relevance to the events of November, 1922

The XVIIIth Dynasty was installed 1,500 years after King Narmer unified the "two lands" of Upper and Lower Egypt in circa 3100 BC. It lasted for about 250 years and contained four generations of Amaran rulers commencing with Thutmose IV and virtually ending with the death of Tutankhamun in 1343 BC. Soon afterwards, the vengeful General Horemheb seized the throne and finished off the dynasty

After Tutankhamun's death his 20-year-old widow was in extreme distress yet she flatly rejected Horemheb's amourous advances and, instead, in an amazing document, wrote to the Hittite King: "...my husband is dead and I have no sons. Should I then, perhaps, take one of my servants and make him my husband? They say you have many sons Give me one of your sons and he will be my husband and lord of the Land of Egypt." The Hittite King demurred and Horemheb fulminated. In a burst of savagery he seized the throne and set about obliterating all traces of her husband from the face of the earth Ironically, if the Hittite King had agreed, it would not have taken us this long to get to Tutankhamun, on the other hand we may not have come to know of the most magnificent pharaoh of all, Rameses the Great Such is life

Coalescing the vitality of the XVIIIth Dynasty is the charismatic Heretic King, Amenophis IV-Akhenaten. Before he changed it all in a series of superbly calculated moves, Amun the "Hidden One" who was the paramount god of Thebes and who spoke through a power-coterie of priests, was all-pervasive. The priests, true to form, believed in the power of the Mysterious to subdue, even subjugate Akhenaten's vigourous monotheism iconosised divinity by giving it a tangible outline in the form of Aten, represented by a gilded globe with rays which manifested Ra, the Sun God He quit Thebes to build a superb temple to Aten at Tell el Amarna, the City of the Globe, which is very strongly identified with the heretical pharaoh.

The Amaran geneaology is pure Theatre of the Absurd, rich in convolutions and black comedy. It abounds in Catch-22 situations: a young man marries his niece who then marries her uncle-in-law who could also be her maternal grandfather not forgetting that at the age of eleven she had married her father. And so forth In this general confusion, Tutankhamun himself appears as a shadowy, enigmatic figure. Howard Carter believed that he could have been a commoner, though later studies make him the son of Amenophis III and Tiye, second generation Amaran rulers. Dates are difficult to pin, but the general consensus seems to be that he was born in 1361 BC, ruled for nine years and died in 1343 BC, aged eighteen.

The Boy King, who was named Nebkheprure at birth and Tutankh-aten at his coronation was steeped in the heretical tradition. Yet soon, in a swift and unexplained *volte face*, he rejected his father-in-law's Atenist hersy, re-established the cult of Amun and changed his name to Tutankhamun. A recent, and credible theory states that the ousted Theban priests made the nine year-old king a pawn in a classic chess game to reinstate Amun, and themselves They succeeded because of Tutankhamun's immaturity and Akhenaten's own inexplicable actions in the latter part of his reign, like his forsaking of his Queen, the beautiful Nefertiti, whose sheer physical presence might have carried the day for him. Thus the brief, bright, Camelot of the Amaran Royalty was born, flared momentarily and died.

Three thousand three hundred years later, those who searched for Tutankhamun had to contend not only with Horemheb's revenge but also with the actions of the community of grave robbers whose entire livelihood depended on the spoils from the tombs of the pharaohs. The wild-eyed men of Qurna defied the most devious plans made to protect the tombs. The desperate priests, in a massive decoy operation, moved the remaining royal mummies out of the

Valley into one cleft tomb in the mountains of Deir el Bahri Yet in 1891, the celebrated Egyptologist Sir Gaston Maspero's team found the tomb stripped bare save for the mummified remains of Egypt's thirty greatest pharaohs and queens laid side by side in the vaulted emptiness. So it was for every tomb found in the necropolis in the last century.

THE MOST FAMOUS FACE from the ancient world The mask of Tutankhamun in beaten gold. Above: Stuccoed and painted wood head of Tutankhamun. It shows the Boy King emerging from a lotus as its petals slowly open to the sun.

In 1907, nine years after coming to Egypt, Howard Carter was introduced to Lord Carnarvon and an extraordinary partnership was born, which lasted till the latter's death in 1923. The extremely wealthy Peer and *bon vivant* had become an Egyptologist when after a nearfatal motor accident his doctor had advised him to go East to recuperate He chose Egypt, developed an interest in archaeology and soon obtained a concession to dig west of Thebes. Their team made valuable finds like the Carnarvon Tablet and the tomb of Amenophis I. Gradually, and no doubt with some misgivings, he saw his egocentric partner becoming obsessed with Tutankhamun

Most archaeologists believed that the Valley had surrendered all its secrets. The supremely fixated Carter, who for the last five years had combed the Valley for Tutankhamun, persisted. Were the occasional clues merely red-herrings? If found at all, would the tomb be intact? *Where, in God's name was it?*

One should risk the charge of being theatrical if only to give the battle a classic dimension. The forbiddingly desolate terrain; two determined adversaries- Horemheb and Carter- separated by 33 centuries, one man driven by the force of destruction and the other compelled by the potency of discovery And, finally, a victory which had much more than just a material outline, however precious that it might have been.

Though Carter was not such sort of a man, for him Tutankhamun's tomb seemed to have taken on mystical properties. However, the concession was running out and the area near the tomb of Rameses VI which Carter had always believed was a likely site, was the last place left. It was 4th November, 1922.

The day that changed the entire course of Egyptology dawned cool and clear. The digging was proceeding routinely near the entrance to Rameses VI's tomb when one of Carter's foremen ran up to him and announced that their chisels had unearthed a stone step Carter instantly recognized it for what it could be Frantic hands clawed at impacted sand and centuries-old rubble and in 48 hours the steep stairway leading down to Tutankhamun's tomb was exposed Picture this dry, introverted man peering down the sixteen steps at a sealed door hiding a 3,300 year-old secret, and you will see the stuff of which history is made

Carter kept the welling ecstacy tightly capped and cabled Carnarvon in England: AT LAST HAVE MADE WONDERFUL DISCOVERY IN VALLEY STOP A MAGNIFICIENT TOMB WITH SEALS INTACT STOP HAVE RE-COVERED SAME FOR YOUR ARRIVAL STOP CONGRATULATIONS. Why the congratulations? Was Carter being facetious or super-arrogant or was he merely following form? The import of the words: WITH SEALS INTACT was not lost on Carnarvon who set out immediately for Cairo. Carter had to wait for 18 days, agonizing over what lay beyond the sealed door. Here the first doubts begin to creep in. If after years spent in chasing an obsession, you were a few yards away from the most momentuous find of the century and, more importantly, about to retrieve your entire reputation, would you have waited so long?

Carter made arrangements for opening the tomb on 26th November, and journeyed to Cairo to receive Lord Carnarvon and his daughter, the pretty Lady Evelyn. Though the Egyptian Service of Antiquities exercised authority over all finds in the country, only Lord Carnarvon, his daughter and Callender the faithful assistant were privileged enough to be there.

In his three-volume *The Tomb of Tut. Ankh. Amen*, published between 1922 and 1927, Howard Carter describes that cool morning, exactly sixty years ago: "The decisive moment had arrived. With trembling hands I made a tiny breach in the upper left hand corner (of the door) . ... inserted the candle and peered in... .. At first I could see nothing, the hot air escaping from the chamber causing the candle flame to flicker, but presently as my eyes grew accustomed to the light, details of the room slowly emerged from the mist, strange animals, statues and gold- everywhere the glint of gold For a moment- an eternity it must have seemed to the others standing by- I was struck dumb with amazement, and when Lord Carnarvon, unable to stand the suspense any longer, inquired anxiously, 'Can you see anything?' it was all I could do to get out the words, 'Yes, wonderful things' "

Their light, the first in 3,300 years to pierce the darkness of the chamber, reflected dully off strange surfaces, wierd, black shadows jumped against the walls, the air smelt musky, as those who had buried Tutankhamun had smelt it But they had seen nothing of the wonders as yet

The Service of Antiquities was furious at being ignored. An official was sent to find out what exactly was going on Carter was probably abrupt, and the sordid, acrimonious battle was joined Carter fought the Service for five years, but why? Not for the relics, surely Even when it was hinted that he had cached away a portion, he disdained to reply, which made matters worse. I think Carter was fighting for a place in the sun which the Service was denying him, in terms of an autonomous control of the operation.

Tutankhamun's tomb, consisting of four rectangular rooms each separately oriented to the four points of the compass, covered an area of about 900 square feet. It was an incredible storehouse of funerary relics which according to the ancient codes would travel with the dead Pharaoh on his celestial journey. There were breathtakingly gilded chariots and couches and boats and beds and thrones; remarkable statuettes in alabaster and ivory and lapis lazuli portrayed a handsome race; shrouds of Egyptian textiles appliqued with small rosettes of pure gold; exquisitely crafted chests and shrines which held religious artefacts and foods.

In the finely worked enchantment of gold, what struck the men as unusual was the measure of humanity reflected in the craftman's work. Egyptian art had always been stylized and conceptually larger than life. But here was a *leitmotiv* of tenderness and delicacy, approaching sadness, and unparalleled linear beauty. Beaten gold panels depict the pharaoh and his lissome wife; the finely pleated robes, the soft bulge of belly and breast, the sharp yet sensuous profiles, the bend in a hip and the lightly caressing fingers are all caught in images of intimacy. In a beautifully symbolized idea, Isis, Nepthys, Neith and Selkit link their goddess-arms in an emotionally protective gesture around the Boy King sleeping in his massive yellow quartzite sarcophagus.

By now, news of the fantastic find had spread far beyond the borders of Egypt. Journalists and mystics, politicians and faith-healers, Royalty and rubber-neckers flooded the Valley. This time it was Lord Carnarvon who got into trouble, with the Press. Newsmen eager for scoops were horrified to find that the old Peer had contracted away exclusive first rights to the London Times. Sell-out! they cried Carnarvon stiffened the upper lip and wondered aloud as to why they were carrying on so; after all they were getting their stories free, from Merton's dispatches, though admittedly a day later! This controversy naturally got world-wide coverage and one more fissure appeared in the solid, 24-carat facade.

Since there was enough evidence to show that the grave-robbers had entered the anteroom, Carter was apprehensive about the state in which he would find the Burial Chamber. All doubts were dispelled when this chamber was opened on 17th February, 1923, and found to be totally intact. This 13' x 21' x 11' space was an incredible Chinese-puzzle containing four room-filling shrines, a massive sarcophagus and three gilded coffins, all packed tightly one inside the other It took 2½ years to dismantle everything and get to the Boy King.

In March that in Cairo, Carnarvon was bitten by a mosquito on the left cheek, contracted blood poisoning and died. All the street lights went off and in England his dog howled and fell dead. Those who later examined Tutankhamun's mummy found a scab on its left cheek Even the words spoken at his Hampshire graveside had an apocalyptic ring *Here, here's the place where meteors shoot, clouds form, Lightnings are loosened, Stars come and go.. ...* There were some coincidental deaths and unusual sand storms in the Valley, near the tomb The Terrible Curse of the Pharaoh was on

On October 28, three years after the discovery of that first stone step, the last coffin was opened. It revealed the extraordinary gold mask, surely the most well-known archaeological relic in the world. Around it was a garland of flowers which still retained a tinge of colour; it was Akhensenamun's final, touching farewell to her husband. The final coffin, ⅛' plate all around, weighed 2,448⅛ pounds in pure gold. Inside this, in a tragic anti-climax, were the mummified remains of Tutankhamun, almost burned away by the use of excessive embalming fluid and pitiful in its small, bejewelled, nakedness. Even so, Horemheb had lost.

The final indignity attaching to the would-be glorious story was in the form of

AKHENSENAMUN ANOINTING THE COLLARETTE OF TUTANKHAMUN. Silver, gold and paste panel from the back of the throne found in the tomb. The pose is unusually informal for Egyption art.

the absurd, trumped-up Curse On the other hand, the tomb presents genuine facets of mystery Why was this the only tomb in the Valley which escaped the large-scale pillaging by the grave-robbers who had entered it? What explained the penury of its walls and ceilings in startling contrast to the structural magnificience of the other tombs? What was the reason for the incredible confusion inside the tomb? Why, amidst a wealth of artefacts evoking the classical heights reached by the XVIIIth Dynasty, was there not a single scrap of papyrus to shed light on the history of the Boy King? Why had Horemheb, whilst annihilating his memory, left Tutankhamun's sepulchre unviolated? No theory is totally satisfying, and we may have to wait for another great find in the Valley to finally solve the mysteries of the tomb.

Howard Carter left the Valley of the Kings, finally, in 1932, exactly ten years after his historic find The tomb had taken a massive toll in terms of physical and financial resources; it had yielded no historical clues; the Wafdists Cabinet in Egypt had virtually derecognised him; the world's Press had injected into his remarkable story aspects of greed, prejudice and perversity.

The Curse did not get Carter This complex, introverted man died in 1939 from natural couses, far away from the Valley he knew so well and loved so fiercely. He, along with his Patron, had retrieved Tutankhamun from a carefully engineered obscurity and handed back to us a glorious segment of our heritage.

The two great godesses of Upper and Lower Egypt who protected a Pharaoh were Nekhabet, the vulture and Wadjet, the serpent. It is perhaps only a man like Howard Carter that they would recognise and let through. ■

APRIL 4, 1979: Supporters of Zulfikar Ali Bhutto weeping as they assemble at the Liaquat Ali Gardens in Rawalpindi to pray for his soul after his execution earlier in the morning.

In Pakistan Today—4

Generals Play Havoc

In this concluding instalment of excerpts from *Generals In Politics* (to be published shortly by Vikas), the former Pak Air Chief reveals how the Generals have all but reduced Pakistan to the level of a client state and played havoc with the economy of the nation.

by Air Marshal Asghar Khan

WITH the Judiciary effectively emaciated and political activity completely banned, political leaders took fresh stock of the situation. No one believed that Zia ul Haq's occasional statements to reaffirm his faith in democracy cut any ice with the people. The game had by now become clear. Piecing Zia ul Haq's statements and speeches together, it was obvious that he intended using every stratagem to remain in the driver's seat. He had, since coming to power—and particularly after the postponement of the November 1979 elections—made some important observations:

1 Pakistan had been created in the name of Islam and only an Islamic system could prevail in the country. What was an Islamic system was left for the "Council of Islamic Ideology" to define. This Council had been set up by Zia ul Haq with persons nominated by him.

2 Only those persons could be allowed to stand for elections in future who were good Muslims and good Pakistanis. It was not explained *who* would decide whether a person was a good Muslim and a good Pakistani.

3 The place of women and their rights would be decided afresh.

4 The public would be asked in a referendum whether they wanted an Islamic state. The General had perhaps overlooked the fact that the "Objectives Resolution" passed by the Constituent Assembly of Pakistan as early as 1949, and every Constitution since, had laid down that Pakistan would be an Islamic Republic. There was, therefore, no dispute on this issue.

5 The Armed Forces would have a political role in the country's Constitution.

6 The President would be vested with greater powers.

7 The people nominated to the Federal Council would perform the role of a *Majlis-e-Shoora* or a consultative body which would advise the President. A system of Islamic democracy would be worked out in consultation with this body and elections held for a Federal Parliament that would replace the nominated Federal Council.

8 Islam did not visualise more than one political party in the country.

9 Anyone who did not believe in the "Islamic ideology"—presumably as defined by Zia ul Haq—had no place in Pakistan and would be "liquidated". As a concession, in a subsequent statement, Zia ul Haq modified this to say that such people would have to leave the country. He did not say in which direction.

10 The press will be free to criticise any body or individual except the Armed Forces and the ideology of Pakistan. It will not be able to write anything which could fan regionalism. Any attempt by an individual or a newspaper to advocate the cause of a particular region could, therefore, be dubbed as regionalism.

Not A Proper Forum?

Putting these thoughts together, it was evident that the General's junta would like to evolve a system that would ensure a vote by the people in *their* favour. They were, therefore, likely to get the Council of Islamic Ideology to propose certain amendments to the 1973 Constitution. These proposed changes could be put to a referendum, or to the councillors elected under the local bodies' elections, or perhaps to the nominated Federal Council *(Majlis-e-Shoora)*. A referendum is not a proper forum for a decision on complicated constitutional issues, but the question could be so worded that the answer would go in the regime's favour. For instance, the referendum could include the following questions:

1 Do you stand for an Islamic order in the country?

2 Do you agree that only pious Muslims should be allowed to contest the elections?

3 Do you believe that people and parties subscribing to alien ideologies should be disqualified from participating in politics? Anybody talking of an egalitarian set-up could be debarred as a Communist or as an agent of a socialist country and could thus be disqualified.

When this had been done, elections could be held in such a manner that only those people are returned who would support Zia ul Haq and the junta—a situation which he artfully described as "positive results". The Generals would then have justified their action and could hope to make world opinion believe that they enjoyed the people's support.

This question of apparent public support assumed greater importance in view of the reluctance of a section of the public in the United States to support dictators in Third World countries with economic and military aid. Mindful of this, the Reagan Administration had, in all probability, suggested that Zia ul Haq should obtain a mandate from the people—phoney though this may be.

At home in Pakistan, so long as important political parties and the acknowledged political leadership did not fall in line, it would make little difference to the situation. Zia ul Haq's credentials would not improve and the political situation would remain inherently unstable.

PPP: In A State Of Disarray

Having experienced a major upheaval relatively recently in 1977, it was not easy to regroup political forces on different lines. The major political forces in 1977 had been the PPP and the PNA. The PPP was still licking its wounds. The party had been built up under the personality cult of one man who was no more. It did not have a democratic structure and its effective second-level leadership had been harassed and victimised by the military regime. It was, as a result, in a state of disarray.

The political parties that comprised the former PNA were now split in terms of their true character. Those parties that stood for democracy and were opposed to exploitation could not associate with the military regime of Zia ul Haq, whereas others were influenced by different considerations.

Each religious party was split into two groups. The larger group was the one which would like to bring an Islamic order by *any* means possible. For it, democracy was only of academic interest. The other group, notably in the JUI and the JUP, believed that any system, if it did not have the backing of the people and the sanction of the Constitution, could not last and, far from furthering the cause of Islam, would in fact damage it. It, therefore, found more in common with those who stood for democracy and were opposed to Zia ul Haq's regime. The Jamaat-i-Islami, however, believed in extending full support to Zia ul Haq. The Pagaro Muslim League was the inheritor of the traditions of the Convention Muslim League of Ayub Khan and was anxious to cooperate with the military regime.

In February 1981, 9 political parties—namely the Azad Jammu & Kashmir Muslim Conference, the Jamiat-ul-Ulema-i-Islam, the Council Muslim League, the Pakistan Democratic Party, the National Democratic Party, the Qaumi Mahaz-e-Azadi, the Mazdoor Kisan Party, the Pakistan People's Party and the Tehrik-i-Istiqlal—signed a declaration* reaffirming their faith in democracy, calling upon Zia ul Haq to hold elections and declaring his regime illegal. Although no organisation was created, this body or front was given the name of "Movement for the Restoration of Democracy". The chairmanship of this organisation was to go by rotation, with each party assuming this responsibility for one month.

The MRD was not an electoral alliance and the only thing its components had in common was their aversion to martial law and the desire to see elections held for a peaceful transfer of power to the elected representatives of the people. In spite of this limitation, it aroused considerable interest amongst the public, who saw this as a vehicle for ridding the country of martial law.

In a meeting with Zia ul Haq at Abbottabad on May 3, 1978... I asked him whether he was serious about holding elections. He assured me that he was determined to hold elections and, putting his hand on his heart, had said, most solemnly, that this was his promise as a "soldier and a Muslim". He was also bold enough to say that, if he failed to do so, I would be at full liberty to publicly call him "a liar". I regret to have to say that, when I took him up on this a year and a half later, I found to my cost that he thought it fit to curtail my freedom.

A.K.

---

* *The declaration was signed on behalf of these parties by*

Azad Jammu & Kashmir Muslim Conference:	*Sardar Abdul Qayyum Khan*
Jamiat-ul-Ulema-i-Islam:	*Maulana Fazlur Rehman*
Council Muslim League:	*Khwaja Khairuddin*
Pakistan Democratic Party:	*Nawabzada Nasrullah Khan*
National Democratic Party:	*Sardar Sher Baz Khan Mazari*
Qaumi Mahaz-e-Azadi:	*Meiraj Mohammad Khan*
Mazdoor Kisan Party:	*Fatehyab Ali Khan:*
Pakistan People's Party:	*Mrs Nusrat Bhutto*
Tehrik-i-Istiqlal:	*Mian Mahmood Ali Kasuri*

However, early in March, the hijacking of a PIA Boeing aircraft to Kabul and the admission of the late Prime Minister Bhutto's son, Murtaza Bhutto, that his organisation, Al-Zulfiqar, was responsible for it gave the martial law regime an opportunity to clamp down on the MRD, particularly the PPP.

Mrs Bhutto's statement, that Murtaza Bhutto and the activities of the Al-Zulfiqar organisation had nothing to do with the PPP, appeared to make no difference and the Government-controlled media played up the incident and the alleged involvement of the PPP with it. To prevent the MRD from "taking off", the Government arrested a number of leading political leaders and lawyers (including Mian Mahmood Ali Kasuri) in the middle of February, much before the hijacking incident. Mrs Bhutto, her daughter Benazir and virtually the entire leadership of the MRD were arrested and put in prison. A large number of workers of the MRD parties were also locked up. For about 2 weeks, the media kept the masses spellbound, with the result that they could think of nothing else and, at least for the time being, the political situation was relegated to the background.

The First Reaction

The first reaction within the MRD was Sardar Qayyum's exit from it. He accepted the Government's version of the PPP's involvement in this affair and, as the martial law authorities began to round up MRD workers, he and the Pir of Pagaro became active in trying to forge another alliance of so-called rightist parties, loyal to the "ideology of Pakistan". After a great deal of running around, the Jamiat-ul-Ulema-e-Pakistan joined hands with the Pagaro Muslim League.They expressed their abhorrence of and inability to have anything to do with the MRD because the PPP was one of its members. The Jamiat-ul-Ulema-i-Pakistan also expressed its aversion to the inclusion of the Jamaat-i-Islami in the Pagaro-JUP alliance.

A friend who had been a senior bureaucrat during the Ayub Khan days had once offered me a piece of political advice. When I had jokingly told him that bureaucrats knew nothing about politics, he had asked: "Who has been running the politics of Pakistan all these years?" He had then given a summary of the role of the bureaucracy in the political life of this country and the significant impact on the politics of Pakistan of people like Chaudhary Mohammad Ali, Ghulam Mohammad and Iskander Mirza—all one-time bureaucrats. He was right. The greater part of Pakistan's history is a story of the partnership of the Army and the Bureaucracy. They have jointly run the country and have successfully kept public representatives away from their legitimate role.

A.K.

The Jamaat-i-Islami, isolated and ignored both by the MRD and the Pagaro Muslim League-JUP combination, tried to make virtue out of necessity and took the legalistic plea that, since political gatherings were forbidden under martial law, they could not meet to discuss such matters. They later resiled from their stand and came out with a formula of their own for a national alliance. Even otherwise, their contention that political activity was forbidden was hypocritical, since they remained active under the label of Khidmet-e-Islami. They also maintained that, when the country was threatened from outside, it was necessary that all political elements should extend their support to the martial law regime.

Having suppressed the opposition, Zia ul Haq turned his attention to labour which, in his opinion, required disciplining. Pakistan's industrialists had been clamouring for this for a long time and Zia ul Haq had delayed taking harsh measures, as he did not think the time to be as yet opportune for such a step. But, to keep labour leaders busy, he had kept up the facade of a triangular dialogue between the Government, industrialists and labour leaders of his choice. A number of conferences among the three had been held, but these had failed to produce the results that the Government had in mind.

In mid 1981, Zia ul Haq moved against the Pakistan International Airlines, banning all union activities, sealing union offices, dismissing hundreds of the Airlines' employees and imprisoning many of their workers and office-bearers. It was said that the airline was not running efficiently, was overstaffed and that the union activities were proving a hindrance in its efficient operation. The action did not create any significant reaction among other labour organisations in the country, who were next on Zia ul Haq's list for similar action. The PIA was a test-case and Zia ul Haq appeared to have selected his victim with care.

When the workers of the newly commissioned steel mill in Karachi staged a demonstration in August 1981, demanding a bonus promised by Zia ul Haq, they were beaten up. One person was killed by police firing and a number of workers (including the woman president of the workers' union) were arrested. A few days later, when an All-Pakistan Labour Conference was called in Lahore, a number of labour leaders were barred from entering the province.

Dismal Picture

By the end of 1981, Zia ul Haq appeared to be having his way. Political parties were banned and the Assembly of even half a dozen political persons inside a house could, if the Government so desired, be stopped. The press had been effectively gagged and most of the papers were vying with one another in praising the regime. Not a single line was allowed to go into the press unless it was duly cleared by the censoring authorities. Even the writings of some very accomplished journalists were being censored by information officers, some of whom were hardly born when these journalists had come to be recognised as competent newsmen. Labour appeared to be demoralised and many of its leaders, like those of some political parties, were squarely with Zia ul Haq.

The political scene in Pakistan, therefore, presented a dismal picture, but it was not one that was unfamiliar. The people had to go through more of martial law to realise the consequences. The question was whether they would do so in time.

Regrettable though it was, it was obvious then—and became abundantly clear with the passage of time—that a fairly large section of the PNA leadership had paid only lip service to democracy and was quite willing to serve on with Zia ul Haq. They lacked confidence in themselves and were afraid to face the people .. Some of our PNA colleagues had decided that, if they could not come to power themselves, they would prefer that the Army ruled.

Whereas the framing and implementation of a programme by one political party would appear to be a relatively simple affair, in an alliance it poses many problems. The Pakistan National Alliance represented a collection of parties with different political philosophies. It was united essentially on the revival of democracy and on the question of facing Bhutto and his party at the polls.

It is my belief that the PNA would not have been able to hold together in government for long, and would, in all probability, have had to hold elections much earlier than the expiry of its normal term. Its manifesto was essentially a compromise on many issues but would, if it had been implemented, been adequate only as an interim programme for a relatively short period.

Limping Economy

PAKISTAN is a land of contrasts and contradictions. The snow-capped mountains in the north and the desert in the south, the arid tracts of Baluchistan and the green fields of Sind and Punjab, the luxurious living of the rich and the dwellings of the poor, the imperial style of its rulers and the grinding poverty of the masses, the use of sophisticated technology and the incompetence and inefficiency of Government offices, must present to the uninitiated a confusing picture of a country which typifies, to a fairly large extent, the social and economic changes being brought about in the Third World. To comprehend some of the difficulties that Pakistan faces on the hard road to survival, a brief look at some of its economic problems and the way these are being tackled would be useful.

In terms of 1960 prices, Pakistan's per-capita income of Rs 681 is one of the lowest in the world. Her population is growing at the rate of 3 per cent a year and at this rate, by 1986, it will be around 100 million; by 1991 it will be 120 million; and, by the year 2000, about 154 million. The per-acre yield of wheat—the staple food of the people and the major source of income—is less than half that of most wheat-producing countries.

It is estimated that Pakistan is losing over 100,000 acres of agricultural land every year through waterlogging and salinity. Because of the rapid growth in population and the relatively low priority allocated to education, the percentage of population with primary-level education has been declining annually. It is estimated that, by the end of the century, 68 million persons—or 44 per cent of the population—will be below the age of 15 and that, unless a major change in priorities and outlook takes place, less than 12 million will be able to receive primary-level education. If present trends are projected into the future, the percentage of literacy in the country will drop substantially in 10 years' time, which in turn is bound to affect adversely the development of the country.

With the likelihood of further increases in fuel and production costs, Pakistan will be required to pay more for machinery and equipment than she has to purchase from abroad. However, given the present trend, her foreign exchange earnings from raw materials and finished goods will not rise proportionally to compensate for this increased cost. With construction work reaching the saturation point in the Middle East, her overseas manpower—which earns foreign exchange comparable with what is earned by the country's total exports—may well be returning home in increasing numbers in the next few years, requiring employment in Pakistan. This source of foreign exchange earnings may, therefore, soon begin to dry up

Growing Defence Expenditure

In the situation with which Pakistan is faced, it is necessary that her non-productive expenditure is kept to the minimum and the aid that she receives is used in the most profitable manner. With no representative National and Provincial Assemblies, a controlled press and a ban on political activities, there is no means by which the people can question the expenditure being incurred by the Government. As a result, non-productive expenditure in Pakistan has been increasing at a phenomenal rate in the last few years, causing rapid inflation in the country.

Pakistan's defence expenditure, per capita, is amongst the highest in the world: 46 per cent of the nation's Federal non-development budget is spent on defence alone. The defence expenditure, which in 1970-71 in the United Pakistan stood at Rs 3.2 billion ($320 million), had, 11 years later (in 1981-82), reached Rs 19.5 billion ($1.95 billion). Moreover, this expenditure of Rs 19.5 billion does not take into account the defence aid Pakistan is receiving from the United States and Saudi Arabia.

Although the defence budget has risen sharply in recent years, the Armed Forces have, over the last 30 years, been able fairly effectively to control the allocation of their share of the Federal budget. Any meaningful discussion of the military expenditure in the National Assembly has been taboo and politicians, even for the short periods when they have been allowed to function, have been persuaded to leave the whole subject of defence to the so-called "specialists" in uniform.

Since the country's foreign policy has been run in closely set grooves, this attitude was understandable. With the foreign policy that Pakistan has pursued, there has not been much room for manoeuvre. The Armed Forces have, therefore, come to be regarded as the "Sacred Cow". Any discussion about its health, size or performance in public or even in the National Assembly has been frowned upon. The "Cow" has been carefully fattened over the years and the pastures over which it has been fed have since dried up. A time has been reached when Pakistan should criti-

THE HINDU

A news paper that is looked upon with respect by over two million readers.

The Hindu has the single largest circulation among English Language dailies at any one place in India. Over 3,40,000 copies are bought, and at least six persons read each copy.

It's published at Madras and comes in facsimile editions at Bangalore, Hyderabad, Madurai and Coimbatore. And its powerful reach is unmatched by any other newspaper in the Southern States.

The distinctive trait of The Hindu is its practice of authenticity and reliability ensured by a system of substantiation and checking up.

But it is also forthright and in the forefront in exposing social evils. A feature that has won over the youth which account for 57% of its readership.

The Hindu reader has now the pleasure of looking forward each week to Special Reports on science, engineering, technology, farming, education, religion etc.

And The Hindu has that extra something that makes it so easy to read : the most modern computerised photo setting, facsimile system of production and offset printing. And a Sunday magazine enlivened by colour.

Best & Crompton now lends its might to a growing movement :

the search for more energy !

Energy bags top priority on Best & Crompton's plans for the 80's.

With the establishment of a separate Energy Division, this giant in power transmission will now focus its R & D and applied engineering talents on two vital questions :

- energy conservation— through new products and systems including waste heat recovery chillers.
- development of new sources— solar, thermal, photo voltaics, wind energy and micro-hydel systems.

As the company works towards its deadline— January 1983—new products and instruments, both imported and indigenous, may well be making news soon... along with special offers from Best & Crompton for systems design and installation.

Best & Crompton—from power to energy, it's a promising leap...

cally analyse her defence needs and trim her sails in the face of different winds blowing across her borders.

Rising Civil Expenditure

If defence expenditure has risen sharply, so has the civil expenditure of the Federal Government. In 1970-71, this figure was Rs 56 million ($5.6 million). Then, 11 years later, it had shot up to Rs 5.5 billion ($550 million)—that is, 13 per cent of the total non-development expenditure of the Government. Added to the defence expenditure for 1981-82, this figure totals Rs 25 billion ($2.5 billion)—which is 59 per cent of the total non-development expenditure of the Federal Government.

In comparison with the 46 per cent of the Federal Government's total non-development expenditure on defence, the Government is spending only Rs 201.8 million ($20.1 million)—or 0.5 per cent—on education and Rs 126 million ($12.6 million)—or 0.3 per cent—on housing. If the budgeted provincial expenditure for 1981-82 on these three subjects is also included, the total expenditure on health in 1981-82 was Rs 937.2 million ($93.7 million)—or 1.6 per cent—of the Federal and the Provincial Government's non-development expenditure of Rs 43.28 billion ($4.3 billion), Rs 3.72 billion ($372 million)—or 6.5 per cent—on education and Rs 197 million—or 0.4 per cent—on housing.

Sometimes, a suicide mania overtakes a people and they realise too late that they have themselves been responsible for their destruction. I pray that history does not record that Pakistan perished in its infancy because the people refused to learn from their mistakes and allowed misguided and power-hungry Generals to lead them to doom and destruction.

A.K.

At the time of Independence, the Pakistan provinces of Punjab, Sind and North-West Frontier were dominated politically and economically by 80 landed families which together controlled 3 million acres of land: 12 years later, when Ayub Khan carried out the first land reforms in Pakistan's history, limiting irrigated land for individuals to 500 acres and non-irrigated to 1,000 acres, the pattern of rural society had not changed. Although only 2.3 million out of the 49 million acres of farmland were directly affected, Ayub Khan's land reform brought home to the landed aristocracy the possibility of further limits being placed on land ceilings. By interpreting the law loosely, landed families, while retaining effective control over their lands, were allowed to transfer, on paper, the ownership of land in the name of children, relatives, reliable tenants, sometimes even servants.

By the time Bhutto carried out his land reforms of 1972, placing a limit on land for individuals at 150 acres of irrigated and 300 acres of non-irrigated land, holdings on land had already been sufficiently divided by these ingenious methods to reduce the effect of land reforms. Even then, 2.83 million acres were affected. However, big landowners managed to circumvent the land reforms once again and only 512,886 acres were resumed by the Government. The land reforms of 1959 and 1972 did not, therefore, basically alter the pattern of rural society.

A.K.

tions of society. These include taxes on services such as electricity, gas and transportation. An average family of 5 pays to the Government in one way or another, in the form of taxes, Rs 2,530 annually Roughly 40 per cent of the sale value of commodities is tax in various forms. This is also true of essential commodities, such as sugar, *ghee*, cement and kerosene.

By new initiatives in her foreign relations, which would enable her to reduce her defence expenditure, Pakistan could raise her expenditure on health, education and housing by many times the present level. The impact on the social and economic life of the people would thus be dramatic. Or alternatively, if the amount thus saved is spent on subsidising essential consumer items (such as kerosene, *ghee*, cement, etc), the prices of these commodities could be substantially reduced.

Along with a change in her foreign policy and complete reorganisation of defence, a reorientation of Pakistan's policy in respect of foreign debts will be necessary if the future of the country is not to be mortgaged At the present rate of increase in the external economic debt, the country would have accumulated, by 1990, an outstanding debt of about $20 billion, which would require larger and larger amounts of foreign exchange to be set aside for debt servicing. With the country's foreign exchange earnings not keeping pace with the rapid growth in debt-servicing obligations, the Government of Pakistan has repeatedly pleaded to donors to reschedule debt-servicing obligations. Clearly, such a situation could only mean the complete subordination of national interests to aid-providing countries. Since some aid will be necessary, it would be prudent to diversify the country's sources of aid so as to reduce Pakistan's dependence on present major donor countries.

Having become militarily and economically dependent on the United States and the West, Zia ul Haq's Military Government has been obliged to follow the advice of the World Bank and the IMF. Her domestic policies and foreign commitments have, therefore, led her progressively to withdraw subsidies from such items as wheat and agricultural inputs. It was also under pressure from these agencies that the rupee was delinked from the dollar and, therefore, virtually devalued and reductions were made in investment in the public sector industries.

These agencies, representing capitalist interests, tend to be unmindful of the hardship that such measures cause to the poorer sections of society and aim at "development" at their cost. It is, therefore, apparent that, if the Government continues on the course it is following, in a few years, the prices of essential items of consumption will have risen sharply, imposing an even greater economic burden on the common man. Unless her present foreign policy is changed and the level of her defence and other non-productive expenditure is also substantially reduced, Pakistan will be forced to continue with her present heavy dependence on foreign aid, thus reducing her to the status of a client state of the major aid-providing nations—a status she appears at present to be trying very hard to acquire.

The Five Main Sources

An analysis of Pakistan's economic structure over the last few years will show that the country's expenditure and investments are met from 5 main sources: export earnings; foreign exchange remittances by Pakistanis living abroad; foreign aid, private savings; and taxes. The foreign exchange element is spent largely on import of fuel, manufactured goods (including machinery) and defence purchases. With an expanding economy and rising costs, there is limited scope for reducing foreign exchange expenditure on fuel and machinery. The rupees collected through taxes are required to meet the Government's domestic expenses. Roughly two-thirds of this amount is spent on defence and on the administration.

It is obvious that any reduction in the import of defence equipment would release an equivalent amount of foreign exchange for use on the country's development and reduce the burden of foreign debt. Any reduction of the rupee component of defence and administrative expenditure would release equivalent sums for health, education, housing and other sectors of public utility.

In fact, it is only by reducing the foreign exchange and rupee expenditure on defence and the administration that significant resources can be made available to the Government for changing the shape of Pakistani society. Only thus can the destinies of the people be changed and the country saved from the consequences of grave economic and social problems.

This is the only road to survival. ■

In The States

When Government Fiddled While Trivandrum Burned

by Sujata Anandan

TRIVANDRUM: For Trivandrum, New Year's eve, dawned with violence—the first of its kind in the city. And New Year's day brought with it the army. Never before had the city witnessed communal riots, let alone on the scale that they broke out in Trivandrum. Kerala has been a State known for its communal harmony—Hindus, Muslims and Christians have lived together in peace for years. Now, however, the fair face of this State lies marred by arson, loot and violence.

If one looks deeper into the incidents, however, one will realise that the violence marked not so much communal disharmony as the complete takeover of the city by anti-social elements who gave a communal colour to their depredations by splitting into Hindu and Muslim factions. The blame lies with the Government, the police, the opposition parties, the Muslim leaders and Hindu extremists, among others.

A Nabi day procession in Alleppey unexpectedly turned violent, triggering off the whole chain of unfortunate events. A rather tough Sub-Inspector, disliked by certain sections of the people, got into a tussle with the processionists when they changed their route without prior intimation to the police. Within moments the religious procession had turned into a mob and such was their fury that the men on duty lost their head—instead of resorting to lathi-charge and tear gas they opened fire, in apparent "self-defence". A bullet found its mark, resulting in the unfortunate death of one of the mob.

Soon emotions ran high—*a Muslim had been killed on Prophet's day* and the community was soon up-in-arms against the Government. The transfer of the erring Sub-Inspector did not pacify the Muslims but it sowed discontent among a section of the police staff—they felt they were being unduly victimised.

When protest demonstrations erupted all over Trivandrum, the Government was wary of taking any precautionary measures. What happened subsequently has perhaps never occurred before in the history of any State.

According to a senior Cabinet Minister, just a fortnight earlier the police in the State capital had had a scuffle with a section of the city's Latin Christian community. This soon escalated into a major confrontation with the local religious head and, in the resulting violence, one of the Latin Christian demonstrators was fatally injured. Voices had already been raised in loud protest against this so-called victimisation of a minority community when the Alleppey incident, coming soon after, added to the tension within the Government circles.

Chief Minister Karunakaran's UDF Ministry is precariously balanced on the support and goodwill of its minority supporters, especially the Muslim League. Organised Muslims are thus the critical deciding factor on the Kerala political scene and any withdrawal of this support would mean the instant collapse of the Government. It is an established fact that Muslim support in Kerala has always made and unmade Governments. For this reason the Marxists are trying their best to win them over.

Viewed against this background, the Government's reluctance to annoy the Muslim leaders becomes understandable. But what is totally *ununderstandable* is its foolishness in yielding to Muslim pressure and shackling its police force for hours.

The Government were apparently warned by the Muslim leaders that the deployment of the police would result in the eruption of uncontrollable violence by their followers. Consequently, all the time that the miscreants were indulging in spontaneous destruction of public and private property of the majority community, there was not even a single policeman or jeep patrolling the streets. Police officials were under strict orders not to use force whatever the provocation. Indeed, even when a police station was attacked by the looters, the men watched the destruction helplessly, afraid to take any action.

Such was the communication gap within the Government that none was aware that the rioters had even reached as far as the airport and set the grass round the runway on fire, successfully preventing the landing of several planes. One of the Boeings that had to be diverted to Cochin happened to have Governor P. Ramachandran on board. According to a source, a frantic call from him to the Chief Minister was the first that the Government heard of the extent of violence in the town. Only then did the police swing into action—fire engines were rushed to the airport and the rioters arrested. But by then it was too late.

Noting police indifference to the large-scale destruction of Hindu property, the majority community—mainly the RSS—warned the Government that they would soon move in retaliation if the police failed to control the rioters. However, when a small temple at the corner of a street was demolished, all hell was let loose.

Singling out Muslim homes and establishments, the Hindus—among them the RSS—went on a rampage. Within hours the city was on fire. There were no fire engines, and only a handful of policemen to control the mob. By the time a formidable force could be gathered and the army called in, large sections of the city already lay smouldering in embers.

(Trivandrum city apparently has only four fire engines, which in this instance, proved woefully inadequate to put out the fires that erupted in different parts of the city).

Senior police officials insist that there was "no delay in action, only delay in reaching the trouble spots". Why? According to them, almost all the police force was in Alleppey, Quilon and Kottayam attempting to quell the riots there! Even if one were to believe this outrageous statement, a serious shortcoming in the organisation of the State police force is all too evident.

Home Minister Vayalar Ravi, young, forthright and forthcoming, admits that there is a severe shortage of policemen in the State, putting the blame squarely on the 21-month E.K. Nayanar regime during which period, he insists, not even a single new recruit was taken into the police force, though two whole battalions were totally without a single cop! He puts the shortage at close to 5,000 men. Indeed, the Kerala plice force is extremely top heavy—there are five Inspectors General in Trivandrum alone, an equal number of Deputy Inspectors General and to top them all a Director of Police! But how many men do they command between themselves?

CPI(M) leader E.K. Nayanar, who heads the joint opposition in the Kerala Assembly, however, denied that there was any deliberate policy of non-recruitment of policemen in the State during his regime. The Central Government's insistence on recruitment by the UPSC had caused the shortage, he said, but only to a certain extent.

"It is ridiculous to say that all the Trivandrum police were in other towns," he says. "A city cannot be left totally without protection. No, it is not *police* inaction but *Government* inaction that escalated the violence."

Chief Minister Karunakaran, however, is less categorical in pinning the blame for the riots on any single shoulder. "The riots were more a case of lawlessness than communalism," he says, admitting that his Government was caught napping. "We believed that any show of strength on our part might result in more violence than we were prepared to accept the blame for. What we didn't realise was that it would have the totally opposite effect. But the calling in of the army and our later iron stand helped to bring the situation under control in no time at all. I don't think any other State has controlled such riots as fast as we did," he claims proudly.

Mr Karunakaran is even more reluctant to name any single community or party for the violence.

"There were RSS elements, Communist elements and Muslim elements among the rioters *and they were all lawless*. I don't believe any one faction incited either Muslim or Hindu passions," says he.

Looking back at the incidents of violence, the fact that stares one in the face is that all through the period of the riots there were no killings, no stabbings, no rapes or any similar occurrences that are generally associated with communal outbreaks. Indeed, the only death in Trivandrum during the riots was that of a man who was trapped in the fire in his shop and charred to death before he could be rescued. This gives strength to the theory that there was more an element of lawlessness than communalism in the recent riots.

Trivandrum, however, is *not* a Muslim stronghold like North Malabar is. There are only a few Muslim pockets in South Kerala. Nor is it traditionally an RSS stronghold. Yet the fury of the violence in the southern part of the State was scorching, while there were almost no inci-

—T. Rajan Pedavel, *Madhrubhumi*

FURY OF THE FLAMES. A serious shortage of fire engines and the delay in police action led to large-scale destruction of property in Trivandrum. Left: Firefighters on the job at a house at Injakkal junction. Below: Shops at East Fort in flames. Inset: Chief Minister Karunakaran (left) and Home Minister Vayalar Ravi (right)

dents at all in the north where such a flare-up could have taken an even more serious turn. One is forced to draw the conclusion that it was the Government's reluctance to act against the Muslims that led the mild protests to snowball.

However, it is interesting to note that while the Muslim miscreants were on rampage, the League leaders insisted that they be allowed to protest without being hampered by the police. But no sooner than the Hindu hooligans took to the streets, the League leaders were frantically on the phone appealing to the Government for police protection of their homes and property.

The fury of the Hindus, once unleashed, was uncontrollable. District Muslim League leader E.A. Rashid, who along with the Imam of the Palayam mosque and Deputy Chief Minister Mohammad Koya, was one of the chief organisers of the protest demonstrations, perhaps suffered the greatest loss—his car was burnt to ashes, expensive colour TV and video sets were ruined and, soon after, his house was set on fire. He himself had to jump over the walls of his garden into the adjoining *Mathrubhumi* compound and take shelter inside the newspaper office.

Indeed, Hindus as well as Muslims sheltered under the *Mathrubhumi* roof that night. Hindus sheltered their Muslim friends and Muslims sheltered their Hindu friends in areas where either community was threatened.

Significantly, 90 per cent of the damage was caused in predominantly Muslim Areas (only coconut trees and cows were left standing here) while only 10 per cent of the damage occured to Hindu establishments. A senior Minister alleged that, despite delay in Government action, the violence would have been much more contained had their been less politicisation of the issue by the Marxists. They were behind the Muslims, he said, egging them on to loot and violence: the Marxists have been consistently trying hard to win over the Muslim electorate in an attempt to come back to power and they apparently could not resist the temptation to show up the Government's so-called unconcern for Muslim welfare. They tried to make political capital out of the hasty police action in Alleppey but suffered a moral failure in Trivandrum.

The police as well as senior Ministers claim that a major part of the loot recovered was from areas predominantly occupied by CITU workers. A large number of acid bombs and country bombs were also seized from there during the course of the raids.

Marxist leader E.K. Nayanar, however, dismisses the allegations as juvenile, "The loot recovered was not just from CITU areas; the AITUC, the INTUC and lawless elements must share equal blame. There were no communists among the rioters, only communalists" he snaps.

Deputy Chief Minister, and Muslim League leader Mohammad Koya, however, insists that no communalism was ever intended when the protest demonstrations began. The violence was not systematically organised; it was spontaneous: the anti-social elements, having no cause to fear the police, took control of the situation out of the leaders' hands. Under the cover of religious dogmatism, they took advantage of the situation to settle personal scores. In fact, a large number of establishments burnt down—whether Hindu or Muslim—were the very ones over which disputes had been raging for several years in the past.

No one comes out lightly from the affair. To be fair to the Government, Chief Minister Karunakaran has accepted part responsibility for its lack of foresight and failure in taking precautionary measures against the possible eruption of such violence. Though he has also ruled out a public enquiry into the incidents, his Government is already distributing free rations and providing temporary shelters to the victims. The extent of the damage done is still being assessed but it is obvious that the loss of public property has been tremendous. Even Bombay did not witness the kind of arson during the police riots that Trivandrum did.

According to a local newsman, the people of Kerala are generally not so excitable, nor are they violent by nature. However, the Muslim leaders desired to draw the attention of the Centre towards the Alleppey incident and they went out of their way to ensure that their protests would be heard. (This takes on added significance in the light of the party high command's ban on religious protests by Congress (I) Muslim leaders).

Says the Home Minister, a popular youth leader in Kerala and a man in whom Chief Minister Karunakaran has tremendous faith, "We did not want to throw ourselves open to accusations of suppressing peaceful protests, for we are democratic. Which is why we allowed the demonstrations. But when such democratic dissidence turned into large-scale violence, we had to come down on the arsonists with an iron hand."

But as the DIG (Crimes), Dr Alexander said, "One must draw the line between democratic dissidence and plain wilful lawlessness." Else, the country will soon turn into a playground for looters, arsonists, killers and rapists, carrying out their criminal activities without fear of reprisal, in the name of democracy ■

A Way Of Life

BARODA: Riots have become a way of life to the people of Baroda. But those which rocked the town on the night of December 13, 1982, were riots with a difference.

They have claimed 13 lives—so far the highest toll in any of the over a dozen riots that occurred in the past year. The loot and arson were extensive. There was a head-on collision between two communities. The most striking feature, however, was the abrogation of responsibility by the police force on the first day of the riots. But, when the police struck the next day, it did so with a vengeance: over 60 bullets were fired in just 2 days.

Again, perhaps for the first time in the country, a riot had coincided with—if it had not been sparked off by—the transfer of a police official. Though there is considerable evidence that the riots were directly linked with the transfer of Police Commissioner Jaspal Singh—who had taken over only 3 months ago—the three Central Ministers in charge of the Home, Defence and Tourism Ministers, who visited the city soon after the violence, insisted that the transfer had nothing to do with the riots.

The latest riots, unlike the past ones, have cast an ominous shadow on the Baroda Municipal Corporation and the MS University, Baroda. The resignation by 15 corporators from the Ruling Congress-I (including the Mayor) coming soon after 4 Muslim corprators (including the Deputy Mayor) quit the party in protest against police atrocities during the November riots, has plunged the civic body into an unprecedented crisis. The air is thick with talk of its supersession.

No one can say when normality will restored to the university campus, which is now the scene of relay fasts and demonstrations by the students, demanding "reinstatement" of Jaspal Singh. The student agitators have so far failed in their effort to enlist the support of students from other cities, particularly Ahmedabad. Needless to say, the stir, leading to the university's closure 2 weeks ago, has inordinately delayed the first semester examinations.

The transfer issue has provoked litigation in a city civil court and the High Court. It is pertinent to note here that the Director-General of Police had, on December 14, ignored the order issued by the civil judge staying the transfer of Jaspal Singh on an application filed "in the interest of public property" by a local doctor, D.V. Nene.

The State Government has taken a serious view of Jaspal Singh's "non-functioning" on the night of December 13. And, in a reference to it, Chief Minister Madhavsinh Solanki had recently told a delegation of students that "Mr Jaspal Singh deserved to be in jail". However, it is a puzzling fact that, in just under 3 months, Jaspal Singh has become very popular, particularly with the majority community, which is now demanding his reinstatement.

Perhaps the effective police bandobust at the *Vargadha* procession, which was unprecedentedly spectacular this year, gained him the popularity among the majority community. So impressed were the organisers that they held a special function the next day to felicitate him. This caused some heart-burning among the minority community whose *Tajia* schedule was earlier upset by the riots.

The Police Commissioner obviously had good public relations. He endeared himself to the majority community by permiting *garbos* until 2 am and, later, he made sure that the marriage season went off without a hitch. His "exercises" in public meetings and small, impulsive acts apparently brought him close to the masses. He had a soft spot for the youth and made frequent "dramatic gestures" towards student leaders by calling upon them to listen to their problems.

SAD REMINDERS. The extent of arson and violence was immense during the latest Baroda riots. Inset, police Commissioner Jaspal Singh.

This is one reason why following his "transfer", for days on end, there were queues of students at his bungalow, carrying bits of paper and currency notes to secure his autographs on these. Jaspal Singh was merrily obliging them—an exercise considered by many to be utterly unworthy of a civil servant. However, by directly cultivating the students, he tended to set up an alternative centre of power in MS university, thus considerably reducing the powers of the university authorities.

Lately, he had also begun cultivating trade union leaders: this could have interfered with the process of industrial relations. There are other instances to show that he had a tendency to undermine the established institutions and lacked regard for procedural niceties.

Of course, his style of functioning projected a completely new image of a police officer, given Jaspal Singh's "flamboyance" and "nonconformist" views. At a function marking the death anniversary of Dr Ambedkar, he even criticised the State Government in the presence of other officials for knowing nothing about poverty and doing nothing for the poor.

Also, the manner in which the State Government acted in "removing" the Police Commissioner was highly clumsy. Jaspal Singh had been told by the Home Secretary in Gandhinagar that the Gujarat Government was not happy with his performance. In the gap between the time Jaspal Singh returned to Baroda from Gandhinagar and P.K. Datta took over as Commissioner, there was virtually no one in effective control of the police forces.

And, thanks to this, Mayor Jatin Modi, was manhandled by a mob at the railway station on the night of December 13. The crowd prevented him and his party from boarding a Bombay-bound train, alleging that he was responsible for the police official's transfer. The Mayor was literally carried away by the mob from the railway station to Jubilee Baug, more than 2 kilometres away. They had to go past three police stations, including the Police Commissioner's office: but not a single policeman came to his rescue! ■

Inder Sawhney

The traditional dances of a country truly reflect the cultural ethos of a people, as nurtured by the past and shaped by latter-day influences and impacts.

"ALL art is a revolt against man's fate," observed Andre Malraux, and that is why the dance seeks to transport us into a kind of space-time quite different from that of every-day life. The gifts of the body, supplemented by the gifts of the mind, have helped us establish new frontiers in the creative realm through the art of dance, and "every epoch that has understood the human body and experienced at least some sense of its mystery, its resources, its limits, its combinations of energy and sensibility, has cultivated and revered the dance."

The sphere of culture and civilisation lays down broadly the style and substance for the pattern of dance and, even here, the periods of evolution and the nature of society mark the divisions of tribal, folk and classical systems. At the other end, we have modern dance shaping itself in a new direction, according to the demands of the times to suit emerging fashions and the tempo of modern life.

The dances of Korea belong to the northeast Asian cultural sphere, and the traditional repertoire includes items that trace their origin to the courts or to community celebrations. Thus we have extreme sophistication as demanded by nobility or an exaggerated emphasis of the emotional or romantic note as one would expect in a performance for the multitude.

The music of Korea also follows these two main courses—one emanating from the anstocratic source and the other springing naturally from the common heritage of the land and the people.

The Korean cultural heritage carries with it a distillation of influences percolating through a period of over 500 centuries. Consequently, the past is marked only by the traditional and not the classical idiom. But even so the restrained elegance of the court dances stand influenced by the Confucian ideal and, thus, reflect a serenity that is classical in substance

The music, characterised by gentle curves in melody and controlled grace notes, adds to the overall impact of Korean dance that can, in subdued notes and ceremonial costumes, present the "Flower Crown" in the court or create splendorous designs with fans for loud applause from the people

On the religious plane, the Korean dances bring to us Buddhist rituals, traditional celebrations of the full moon and also exorcist practices from the earliest period in Korea's history—relating to shamanism

The Mask Dance represents the folk element and is usually satirical in content, leaving the community celebrations to feature through the Drum Dance or the Farmers' Dance.

The dance as an art is endless, indeed, for it has sought to create beautiful forms in motion in time and space from the first dawn of civilisation and stands wedded to life to reflect all moments of being and becoming.

S.V.V.

JAWAHARLAL NEHRU being sworn in as India's first Prime Minister by Lord Mountbatten on August 15, 1947 "The fact that Mountbatten could not establish quite the Commonwealth he had in mind—wherein the King of England would remain the King of India too—did not diminish his sense of relief and achievement."

bind India to British policies, and Pakistan was to be the tough knot to ensure that India did not easily untie that bond. Gandhi's intention, therefore, of having the British commit to similar arrangements for both India and Pakistan undercut the very basis of British strategy. Obviously they could not agree to this.

Mountbatten then again sought to highlight the value of the Commonwealth. "The greatest guarantee for the future peace of the Indian sub-continent lay in both nations remaining members of the British Commonwealth," exclaimed the Viceroy. Gandhi, who had never reconciled himself to the idea that Hindus and Muslims were two different nations, reacted at once and reproved him for using the word "nations", and asked him to use the words states or countries instead.

Mountbatten well realised that India was being dragged into the Commonwealth against her will. As such, the Labour Government in England was sceptical about India remaining its member for long but expected that the Congress would have to show some moderation for the time being But on 21 July, barely three days after the Indian Independence Act received the royal assent, Nehru, on behalf of the Union Constitution Committee in India, presented the draft Constitution to the Constituent Assembly which came as a great blow to the British dreams.

Lord Louis Mountbatten was even more unhappy to find the term Sovereign Independent Republic -which he had battled so hard to avoid. Desperately reaching out for some straw, he latched on to the suggestion Nehru had made in their very first meeting months ago

He wrote to Listowel, "I have been wondering whether some form of common citizenship as was proposed for France and England in the summer of 1940, might be a possible solution and I shall be grateful for any thought on this matter from you at home."

After pondering over this proposal, Listowel ruefully wrote in his last letter to Mountbatten: "In another sense, however, to hanker after any form of common citizenship (is) swimming against the stream. In any case the status of a British subject will remain a common status, though in the last analysis it will now, more than ever, mean simply a common allegiance to the Crown And there, I take it, we are back at our starting point."

Mountbatten had tried so hard to engineer did not work out quite as he wanted it to Actually India's becoming a member qualitatively altered the entire concept of Commonwealth

On 2 March 1949, Premier Attlee discussed with Churchill and his colleagues the question of a republican India *vis-a-vis* the British monarch. Attlee afterwards reported to the King "Mr Churchill made the same suggestion which Your Majesty made yesterday, as to the possibility of Your Majesty being the President of India. I felt that the other members were in general agreement with the broad line which Mr Churchill had taken. I was gratified with the general attitude. I hope to see the Liberal leaders tomorrow "

Independence "Plus"

It is amazing that King George and Winston Churchill could believe that the King of England could become the President of free India But if the human mind can conceive of an El Dorado or Utopia, it is perhaps capable of conceiving anything

When the Commonwealth Prime Ministers gathered in the British capital, some of them tried to explain to Nehru the lines along which the British leaders were thinking Peter Fraser of New Zealand tried to convince the Indian Prime Minister that "the Commonwealth was not independence minus but independence plus "

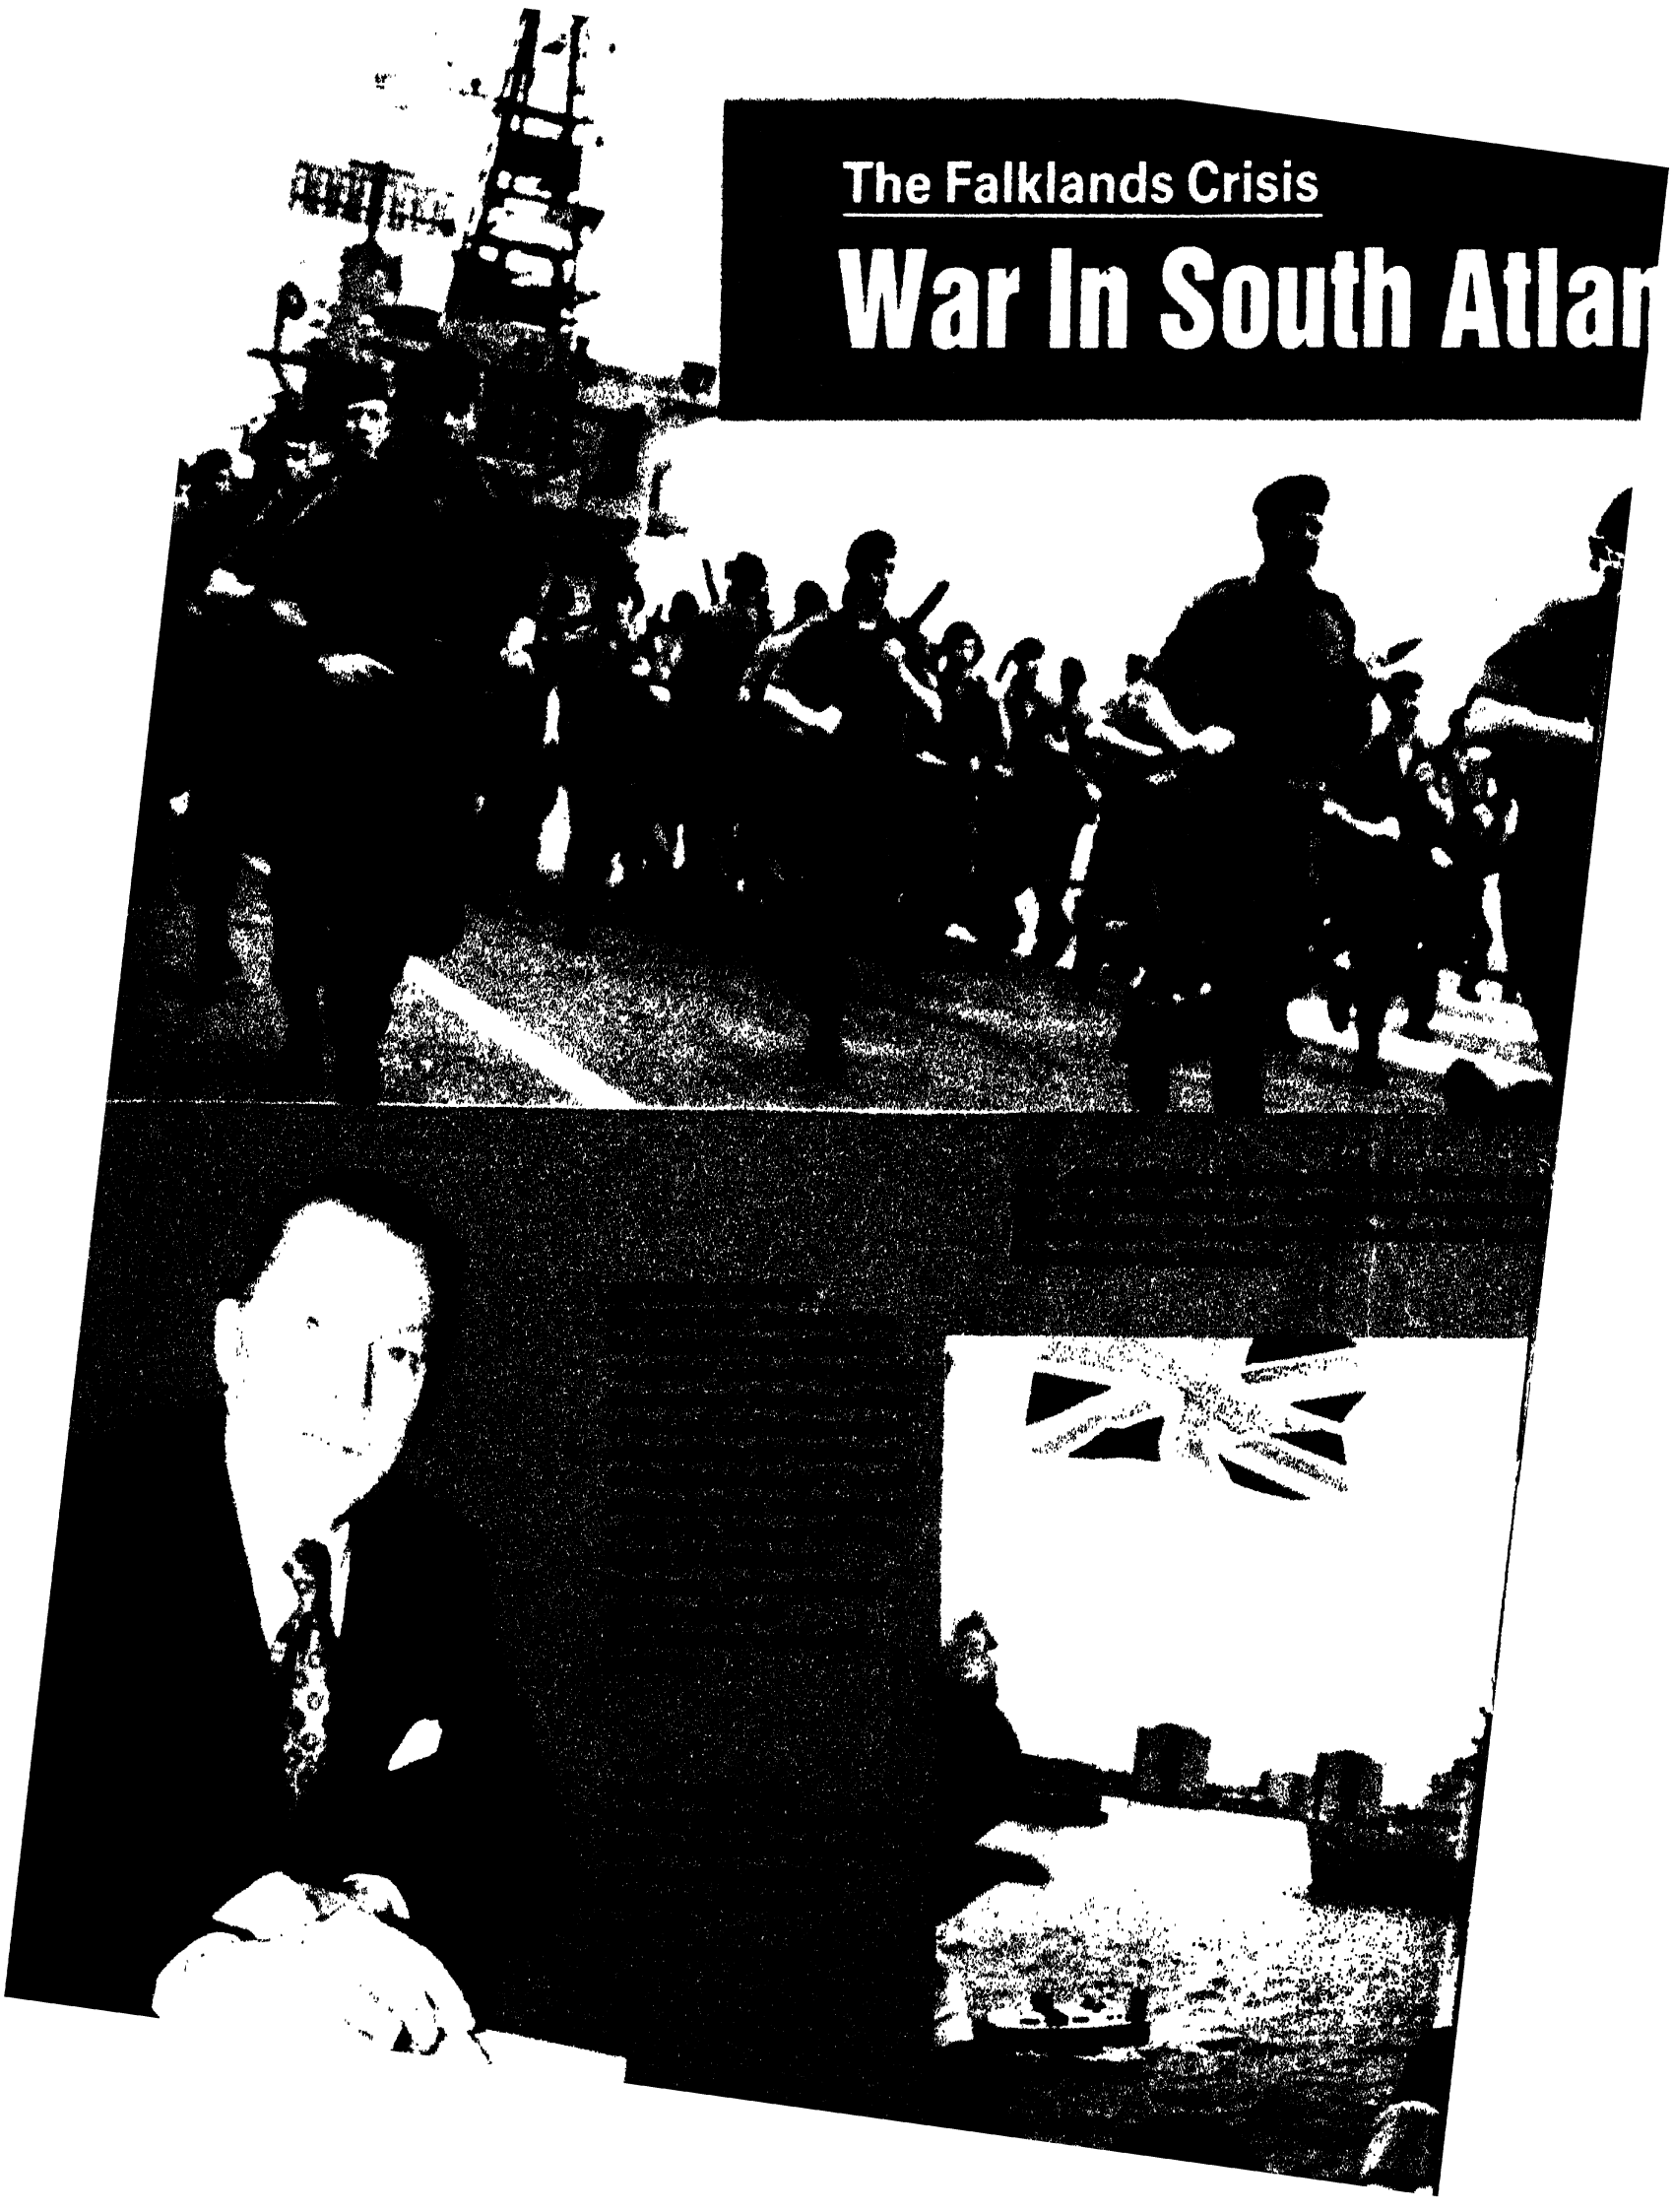
Nehru now had no other alternative but to shatter this reverie of Churchill, Attlee and the King. He openly declared that India was determined to be a republic. To soften the blow, all the Prime Ministers met the King under Attlee's leadership It was, as Attlee said, "the first time, a King had ever had the collective advice of all his Prime Ministers". They told him that his hope was beyond practical realisation In their collective wisdom they submitted that the best that could be done was for the King to be called the "Head of the Commonwealth"

The King heard them out in silence, and his Prime Minister later noted with a touch of pathos: "George VI made not the slightest objection to removing the Imperial Crown from his head—the chief jewel of the British Empire. That is a remarkable fact. It shows the great advantage of having a King who was never static but who moved forward with the times."

The King realised that times had indeed changed. ■

The Falklands Crisis

War In South Atlan



Expensive Games Nations Play

WELCOME HOME?
The Ex-Governor of the Falklands, Rex Hunt, is seen receiving at Gatwick Airport, London, one of the 35 islande who were repatriated by the Argentine soldiers.

Initial diplomatic efforts to resolve the Falklands dispute got nowhere. The US Secretary of State's peace mission and the joint US-Peruvian moves both floundered on the basic issue of sovereignty. Now, the UN Secretary-General has entered the fray. Will it be a case of third time lucky? At the week's end, both Argentina and Britain were in a fighting mood but talking peace. The former has lost a battle cruiser, *General Belgrano*, and the latter one of its modern warships, *HMS Sheffield*. Both countries have suffered heavy casualties. And their economy is in a shambles. While Gen Galtieri has been forced to slap on heavy taxes on liquor, fuel and tobacco to meet the mounting war bill, he can draw some consolation from the fact that support in Western Europe for Margaret Thatcher's bid to punish him for aggression is weakening.
International pressure and the growing demand at home to stop fighting may force Thatcher's hand. But if she compromises on the principle she set out to uphold, it will be a great pity.

by Girija Prabhakar

"We are standing in front of the duchies," said Bismarck to the Austrian ambassador, "like two guests before whom an admirable banquet is spread, but one of them, who has no appetite, sternly forbids the other, who is hungry, to fall to." Superficially, the Falklands dispute would appear to resemble the 19th century problem of the duchies, viz. Schleswig and Holstein. Argentina covets the Falklands Britain does not, at least not to the same extent. The British connection with the islands and its dependencies, especially over the last three decades, has been tenuous at best. Yet, the Argentine invasion on April 2, unleashed a surge of nationalistic pride and self-righteous indignation in Britain.

Running Battle

The battle for paramountcy, however, has been raging for nearly a century and a half. Britain's claim rests on the fact that its citizens have held the islands since 1833. The Argentines question the very legality of this occupation. They also maintain that, on attaining independence from Spain, Argentina inherited Spain's right of sovereignty over the Falklands. Argentina, therefore, claims these islands and its dependencies as an integral part of its territory.

With equal consistency, Britain has been denying the Argentine demand Britain's stand vis-à-vis the Falklands was clearly defined as far back as 1834. Then the British Prime Minister said that his country would not permit "any other state to exercise a right as derived from Spain—which Britain had denied to Spain itself."

The situation in the South Atlantic, now, over a month after the reckless Argentine assault, is both dangerous and uncertain. The British have recaptured the dependency of South Georgia. They have declared a "Total Exclusion Zone" around the islands, as of 1100 hours GMT (16.30 hours IST) on Friday, April 30, and have engaged in fierce fights in the air and at sea to enforce it. They have also bombarded the airfield at Port Stanley, the capital, and Argentine military positions in the Falklands. A British submarine has torpedoed and sunk the second biggest warship in the Argentine Navy. The luxury liner the Queen Elizabeth 2 has been pressed into military service as well It will carry some 3,000 British troops to the Falklands.

Such a tremendous show of force, however, is not without its price. Each day at sea is costing the British Exchequer a couple of million pounds or more. Where will all this money come from? The British taxpayer, quite naturally, is wondering at the wisdom of such an exercise, however "honourable" it may be.

The poser that Thatcher's Government faces, therefore, is whether the interests of 1,800 British subjects, the descendants of convicts—the Falklands were originally a penal settlement—should gain precedence over the interests of the 56 million inhabitants of the British Isles, at a time when Britain is riddled by unemployment, inflation, stagnant levels of production and a difficult balance of payments position.

There is a general unanimity among the English people, that force should not be allowed to resolve any international dispute, and that the Falklanders, like everyone els should have the right to choo their own political destiny. Insofar as the British Government is working towa these ends, it has the unquali backing of the entire nation. T *modus operandi* of the Government, however, has raised serious doubts in the public mind.

The use of force to settle territorial disputes is not new the history of conflict. But victory in war has often led to disaster on the economic fron The Falklands crisis has alrea resulted in the first substanti claim on Britain's contingenc reserve for 1982-1983. A supplementary budget to fina the war effort may be tabled soon. Taxes are bound to go u And deep cuts in public expenditure are likely to take heavy toll of social benefits

Monday, April 5 and Tuesday April 6, saw the exchange rat between the pound and the dollar, at the lowest level sinc 1977. At this stage, a run on t sterling would not only step u import prices and interest rat but also fuel inflation. Win or lose, the Falklands war will result in a severe setback to th nation's limping economic recovery.

High Bill

Keith Speed, former Navy Minister, has suggested that t war bill could be as high as £1 million or £200 million. Small wonder, then, that Tony Benn views the entire operation as a "ill-thought-out enterprise". A early as April 7, Benn called f the withdrawl of the task forc Now, after shooting has broke out in South Atlantic, there ar good many more who subscril to Benn's point of view.

With the lives of British servicemen at stake, there is a growing demand among the Opposition for a negotiated settlement of this territorial dispute. Significantly, even th government's most ardent supporters are now inclined t draw a distinction between th wishes of the islanders about their political future and thei own true interests. The argument is that while the islanders interests cannot be disregarded at the negotiatin table, they cannot be allowed t veto a possible accord for they not know what is best for ther

That's Business

by Our Special Correspondent

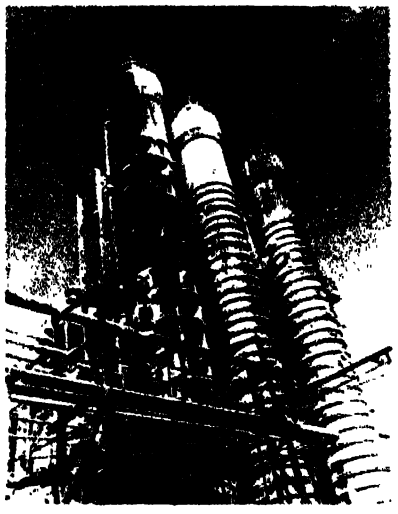
APPOLLO HOSPITALS ENTERPRISE LTD, India's first hospital project to be financed by equity capital and term loans, is expected to start functioning in Madras by July 1983, according to Dr Pratap Reddy, an eminent cardiologist and the brain behind the venture.

Of the equity capital of Rs 3 crore, Rs 1.3 crore have already been subscribed by doctors and businessmen and the balance of Rs 1.7 crore is to be raised through a public issue of shares which opened on December 28. Term loans of Rs 3.29 crore will come from a consortium of banks led by the Indian Overseas Bank. In addition, the American Express Bank in Switzerland will give a loan of 8 million Swiss francs.

Modis Dislodge Dunlop

Judging by the hectic advertisement campaigns, it would seem that the tyre industry is in the throes of frenetic competition among its major constituents—Dunlop India, Modi Rubber, Ceat Tyres, Apollo Tyres and Premier Tyres. This is understandable. While the tyre companies are on the crest of a production thrust, the demand for tyres has receded because of the reduced off-take of vehicles, whose hire-purchase is credit based.

Mr L.J. Tompsett, Managing Director of Dunlop India, says: "A marginal recession in demand together with increased production has led to intensified competition, but there is room for everyone." Without naming his main competitor, Mr K.N. Modi, Chairman, Modi Enterprises, remarks: "We believe in competition and will retain and expand our market irrespective of any multinational."



THE SODIUM BICARBONATE PLANT at Tata Chemicals at Mithapur, Gujarat.

In view of the expectation that the present recessionary phase would end soon, and because of the calculation that exports would continue to grow, none of the companies is inclined to revise its modernisation/expansion programme. The Modis have a Rs 40-crore modernisation programme for their newly-acquired Firestone factory near Bombay. Dunlop India plans to spend Rs 31 crore on modernisation and will raise a part of this finance through a convertible debenture issue. Apollo Tyres has received a letter of intent for a second unit in Ropar district in Punjab. Having acquired a substantial equity stake in Ceat Tyres, Mr R.P. Goenka is pumping a lot of money into his new acquisition. The Niren C. Desai group, which manages Premier Tyres, recently warded off a challenge from nominees of the Kerala Government, which holds 60,000 of the 1.80 lakh equity shares of the company and is chalking out an expansion programme because the company has recently turned the corner.

MR K.N. MODI, Chairman, Modi Enterprises.

The Modis have captured 20 per cent of the market and dislodged Dunlop from the number one position in the industry. With Modistone (actually a new name for Firestone) on the way, they can be expected to increase their lead further. In fact, the growth of Modi Rubber epitomises the entire Modi Group. "Our total assets have increased from Rs 225 crore in 1976-77 to Rs 800 crore at present," claims Mr Modi quietly.

Raw Nerve

Mr Peter Drucker, widely acknowledged as a pundit of business management, has touched a raw nerve among our corporate executives. In his latest book, *The Challenging World of the Executive* he sees legitimacy in a senior executive's salary being 25 times as high as the lowest salary in the company. Although this would be a fantastic proposition in this country, our senior executives have been duly reminded that the ratio of their salary to the lowest salary is, generally, 12:1 before tax and 5:1 after tax.

The views of Mr Pai Panandikar, Secretary-General, Federation of Indian Chambers of Commerce and Industry, are fairly representative of the thinking of

MR PAI PANANDIKAR, Secretary-General, Federation of Indian Chambers of Commerce and Industry.

senior executives. He makes three points. An administratively imposed ceiling is not needed because the corporate structure provides built-in checks, apart from the limitation incorporated in the Companies Act. The ceiling is discriminatory in as much as the professionals have been exempted. It is driving away talent from the corporate sector.

The administrative guidelines of November 1969 pegged the annual salary and commission of managerial personnel at Rs 90,000 and Rs 45,000, respectively. In 1978 the Janata Government lowered the ceiling on salary to Rs 60,000 and on commission to Rs 13,000. Since then the present Government has been dawdling on the issue.

Soda Ash Glut

Ever since the extension of Open General Licence imports under the liberalised policy for 1982-83, various industries—prominent among them being soda ash, POY (partially oriented yarn) and PVC resin—have been complaining about dumping by overseas producers. The latest cry of distress comes from Mr Darbari Seth, Chairman of Tata Chemicals, who recently informed the annual general meeting of the company in Bombay that its soda ash production in the first six months of 1982-83 dropped by 3.5 per cent. There is, however, good

MR DARBARI SETH, Chairman, Tata Chemicals.

news for Mr Seth and others who are similarly sore over reckless imports.

The Customs Tariff Act, which already provides for a countervailing duty under Section 9, was amended during the last session of Parliament to also bring in an anti-dumping provision. Officials at the Commerce Ministry disclose that the necessary rules are being drafted and that a notification giving effect to the provision will be issued "in a couple of weeks".

The anti-dumping provision would be invoked after it is found that the differential between the import price of an item and its indigenous price is not off-set by the countervailing duty. An investigation would be made into two aspects: whether the import price is below the prevailing international price; and whether the indigenous industry is being "injured". It is a measure of the Government's tardiness that though it has been under an international obligation to introduce an anti-dumping law since 1973-74 (when it participated in the Tokyo Round of GATT), it has moved in the matter only now—after so much domestic hue and cry.

The ex-factory per tonne price of the light and heavy varieties of soda ash produced by Tata Chemicals is Rs 2,198 and Rs 2,300, respectively. The corresponding prices of the imported Bulgarian soda ash are $90 and $120. Thus, even after a combined customs and auxiliary duty of 120 per cent, the imported soda ash is cheaper. Irrespective of whether the Bulgarians are dumping or not, the question arises whether Tata Chemicals could reduce both their cost of production as well as profit margin. Consumers of soda ash have, in fact, been complaining against Tata Chemicals, a notable voice being that of Mr Taktawala, President, All-India Glass Manufacturers Federation.

Do We Need Robots?

Notwithstanding the spectacular success of the Japanese in the field, industrial robots would be a superfluity in a labour-surplus country like India. Nonetheless, a few companies have been developing this technological monstrosity, which would be on display at the fifth Indian Engineering Trade Fair being held at New Delhi's Pragati Maidan from January 19. Other attractions are likely to include "electromobile", an electricity-powered vehicle, and an irrigation pump run on solar energy.

The ten-day fair is being organised by the Association of Indian Engineering Industry. Mr Gurpreet Singh, Managing Director, Continental Device India Ltd, and Chairman of the Trade Fair Committee, talks of a two-fold purpose. One, to provide a comprehensive view of India's engineering capability. Two, to promote transfer of technology to India. In addition to the wares of about 150 Indian companies, which include prominent names from the public and private sectors, there will be a "technology transfer show-window" for foreign companies. The response from abroad, according to Singh, has been satisfactory, except for the Japanese disinclination to participate.

The timing of the fair shows clever coordination. Since the fair will broadly synchronise with the Indo-EEC conference (January 16 to 18) and the UNIDO energy conference (January 24 to 26), it should be able to attract a correspondingly larger number of foreign industrialists and technologists. It will be an occasion to talk this over with "delegations" from Britain, Canada, West Germany, Belgium and Hungary. Symposia are also planned on different aspects of technology. ■

MR GURPREET SINGH, Managing Director, Continental Device India Ltd, and Chairman, Trade Fair Committee.

Shaping a better tomorrow. Faster.

That's exactly what HM TEREX equipment does. You can see them in action at vital irrigation and power projects, at Coal and Iron-ore mines increasing the productivity. At Fertilizer and Cement plants for super-fast handling of material.

At giant construction jobs keeping the schedule. HM TEREX Earthmoving Equipment is built to international standards and is backed by dependable after-sales service anywhere in the world

It Can Be Cured

Stammering In Children

by J. P. Gupta

WHEN you see a blind child your sympathy is aroused, when you see a crippled child you pity him, but a child stammering or stuttering with a straining facial expression often evokes laughter. Stammering is the inability of an individual to express his thoughts and feelings fluently in words and phrases. It is his faulty speech that makes him hesitate and then try again and again to produce the sound or word he wants to use. There is a sudden stoppage at a syllable or sound for a fraction of a second or many seconds, at the end of which the sound emerges explosively. Stuttering is also basically similar.

However, it is important to understand, that stammering is not a disease, but is a progressive disorder—a result of faulty feedback. It denotes certain peculiarities of speech. The child utters a few words, is overwhelmed by the sounds of his own voice and starts to falter. He speaks so slowly with a pause at every word that the person hearing him loses patience. In stammering there is repetition of syllables or sounds till the desired word is pronounced. There may be spasmodic contractions of lips, tongue etc, and due to lack of coordination between the muscles of the respiratory organs, voice box and jaws the first letter of a word may be repeated several times, and the word may be pronounced like p - p - p - a - pa - papa, or the mouth may be wide open saying a - a - a - a - a - before pronouncing the word. Some may be so suddenly struck that no sound comes out at the beginning at all, or in the middle of the conversation. Hesitancy over a particular syllable, word, or a long sentence produces a permanent impression of tension and fear on the mind of a stutterer or stammerer. So much so, that he starts anticipating the "block" which makes him even more nervous. Therefore, instead of slowing down he hastens to overcome the "block". These "blocks" are of only 2 or 3 seconds duration, yet in the presence of a dominant personality the resultant time pressure multiplies. He feels guilty for delaying his listener and attempts to camouflage his handicap by moving his eyes, face, neck or hands and legs. This faulty expression of speech is not due to any organic defects requiring surgical treatment, it is more the outcome of an inner mental conflict of the afflicted person.

Why Do They Stammer?

Stammering is usually the result of nervous shock, or terrifying experiences in early childhood. Sometimes surgical operations for cataract, adenoids or the after-effects of whooping cough, measles, influenza, rickets etc can cause shock. Fear, strain and exhaustion also lead to faltering or defective speech. Some of the factors which lead to stammering in children are:

* Jealousy with the arrival of a new baby in the family. Loss of exclusive attention can cause a trauma in the first born.
* Harsh discipline and corporal punishment puts a great strain on the child and can lead to faltering speech.
* Expectation from a child much beyond his talents and capacities subject the child to a great deal of anxiety due to which he may begin to stammer while expressing himself.
* Sudden and forcible discontinuance of long standing habits such as sucking the thumb. The child may take to stammering as an escape mechanism. Also, left-handers sometimes start stammering when they are compelled abruptly to use their right hand.
* Sharp rebukes, constant scolding and stopping a child from participating in a discussion with elders can cause him to stammer. (The words literally remain half-spoken.) This conflict can have a lasting effect. Because of past experience, when he wants to speak he swallows the words. This sequence of intense desire to talk, the conflict, fear and gulping of words make a sensitive child prone to improper expression.
* Sometimes mocking a stammer (or the constant companionship of a child or adult who has a speech defect) leads to the habit of stammering in a child.

Cure It With Care

Some faltering in speech is nothing to worry about. The child must not be made to feel that his speech is making his parents concerned and worried. Do not tease the child or make fun of him or ridicule him, or punish him, but help him get his confidence restored. Coaxing, urging, ordering to talk before the child is ready, showing displeasure or disappointment when he fails to respond make him uncomfortable and he wants to draw away. He may develop a dislike and resistance to any improvement. It is very difficult to break his resistence if you good him to that stage.

The intial step is to look after the child's physical and mental health. Most of the stammerers are anaemic and nervous. Proper medical check-up and necessary treatment is the first essential step in the treatment of the stammerer. Many stammerers suffer from cramps of breathing muscles or they breathe in hurried gasps or they let out almost all their breath before each sentence or phrase and then spell the sentence or the phrase slowly in one breath. Such a person should not let out his breath before speaking. There should be no breathing in the middle. Introducing melody in conversation, giving exercises in reciting the alphabets several times in one breath, trying to say as much as possible of a poem at a stretch, all this, can help.

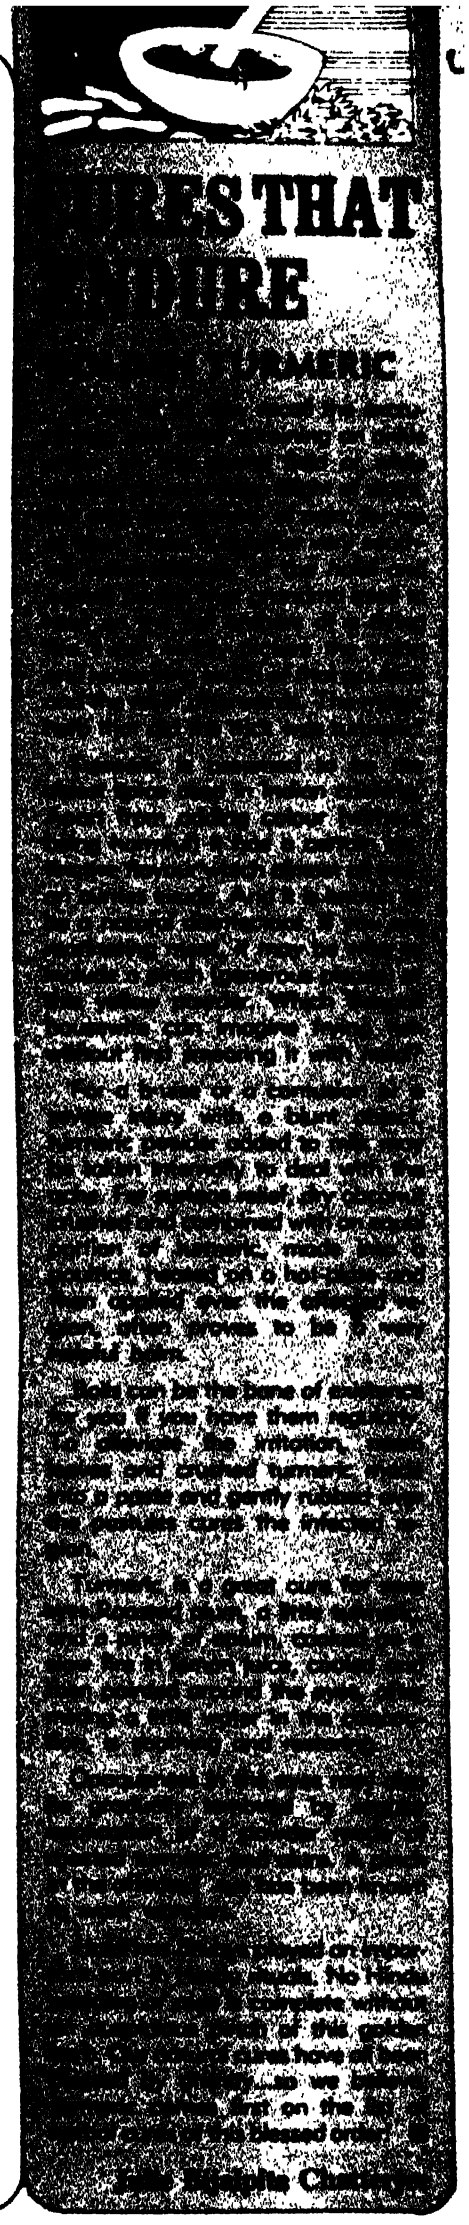
The cooperation of parents in the treatment is equally important. When a child stammers do not reject him, listen to him and speak patiently. Do not check him or correct him at every step. Your calm will reassure him. A stammerer needs practice in making mistakes rather than in talking smoothly. Give him more and more opportunity to talk. Do not insist on correct behaviour and correct speech at all times. Reinforce his confidence by saying kind encouraging words. The child needs to convince himself by experience that he should continue to move forward inspite of errors in his speech. Your fair, frank and affectionate treatment will encourage him to improve

At first the child should be given exercises in proper speaking in exclusive privacy, the number of observers and participants may be gradually increased Your warm outgoing attitude and an easy verbal give-and-take with those around, contributes immeasurably to the speech of the child who stammers—if you can draw him into the conversational circle Let him say a few words on common topics such as the weather, or relate a story in his own words, or deliver a speech whether memorised or extempore. This gradually developes his ability to communicate.

Another way of developing confidence is to sing with the stammerer and by and by to withdraw leaving the child to sing alone. Blowing bubbles and balloons and whispering are also helpful in strengthening the child's confidence and in making him feel that he is doing something to overcome this uncomfortable habit.

The child who is ashamed to speak must be encouraged to speak. Take him to picnics, and places of interest, give him some responsibilities, and most important of all, let him express himself. If he is excessively voluble, stop him gently Stammerers without exception talk too rapidly. Exercises in slowness—in slowing down the speed of their speech, reciting poems or in conversation—should be given to such children.

Reading aloud can also help the child overcome his speech defect. Some friend may read out from the text of a descriptive passage and the child speaks along with him, without looking into the text This means that the stammerer has to listen very intently and to repeat it. The friend should go on reading, and should not give the child time to think so that he has to concentrate first on listening and then speaking and catching the next words and so on Another method is to have the stammerer read aloud from the text and write down the words at the same time. The two things have to be done simultaneously. This requires great concentration and also slows down the rate of speech. You might have heard of the Irish boy, Curin, who was a stammerer in his childhood, but through regular practice of speech therapy became a very fluent speaker. Even more celebrated is the case of Demosthenes the "silver-tongued" Greek probably the greatest speaker of them all. He began as a stammerer and cured himself by learning to speak with pebbles in his mouth! No stammerer is a hopeless case. Some time he will improve with a good deal of effort and a little help from his friends!



Ambitious? Then get a qualification—put some letters after your name

In a business world that more and more demands expert knowledge and *proof* of what you know, there's only one certain way to give yourself a well-paid, interesting and *secure* future; get a recognised professional qualification, with some letters after your name. This will put you out in front and open up a whole new world of opportunity.
You could do this at West London College in just 12 months, even if you don't have the normally essential GCE passes. (Our Basic Business Certificate would make you eligible for the 1-year ABE Diploma Course (for the internationally recognised MABE qualification, awarded by the Association of Business Executives)

EVEN A DEGREE?
If you wanted to, you could then aim at the ABE Advanced Diploma which would make you eligible for a Master's Degree at a U.K. University.
What interests you? Accountancy? Banking? Computing? Management? Administration? Marketing? Export and Shipping? Catering? Secretarial? 'O' and 'A' level GCEs? Whatever your interests and ambition, you would be in the hands of experts at West London College — skilled and experienced teachers who can take you by the most direct and time-saving route to a recognised qualification. Course fees start at £900. Registration fee £25. Write today, without obligation, for your free illustrated prospectus

THE GATEWAY TO SUCCESS

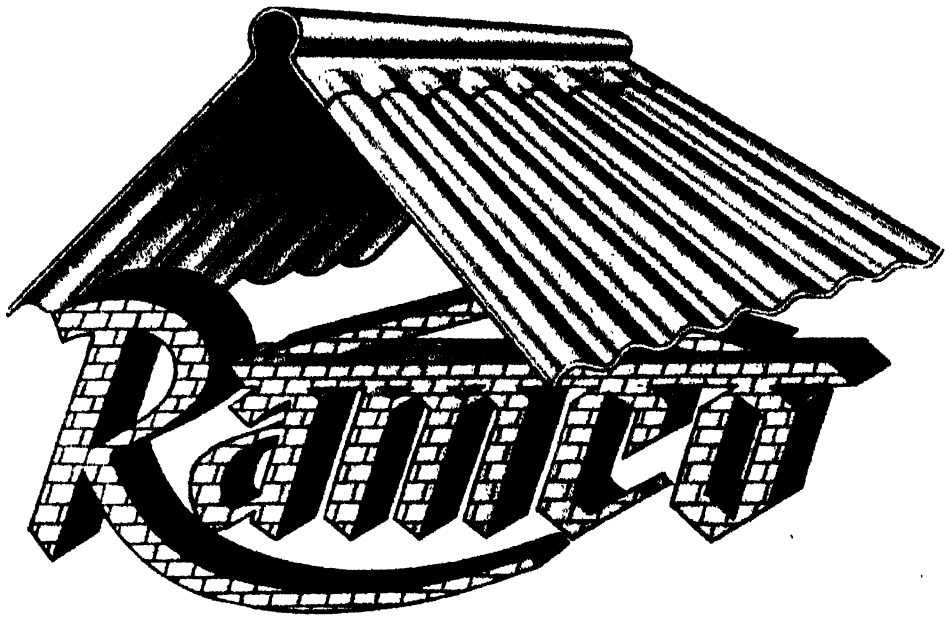
What do you call a roof that's more than a roof?

THE TOP ROOF



The Ramco Roof: it's tops with the best builders in the business. The reasons?
Ramco asbestos cement sheets provide permanent protection with economy.
With superior production technology and a high degree of quality control, Ramco asbestos cement products have stood the test of time.
That's why Ramco asbestos cement products are the choice of Government departments, public and private sector undertakings and top-ranking contractors.
The top asbestos cement roofing material today is Ramco — The Top Roof.

Ramco **More than a roof- permanent protection.**

The Third Eye

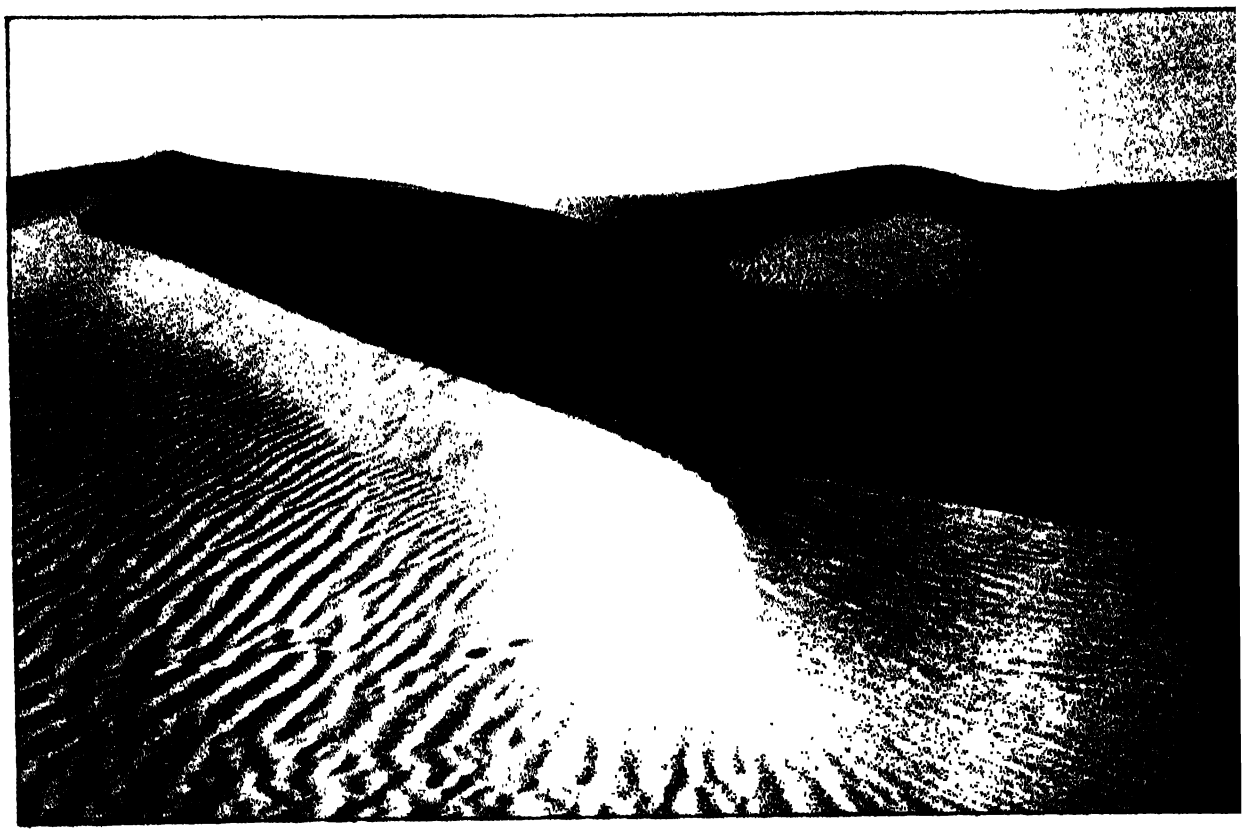
The Dancing Desert

Photographs and Text by Shivji

I AM deeply fascinated by the desert. For me, it is not merely an ocean of sandy ripples but lively poetry dancing to the rhythm of light and shade. Photographing the desert is, in a sense, photographing nature in the buff.

Though desert photography is exciting, it is also very difficult. One has to appreciate the fact that the desert is not inert but dynamic and mobile. It never ages; it has a fresh, new face every morning. The right time to capture its "dancing mood" is an hour and a half after sunrise and before sunset. March-April are the ideal months for sand-dune photography. No matter how many times I photograph the dunes, I am always thirsty—like the desert—to go back again.

I work as a lecturer in philosophy in Bikaner and have had over 200 pictures published in various magazines all over the country.



It was Wednesday. I felt like the cat's whiskers.
I had said all the right things and done all the
right things all day. Everything decided. And she
could see the glint of mischief in
my eyes. Envy. Admiration. All green
for Mr. Cat's Whiskers.

A T&T Product

Hotelier Extraordinaire

From a small Indian boy selling newspapers in Hong Kong, Hari Harilela has come a long, long way. He is reputed to be one of Hong Kong's wealthiest men today and it is rumoured his home is paved with gold.

by Ellen Chau

NO one knows the extent of his riches, but he is reputed to be one of Hong Kong's wealthiest men. He owns a number of hotels and trading companies, and his house is rumoured to be paved with gold. Yet, when it began, he was just a small Indian boy selling newspapers in a city thronged with Chinese.

His name is Hari Harilela. Together with his five brothers, he runs a business empire encompassing hotels, restaurants, import and export companies, finance companies and real estate agencies. But the hotel industry is his mainstay. His hotel interests extend from Hong Kong throughout Southeast Asia, and three more—in Macau, Singapore and Penang—are due to open in 1983.

Despite the fact that he has a multitude of titles and extensive influence, he is a modest, polite and unbelievably approachable man. His easy manner and gentle way of speaking suggest nothing of the hardship and struggle of his youth. The only hint of his unusual ability lies in his eyes which are sparkling, quick and alert.

Palace For A Home

On the afternoon I interviewed him, he listened to my questions attentively before answering in fluent English—until I discovered he is equally at home with Cantonese. He talked freely about his past, his business, his philosophy, his family. Before I left, I received an invitation to his almost legendary residence to see a performance by the Bhutan Dance Troupe, which was visiting Hong Kong for the Asian Arts Festival. Mr Harilela explained that he was entertaining the troupe in his capacity as Honorary Consul for Bhutan in Hong Kong.

The Harilela mansion sits on a broad avenue in the elegant Kowloon Tong area. Outwardly, its lofty architecture resembles that of a church, but its commodious size strikes neighbours as rather more like a hotel. As the visitor steps through the iron gates, he is greeted by a large mosaic of Indian court life, part of the outer wall of the house. Inside, two identical fountains play on either side of an enclosed white marble courtyard, in the cool depths of which stands the serene figure of a goddess. The slightest sound echoes up to a series of open galleries, while a marble staircase, descending glacier-like from the floors above, perfectly punctuates the classical symmetry of it all.

Leading off to one side is the magnificent parlour. There, one can find giant-sized chandeliers, ornate gold partitions, heavy carpeting and exotic decorations in quiet corners. Servants go about their work noiselessly; the ambience is that of a palace.

Altogether, there are 40 bedrooms, 20 garages, a swimming pool and innumerable *objets d'art* inside the complex. The sheer opulence of Mr Harilela's home sets one wondering how an Indian who arrived as a stranger in this foreign city made such a success of his life.

"To be successful is like cooking food—you need to have the correct ingredients," he states. "These include patience, hard work, sincerity of intention, optimism, standing firm in times of failure and never swaying from your target."

Hari Harilela draws his conclusions from his own life's story. The second son of a jade merchant, Hari was born in Hyderabad, Sind, in 1922. He moved from India to Canton with his family at the age of seven. From there they moved on to Hong Kong. The global depression in the '30s forced his father out of business, and the children, living comfortably until then, suddenly needed to supplement the family income by hawking in the streets.

It was a gloomy period. Young Hari became a newspaper vendor, and later an office boy, at a time when he could reasonably have expected to be in school. But the fortunes of the family turned for the better when they had saved enough money to set up a silk store. Then everything ground to a halt when World War II broke out.

After the War, the silk business was resumed and they also managed to obtain the contract to supply food to the British soldiers. But Hari was the first to see a profitable link between the Korean War and the increasing number of American troops stopping over in Hong Kong on their way to and from Southeast Asia. He set up a tailoring shop that sold almost instant custom-made suits. "My brother and I would measure them in the evening and deliver the suits by morning," he recalled. Hari was on his way, and wealth has accumulated rapidly since then.

But while the family was counting its blessings, Hari was already seeking ways to diversify. Despite family opposition and lack of support, he turned to real estate and made his first million dollars in 1957. From then on, he involved himself in different fields of business: import and export, real estate, finance, restaurants and hotels. Some estimates two years ago put his wealth at around $400 million. whether this figure was accurate then, or has doubled by now, Mr Harilela is simply not saying. "Let them guess," he says in good humour, trying (not very hard) to suppress a smile.

—Paul Barbello

A TAILOR-MADE SUCCESS. His easy manner and gentle way of speaking suggest none of the hardship and struggle of his youth.

Cosmopolitan Outlook

Besides his personality, Harilela's success is very closely related to Hong Kong's favourable economic environment. To encourage trade, the Government maintains a *laissez faire* policy, allowing easy movement of money and goods. Anyone aspiring to start up a business needs only to register with the authorities and he can open up shop in just a few days. As for tax, it is low and simple: 15 per cent for individuals and 16.5 per cent for corporations. Hari Harilela says he has to admit that it is doubtful he could have achieved such success in India.

After so many years away from his home country, Mr Harilela has acquired a cosmopolitan outlook—but he has not forgotten his Indian origins. At home, he speaks Sindhi as well as English and Cantonese; he is a devout Hindu; and while guests of various nationalities may be invited to his parties, Indian friends are a must. "I always ask my countrymen not to isolate themselves. They should cultivate friendships with people other than Indians. But they are so shy!" he explains. For his contribution to society, he was awarded the honour, Most Excellent Officer of the Order of the British Empire, by the Queen.

"Life is beautiful. Every day it unfolds a new chapter," comments the irrepressible magnate. He says he finds the greater comfort not in money, but in his faith. He has a temple in his house, and pictures and statues of Indian deities are prominently displayed in his office. "Religion keeps my mind peaceful," he says.

As for money, he admits it is essential, but the most important thing with money is to know how to control it, and not become a slave to it. "One should be rich at heart," he advises—and he donates generously to charitable bodies in Hong Kong and India.

As a man who has built his fortune on hard work, he maintains a very work-oriented lifestyle. He rises at 6.30 every morning, chats with the children of the household—his own children, nieces, nephews and grandchildren—and sees them off to school. Then he practises yoga. He normally works in his office until 7.30 in the evening, followed by appearances at cocktails or dinner parties with his wife, Padma. His indulgences include his twice-a-week badminton sessions and trips out of Hong Kong. A self-made man, he proudly tells you he is studying law and now wants to learn to write in Cantonese.

Although he recently celebrated his sixtieth birthday, the thought of retirement seems distant to him. "I will not retire," he said determinedly, "but I would like to reduce my work load gradually."

The "1997 question" underlying the future of Hong Kong is disturbing many people. But not Mr Harilela. "I am confident about the city's future," he says. "Hong Kong is like a large international department store. It is an ideal place to do business. I do not see why anyone would want to change that position." Indeed, success makes unbeatable logic when he speaks! ■

Kahlil Gibran:
The Lebanese Vates

by Hari Prasad Nayak

Why do you invade my country and try to subjugate me for the sake of pleasing those who are seeking glory and authority? Why do you leave your wife and children and follow death to the distant land for the sake of those who buy glory with your blood and high honours with your mother's tears? Is it honour for a man to kill his brother?

—Kahlil Gibran

LEBANON, the land that has produced many prophets, is in ruins. The invasion of Lebanon has wrought drastic changes in the already complex Middle East situation. The repercussions of Begin's blitzkrieg are sure to have their effect in the years to come. To a great extent, the chances of peace in the region depend on the future of the PLO. Warns the *Sartawi:*

The Palestinians will not easily forget the extent to which they were deserted.

At such a time, when tension increases and threats are hurled like missiles, we remember Gibran, the poet of peace, born in Bsherri, a beautiful town situated in the picturesque valley of North Lebanon—which is reduced to waste and rubble today.

Kahlil Gibran, fortunately, was born a hundred years too early and lucky enough to have escaped the heartbreak of the recent Lebanon crisis. During his student days, he used to write poems in Arabic, which became very popular later. Gibran wrote a book of stories, Al *Arwahulmutmarrid,* his first major work in Arabic, which was published in 1902. Known as *Spirit Rebellious* in its English version, Gibran painted the ignominious character of the priests as vividly as only he could. He depicted how ordinary people were victims of religious hypocrisy and showed great boldness and insight into human nature through his satiric Bosch-like portraits.

The book depicts the tyranny prevalent during the Turkish Empire and the publication of this book angered the Church and stirred the Empire. It may interest the reader to learn that, due to considerable agitation and intrigue, all the printed copies of this book were burned in the market-place of Beirut by furious Church and State officials. Gibran was excommunicated and called a heretic and was forced to leave Lebanon for Boston.

Priceless Legacy

He carried with him a priceless legacy however—the manuscript of *The Prophet,* which he had contemplated at 15. At that time, his mother had told him: *It's good work, Kahlil , but the time has not yet come. Put it away.*

In 1908, Gibran went to Paris. Here, he came in touch with the great Auguste Rodin. Gradually, Gibran evolved a mode of expression in art which attracted Rodin—so much so that, when Rodin desired his own portrait painted, Gibran was commissioned to do it. It was Rodin who later called him *Blake of The Twentieth Century.*

His Most Widely Read Work

The most widely read of Gibran's books is *The Prophet.* The preparation took nearly a quarter of a century and the book was finally published in 1923. Absolutely free from any turgidity of style or content, it abounds with allusions and parables. His thinking on such simple domestic subjects as *Children*

Your children are not your children
They are the sons and daughters of life's longing for itself.
They come through you but not from you
And though they are with you yet they belong not to you.

Giving:

You give but little when you give of your possessions.
It is when you give of yourself that you truly give.

Work:

Work is love made visible.

Laws:

You delight in laying down laws
Yet you delight more in breaking them.
You can muffle the drum, and you can loosen the strings of the lyre, but who shall command the skylark not to sing?

All this brings to mind the vivid imagination of another genius, Dante, who realised, like Gibran, that the larger philosophical questions in life have their answers hidden in the simple home-truths of suffering and sorrows. As *Claude Bragdon* saw it: *His power came from some great reservoir of spiritual life, else it could not have been so universal and so potent; but the majesty and beauty of the language with which he clothed it were all his own.*

The Prophet is an epic concerning the basic relationship between man and man. George Russell points out: *I do not think the East has spoken with so beautiful a voice since Tagore in* Gitanjali.

Andrew Ghareeb collected and translated into English some early poems of Gibran written in Arabic and these were published on October 8, 1934, under the title: *Prose Poems.*

Nymphs Of The Valley is also an English translation of Arabic stories, translated by H.M. Nahmad. So are *The Voice Of The Master, Thoughts And Meditations* and *Spiritual Savings.* There is a famous book, *Al Badayin Wal Tarayiff,* which means *Beautiful And Rare Sayings.* This volume contains the drawings of pre-Islamic poets and writers. Conjured up entirely from imagination, when Gibran was 17 years old, they betray his fondness for form and perfection of line.

A Tear And A Smile is the English translation of the Arabic title: *Dam Atun Wab Tesamatum. The Child Jesus* is one of the finest pieces in this collection. *Tears And Laughter,* another English translation, is more on an Eastern note, however, than his later works. This is probably because he was writing this collection for his countrymen at home and abroad. Perhaps it is the last book Gibran had written in Arabic.

Kahlil Gibran: The charismatic poet

It was in 1918 that *The Madman,* the first of Gibran's books in English, appeared. Almost all the parables in the book are statements against hypocrisy, spritual blindness and stupidity prevailing in society. This book is entirely the product of an Eastern mind, with no shades of Western thought or content. It was received very well by readers and the first edition was exhausted within a very short period; and, due to the French, German, Italian and Spanish translations, Gibran became widely known to the Western World.

After the exaltation of *The Madman, The Forerunner* was published in 1920, a book of wider vision and deeper wisdom, together with warmth, tenderness and compassion, all blended in with a touch of masterful irony. *God's Fool* is one of the most touching and beautiful tales among all the parables in this collection.

Divinely Informed

Jesus, The Son Of Man, published in 1928, is a kind of gospel according to Gibran and it came into existence by chance. Here, Jesus is not a hypothetical proposition, but is regarded as the most humane, enlightened and divinely informed being who ever visited the Earth. Basically exploiting the theme of the relation between man and man, *The Garden Of The Prophet* was published in 1933.

Lazarus And His Beloved was the last book by Gibran to be published in 1933. It is a one-act play which is the first and the last work of this type. This work was read in a private celebration of Gibran's 46th birthday at the *Ashram* of Jose Clamante Orozco, the Mexican painter, on January 6, 1929. Claude Bragdon, Sarojini Naidu and many other literary stalwarts witnessed the performance.

Gibran could paint with his brush as adroitly as with his pen. His book of *Twenty Drawings* was published in 1919. All the drawings are beautifully allusive and depict a sensitivity and deftness of form that made Gibran a well-known painter in the Arabic world. In terms of time, Gibran lived a very short life, but he neither lived nor thought in terms of temporal barriers. Although a staunch admirer and worshipper of beauty, he enjoyed celibacy throughout his life.

An Artist First And Last

Gibran was an artist first and last. His life was simple, his living saintly. Today, Kahlil Gibran, the prophet of Lebanon, is long dead but Gibran is more alive to us than ever through his glorious works.

On August 21, chanting *Revolution, Revolution, Until Victory,* the Jordan- and Iraq-bound deportees boarded 13 Lebanese Army trucks and the city echoed with the shattering cracks of gun-fire as truck convoys carrying PLO evacuees wound through homeless, hungry multitudes. One cannot help recalling the description in T.S. Eliot's *The Waste Land:*

These fragments I have shored against my ruins
Why then Ile fit you. Hieronymo's mad againe
Datta Dayadham Damyata
Shantih shantih shantih.

Gibran mercifully is not alive today to see the outrage performed on his homeland; but there is little doubt that the earth-shattering roar of bombs would have awakened him and he must indeed be turning in his grave! ■

Facts about BHEL-Tiruchi

BHEL-Tiruchi was set up in 1963 to manufacture steam generators, auxiliaries and valves with an initial capacity of 750 MW and an investment of Rs.24 crores. Today BHEL-Tiruchi has grown to 4000 MW at an investment of Rs.100 crores. An Auxiliaries Project at Ranipet for manufacturing boiler auxiliaries at an estimated cost of Rs.32 crores is being set up as a satellite plant. These projects will be completed in 1983-84.

The value of out-turn today stands at Rs.350 crores and is expected to grow to Rs.500 crores in the next two years. The man-power growth has also been impressive and totals to 13,000 with 5,000 trained technical personnel and 8,000 skilled artisans and other employees.

Wide range for wide applications

BHEL-Tiruchi has contributed in a major way in supplying boilers, auxiliaries to a number of power stations in the country. Totally 98 steam generators have been delivered to power stations totalling to 13,250 MW of which 86 nos have been commissioned totalling to 11,340 MW. In the Industry sector, the number of steam generators supplied to Fertilizer, Refinery, Chemical, Steel and other plants is 101 out of which 94 have been commissioned.

The product range of BHEL-Tiruchi is versatile; the capability exists to produce boilers ranging from 6 t/hr to 1700 t/hr, besides valves for various applications, and seamless steel tubes. With the creation of adequate capacity, BHEL-Tiruchi is in a position to meet the tight delivery requirements of customers. Singrauli 210 MW boiler was commissioned within 48 months of the Letter of Intent.

BHEL-Tiruchi has a very well organised after-sales-service set up. It is a well known fact that due to continuous interaction with State Electricity Boards and CEA, the power output from its sets considerably increased and several stations such as Vijayawada, Parli, Nasik and Ukai achieved PLF ranging from 85% to 99.9%. The forced outage due to BHEL-Tiruchi boilers has been halved to 5.8% in 82-83 compared to 80-81.

BHEL-Tiruchi uses computers extensively in all its areas and operations. As a result of intensive monitoring of various on-going power projects where BHEL-Tiruchi boilers are involved, supply of boiler components have considerably been speeded up. Continuous interaction with CEA and Electricity Boards is maintained to ensure that work at no site suffers by resorting to alternate methods of continuing construction work at sites.

Research and Development

Recognising the importance of Research and Development in the complex technological areas like boilers, a full-fledged R & D Laboratory set-up has been organised. The total investment in the R & D complex in BHEL-Tiruchi is Rs.5 crores and today 560 qualified technical personnel are employed in the various phases of research work. Pioneering work in the area of coal research, welding, pollution control and energy conversion systems is going on.

Ancillary development

Starting in a small way in 1970, BHEL-Tiruchi has played a significant role in developing ancillaries. An indigenous development programme has grown to massive proportions with over 33(units engaged in Tiruchi and other districts of Tamil Nadu and even outside the State to deliver 60,000 tonnes of finished materials to various sites. The total employees in these ancillary industries today stands at 12000. An Indigenous Development Cell has started functioning with a specified objective in promoting entrepreneurs to take up manufacture of components which are hitherto being imported.

Responsibility of corporate citizenship

In addition to the welfare measures provided to the employees like free medical aid, subsidised schooling, housing, canteen facilities etc, BHEL-Tiruchi has also been actively engaged as a responsible corporate citizen in promoting the welfare of the adjoining communities. The welfare activities include a centre for providing employment opportunities to economically backward women, running of a school for mentally retarded children, the adoption of a village nearby and providing basic amenities like drinking water, sanitation and other facilities and training the rural people to absorb certain technical skills.

The Weekly Pick

Light Me A Candle

Rita Wiesinger-Ferris, Shakuntala Publishing House

Women's lib...so much talk and so little done. Its only when a book like this is published we realise the true meaning of the concept for what it is worth!

The author's two years of literacy campaign and adult education work among the women of Khuziston, Iran, finds succint expression in this interesting compilation of experiences. *Some pages from my diary* makes arresting reading. The sheer poverty of the women at Dezful and their lack of amenities makes the reader appreciate the necessity for education in the region

The Rebel Bureaucrat

Edited by Peter Penner and Richard Dale MacLean, Chanakya Publications, Rs 120

The Indian Civil Service has not produced many rebels—Frederick John Shore, was perhaps one of the earliest ones (1799-1837). The articles included in this edition are well selected and bring to the fore the exploiting character of British rule in India. Shore's observations are refreshing, perceptive and candid. The style is direct and the information enlightening. Much ignored and neglected previously, at last the book is published.

The Scent Of The Roses

Mary O'Hara Fontana, $ 5.95

The pangs of growing up and then losing her mother at 17 are some of the more poignant memories recalled by the author in her sketches about her life. Her illustrious career as a singer and harpist and the subsequent tragic marriage to Richard Selig the poet, her human indecisiveness between joining a monastery and leading a normal life—all this is beautifully evoked with sensitivity and intelligence.

Stormy Decade

Balraj Madhok, Indian Book Gallery, Rs 45

The book is a fairly in-depth study of the political events between the two General Elections of 1971 and 1980.

Balraj Madhok is a well-known political commentator and national leader since 1947.

If you want to be a choosy reader, (though unsystematic) the chapters *Emergency, Harakini by Jan Sangh* and *Zero to Hero* are some of the chapters worth reading.

Julie

Amitabh In *Amitabh?*

Amitabh Bachchan is being immortalised with a movie being named after him. A film production concern has registered the title "Amitabh" with the Indian Motion Pictures Producers' Association. Whether the superstar will himself act in the movie is being hotly discussed in the city's cocktail circles.

—The Daily

Cutting Antony To Size

Originally, Joseph L. Mankiewicz's *Cleopatra* was to be released as two pictures. But when Darryl Zanuck took over Twentieth Century Fox from Spyros Skouras, he drastically reduced Richard Burton's role in the film because he couldn't understand why Mark Antony let Cleopatra dominate him so totally. Said Zanuck: "If a woman ever treated me like that, I'd cut her balls off."

Paging Dr Freud.

—The Guardian

Shavian Wit

Samuel Goldwyn of Metro-Goldwyn-Mayer finally met his match in George Bernard Shaw. The Irish playwright was not interested in Goldwyn's proposal to film some of his plays. But Goldwyn persisted. "Think, Mr Shaw," he said. "Think of the millions of people who would have the opportunity to become acquainted with your art."

"Ah, Mr Goldwyn," said Shaw. "You think only of art, while I think only of money."

— The Times Of India

Sholay On Channel 4

Here is the *Sunday Times Magazine*'s description of *Sholay* for English audiences who saw it on the controversial new Channel 4 at 1.20 pm on Boxing Day: "Gigantically successful Indian film in which its heroes fight like James Bond, Bruce Lee and John Wayne, and can also stop action to perform a full-scale musical number, Busby Berkely style."

— Mid-Day

Cinematic Relativity

In 1931, Albert Einstein and his wife visited the Warner Bros Studio in Burbank, California. They were asked to mount a platform and sit in a Model T Ford while they were captured on film. After lunch, the Warner Bros arranged a screening of the film which showed them flying over the Niagara Falls, Manhattan, the Statue of Liberty, Atlantic City, New Jersey and the Grand Canyon. Einstein was delighted with the result, but, although he gave to the world the theory of relativity, he was unable to understand cinematic relativity!

Jackie

Professional Hazard

A doctor of Samastipur town who answered the bell on New Year's day to a group of seven "patients" had to part with Rs 50,000 at gunpoint.

According to police sources, a seven-member gang of armed dacoits posing as patients overpowered the doctor, cut the telephone wires and escaped with cash and ornaments.

—Free Press Journal

Old Guard

The Union Ministry of Communication has waived the date of retirement of 93-year-old K.V. Peter, who has maintained a unique record of 68 years of service in the Posts and Telegraphs Department from 1913 to 1981.

He has been allowed to serve the Shenbaganur post office at Kodaikanal in Tamil Nadu, where he joined service as extra departmental sub-post master on September 12, 1913, as long as he is fit, says an official press release.

The Postal Department has honoured him with a token award of Rs 2,500 marking the International Year of the Aged.

—Press Trust of India

All In The Family

Three candidates belonging to the ruling Congress (I), the Janata Party and the Bharatiya Janata Party from Shantinagar (Reserve) constituency in Bangalore are all related to one another.

While the winning Congress (I) candidate P.K. Ranganathan is the brother-in-law of Janata candidate P.D. Govindaraj who lost, the Bharatiya Janata Party nominee M.S. Kanagarajan is a cousin to both of them.

Over 56 per cent of the 86,000 voters in the constituency exercised their votes.

—Indian Express

Hell Or Heaven?

With the ever increasing arms race, I give this planet Earth another ten years. It would go up in smoke and I would not like to be a part of it. Not that I am afraid of death. But I have a feeling that hell is going to be a very crowded place. As for heaven—well, I hate travelling first class all by myself.

—Khushwant Singh

And Now Portable Homes!

Carry home a camp house if you will.

The India Plywood Industries Research Institute (at Bangalore) has developed the technique for building collapsible houses.

These ply-wood-and-wood structures measuring eight feet by 12 feet could be bought for just Rs. 50,000.

— The Hindustan Times

Goldie

Bossom?

When as a new MP Sir Alfred Bossom had entered the House of Commons, Churchill said, "Bossom? Bossom? What an extraordinary name.. neither one thing nor the other!"

—A. Sykes And I. Sproat

The Gate Swings Open

As midnight approached, cheering crowds lined both sides of the wire fences and iron gates at the border. "The key! The key!" they chanted as a Spanish customs official walked forward, accompanied by two uniformed policemen. The key fit, the gate swung slowly on its rusty hinges, and the border between Spain and Gibraltar was open for the first time since June 9, 1969.

The Ladies Of Simla

Lord Lytton was not much attracted to Simla society, the ladies being too virtuous for his taste. "I do miss the pleasant scamps and scampesses of pleasant France," he said in a letter to Lady Salisbury, "and having seen virtue embodied in the form of Lady — I don't agree with Schiller that if virture were a woman, all the world would fall in love with her... I envy you the pleasure of living amongst so many naughty people."

—Mark Bence – Jones

Concert For A Queen

Queen Elizabeth has asked President Ronald Reagan for a very special favour during the forthcoming royal tour of America. Could she hear Frank Sinatra sing? The veteran crooner has agreed to perform free of charge at a gala banquet to be given to the Queen in Los Angeles on February 27. The invitation heralds a return to Presidential favour for Frank Sinatra. He had been dropped by the Reagans in recent months due to his connections with the Mafia.

—Mid-Day

Gigi

VACATION time was sun-tan time as far as Joan, an admirably proportioned secretary, was concerned, and she spent almost all of her time on the roof of her hotel sopping up the warm sun's rays. She wore a bathing suit the first day, but on the second she decided that no one could see her way up there and she slipped out of it for an over-all tan. She'd hardly begun when she heard someone running up the stairs; she was lying on her stomach, so pulling a towel over her derriere, she continued to recline as before.

"Excuse me, miss," said the flustered little assistant manager of the hotel, out of breath from running up the stairs. "The Hotel Plaza doesn't mind you sunning on the roof, but we would very much appreciate your wearing your bathing suit as you did yesterday".

"What difference does it make?" Joan asked rather coolly. "No one can see me up here and, besides, I am covered with a towel."

"Not exactly," said the embarrassed little man. "You are lying on the dining hall skylight."

A BIG fat lady sat on a broken toilet seat. When she got up, the seat came off, firmly fixed to her bottom. They could not get it off, and finally a surgeon had to be called into help. "By Jove", he said, "I've seen many in my time, but this is the first time I've seen one framed".

DOCTOR: You must stop worrying so much—try absorbing yourself into your work.

Patient: Gosh I can't do that, Doctor. I operate a cement mixer

A PEDESTRIAN had fallen into a man-hole and called for help. "Dear me," said a gentleman who happened along. "Have you fallen into that manhole?"

"Not at all," was the reply. "As you seem interested I will say that I just happened to be down here and they build the pavement around me."

FATHER: Shall I help you with your homework, son?

Son: No let me get it wrong by myself, papa.

LITTLE Jimmy was found by his father in the barn shaking his pet rabbit and saying: "Five and five. How much is five and five?"

The surprised father interrupted the proceedings and asked: "What's the meaning of all this Jimmy?"

"Oh," said Jimmy, "teacher told us that rabbits multiply rapidly, but this one can't even add."

IN that cricket match, the bowler bowled so wide, even the out-stretched bat couldn't make contact. "Oh, a virgin over!", said my friend. "Virgin over? You mean a maiden over", I asked. "No", said my friend, "A maiden over is one where there is no contact".

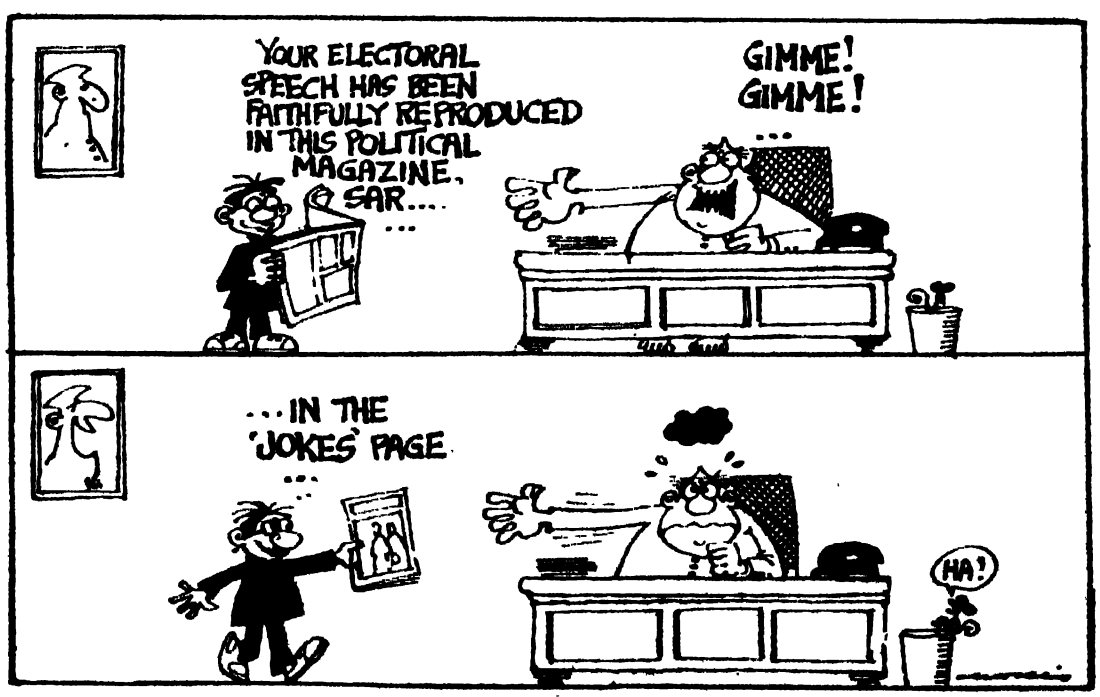
THE farmer's boy and his girl were sitting on a stile. The boy made no move, and the girl was eager for him to start. She pointed to a bull nuzzling a cow in the field and said, "Why don't you do that?". The boy vaulted over, drove the bull away and nuzzled the cow.

THOSE were days in which the USA had posted 'advisors' in Vietnam. They had also exported bulls to improve the local breed of cattle. In one farm, an observer found most of the bulls "Courting", but one big fellow was standing apart.
The observer went upto him and asked, "Why aren't you joining in? Aren't the cows pretty enough?".
The bull looked away and said, "I cannot. I'm an observer".

THE warden of a prison was escorting a party of politicians through the institution, and they passed through a room where two women were sewing.

As they went out one of the politicians said: "My, what hard working women! What are they in for?"

With ice in his voice the warden replied: "They are in here because they have no other home. That is our private living room, and they are my wife and my mother-in-law."



Hullo! Now I am the new national bird.

THE geometry teacher who was having difficulty holding the attention of his first-year class came up with this story:

"There's an ancient Indian legend that tells of a chief with three squaws. To please them, he let each choose the material from which her teepee would be made.

"The first squaw chose to have her home made of buffalo hide, the second chose beaver hide, and the third chose hippopotamus hide."

"Time passed", continued the teacher", and the squaw with the buffalo-hide teepee bore the chief a son. Soon the squaw in the beaverhide teepee also bore him a son. Then the third squaw, who lived in the tepee made of hippopotamus hide, bore him *twin sons!*

"Which proves", the teacher concluded, "that the principles of geometry were sound even then: 'The squaw of the hippopotamus equals the sons of the squaws of the other two hides."

PSYCHIATRIST: How long have you been thinking you're a dog?

Patient: Ever since I was a puppy.

IN the toy department, a distinguished looking man was entranced with a model train that whistled,belched smoke, deposited milk cans, picked up mail and did virtually everything a real freight train does. "I'll take it", he finally said.

"An excellent choise", approved the clerk. "I am sure your grandson will love playing with it."

"Why, you are absolutely right," the customer agreed. "I'd better take two."

A TOURIST was introduced in Texas to a Red Indian with a reputedly perfect memory. Sceptical, the tourist asked, "What did you have for breakfast On July 1, 1980?" The Red Indian answered: "Eggs." The man scoffed. "Everyone eats eggs for breakfast. He's a fraud." Eight years later the traveller's train stopped again in Texas and he saw the same Red Indian on the platform. The tourist went up to him and said: "How?"

Quick as a flash,the Red Indian answered:

TEACHER: Why do you want to be a fortune teller when you grow up Chhotu?

Chhotu: Because it's a job with some future in it.

DRIVING past the grounds of a University, a professor saw a student running hard. Chasing him and snarling at his heels were three huge dogs. Intent on rescue, the professor braked his car to a halt and threw open the door. "Get in!" he commanded, "Get in!" "Say, you're the greatest," the bearded youth gasped. "Most people won't offer me a lift when they see I have three dogs."

GOSSIP: The spies of life.

Bore: Someone who is talking when you are interrupting.

MOTHER of small boy to child psychiatrist. "Well, I don't know whether or not *he* feels insecure, but everybody else in the neighbourhood certainly does!"

(Translated from the Tamil by M.R.Sivaramakrishnan)

"I spit on you all," creamed the girl's mother. 'Make a noose round your ıecks with your sacred hreads and hang ourselves—that would be ıetter than calling ourselves Brahmins!"

Brahmin Is As Brahmin Does

by Indira Parthasarathy

DHARMALINGAM looked at the clock. It was five to nine. Why hadn't Iyer come yet?

The shop usually opened at nine. On Saturdays it opened at a quarter to nine—perhaps out of fear that if it opened at the inauspicious time of Rahu's dominance *(Rahukalam)*, Rahu himself might slip in and work havoc with the shop's fortunes.

Iyer daily collected the key to the shop from Dharmalingam's house at 8.30 in the morning. Other employees would wait for him outside the shop. The shop opened for business after the ritual *agarbatti* offerings by Iyer to framed pictures of favourite gods.

In twenty years this routine had not been disturbed. What had happened to Iyer today? Could he be ill? Even so, when that had been the case once before, Iyer had sent word. Only once. He had never been absent again.

Two minutes to go. Dharmalingam thought he would have to go to the shop himself. He called out to his wife: "Bhagyam! I don't know what is wrong with Iyer. There is no sign of him. I am going to the shop."

Putting on his sandals he stepped out of the house. Iyer was coming towards him across the road.

"Hey, Iyer! Not only is it *Rahukalam* but you have to cross my path, too, and make it doubly unlucky!"

"Forgive me, sir, I got delayed," Vengu Iyer replied, wiping the sweat off his face.

"Come inside the house and have a drink of water," invited Bhagyam from within.

Dharmalingam looked at the clock. "It is past nine already," he said, with some irritation.

"I have to discuss something important," said Vengu.

"About what?"

"Can we talk inside the house?"

Dharmalingam looked Vengu up and down. What could he want to discuss? Had the income-tax people been at him with questions?

DHARMALINGAM stepped inside and sat on a chair. Vengu followed and sat on a stool.

"I don't know how to begin ... It is about Raju."

At the mention of his son's name Dharmalingam looked at Vengu sharply. Bhagyam moved closer to them.

"You know Nanu Iyer, the Vakil's clerk. He came to my house early this morning at eight in a towering rage. He said his third daughter Girija, who is a typist at the Chit Fund Office, has been friendly with Raju ... " Vengu paused.

Dharmalingam looked at Bhagyam.

"So?" Bhagyam asked aggressively.

"Matters have come to a head ... The girl is two months pregnant."

"It is a black lie," shouted Bhagyam. "That Vakil's clerk Iyer is trying to extort money from us."

"Call Raju," commanded Dharmalingam.

"Why call him? He is a young man. I don't deny he is a bit of a playboy. But this ... no, no! That Iyer is scheming ... It is obvious."

Raju was just then coming down the stairs, toothbrush in hand and a towel over his shoulders.

"Hello, Vengu sir?" he called cheerfully. "How are you? How come you are here at this late hour and not at the shop?"

"Hey you! Come here," ordered Dharmalingam.

Bhagyam intervened, "Let him have a wash first."

Dharmalingam ignored her. He asked, "Is it true what Iyer says?"

"What does Iyer say?"

"That you are friendly with Nanu Iyer's daughter."

"Yes, I know her. So what?"

"They say she is two months pregnant."

Raju was taken aback. "Really?" he asked.

"What do you mean, 'really'? That Iyer is hopping mad. We send you to college to study and this is what you do—invite scandal! You will never amount to anything!"

"He is only a boy. What happened to the girl's good sense? It is a put-up affair. The Iyer is casting his net where the catch is good. Whom is he trying to bluff?" asked Bhagyam.

Raju quietly slipped away towards the bathroom.

"Look here, if that Iyer is dreaming of

marriage and so on, tell him nothing doing. I have seen that girl—the way she dresses and flaunts herself, who would guess she was from a poor family? Who knows how many innocent boys like Raju she has been friendly with," she continued.

"Will you shut up!" Dharmalingam said severely.

"I am talking to Vengu. Why does it bother you?"

"You go inside. I shall do the talking," said Dharmalingam.

AS she left, Dharmalingam turned to Vengu. "She indulges him too much. But we have to save the situation somehow What do you think?"

"I am unable to offer any solution. It is true the girl should have been careful, but .... "

"Go on".

"When a girl gets two months pregnant, it is not a small matter. Nanu has three more daughters waiting to be married. One must consider all these things.. "

"Are you suggesting my son should marry into that family? Where is your good sense Shanmugam has been proposing his daughter for Raju for quite some time now. Raju is my only son and Shanmugam's is an only daughter. I have thought of merging our two businesses and putting you in charge so that I can retire... And you are talking like this!"

"In my charge?" Vengu could not conceal his surprise.

"Who else is there? Raju will be the owner in name only. He does not know how to run a business. I am getting on in years. Shanmugam is even older. What a coincidence we should both have had children in our advancing years! And then a son like this! It is fate. Look Iyer, you have to look after the business and Raju."

Vengu was nonplussed As a twenty-year-old youngster without references, he had come to Dharmalingam who took him in and gave him a job in the shop. After five years, he was made the cashier behind the desk. He was trusted completely.

Vengu's whole world was the shop. He had not ever thought of marrying.

At first when Dharmalingam asked him to keep two sets of business accounts, he was disturbed. It would mean cheating the Government, and the immorality of it shocked him. Dharmalingam soon showed him how all was fair in business and how scrupulous businessmen came to a bad end. Vengu quickly fell into the ways of businessmen who after all had to conform to current socio-political standards. They had to contribute to political parties at election time. They created artificial scarcity of commodities, greased the palms of officials and pushed up the prices for consumers. There was no place for honest trade practices in such a set-up.

Raju re-entered, wiping his face with a towel

"Come here," Dharmalingam ordered

Raju came nearer, burying his face in the towel.

"Did you promise to marry that girl?"

Raju evaded the question. "I know it looks bad, but what shall we do now?" he asked his father.

Bhagyam joined them with "That Iyer will not say no if we fling two or three thousand rupees his way."

Vengu felt his stomach turn.

Bhagyam dismissed Raju with, "All right, don't do such things again and compromise us. Now you go upstairs."

Raju left.

"Iyer, Please talk to Nanu Iyer nicely We can go upto five thousand," said Dharmalingam.

"Why so much?" interrupted Bhagyam.

"You keep quiet Iyer, please see Nanu Iyer. I shall go to the shop."

IT was like the lull after a storm in Nanu Iyer's house when Vengu got there Girija's face was swollen with weeping. Nanu Iyer's wife and three daughters were standing, each in a corner.

Nanu Iyer was staring at the ceiling. His thoughts did not seem to include any scheme to extort money from Dharmalingam or cast a net to catch Raju.

Vengu began: "I spoke to my boss—"

"I suppose he proposes marriage. What about my other daughters? Who will marry them now? Rich people can ride out these things, but I am a poor Brahmin ...!"

"Why do you go on? Let him talk," said the wife.

When the Brahmin father was reluctant to countenance even a marriage, how was he to bring up the money question? Vengu looked worried

He said to Nanu Iyer "What has happened is not right. But what do we we do now?"

"I have told my daughter to go drown in the sea!"

Vengu glanced at Girija. Such a beautiful girl! Not her fault she was born poor. Did she have to fall in love and, to top it all, pay the price with pregnancy? What a shock it would be to her if she knew that Raju was ready to ditch her!

Girija's voice was barely audible. "What does Mr Raju say?"

"Mister Raju indeed! She shows respect to that scoundrel, as though he were her wedded husband! That fellow deserves to be chopped up into pieces shouted Nanu Iyer in uncontrollable anger.

Vengu said kindly, "You are a girl and you should not have done such a thing."

"But Raju told me he would marry me after getting his parents' consent," said Girija.

"Is it enough that *his* parents are consulted? You are born a Brahmin, yet you have lost your senses! What about us here, your own parents, large as life?" spluttered Nanu Iyer.

The wife said, "You keep on talking about being a Brahmin! Is being a Brahmin enough? Why don't you get enough money to marry off your daughters properly and in good time? Being a Brahmin or not doesn't matter when there is no money "

Nanu Iyer retorted "All right, then. You go to the wedding I shall not come. My ancestors performed great yagnas . "

"Stuff and nonsense," said his wife, dismissing his ancestry with a shrug.

Nanu Iyer went red in the face. He stared at his wife and hurried out of the house without a word

Girija came closer to Vengu and asked, "Do Raju's parents agree to marriage?"

"You work in a Chit Fund Office. How did you get to know Raju?" he asked

Mrs Nanu Iyer interrupted with, "Is it important how they know each other? The thing is done. Tell me if they agree to marriage "

"I don't know how to tell you this The girl should not have put her faith in the boy. The parents do not agree to marriage . . but they offer money . "

"Damned devils!" screamed the mother

Girija's face froze She stood still. Looking at her, Vengu felt fear

The mother rushed at Girija and began to beat her, cursing all the while Girija was motionless. Vengu and the sisters had to try very hard to separate the mother from the daughter The mother had the strength of a woman possessed.

Girija kept standing, staring into space

"You!" the mother turned at Vengu. "You are a Brahmin. He has ruined a Brahmin girl and you haven't the grit to tell your boss to get the marriage settled! You will let a Brahmin family be disgraced! Her father is a Brahmin—how many dishonest briefs did he accept in courts to merit this punishment! And you, collaborating with a greedy shop-keeper who fleeces ordinary folk with inflated prices, have you lost your tongue! I spit on you all. Make a noose round your necks with your sacred threads and hang yourselves—that would be better than calling yourselves Brahmins!"

Girija's mother ranted on. Vengu's head began to spin. He left without a word.

BACK at the shop, Dharmalingam sat behind the cash-box counting money. When he saw Vengu approach, he asked his assistant Arumugam to mind the shop and invited Vengu to step into the dimly-lit godown at the back, where he promptly sat on the only stool available. Vengu stood.

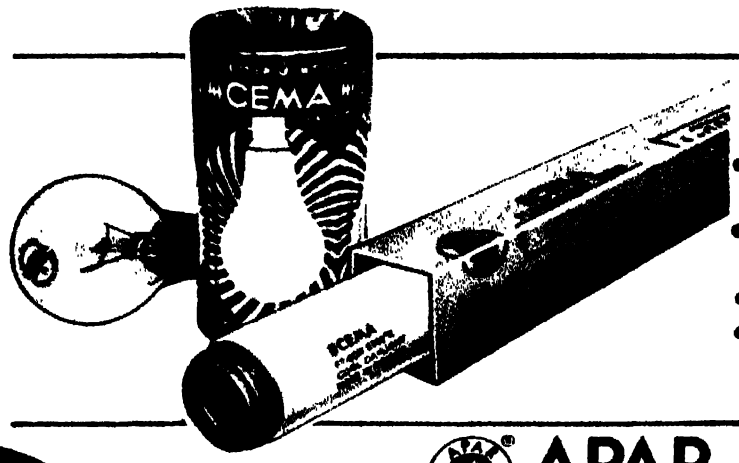
Is the cost of a bulb nowadays featuring increasingly in your monthly budget?

Get more hours of light with ISI marked

CEMA®

Bulbs and Tubes

Guaranteed 250 volts. 1000 plus hours of light for bulbs. 5000 plus hours of light for tubes.



Important check points whilst buying a bulb or tube.

BULBS :

- Should have a very light yellow tint—which is a special coating on Tungsten's filament to prevent burning out.
- The filament leading wire on three points should be symmetrical.

TUBES :

- Colour should be clear, cool blueish white.
- Should have no black rings/stains at the ends which indicate possibilities of the tube being earlier used or reconditioned.

And above all check that both are in the original ***pack*** unopened.

"Fruitful or no?"

Vengu did not reply.

"What do they say? Tell me."

"I can tell you no one is casting nets to catch Raju, like your wife says. It is a tragedy. Nanu Iyer will not hear of marriage. He would rather have his daughter drown in the sea. They have their self-respect."

"They refuse the money?"

"It was quite awkward to bring up money. I managed to mention it. The mother started screaming like a woman possessed. I hung my head in shame and came away."

Dharmalingam pondered in silence.

Arumugam peeped in to say Dharmalingam was wanted on the telephone by his wife.

"Tell her I am busy," he said curtly. Turning to Vengu he asked, "What do you propose now?"

"I haven't an idea in my head," said Vengu.

"Can I say something?"

Vengu looked at Dharmalingam.

"Don't misunderstand what I am going to say. *You* marry the girl. I can easily put up 20 or 30 thousand for the marriage."

Vengu's response was a shocked silence.

"If that girl does something silly like killing herself, there will be an unnecessary scandal. Nanu Iyer is looking for a bridegroom. You are not all that old. Forty is no age. The girl has been foolish but does she have to die? There are many alternatives. What do you say?"

"If I wanted to marry I would have done so long ago."

"Why didn't you?"

"I never thought of it."

"Think of it now then.—You will save a Brahmin girl's life—it will be a noble act. You have served me well all these years. Let me help you now."

"Help?"

"Yes, help. I shall see that the marriage is performed in style. Nanu Iyer cannot afford Rs. 30,000 for his daughter's wedding... Life must have a purpose. Who benefits by your slaving for years in my shop and at the end of it all passing on without a trace? By making a gift of life to a girl, you will be helping someone greatly."

Vengu did not know what to say. Was this the only solution? Having collaborated all these years in business malpractices (as Girija's mother had shrewdly pointed out), he had lost the moral right to condemn Dharmalingam for forcing a Brahmin to marry the girl his son had made pregnant. Anyway, would Girija agree? It was by no means certain.

"What, Iyer, what do you say?"

"The girl has to agree."

"You fetch her and I shall talk to her."

"She won't come."

"Then let us go to her."

GIRIJA sat next to a pillar in her house, clasping her knees in her arms. The mother was busy cleaning rice.

A smile of surprise crossed Girija's face as she saw Dharmalingam and Vengu, but she did not stir.

"*Namaskaram*. Nanu Iyer home?"

"No, but do come in," said Girija's mother. Dharmalingam sat on the bench.

"I am Raju's father."

"I know."

"The whole thing is unfortunate. I don't say it is your daughter's fault. It is my son's doing. He was born to us in our late years and has been indulged too much. He has been spoilt. I doubt if he will change. We have to do something."

"What?"

"I know my son. Even after marriage he is going to run around like a dog in heat. I know my wife. Between the two of them they'll make poor Girija's life a hell. I shudder to think..! Let me say frankly what is in my heart. It is up to you to accept or reject it."

"What is it?"

"You see Vengu Iyer here. A noble soul, rare these days. He came to me 20 years ago as a youngster. In five years I could hand over to him the key to the cash-box and relax confidently. I will not trust my own son like that. Vengu Iyer is only 40, and who can say looks 40? There is such fire in him! I am only thinking of your daughter's welfare. Let her marry him. Even if it costs 30 or 40 thousand, it does not matter. I shall look after that."

Nanu Iyer's wife was shaken. She looked at Girija. Girija stood up.

Dharmalingam went on: "All this talk of love is only self-delusion. Vengu Iyer will care for her like a treasure. Your daughter's welfare is the most precious thing to you. Even after I die, my son will not be able to dismiss Vengu Iyer. I shall say so in my will. True, your daughter is pregnant, but she is only two months gone. It can be attended to. I shall see to that also."

"You don't attend to anything," Vengu firmly declared. "I accept your proposal. But first, three things must be done."

Vengu Iyer, who had been standing deferentially all this time, now sat down next to a very surprised Dharmalingam.

"What three things?" he asked in a voice barely concealing his irritation.

Vengu looked at Girija. Her face showed surprise, and also curiosity. He spoke firmly: "You don't 'attend to' or 'see to' Girija's condition. Not you, not I—not even Girija—can have the right to 'attend to' it. Secondly, keep your money—all 30 or 40 thousand of it. I have some, and if Girija agrees, we shall manage. Thirdly, I will not be working for you any more."

Dharmalingam could not believe it was Vengu speaking. Vengu continued: "A little while ago Girija's mother said, 'I spit on you. Make a noose round your necks out of your sacred threads and hang yourselves—that would be better than calling yourselves Brahmins'."

"One is not a Brahmin because he is born one. It has been expected of a Brahmin that he be the guardian of our social conscience. A man may chant the Vedas or chop wood, but so long as he will not sell his conscience, he is a Brahmin. Girija has done wrong. So have I, these many years. It is difficult to judge who is the greater sinner. We will begin a new life. My only wish is that we lead a Brahmin life according to our conscience, the best we can."

"I agree, with all my heart," said Girija with a smile. ■

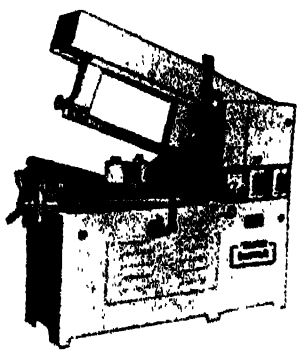
TANSI THE CATALYST FOR INDUSTRIAL UPSURGE IN TAMILNADU.

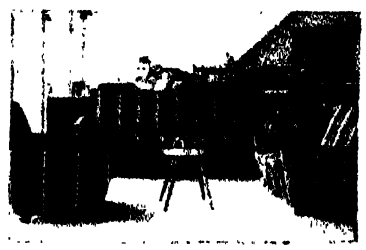
1 December 1965.

The birth of a Tamilnadu Government Enterprise called TANSI. The emergence of a catalyst for industrial growth in Tamilnadu.

Today, after 17 years, TANSI is a giant in the field of small industry.

A diverse range of industrial and consumer products — structurals, machine tools, pressure die castings, forgings, copper wires, castings, deepwell handpumps, trailers and sprayers, steel and wooden furniture, leathers and leather goods, spirit and spirit-based products...the range is vast with built-in Quality and Economy.

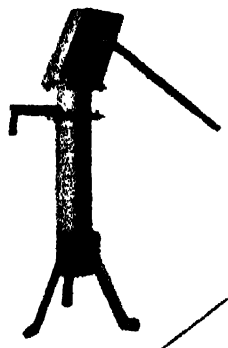


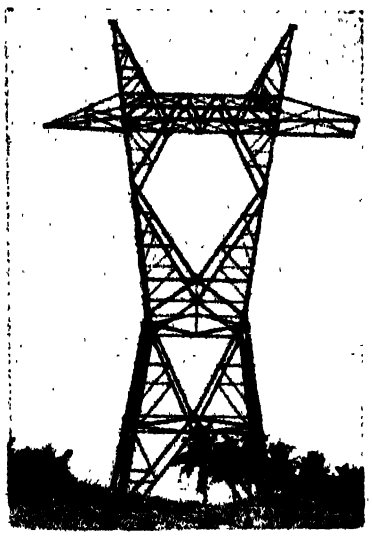


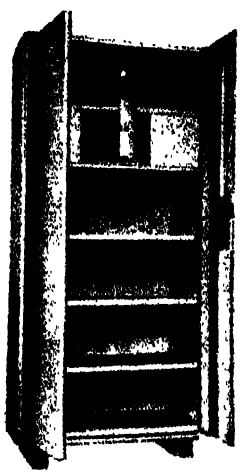
Towers for P & T Department, Furnishings for posh offices in South India, Export of leathers and leather goods.

The shape of things to come from TANSI augurs well for industrial progress of Tamilnadu **— expansion of enamelled wire unit, diversification into pharmaceuticals and rubber-based products, wider range of sophisticated Machine Tools.**

A shining example of a company which keeps good company...







TANSI has made significant strides with major projects executed **— Structurals for Thermal Stations, Steel Plants, Cement, Sugar and Textile Mills, Transmission lines in Tamilnadu, Microwave**

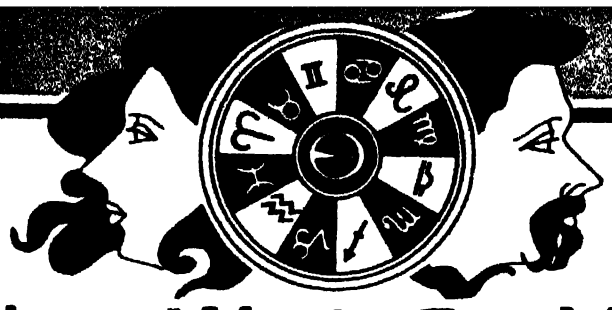
MINI BULLET
Bullet blood runs in it.

OBM 7837



Next Week For You

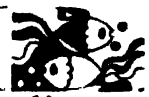
S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

Try to keep up the sweet talk as far as possible for a sharp tongue might create unnecessary conflicts. Active participation in group or social activities should be avoided early in the week. Interesting developments take place midweek. You must take the fullest advantage of the new opportunities coming your way.

AQUARIUS
(Kumbha)
Jan 20-Feb 18

This is a good week for socialising. You must try to understand the views of seniors and those in authority if you want their willing support and spontaneous co-operation. Take extra care while driving and avoid air travel as far as possible. Midweek is ideal for making fresh business deals. Weigh all the pros and cons..



PISCES
(Mina)
Feb. 19-Mar 20

Follow a policy of least resistance this week. Your old reliable associates may suddenly shoot off at tangents and create certain unforeseen problems. Take things easy. Do not lose your cool and patch up your differences by midweek. Clear all backlog by the weekend. Saturday is for entertaining and merrymaking.

ARIES
(Mesha)
Mar 21-Apr. 20

Be just and appropriate and do not argue with colleagues and seniors on petty matters. You will be in the limelight early in the week. Your prestige will be enhanced and you will gain more popularity. Do not indulge in speculation. Be polite to strangers but do not trust them an inch. A stroke of good luck brings money.

TAURUS
(Vrishabha)
Apr 21-May 20

A clash of interests with partners may suddenly take place early in the week and you will be inclined to break off the relationship. You are advised not to take hasty action. Be patient and enduring and sort out your differences. You should formulate a new policy for future dealings and keep to it conscientiously.

GEMINI
(Mithuna)
May 21-June 20

You are headed towards a better phase from this week onwards but you must not disturb the existing arrangements. A new job or assignment will be entrusted to you by seniors early in the week. You will successfully accomplish the task by midweek. You must secure the appreciation of seniors and give credit where due.

CANCER
(Kataka)
June 21-July 20

You may find it difficult to raise funds for your projects during the next three weeks. Therefore you must deploy the existing resources wisely and tactfully. Health may be delicate due to over-exertion. You may not be on good terms with seniors and elders during the course of the week. Things look up later on.

LEO
(Simha)
July 21-Aug 21

A physically and emotionally exhausting week. There are two main reasons. Firstly, the generation gap will begin to play up and cause much tension within the family. Secondly, a wrong sense of judgement on your part may result in an accident. To avoid both, you must keep your temper in check and be calm and cool.

VIRGO
(Kanya)
Aug. 22-Sept. 23

You will have to make sudden changes in your plans and schedule owing to delayed information about the facts. You will nonetheless quickly adjust to the changed circumstances out of compulsion. Keep away from group activities on Thursday/Friday. The routine will be normalised by the weekend.

LIBRA
(Tula)
Sept 24-Oct. 23

You must deal with youngsters carefully and with tact in order to avoid widening the generation gap. Do not indulge in speculation at least this week. You can take time off midweek to visit a beauty spot in the company of a friend or sweetheart. Handle Government officials and seniors tactfully, midweek.

SCORPIO
(Vrishchika)
Oct 24-Nov 22

Wittingly or otherwise you are likely to be ignored by others and your opinions set aside. A verbal duelling with elders on policy matters will cause much tension in the early part of the week. There is a slight improvement in your affairs midweek. Try and effect a reconciliation with family members.

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20

You are better advised to use all the care and tact at your disposal while dealing with strangers. A new business proposal may look profitable but do not commit yourself on anything. You may effect important changes in a partnership or a joint venture but do not start anything without consultation with legal experts.

STAR FOCUS

1983 For You-III

Virgo: This is a luckier and happier year than 1982. You may go abroad to secure technical knowledge in your discipline. Investment in a house, vehicle or agricultural land will prove profitable. Material enhancement of your prospects through gifts and inheritances cannot be ruled out. The disposal of an estate will bring you more money. and add to your savings.

Libra: A year full of wonderful opportunities and easy success. Your company will be much in demand both in and outside home. The younger generation can go abroad for studies or technical training either in the first or the last quarter of the year. Publicity and recognition awaits artists, sportsmen and industrialists. Elders will be on pilgrimage.

Scorpio: A year full of restrictions and curbs. Caution should be your catchword this year. You will be forced into an introspective though not gloomy mood. You will do generally well on the financial and domestic fronts provided you do not expect too much. Of course, similar luck does not hold good on the vocational front. Enmity of friends will hinder your activities.

Sagittarius: Your solar horoscope points towards easy success in all your activities this year. Your social life will throb with activity. In personal life there will be lucky events and happy moments. Be warned, however, that you must steer clear of overambitious plans that might involve you in undesirable activities. Make the best use of your talents in April and September.

Birthday Forecast

Sunday, January 23

A year when you have to move cautiously and carefully. Changes, if absolutely necessary, should be effected only after September. Do not involve yourself in any new activities.

Monday, January 24

A year full of stresses and strains. You will be living and working under tremendous pressure. By the middle of 1983, you will be in a fix about the course of direction you must take.

Tuesday, January 25

You must maintain status quo in all walks of life. Between April and July, there will be a temporary lull in your activities but the peace will be shattered in September.

Wednesday, January 26

A busy, varied and interesting year lies ahead. Nevertheless you should be cautious between July and September. Try not to go in for expansions in the last quarter. You must make for stability rather than change.

Thursday, January 27

A year when you must be wholly cautious. The changes that take place may affect your work life, adversely. Be in readiness to adjust quickly to the changed circumstances in August, September and October.

Friday, January 28

The lunation on your birthday does not augur well. Worries and anxieties concerning your relationship in and outside home will continue to prevail, leading to a crisis in July and August and again in November. Be on your guard.

Saturday, January 29

Things will work well until April. From July onwards things become a little difficult and you will be kept busy until September sorting out your problems. You will have to take certain firm decisions in November/ December.

This Week's Bridge

1982 World Olympiad - II

MIXED PAIRS, Contd:

DIANNA Gordon and Mittelman won the Mixed Pairs at the Biarritzz World Olympiad in October. They played steadily throughout, as seen by the fact that they won without even a single absolute top of 388!

Here are a few more of their successful hands, continued from last week, taken from the Daily Bulletins edited by Dorothy and Henry Francis:

In the second session, they found a Grand Slam that most of the field missed—in fact it was worth 351 of the 388 matchpoints. Incidentally, Dianna and George never once got a cold top—but there were lots of deals on which they scored more than 300.

Board - 9: Dealer North, E - W Vul.

	♠ J842 ♥ K8732 ♦ 752 ♣ 4	
♠ 3 ♥ AQJ54 ♦ AJ1093 ♣ K8	N W E S	♠ AKQ965 ♥ - ♦ KQ8 ♣ A732
	♠ 107 ♥ 1096 ♦ 64 ♣ QJ10965	

The bidding:

West	North	East	South
Dianna		George	
	P	1S	P
2H	P	3C	P
3D	P	3S	P
3NT	P	4D	P
6D	P	7D	All Pass.

Dianna's three Diamonds bid didn't necessarily show Diamonds, but it did show extra values. However, when she leaped to six Diamonds over four Diamonds, George knew the Diamond suit was real, and he had no trouble finding the seven Diamond bid.

BOARD - 22: Dealer East, E - W Vul.

	♠ 952 ♥ A10753 ♦ KQ ♣ A84	
♠ AK64 ♥ Q8 ♦ 84 ♣ QJ765	N W E S	♠ Q103 ♥ 96 ♦ A109753 ♣ 102
	♠ J87 ♥ KJ42 ♦ J62 ♣ K93	

The bidding:

West	North	East	South
Dianna		George	
		P	P
INT	D"ble	3D	All Pass.

That certainly is not the best One No Trump bid in history, but it was George's task to try to win eight tricks before the opponents took six—a difficult task since North—South had six "sure" tricks—two Hearts, two Clubs and two trumps. George won the opening trump lead with the Ace and immediately led a Heart—an attempt to make the opposition think he was trying for a ruff. North won and cashed the Diamond King, drawing dummy's last trump. Now the defense, bemused by George's earlier Heart play, tried to cash TWO Hearts, but of course, George ruffed the third round of the suit. Three rounds of Spades dropped the suit, so he pitched a losing Club on the thirteener while South helplessy ruffed with the master trump.

Good declarer play earned another 304 points for the champs on Board21.

Board - 21: Dealer North, N - S Vul.

	♠ AK4 ♥ 10876 ♦ A752 ♣ J7	
♠ J52 ♥ AK54 ♦ 6 ♣ K9652	N W E S	♠ Q986 ♥ QJ9 ♦ KJ3 ♣ Q103
	♠ 1073 ♥ 32 ♦ Q10984 ♣ A84	

The bidding:

West	North	East	South
Dianna		George	
	1D	P	P
1H	P	1NT	2D
P	P	2H	All Pass.

Dianna's overcall on a four-card suit got the partnership to a reasonable spot, but there still was a lot of work to do. North led the Spade King, then switched to the Diamond Ace and another Diamond. Dianna went up with the King and carefully discarded a Club, not a Spade, from her hand. She ruffed dummy's last Diamond, even though she was reasonably sure the trumps were not breaking 3-3. A Spade went to the Queen when North ducked, and Dianna called for the Club Queen. South rose with the Ace and got out with a Club to the King. Dianna in turn got out with a Spade to the Ace. North's return of a Diamond gave Dianna a chance to throw a Club from dummy while she ruffed in her hand. Now she had a high crossruff for the rest of the tricks—making nine tricks. Even if the defense hadn't slipped, she would have made 110—still a very fine result.

"WEEKLY" CENTENARY BRIDGE TROPHY '83

Western Zonal

January 28 to 30

Garware Club House, Wankhede Stadium

This Week's Chess

Queen - Knight Combine

WITH their different ways of movement Queen and Knight combine harmoniously in an attack on the enemy King. In position No 295 White sacrifices a Rook for such a combination. In the game of position No 296 the Knight makes 8 and the Queen 4 of the last 14 moves.

Szymczuc - Hawelko
Gdansk (Poland) 1982

1.d4, Nf6 2.c4, e6 3.Nf3, c5 4.d5, exd5 5.cxd5, d6 6.Nc3, g6 7.Bg5, h6 8.Bh4, a6 9.a4, Bg7 10.e3, g5 11.Bg3, Nh5 12.Bd3, 00 13.Nd2, Nxg3 14.hxg3, Nd7 15.Qc2, Re8 16.bh7ch, Kf8?! 17.Bf5, Ne5?! 18.Bxc8, Rxc8 19.Qh7, Qb6 20.Rb1, c4 21.Nce4, Ng6 22.Rxh6!, Rxe4! 23.Nxe4, Qa5ch 24.Ke2!, Qxd5.

Position No. 295: 25.Rxg6!, fxg6 26.Qxg6!, Qd3ch 27.Kf3, Qxb1 28.Qxd6ch, Ke8 29.Qe6ch, Kd8 30.Qd5ch!, Ke8 31.Nd6ch, Ke7 32.Nf5ch!, 1-0.

Modern Benoni Defence

7.Bg5) Other continuations are 7.e4, 7.g3, 7.Nd2.

7...h6) Geogardze-Dorfman, Erevan Zonal 1982: 7...Bg7 8.e3, h6 9.Bh4 00 10.Nd2, Na6 11.Bc4, Bc7 12.00, Re8.

17.. Ne5?!) Better 17...Kg8 preventing Queen's entry.

21...Ng6) 21...Nd3ch 22.Ke2, Nxb2 looks plausible; but 23.Rxh6! should win, e.g. (i) 23...Bxh6! 24.Qxh6ch, Ke7 25.Qf6ch, Kd7 26.Qxf7ch, Re7 27.Nf6ch, Kd8 28.Qf8ch, Kc7 29.Qxe7ch, Kb8 30.Nd7ch wins the Queen; or in this 25...Kf8 26.Rh1 and mate follows. (ii) 23...c3 24.Nxd6, cxd2 (or 24...Qd4 25.Rxb2!, cxb2 26.Qf5) 25.Nf5! wins; (iii) 23...c3 24.Nf6, Bxf6 25.Rxf6, Rc7 (if 25...Qc7 26.Rh8, c2 or cxd2 27.Qh8ch, Ke7 28.Rxf7ch, Kxf7 29.Rh7ch, Kg6 30.Rh6ch etc. leads to mate) 26.Nc4!, Qd4 (or 26...Qc5 27.Nxd6; or 26...Nxc4 27.Rxb6, Nxb6 28.Qh8ch, Ke7 29.Rxf7ch, Kxf7 30.Qh7ch, Kf8 31.Qxc7 etc.) 29.Qh8ch, Ke7 30.Rxf7ch wins the Queen.

28...Ke8) After 28...Kg8 29.Qe6ch, Kh7 30.Nxg5ch etc. wins; but not 30.Qxc8??, Qd1 mate.

32.Nf5ch!) If 32...Kc7 33.Qd6 mate; or 32...Ke8 33.Qe6ch etc. leads to mate.

Karlsson—Suba
Ekzjo (Sweden) 1982

1.c4, Nf6 2.Nc3, c5 3.g3, e6 4.Nf3, b6 5.Bg2, Bb7 6.00, Be7 7.Re1, d5 8.cxd5, exd5 9.d4, 00 10.Bg5, Na6? 11.Qa4,Ne4 12.Bxe7, 12.Bxe7, Nxc3 13.bxc3, Qxe7 14.Ne5, Rfc8 15.e4!, dxe4 16.Bxe4, Bxe4 17.Rxe4, Qb7 18.Rae1, b5 19.Qb3, h6 20.a4!, cxd4 21.cxd4, b4 22.Ng6!, Kh7 23.Re7, Qc6 24.Nh4, Qc4 25.Qf3, Rf8 26.Qe4ch. Kh8 27.Nf5, b3.

Position No. 296: 28.Nd6!, Qc2 29.Nxf7ch, Kg8 30.Nxh6ch! Kh8 31.Nf7ch, Kg8 32.Qe6, Nc7 33.Rxc7!, Qxc7 34.Ng5ch!, Kg8 35.Qg6!, 1-0.

A variation of English Opening.

7.Re1) Smyslov-Andersson, Biel 1976: 7.d4, cxd4 8.Qxd4, d6 9.b3, 00 10.Bb2, a6.

10...Na6?) This Knight makes only one move later; it should have gone to d7.

14...Rfc8) 14...f6? 15.Nc6, Qd7 fails to 16.Bxd5ch, Qxd5? 17.Ne7ch etc.

29.Nxf7ch!) 29...Rxf7 is replied by 30.Qxa8ch.

30.Nxh6ch!) 30...gxh6? 31.Qg4ch leads to mate.

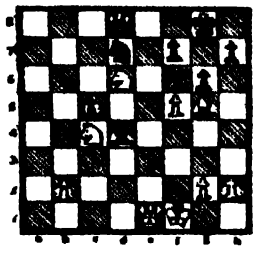
No 297 White to play



No 298 White to play

Myth: Public Sector companies show poor overall performance.

Fact: Being a progressive Public Sector company, United India has constantly sustained a high growth profile.

Our 26.8% growth in 1981 was clearly above the general industry average. Even overseas operations registered an increase of 41.5%.

Seven divisional offices and twenty-five branch offices were opened in a single year — 1981. Now 407 United India offices take insurance to the remotest corners of India.

Myth: Public Sector companies lack speed of response.

Fact: Being an enterprising Public Sector company, United India has the resources to attend to customer needs immediately. During 1981 we settled over 2,00,000 claims — averaging more than one a minute during normal working hours.

Myth: Public Sector companies are ill-equipped to handle specific customer requirements.

Fact: Being a professionally managed Public Sector company, United India has developed the largest number of non-traditional and rural insurance covers.

First with poultry insurance. First with silkworm insurance. First with inland fish insurance. First with honeybee insurance . . . the list is never-ending.

From multi-crore ONGC and NALCO* insurance covers, to five-rupee Gramin policies, our range is indeed comprehensive.

No matter what your risk, United India can create an insurance cover just for you

Myth: Public Sector companies lack the personal touch.

Fact: Service is a way of life for our 10,000 highly-qualified staff and 37,000 hand-picked agents.

A host of measures have been adopted to ensure that toddy-tapper and shipping magnate alike, get individual attention. To name a few: complaints cell in every office; free risk management advice; customer seminars; pre-insurance surveys, etc.

You know the facts now. So why be a victim of myths? Our local office or agent will be happy to provide you with more information on our comprehensive range of insurance covers.

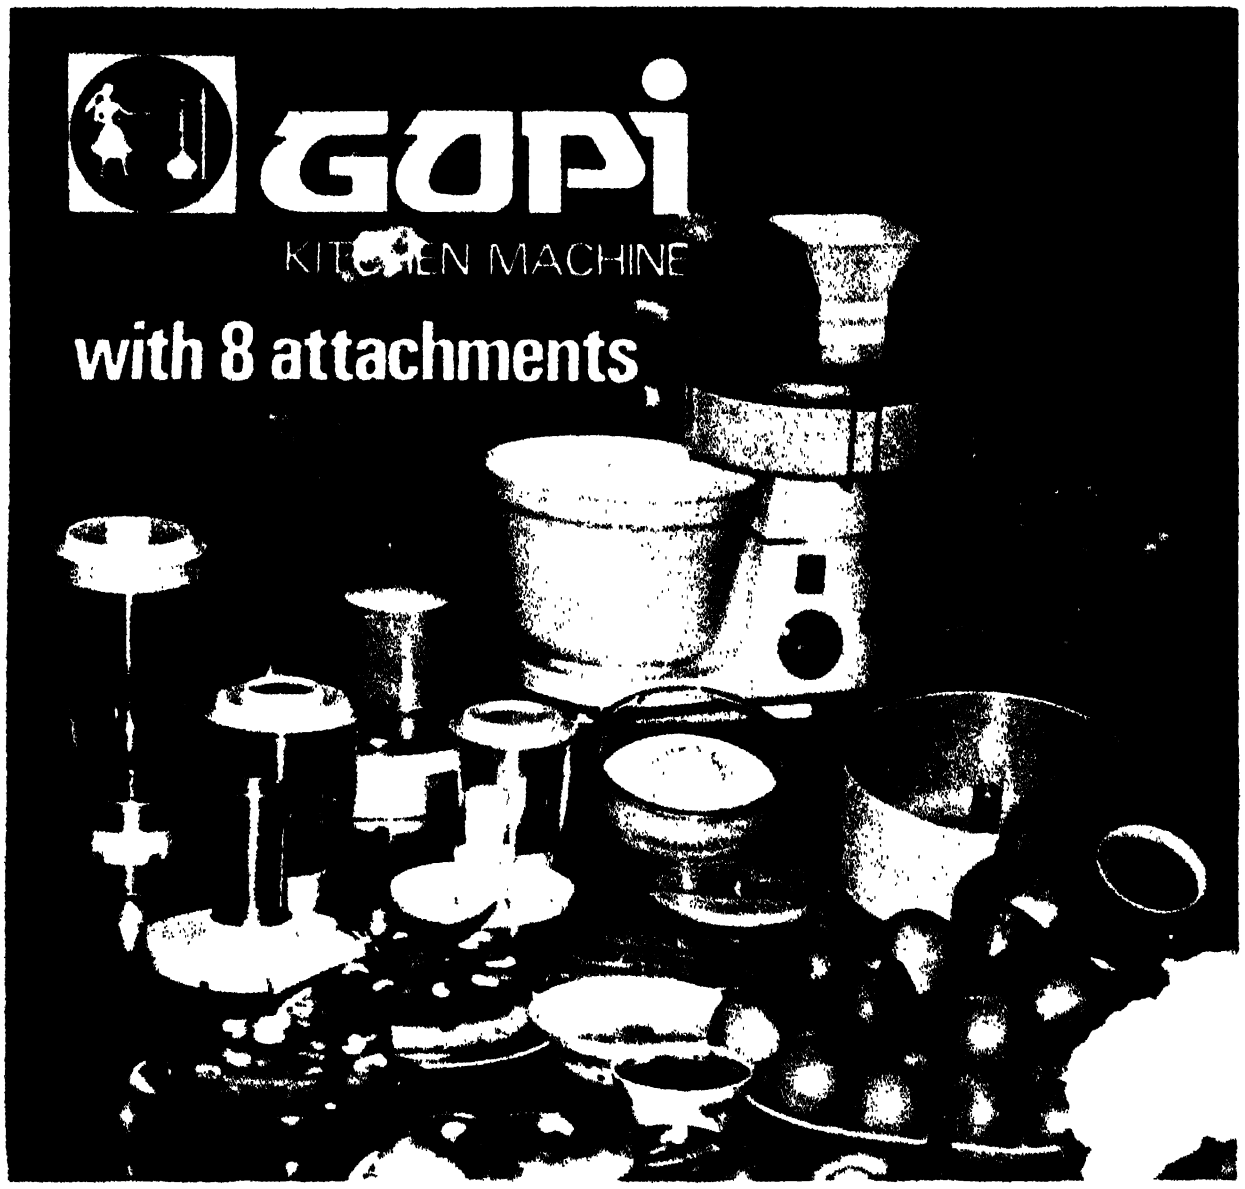
GOPI

KITCHEN MACHINE

with 8 attachments



GOPI Mixer-cum-Grinder with its three standard and five optional attachments is a complete kitchen machine. It can replace a team of cooks and virtually proves a magic Lamp for the Housewife.

GOPI may not be confused with single jar blade changing mixers being passed on as kitchen machines or food processors. It has a complete range of different attachments for doing different jobs. With GOPI you do not mix Garlic flavour with coffee or coffee flavour with your idlipaste and so on; as is the case in single jar machines.

Regarding cost also you pay only little extra than conventional mixers or even single jar mixers. Although its capacity is 1.5 litres & motor can run for hours together.

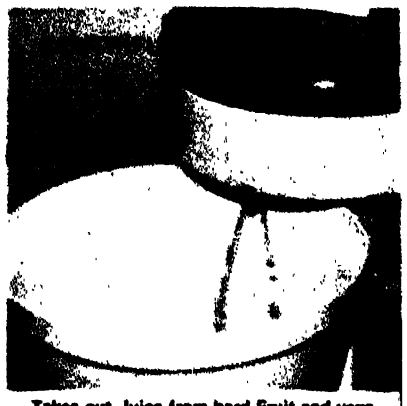
GOPI is comparable to any internationally known brand of kitchen machines. Not only that, you pay much less for GOPI.

C. lal electrical & mechanical co.
Industrial Estate,
Ambala City-134002

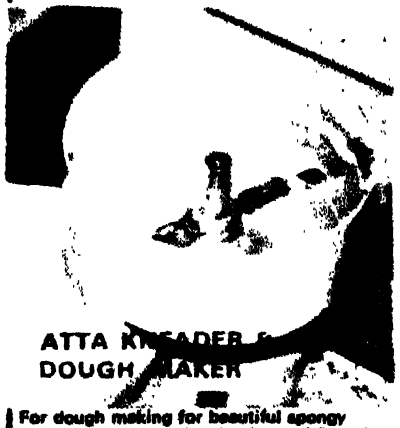
For grinding Coffee and Massles etc.

For Milkshakes, Cocktails, Lassi etc. Motor can run for hours together on normal loads

For making Dal & Rice paste for Dosa, Idli etc. And for making Chutnies.

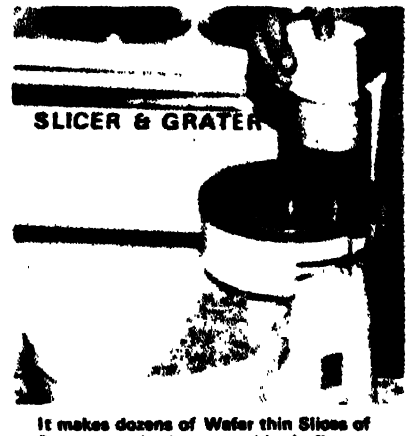


Takes out Juice from hard Fruit and vegetables, like Apples and Carrots etc. continuous waste ejecting system. Processes one kilo of carrots in 75 seconds.

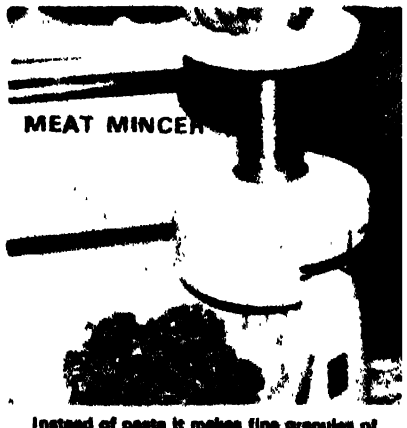


For dough making for beautiful spongy Cakes & atta kneading for Chapati & Puri etc. Kneads one kg. of atta in about 60 seconds only. Very easy to clean & towards

For extracting Juice of citrus Fruits like Orange. Malta and Moosambi etc.



It makes dozens of Wafer thin Slices of Potatoes and other vegetables in five seconds only. Grates one carrot in 5 seconds.



Instead of paste it makes fine granules of meat for Kebabs, Keema etc. and the process is continuous.

LETTERS TO THE EDITOR

Fine Fest

Sir—Thank you for the article by Lalitha Krishna who has caught in a nutshell the views of us English-movie-lovers. ("For Our Eyes Only", January 2). But how could you forget to mention *The Champ*?

P.S Badde
Sangli

Pehle Aap Presidentji

Sir—I write to invite your attention to an illustrated item published in your esteemed *weekly* ("Who's First?", December 19).

The report as published in your columns is totally inaccurate. The President, Giani Zail Singh, was the first to leave as per protocol.

K. Suryanarayana
Press Secretary to the President, Rashtrapati Bhavan
New Delhi

Arun Padhye

Sir—Our exhibition ("Christian Story Through Indian Eyes", December 19) was superbly covered in the WEEKLY. However, in our catalogue and press release we have made an error in the name of the artist whose painting appeared in the upper left hand corner of the page. He is Arun Padhye not Arun Pradhan.

Naomi Wray
Secretary
Indian Christian Art Association

The Warlords

Sir—Thanks for publishing "Power-Mad Generals Of Pakistan" (December 26). Air Marshal Asghar Khan's analysis was really superb. The WEEKLY offered an in-depth analysis to its readers. It is an issue worth preserving.

Gaurang Pushpak
Ahmedabad

Sir—Asghar Khan's article was most authentic and thought-provoking. Sadly, smugglers, adulteraters and blackmarketeers still rule the roast with the military having consolidated its iron grip on Pakistan.

Bhupen Bosu
Jamshedpur

Our Own Midgets

Sir—Lata Jhaveri's piece on the art of growing bonsai (December 26) was informative. I was surprised to learn that this art actually originated in Vedic India.

Ms Prabha Padmanabhan
Bombay

Foreign Gods

Sir—Mathai Zachariah presents a competant portrayal of Christianity in India. (December 19) According to him the take-over of welfare by the State and Christianity's association with Western culture are the two major handicaps it suffers from. Actually its real enemy is another foreign ideology—socialism. This godless theology is being vigorously propagated by a set of powerful and well-equipped evanglists over the last four decades.

Mihir Bain
Calcutta

Sir—The Bible prophesies the destruction of all religions before the close of this century. Nations have to obey and give allegiance to that ONE GOD. Else, they are going to be destroyed one after another.

Bro Lukes Ninan
Bombay

Sir—All scriptures refer to Christ as the fulfilment. "...*Masih Ruh Allha*" (Quran); "... from darkness to light..." (Brihad Aranyaka Upanishad); "*Adi anth eko avtar*" (Adi Granth), all point to the Word Incarnate, Jesus Christ. An unbiased searcher after Truth—Hindu, Muslim or Sikh—cannot but arrive at the person of Jesus Christ through the Vedas, Quran or the Granth Sahib. So Christianity has an enormous task ahead and the vista is wide open to elucidate the hidden Christ of other religions. The teaming millions are awaiting liberation from illiteracy, poverty and oppression. Regarding the Government initiating/taking up developmental work, the less said the better—it has the proverbial Midas touch, but in reverse.

Fr Felician
Kottayam

Sir—The article has overtones of liberation theology. Liberation theologists everywhere want the Church to turn into a political movement to fight injustice and to establish a just society.

The very premise on which the liberation theology is built is erroneous as it presumes that humans innately love justice and righteousness. But, the truth is that natural man loves justice and righteousness only when he is at the receiving end. This is the reason why all revolutions turn out to be "gods that failed".

Also, the view that poverty is due to exploitation and unjust distribution is only partially true. Poverty is basically due to a low rate of development. That is why starvation, unemployment, exploitation, Harijan burning, etc are the lowest in Punjab.

George Verghese
Nedungadappally

Dave Not Doshi

Sir—"Press And Cure" by Meera Pandya (December 26) is not about Chimanbhai "Doshi" but about Chimanbhai Dave. I have witnessed his successful cures.

Sarabhai B. Choksi
Bombay

What's In A Name?

Sir—Acharya Kriplani's wife was Sucheta not Sushila ("With The Inner Eye", December 5).

Dr M. Hashim Kidwai
Aligarh

Visual Treat

Sir—What? Governor Latif captured through his "Third Eye" (December 19)! It was a visual treat!

C.P. Belliappa
Coorg

Old Jewels?

Sir—Patanjali Sethi's write-up on the aged ("Old People: Unwanted Minority?", December 26) was one-sided. No organisation working for elder citizens has even claimed to have replaced the family. In an ideal situation (as the Chinese say) every senior citizen is treasured as a "family jewel" by his or her relations. But unfortunately such utopian conditions seldom exist in real life. Moreover, Mr Sethi is extremely pompous when he is waxing eloquent about the virtues of the Indian family. Such traditions are not unique. They are found all over the world. Often enough, we are hypocritical about our ill-treatment of our aged.

P. Shankar
Bangalore

Sir—Patanjali Sethi's article deserves special commendation. Mere blind imitation of the West will lead us nowhere. Our own culture has been a source of perennial inspiration and we should always be proud of it.

Indra Sen Chaturvedi
Gangapur City

Hail Hinduism!-II

Sir—The article on Hinduism by P.K. Nijahwan (December 19) was bold. We are all secular even if our mothers are not! How can we resist the temptation of embracing the vices of other religions and earning fame? Previously conversion was for survival; now it is betrayal! God save Indians!

Ramadas
New Delhi

Sir—Except Hinduism, all religions are "man-made", whether by Jesus, Mohammad, Gautama, Mahavira or Nanak. Thousands of missionaries and zealots of Christianity and Islam go to the ends of the earth to preach their gospel of love, equality and service through conversion whereas the high priests of Hinduism go to the Himalayas for meditation and self-realisation. Although there is a tussle between "black and white" Christians and Islam sanctions slavery, torture and most unfair treatment to women, the arcane philosophy of Hinduism is beyond the comprehension of the common man, while the practical side of Christianity and Islam *do* attract him. Hindus are themselves to blame for the crisis, as they have never reached the common, suffering downtrodden people who need it most.

Tatya Tendulkar
Kolhapur

Poet Of Freedom

Sir—I enjoyed RGK's article on Subrahmanya Bharati (December 12). But how could he leave out Sister Nivedita—the great disciple of Swami Vivekananda, who was a pole star in the life of this great poet? He used to call her "mother". He met her sometime in 1906 while she was on a sickbed in a house at Dum Dum near Calcutta. It is she who inspired Bharati to become a poet of freedom.

A.C. Sorka
New Delhi

In the second take RGK added a para on Sister Nivedita. However, we could not accommodate it due to pressure on space.

—Editor

Where Eagles Dare

Sir—In his review of Major K.C. Praval's book, *The Red Eagles* (December 19), Mr K. Mhatre says that it does not set your pulse racing and is as dry as dust. Serious military history books are not written to set one's pulse racing; that is done by war novels and a few of the more lurid autobiographies of military commanders. Military history books are not meant to be scripts for war movies but for study by students of military science. I think Major Praval has done a splendid job.

Maj Gen R.M. Rau (Retd)
Hyderabad

Cuddlesome Curves

Sir—The WEEKLY is doing a great job and touching new heights with the induction of the "The Third Eye". "Curves and Contours" (December 12) by Balkrishan was superb.

Dr M.K. Gupt
Lucknow

Sir—I think the world's most spectacular breast can be seen at Belur

But alas, it is fashioned in cold stone. Now Bali has gone and captured that gorgeous, curvaceous living contour on film. I vote it for the second place. Why did he not use colour?

R.M. Muzomdar
Caranzalem-Goa

Sir—Why do you make Curves and Contours available for public exhibition?

A.S. Ratnam
Parbhani

Superb Story

Sir—Margaret Bhatty's story is a refined echo of the old story, "The Luck Of The Roaring Camp" (December 19). It has a fine O'Henry ending "I would not have survived to tell the tale". I like the story immensely.

Prof K.A. Nambiar
Badagara

Bhishma Narain Singh

Sir—In a caption to the picture as in the text, Bhishma Narain Singh has been described as "Ex-Union Minister for Works and Housing" ("Housing The Asiad", December 19). This is wrong. He still continues to be Union Minister for Works and Housing as also for Parliamentary Affairs.

Gyan Singh
Information Officer
(Works & Housing)
New Delhi

Ungandhian Attenborough

Sir—M. Bhaktavatsala's "Attenborough's Experiment With Truth" (November 21) no doubt highlights the "realities" from the film *Gandhi*. For sheer extravagance of expenditure, however, the film is most un-Gandhian in spirit. (One must still give Sir Richard his due for having completed the film despite much hardship.)

Prashna Kumar Panigrahi
Utkal University

The Fat Cats

Sir—The article "Great Shakes—The Cabaret Is Back!" (December 26) and the accompanying photographs had many facts and a lot of fat, respectively.

Cyrus Hiraji Varkaday

Daring.

Sir—N.A. Palkhivala gave a brilliant exposition of the present state of affairs in India. ("The State Of The Nation", November 21)

However, we Indians. have tolerance, optimism and hope in abundance. To quote Rajaji "What a beautiful world it would be if everybody were just God-fearing and realised the happiness of loving others; yet there is more practical hope for the ultimate consummation of this ideal in India than elsewhere".

Special Republic Number

8 COVER STORY: ***Our Freedom In Peril?*** On the 33rd anniversary of the Republic we pose to our readers the question: Will our sovereignty as a nation get eroded or will we muddle through as in the past? Leading writers and thinkers present their views.
Threats To Our Freedom. No one is good or bad in the international power game—only strong or weak. And, basically, the threats to our freedom stem from our own despair, says K.C. Khanna.

9 ANALYSIS: ***India's Darkest Hour.*** In the 'sixties and the 'seventies the foundations for national unity and welfare were often shaken, and now they are threatened with permanent damage. The very basis of our nationhood is now a matter of doubt, insists R.G.K.

12 POLITICS: ***Regionalism To The Fore.*** The threats to Indian unity arising from ethnic, religious and linguistic divisions are clear. Pan-Indian unity, says Sitanshu Das, is essential if India is to keep her independence.

13 ECONOMY: ***The Debt Trap.*** Ashok Mitra on the complications that may arise due to our eagerness in accepting the stupendous IMF loan.

15 SOCIETY: ***Feminism In India: Mirage Of Womancipation.*** Is true independence a mirage for most women in India? asks Shobha Kilachand.

16 THE NATION: ***Troubled North-East: Foreigners Stand Between Poll And Peace.*** H.S. Sethi on the situation in Assam after three years of violence and agitations.

19 ALSO: ***Assam: Agitators Losing Their Grip?*** By Kirit Bhaumik.

17 Plus: ***Land Of The Three Gs:*** People of the State are mere pawns on the chessboard of Mizoram, says H.S. Sethi.

26 CURRENT EVENTS: ***The NTR Tornado.*** Telugu Desam has battered the Congress (I) so badly that they will take quite some time to regain their senses. An indepth poll report by G.S. Reddy.

22 ALSO: ***Gundu, Gundu Gone.*** A comprehensive report of the Karnataka polls.

30 IN THE STATES: ***The Witch-Hunt Begins.*** G.S. Chawla reports from Delhi on the Intelligence Bureau's failure with regard to the recent Andhra and Karnataka polls.

34 HAPPENINGS—I: ***Letter From Calcutta.*** Sumita Sandilya reports on the more interesting developments in Calcutta, Jyoti Babu's illness and the hawkers.

35 HAPPENINGS—II: ***Letter From Chandigarh.*** Darshan Singh Maini on the *Press, Society And Government* Seminar, the art exhibitions and the Indo-Pak *mushaira* in the city.

28 INTERNATIONAL: ***CIA's Perfidy In Australia.*** Did the CIA manage to do in Australia, too, what it did in Iran, Guatemala and Chile: destroy an elected Government? By James A. Nathan.

55 PSYCHOLOGY: ***Crowds In India.*** The manner in which crowds behave is reflective of their psyche, says Surindar Suri.

24 ART—I: ***Murals To Mahadeva.*** The robust temple murals by Rajasthani masters at Chandod were commissioned by the Gaekwads of Baroda 200 years ago. By Ramesh Pandya.

39 ART—II: ***Folk Art Of Maharashtra.*** Chakresh Jain meets a successful painter of the Warli tribe, Jinya Soma Mahse.

43 BOOKS: ***History Of The Mahars.*** Thomas Gay reviews *Forefront For Ever: History of The Mahar Regiment* by V. Longer. Also: K.V. Chacko's *Man And Woman* reviewed by T.G. Khemani.

51 HUMOUR: ***Blocking The Road To Dusty Death.*** A C-R-A-S-H course for traffic cops and violators by Ranjit Lal.

44 HEALTH: ***Obesity Is An Indecent Obsession.*** So says Bijalpita Chatterjee and discourages overfeeding for babies and adults alike.

45 SPORTS: ***The Boats Are Waiting: Come Sail Them!*** India has the talent, a long and inviting coastline, ports, harbours and lakes. Shanti S. Thirumalai beckons the sailors.

32 PHOTOFEATURE: ***Frozen For Eternity.*** A collection from the album of H. Narayanan.

49 FICTION: ***Afterglow.*** Short story by Christine M. Krishnasami.

PLUS: ***That's Business:*** 36, *The World Around Us* 37; *The Weekly Pick:* 42; *Ha!* 46; *Stars* 53; *Bridge & Chess* 61, *Comics* 57.

Threats To Our Freedom

by K.C. Khanna

OSTENSIBLY, it seems alarmist to suggest that India's freedom is under threat Mrs Gandhi's oft-repeated warnings notwithstanding, every power on earth—and that includes Pakistan—is too preoccupied with its domestic problems to want to occupy New Delhi Even if it did, it would be sheer madness on its part to mount an invasion The days of empires ended with World War II Thanks to India's long and glorious struggle for independence that culminated in the1942 Quit India Movement the British were perhaps the first to see the writing on the wall, cut their losses and go Since then, any country that has tried physically to subjugate another nation has come a cropper The memories of its misadventure in Vietnam still bedevil America, just as Poland and Afghanistan are proving to be Russia's Achilles' heel

But freedom is a many splendoured word In the post-war world, a nation is seldom truly free unless it is also strong If it is not, its government can always be pressed by foreign powers to act against its true interests Often enough, in recent history, the US has arrogated to itself the role of an international gendarme and, to an extent, still does Russia brazenly enforces the doctrine of "limited sovereignty" on the countries on its periphery Kwame Nkrumah in his day so pointedly drew attention to the insidious nature and dangers of neo-colonialism It has taken new forms but it still continues to blight large parts of the globe

External forces apart, freedom of a people can be destroyed by its own government All dictatorships do that Even in a democracy, the people cannot be wholly free if the Government is weak, corrupt or inept In our own country, none can deny that this is precisely the situation in most of the States Nor is the Central Government the epitome of rectitude or sagacity Indeed, the entire system is creaking under the weight of its own inequities Growing political turmoil threatens to tear it apart The sagging economy and increasing poverty are cutting it at its roots Mounting social conflict is eating into its vitals Whether it has the resilience to repair the damage and regain its moorings is, for the first time in 35 years, a moot question Every thinking citizen wonders what is happening to us as a nation Fears about the future of children growing up under the shadow of an open-ended moral crisis are writ large on millions of faces

"The entire system is creaking under the weight of its own inequities. Growing political turmoil threatens to tear it apart. The sagging economy and increasing poverty are cutting it at its roots. And mounting social conflict is eating into its vitals. Whether it has the resilience to repair the damage and regain its moorings is, for the first time in 35 years, a moot question. Every thinking citizen wonders what is happening to us as a nation."

In the 1950s and early 1960s, the country was economically much weaker but it had the moral strength of a nation on the move Jawaharlal Nehru's quest for modernisation through planning within a democratic framework, combined with his commitment to non-alignment, had caught the imagination of the people everywhere, established India's credentials in world councils and raised its stature all over the globe Notwithstanding the abuses hurled at his policies by powerful detractors abroad, New Delhi played an honourable role in almost every international crisis Korea, Vietnam, Lebanon, Suez, Congo, Cyprus and so on If today New Delhi is invariably bypassed or relegated to a back-seat, it is partly due to the progressive erosion, since Jawaharlal Nehru's death, of the moral values he cherished and so valiantly upheld

How foreign powers try to destabilise even friendly countries is vividly illustrated by the article on the *CIA's Perfidy In Australia* (Pages 28-29)

Innumerable such examples can be cited It is a measure of the weakness our own Government that, more often than not, it throws a cloak of secrecy over similar incidents Not too long ago, British frogmen were caught during the Prince of Wales's state visit snooping under water in Bombay Harbour The Government did nothing

How Lal Bahadur Shastri's arm was twisted by Alexei Kosygin till he signed the Tashkent declaration is by now common knowledge Shastri was forced to agree *inter alia* to give up four key posts dominating the vital road from Srinagar to Leh via *Zoji La* even though the Indian Army had wrested them from the Pakistanis during the conflict in 1965 at great sacrifice The following year, Indira Gandhi was compelled to devalue the rupee and liberalise imports—as it turned out, disastrously—at the behest of the World Bank-IMF group in return for a mere $900 million loan Likewise, the more recent $5 billion IMF credit is hedged in by conditions that are detrimental to national interest Even businessmen to whom the Congress (I) is so beholden for electoral funds are protesting loudly that, thanks to the IMF, domestic industry is being ruined by "dumping" of foreign products in the Indian market to shore up sagging employment overseas!

Such pressures are bound to increase if the domestic economy fails to pick up and New Delhi is compelled to fritter away whatever foreign

Illustration by Mario

exchange it still has in the kitty on imports of food, costly arms and luxury goods (like colour TV sets and expensive oil). Already, there is talk that there is not the slightest hope of getting another loan from the IMF and that the foreign exchange reserves will touch the bottom in 1985, precisely when large instalments of past foreign loans are due for repayment. It would have been a different matter if the investments made with the help of accumulated foreign exchange reserves in communications, power projects, heavy industries and the railways were to bear fruit by 1985. As it is, all such schemes are lagging far behind schedule.

High Price To Pay

There was a time when the world was dominated by two competing Power Blocs and India could take advantage of both by pursuing principled policies in national self-interest. But today the situation is much more complex. The nexus of complementary and competing interests that binds the two Super Powers drastically restricts India's room for manoeuvre. The incipient arms race in the subcontinent, for instance, hurts neither. Both keep a tight rein on the spare parts for the arms they supply. Moscow tut-tuts but does not really mind if India buys weapons from the West at 250 per cent of the price it charges for comparable hardware—so long as the money is paid out of the IMF loan!

No one is good or bad in the international power game—only strong or weak. And, basically, the threats to our freedom stem (as several articles on the subsequent pages show) from our own despair. ■

India's Darkest Hour

All the evils we see today are like the poison that came up during the Churning of the Ocean and I expect much good also to emerge. We should not forget that we are still a nation in the making and that the creative process itself can generate evil.

by R.G.K.

THE present seems the darkest hour in the brief history of India as a free nation. We can discern all the classic symptoms of a country on the verge of chaos and in danger of losing its freedom. Despair has taken hold of large sections of people. All that we cherished when we fought for freedom now appears a tarnished dream. All the old fortresses are crumbling. The integrity of the country, always in doubt, is now seriously threatened. All the gains of freedom are being thoughtlessly thrown away. All the institutions painfully built in these troubled decades are being undermined.

The fifties were a creative period, a time of consolidation. We took the first steps in the democratic experiment of seeking a better life for ourselves by setting up new plants and factories and by building new dams and power projects. In the sixties and seventies the foundations for national unity and welfare laid earlier were often shaken and now, in the eighties, they are threatened with permanent damage. The very basis of our nationhood is now a matter of doubt.

Our Constitution provided for a federal structure with all the characteristics of a unitary state. It is often said that it is nothing but a glorification of the Government of India Act of 1935. This is not without truth. Our founding fathers, who had knowledge of the history of our country with its ethnic, religious and cultural diversity, wisely combined provincial autonomy with Central authority. They wanted each State to have an identity of its own, but not at the cost of the identity of the nation as a whole. The Constitution is a charter of freedom and democracy. There are safeguards in it against the dismemberment of the country and the abuse of authority by the Centre. These include the checks and balances as between the Executive, Parliament and the Judiciary and as between the Centre and the States. The Constitution has often been abused and changed according to the whims of the party in power. The freedoms bestowed by it on the citizens have been threatened with abridgement or even abrogation. During the Emergency, the then Attorney-General Niren De warned us that the Executive possessed the right to take away the life of the citizen. The Constitution thus is no permanent guarantee of freedom if it is not worked by the right kind of individuals.

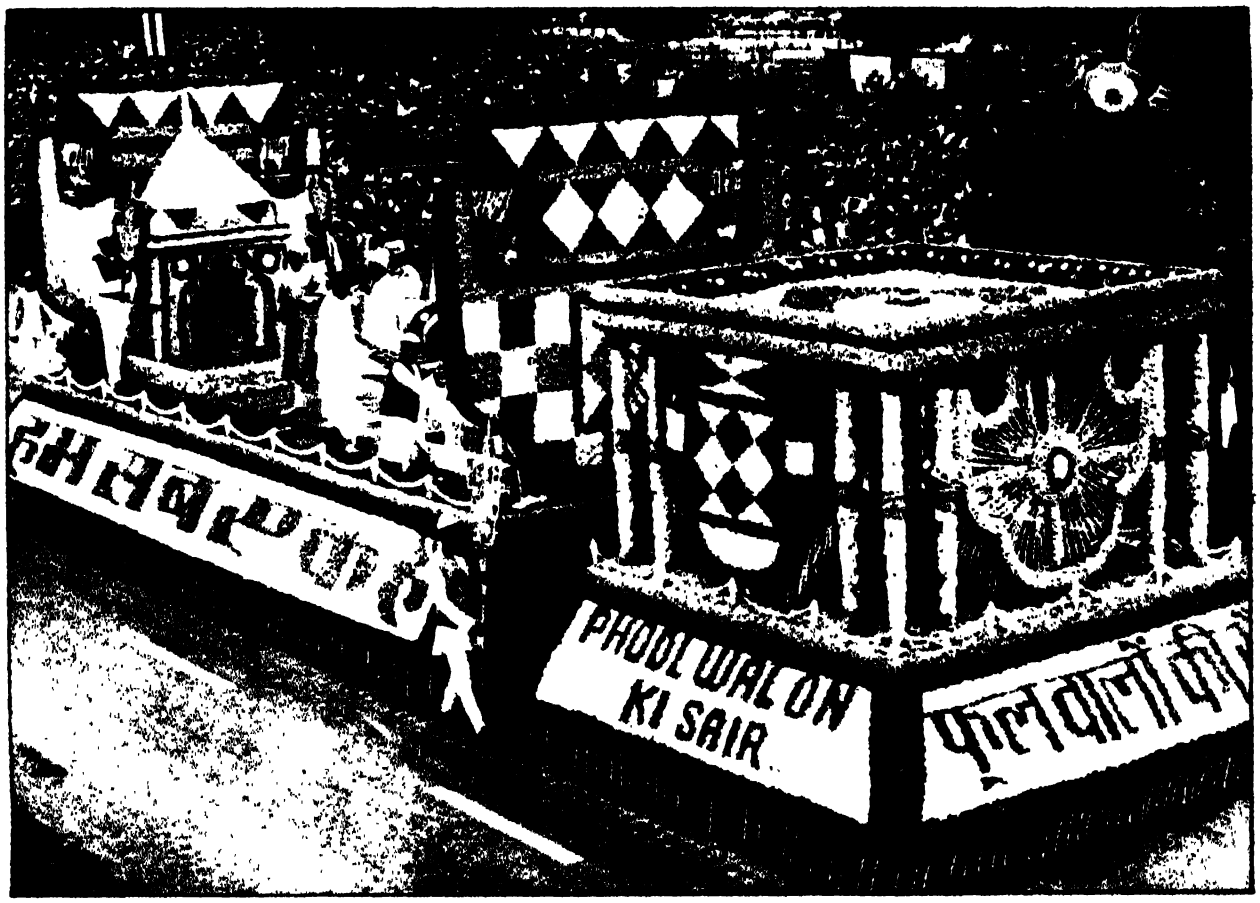
In the early years of freedom we could maintain stability in India and safeguard its democratic structure, in spite of threats from within and from outside, because the Indian National Congress was in power. In the late forties and in the fifties, the Congress retained its traditional character of an organisation that represented the entire nation. There were two reasons for this. First, the Congress still possessed the momentum of a fighting party with a residue of the idealism of the freedom struggle. Secondly, it was dominated by men and women who could not but think of India as one nation. The States were reorganised in the fifties: this was done with the idea of rationalising the political structure of the country, not to sow the seeds of national dismemberment—it was thought that by recognising the aspirations of regions divided according to language we could better ensure their cooperation in the national endeavour.

In the early sixties, when we suffered humiliation at the hands of China and when there was a threat to our freedom, our people demonstrated an inspiring sense of unity. Even C.N. Annadurai, at one time a secessionist, spoke the language of a →

nationalist. Subsequently, however, unsettling and disruptive forces were generated. The death of Jawaharlal Nehru removed from the scene not only a great patriot and statesman but the most powerful defender of freedom and the greatest force that held together the country.

I would like in parenthesis to discuss the personality cult in India and the question whether, on account of it, we are unfit for freedom and democracy. It is sometimes forgotten that this cult—the prevalence of a father figure, a focus for national aspirations—is not unique to India. It has obtained—and still obtains—even in countries with longer experience of freedom and democracy. During our formative years Panditji represented in himself the dreams and ideals of almost the entire nation. Later, his daughter fulfilled this role though not with the same magic as her father—she was the only leader acceptable to the vast masses of people in different parts of the country.

There is no need to be ashamed of the personality cult given the special nature of the country and its problems. Many of our recent problems could be attributed to the failure of Mrs Gandhi to play the role of a national figure. We must have a personality for the personality cult Mrs Gandhi is losing her fitness to be this personality. The Emergency greatly diminished her stature: it was looked upon as a means to keep herself in power. When she got a second chance for national leadership in 1980 she gave the impression that she wanted to make the prime ministership a "family institution". The tragedy of Indira Gandhi is that a people who were willing to pay her obeisance as the daughter of Panditji—as one who was expected to rise over considerations of family and party—revealed herself as an individual with the failings of an ordinary politician. The second tragedy is there seems to be no alternative to her. And herein lies the threat to our stability and freedom.



—P. Dayal

IS THAT THE SILVER LINING in the lowering clouds (below) *that menace our freedom? The process of nation-making may take several generations, but we must stick together during the interregnum.*

—Chitrangada Krishna

The decline of Indira Gandhi was caused by the decline of her moral authority. The decline came to be reflected in the Congress. The party that was identified with the nation now became a vast caucus of petty politicians. The Antulays and Gundu Raos and Jagannath Mishras took over. The Bhosales and Anjiahs emerged as expressions of an emptiness, as representatives of a party depleted of all its talents and human resources. Indira Gandhi could do nothing to reverse the process and halt the decline of her party. Telugu Desam is nothing but a product of a decaying Congress. And problems like Khalistan are the products of a weak national leadership. They loom today as a threat to our integrity and freedom.

Mrs Gandhi once rightly said that a strong Centre was the basis for strong States. Today there are weak States which the Centre is unable to keep together. The lesson of the last few years is clear. India needs a strong Centre and a strong Centre means a strong personality at the Centre. A strong personality does

not necessarily mean a despot. Indeed one of the lessons of the Emergency that our people (our so-called pluralistic society) do not tolerate despotism or *tanashahi*. A strong personality thus means an individual who has personal magnetism, who has moral authority and who is reputed to be incorruptible. Indeed we need a figure invested with romanticism, a certain aura. He may be an agnostic like Nehru—contrary to the popular view, he need not be "spiritual"—but he must represent those values of the country which transcend "spirituality". This is the lesson of 35 years of freedom.

The question that we must now ask ourselves is: how long can we place our trust in supermen and superwomen and how long can we be assured that they do not have feet of clay? How long can we subscribe to the doctrine of political avatars? The rise of N.T. Rao shows that even for regional leadership we are looking for gods. In Tamil Nadu it is a hero who is as good as a god. Nature does not always ensure a constant supply of gods and heroes. If India is to preserve its freedom and unity it should learn to live without gods and heroes. This is a problem of education and thus the very basis of our future.

Freedom itself has unleashed disruptive forces. The non-fulfilment of the expectations aroused by it has created unrest. New classes have arisen and caste jealousies have become more acute in the course of the sharing of the fruits of freedom. Forces suppressed for centuries have surfaced. These have threatened the peace and security of India and raised doubts about the country's ability to preserve freedom. The Emergency was an arbitrary solution—it may be argued that all solutions are arbitrary—way of solving the problems of disunity. It was not only an exercise to keep Mrs Gandhi Emergency. It cannot however be in power—to be charitable to her, in the process she tried to keep the nation intact and instil a sense of discipline in the people, *Anwasan* cannot be imposed: it has to come from within. this is the lesson of the Emergency. It cannot however be denied that that discipline is of paramount importance in the preservation of freedom and in the building of the nation. The lesson of freedom with responsibility is yet to be learned by our people. In a sense it is the most important lesson for us—and again it is a matter of education, the evolving of a new political culture.

There are people who think that economic well-being is more important than freedom. There are others who believe that economic well-being is not worth having without civil liberties Our own experience of the Emergency when our liberties were abridged is that dictatorship is no guarantee of economic well-being. Salvador de Madriaga recalls: "A professor said, 'People are not interested in freedom, but in ham and eggs.' To which I retorted, 'Ten years in prison with only ham and eggs for breakfast would cure that.'" Indeed no nation grows, no society flourishes, eating the bread of slavery. Remember the Republican slogar during the Spanish Civil War: "It is better to die on your feet than to live on your knees." This may be to take a romantic view of freedom, but sometimes it may be the only view to take.

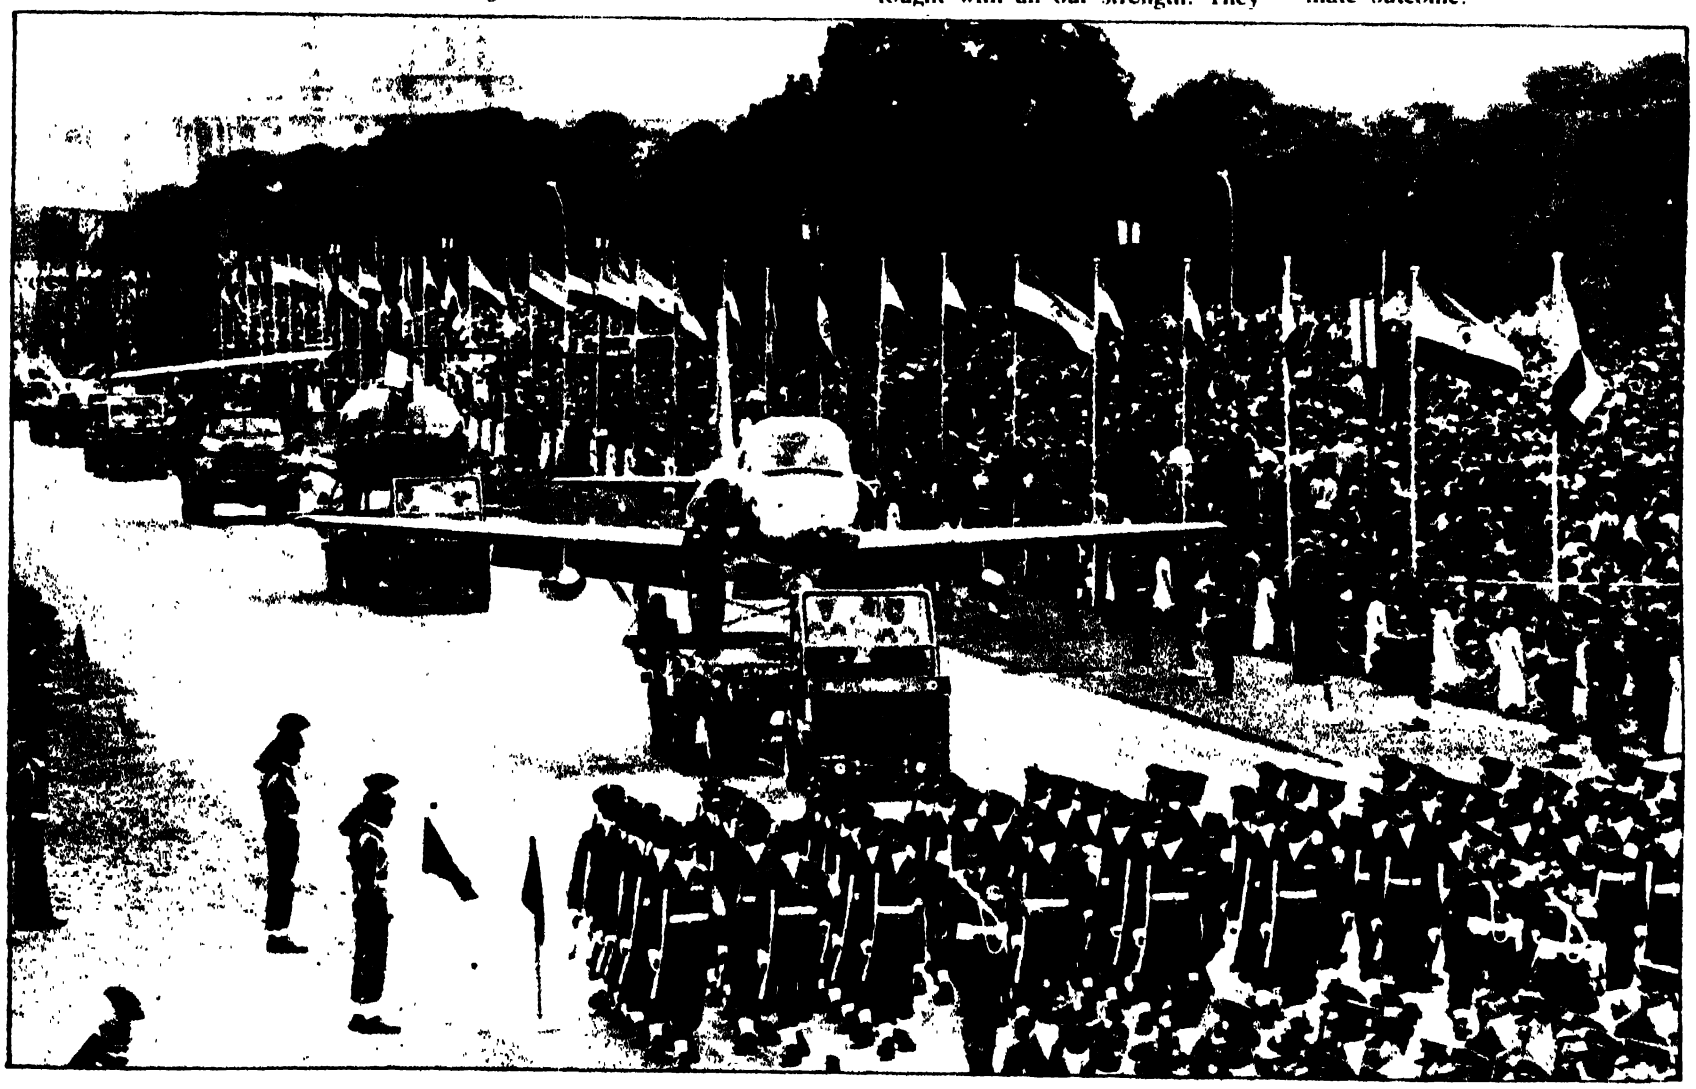
There is however truth in the criticism that we often take a negative view of freedom. We have not yet learned the constructive meaning of freedom, which means freedom with responsibility—a cliche but very important for our political maturity. I did not understand the full implications of a positive approach to freedom until read the words of Erich Fromm: "Man has achieved *freedom from*—without yet having achieved *freedom to*—to be himself, to be productive, to be fully awake." The Vedic ideal of *svarat* is that of a man who is fully awake and a master of himself—he is not a man let loose like some of our people who are ostensibly lovers of freedom.

Affronts to our freedom like the Bihar Press Bill are, in my opinion, aberrations and are not to be exaggerated. They must, however, be fought with all our strength. They are part of the struggle of a group of self-seeking politicians to remain in power. I personally do not regard them as a pointer to worse things though I have no doubt that they must be checked.

All the evils we see today are like the poison that came up during the Churning of the Ocean and I expect much good also to emerge We should not forget that we are still a nation in the making and that the creative process itself can generate evil. India is today engaged in a great experiment: it is a process of trial and error in which the people are involved with all their clashes and differences of outlook. The present disturbed state is part of this experiment. Unlike Gandhiji we have a traditional dread of anarchy—this is a dread shared by other peoples While anarchy may be preferable to slavery and stagnation, it is patently foolish to encourage unsettling forces unless we discern in them the hope of a better future. We must also bear in mind that we take an exaggerated view of events that are close to us. We must also be prepared for the process of nation-making to take several generations.

Freedom and its future are important questions. The preservation of freedom is essential for civilised life. What worries me is that if we are neglecting the equally important question of the social and political unrest born of freedom and its ultimate outcome.

"A STRONG CENTRE," Mrs Gandhi once rightly observed," was the basis for strong States."



Regionalism To The Fore

by Sitanshu Das

The threats to Indian unity arising from recent historical memories, ethnic, religious and lingual divisions, are clear and it would be naive to discount them. But it would be equally naive to disregard the lesson, learned from geography, history, industrial and economic development, that pan-Indian unity is essential if India is to keep her independence, says the author.

IN the 33rd year of the Republic (which is also the 36th year of Indian independence) this country is likely to be in a self-congratulatory mood. It is likely to see itself as a large island of stability in a region heaving with conflicts.

India will have reason to be pleased with the fact that she has kept a large part of South Asia free from direct intervention by the great powers. Internally, despite dire thoughts, the country has remained in one piece without impairing the rule of law and the principle of government by consent.

But in the long run a nation's independence and integrity are safe if it is able to defend, either singly or in concert with others, its interests from external adversaries and if it has a stable political order which ensures a reasonable degree of internal cohesion. Although many Indians worry a great deal about India's capacity to survive as one nation, not enough attention is given to the problems of the country's external security.

Schizophrenia

India's defence policy suffers from schizophrenia. The country lives under the shadow of the growing nuclear arsenal of one neighbour with which it has had adverse relations for at least 25 years. Another neighbour, which is revanchist, appears to be engaged in a nuclear programme which has, to say the least, military intent. There is no "nuclear umbrella" of either super power which India can take shelter under.

For the last 19 years the country's political and defence establishment has been making periodic noises about India's "nuclear option". The Government has neither taken the option nor answered how it proposes to ensure the strategic defence of this vast country. Meanwhile, the so-called nuclear option has ceased to be even a diplomatic weapon. The distance between the nuclear capabilities of India and her would-be adversaries is fast widening.

History has taught India to fear internal disunity as the cause of her prolonged subjugation to foreign invaders. That fear repeatedly came true in her recorded history. Embedded in the collective Indian mind is the lesson that pan-Indian unity is essential if India is to keep her independence.

The weaknesses of Indian unity are almost organic. They do not disappear merely because what remains of undivided British India has remained in one piece for 35 years. What are 35 years in the millenia which have known the vicissitudes of India or the Indians?

There are of course other large countries as diverse as India—notably, China and the Soviet Union. But whereas China's State system in history heavily emphasised centralisation, India's imperial powers, save the Mughals in the high-noon of their power and the British, tended to rest on decentralised subsidiary power centres. The Soviet system, being a recent one, is not to be compared with the past political orders in India or China.

There are those who see in the growing demands for local autonomy in the relatively homogeneous and highly centralised States of Western Europe a situation comparable to Indian disunity. But the unifying elements—economic and religio-cultural—in the countries of Europe are so strong that their circumstances do not bear any comparison with those in India. Those who framed the 1950 Constitution for India were prompted by a premonition of the dangers ahead and they provided for a strong Centre. Even so, India could not be a unitary State. The Centre could not be given new powers by abridging the autonomy which the British Parliament's Government of India Act of 1935 had already granted to the provinces.

The dangers to Indian unity are still elemental—arising from recent historical memories, ethnic, religious and lingual divisions. When the Akalis propose a separate Constitution for Punjab—their extremists want an independent State—they are prompted not only by contemporary political considerations but also by the memory of Maharaja Ranjit Singh's kingdom.

The perpetuation of a special status for Jammu and Kashmir is meant to answer the more extreme secessionist demands there. But fundamentally the problem in that State is Muslim Kashmir's sense of a separate identity based on religion. If religion is a disintegrative force in north-west India, the ethnic-language divide provides the stimulus for separatism based on religion. The conflicts arising from ethno-cultural identities have given birth to active insurgencies in north-east India. The whole of the Brahmaputra valley is on the boil, and it is difficult to foresee what turn the popular agitation there will take.

Sophisticated Variant

A more sophisticated variant of separatism is to be encountered in West Bengal where the Marxists have become the dominant regional party, by voicing the Bengali middle class's perception of the injustices done to Bengal by the establishment which rules the Centre and runs the Indian economy. The loose federation the CPM wants is the Marxist variant of the Akalis' Anandpur Sahib resolution. Ethno-centric politics is gaining strength in the tribal belts—from Orissa to Maharashtra. Religious differences are being added to the tribals' growing awareness of deprivation to create an explosive situation in these areas.

While it is true that the dangers to India's integrity are graver now than when it gained independence in 1947 (when, the partition having induced a trauma, the centrifugal elements were quiescent), this general statement will not apply equally to all affected areas if the situation this year is compared to what it was at this time last year. The picture that north-west India offers is not one of uniform deterioration. If the Punjab situation has worsened very substantially, this cannot be said of Jammu and Kashmir. The change of leader in that State has served to unwind tensions. There are now opportunities for collaboration between the Congress(I) and the National Conference. Dr Farooq Abdullah, the new Chief Minister, needs time to consolidate himself in office, and the Congress(I), by being helpful, can free him of the need to turn to separatist elements for support.

In the short run the Congress(I)-National Conference alliance—whether formalised or tacit—can hold at bay the

(Continued on page 14)

INDIAN STATECRAFT faces many serious challenges in the years to come. Yet Indian unity is no artificial arrangement contrived by the British. If the centrifugal forces of Indian history are a reality, then it will not come unstuck. Below: A protest rally by Assamese students at New Delhi's Boat Club

The Debt Trap

We have made matters more complex by eagerly accepting the IMF loan. Evenly distributed, our output *can* feed the whole nation quite adequately. But for this a total revamping of our whole political, social and moral fibre is called for, says the author.

by Ashok Mitra

AS the year 1982 ended, India's foreign exchange reserves were worth the equivalent of barely two and a half months' imports, the lowest since 1957. And this situation has come about despite the fact that over the past 15 months, nearly one-half of the disbursements from the Rs 5,000-crore loan from the International Monetary Fund has been drawn. Notwithstanding this heavy draw, the foreign exchange reserves are close to 400 crores of rupees less than what they were about this time last year.

Those who had warned the authorities that the IMF loan is no panacea for the nation's difficulties and that the terms and conditions attached to it, instead of helping to lift the economy, would actually make its plight worse, can, of course, give vent to a we-told-you-so feeling. That would, however, have little point at this juncture. What is called for is to suggest measures which, even at this stage, could salvage the situation.

Three major complications might arise between now and the next couple of years. The "conditionality" attached to the IMF loan ordained the liberalisation of both industrial and import controls. The authorities accordingly initiated a regime of Open General Licence imports, accompanied by large-scale dependence on multinational corporations and big industrial houses to accelerate the pace of industrial growth.

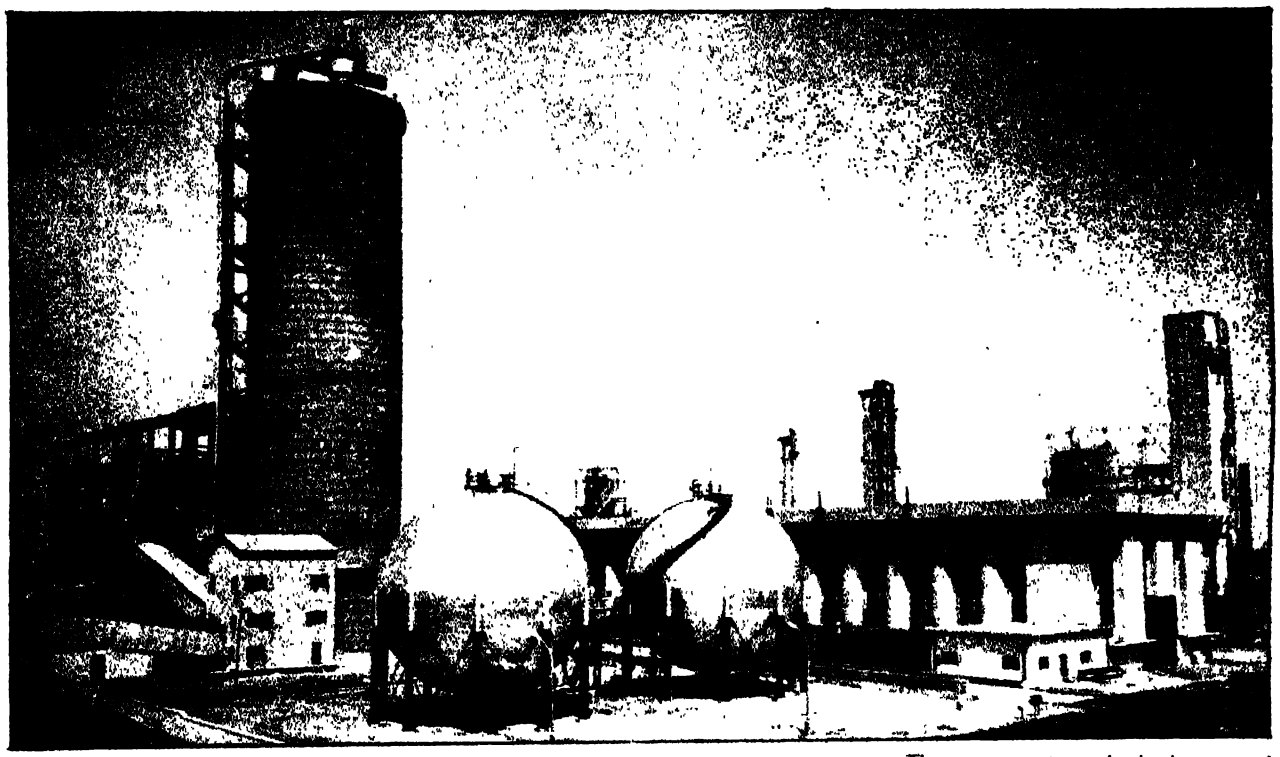
In view of the more recent developments, the Prime Minister has now asked a committee of officials, headed by the Cabinet Secretary, to devise means for curtailing imports. This is going to be no easy task. Forces unleashed during the past few years will resist attempts at restoring the *status quo ante* regarding controls. Both the multinational corporations and the big houses have a predilection for an open system, and they have succeeded in amassing strong political support at important focal points. This is quite apart from the fact that the IMF might consider a reversal of the policy of liberalisation in breach of the loan "conditionality" and threaten to cut off the balance of the loan.

Secondly, none of the qualitative improvements in the economy which the Government claimed would take place in the wake of the IMF loan are likely to eventuate in the reasonable near future: neither would the overall growth rate pick up, nor is there going to be any narrowing of the trade deficit. All that would happen is that we would have blown away the Rs 5,000-odd crores of the Fund loan on high living marked by frivolous and unnecessary imports and, in addition, abdicated our policy of strengthening the industrial base so crucial for national self-reliance.

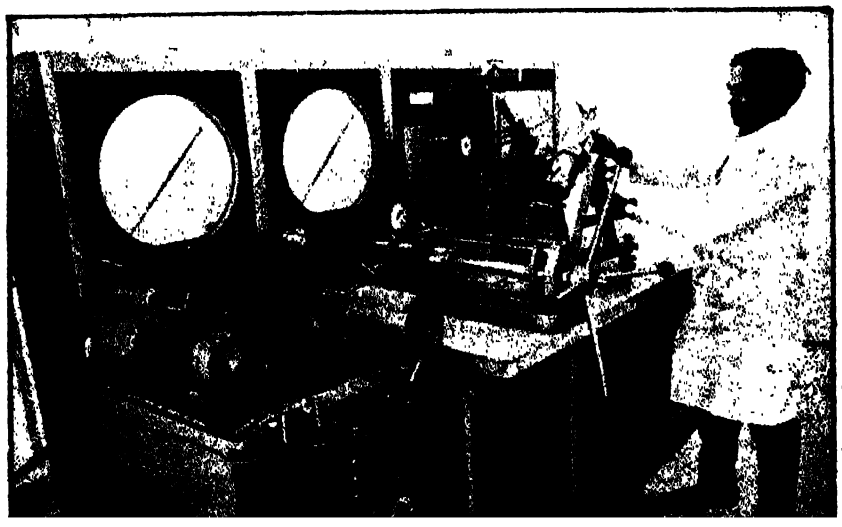
As a direct consequence of the official policy of indiscriminate imports, some industrial units have gone to the wall in the past few months and several others are struggling. The industrial capability of the economy, for all one knows, could therefore be somewhat less by the end of 1984, when the loan disbursements will be completed, than what it was in the final quarter of 1981 when they began. Precisely at that point of time, our external debt service burden is expected to jump sharply on account of the commencement of repayments of the Fund loan. The gap in our balance of payments could, if anything, therefore assume an even acuter form, and more so because, given the widespread economic recession in West Europe and North America, little prospect exists of a significant upsurge in our exports to these regions.

The third aspect of the matter is the likely disinclination of the IMF to consider any further line of credit to us. There are in fact some economists who apprehend that, since we are already in the breach of one or two of the underlying conditions of the IMF loan, such as the ceiling that was set to net credit to the Government sector, the Fund might decide to suspend payments of the balance of the loan even earlier. And it could well be that as a pre-condition for resumption of payments, the Fund may insist on a hefty devaluation of the rupee, with consequences far more disastrous than on the last occasion when we caved in to it in 1966.

If these were to be the circumstances to emerge in the not too distant future, we could be confronted with a situation not unlike what Mexico faced some six months ago. Internally, forces would resist a return to a regime of import restrictions and industrial controls. Suggestions are likely to be made that imports be discouraged, not through clamping of controls, but by raising customs duties. **Since the economy is flooded with black money, those who are inclined to be import-minded wouldn't however be deterred by a higher level of duties; they would pay the high duties and continue to import, thereby eroding further the dwindling stock of foreign exchange reserves.** Yet others would continue to advocate the cause of the big monopoly houses and the multinational corporations; the wobbliness in the political situation would embolden them to stock to their position. The failure either to restrain imports or to raise exports, and the prospect of the IMF refusing to accommodate us further could then lead the country to the brink of external bankruptcy



SHRIRAM FERTILISERS AND CHEMICAL INDUSTRIES of Kotah, and (below) Institute For Petroleum Exploration at Dehra Dun. The massive loan we have just received with open arms could have been avoided by making greater use of our own domestic industrial capacity and thereby curtailing imports as well as by rationing the consumption of petroleum products.



—United Nations

Those amongst us who had protested against the IMF loan in 1981 made a number of points at that time: (a) the loan carried conditions which were derogatory to our economic sovereignty, such as the quantitative ceilings on money supply and budgetary deficits and the limit set on external borrowing from non-Fund sources; (b) the loan was not even necessary, because we could have arranged to save the Rs 5,000 crores worth of foreign exchange over a period of three years by making greater use of our domestic industrial capacity and thereby curtailing imports, as well as by rationing the consumption of petroleum products; (c) the most likely consequence of the loan would be our sliding gradually into a "debt-trap", the fullest advantage of which would be reaped by foreign private, commercial banks.

This latter possibility is now increasingly looming large. In case the Fund refuses further lines of credit to us, the alternative left would be to go to the foreign banks

(Continued on page 14)

(Continued from page 12)
surge of Islamic fundamentalists and separatists in the State. The elections are due by June 1983 and it is likely that Dr Farooq Abdullah will be the beneficiary of the sympathy vote which will come to him as a result of the death of Sheikh Abdullah.

A Friendly Relationship

Whether or not the Congress(I) enters a coalition with the National Conference in the next assembly, even a friendly relationship between the two will be conducive to communal harmony and political stability in the State. The Kashmir Valley is being subjected to several external influences, not the least of which is what Ayatollah Khomeini does or says in Iran. And Kashmir wakefully watches the happenings of Afghanistan and the neighbouring Islamic republics of Soviet Central Asia.

Punjab, the key State in north-west India, is being systematically destabilised. There is no alternative to the Congress(I)-Akali coalition if the State is to be saved from a graver crisis. Punjab is not only India's bread basket, it is also the sword arm. The State faces Pakistan and the security of Jammu and Kashmir will suffer if the State remains disturbed. In trying to involve ex-servicemen in the Akali agitation Sant Harchand Singh Longowal has taken a desperate step. There are more than a million Sikh ex-servicemen in the country.

Since the Akalis cannot acquire an exclusive lien on office in Punjab and the Congress(I) cannot effectively govern the State without the backing of a strong section of the Sikhs, realism demands that both become partners in the same Government. It matters little whether such a coalition is headed by the leader of the Congress(I) party, which has an absolute majority in the present assembly, or Mr Prakash Singh Badal. Even a Congress-Akali coalition will be a holding operation: it alone cannot cure Punjab of separatism to which the Akali Dal resolution of 1973 has lent respectability.

In Tamil Nadu, separatism has been subsumed in the success the Dravida parties have had in taking and keeping power in the State. However, in the north-east, secessionism is still an active force True, the insurgency in Mizoram has been held in check. The security forces helped by local intelligence have succeeded lately in picking off MNF area commanders who had come from their Bangladesh base. The last major incident occurred nearly six months ago. The two recent District Council elections found the Congress(I) winning the seats—evidence presumably of the interest the Mizos are taking in national politics. Brig Sailo's Government appears keen to press ahead with the development projects which had been halted by MNF activities.

Some improvement has occurred in Nagaland where the Congress(I), having emerged in the recent assembly election as the largest party, formed the Government. What is more, the elections passed off without any major incident, though the Naga National Council and the "federal Government" was expected to oppose the poll with guns.

Grim Situation

By contrast, Manipur and Tripura, where ethno-cultural differences should have been less of a factor for insurgency than in Mizoram and Nagaland, the situation is grim. Manipur's Naga areas are bedevilled by an active insurgency. But the proud Meiteis, the Kshatriya ruling clan of the former princely State, who declined the privileges which would have been theirs had they accepted the status of a tribe, now have a strong group of insurgents. Because this movement is manned by educated young people, it has acquired an ultra-left ideological colouring. Delhi claims that its Rs 20-crore employment generation programme should allay the gravity of Manipur's educated unemployment. But Manipur's sense of alienation was stoked by several factors of which unemployment is only one. To the wider problem of estrangement, the employment programme and the security forces can provide no lasting answer.

As in Manipur so also in Tripura sections of local tribes are taking to arms to defend what they perceive as their rightful place and identity in the lands of their forefathers. Tripura's capacity to deal with the armed faction of the Tripura Upajati Jubo Samity is limited by the Marxist Government's own dilemmas.

As Communists the Marxist Ministers had worked long and hard among the tribes to make them aware of their rights. Now that the same Marxist party has in fact become the party of Bengali settlers who now outnumber the indigenous people, the party does not know how to reconcile the interests of their constituents with those of the tribes whom they once wooed.

The Marxists stalled the enforcement of the Armed Forces Disturbed Areas Act in the affected villages for nearly six months and thereby allowed the armed band to regroup. Agartala refuses to use the National Security Act but blames the Centre for not doing enough against the insurgents who are now believed to receive training in small arms and guerilla tactics from the MNF base in the Chittagong Hill district in Bangladesh.

The Assam situation left the Government with only three alternatives. It could and has gone ahead, disregarding disturbances which may ensue, with the intention to hold the elections, a constitutional requirement, in February 1983. Alternatively, it could have proclaimed an emergency in Assam and postponed the assembly election. The third course, would have been to amend the Constitution, before February 17 this year, to permit President's rule and the deferment of the elections beyond February 17. But all these are short term measures which cannot remove the sense of separatism which has been deepening in Assam since 1962, when the Chinese made a lunge across the Himalayas towards the foothills.

These then are some of the more serious challenges Indian statecraft must meet in the years ahead. But far be it for me to say that Indian unity is an artificial arrangement which the British contrived and which over a period must come unstuck. The threats to Indian unity are clear. But it must not be assumed that 90 years of British rule (1857-1947) followed by a reasonably centralised scheme of government, industrialisation and the intermingling of the people facilitated by modern communications, has not strengthened pan-Indian unity. If centrifugal forces are a reality in Indian history, the desire for unity, let it be admitted, also has strongly motivated the cultural and political life in peninsular India. ■

(Continued from page 13)
for accommodation. They might then well insist on conditions which could mean a further erosion of our economic sovereignty. For example, the nation's economic management could be subjected to directives or guidelines laid down by a consortium of these banks, and conditions set even more difficult than those set by the IMF. There could be insistence that the country be further opened up and foreign companies be allowed even greater degrees of freedom. Since none of these stipulations would be conducive to a rise in exports, while at one end we would keep contracting further loans, at the other end our capability to pay back these loans would actually decline. This would be what is known as the classical debt trap.

Not that this need be the only prospect awaiting us. Even at this stage, we can clamp back a regime of strict import control. We can stop importing steel and fertilisers and mining equipment and power equipment for each of which we have plenty of internal capacity. We can stop importing luxury items like wall paper and colour television sets. We can put a brake on the royalty and dividends taken out by the multinational companies each year. **We can so arrange things that there are savings to the extent of at least 20 per cent in the import bill for petroleum products each year. With a little effort, we can even accelerate our domestic programme for extracting oil.**

Why should we, after all, panic? As a result of the efforts put in since the mid-50s, we now have a deep and wide industrial base. Even if all foreign supplies are choked off, we can, with a little bit of chopping and pruning here and there, subsist on our own. Evenly distributed, our output of foodgrains can feed the entire nation reasonably comfortably. We have an infrastructure of technology which is capable of being further developed so as to cater to our needs.

There is, however, one important prerequisite. To usher in these changes, we need a different kind of cultural and moral climate. The fly-by-night practitioners of economic policy, ensconced in New Delhi, have sought to plant the notion that we can eat the cake and have it too. Such notions would need to be cast aside. A technology which shuns imports and depends on local resources and local materials necessitates a different kind of social attitude. It calls for an understanding on the part of the political leadership that, contrary to those who had advised at the time the IMF loan went through, one cannot correct a trade deficit by liberalising imports; such liberalisation can only further worsen the balance of payments.

Similarly, by allowing unbridled import of foreign goods, we do not promote growth, but create unemployment and recession in our own units. Those who have nonetheless opted for liberal imports and liberal industrial policies have done so because, not to mince words, they have been tempted by the lure of easy money! I allow you to import, and you reward me with a fat commission; I relax the industrial controls, and you put in some ready cash either in my party coffers or in my private coffers. Receding economic self-sufficiency, retarded economic growth, precariousness in balance of payments, none of these is an isolated problem. Each is a progeny of the moral climate. **To salvage the economy and restore the nation's self-confidence and honour, we need a different kind of morality from what we have been treated to in recent years.** ■

WHY SHOULD WE HAVE TO IMPORT colour T V cameras when we can exploit our own technological knowhow and save precious foreign exchange and give our specialists employment?

The Mirage Of Womancipation

A vast majority of women in India are still shackled in servitude to Male Chauvinist Pigs; but things *are* changing, slowly...

by Shobha Kilachand

IN India we treat our women strangely. We either worship them. Or we burn them. If that sounds like an extreme sentence, so is our peculiar attitude. I wouldn't be at all surprised if images of Durga were found in some of the houses where daughters-in-law were sent up in flames for not having brought along a handsome dowry. Such contradictions co-exist so naturally, that they go unnoticed. Especially by the men. If this makes you believe that a typical feminist tirade is about to follow, it is not. The whole question of the position of females in India is so wonderfully confused that it's impossible to take any one stand on it. Women are exploited. And women are deified. Women occupy positions of great power. And women are powerless. Women have strong identities and women are non-entities. Does that surprise anybody? Not at all. Is this paradoxical state about to change? I doubt it.

Going by the film culture (which is the best indicator of social change) the only big break-through in recent years has been in the bedroom. When Smita Patil announces to Amitabh Bachchan in the film *Shakti*, that she is bearing his child, nobody in the audience dies of shock. Not even in a place like Jamnagar. The blasé acceptance of their relationship shows just how far we have come from the days when the heroine could not go further than fluttering her eyelashes, sex was an act of folly outside of wedlock and the wrath of God was but a thunderbolt away. If the girl, seized by a mad fit, ever surrendered her virtue to anybody other than her *saat-phera*-ed husband you could be sure she'd die a violent death two reels later. The introduction of the mandatory rape took this a step further and made the victim pay for the villain's crime. To the best of my knowledge, *Shakti* was the first film that presented an open-ended contemporary relationship, where two people were shown living together out of choice and not due to any forced circumstances. It's a pity that the filmmaker didn't go the whole hog and have them live happily ever after—pre-mature widowhood just had to follow. Even so—it represented a big leap. Forward or backward, is a matter of opinion.

A city like Bombay is like a patch-work quilt where diverse attitudes exist compatibly. The working class woman of this city is a special breed. She has become an economic reality and necessity on par with the compulsory deposit scheme or a life insurance policy. That has tilted the scale in her favour and affected middle-class attitudes dramatically. Her economic status has automatically bestowed a certain, very basic role in her life and granted her at least a minimal sense of self-worth. That she still has to comply with the traditional expectations of her varied roles, is a bit of a nuisance. But even that is changing. Mothers-in-law for example, show more respect towards working daughters-in-law, than they do for domesticated *bahus* who are often treated like not so-glorified maids, that too, with no wages. What is still a matter of surprise is the standard practice of the daughter-in-law obediently handing over her salary to darling mother-in-law, for her to decide and distribute according to her discretion. In some cases, even nominal "pocket money" is denied to the earning woman and she is made to feel guilty about even the smallest personal expense.

The dirge of the downtrodden—the unbelievably barbaric occurrence of dowry-deaths has astonished and numbed civilised minds, but has it led to any radical reforms? Not yet. At every level of our society, dowry continues to be practised and perpetuated. To some, the whole ghastly phenomenon is reduced to a question of demand and supply. So long as men are regarded as prized commodities going to the highest bidder, and brides continue to be sold at the going market-rate, dowry is something we will have to live with. In a subtle and disguised form or in its most obvious and brash state, it can only be fought from within and not without.

Eventually, everything boils down to money—that great leveller. There can be no talk of independence for women, without economic self-sufficiency. An independent mind or a free spirit, is meaningless so long as the body and soul are being kept together by somebody else. Indian men are certainly more enlightened than their counterparts in other countries, who continue to think in terms of "male supremacy" in the most adolescent of terms. For example, the position of a mother, in our society is truly unique. She is treated on a par with an all-powerful goddess and endowed with mythical qualities of the most exaggerated kind. The problem starts when a woman steps off that pedestal and wants to be treated like a mere mortal—that's when the system gets thrown out of gear—and chaos begins. Women the world over are given a raw deal. A rotten one. For this second sex, second class citizen status has always been the system. The few who have attempted to fight it have acquired the status reserved for crusaders, martyrs or suffering saints. "THE CAUSE" has yet to take over India in any organised, structural sense of the word. Women continue to battle with the multiplicity of their roles, trying desperately to combine all the separate virtues associated with each character and blend them into an identifiable, meaningful whole. This, I believe, is the toughest part. Coming to terms with clashing expectations at home, on the job, in society has presented an intimidating tableau that has daunted even the most determined feminists. Then again, our cultural tradition has always sung the praises of the ideal woman, as personified by Sita. Reeling from this mythological hangover, most women have aspired to make that grade and failed miserably. Putting the *sati-savitri* act together in our confused times hasn't been a cake-walk. Plus, who really wants to prove her untainted character to a boring Rama when there might be a devastating Ravana around?

Militant feminist groups have surfaced in our cities and raised their voices against continued injustice and supression. So far, their voices have been muffled in the overall macho din. They have managed to attract a modest amount of media attention, but that's about it. They have mostly been dismissed as cranks or frustrated spinsters (a stereotyped and universal reaction to self-respecting women). In fact, it's strange how even intelligent and sensitive men have preferred to stick on a label like "lesbian" or "old maid", when they themselves have been at a loss to understand and absorb the far-reaching implications of this new female awareness. Male digs and cheap cracks at the new woman are so puerile and unimaginative that they don't deserve to be discussed. Unable to cope with this new unleashed female *shakti* they have retreated to their safe havens, from there to take pot-shots at an alien threat. Many a time, one overhears men talking with mock-indulgence about their "liberated" wives in a tone that implies their own generosity in having "granted" freedom to their spouses.

Eventually, every relationship is a power struggle either on an overt or subliminal level. This is not news. Control over the situation has been a male prerogative over the centuries. Women's destinies have been determined largely in that context alone. At times their very lives have depended on it. The single woman in the cities has emerged as a distinct species during the past ten years. Hers is a unique and difficult position. That she may have opted to remain single is always the last consideration. Single by choice is OK for men, but not for women—not yet. A bachelor in his forties is not necessarily the object of speculation and gossip. A single woman of the same age is. The "old maid" label is stuck on her, whereas no one refers to him as the "old crow". Again she cannot escape sexual insinuations—is she frigid, a lesbian, or just plain ugly and undesirable? No one calls him "homosexual" or "celibate". Paradoxically, it is other women who attack her single state far more savagely than the men.

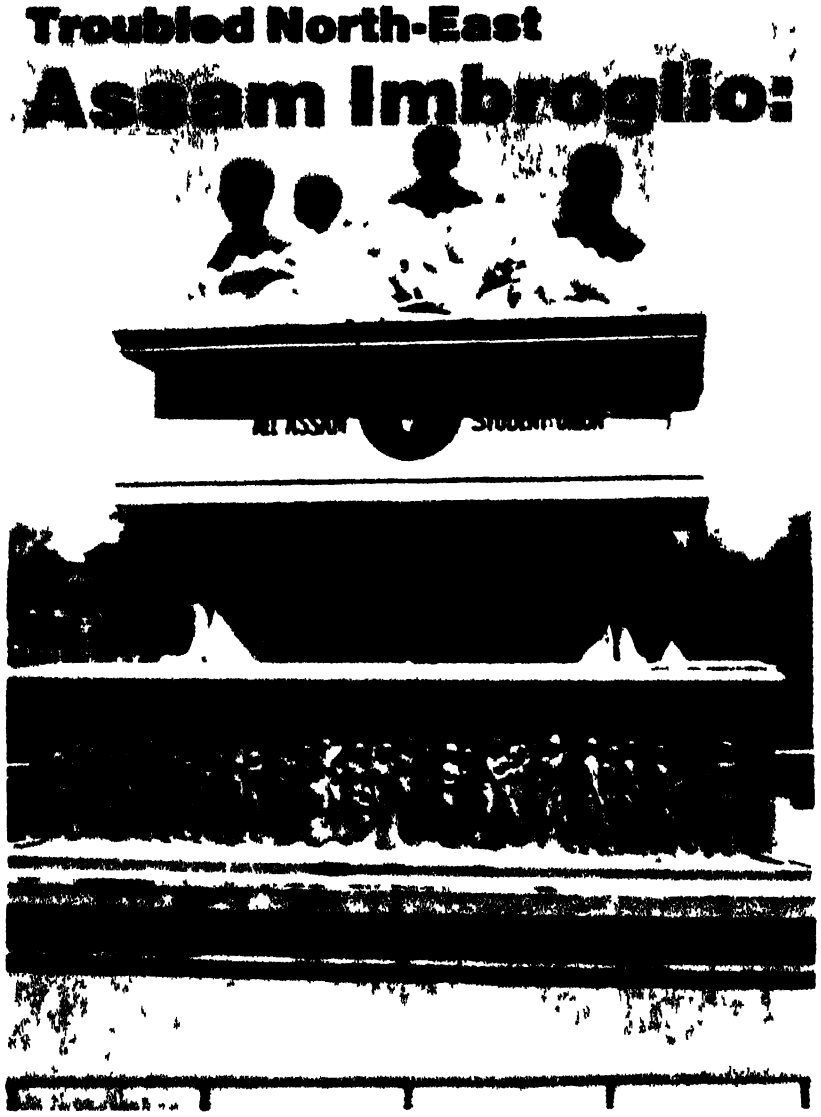
The terms underlying marriage have also been redefined in recent times. With some amount of economic freedom, women have changed the basic rules somewhat. If a self-sufficient woman with a roof over her head chooses to marry, it is because she wants to share her life with someone in the fullest sense, not because she is looking for a life-long meal ticket. Divorce, too, has got to be viewed in this light. A woman of independent means is not compelled to perpetuate a bad marriage because she has nowhere else to go. The trap of total dependency that caged so many unhappy women in the past no longer keeps the unwilling woman down. She lives with a man not because she *has* to, but because she wants to. It certainly represents a big step forward.

It is time they were made aware of their own potential and power. *Shakti* needs to be harnessed, directed and exploited for the furtherance of overall human development. The very concept of the sexes locked in eternal battle is negative and destructive. Rage can never replace understanding. Through generations of propaganda, women have been brainwashed into sustaining the myth of male supremacy. This continued state of suspended insecurity has to be dispelled for any intelligent dialogue between the sexes to begin. Exploding myths is not an easy task especially when it's undertaken by the underdog, (underbitch, would be more appropriate in this context!). Slogans and rhetoric can achieve nothing, because, as all us urban cats already know, India lives in its villages. To a woman in some distant taluka, the Germaine Greer brand of feminism is so much hogwash. In real terms she has to be awakened to only one issue—that her dignity is at stake. When one talks of *shakti* unleashed, one also remembers the two connotations of *shakti*—the destructive *avatar* is as potent as the creative one. It is in maintaining the state of equilibrium between these two opposing forces that can lead to creative and dynamic harmony.

Complacent, placid women have always existed and will continue to exist, as have and will docile or meek men. The quarrel is not with who will scramble to the top of the human heap and stay there, but with the race being run in fair terms and without weighted handicaps. Men will have to come to terms with woman power. This isn't the voice of naive female optimism. It is the voice of reason and logic. I simply believe that another alternative just does not exist any longer. ■

Troubled North-East

Assam Imbroglio:



FOREVER REMEMBERED This memorial, in Tezpur, to students who died in the agitation against foreigners, is a grim reminder of past violence

Foreigners Stand Between Poll And Peace

The agitation leaders have threatened large-scale violence and bloodbaths if elections are forced on them before a settlement of the foreigners issue Meanwhile the Centre has already announced the polls in Assam next month

Text and Photographs by H.S. Sethi

"I HAVE seen gorgeous scenery on the Thames But I cannot recall anything as superior to the lavishness with which nature has decorated the great stream on whose banks I am writing these notes"

Mahatma Gandhi wrote these lines from the banks of the Brahmaputra at Tezpur for *Young India* in 1921 In the same piece the Mahatma sang of the Assam s women who "weave fairy tales in cloth and of the part played by its men in the freedom struggle and confessed of his "stupidity to have written (in 1908) that the Assamese were *jungli*

Assam had long forgotten the injury and, as Gandhiji himself mentioned, the highest percentage of pleaders who suspended practice to join the freedom movement came from Assam

Today, 62 years after the Mahatma wrote that eulogy to Assam, the Assamese still nurse a wound—an injury caused by the invasion of their land by foreigners and by the consequences that flowed from it In the same Tezpur, stands a memorial to students who died in the agitation against foreigners

The Brahmaputra flows through almost all districts of Assam for a length of 725 kms The great river has been a source of verdure as well as erosion of pleasure as well as pain for Assam But always the people of Assam have been proud of it, of its vastness and power Unfortunately, the same Brahmaputra, on the bank of which their hero Lachit Barphukan, repulsed the repeated attacks of the mighty Mughals in the 18th century, could not hold the Bangladeshi foreigners

Immigration from an overpopulated area like Bengal into an under-populated adjoining State with its lush green expanses of paddy fields was natural and had been going on for ages It was inevitable, too, because the natural barrier of the Brahmaputra, instead of hindering the immigrant, actually helps him

Others too, like the Brahmaputra, had connived at importing these "foreigners" The Assamese loved ease and needed labour for their farms and tea estates, the Bengali "babu" who ran the bureaucracy sympathised with fellow Bengalis from across the border, and the Government, particularly the one led by M Saadulla, encouraged immigration under the guise of the *Grow More Food* campaign during World War II and settled them on the banks of the Brahmaputra Ever since, these had remained Bengali dominated areas that, according to AASU, provided initial refuge to a "foreigner" until he could move further into the Brahmaputra valley After Independence, too they allege the Congress turned a blind eye to it with a view to capturing the block votes of these "foreigners' turned Indian citizens

And Assam exploded when in March 1979, on the eve of a by election in the Mangaldoi Parliamentary constituency most of the objections raised against 47,650 "voters" were sustained by electoral registration officers AASU and AAGSU then combined in a rare expression of unity and the agitation against foreigners reached gigantic proportions The Government had to repeatedly withdraw curfews and Section 144 orders in view of massive defiance by the people

In May 1980 when I met Lalit Rajkhowa, the AASU advisor and then a law student at Gauhati, he was bubbling with over-confidence "Like the flow of the Brahmaputra, nothing can stop this movement" he told me

The Tide Turns

However, the tide started turning when the minorities led by the All Assam Minorities Students' Union took out a two-lakh strong procession in Barpeta on May 26, 1980 When the AASU tried to stop the processionists, at many places there were clashes A CRP commandant saved the situation near Barpeta when he stood between the two processions and used persuasion and threat to prevent bloodshed The situation took a violent turn later In the next four days, 47 persons lost their lives

I was in Nowgong, the worst-affected district, on May 28 As news of the burning of 26 Assamese homes by the minorities in Lachar village in Dhing area reached the control room of Nowgong, Commandant Sandhu of the CRPF decided to be on the spot I accompanied him

What I saw on the way reminded me of 1947 Mobs of varying sizes could be seen moving from their villages towards Dhing despite the curfew Lathis spears axes, *chok* (multi faced spears) *kachi* and *takas* silhouetted the horizon

The agitation leaders got worried and decided to observe an *Integration Week* But simply labelling a week did not cut much ice even with other non-Assamese living in the State for ages The unanimous feeling was 'After the foreigners it will be our turn'

The Assamese had themselves to blame for this Through written and spoken word they had abused and intimidated the non Assamese In Dibrugarh the walls of Don Bosco School had the slogans *Our Sword is thirsty for non Assamese blood- Go back non Assamese* and *Assam Bharat Bhitar Nahin* (Assam Is Not Within India)

The Bodo tribal, who had earlier sided with the Assamese students, had his own reservations The Bihari tea garden labourer feared that a tea blockade could snatch his source of living The minorities had openly requested the Centre for the deployment of Central troops with an *independent command*

A Sikh whose forefathers had settled in Assam told me that daily abuses were hurled on the face of non-Assamese

"Aeli, kuli, Bengali
Pagriwala Punjabi
Pet mota Marwari
Nak chippa Nepali
Letra setra Deshwali
Kookar Panwali
Yapur ke le aali

(The Muslim the labourer, the Bengali the turbaned Punjabi, the fat Marwari, the flat nosed Nepali, the dirty Deshwali—sons of a —what have they come here for?)

CRPF Takes Over

The tables turned from November 27, 1980 onwards On this day an angry Sarin, Advisor to the Governor of Assam demanded why, with so many battalions, the CRPF was ineffective He was told that the problem was that under the Constitution, "law and order" was a

GROW MORE FOOD The comfort loving Assamese needed labour for their farms and so indirectly encouraged immigration from neighbouring lands into their State

Troubled North-East

Mizoram: Land Of The Three Gs

The people of Mizoram are fast tiring of insurgency and armed presence in their State. They would wish all the violence to end, but they continue to be mere pawns on the chessboard of Mizoram.

THE night was young and the Van Sisters were singing lustily to the music of a guitar. A sad note now; a merry one the next moment; at times invoking *Pathian* (God) to help their beautiful land...

That was at Aizawl in 1976. The venue: the residence of Mr Surendra Nath, the Indian Police serviceman made the Chief Secretary of the Union Territory.

It seemed a timeless moment—the sisters could go on singing till eternity. They, like all Mizo people at that time, were happy. The peace accord between Laldenga and the Centre had been signed at Delhi and approved by the MNF convention at Calcutta. No one spoke of war. Never before did the church bells toll so merrily as they did on July 7 that year.

Back home in Delhi, I wrote a piece on Mizoram for the *Weekly* which noted: "The three weaknesses of a Mizo youth are gun, girl and guitar." The media picked it up and the alliteration caught on. (Today Mizoram is often referred to as the "Land of the Three Gs").

But Laldenga was not amused. When the sentence appeared in the *Weekly's* advance blurb, he raised a hue and cry. "Look, what is appearing in the *Weekly* when peace talks are going on," he complained to the Home Ministry. Nothing could be done then; the *Weekly* was already out.

Laldenga was then dragging his feet. The accord had envisaged, among other things, the collection of the insurgents in camps to lay down arms within a month. Hardly had the ink on the agreement dried when Laldenga sent a tape-recorded message to the underground not to surrender.

Laldenga was picking holes in the agreement. He objected to newspaper headlines like "MNF surrender imminent" and played upon the word "surrender". This was one word that hurt tribal pride, for the Mizo youth had always dreamt of being warriors and had considered the gun as a necessary prop of the macho image.

Ask any man in uniform and he will tell you how the Mizo extremists bade farewell to arms. During the first 8 months of last year, the CRPF captured 75 guns as a result of searches, encounters and surrenders but in every case, the extremists took leave of their guns as a dying man would from his dear ones.

Laldenga wanted to retain the arms as a counterweight for bargaining with the Centre. However, by then the Janata regime was in power and both Morarji Desai and Charan Singh told him that there could be no bargaining with an insurgent. Morarji Desai reportedly told him on his face that he was a "slippery customer"

Renewed Violence

Although Laldenga promised to arrange the surrender of arms by January 26, 1978, violence was renewed. Hints were dropped that Laldenga be installed as Chief Minister. The Centre promptly declared MNF as unlawful and arrested Laldenga

Laldenga has never had qualms about making or breaking promises. If he had, the history of Mizoram would have been different. In 1966 he gave a "good conduct" undertaking to Chief Minister B.P. Chaliha of Assam to secure release from prison. He organised a revolt soon after coming out. It coincided with the cyclic famine. (When the bamboo flowers once in 50 years, the rats feed on it, proliferate and devour all crops. This phenomenon is called *mautam*, which even in Hindustani stands for mourning). In that year of revolt, it is said rats multiplied so much that they swam across the rivers in search of food and ate up everything that came in their way.

Laldenga converted the Famine Relief Front into the Mizo National Front with the avowed aim of securing independence for Mizoram. What happened later is recent history. Suffice it to say that Laldenga cashed in on the persecution-by-Janata-regime sentiment when Indira Gandhi came back to power in 1980 Talks were resumed. They dragged on for about two years and failed The interval was utilised by the MNF for intensifying recruitment and extorting money

On January 20 last year, the MNF was banned Four days later Laldenga declared that "the war was on". On February 20 he told UNI that the MNF was no longer committed to finding a solution

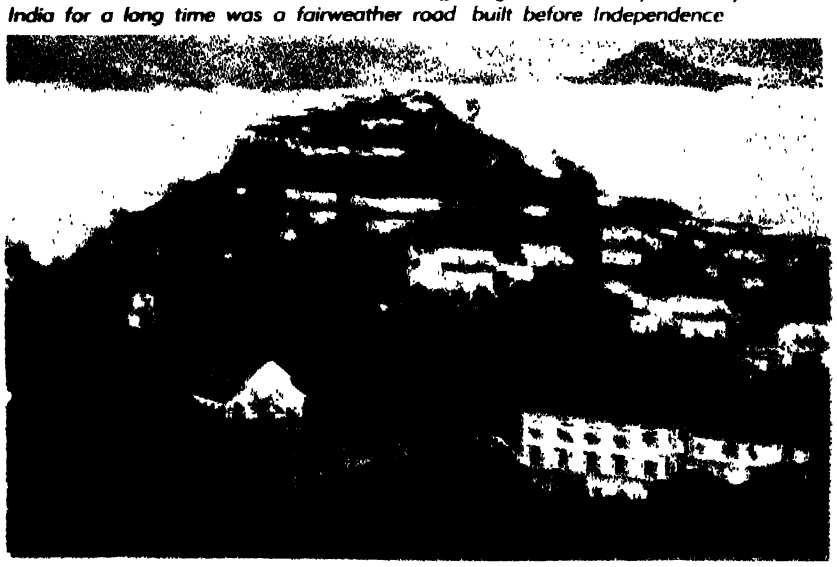
LONE RANGER. Mizoram is almost completely snowed under the CRPF. Men in khaki guard all the vital installations and sensitive spots

CULTURAL EXPOSURE. The Asian Games opened up a whole new India to the bamboo dancers and Mizo officials. They returned as ambassadors of goodwill.

CENTURIES OF ISOLATION. Aizawl under fog rising from the valley The only link with India for a long time was a fairweather road built before Independence



WITH GIRL, GUN AND GUITAR. By and large, the people of Mizoram desire an end to the nightmarish existence that 17 years of insurgency has brought into their land.

within the framework of the Indian Constitution.

Laldenga wanted to hold on but could not. For one thing, the inspiration for insurgency in Mizoram and the tactics came from Nagaland. And one lesson that Nagaland held for Laldenga was that he must not become another Phizo. He could perhaps go to the MNF headquarters in the Chittagong Hill Tracts through Bangladesh and guide insurgency from there. By remaining in Delhi, he could show clout. In the Chittagong Hills, he would be just one of the insurgents.

The situation in Mizoram itself—the people, the Government and the security forces—also influenced Laldenga's decision.

CRPF Sway

When I visited Mizoram recently, Aizawl seemed to be completely under the sway of the CRPF. Men in khaki patrolled the streets of the city round the clock, guarding not only vital installations and sensitive spots like powerhouses, water-points, jails, banks and treasuries but also the houses of Ministers and top officers. Armed CRPF men escorted the touring VIPs and officers.

They even guarded the police headquarters at Aizawl and some police stations. (The police top brass could not afford to forget the unlucky 13th day of January 1975 when the IGP, DIG and an SP were murdered in broad daylight at the police headquarters. The four MNF assailants had escaped in a jeep in full view of the local police guard, as easily as they had come. The security forces were then mobilised to organise a hunt for the killers. While Lalhlea died in a running encounter with the BSF, the remaining three—Zuava, Thangrelova and Rohunna—were accounted for by the CRPF).

In addition to the CRPF, there were other forces like the army, Assam Rifles, BSF and Mizo Armed Police in Mizoram. The Mizos could not win against these forces in pitched battles: they were born ambushmen. In the old days, they planted smooth six-inch long needle-like bamboo spikes on the forest pathways and waited with *daos* (machetes) in the overhanging canopy. After the enemy was spiked, they would charge in with the *daos* to take the heads home as trophies. Today, they plan ambushes with meticulous care, use the latest weaponry and execute them ruthlessly from trenches along Mizoram's serpentine roads which pass through the hills and jungles.

After the talks failed, the MNF laid two major ambushes (both directed against the CRPF) in which two Deputy Superintendents of Police and three men were killed.

However, the MNF not only killed soldiers but also civilians, including teachers and road builders who, until recently, were treated with respect. This has certainly not won the MNF any friends. In fact, following the spate of murders by the MNF in 1980, there were popular demonstrations against unwarranted "un-Christian" killings by over 20,000 youths in Aizawl.

Yearning For Peace

The Mizos, by and large, yearned for a lasting peace, though, of late, the Mizo Zirlai Paul (Mizo Students' Association) had been showing some affinity for the MNF; it allegedly extorted taxes from the people on behalf of the MNF.

This part of the North-East was neglected for many years after Independence. Even today one could draw only two gallons of drinking water against a ration card. (The black market price varied from Rs 5 to Rs 10). Despite Mizoram's huge hydro-power potential, even the capital, Aizawl, remained dark most of the time.

For centuries the Mizos had lived in the isolation of the Lushai hills. Their only link with the rest of India was through the 240-km Silchar-Aizawl fair weather road built in 1942. It was only in the sixties that the road was metalled.

Silchar was culturally so different. Unlike Mizoram, the shopkeepers here haggled, the rickshawala quarrelled and the Cachari made indecent remarks. The Mizo sense of alienation was reinforced every time they went to Silchar for shopping.

Incidentally, the Asian Games provided the biggest "exposure of India" for the people of the North-East (a smugglers' paradise, Aizawl had a number of TV sets). Besides, the 500 bamboo dancers and the host of Mizo officials who lived in Delhi for months came to know the kaleidoscopic composition of India and its interest in the culture of all regions. They came as Mizos and returned as ambassadors of goodwill.

The 4,40,000 people of the Union Territory, sandwiched between Burma and Bangladesh, had all along hoped that the talks would be fruitful. Said a college lecturer at Aizawl: "I wish the talks between Laldenga and the Centre could go on forever. After all, arguing is better than fighting."

The Mizos know the meaning of the Unlawful Activities Act better than anyone else. "Who would like to have a midnight knock at his door, the searches, the whisking away of a son or brother by security forces?" asks a woman of Saitual.

Nightmarish Life

Seventeen years of insurgency have been nightmarish for the people of Mizoram. I once met Malsaumi, who earned her bread by stitching and looked older than her years. She was ill and had a mentally deranged sister to support. In sheer agony, she talked of her three brothers—Kapkima who had been serving a life term for involvment in murder, Kapthana who had not written to her for years and the third one who was working on "jhoom". She prayed fervently that he should not go to the "jungle" (the Mizo expression for underground). A large number of Mizo women were suffering from mental illness.

According to tribal traditions, a guest had to be welcomed. So the extremists could always find shelter in a village. But, by and large, the MNF lost its hold on the people. This was proved beyond doubt in the Assembly by-elections held in May last year. Of the four by-elections, three were won by the ruling People's Conference and one by an independent. The MNF could not stand this and murdered Riving Zadinga, a PC candidate at Phuldansai while he was on a thanks giving visit to his constituency.

Still, people are mere pawns on the chessboard of Mizoram. The initiative lies with the insurgents. True, there has been no eruption of violence on a large scale but no one knows what tomorrow has in store for them. "We sit with fingers crossed and pray for peace," says a young teacher.

As the evening descends on Aizawl it is time for curfew. A hush seems to fall on the town. Not even a single dog barks. But the sounds of the boots of the patrolling soldiers come loud and clear...

"IT was a war of minds." This is how Brig. T. Sailo, the Chief Minister of Mizoram, described insurgency in the Union Territory when I met him in Aizawl recently. The Brigadier, still recovering from "Delhi's gift" of dengue, felt that the MNF was losing the war.

"After sixteen years of insurgency, the people are showing signs of disapproval and are, for the first time, volunteering information. This indeed is a breakthrough. As a result, a large number of insurgents have been captured with weapons. This had never happened before," said Brig. Sailo.

The Chief Minister's assessment of the support the MNF received from the people during various stages of insurgency was this: In 1966 when insurgency started, nearly half the population supported it. The Mizo Union, then a party loyal to the Government, won the elections. The MNF killed nearly 200 members of the Mizo Union. Subsequently army excesses moulded all in hostility to the security forces. Thus by 1974, the percentage of MNF sympathisers had risen to something like 80. Later on, however, the process was reversed and insurgency was on the way out in 1979 but the national papers and New Delhi boosted up Laldenga who was a forgotten force then. Of late, the security forces had realised that the best weapon was to enter the minds of the people. The CRPF in particular had been conspicuous in winning public confidence. As a result, the sympathy for the insurgency in public was just marginal now.

The bullets did not solve the problem, said the Chief Minister. But, he agreed, a minimum use of force was always required. "Force used should be compatible with the gravity of the situation," he said.

The Chief Minister, however, did not favour fraternisation by the security forces. "Obviously, it would be wrong," he asserted.

H.S.S.

Continued from Page 16

State subject and therefore the CRPF had to work under Assam administration which, at that time, was partisan.

Sarin decided that henceforth the CRPF would have the authority but it would associate with the Assam Police in all situations. In practice, it meant that CRPF could act on its own. Soon the city of Gauhati was divided into five sectors and a CRP Commandant made overall in charge of operations. "From that day, the people knew that there were no sacred cows, that the CRPF meant business," said DIG M.P. Singh of CRPF. "We made up our mind that henceforth law would be enforced and it was enforced."

Meanwhile the Army had cleared the oil blockade but trains loaded with "embargoed" items like oil and teak had been standing in the yards and there were hurdles at every inch of the track. With the help of a CRPF battalion that operated from Amingaon on the bank of the Brahmaputra, the Railways were able to move these trains all along the route. The cops also removed road barricades and saw to it that the vehicles were kept moving.

Students were obliged to lift picketing at various places in the face of the show of force and firm handling by the CRP. In the bargain, the CRPF was stigmatised, abused. Unmindful, the men in khaki did their duty.

Students struck back through *bandhs* and non-cooperation. But such action always called for more vigilance and hence more trouble for law-breakers. In the process, the cops recovered a lot of liquor and contraband goods, the *goondas* were scared and the general law and order situation improved

In fact, while the Assamese by and large supported the agitation, a sizeable Assamese population had got sick of it. After all, how long could parents allow their children to miss studies and their young daughters to be away from their houses? People, therefore, welcomed the opening of the educational institutions and a return to normalcy.

ALL QUIET ON THE NORTH-EASTERN FRONT? CRPF jawans on vigil at a crucial point in Dispur. The CRPF was greatly stigmatised and abused by the Assam agitators but they did their duty nevertheless.

The agitation leaders originally swore by Gandhi and non-violence and still do. However, driven to desperation by the Government's firm handling, some agitators had, of late, taken to bomb attacks. No less than a dozen bomb blasts took place in Nowgong district alone last year. A blast on the eve of the last Independence Day killed six in Nowgong. Another bomb in the Fatasil-Ambari market of Gauhati left 21 dead.

The agitation leaders had had a tiger ride and found it hard to get down on *terra firma*. All along they had fed the inhabitants with impossible promises. They realised that now. That is why, starting with their demand of 1951 as the cut-off year, they were now negotiating for 1961.

Today, as Assam is on the threshold of elections, the "foreigners" stand between poll and peace. The die is cast

The agitation leaders did not hide their bitterness at the failure of talks. While Indira Gandhi stated that the door for negotiations was still open, the Assamese leaders talked of a "final estrangement" between the Centre and the people of Assam, of a "movement against aliens going beyond control" and of a "blood-bath". In separate statements, AAGSU threatened to teach a lesson to the Government and AASU leaders—Mahanta and Phukan—stated that there would be large-scale disturbances if elections were forced on Assam without settling the foreigners' issue.

Long before the poll was announced, the agitators had started their campaign against the elections. There were wall posters like *No solution, no elections* at Gauhati; *Those who dream of becoming ministers — beware* at Barpeta and *Martyrs' soul calling — Pay the price of our blood* at Bako. Similarly there were posters like *We shall give blood but shall not allow elections* at Goalpara.

The Government replied to the threats simply by arresting the agitation leaders and inducting security forces on a large scale (with the CRPF forming the bulk) in Assam in order to make *pucca bandobast*

Even so, will there not be a repetition of Mangaldoi in many constituencies and what percentage of voters will actually turn up for voting? These are questions that time alone will answer.

An observation made by the former Chief Election Commissioner Shakdhar to the Press at Shillong in May 1982 is, however, relevant. He stated that even in 1980 the Lok Sabha elections could have been held in Assam if the State administration had been firm. There is little doubt that it will be so this time. Since Mangaldoi, much water has flowed down the Brahmaputra.

H.S. S.

Assam: Agitators Losing Their Grip?

Although even after three years a solution to the problem of foreigners in Assam has proved elusive, recent happenings indicate that the agitators do not hold as much sway over the Assamese as they did earlier, says the author.

by Kirit Bhaumik

ASSAM provides a unique example of how political instability can encourage different interest groups to adopt irreconcilable positions giving rise to knotty and insoluble problems. Next to Kashmir, no problem has received so much attention involving the highest levels in the Government. Yet, after three years of sustained effort, the problem remains as intractable as ever.

But patience pays. A lot has changed in the north-eastern State behind the facade of the long-drawn-out and frustrating negotiations. Pertinent to this are the two bandhs called by the All-Assam Students Union and the All-Assam Gana Sangram Parishad, a combination of local political groups, which spearheaded the movement for the expulsion of "foreigners" from the State—one in 1979 and the other recently.

The bandh on December 2 last could be charitably called a partial success. A similar bandh called three years ago (on December 3, 1979), demanding postponement of elections, brought life in the Brahmaputra valley to a standstill and sparked a blockade movement which put considerable strain on the national economy.

The last bandh showed that it is no longer possible for the agitators to repeat their performance of 1979 when flow of crude from the State, which meets one-third of the country's requirements was totally stopped. The supplies of plywood, bamboo and timber were also disrupted creating widespread unemployment in these trades.

The Government was forced to import about three million tonnes of crude to meet the shortage when international prices were ruling high, till the supplies from the Assam oilfields were restored in November 1980. The loss to the nation in financial terms was estimated at Rs 1,000 crores a month with an additional invisible and indirect loss of Rs 50 crores to Rs 75 crores a month.

Besides, more than 300 people lost their lives in clashes and police firings in different parts of the State. The movement took a violent turn in the initial stages till negotiations began in February 1980. Students lost at least one year of their academic career due to closure of schools and colleges. Development work also suffered a setback.

The credit for the change in the situation must go to the Indira Gandhi Government for its patient handling of the agitation. However, the situation is so complex that it is indeed difficult to apportion blame. One could say that the nation and the people of Assam shared the loss equally for a cause which is not devoid of justification. The people of the State were prepared to undergo the loss and sufferings because they apparently thought that their future could be threatened unless they could make the Centre sufficiently aware of the dangers ahead

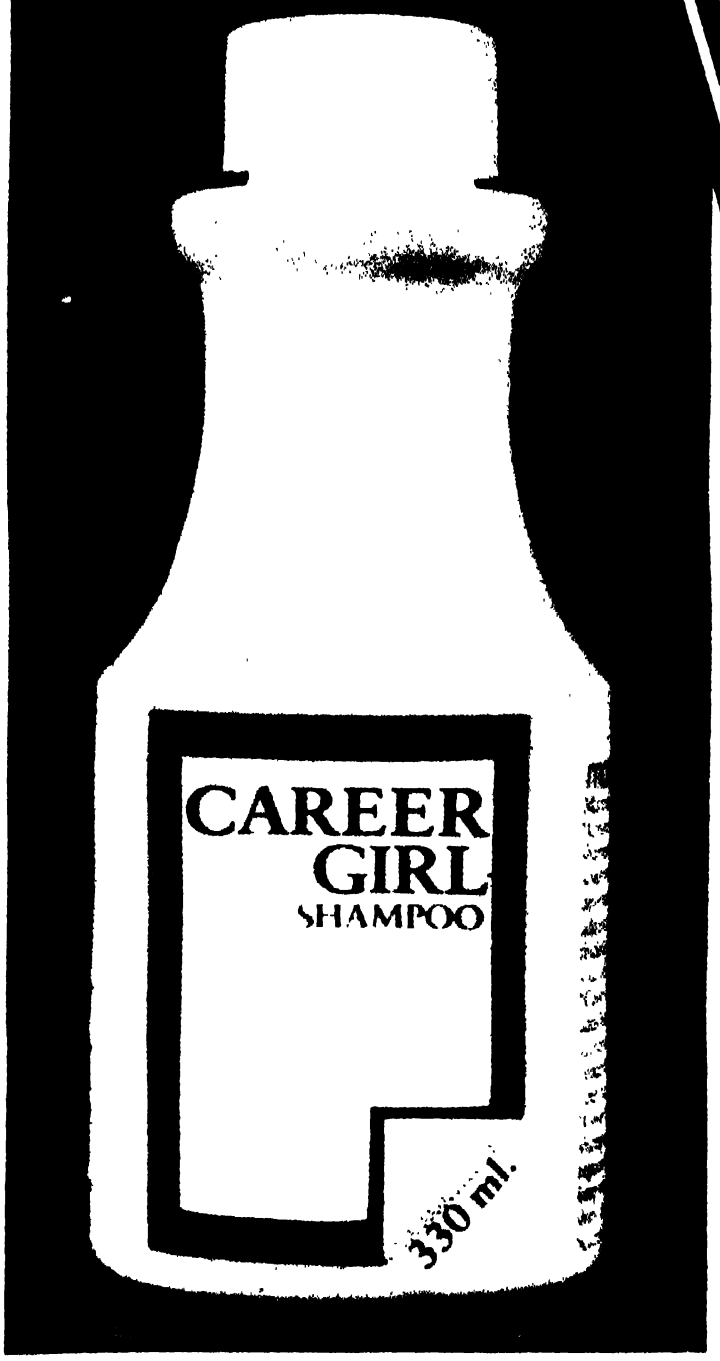
Knotty Problems

It is here that the problem remains knotted. The situation has been complicated by geography and history, by the political interests of different groups, by the partition of the country, the Government's commitments to the minorities across the border and the Assamese fear of being swamped by people from outside.

The Assamese fears were exacerbated because there appeared to be no authority in the country which could understand their problems. Mr Charan Singh's Government at the Centre did not inspire confidence that it could guage the complexity of the issues involved. There was also inadequate awareness of the size and complexity of the problem even at the State level. Mr Jogendra Hazarika who was then the Chief Minister, estimated in October 1979 that there were about 2,00,000 "foreign" nationals in the State and declared that they would be deported through a judicial process.

This could hardly satisfy the Assam agitators. Their estimate was that there were no less than five million "foreigners" staying in Assam without authority. They had come in different phases since 195

mannequin's



SAVE 35%—50% ON YOUR SHAMPOO COSTS!

Calculate for yourself

Product	Contents	Maximum retail price	Therefore retail price for 330 ml
Halo	160 ml.	Rs 20/10	Rs 41/45
Sunsilk	180 ml.	Rs 20/50	Rs 37/58
Gleem	180 ml.	Rs 19.13	Rs 35/07
Mannequin's CAREER GIRL			**Rs 24/90**

Imagine a premium quality shampoo that costs 35%-50% less than your regular shampoo!!
Yes, Mannequin's *"CAREER GIRL"* Conditioning Shampoo costs only Rs 24/90 (plus local taxes) for a full 330 ml. bottle.
Remember most ordinary shampoos cost you Rs 20/- or more for a 180 ml. bottle and as we said before *"CAREER GIRL"* is only Rs 24/90 for a full 330 ml. bottle. That's a fantastic no-nonsense saving of over 40%.

Price apart, "CAREER GIRL" Shampoos' exclusive honey-thick formula strengthens weak hair, controls split ends and stops excessive hair loss instantly. Remember *"CAREER GIRL"* is also gentle to the most sensitive hair, get yourself the *"CAREER GIRL"* look today! It costs so little!!

Available in a choice of lime, egg and herbal.

from erstwhile East Pakistan and later Bangladesh and stayed on. Their estimate was later found to be much nearer the mark.

No State was perhaps affected more by political instability during the Janata period than Assam. Due to internal squabblings, the Janata Government led by Mr Golap Barbora disintegrated in September 1979 which gave a go-bye to the last vestiges of political authority in the State. After the fall of the Barbora Ministry, Mr Hazarika tried to rule with the help of a rump of disparate elements but gave up the effort within three months. This was followed by two abortive attempts by the Congress (I) to rule through its Governments.

With political authority nowhere in sight, students and local political groups with extremist leanings took up the cause of the Assamese-speaking people by organising a massive rally in Gauhati on October 10, 1979 in which over 1,00,000 people participated. In a situation where political vacuum prevailed, the movement was bound to take a violent form.

Lack of authority also encouraged the State Government employees to openly cooperate with the agitators by not only responding to their work stoppage calls but by participating in their rallies and demonstrations. That partially explains the total success of the movement in the initial stages.

The first serious attempt to get to grips with the problem was made after Mrs Indira Gandhi returned to power at the Centre in January 1980. A dialogue between the Centre and the agitators was started with a delegation of the All Assam Students Union (AASU) meeting the Prime Minister in New Delhi on February 2.

The beginning, unfortunately, was made under a cloud of suspicion on both sides. Mrs Gandhi is on record as saying that the movement, started by students, had gone into the hands of secessionists. At different forums, she spelt out the Government's reservations in accepting the agitators' demands.

Mrs Gandhi said it was simplistic to imagine that if Bengalis went out of Assam, Assamese from Bengal, Tamilians from Karnataka, north and south Indians from Bombay more jobs would be available to the local people. Such narrow-mindedness, she averred, especially which led to agitations, had reactions in other places, hit development and did not allow employment to increase. She expressed concern that, whereas the problem of presence of foreigners in Assam was real, there were instances of people who were not foreigners being called foreigners. She told the agitators that no genuine Indian should be harassed.

The agitators took the stand that, by allowing the influx of foreigners unchecked into Assam, the Union government was creating a dangerous situation with potentialities of disruption in the future. While they were concerned about its impact on their own interests, they also wanted the country to know that it could one day undermine the integrity of the country.

The justification for calling the movement "anti-national" was that certain groups in Assam, on certain occasions, raised secessionist slogans. The Assamese agitators, however, say in justification that such slogans are raised because the Centre has shown scant interest in the problems of the northeast. Nehru's "farewell message" to the Assamese people in the wake of the Chinese thrust towards Tezpur in 1962 apparently continues to rankle some Assamese minds.

Although no agreement could be reached in the countless rounds of talks held between the Union Government and the Assam agitators on the foreigners problem in the last three years, it would be wrong to say that no progress was made towards finding a solution. In fact, the problem has been considerably narrowed down.

In the beginning, the agitators demanded that all foreign nationals who entered Assam since 1951—the year of the signing of the Nehru-Liaquat Pact—should be detected, their names should be struck off the electoral rolls and they should be deported to their countries of origin (Bangladesh, Nepal and Burma). The Union Government offered 1971 as the cut-off year when acceptance of refugees from Bangladesh was stopped under the Indira-Mujib agreement. It meant that all those who had come to the State after March 1971 from Bangladesh would be deported.

Between 1951 and 1971, it was estimated that around 3.7 million people had come into Assam from across the border in different stages. A majority of them belonged to the minority community in East Pakistan—Hindus—who had migrated due to persecution or fear of persecution after partition. A majority of them settled on the fertile but fallow land in the Brahmaputra valley, raised crops and thereby rehabilitated themselves.

The Hindus from east Pakistan argued that they were the victims of a political decision—partition of India—taken without consulting them. The Government of India therefore had an obligation to accept them if they could not live with honour and dignity in Pakistan. The Assamese-speaking people asserted that rehabilitation of refugees was a national obligation and only a few States should not be expected to shoulder the burden.

However, the size of the population involved was so large that to uproot them from their homes and resettle them elsewhere was an impossible task. Besides, several legal and constitutional complications could arise in ejecting them from their land. Those refugees who had not obtained Indian citizenship certificates could technically be called "foreigners", but what about their progeny who had grown up in this country in the last 30 years? Obviously, they could not be disturbed

After a series of talks held in New Delhi, the agitation leaders agreed that those who entered Assam during the 1951-61 period could be absorbed in the State but insisted that the immigrants of the 1961-71 period should either be deported or be dispersed to other States This, however, did not help to bring the problem down to manageable proportions because even then the people involved were as many as 1.2 million.

A majority of these people, belonging to the minority community in East Pakistan, had come in the wake of the Indo-Pakistan conflict of 1965 and the Government of India was committed to accept them. In the Government's view, even if these people have not obtained the citizenship certificate, they are eligible for it.

While this basic difference between the Union Government and the agitation leaders continued through the three-year-long parleys, agreement was reached on a number of important points. It was decided to take measures to prevent enrolment of ineligible persons as voters and to issue identity cards to all eligible voters. The Centre would henceforth grant citizenship certificates to those eligible for it and not the State Governments. A household register and a birth and death register would be maintained in Assam.

The Government also agreed to tighten border security measures and take special steps to prevent encroachment on tribal land Finally, the Government offered to amend the Constitution to provide political, educational and employment safeguards to the Assamese-speaking people By political safeguards, it was presumably meant that majority for the Assamese-speaking people in the State Assembly would be assured.

Allaying Fears

The political safeguards were offered to allay the Assamese fear that they would one day be outvoted by the aliens. They have before them the experience of Tripura where the original people of the State have been reduced to a small and insignificant minority

While the agitators have not given up their demand that all the 1.2 million "foreigners" who came into the State between 1961 and 1971 should be dispersed to other States, they were agreeable to their dispersal under a phased programme spread over several years. This they considered to be a major concession. But they were insistent that the names of all those "foreigners" should be struck off the rolls before the elections.

Having involved the Opposition parties in the negotiations, the Government asked the Janata party leader, Mr Ravindra Verma, to suggest a solution Mr. Verma offered a formula under which the entrants of the 1961-71 period were to be categorised in different groups and proposed that names of all those found ineligible for citizenship by duly constituted tribunals, would be struck off the electoral rolls. The formula was rejected by the agitators.

Be it the political interests of the ruling party or a genuine concern for the fate of the victims of partition, the Union Government apparently has reasons not to concede the agitators' demand that the 1.2 million people now living in Assam should be reduced to the status of "statelessness". The agitators find it difficult to further soften their stand, apparently for fear of losing a good deal of political clout. A solution has, therefore, so far proved elusive.

In the event, the Centre appears to be veering round to the view that the only solution to the Assam problem lies in restoration of political authority in the State. The first step in this direction is obviously to hold elections to the State Assembly. ■

NO GENERATION GAP HERE. Aged women protest in support of AASU in Jorhat. The Assamese are prepared to undergo great loss and suffering for their cause.

—H.S. Sethi

Gundu, Gundu, Gone!

Mr Gundu Rao, due to his arrogant antics, had the dubious distinction of presiding over the Congress-I's rout in the state, says the author.

GUNDU Rao, who met his Waterloo at Somwarpet, knew it was coming. Apprehending the impending doom, he brought in a battery of film stars—Amjad Khan, Feroze Khan and Sanjay Khan—to bail him out of the inevitable disaster. Sensing the danger, his political guru, M.G Ramachandran, rushed to Somwarpet and pleaded with two lakh people to vote their Chief Minister back to power. Mrs Indira Gandhi and Rajiv played their parts, too.

But the rescue operations came a bit too late. The damage was already done. On January 5, the electorate of Somwarpet decided to disown their pompously querulous, flippant and egotistic representative. And when the results were announced the next day, Gundu Rao, who not only boasted that he can win anywhere in the State, but also that he would win by more than 10,000 votes, was thrown out by half that number.

As if to drive home the point more effectively, the voters of Kodagu (Coorg) district, (under which Somwarpet constituency falls) gave their stamp of approval to the two remaining Congress (I) candidates. Of the three seats that Mrs Gandhi's party contested in this district, it lost only one—the seat of Mr Gundu Rao. During his brief tenure, Gundu Rao has accomplished what his predecessors failed to achieve—presiding over the doom of the Congress, the party that held sway over the State for the last 25 years.

A look at the party's performance from 1972 onwards, the year Mrs Gandhi established her supremacy in the party, shows a gradual decline in its popularity.

Year	Congress-I
1972	165 seats
1978	149 seats
1983	81 seats

The Janata, which put up an impressive performance in the last Assembly elections, winning 59 seats, also lost some of its strongholds in the latest elections, while making dents in the Congress (I) pockets. For example, in Mandya and Bijapur Districts, the party could win only four seats in the former and three seats in the latter, while bagging eight and seven seats respectively in the 1978 elections. The party contesting as Janata Ranga (Janata plus Kranti Ranga) made dents into the Congress (I) pockets like Mysore and Tumkur, where it won 14 seats. Besides, the party has also improved its hold in the following districts.

District	1978	1983
Bangalore	16	20
Hassan	3	5
Dharwar	5	6
North Kanara	2	3

In Shimoga and Chikmagalur, where the Congress (I) had won five seats each in 1978, the party managed to win six and four seats respectively.

The Congress (I) lost considerable ground even in the coastal districts of Dakshina Kannada and Uttara Kannada. While it got 15 seats in the 1978 elections, this time it could barely win five seats. The major beneficiary in this area is the BJP, which won eight seats in the Dakshina Kannada District. The BJP, which improved its tally from four to 18 in the latest elections, however, suffered a major setback when its State General Secretary B. Deshpande lost in Dharwar. In fact, BJP's performance has surprised quite a few leaders, including A.B. Vajpayee, who estimated that his party will win nine seats at the most.

The Congress (I), which was a major force in the old Mysore area, winning 70 of the 110 seats in 1978, managed to secure only 23 seats this year. The Janata-Ranga Party emerged as the largest party in this belt, bagging 62 of the remaining 82 seats. Statistically speaking, the Janata-Ranga Party, which secured 94 of the 223 seats, managed to win 66 per cent of the seats from the old Mysore area. The situation is somewhat akin to the performance of Telugu Desam in Andhra Pradesh that won nearly 73 per cent of its seats from coastal Andhra. That the Congress (I) could not reach a double figure mark even in a single district, illustrated the dismal performance of the party.

In the Bombay-Karnataka and Hyderabad-Karnataka areas, considered to be the traditional vote banks of the Congress (I), the party fared better than the Opposition. In Dharwar, Bijapur and Belgaum districts forming the Bombay-Karnataka belt, the party secured 24 of the 51 seats. Similarly in the Hyderabad-Karnataka area (Raichur, Bidar and Gulbarga districts), the Congress (I) bagged 17 of the 30 seats. Region-wise, the performance of the parties is as follows:

Region	Total Seats	Cong-I	Janata-Ranga	Others
Old Mysore	110	28	62	20
Hyderabad-Karnataka	30	17	8	5
Bombay-Karnataka	51	24	14	13
Other Districts	32	12	10	10
Total	223	81	94	48

PAT FROM PATNAIK. Chief Minister Ramkrishna Hegde, being congratulated by Janata leader, Biju Patnaik. All the four members of the alliance—Janata, Kranti Ranga, CPI and CPM—must keep in mind the lessons of the post-1977 Janata disunity if they are to prove themselves to their electorate.

IDLE BOASTS by Gundu Rao that he would win by a margin of more than 10,000 votes were replaced by his dismal defeat by half that number

in Chikmagalur district, from where Mrs Indira Gandhi re-entered the Parliament in 1979 by over two lakhs majority, the Opposition scored convincing victories. Out of the five constituencies in this district, the Janata-Ranga bagged four, saving the remaining seat to the Congress (I).

Voting Pattern

An analysis of the voting pattern in all the 19 districts of the State shows that the Congress (I), which captured 27 of 28 Lok Sabha seats in the 1980 mid-term elections, could maintain its sway, though in a reduced way, in only five districts, viz Bellary, Raichur, Bidar, Kodagu and Bijapur.

District	Cong-I	Janata	BJP	CPI	CPM	Others	Total
Raichur	8	1	-	-	-	2	11
Bidar	4	1	1	-	-	-	6
Kodagu	2	1	-	-	-	-	3
Bijapur	9	3	2	-	-	1	15
Bellary	5	4	-	-	-	-	9
Total	28	10	3	-	-	3	44

Apart from the BJP's overwhelming success in Dakshina Kannada, where it captured eight of the 15 seats, it also bagged two seats each in Shimoga and Bijapur and one each in Gulbarga, Bidar, Tumkur and Mysore Districts. While the CPI secured one seat each in Gulbarga, Chitradurga and Bangalore districts, the CPM also secured three seats. The Maharashtra Ekikaran Samithi retained their hold over the border district of Belgaum, winning five of the 18 seats.

Of the 184 seats in the dissolved House, the Ruling Party lost 106 seats. The break-up of the parties gaining these seats is as follows: Janata-Ranga 75, BJP 14, CPM 3, CPI 1, Independents 13. More than half of the sitting members who contested the elections failed to make the grade. Out of the 131 sitting members, who made a bid for another term 73 were shown the door. A partywise analysis of the rejected candidates reveals that Congress (I) was bruised badly. Out of the 1012 Congress (I) sitting members who contested the polls, 65 were rejected.

Less Colourful

All the six sitting Congress (I) women legislators were also defeated at the polls. In fact, the new House—the 7th Karnataka Assembly—with only two women legislators, will be less colourful than the previous one with eight. Of the 39 women contestants, only two—former Assembly Speaker Mrs K.Nagarathnamma and Mrs Chandra Prabha Urs (daughter of Devraj Urs) were returned. In contrast, out of the 32 women candidates who contested in 1978, eight could get elected.

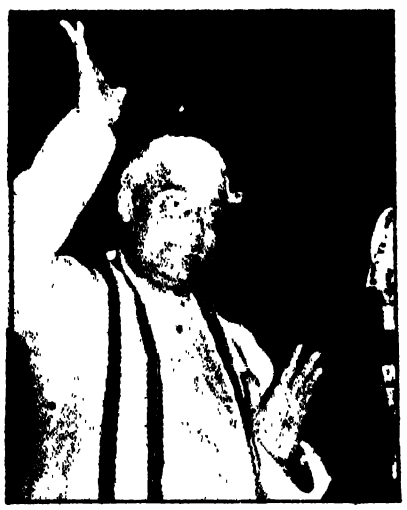
Among the major casualties in the latest Assembly elections are 12 Ministers. These include the Chief Minister, seven Cabinet Ministers and four Ministers of State. The defeated Ministers include K. Thimmappa (Public Works), G.B. Shankar, Rao (Education), A.K. Abdul Samad (Health), G.K. Gangadhar (Information), etc. The Ministers who contested successfully include Veerappa Moily (Finance), H.C. Srikantiah (Cooperation)—both of them had plans to bid for Chief Ministership—Dharam Singh (Urban Development), G. Made Gowda (Forest), Mallikarjuna Kharge (Revenue), etc.

Twelve Congress (I) MLAs (rebels) contested the elections as Independents. Of them only one candidate, G.F. Uppal, retained the Shirahatti seat, defeating his nearest Congress (I) rival by a margin of 5,000 votes. Ten other rebels were defeated by the Congress (I) candidates. This means that the rebels, who were subsequently expelled from the party, would not sabotage the chances of the official party candidates to any great extent.

The AIADMK, which won the Kolar Gold Fields (KGF) seat, could not make much of an impact on the Karnataka electorate elsewhere. Even the KGF seat was won by a narrow margin (over 1,000). MGR's campaign in Somwarpet and Bangalore city did not help the Congress (I) in capturing the Tamil votes. In retrospect, MGR's claim that he was responsible for Mrs Gandhi's victory from Chikmagalur in 1979 sounds ridiculous.

After the Congress (I) bosses recover from the shocks administered both in Andhra Pradesh and Karnataka, an analysis of the causes of the party's humiliating defeat will be taken up. But for a discerning observer, the reasons are obvious. The excessive dependence of the local leaders on the High Command, rampant corruption which attained an aura of legitimacy and respectability, alienation of the backward classes and the scant regard shown to these classes while finalising the party's candidates, farmers agitation and the resulting firing that claimed 137 lives, the Kannada agitation and insensitivity to the feelings of the non-Kannadigas—well, the list can go on and on. The reliance on intelligence reports is also partly responsible for the party's rout. Based on these reports, the party bosses took things for granted. For example, according to the news editor of an English daily of Bangalore, the intelligence reports, prepared just one day before the polls, estimated that the Congress (I) would win at least 146 seats. F.M. Khan, the bosom pal of Gundu Rao had predicted that the Congress (I) would win more than 173 seats. Looking back, one can see how unrealistic were these estimates.

THE BJP's considerable success (14 seats) astonished its own leader Atal Behari Vajpayee, who had estimated a modest maximum of 9 seats.



WHAT'S UP HIS SLEEVE? Bangarappa, who played a prominent role in the alliance parties' victory, is now disgruntled over the Hegde-led cabinet.

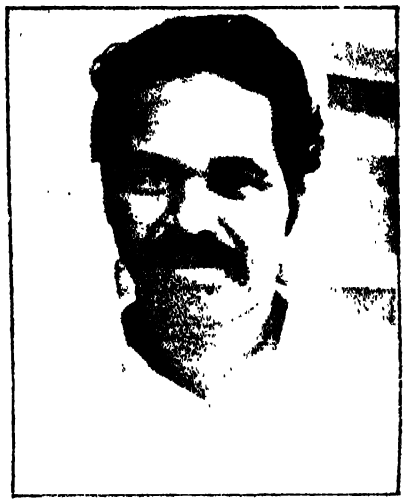
The farmers agitation, which threatened to bring down the Congress (I) fortress in the South did not have much of an impact. Ironically, the Congress (I) fared well in the districts that were the hotbeds of the farmers' agitation. That the Congress (I) could put up a creditable performance in Mandya, Dharwar and Hassan, the districts affected by the agitation, shows that the Ryota Sangha's (farmers association) call to vote against the Ruling Party has gone unheeded

After a few anxious days, the Janata Party (after the merger of Kranti Ranga with Janata), has been called upon by Governor Govind Narain to form the Government. Bangarappa, who played a prominent role in the alliance parties (Janata, Kranti Ranga, CPI and CPM) victory, has refused to join the Cabinet headed by Ramakrishna Hegde. He even stayed away from the swearing-in ceremony. What Bangarappa has up his sleeve is anybody's guess. According to the Governor, a former Union Home Secretary, who verified the support claimed by Mr Hegde, the Janata Government has the support of 132 of the 223 members. The BJP, suspecting the "Haryana drama" being enacted in Karnataka, promptly announced its support to the Janata Government.

The Congress (I), though humiliated, did not give up its hopes of forming the Government. The Central Minister, Mr Buta Singh, who was at Bangalore as the AICC observer, has in fact disputed the claim of Janata-Ranga to form the Government. His contention is that the Janata-Ranga, though it contested on a single symbol, is in fact an alliance of two parties. According to Buta Singh's reasoning, Congress (I) is the largest party in the new House and it should be provided the first opportunity to form the Government. One is not very sure whether he is reflecting the High Command's thinking. But his subsequent remark that the Congress (I) is not in a hurry to form the Government is pregnant with the possibility of the party exploring ways to lure the required number of legislators. The obdurate and unpredictable behaviour of Bangarappa, an ex-Congressman who walked out of the party to voice his protest against the style of Gundu Rao, only adds to the confusing scenario.

No Encouragement

Mrs Gandhi, on her part, has made it clear that she is not interested in encouraging defections. But the uncertainty confronting the new Government can be cleared only by accommodating Bangarappa, in a suitable party post. The new Chief Minister, Hegde, with his vast political experience, should not find it difficult to patch up with the former Kranti Ranga leader and ensure a stable Government. Though Mr Bangarappa is cut up because he is basically opposed to the idea of imposing a non-legislator as Chief Minister from the Centre—as it happened in the case of Ramakrishna Hegde—it is not in the interests of either the Janata Government or Bangarappa to adopt an antagonistic and non-cooperative attitude. The lessons of the post-1977 Janata disunity, still fresh in our minds, should serve as a warning. All the four members of the alliance—Janata, Kranti Ranga, CPI and CPM—which have been given an opportunity to prove themselves—cannot afford to waste their time through unproductive bickerings. If they let down the generous electorate again, they will never be able to regain credibility as an alternative to the Congress (I). The Janata legislators cannot be oblivious to the fact that the Congress (I)—a wounded tiger—is desperately waiting to strike when factionalism reaches a point of no-return in the Ruling Party.



VEERAPPA MOILY, Finance Minister in the earlier Cabinet, had plans to bid for Chief Ministership in the absence of the Janata-Kranti Ranga merger.

What will be the future of Gundu Rao? This is the question that will interest every political analyst in this country. Recently the former Chief Minister revealed his mind, when he said that he would have opted for a film-acting career, if he was not pitch-forked to the Chief Minister's post—courtesy Sanjay Gandhi.

With F.M. Khan, whose film connections are well known, at his service and the eagerness of a one-time celluloid celebrity, MGR, to help him out, Gundu Rao can get a flying start as an entertainer—a role which he played with diplomb as the Chief Minister.

SITA AND MANDODARI (left) *with Hanuman in the Asoka Vatika.*

Murals To Mahadeva

200 years ago, at Chandod on the banks of the Narmada, the Gaekwads built a fortified temple. The chief shrine was decorated with vibrant murals which are still delightfully fresh.

by Ramesh Pandya

THESE days art is supposed to be an intensely individualistic affair—a personal statement of what the creative "I" feels. In the days gone by, it had a predominantly educational element. It was intimately entwined with life: patrons and artists, viewers and visionaries interacted freely, enriching one another. In India, the focus of all these social, artistic and religious activities was the temple. This tradition is still extant in temple cities like Tirupati, Varanasi, Dwarka, Ambaji and Dakor. Along with the elaborate rituals of worship continue the festivals and *saptahas* of Hari Kathas, discourses, performances of dance and drama with religious themes. Such a temple is a living university teaching philosophy and fine arts to the public.

In all this, painting, of course, was not ignored. It has been an integral part of temple architecture. Barely four decades ago, Sir Sayajirao Gaekwad of Baroda commissioned Nandalal Bose's murals for the Kirtimandir.

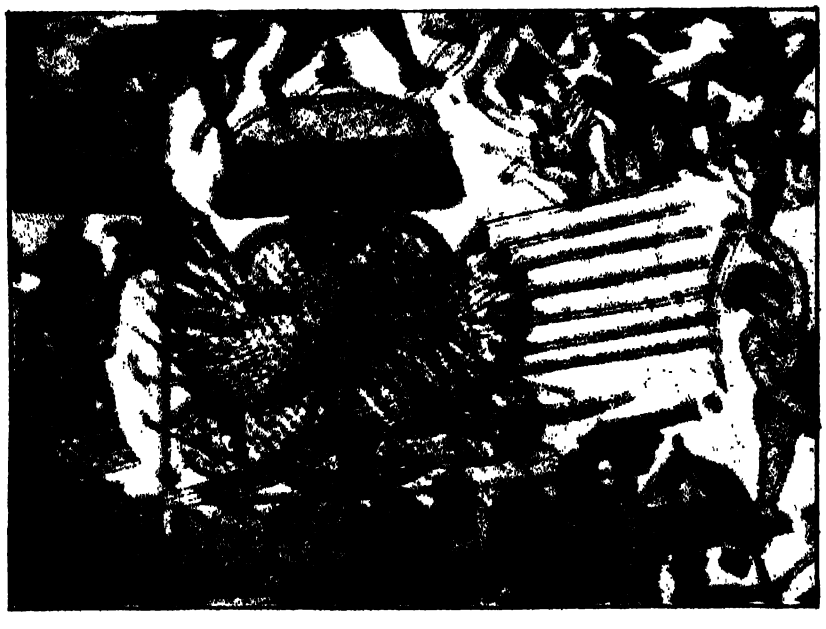
The ancestors of the Gaekwad built a Mahadev temple 200 years ago on the banks of the Narmada at Chandod some 27 miles south of Baroda and had its dome decorated with robust murals done by master painters of the day.

To this day the temple is maintained by the Gaekwad's Khangi department. Unfortunately, however, no documents on the construction and endowment of the temple exist.

The temple is a fortified complex of shrines dedicated to Ganapati, Hanuman, Bhairav, Annapurna and Bahucharaji. The temples to Kashivishvanath and Sri Dameshwar dominate the buildings as they are on 10-ft plinths. Moreover, only the Kashivishvanath temple bears murals. The temple dome measures 24 feet in diameter and has the murals starting at a height of 17 feet. They culminate into the stucco chandelier which hovers over the Nandi before the idol of Siva. The dome rests on beams arranged in an octagonal shape supported by eight pillars at each angle. Barring the eastern side where the sanctum *(garbhagriha)* enshrining Sri Vishvanath is situated, all the seven sides are open, this allows plenty of light on the floor which in turn illuminates the murals in the dome during daytime. We have photographed these murals in this "available light".

The murals which start above the beams are divided by 32 stucco figures of gods and goddesses surasundaries, apsaras and attendants, each approximately four feet high. The ornaments and draperies of the figures were originally painted with the same pigments which are used in the mu-

A RIFLE-TOTING RAVANA. This folkish version artlessly combines the traditional and the modern.



RAVANA'S ENCOUNTER with Jatayu, the vulture king who died in vain while trying to rescue Sita.

rals. The figures have deteriorated. The iron bar armature used in their modelling shows through at places. Fortunately however, the murals are in a better state of preservation.

The murals deal with popular subjects from mythology such as Krishna's dalliance with the gopis. There are several engaging episodes from Vrindavan including a panel showing Krishna atop a Narikunjar, a composite figure in the shape of an elephant made up of female figures. Also represented are some "secular" subjects: processions with riders, elephants and palanquin-bearers, a dancer trying to seduce an ascetic, royal women visiting a spiritual personage, armoured heroes on the battlefield, amorous couples, Dhola and Maru (a Rajasthani ballad) and hunting scenes. Birds and blossoming trees are appropriately scattered in the murals. Those fill up the space as well as maintain the flow from frame to frame.

Above the stucco figures is a panel separated by a decorative floral band. It contains running compositions blending episodes from the Ramayana, the Mahabharata, the Bhagavata and the Okhaharan. A tier showing 23 Mother Goddesses tops this frieze. The deities are all depicted with their mounts: Brahmani on a swan, Rudrani on a bull, and Saraswati on a peacock. Some figures are drawn from folklore such as Bahuchara on a cock, Tulja on a scorpion and Ghetesari on a ram, Gardabhvahani on a donkey and Shrugalvahani on a jackal, etc. The figures are large and clearly delineated. This belt is also separated with a band of swans in vivid postures at the bottom. At the top it meets a decorative and stylised solar motif, radiating its rays from the base of the inverted chandelier in the dome.

The murals in the central panel bear several important episodes from the Ramayana and the Mahabharata such as Rama, Sita and Laxmana in the forest, the abduction of Sita, Ravana's battle with Jatayu, the disfiguring of the demoness Surpanakha, Rama's pursuit of the golden hart, bridge-building at Lanka, the battle of Rama and Ravana, etc. The main scenes from the Mahabharata include the *matsyavadha* and the marriage of Arjuna and Draupadi.

Most of the faces in the murals are depicted in profile. Only Gajalakshmi is shown with a frontal face with a somewhat squintish expression (this is probably due to the artists' unfamiliarity with the medium). Some faces are drawn three-fourths. This is a typical characteristic of the Rajasthani school. Other features like the *odhni* and the *damni*, a type of tasselled ornament and the style of the headgear worn by the men suggests that the artists who painted these murals hailed from Rajasthan. The names written in Devnagri also sound as though they were done by Rajasthani folk (Bhavijana for Vibhishana, Manohari for Mandodari, Jataoo for Jatayu and Kubhakarna instead of Kumbhakarna).

Ravana's retinue includes Portuguese soldiers in quaint helmets, buttoned-up coats and trousers, bearing artillery. Ravana himself is shown holding rifles in seven of his hands. But such alien characters are not repeated elsewhere in the dome. While dusting the murals with soft linen it was found that the pigments were coming off at the slightest pressure because the murals were not done in the fresco technique. They are simply painted on a white polished surface. The colours used in these murals are limited to yellow ochre, red ochre, terra verte green and, of course, black. Blue is totally absent. Red ochre and black are often used in mixture with white creating beautiful pink and grey. Pure red ochre is used only in three places to show brick walls.

MOTHER GODDESS. Right: *Kumbhakarna battling the monkey hordes at Lanka.*

Murals such as these are also found at at the Sri Kamnath Mahadev temple in Baroda, the Siva temple at Bhilapur and the Hamfeshvar temple seven miles from Kadipani, District Chhotaudepur. However, the Chandod murals are undoubtedly the most refined and well-executed. Although they are comparatively in good condition, time has started taking its toll. A few cracks have become visible in the dome and the monsoon floods in Narmada plus damp percolating through the thick walls of the dome are continuously playing their destructive part. The Hamfeshwar temple is sure to be submerged when the Narmada dam at Navagam is completed. Before it is late, the authorities should take measures to preserve and enhance the life of these valuable national treasures. ■

The NTR Tornado

Telugu Desam, NTR's 9-month-old brain-child, has dramatically humbled the Congress-I in its stronghold.

by G.S. Reddy

Hyderabad: The NTR tornado in Andhra battered the Congress-I beyond recognition. Never before was Mrs Gandhi's party mauled so badly. The damage brought on the national party is so severe that it will take at least a few weeks for the shocked Congressmen to come back to their senses. The NTR wave upset all the media forecasts and computer calculations. As the news of the devastating sweep flowed into the newspaper offices, the political analysts were left dumbfounded.

Following the footsteps of MGR, NTR has not only taken the Andhras by storm but also fared better than the Tamil Nadu Chief Minister. In spite of his long political career, MGR could win only 130 of the 234 Tamil Nadu Assembly seats, polling 30.36 per cent of the total valid votes in 1977—the year AIADMK was voted to power. In contrast, NTR, a nine-month old political baby, has polled 47 per cent of the valid votes winning 202 of the 294 seats. Indeed, the celluloid celebrity has been given a flying start by the Andhras.

The electoral torrent that originated from the north coast of Andhra swept right down to the south. The heads that rolled in this deluge included several Ministers and the Mayor of Visakhapatnam, N.S.N. Reddy, contesting on the BJP ticket. The margin of Telugu Desam's victories, to say the least, was spectacular. Here is how it fared, for instance, in three northern coastal districts of the State:

District	Constituency	Valid Votes Polled	Votes polled by TD	Votes polled by Cong	Margin
E. Godavari	Kakinada	87962	69499	13868	55631
W Godavari	Kovur	84472	65893	10983	54910
W. Godavari	Elur	84760	62567	15142	47425
Visakapatnam	Visakapatnam	91204	62326	14410	47916

In the southern coastal area of the State, the sweep was sustained by the founder-President of Telugu Desam, N.T. Rama Rao. Contesting from the temple town of Tirupati, he humiliated his Congress-I rival, Eswar Reddy, Speaker of the State Assembly, by a huge margin of 46,879 votes. That the Congress-I could not secure even a single seat in the East and West Godavari Districts (37 seats in all) speaks of the disaster that struck Mrs Gandhi's party in the coastal districts. In fact, the Congress-I could win only nine of the 134 seats in this area. On the other hand, Telugu Desam has walked away with 120 seats bagging 21 seats in East Godavari district alone. Guntur and Nellore districts, considered to be hotbeds of political activity in the coastal area, have refused to return any Cong-I candidate. Among the ministers defeated in this area are N. Janardhan Reddy, who made an unsuccessful bid for Chief Minister's post and M.A. Aziz, Forest Minister, who lost the deposit.

The NTR wave continued unabated in the Rayalaseema region of the State, capturing 39 of the 53 seats. Kurnool District, which returned Vijayabhaskara Reddy along with three other Congress-I candidates, contributed eight of its 13 seats to the regional party. Mrs Gandhi's party could secure only eight seats in this Rayalaseema, drawing a blank in Chittor District. Among the ministers who lost in Rayalaseema is Chandra Babu Naidu—son-in-law of N.T. Rama Rao.

The regional party's sweep was effectively contained in the Telangana area comprising 107 seats. While the regional party secured 43 seats, the Congress-I romped home with an equal number. The NTR deluge was completely checked in Ranga Reddy District—the home district of Dr M. Chenna Reddy—where Telugu Desam failed to win even a single seat. Equally dismal was the performance of Congress-I in Hyderabad, where it drew a blank.

The successful Telugu Desam candidates included Nadendla Bhaskara Rao, N. Srinivasulu Reddy and Anam Venkata Reddy, all former ministers.

N. Janardhan Reddy's defeat in Nellore District did not come as a surprise. He had carried the group politics too far and managed to accommodate all his candidates in various constituencies of the district. Denial of the party ticket to the influential Anam family in the district was the last straw. Disgusted at this high-handedness of Janardhan Reddy, considered an upstart in politics because of his close relationship with the High Command, the Anam family in Nellore had vowed to put a stop to the Agriculture Minister's political ambitions. To achieve this, Anam Venkat Reddy and his son Anam Ramnarayana Reddy switched over to Telugu Desam, and marshalled all available forces to fight Janardhan Reddy's candidates. The result is that all the eleven Congress-I candidates in Nellore District were defeated.

Similarly in Guntur District—the home district of K. Brahmananda Reddy and Bhavanam Venkatram, none of the Congress-I candidates were elected. Telugu Desam has captured 18 of the 19 seats. Among the ministers defeated in this district are Kona Prabhakara Rao and G. Nageshwara Rao. This district, which had the distinction of having seven ministers in the "airbus" cabinet of T. Anjiah, was one of the strongholds of the Congress-I. In fact, in the 1978 Assembly elections, the Congress-I was able to win 12 seats in this district inspite of the prevailing Janata wave.

Another district that refused to return any Congress-I candidates is Chittoor. The Telugu Desam has won 13 of the 14 seats in this district. While factionalism among the Congressmen contributed its share in wiping out Congress-I from this district, the NTR wave was just too strong for even prominent personalities like C. Das, former PCC chief, to romp home on the Congress-I ticket.

The Congressmen in the State are now in a despondent mood. Some of those like T. Anjiah, who reduced the party to a laughing stock, are now threatening to walk over to the Sanjay Vichar Manch. It may be recalled here that this former Chief Minister has been in touch with the Manch leaders even before the polls. How many of the elected Congress legislators will eventually switch over to the Vichar Manch is, however, uncertain.

Though the Congress-I was able to stop the NTR wave in Telangana to some extent, deep concern is expressed at the loss of some constituencies in Medak District—the parliamentary constituency of Mrs Indira Gandhi. Mrs Maneka Gandhi was able to make dents in this constituency by winning the Kamareddy assembly seat. The Communist parties, CPI and CPM, which had 14 legislators in the last assembly, could secure only ten seats, even though they contested as a single front this time. Khammam District in Telangana, which continues to be a stronghold of the Communists, returned five of these candidates. Peculiarly, the Communists in the State are fond of entertaining exaggerated notions of their strength. In the 1955 elections, even though they polled 31 per cent of the total votes, they could secure only 15 of the 196 seats they contested. Since then, there was a gradual decline in their strength. In 1963, in spite of securing 51

of the three hundred seats at stake, the percentage of their vote was reduced to 19.53. The decline continued after the split: While in 1967 they won nineteen of the 287 seats, they secured only eight seats in 1972, polling 15.2 per cent and 9.2 per cent, respectively. In the last assembly elections, both the Communist parties won 14 seats, polling 5.2 per cent of the total votes.

The Janata Party, which won sixty seats in the 1978 elections, has been almost completely wiped out but for the election of its leader S. Jaipal Reddy. BJP, considered as major force in the urban areas was devoured by the regional party. It could win only three seats, including a win from the old city area of Hyderabad. Sanjay Vichar Manch, which entered into an alliance with Telugu Desam, could win four of the five seats it contested.

The final poll tally is as follows :-

Party	Last Assembly Strength	Seats Contested	Seats Won
Telugu Desam	—	288	202 (including S.V. Manch)
Congress(I)	246	294	60
CPI	6	48	4
CPM	8	28	5
BJP	3	80	3
Janata	5	45	1
Lok Dal	6	33	—
Congress(J)	—	80	1
Congress(S)	—	9	—
RPI(K)	—	3	—
Independents	10	809	17

NTR's campaign in Andhra Pradesh has created history. Travelling day and night in his election mobile, a converted Chevrolet, he travelled throughout the State covering 35,000 kilometres in 70 days. According to the Telugu Desam party office, he has addressed 30 million people during this ceaseless campaign. The regional party, launched on May 29, 1982, made rapid strides towards its goal: displacement from power of corrupt Congressmen. The repeated nomination of new Chief Ministers by New Delhi during the last two years and the fawning of Congress-I legislators before the party High Command, created the right atmosphere for NTR to strike. Rightly, he made 'self respect' of Telugu people a major issue in his campaign.

True to his word, NTR, the first non-Congress Chief Minister of Andhra Pradesh opted for a compact 15-member Ministry. It was sworn in on January 9, he is said to consider nine as his lucky number, just like T. Anjiah. It was assumed that his cabinet will have at least 18 (1 plus eight = nine) members, but he surprised everyone by opting for only 15 members—a number that would have been the choice of Dr Chenna Reddy, whose lucky number is six. Incidentally Telugu Desam is also nine-months-old, on the day of swearing-in-of NTR's ministry.

Regionwise, the new Ministry has seven members from coastal Andhra (120 legislators) six from Telangana (43 legislators) and two from Rayalaseema (39 legislators). Apparently, the representation in the Cabinet is based on the total region-wise strength of all the parties in the Assembly (coastal Andhra 134, Telangana—107; Rayalaseema—53) rather than on Telugu Desam's strength. This is considered as a healthy precedent.

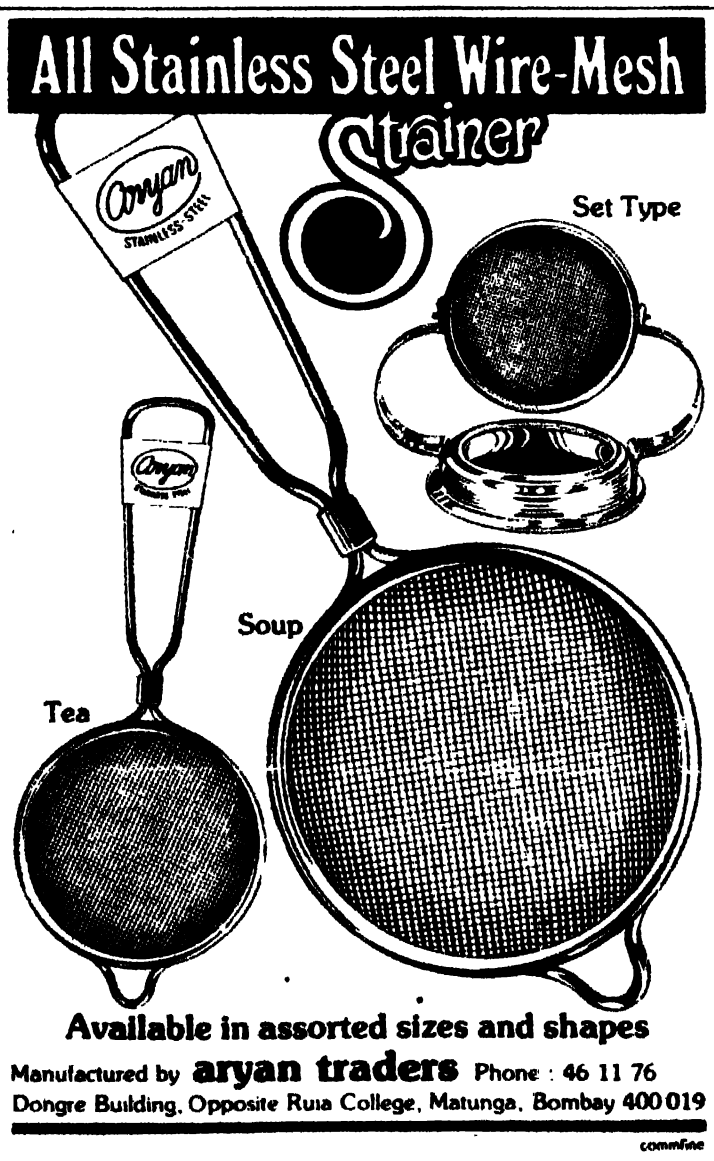
All is not lost for the Congress-I, however. It is the only national party that can truly reflect the aspirations of the people and check the forces of regionalism threatening the unity of the country. Though the party has suffered a major setback in terms of the number of seats won, it is still a force to reckon with in the State. That it could secure 30.45 per cent of the total votes, despite its dismal record, clearly reveals its hold on the electorate even now. As seen from the table below, the party was at the height of its popularity just ten years back.

Year	Total seats	Seats won	Percentage
1962	300	177	47.44
1967	287	165	45.6
1972	287	219	52
1978	294	175	39.26
1983	294	60	30.45

The fact remains that the crushing defeat it has suffered in the battle for the contest of Andhra Assembly will have its repercussions in other parts of the country. Kerala, the only State in South India where the Congress-I is still in power may soon witness a period of instability. Encouraged by the triumph of regional forces, both the wings of Kerala Congress (Mani and Joseph groups) are planning to merge and build up their strength on a regionalist plank so popular in the other three southern States.

The Congress-I's reversal, has also revealed the strategic blunder committed by the party. While its leaders in Andhra were pushed into oblivion during the campaign, hordes of north Indian leaders descended on the state to campaign for the party. Those touring the state during this campaign could feel the resentment among the people, especially the party workers who expressed disgust at outsiders bossing over them. A classic example is G.K. Mooparar's high-handedness in Tirupati.

Mrs Gandhi has committed political harakiri in Andhra by her excessive dependence on the sycophants parading as expert advisors. Her decision to prepone the poll in particular, proved to be disastrous. For it pushed the people to go to the rescue of N.T. Rama Rao waging a one-man battle against the corrupt administration. Her overdependence on the computer whizkids operating from Delhi is another instance of her reliance on characters who are totally out of touch with the realities in the State. In the event, she totally misjudged Winston Churchill's "little man, walking into the little booth, with a little pencil, making a little cross on a little bit of paper." ■



THE INTERNATIONAL EXPORT ASSOCIATION, ENGLAND
(A non-profit making organisation)
Now proudly offers at Hyderabad — and through live sessions

A BRITISH POST GRADUATE DIPLOMA IN EXPORT MANAGEMENT

Duration : 3 months
Timings : 6.00 to 8.00 p.m.,
Mon, Tue, Wed.

Our step-by-step scientific method of coaching will give you complete mastery over the total conceptual framework in which Indian Export business has to operate. Full range of instructions are provided on the latest techniques of Export Marketing, with special emphasis on EXPORT-IMPORT POLICIES, PROCEDURES & DOCUMENTATION. We enroll students from Public and Private Sector Undertakings, Government Departments, Banks, Defence Services; and individuals engaged in their own export business. Admission open to graduates. For prospectus and Application Form please send a crossed postal order of Rs. 10/-, within a fortnight, drawn in favour of:

THE INTERNATIONAL EXPORT ASSOCIATION,

D-22, ANAND NIKETAN, NEW DELHI-110021. Phone : 675757
Personal/telephone enquiries 11 A.m. 2 p.m.

WHETHER HE GOT AUSTRALIA WORKING OR NOT, Prime Minister Gough Whitlam (above) *certainly got the CIA working! For, with Whitlam's ascent to power, the US had genuine reason to worry about its special position in Australia. Matters finally came to a head and a representative of the British Crown (appointed by Whitlam himself in 1974) resorted to powers never before used in Commonwealth history. Governor-General John Kerr* (inset) *called Whitlam to his official residence and, without warning, dismissed the astonished Prime Minister. Kerr allegedly had links with the CIA.*

CIA's Perfidy In Australia

Did the CIA manage to do in Australia, too, what it did in Iran, Guatemala and Chile: destroy an *elected* government? The Government of Gough Whitlam, Australia's first Labour Government in 23 years? Australia has traditionally been friendly towards the United States. However, during the Whitlam years, the CIA was unsure of Canberra's value as an ally—the USA had critical and irreplaceable electronic intelligence bases in Australia... Lately, amazing details have come to light—details that are analysed in depth in this two-part study of the CIA's role in determining the pattern of government that Australia once again has today.

by James A. Nathan

TODAY, from Press and Parliament, Australia is awash with accusations about illegitimate American intelligence activity. Much attention and anger is focused on the Central Intelligence Agency. There is an almost hysterical set of indictments levelled against US Intelligence. The CIA is charged with becoming involved in Australian politics and foreign relations, even manipulating the Australian banking system and, most astonishingly, organising a narcotics trade from Australian soil.

Intelligent American observers' initial disbelief needs reassessing. For, in Australia, a plausible case is being developed that CIA officials may have also done in this country what they managed to achieve in Iran, Guatemala and Chile: destroy an *elected* government—in the case of Australia, the Labour Party Government from 1972 to 1975.

The fall of Prime Minister Gough Whitlam and the appointment of the current Prime Minister Malcolm Fraser met with profound relief among US officials. Whitlam, perhaps the best orator in contemporary Australian history, aroused deep hostility within the US Intelligence community. It viewed his part and his politics as, at best, benighted accomplices to Soviet undertakings. The CIA feared that secrets shared with Australia were being routinely compromised, that CIA activities and agents in Australia would soon be revealed and that the US Government's critical and irreplaceable electronic intelligence bases in Australia, vital for US nuclear verification activities, could be lost.

Dialogue Of Distrust

During the Whitlam years, Australia and the United States were caught in a dialogue of distrust. The CIA was unsure of Whitlam's value as an associate and Whitlam feared that the CIA would be involved in anti-Labour Party machinations.

Relations improved with the arrival of a more conservative government in the Australian capital: Canberra. But a recent investigation into the 1980 failure of the Sydney-based, American-owned Nugan Hand Merchant Bank has revived interest in some of the controversies of the Whitlam era. Australian suspicions that might have seemed preposterous in 1979 are now fed by a great river of evidence. The record, at the least, gives warrant to a water-cooler aphorism: *Even paranoids have enemies.*

Geography and geology have conspired in directing Australia's destiny. Australia has bountiful mineral endowments and a small population-to-area ratio with a total population of 15 million. It is one of the most strategically valuable pieces of real estate on the planet. Australia sits at the south-east corner of the Indian Ocean, about 2,400 miles south-east of Indonesia. Full 69 per cent of Japan's oil requirements, 70-80 per cent of Western Europe's and 15 per cent of America's passes through the area between Australia and Southern Africa. In fact, US B-52s flying from Guam to Diego Garcia refuel in Northern Australia at a base in Darwin. Australia hosts 10 American military installations. Because of their unique location, most cannot be replicated at any cost. The new US Defence Guidance characterises Australia as a critical area.

Australia has traditionally been friendly towards the United States. Tens of thousands of US sailors each year are delighted to find that the computerised date-a-sailor services offered at every Australian port are overburdened with amicable Australian applicants. But things *are* changing. No longer do Prime Ministers claim, as John Gorton did in 1969: "Wherever the United States is resisting aggression... we will go a-waltzing Matilda with you." Evidence of a new atmosphere was the roasting that Vice-President George Bush suffered at the hands of the press in his May 1982 courtesy visit to Canberra. Bush was questioned at every turn about CIA involvement in Australia's internal affairs. And, on March 26, 1982, 6 weeks before Bush's jet landed in the bleak winter-chilled outback, the CIA released a rare public denial:

> *The CIA has not engaged in operations against the Australian Government, has no ties with Nugan Hand and does not involve itself in drug-trafficking.*

In fact, the Nugan Hand Bank seemed to have employed an incredible collection of former top-ranking US Intelligence officials. Since 1977, the Sydney Police have received reports suggesting that the Bank served as a conduit for the drug trade. In 1980, following the apparent suicide of its Chairman, Frank Nugan, the Bank collapsed.

Nugan was found dead in sheep country on a lonely, unpaved road at 4.00 am, 90 miles north of his $1 million harbourside residence in Sydney. In Nugan's pocket was the business card of former CIA Director William Colby. On the back of the card was the proposed itinerary of Colby's upcoming Asian trip. Colby was on his way to Australia in his capacity as political, legal and tax adviser to Nugan Hand Ltd.

In June 1982, the Chairman of the New South Wales Corporate Affairs Commission told the press that the Nugan Hand Bank investigation would lead to "criminal prosecutions (that) will be commenced... for drug, conspiracy, perjury and passport offences".. Many people close to the investigation think that there will be even more to the Nugan Hand story. For, as the CIA denial indicates, Australian investigators now link the activities of the Nugan Hand Bank with the fall of the Whitlam Government in 1975.

The CIA Sees Red

In 1972, Whitlam formed Australia's first Labour Government in 23 years. For years, a conservative coalition of the Liberal and National Country parties had denounced as Communist many of the unions that supported Labour. In fact, despite its tiny size, the Communist Party did have considerable influence in key Australian trade unions—transport, power, oil, shipping, construction and railroads. The Australian Communist Party itself claimed in 1974 that, with a Labour Government, it "would probably be the most influential of the political parties together with the left-wing sections of the ALP (Australian Labour Party)".

Of immediate concern to Australian conservatives and US Intelligence was Whitlam's heir-apparent and second-term Deputy Prime Minister, James Cairns. A so-called fellow-traveller since 1945 and a leader of the Australian anti-Vietnam war protests, Cairns favoured a Labour Party resolution restricting the Australian counterpart of the CIA, the Australian Secret Intelligence Organisation (ASIO), in 1971. ASIO's 1971 report on Cairns, according to a June 22, 1974, article in the news magazine, *The Bulletin*, concluded that his behaviour could bring "anarchy and, in due course, left-wing fascism" to Australia.

One set of Australia-watchers wrote of the Whitlam years that no country has "reversed its posture in international affairs so totally without first having passed through a domestic revolution". Whitlam put an immediate end to conscription and pulled the last elements of Australian forces out of South-East Asia. He supported the Indian Ocean Zone of Peace, which was opposed by the United States and favoured by the Non-Aligned Movement. He suggested that Australia might join mineral-exporting cartels. At the time of the 1972 Christmas bombings of Hanoi, Cairns and several other Ministers called for boycotts of US products and asked dockers not to unload US ships. Whitlam suggested he might draw the Indonesians and the Japanese into protests against the bombings.

The new Government recognised Cuba, North Korea, the German Democratic Republic, received PLO leaders; it applied for observer status at Non-Aligned Movement summit meetings; it voted against the United States in favour of expelling South Africa from the UN; voted against Portugal in the UN regard-

ing Angola; bludgeoned the French over their South Pacific nuclear arms tests while virtually ignoring Chinese atmospheric testing; and welcomed Chilean refugees upon the fall of Socialist President Salvador Allende Gossens while condemning the United States for evacuating South Vietnamese "illegally" from Saigon in the denouement of the Vietnam war. Cairns, when in Hanoi, attended a Vietcong reception in his honour. Further, Whitlam removed strategic controls on trade with the USSR, China and Eastern Bloc countries.

Yet even these moves were not enough for Whitlam's Left wing. The spokesperson for the ALP Left said confidently in 1973: "We are looking forward to the possibility this year that the (ALP) Federal Conference will jettison the American alliance and other overseas commitments and join the Third World." As Henry Albinski, America's leading specialist on Australian-American strategic relations, wrote: "Barely in office, (Labour) had severely damaged relations with the United States, abdicated its responsibilities as a cohesive government to wild men and shown its helplessness in the face of radical trade-union pressure." Whitlam and his Government with their harsh comments about the US Government engendered deep hostility within the Nixon Administration.

Gough Whitlam and his Government, with their harsh comments about the US Government, engendered deep hostility within the Nixon Administration.

ASIO's Fears

Whitlam's staff, as a political gesture of confidence in Labour's Left wing, was not required to undergo ASIO's security clearances. Nevertheless, ASIO felt that elements of Whitlam's party would lead "via civil, industrial and political unrest... to the fascist cult of personality, to the worship of force and to the destruction of the democratic parliamentary system of government". Whitlam's Commonwealth Police reinforced ASIO's fears with a midnight visit on March 15, 1973, to the Canberra office of ASIO. And, while looking over the files, Whitlam's Attorney-General, Lionel Murphy, came to *M* on the file. Murphy said to the ASIO Station Chief, just out of his nightclothes: "God help you if my name's in this!"

It was not.

Murphy and Whitlam were uncertain whether ASIO's zeal to chase left-wing groups had not at best allowed right-wing groups—even those as small as elements of Australia's Croatian community—to engage in terrorism unmolested and, at worst, assisted them in terrorism. In 1963 and 1972, Australians of Croatian extraction had penetrated Yugoslavian frontiers, where they were arrested and shot. Bombs had exploded on Yugoslavian diplomatic premises; and, in August 1972, bombs went off in Sydney travel agencies specialising in trips to Yugoslavia.

On March 16, 1973, 3 days before the Yugoslavian Prime Minister was to pay a State Visit, Murphy's police raided ASIO's headquarters in Melbourne. Murphy's raid had a rationale: the Whitlam Government wished to attend the Non-Aligned Movement summit meeting in Algiers at the end of the year. It was important that the Prime Minister's trip to Australia pass without trouble, given Yugoslavia's position in the Non-Aligned Movement. Commonwealth Police acted as if they were in enemy terrain and sealed ASIO safes. The *Canberra Times*, a voice for Australian civil servants, editorialised: "ASIO can no longer be said to be able to guarantee the confidentiality and absolute trust without which it loses all capacity for function..,"

The CIA's reaction was intense. James Angleton, legendary counter-intelligence officer in the CIA, recalled during an Australian Broadcasting Commission programme:

> *We entrusted the highest secrets of counter-intelligence to Australian services and we saw the sanctity of that information being jeopardised by a bull in a china shop... How could we stand aside without having a crisis, in terms of our responsibilities, as to whether we would maintain relationships with the Australian Intelligence services?*

Angleton went on:

> *Everything worried us. You don't see the jewels of counter-intelligence being placed in jeopardy by a party that has extensive historical contacts in Eastern Europe.*

Colby apparently shared Angleton's sentiments. Colby has complained that it was a hectic time. The United States was confronted with a Communist Government in Chile and "crisis like... coups in Cyprus and Portugal.... a nuclear explosion in India and a Left-wing and possible antagonistic government in Australia". As the former ALP Party Secretary wrote in *The Bulletin* recently: "When the Chief of CIA lists... an ALP Government as a crisis of comparable priority to the Yom Kippur War, coups in Cyprus and Portugal and the unexpected entrance of India into the Nuclear Club, (our) concern looks less like paranoia."

Clearly, both Angleton and Colby had reason for concern. With the seizure of ASIO files, CIA overtures and connections to ASIO were subject to an unprecedented hostile environment of scrutiny It must have seemed to the CIA and to ASIO that the Whitlam Government was undertaking fishing expeditions aimed at each country's intelligence services in order to satisfy an agenda that was not in either country's long-term interests. Against this background, many Australians are willing to believe the assertion that the US Government played a role in the revelation of a scandal that ultimately contributed to Whitlam's fall.

Unflattering Balance-Sheet

By the mid 1970s, the Whitlam Government was encountering financial difficulty. Falling commodity prices, 14 per cent inflation and vastly increased energy costs were buffeting the economy. The money supply was increasing by 25 per cent per year. Unemployment had doubled since 1972 to a post-war high of nearly 5 per cent. The world's oldest Labour Party had promised union tranquillity. But Australia soon encountered rising resistance from labour. A tariff reduction of 25 per cent drove many leading industrial sectors to the edge of disaster. The elaborate social programmes undertaken in the Whitlam years burdened the Government with a projected $4 billion deficit in 1975.

One avenue of funds seemed to be the Arab world, then awash with dollars and hoping to diversify investments. Whitlam instructed two of his Ministers to scour the Arab world for what would have been the largest loan in history: $4 billion. Later, the amount was reduced to $2 billion. The Minister for Minerals and Energy, Rex Connor, chose a curious partner: Tirath Khemlani, a Pakistani commodities merchant in Singapore whose largest previous deal had never amounted to more than $16 million. Khemlani had no real offices. He had to borrow telex machinery from neighbouring offices. He also consorted with criminals. In 1980, "Ole Rice and Monkey Nuts" (as his London associates called him) finally found rest for a while in a New York prison.

Leaks of the deal soon appeared, greatly embarrassing the Whitlam Government. The ultimate avalanche came when Khemlani returned to Australia in October 1975 and released piles of telexes, including evidence that Connor had not stopped dealing with Khemlani even after Connor had assured Parliament that the loan quest was called off.

In the same search for funds, Cairns also enlisted an acquaintance to seek a $2 billion loan, offering "a once-only brokerage fee of 2½ per cent deducted at the source". Cairns denied the brokerage-fee letter to Parliament. He also denied that he had continued the loan forays after they had been revealed to the press and to Parliament. Yet another blizzard of telexes and letters surfaced indicating that Cairns, like Connor, had not told the truth.

Cairns, the most charismatic figure on the Left in generations, was politically ruined. It was a curious affair. As the CIA's *National Intelligence Daily* noted, some of the most incriminating evidence "may have been fabricated"

Evidence of a new atmosphere was the roasting that (US) Vice-President George Bush suffered at the hands of the press in his May 1982 courtesy visit to Canberra. Bush was questioned at every turn about CIA involvement in Australia's internal affairs.

These ongoing embarrassments pushed the Whitlam Government against the rocks. Connor and Cairns were fired The ALP's opposition went on the offensive The Liberal-National Country Coalition controlled the Senate, which possesses powers somewhere between those of the the British House of Lords and those of the US Senate. As the lesser chamber, the Australian Senate had never before voted against an Authorisation and Appropriations Bill—a Supply Bill—approved by an Australian House of Representatives. Malcolm Fraser, Leader of the Opposition, claiming these were extraordinary times, instructed his Senate majority to oppose the Supply Bill. It appeared that by November 27, 1975, the Government would run out of money.

As the supply crisis and the loans scandal fed each other, the representative of the British Crown, appointed by Whitlam himself in 1974, resorted to powers never before used in Commonwealth history. Governor-General John Kerr called Whitlam to his official residence and, without warning, dismissed the astonished Prime Minister

The British Government does have an Ambassador to Australia. Kerr's responsibility, however, was to represent a sovereign more than 12,500 miles away for general ceremonial purposes. The British Foreign Office was not given advance notice, nor was the Queen. She was told in a midnight phone call after Kerr had finished appointing Fraser caretaker. The House passed a resolution of no-confidence in the new Coalition Government headed by Fraser and National Country Party Leader Douglas Anthony, whereupon Kerr promptly dissolved the House of Representatives and the Senate.

The immediate reaction in Australia was a numbed disbelief. There were real feats of violence. But Labour leaders and Whitlam appealed for calm. The *London Times* Correspondent noted that the country was "surprisingly quiet" as Australians prepared to vote in mid December 1975. Whitlam's party faced its 2nd election in 3 years in the worst economic and social climate of the post-war era.

Revealing Background

At this point, Kerr's background encourages those predisposed to conspiracy theories to find an explanation for Whitlam's dismissal in Kerr's intelligence associations. Now Kerr is an Australian-born lawyer. During World War II, he was sent to London on intelligence missions He had contact there and in Washington with the Office of Strategic Services, precursor of the CIA. He was a founder of an Asia Foundation branch, Law Asia; the Asia Foundation has been a CIA conduit. Law Asia had received Agency funding for its first year of life in 1967 Kerr was also active in the Congress for Cultural Freedom, another CIA-funded enterprise.

Only a day before his dismissal of Whitlam, Kerr had received a briefing from the Permanent Secretary of the Australian Department of Defence. The subject of the briefing was American discontent with Whitlam, growing out of parliamentary disclosures of CIA agents' names and covers in Australia. Australia's Senior Permanent Defence official was alrmed because the CIA had just given an ultimatum to its counterpart, ASIO, to keep Whitlam in line or break inter-agency cooperation.

The only organisation to receive a substantial increase in funding in Fraser's first budget was ASIO. The only person to receive a salary increase was Kerr—an amazing 171 per cent. Thus it was not surprising that the suspicion of an ASIO-CIA link to the Kerr coup was becoming a conviction among many responsible Australians.

To Be Concluded

By special arrangement with *Foreign Policy*

In The States

The Witch-Hunt Begins

by G.S. Chawla

NEW DELHI: Following the Congress(I) debacle in Andhra and Karnataka the inevitable witch-hunt has begun. Scapegoats will be found in due course.

Who are the guilty men in the corridors of power advising the Prime Minister? The senior leaders of the party are worried and disgusted over the way things are happening.

It seems the Intelligence Bureau had warned Mrs Gandhi of the impending debacle in Andhra though even the Bureau had not expected the disaster that came. The rating was around 110 seats for the Congress(I) in the 294 house. The party got only 40. But in Karnataka even the IB went wrong for it had predicted a clear majority for Mrs Gandhi's party. Following the warning, Mrs Gandhi did her best to retrieve the situation but evidently it was too late.

There is no formal attempt yet for the post-mortem of the Congress(I) debacle in Andhra and Karnataka. In the first meeting of the party's Parliamentary Board on January 11, there was no mention of the debacle at all. Perhaps this was left for some other date.

It was in Haryana and Himachal Pradesh in May last year when the same people around Mrs Gandhi had bungled. In both the States the party was defeated though the Governments were formed with the help of defectors and independents. As a result of this bungling, Himachal, traditionally a Congress(I) State has become a stronghold of the BJP which has now a strong base in the State as an alternative to the Congress(I).

In Haryana, Bhajan Lal had earned notoriety for manipulations and money power. The Ministry is there but the Congress(I) is being liquidated.

A man like Bhajan Lal, having no value for political morality is the least worried man because he can always switch his loyalties to the powers that be.

After the elections in Haryana and Himachal, the general reaction among the partymen was that the political aides of Mrs Gandhi, Makhan Lal Fotedar and Arun Nehru, who neither knew the people of the two States nor the party workers, had selected those candidates who could not have won the elections. Both of them had played into the hands of Bhajan Lal and Ram Lal, Chief Ministers of the two States.

But even then no amends were made. The same persons were at the helm of affairs for selection of candidates in Andhra and Karnataka. Senior party leaders who have been campaigning in the two States say that again the choice of party candidates was not based on any principle but on personal whims. They point out that in Karnataka the persons dropped from certain positions on account of some charges, were again selected as party candidates.

For instance they give the example of Ibrahim, a former minister in the Gundu Rao Cabinet who was dropped from the Ministry because there were charges against him. He was held guilty in a CBI enquiry of having given flour mill licences to the wrong persons. But he was again selected by the party to contest. The leaders were not able to explain this away to the public. Another person who was running the show in Karnataka was F.M. Khan, MP.

Similarly, in Andhra, the selection of candidates was not proper.

According to senior party leaders, one of Mrs Gandhi's aides had boasted before the polling that they had selected the candidates on some set principles. They had asked for separate lists of candidates from the Pradesh Congress Committees and the Chief Ministers. Then two independent groups of MPs were sent to the two States to report on each constituency. This was followed by a comprehensive report from the Intelligence Bureau. Those candidates whose names figured in all the five lists were selected.

There is no serious consultation with the senior party leaders. Men like Kamlapati Tripathi and Mir Qasim sit at Parliamentary Board meetings almost as spectators. They appear disinterested as they are not properly consulted.

Mrs Gandhi is caught in a strange situation. She is not prepared to trust the old-guard. The people around her have no political maturity though they see to it that everybody including senior Ministers dance to their tunes and pay them homage. Rajiv Gandhi had told Zail Singh early last year that their main problem was that they could not take the risk of trusting the veterans who had once let them down but among the youth they had no experienced hands.

Delhi may repeat the Karnataka performance. Assam may not be any different. Elections in Jammu and Kashmir are expected to be held in April or May. Yet the party has not finalised any strategy. Rajiv Gandhi's personal relations with the Kashmir Chief Minister, Dr Farooq Abdullah, are good but the Congress(I) in the State is hostile to him. How they will reconcile to it is not yet decided.

During the Emergency, the then Congress President D.K. Barua had given the slogan *Indira Is India And India is Indira.* At that time some partymen believed the was an opportunist. A senior party leader now feels that this is the right time for the slogan. "Mrs Gandhi is still the leader of the country and there is nobody to replace her. If she destroys herself, she destroys the country. And she has already started the process," he said.

THE NEW HEROES. Crowds felicitating B.A. Jivijaya in Bangalore after he defeated former Chief Minister Gundu Rao.

—Mushtaq Ahmed

THE OLD ORDER CHANGETH. After hectic parleys the new Chief Minister relaxes at tea with his wife and mother. The Congress(I) slipped up very badly in the selection of its candidates

—Mushtaq Ahmed

Under the circumstances, the leaders of the Opposition parties and also senior Congress(I) leaders are all in the guessing game. With States gradually slipping from Congress(I) rule, what will be Mrs Gandhi's next step? Will she go for the Presidential system: in that case she will have to fight the elections alone and not for over 500 others as well.

The opinion in the Capital is that soon after the elections in Delhi and Assam, she will take some drastic measures, political, economic and administrative. Many heads may roll in the administration.

Another question being asked in political circles is whether the party will stand by her if she decides to go in for the presidential system. There are several legislators sitting on the fence right now who may not support her in this. She needs a minimum two-thirds majority in both the Houses of Parliament. If not the presidential system, what else? The answer can only be a matter of guess.

There is almost a panic in administration circles as senior officers hesitate to take any decision. They look towards their Ministers for orders who in turn depend upon their leader for the final word. Nobody is prepared to take a decision lest it is not liked by those at the helm of affairs.

IDEAL AND IDYLLIC. Himachal Pradesh has progressed from a backward State to one with a most advanced system for promoting modern tourism in the country.

A Model Of Tourism

SIMLA: Within a decade, Himachal Pradesh has not only become a model State for the promotion of modern tourism in the country but it has also started offering a consultancy service on the promotion and development of modern tourism to other States in the country.

Gone are the days when Himachal Pradesh was the most backward land full of snows, no road and rail communication and inhabited only by simple, god-fearing and ignorant hill-folk, craving even for schools and dispensaries. In the past two decades, however, the State—still without much road or rail communication—has built over two dozen tourist complexes, ranging from way-side cafes, restaurants and hotels to log-huts, barbecues and hot-water springs.

Today, all eyes are focussed on Himachal Pradesh—to gain from it experience and know-how in the promotion of modern tourism. Even a State like Jammu and Kashmir, where the tourist trade is about a century old, has approached the Himachal Pradesh Tourism Development Corporation for advice on the development of more broadbased domestic tourism, the provision of more modern amenities to home and foreign tourists and the enlargement of the scope of publicity within and outside the country.

Says Mr. V.K. Ahluwalia, Managing Director of the Tourism Development Corporation, "We are not in tourism to earn money. We are there to play a promotional part in developing an activity that is an important aspect for many States. We have a social obligation to meet and to justify our existence as a public sector undertaking."

According to him, the efforts to promote tourism have been basically to provide way-side and holiday facilities where they did not exist before. "Our strategy has been to create on all highways leading to the interior of the State, complexes which provide basic comforts and make it worthwhile for a traveller or a tourist to halt. In fact, some of our tourist complexes are within easy driving distance from Chandigarh, Punjab and Haryana and are very attractive for week-end outings or even casual evening drives," he adds.

Tourism in Himachal Pradesh had a very humble beginning in the mid-fifties when a Department of Tourism was set up for the purpose. The scope for development and promotion of tourism acquired bigger dimensions when all the hilly areas of Punjab were merged into Himachal Pradesh under the Punjab Reorganisation Act, 1966. The State Tourism Development Corporation was constituted in 1972 with the objective of giving a fillip to the development of tourism on modern lines and also to plan activities connected with the promotion of tourism on sound economical and commercial lines.

In fact, an antiquated form of tourism was in existence in the Simla Hills States about 150 years ago, with the Britishers coming over to this region for rest and recreation and to escape the heat and dust of the plains in summer. The construction of the Hindustan-Tibet road and the narrow-gauge railway line from Kalka to Simla in 1903 made Simla more accessible to the outside world.

In 1983, Simla had reached its full glory as one of the capitals of the world. But because of its strategic importance as the summer capital of the British Indian Government and the seat of the General Army Headquarters, the British Government did not encourage tourism in this region. However, towns like Dalhousie, Kasauli and Dharmsala were planned and developed as health resorts and places of rest and recreation for the British troops in summer.

With the passage of time and the opening up of the interior with the help of modern transport facilities, a new era was ushered in for the development of tourism in places like Kulu, Manali, Palampur, Khajiar, Dharmsala, Chail and Simla. In the past two years, the State Tourism Development Corporation has made serious efforts to give a new direction to the development and promotion of tourism and to adopt a new policy for its promotion, keeping in view the immediate and future needs of various classes of tourists.

Accordingly, haphazard growth was curbed and steps were taken to utilise and strengthen the existing facilities. Measures were also taken to fill in the gap between the peak and lean tourist seasons. Besides modernising the existing accommodation facilities to cater to present-day sophisticated tourists, the Corporation has constructed most modern hotels and restaurants in Simla, Chail, Kulu, Manali, Palampur, Jwalamukhi, Parwanu and Dharmsala to cater to the taste of all classes of home and foreign tourists. All self-contained tourist huts in Manali and honeymoon suites in Chail, once the Princely preserve of the erstwhile Patiala rulers, are booked throughout the season by those who can afford to pay Rs. 200-500 a day.

However, although the Corporation claims that its tourist complexes cater to all budgets, there is a general complaint from the more frequent visitors that the boarding and lodging rates in various complexes of the Corporation are too high to suit the average man's pocket. Tourists from the lower income brackets feel that they are being fleeced. Judged from the average Indian standards, a fully furnished room at Rs. 100 to 150 per day is certainly expensive. To counter such complaints the Corporation is now going in for cheaper accommodation like cottages, huts, youth hostels, dormitories and even tents.

The Corporation has also diversified into activities like arranging seasonal trekking programmes for the youth, developing ski resorts in the State and modernising the existing ice-skating rink in Simla. (This is the only rink of its kind in Asia). Last year, nearly 1,200 young men and women from different parts of the country participated in various trekking programmes organised by the Corporation. The Corporation has purchased a few boats to develop and encourage water sports in the Gobind Sagar lake and other such lakes in the State. Similarly, it is making all out efforts to develop winter sports with a view to diversifying tourist activities.

The Corporation organises a ten-day ski course at Narkanda near Simla in winter in collaboration with the Indian Institute of Skiing and Mountaineering, Gulmarg. It is also training students from Garhwal University in various aspects of modern tourism and awarding them diplomas in the subject.

A Special Correspondent

Where Have The Fish Gone?

GARHWAL: Man-made changes have brought about a great alteration in the ecology of Himalayan streams and rivers. Deforestation and the construction of dams etc. have gradually annihilated the fish in the region. For example, the Bhagirathi blockade caused by the fall of a huge hillock into the river at Damgla near Gangnani, 45 kms up-stream from Uttarkashi, in August 1978 formed a big artificial lake, one and half kilometres in length and 30 to 35 metres deep. As a result of this, there was no water flow for almost 14 hours between the Kanodiagad stream and Deoprayag, causing the mass annihilation of fish and other aquatic fauna and flora. The hydrobiological changes brought about by the blockade adversely affected both the migratory and non-migratory species of fish.

When the blockade was removed, there was a sudden and abrupt flow of a tremendous quantity of water which increased the mud in the river bed and further destroyed the breeding grounds of the fish. The silting also resulted in the suffocation of the fish. A considerable reduction in the fish population has been recorded thereafter.

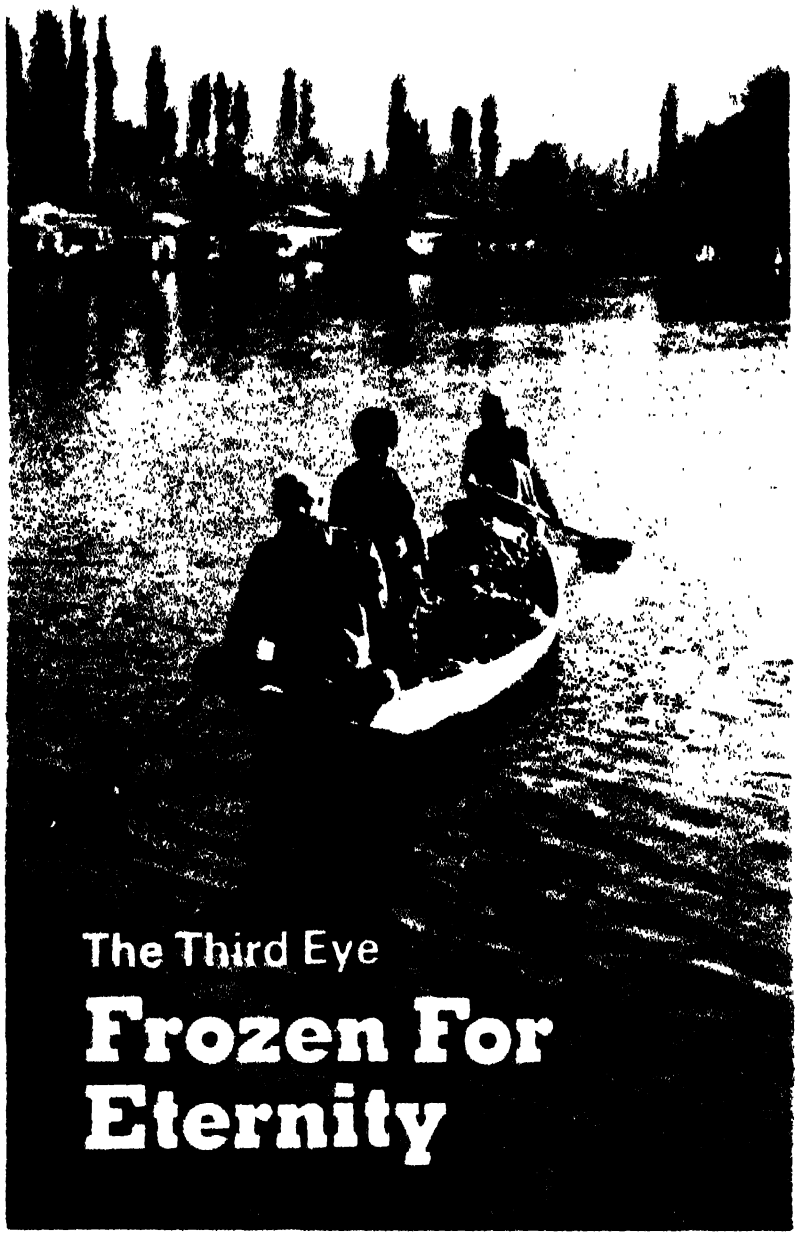
Similarly, the June 1970 floods in River Alaknanda brought about the massive destruction of different species of fish in the Garhwal region. This area is witnessing a large number of development projects connected with roads, dams and bridges. This is likely to alter the aquatic habitat and thereby tend to induce a change in the aquatic fauna and flora of the streams.

Such construction works cause changes in vegetation leading to the disruption of the life systems supported by it. In nature there is interdependence and interaction among living creatures. In each environment, the plant and animal species which constitute its biotic community and the non-living (abiotic) components of the environment are linked with one another in such a manner that they constitute a unified life support system. Damage and disruption at one or more points in this network of aquatic life weakens the whole structure. Such dangerous discontinuities cause the malfunctioning of the entire system.

Apart from this, illegal methods of fishing prevalent in this area are also playing havoc with the fish population. These include blasting with dynamite, chlorination with bleaching powder, *phandi* fishing (long line method) and "V" shaped *gadas* (a local fish collection device). A large number of mature males and females are captured before spawning by these illegal methods. This causes a great harm to fish progeny. The killing of one adult female would mean the destruction of hundreds and thousands of eggs.

M.P. Baloni

SAD DESTRUCTION. Man-made changes have wrought havoc with the population of fish in Himalayan streams and rivers.



The Third Eye
Frozen For
Eternity

Photographs and Text

by H. Narayanan

FOR me, as a layman behind the lens, photography is a kind of urge to convert transience into permanence, a desire to capture fleeting moods for eternity. This is why I aim my camera at anything which holds or arrests me, be it chirping birds, mocking clouds, giggling girls, surf-drenched coasts or snow-capped mountains.

I made my first foray into photography with a sophisticated Voiglander during my college days. Then, for almost a decade and a half, my camera merely gathered dust in a cupboard. I returned to the hobby with renewed vigour when I became a father and wanted to freeze the pranks, smiles, tears and tantrums of my daughters with the help of pictures. I have had several of my photographs published in Tamil, Malayalam, Kannada and English periodicals. I am now preparing an illustrated book on India—with my photographs, of course! ■

Letter From Calcutta

— Mona Chowdhury

MR JYOTI BASU was rumoured to have been ill recently

DARJEELING—the paradise open only for the jetsetters.

HAWKERS at Calcutta add colour and life to the cold winter days.

Free For All

Fourteen candles were lit on Christmas Day to mark the birthday of *Mukta Mela*, a weekly fiesta of poetry song and dance that is held every week among the cluster of six deodars and two mahogany trees opposite the Victoria Memorial. An amusing one-act play, One Day With Ali Baba, was enacted, there were some pleasant songs and recitation by the poets themselves, verses romantic, bitter and cynical. It was a modest, mildly enjoyable exercise watched by the idly curious rather than the wildly enthusiastic, a lilting diversion in the hectic life of a crowded city.

And yet, *Mukta Mela* promised to be so much more when men and women of real talent first assembled 14 years ago to give expression to their talents without the restrictions of a formal framework. It was then truly a mela in the traditional sense but a mela of culture not commodities, and also mukta, or free of restraint. But politics moved in, writers and musicians squabbled among themselves, there were struggles for control and the police had to intervene. Eventually only one man—poet and playwright—was left with his private group, and even his supremacy may soon be challenged since someone this year demanded accounts of the paltry sum collected through a raffle.

So peters out all commendable enterprise in Calcutta. The magazine *Mukta Mela*, sold for a rupee, recalls the sad decline by reminding listeners of the time when the mela sustained four printed and seven hand-written journals, one of which sold neatly a thousand regular copies, when *Mukta Mela* scooped the Calcutta Press with the news of Zakir Hussain's death. As quality has fallen, enthusiasm waned and crowds dwindled, Mukta Mela has also slowly acquired the organisational structure whose absence was once its chief boast. There are picnics now, poetry awards too, and pride in messages of goodwill from distant lands. At this rate, a shadow of the old and vital *Mukta Mela* might even apply for recognition by one of the national akademis.

Heart Of The Matter

Illness in high places always provokes intense speculation, more so because—as in the case of Nehru's stroke in Bhubaneswar—it is treated with the utmost secrecy. So, when the news filtered out of Mr Jyoti Basu's ailment, people suspected the worst and there were morbid rumours of a massive heart attack. Nor was gossip diminished by mysterious reports regarding the Chief Minister's abode: he had, apparently, left his paternal house in Ballygunge for his son's flat in Park Street. The State Government was said to be searching for a new residence, preferably near Writers' Buildings and with a lift, later, Mr Basu was planning to move into a flat in the Raj Bhavan estate where other Chief Ministers—notably Mr P C Sen—have also lived.

All this suggested some degree of physical incapacitation. The disablement of the important is always a matter of prurient curiosity. But in this case, there is also serious political concern. With Promode Dasgupta gone, Mr Basu is the only man left to restrain the CPI (M), hold together the Left Front, and continue a working relationship with New Delhi.

Realising the nature of public interest in his well-being, the Chief Minister wisely ordered daily medical bulletins: the first to be issued, about two weeks after the stories first began to circulate, claimed that though Mr Basu "had an attack of vertigo and hypertension" he was improving and there was "no cause for anxiety about his health at present". Amen to that. It might mean the saving of the Left Front.

Restricted Entry

Few enough foreign tourists come to Calcutta and the eastern region for the authorities to take care not to drive them away. This seemed likely in early December when Indian Airlines suddenly announced that it had been instructed not to take foreigners to Bagdogra—the terminal for Darjeeling, Kalimpong, Gangtok and Bhutan—unless they were already armed with inner line permits. It turns out now that it was all a mistake: foreign tourists will be able to fly as before to Bagdogra and obtain a week's permit for Darjeeling on the spot.

They will not be subjected to the harassment and humiliation of having to apply to the police in advance. But this indignity is still obligatory for less affluent foreigners who cannot afford the air fare and travel by bus or train, a crudely snobbish discrimination that seems outrageous by any standard. Indeed, the entire question of permits needs to be examined. They were imposed under the Eastern Bengal Frontier Regulations of 1883 which cannot possibly be relevant a century later.

Shopping Spree

There was a time when Calcutta had any number of richly stocked, stately department stores (Harrison & Hathaways, Whiteaway Laidlaw, the Army & Navy Stores and Hall and Anderson) but now we have only an abundance of pavement vendors. Many have acquired a permanent pitch, some shift from one roadside to another, others—like the Bhutiyas who sell heavy and colourful woollens are seasonal. Incidentally, it is wrong to imaine that the Bhutiya hawker brings you a genuine hand-knitted pullover made of pure yak's wool: he is only a salesman employed by factories in Jullundur and Ludhiana, but this is not the only deception practised by the roadside.

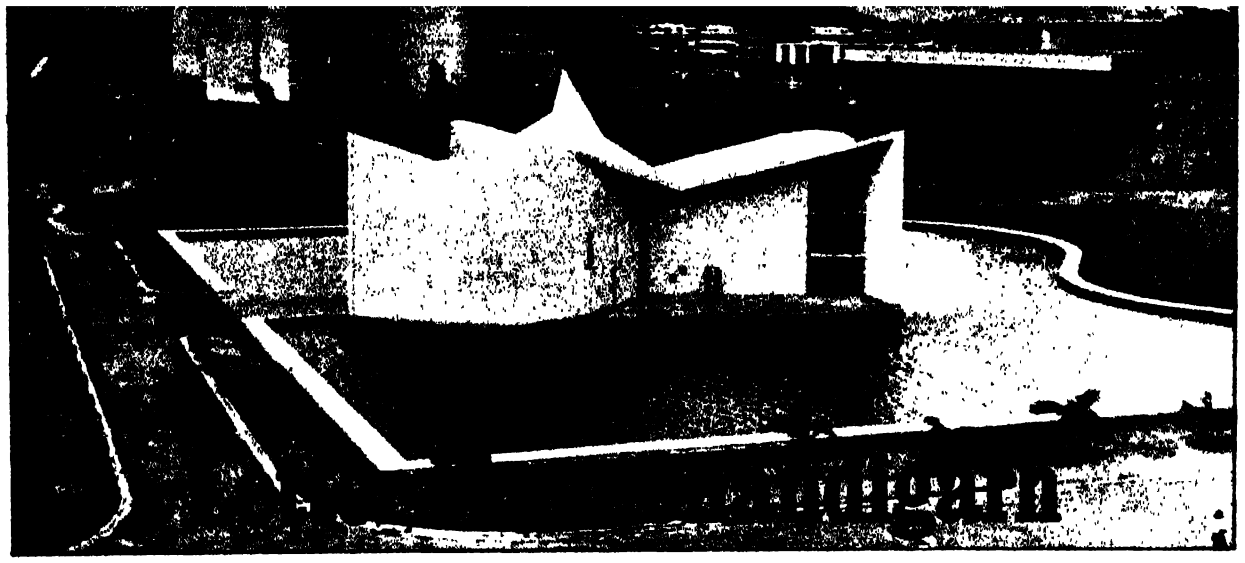
More serious is the periodic farce of driving hawkers away. No one really wants them to go. Not the public which patronises these interant sellers, nor policemen who extract protection money from them, and certainly not politicians who enjoy the support of hawkers' lobbies. For instance, the Public Works Minister, Mr Jatin Chakravarty of the Revolutionary Socialist Party, takes action only against Esplanade vendors who back the Forward Block, while the Congress (I)'s Mr Subrata Mukherjee jubilantly celebrated the victory when the courts confirmed Gariahat hawkers in possession of land they had forcibly occupied.

Noblesse Oblige

From Writers' Buildings comes two curious reports touching on the Bengali's sense of dignity. First, senior IAS officials of the rank of secretary feel that the conventional knee-hole desk (with a rectangular surface and drawers down both sides) are unfashionable and will now be provided with smart horseshoe writing tables and foam-cushioned chairs. Secondly, and not to be outdone, peons have decided that khaki offends their prestige which demands navy blue trousers and pale blue shirts.

The reasons for these innovations are not far to seek. West Bengal civil servants want their offices to look as much as possible like a commercial executive's suite, which is the status hankered after by men who bring very little dedication and no sense of identification with the people they are supposed to serve. As for peons, khaki is an uncomfortable reminder of the menial duties they disdain to perform though paid for them. Presumably they expect shades of blue, not associated with any known uniform, to free them from even nominal obligation. It should surprise no one if Left Front ministers now announce that the Gandhi cap is obligatory for office. ■

Sumita Sandilya



by Darshan Singh Maini

WHATEVER the fate of Chandigarh which continues to dominate the mind and the imagination of the people in these parts, one thing is clear enough. It's going to develop into a kind of *cultural capital* this side of Delhi. Perhaps its proximity to that metropolis makes it a natural choice for certain *repeats* and *overflows*. Add to it the Punjabi *bonhomie* and a natural hospitality, and the city's own overtures to the imagination, and you get some idea of the *Importance of Being Chandigarh*. And particularly in these winter months when the air has a bracing bite, and a fetching freshness, and the sun is a warm and winsome presence, the city cannot but attract conferences, seminars, art exhibitions, theatre and dance troupes of all manner and description. Surely, the cultural ecology of Chandigarh is beginning to take form and style.

The city, after all, has more retired officers, more serving clerks and bureaucrats, more stray artists and intellectuals, more foreign students, more cars and scooters and motorbikes, and more politicians and pedigree dogs per square metre than any other State capital or city in India. And now comes the disquieting news that it leads the rest of the country in the number of *depressives* (29 per cent of the total population) also. Considering the quality of life here, this is indeed a very odd inference. But, then, there are, as the Freudians would say, "more things in heaven and earth, Horatio, than are dreamt of in your philosophy".

Verbal Gymnastics And Cunning Politicking

Undoubtedly, the most important thing to have happened here lately was the two-day, national-level seminar on "Press, Society and Government" organised by the Servants of India Society at the Lajpat Rai Hall through the initiative and effort of Mr Krishan Kant. The presence of some top-drawer editors and columnists, not to speak of legal luminaries and intellectuals of all shades and persuasions, made it a memorable experience. For something like 14 hours, there was impassioned discussion involving dozens of delegates and participants. If a great deal of fur was flying, there was also a feeling that issues of great import and consequence were on the anvil, and that the question of moral credentials would brook no prevarication. And the man who roused all this academic ire was, of course, the person who answers to the name of Jagannath Mishra. He is undoubtedly one of the many natural calamities which the unfortunate State of Bihar is prone to. That infamous piece of legislation called the Bihar Press Bill conceived in bad faith, and put to paper and seal in a spirit of wanton cynicism, helped galvanise the gathered fraternity to a rare degree of perception and protest. In short, Dr Mishra, it was felt, had unwittingly become an instrument of history which, as we know, has many a "cunning corridor" and many a "turn of the screw" to show! But perhaps, all such reflections are lost upon him and men of his kidney.

In his keynote address, Mr Chalapathi Rau delivered a few straight broadsides to highlight the poverty and misery of the ensconced authorities that failed with the temper of the times. At the same time, if a journalist was really obliged to tread on bureaucratic corns, or to put a politician in his place, he too, in his view, should realise the limits of his rhetoric and wrath. Though the voice faltered with age, one could see that "the lion in winter" had lost little of its roar.

Earlier, in his inaugural address, Mr Prem Bhatia, in a suave and urbane manner which still subsumed a hint of acerbity, remarked that the displeasure of the Government in power was a natural consequence of their profession, and that the journalists had better get used to it, for no rulers anywhere in the world were particularly fond of their tribe.

Other notable editors—Messrs George Verghese, S. Sahay, Nikhil Chakravarty, Kuldip Nayar, Rajendra Mathur, Jagjit Singh Anand, among others—too, in varying degrees and voices, felt deeply anguished over the assault on the press and suggested some remedial measures to keep it in health and spirit. It was a most impressive display of editorial solidarity.

Art For *Life's* Sake

What a relief it is, then, to turn from the murky politics of a Mishra to the lambent world of art! Chandigarh mounts so many exhibitions in its two art galleries—the Museum and the Punjab University Museum—that there is, indeed, a feeling of plenitude and pride. To begin with, the display of French lithographs—Picasso, Miro, Matisse, Braque and Chagall, among others—was both for the art student and the lay admirer a revealing experience. Why French art continues to be astonishingly fecund and innovative is not easy to tell. There's perhaps something in the Gallic sensibility which keeps it in a state of continual engagement with reality at the aesthetic level. However almost all the *avant-garde* movements which originate on the pavements of the Montmarte often lead to ersatz art and meretricious copies in other hands and in other climes.

This, to be sure, is not true of Prem Singh whose paintings have a remarkable air of fidelity to experience even when the form is largely expressionistic. It's clear he has gone to school with some great foreign 'masters' as though by an act of imaginative pupilage, though the two native influences—Amrita Shergill and Satish Gujral—could be seen in the obsessive motif of the hooded figures, and in the choice of dark and sombre and strong colours in such cases. His penchant for folk art is cunningly exploited within the context of the modernist techniques he has evolved to structure his vision of reality. Nearly all the 28 oils and the 6 pen-and-ink drawings have a distinctive personal code, signature and style. While the drawings reveal a crystalline purity of line and design, the oils show a whole world of Freudian urges struggling to be born. One of the more striking paintings is a scene perhaps of impending rape, and the unleashing of the horrendous hounds of desire. Incidentally, the next port of call for the Exhibition is Bombay.

Another great show on was the display of Dhanraj Bhagat's recent drawings. The renowned Indian sculptor, grown grey in the service of wood and metal and chisel, and disabled by a crippling pain in the arms that once created some of the most moving and authentic specimens of sculpture in India since the days of the ancient craftsmen is alas, now obliged to seek a collateral medium for the expression of his undiminished energy, vision and skill. There is a rich profusion of colour and ink drawings, and the Exhibition shows scores of these late blossoms selected from a mass of over 5000 since 1978. The main motifs—Krishna and his flute, the hooded serpent of terror and knowledge, the elephant and the horse in sport, the schools of birds in aspects of love, sleep and flight—are all worked out in bright blues and greens and reds etc, revealing the chromatic drift of his thought. Clearly, Dhanraj's hand has not lost its cunning, nor his eye the beauty and mystery of the human and animal form. The agony and the art abide.

"Photo-82"—an All-India Exhibition of creative photography—provides another perspective, though not another impulse. How the camera can in imaginative hands turn into an instrument of vision may best be seen in the handiwork of Karam Singh and Yog Joy and others who create uncommon effects through a simple flick or flash. Ordinary occurrences and common men and women suddenly assume a hum of meanings, thanks to the use of such devices as close-up, distancing, *chiaroscuro* and montage etc.

Bridge Over Troubled Waters

If the art galleries are still the concern of the elite and the *cognoscenti*, poetic symposia are at least within the ken and reach of the common man. The appeal is irresistible if the language happens to be Urdu, for it still evokes great nostalgia. In any case, an Urdu symposium has its own unique *elan* and atmosphere, its own culture and codes. Thus, the *Indo-Pak Mushaira* at the Tagore Theatre where a full house sat through for full 6 hours and more, one memorable evening, only proved that there was nothing like the muses to build bridges of amity and understanding. The *ghazal qua ghazal* is supremely suited to the endless blandishments of love, and lends itself to endless variations. Its dialectical nature permits the poet to sift emotions through the sieve of thought. As for the *compere*, Kanwar Mohinder Singh Bedi, he was all wit and urbanity and gay repartee, authenticating that *joie de vivre* which characterises Punjabi life on both sides of the border. The visiting Pakistani poets—Rais Amrohi, Bazam Ansari and Akhtar Feroze—were, in any case, expected to bring the house down, but what left me fairly wondering and, of course, pleased was the matching performance of our local and native poets such as Khumar Brabanki, Tasnim Sadiqui, Jamila Bano, Zakir, Hunar and Shakir, among others. Surely, such a thing bespeaks a true consanguinity of minds and imaginations, and augurs well for the future.

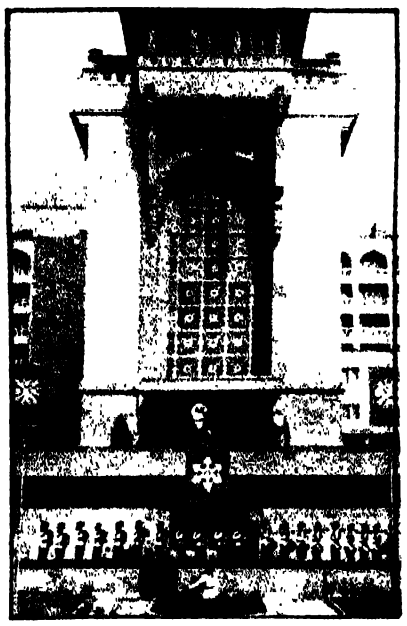
P.S.

By way of a postscript I may add that the holding of the 58th session of the All-India Medical Conference in late December at the prestigious PGI helped highlight the general lack of Government interest in a really meaningful health policy, programme and projections. In his forthright presidential address, Dr M.G. Garg of New Delhi called for a purposive and visionary approach which without being pragmatic was, at the same time, humane and compassionate. He demanded, among other things, the abolition of state duties on medicines. "Taxing drugs," he said, feelingly "is taxing sick people." In his inaugural address, Sardar Darbara Singh, Chief Minister, Punjab, emphasised the importance of controlling India's burgeoning population, and of checking effectively the menace of drug addiction and drug abuse. As a gesture of goodwill, he donated a sum of Rs 25,000 to the I.M.A. to assuage the ruffled medical minds. ■

PAINTING by Prem Singh

That's Business

From Our Special Correspondents



HOTEL ASHOK in New Delhi

ANY lingering doubts about our socialist god having stumbled should be dispelled by the vulgar disparity witnessed on the New Year's eve of 1983. While the poor majority shivered as usual in the icy cold, the rich minority made a bee-line for five-star establishments to partake of pricy extravaganzas whose cost in some places touched Rs 1,500 a couple!

The statistics behind the iniquitous scenes are equally searing. Data released by the Central Statistical Organisation shows that the top 5 per cent households possess 33 per cent of the nation's wealth, nearly half of it being held by the top one per cent. On the other hand, the share of the bottom 5 per cent of the households is only 0.01 per cent. This works out to a ratio of 1:3,300 between the lowest and highest 5 per cent groups and approximately 1:20,000 between the bottom and top one per cent groups. Further, the consumption share of the top 10 per cent of the population rose from 20 per cent in 1950 to 60 per cent in 1980.

In the vanguard of our quest for a socialistic pattern of society are, of course, our ministers who enjoy perquisites that would be the envy of a medieval potentate. Compare this with the values in Scandinavian countries which enjoy the highest standard of living in the world but whose ministers live in two-room apartments.

Growing American Interest

Some initiatives are visible in the wake of Mrs Gandhi's invitation to American businessmen to come to India. Following the recent visit of American industrialists to this country under the auspices of the Overseas Private Investment Corporation, a semi-government US agency, the US Department of Commerce is organising a one-month-long programme of seminars in 13 American cities from February 23 to educate businessmen on investment opportunities in India.

Mr H.R. Lucius, Commercial Counsellor in the American Embassy, explains that the seminars will be addressed by American and Indian businessmen engaged in Indo-US ventures. Indian businessmen visiting the U.S. at the time of the seminars and wishing to participate may contact him. "The seminars will focus attention on medium-scale entrepreneurs."

Asked how he squares such efforts with this country's persistence in restrictive policies on foreign investment, Mr Lucius asserts: "The change in attitude makes a difference. Now a proposal can be cleared in 90 days. Moreover, the Indian Government's more relaxed attitude towards the private sector as a whole helps the foreigner, too." To buttress his point about the growing American interest in India, he discloses that in January-September 1982 the US accounted for 118 of the 435 collaboration proposals approved by the Government, topping the list.

MR H.R. LUCIUS, Commercial Counsellor in the US Embassy.

American investment in India began to decline following the nationalisation of oil companies and the departure of Coca Cola, IBM and Remington Rand. Recently, however, there has been a pick-up and now the American investment stands at around $400 million.

Feeble Response Of Non-Resident Indians

The flow of funds from non-resident Indians has been below expectations. One reason is the grudging, piecemeal manner in which the incentives have been announced, not to speak of their limited attractiveness. For example, although the interest offered to non-resident Indians on their bank deposits is 2 per cent higher than the normal rate, it is still lower than the interest available abroad. It needs to be realised that most non-resident Indians, being either professionals or skilled or semi-skilled workers, lack a business orientation and, therefore, have a natural predilection for earning interest on bank deposits.

Another reason for the inadequate response hitherto was the unavailability of the complicated rules and regulations in an encapsulated form. This lacuna has now been filled by the Industrial Credit and Investment Corporation. It has brought out a booklet entitled "A World of Investment Opportunities at Home". It systematically explains the rules pertaining to bank accounts and investment facilities. The section on bank deposits is divided into three parts: non-resident (external) rupee accounts, foreign currency (non-resident) accounts, ordinary non-resident accounts. The section on investment facilities has eight parts: investment in government securities, investment in companies with right of repatriation, investment without repatriation benefits, portfolio investment in shares, investment by overseas companies and other corporate bodies, investment in free trade zones, special facilities for setting up industrial units, investment in electronics industry.

The booklet, which also lists addresses of 67 banks authorised to receive foreign exchange, should be widely circulated abroad.

Kothari For Power

Mr D. Kothari feels that he has a moral right to expect due attention for his views on power generation. He is the Chairman of a major company, Kothari (Madras) Limited but, that apart, Tamil Nadu's industry has been in the grip of an unprecedented power crisis.

Addressing the annual general meeting of the company recently, Mr Kothari strongly supported the long-standing demand for power generation in the joint sector. While capacity utilisation in the private power plants was 78 per cent in 1981-82, in the state-owned units it was a measly 47 per cent. Some time ago the Government considered the proposal for setting up units in the joint sector, but nothing came of it because of disagreement over the distributional aspect. The Government insisted on retaining full control on distribution.

MR D.C. KOTHARI, Chairman, Kothari (Madras) Limited.

Kothari (Madras) Ltd has done well in the year ended June 30, 1982. This is due to three factors: alleviation of power shortage through captive generation, efficiency, and high profit margins (as in the case of most sectors of industry). The company's fertiliser division registered a 30 per cent increase in production and its chemical unit achieved 90 per cent capacity utilisation. The dividend declared was 22 per cent and the profit after tax Rs 338 lakhs.

Singhania's Proposal

"We have a proposal for an Asian Pacific Economic Community," says Mr Hari Shankar Singhania, newly-elected Vice-President of the Taipeh-based Confederation of Asian Chambers of Commerce and Industry.

The idea is unexceptionable. But is it practicable? Apart from the problem of reconciling conflicting interests of disparate countries, there is already the Association of South East Asian Nations (ASEAN). The parallelism is evident from the fact that only three members of ASEAN—Hong Kong, Indonesia and the Philippines—are members of CACCI, whose other seven members are Japan, India, Australia, New Zealand, Taiwan, South Korea and Sri Lanka. Further,

MR HARI SHANKAR SINGHANIA, the newly-elected Vice-President of the Taipeh-based Confederation of Asian Chambers of Commerce and Industry.

CACCI lacks governmental mandate, which means that the proposal will require endorsement but by the respective governments.

In addition to apex business organisations, individual companies are also members of CACCI, an organisation that is 15 years old but has remained underpublicised. Of the 100 odd companies which are its members, 30 are Indian. Apart from the usual promotional functions performed by organisations of this type, CACCI, according to Mr Singhania, is engaged in efforts to improve agricultural productivity in the member-countries. This is interesting, coming as it does from the chief of an organisation of businessmen. ■

THE WORLD AROUND US

***SIAMESE TWINS?** Yes. Lockheed experts are exploring this design concept of two Jumbo Jets sharing one giant wing and six power plants.*

***ON WITH THE SHOW.** Union Information and Broadcasting Minister N.K.P. Salve lights the lamp to inaugurate the Ninth Film Festival at New Delhi's Asiad Centre Auditorium.*

***A LADY IN DISTRESS?** On the contrary, Domino, played by Kim Bassinger, is on her way to safety with rescuer James Bond. Sean Connery returns to the screen as Bond in "Never Say Never Again".*

Rs.10 LAKHS NESCAFÉ NESCHEQUE CONTEST

Over 3500 Nescheques to be won!

First Prize

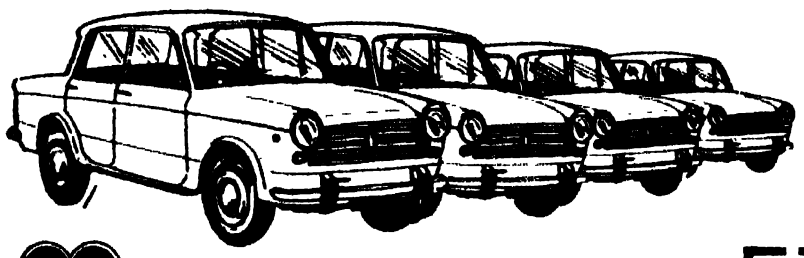
The best month of your life!

Rs 2,00,000

to spend just the way you want to, within 30 days of the prize announcement OR A Nescheque worth Rs. 2 lakhs.

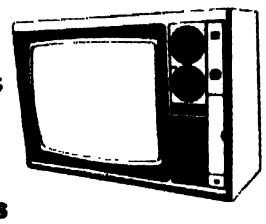
4 second prizes

Premier Padminis each fitted with an air-conditioner and cassette stereo OR Nescheques worth Rs. 90,000 each.



20 third prizes

Colour TV sets OR Nescheques worth Rs. 7,500 each.



40 fourth prizes

Walkman sets OR Nescheques worth Rs. 1,000 each.

1500 Consolation Prizes

Nescheques worth Rs 100 each.

2000 'Early bird' Prizes

Nescheques worth Rs 50 each for the first 250 valid entries received every week!

NESCAFÉ.

When you want nothing but the best

Contest closes 15th Feb. 1983

CAS 565 P

ALL YOU HAVE TO DO

In the Entry Coupon below are symbols of 5 of the world's currencies Underneath each one of them are 5 of the world's best-known landmarks All you have to do is match the currency symbol with the landmark of the same country by writing the number of the landmark alongside the currency symbol

For instance '¥' denotes Japanese Yen, hence '¥' matches the Mount Fujiyama. Thus No 5 is written next to the symbol It is as simple as that Now go ahead and match the others

After you have matched the currencies and landmarks there is just one more thing to do. You know that Nescafé is the world's favourite Instant Coffee Suggest **one** word to either precede or follow the name 'NESCAFÉ' that denotes its superior quality

For example
Super Nescafé or
Nescafé **Classic**

Put down your word in the blank provided in the Entry Coupon

Now fill in the coupon with your name and address and mail it to **"Nescafé Nescheque Contest"**
Post Bag No 10
New Delhi 110 002

WHAT YOU NEED

Each entry must be accompanied by an inner seal of a Nescafé jar or an empty 50g sachet

The inner seal of a **50g jar**
or an empty **50g sachet**
entitles you to 1 entry
The inner seal of a **100g jar**
entitles you to 2 entries
The inner seal of a **200g jar**
entitles you to 4 entries

You may use the Entry Coupon in this advertisement or get an Entry Form from your Nescafé dealer Remember! More entries from you improve the likelihood of your winning a prize

RULES & REGULATIONS

1. All entries must be legible and complete
2. You may send as many entries as you like but each entry must be accompanied by an inner seal of a Nescafé jar or an empty 50g sachet
3. All entries must be mailed by ordinary post and not registered.
4. The first 250 valid entries each week will receive a cash prize of Rs. 50 each. These winners will also be entitled to win any one of the other prizes.
5. The contest is open to all citizens of India except the employees of Food Specialities Limited, Clarion Advertising Services Limited, R K Swamy Advertising Associates Pvt Ltd and their immediate relatives
6. The decision of the judges will be final and binding. No further correspondence shall be entertained.

¥ 5 | Rs ____ | £ ____ | $ ____ | Fr ____

Warli Painting

Folk Art Of Maharashtra

by Chakresh Jain

—Mahesh Painter

NATIONAL AWARD WINNER Jivya Soma Mahse, who belongs to Maharashtra's aboriginal Warli tribe, demonstrated his art at the Festival of India Below: *Laxmi, who paints chowks during marriages.*

CLAD in a white loincloth and seated on the bare mud floor of his hut, his dark, lean body bent over an exquisite painting, he is busy giving it finishing touches. He is not a protege of any art school or of any school for that matter. He is an unlettered artist belonging to the aboriginal Warli tribe of Maharashtra. He is Jivya Soma Mahse, 47, of Ganjad village in Dahanu, about 125 kms from Bombay.

Looking at him one would never imagine that he has two exhibitions to his credit held in Bombay and Delhi, that he received the National Award for which he went to Delhi or that he visited Belgium with his paintings or that he demonstrated his art at the Festival of India in London. Despite all the limelight, his lifestyle has remained unaffected, unaltered.

I sit beside him in his simple mud-plastered "studio". On a pillar hangs a picture of Jivya with Indira Gandhi, surrounded by Certificates of Merit presented to him by various organisations.

How did he start painting, I query in Marathi.

Introvert, quiet, he merely looks up from his work, his face wreathed in smiles.

Doodling In The Mud

Sadashiva, his son who is his manager, informs me that when his father was barely four, he began doodling in the mud. He was a lonely child abandoned by his parents. He loved to draw and whiled away his time forming patterns in the mud.

Traditionally, Warli paintings are executed on walls of huts mainly by women as a wedding ritual when the chowks are painted with rice flour at the time of the Dev ceremony to invoke the gods.

Jivya watched these women paint, practised the art and gained proficiency over the years. He has been painting for over 12 years now.

"Sometimes the women drew just a few lines on the chowk and I completed the rest," he grins.

How was Jivya's talent discovered?

Reluctant Guests

In 1974 the Handlooms and Handicrafts Corporation invited four Warli women to Delhi for a demonstration of their art. Never having seen or travelled in a bus or train, they were reluctant to accept the invitation. Jivya was asked to escort them. They felt like fish out of water, homesick in an alien surrounding. Jivya would console them and also helped them paint the chowks.

Sadashiva reveals that the chowks painted by Jivya were far superior to those done by the women. The Corporation suggested that the Warli women should paint on paper so that their art could be sold. This was sacrilegious! But Jivya was quick to take up the idea and began painting on large sheets of brown paper. A non-conformist, he ventured to step into a field which had hitherto been a woman's domain.

Jivya is now a master of his art. His uninhibited desire to express his aesthetic urge has enriched the repertoire of Warli patterns. His works depict the lifestyle of his tribe—hunting scenes, harvesting, winnowing, singing and dancing which form an important part of a Warli villager's day, are his favourite themes. His canvases represent all the multifarious activities of a rural life. Sometimes a car, a truck or a train are included, but this is rare.

Each detail is painstakingly executed; the fine lines are meticulously drawn. Though simple in conception with flat, single-dimension perception, they manifest movement. Swirling, whirling.

Jivya uses white poster paint and bamboo twigs. The white patterns stand out against the mud-like brown paper background. He is an artist with roots in tradition with highly individual forms of expression. His paintings have won rave notices in the prestigious biennale Menton of France and have been acquired by private collectors. Each little creature he paints illustrates an anecdote or some Warli ritual.

The photo session over, he fetches a bamboo basket with dried *apta* leaves and tobacco and rolls his bidis while chatting with me. He is more at ease now.

"I paint from morning till evening. At present I am teaching this art to three Warli boys, including my son Balu. At times I work in the fields as a break from painting." Jivya owns a plot of land which is tilled by his wife and sons.

How was his trip to Belgium, I am curious to know.

"I enjoyed it immensely. *Bara watla* (I felt good)," he says gleefully. Pointing to a picture-postcard displayed in his hut he tells me, "Look at this picture of the hotel where I stayed." ■

CO-ORDINATI

TIONS

The Pulsating Fabric Creations By Grasicrimp

Fibres that put the exciting beat of new combinations and co-ordinates into an ever-increasing harmony of new blends for new fabrics.

Grasicrimp not only offers the best qualities of texturised polyester and acrylic yarn - such as good handle & feel, better insulation and faster crease recovery. It is also a stronger than normal viscose fibre which affords a superb degree of dye absorbancy.

This fibre can be used with advantage by all spinning mills for the manufacture of 100% crimped yarn. Or for blending with Acrylic, Polyester, Cotton and Wool, for an overall improvement of yarn and fabric quality.

Grasicrp is now being manufactured in India for the first time - exclusively by Gwalior Rayon, with its own highly developed technical expertise.

Grasicrimp

Great Fibre Blends for Great Fabric Creations.

The Weekly Pick

Kanthapura, Raja Rao, Orient Paperback, Rs 14

Kanthapura is the name of a village in the interior of South India. The novel is about the Independence movement's effect on this sleepy village amidst dusty cart roads and elephant-haunted valleys. It is really a story of Moorti, his idealism and fervour, seen through the eyes of an old lady — who acts as a sort of chorus, commenting on the complex, vibrant and variegated texture of life. There is a remarkable blending together, of *time-past* and *time-present* with a slicing and clean style that gives the book a certain classical clarity of epic proportions.

Heir Apparent, Karan Singh, Oxford University Press, Rs 80

He calls it an autobiography. It spans 22 years of his youth—and forms some sort of a "recollections of early childhood". The photographs used are charming and the chapter on the Americans has the tell-tale marks of a sincere and open-hearted young boy. It is apparent that the author was indeed an observant and sharp-eyed politician in the making, even in those days! The last two chapters are very well knit. Jawaharlal Nehru—his *political guru* is drawn by a true *shishya*.

So Many Hungers, Bhabani Bhattacharya, Vision Books, Rs 25

Steel Hawk and Other Stories was a pleasure to read. And if you are particularly keen on realism as a backdrop, then this novel, which is based on the famine of 1943 in Bengal, will surely give you a jolt. Early in the novel, the exchange between *Dadu* and Rahoul about *Baruni* the village is heart-rending. The simplicity and intrinsic goodness of the poor peasants emerges as a gradual but persistent motif all along.

Vatsyayana's Kamasutra Translated by Sir Richard Burton and F F Arbuthnot, Orient Paperbacks, Rs 16

Kamasutra? So what's new, you ask? Well first the *approach*, and then of course, there are those lively illustrations. The translators have done a fair job of dividing the book into 7 parts. *About The Wives Of Other Men* and *On Sexual Union* are two of the best and there is a bit of humour to be found (if you're subtle enough!) under the *fun*. *A classical work of erotica it is and will remain (it seems)—as nothing is novel in what the 20th century courtesan does, compared to the genius of Vatsyayana. Even Sensuous Woman* tastes bland after this!

Julie

Khrushchev's Mouthful

The mercurial Nikita Khrushchev took Hollywood by storm on a brief, whirlwind tour of the film metropolis when he lunched at the Twentieth Century-Fox studio. He and studio president Spyros P. Skouras got into a discussion on the merits of Soviet and American social life. Skouras defended the American way of life which made it possible for a penniless Greek immigrant like him to rise to the position of studio boss. Mr Khrushchev quickly silenced him with the remark, "I worked in a factory for a German, then in a French-owned coalmine, then in a Belgian-owned chemicals factory. And today I am the Prime Minister of the great Soviet state... Well, fellow Greek, is that enough for you?"

—Screen

In The Spirit Of Gandhi

Martin Sheen, the American film star of no mean genius, who played the role of an American reporter in Attenborough's *Gandhi*, has donated the $200,000 he earned to charities: to Mother Teresa and her work in Calcutta; to the Quakers who looked after Gandhi when he went to London; to Concern, an Irish group started at the time of the Biafra famine and looking after starving people all over the world.

—The Daily

Name Game

Amitabh Bachchan may have a hair-style named after him, department stores may sell Shabana Azmi saris and vendors may talk about Gabbar Singh biscuits. But sometimes the name game goes too far. Like a restaurant at Nagpada which offers "Padmini Kolhapure mutton" and a juice shop at Byculla which offers a "Hema Malini falooda". A shopkeeper at Chowpatty has Ranjeeta sipping water from a coconut to attract customers. Hotel President named their new Indian restaurant "Gulzar". Let's hope people don't expect Raakhee kababs!

Science Invades Temples

Tirupati temple, the abode of Lord Venkateshwara and one of the richest temples, has once again effectively introduced scientific technology for its and pilgrims' advantage.

After introducing music to its *Gosala* (cowshed) to milch more milk from its cows, the temple has gone in for solar technology.

A huge solar heater designed and installed by BHEL is to supply hot water for bathing to the visiting devotees.

This method of hot water supply will save the temple hardship of heating water with firewood and can save the use of 200 tonnes of firewood annually.

—The Hindustan Times

Fury Of The Monkey

A hair-cutting saloon at Manmad wore a look of seige last week as grim-faced policemen waited patiently for six hours to see a fierce monkey come out and enter the iron cage outside.

The monkey which went on rampage injured at least 15 people in the course of the week and played havoc with the normal life of the town. A police constable lost his ear, school-going children remained indoors and motorcyclists deserted their vehicles as the 4-foot high black faced mammal ruled over the town.

Motorcyclists became special targets of the violent monkey, which reportedly lost its beloved hit by the vehicle.

Gigi

History Of The Mahars

A Review by Thomas Gay

ADDRESSING the Indian Military Academy in 1974, the Colonel of the Mahar Regiment (who is now Chief of Army Staff) mentioned that as a young Cadet, 32 years ago, he had been commissioned into that Regiment. When he inquired who the Mahars were, no one could enlighten him, and eventually he was put wise by a small lecture from the Commanding Officer himself. This volume will not only serve as an inspiration to the officers and men of the valiant Mahar family but will also dispel the ignorance of all—civilians or even members of the Defence Services who may be as innocent as General K. V. Krishna Rao, PVSM, once was.

In writing this third edition of the Regiment's history, Colonel Longer aimed at producing "an accurate, run-on, readable account, chronological and well-documented... not broken up into units and battalions, and... set in the framework of the history of the nation and the history of the Indian Army." In the reviewer's judgment, the target was well selected, and has been fairly hit.

Of the nine chronologically arranged chapters, the first discusses the origins and ancient military prowess of the Mahars. One supposed derivation of the caste name (from "Mrityu-har") is not mentioned; nor does the author attempt the perhaps, impossible task of explaining how the Mahars came to be socially downgraded by other castes who were in no way superior to the Mahars in courage and loyalty.

Recorded history includes the Battle of Koregaon, fought on the first two days of 1818, which the reviewer (a collateral descendant of a Major who fought in the last Maratha War) never remembers without a thrill of admiration. The tiny force which held Koregaon against the Peshwa's whole army included Mahars.

Indeed, the Regimental crest originally showed the Koregaon obelisk, but this was afterwards modified into a dagger of very similar outline for understandable reasons of national sentiment.

In 1856, the Mahars and other non-Maratha castes comprised one third of the Bombay Army; and here the author might have reminded us that Richard Burton (no mean judge of men and soldiers) took a Mahar as the typical Bombay sepoy. This first chapter closes with the unfortunate changes in recruitment affected by the martial races theory and the consequent exclusion of the Mahars and other "non-martial" groups from 1892.

The book records the long, tough fight waged by the Mahar leaders (including the father of Dr. B. R. Ambedkar) and supported by G. K. Gokhale against that obnoxious theory. The success gained in 1917, when a Mahar battalion was raised, was short-lived, and final victory came only under the pressures of another war. On October 1, 1941, a Mahar battalion was raised, quickly followed by two more. When World War II ended, over 10,000 Mahars had served in the army, some in Burma and some with the Persia and Iraq Force.

In the twilight of Independence, the Mahars escorted refugees from Delhi to Pakistan, and many a defenceless Muslim owed his life to the faithfulness and resolution of his Mahar escort. Mahars again were among those who threw back the tribal raiders from Srinagar, with one Mahar platoon fighting to the last round and the last man rather than retire or surrender, and one of the Regiment's best-remembered heroes, Havildar Rawoo Kamble, falling at his gun.

In 1953, the 3rd Mahar formed part of the UN peace-keeping mission in Korea. Later the Mahar was converted to a mixed all-class regiment and some of its units took part in the liberation of Goa while others served with the UN's peace mission in the Congo. During 1962-63, the 1st, 6th and 7th Mahar fought in NEFA and Ladakh. The unit's strength was now raised to ten battalions and the Mahar MG Regiment was reconverted into a standard Infantry Regiment. The Indo-Pakistan War of 1965 saw the Mahar's finest hour. As many as five Mahar battalions fought in Kutch, J & K and Sialkot with a valour to which even the enemy paid tribute. In 1968 the Regiment was awarded hackles and other cherished honours while its strength rose to fourteen battalions.

The presentation of new colours by the President and Supreme Commander of the Armed Forces followed. During the 1971 Pakistan War twelve of the Regiment's fifteen battalions were engaged. Of outstanding interest are the one-man suicide mission of young Anasuya Prasad and Chatlapur and the winning of four Vir Chakras at the Battle of Parbat Ali on the Sind border.

All in all, the book is both attractive and comprehensive. The various actions are illustrated by hand-drawn maps. The numerous photographs are well chosen. The author describes how 2nd Mahar won the battle honours of Asal Uttar. During this period the new 11th proof-reader has done a better than average job; this reviewer's eagle eye could spot only twelve misprints in some 300 pages.

"FOREFRONT FOR EVER": History of the Mahar Regiment, by V. Longer—published by Brig. I.D. Vasishtha, Mahar Regimental Centre; Rs 110.

Fiction Perfection

A Review by T.G. Khemani

"ARE we story writers also responsible for the sorry state of the short story?" The author of the book under review poses this question in his hard hitting foreword that does not spare anyone including publishers and editors, in an attempt to locate the reason for the decline in the English short story market in India.

In this bleak atmosphere it is edifying to note that some of the stories included in this collection have shown a remarkable degree of maturity in the matter of theme as well as technique. For example, the first story, *The Path to Hell* is the account of a woman who proclaims that "My happiness was never relative or tied to anybody." The woman finds that she could be happy even when she is having an extra-marital affair with a bachelor, that too without losing her love and affection for her husband. The story apart from its thematic significance deals with the Freudian concept of father-fixation in a very innovative way.

As the title would imply, the collection explores the various fascinating as well as disturbing aspects of the eternal theme of the man-woman relationship. Naturally the author has not minced words or sought smokescreens to present the never exhausting panorama of this relationship. *The Half Infidel* is a very telling instance of his no-holds barred approach to the issue. Here he presents the mysterious and stealthy sex life of a construction worker who tries to over come his psychologically rooted impotence by vanquishing a whore! Apart from the authenticity of the situation, the story once again proves the old stand that good fiction is never fantasy.

BOOK REVIEW

Keema Curry is once again a story of the poor, but their social and sexual lines have been painted very effectively in the three pages narrated by a five year old. There are no elaborate descriptions or detailed backgrounds.

The trim and neat narration, that too in the "stream of consciousness" style, makes this an exemplary work that should be read by all aspiring writers.

Similarly *The Ruins*, too, deals with the man-woman theme, but here the woman is a whore and the man her pimp who became her husband just for the sake of business.

All other stories in the collection are on the man-woman theme, except *The Homeless*, which is a very peculiar story even thematically. The son who is in the "north" is placed in a poignant situation when he is required to ask people the direction to his father's house. His father had migrated to another village away from "the native place" and the son who was in the north during this migration arrives at the new place. There is hardly any traumatic experience as poignant as to have to ask strangers the way to one's own home! In the new place the sensitive young man feels alien and when he reaches the old village, the native place has undergone tremendous changes.

Another unique story is *Survival* also in the stream of consciousness style. It is built around the theme of a calamity (probably Morvi), but the way socio-psychological facts and truths have been incorporated in it is very admirable. In fact I've not seen another Indo-Anglian story of such multi-dimensional scope as *Survival*. A young man who is saved from the flood that has killed his entire family is in a rehabilitation shelter and recounts the story. He feels he is only a surviving corpse and that he has killed his family members because he had reached the brink of despair about his responsibilities. Now he has lost all feelings because "a corpse cannot have any feelings for other stinking corpses."

"MAN & WOMAN" by K.V. Chacko; Writers Workshop; Calcutta (flexiback); Rs 20.

F. Botero, "La Familia Pinzon"

WE'RE ALL IN IT TOGETHER: the genetic factor in obesity may warn you of impending disaster and doom as punishment for your gluttony. In this case, at least the sins of the fathers seem to find ample expression in the children!

An Indecent Obsession

OBESITY

by

Julie Bijalpita Chatterjee

Obesity, (one school strongly believes) runs in families, and though it is impossible to find out to what extent these familial tendencies are genetic or environmental, the modern Indian parent should be aware of the dangers of over-feeding the baby. *Demand feeding* while breast-feeding the baby, then indulging the baby with sweets and chocolates at montessori stage are practices to be avoided. The paediatrician should be consulted regularly and the weight should be recorded and watched. The *fat baby bonny baby* myth has been exploded. Now it is time for the young Indian parent to change the traditional attitude of *fattening* the child. To be effective, the prevention and treatment of obesity must be based on measures which encourage behaviour patterns conducive to weight control. Young children often eat irregularly and have many snacks between meals. An excessive intake of calories is occasioned by a sedentary lifestyle. Mothers find it difficult to say *no* when children reach out for sugary foods. They should be conditioned to find other modes of entertainment and interests than being obsessed by the thought of food.

A Parent-Child voluntary exercise programme from the early years is recommended. Our system of education does not allow for outdoor games. Most schools are cramped and a lack of games space makes matters worse for children in the cities. But a conscious and regulated effort on the part of the parents to take the children for a jog in the early mornings or away from the city during the odd weekend would prove mutually beneficial. The most disturbing part of the research findings is that persistent juvenile obesity almost certainly leads to obesity in the adult years.

Mind Over Matter

"Imprisoned in every fat man a thin one is wildly signalling to be let out." In contemporary society, wealthy sectors exercise less and live in an economy of plenty. There is an increasing awareness of the problem of obesity, so much so that more and more people are becoming members of health clubs and gyms, and gourmet cookery books that do not use butter, cream or flour have flooded the market. By enlarging our knowledge of nutrition—of the relationship between obesity and certain diseases, general health and longevity—obesity among the affluent has come to be regarded as a major hazard. The external causes of genetics and environment apart, there is ample experimental evidence pointing towards psychological factors in obesity.

A number of medical studies indicate that obesity is largely the consequence of neurotically-induced eating behaviour. A series of typical negative monologues, collected from a survey of 15 affluent obese people from a metropolitan city of India runs as follows:

"I've starved myself and haven't lost a pound."

"Its just impossible to eat within calorie-limits with a schedule like mine."

"What does it matter? I've started the day off with a chocolate eclair—I may as well enjoy myself today. Next time!"

Today, like so many other diseases, for obesity too, behaviour therapy is a standard treatment in many clinics. It has been detected, for example, that many rich but socially rejected persons tend to eat more. Another surprising discovery is that an unlimited access to food *does not* satiate the urge to eat, as was believed by some psychotherapists of the last generation; but like the hypothalmic obese rat, obese humans eat considerably *more* when no impediments or inhibitions exist.

The adverse influence of obesity on cardiovascular complications is now common knowledge. Diabetes, cerebrovascular diseases, digestive system diseases and renal diseases are some of the graver dangers to which obese anatomies are particularly vulnerable. There is a direct connection between obesity and dysfunction of the vital organs (ovaries, pituitary and thyroids).

With the advent of television, cars, easier modes of transport, fast-food and easier access to alcohol (*the beer-boom*) and a general loss of interest in the outdoor activities, people have stopped exercising enough. Snack meals of hamburgers, milkshakes and pizzas loaded with calories and dangerous cholestrol values have become immensely popular.

At last there is a flicker of hope, however, with the current accent on fibre diets. They are nutritional, low-calorie and satiate the appetite. **A low-calorie diet need not necessarily be uninteresting. For the exotic eaters, bean sprouts and mushrooms are recommended and for those, like me, the good old *paneer, channa* and greens are delicious. If you want to live long and lose the extra tiers cook without fat. You'll stay slim! ■**

Child Is Father Of The Man

There is no single definition of obesity in childhood. Several criteria contribute.

The modern medical theory is a nip-in-the bud theory. Fat children make fat parents and they in turn produce fat progeny. The clinical solution is starving the child if necessary to avoid an obese adult. In the case of human babies there is certainly an influence of maternal obesity on the skintold thickness of the baby at birth. So thin mothers tend to have thin babies and fat mothers fat babies, as pointed out by J.S. Garrow in the studies carried out by his Nutrition Research Group.

—Homyar J. Mistry

The Boats Are Waiting: Come, Sail Them!

The Asiad could well act as a springboard for our yachtsmen to take off. Certainly India has the talent, a long and inviting coastline, many ports, excellent harbours and picturesque lakes.

by Shanti S. Thirumalai

NOW that the Asian Games are well and truly behind us, let us look back and reflect upon it all.

The Yachting Organisation Committee did a wonderful job, a job with which the foreign competitors were well pleased. The facilities at the Sailing Complex were liked by both the Indians and by the foreigners: 7 races were sailed in light-to-moderate winds in 4 classes of boats: the Fireball, the Enterprise, the OK Dinghy and the Windglider.

India won the gold in the Fireball Class (Tarapore and Karanjia); the silver in the Enterprise Class (Jeejee and Fali Unwalla); and the bronze in the OK Dinghy Class (C.S. Pradipak). But the Japanese were the real champions: Ishiwata won the Windglider Gold, Nagatsu the OK Dinghy Silver, Yagi and Tanaka the Fireball Silver, Inoue and Baba the Enterprize Bronze.

Japan has thus emerged as a major sailing nation in the world and may well proceed to bag a medal in the Olympics. The Japanese Government sponsors Olympic-class sailing and takes a keen interest in the activities of the Japanese Yachting Federation. Today, in Japan, there are 1,000 snipes, 1,500 Olympic-class "470" boats, 1,000 lasers and over 20,000 wind-surfers sailed regularly.

For sailing to achieve as broad a base in India, many changes need to come about: first, cheap indigenous equipment must be made available. The Government of India should subsidise sailing in a big way. School and college students must be encouraged to take to sailing in the Optimist Class (for Under 15s) and the Cadet Class (for Under 18s). In Singapore and Japan, sailing for students is free. Voluntary organisations like the NCC, the Girl Guides and the Boy Scouts should make sailing a compulsory discipline.

The English Example

Sailing Schools in England receive Government subsidy and teach interested adults basic sailing over a 3-day weekend. Similar courses can be organised here in India, so that more adults may take to sailing, know the sheer joy of moving on the water and discover a happier world.

Sailing Clubs should keep their memberships open and allow the sport to grow. We have very many "exclusive" and expensive clubs in the country; but there are genuine Sailing Clubs, too, like the Lake Club (Chandigarh), the Colaba Sailing Club (Bombay) and the Royal Madras Yacht Club.

Need For Good Coaching

Good coaching is essential for both basic and advanced training. Surinder Mongia is the only available Indian coach right now. The Government should also have coaches coming in from Germany, Sweden and England to groom promising youngsters at coaching camps.

Some day, India *might* win an Olympic gold, but that day is surely far away even for Farouk Tarapore, probably the best sailor in India today. The Chairman of the AGYOC, Adm M.P. Avati, has written to the Union Sports Ministry about the prospects of this future Olympian, a communication to which he has received a favourable reply. However, except for this, there are no plans as yet for the Olympic Games. "Still it's not too late even now," as Adm Avati notes.

Little thought, as it turned out, had been given to the future of competitive sailing. "The boats for the Games were selected by accident and historical precedence," Adm Avati pointed out. "The '470' could've been chosen instead of the Fireball. And the Seabirds (unnecessarily bought by the AGYOC) have been purchased by the Navy, which plans to race them to Seychelles! The Navy has excellent facilities which would be put to much better use than at present if the membership of the Naval Sailing Club were thrown open to talented civilian youngsters who are too old to be Cadets. The Navy would then contribute greatly to the promotion of sailing.

Wanted: Sponsors

Even now, a Finn and a Laser could be bought, since both these classes will be sailed in Seoul at the 1986 Games on the recommendation of the Asian Yachting Federation, so that the sailors will have adequate practice in handling the boat. A "470" and a Soling, if available, would be used in preparation for the 1984 Olympics. In preparing for Olympic success, the need for international competition cannot be overestimated. Yes, in order to improve, it is essential to compete against the world's best regularly. To make this possible, sponsors should be more readily forthcoming.

The Asiad Sailing Complex and the 50-odd boats bought for the Asiad will be taken over by the Government of India to form the National Institute of Sailing, which will be affiliated to the National Institute of Sport, Patiala. It remains to be seen if such a National Sailing Institute will seriously promote dinghy sailing and offer civilians the same facilities as the College of Sport in North Korea.

India has the talent, a long and inviting coastline, many ports, excellent harbours and picturesque lakes. The boats are waiting for you: come, sail them! ■

WHEN asked if he knew of a miracle, Pablo Picasso answered: "Certainly. Rubens was a miracle."

The questioner wanted to know, "Do you really consider Rubens' masterpieces miraculous?"

"Not exactly," Picasso explained. "But Rubens made only 2,000 paintings, of which we have now 4,000 left. That's what I'd call a miracle."

PROFESSOR Ernest Brennecke of Columbia is credited with the discovery of a sentence that can be made to have eight different meanings by placing the word "only" in all possible positions in the sentence: "I hit him in the eye yesterday."

ALABOURITE defending the Government's socialized medicine program in Parliament, cried: "In our country today, we have more babies than ever before! And why?"

Before he could answer, a Congressman shouted: "Private enterprise!"

A NEWLY-WED executive carefully remembered his mother-in-law's birthday and wired her: "Happy birthday Mother! May you have 100 more!"

Her iciness in the following weeks baffled him until he caught sight of the telegram and saw a zero had been left off the hundred.

A NOT particularly brilliant little girl came home one day, delighted to tell her parents that teacher said she was the best in the class. They were proud and impressed—until they asked what the class had been doing that afternoon. Said the girl, "We were practising opening our mouths wide."

THE gravestone of H. Amenzo Dygert, died 1924, aged 78, in Rural Cemetery, Phoenix, New York, explains:
An American by birth.
A German Dutchman by descent.
A Republican in Politics.
A Congregationalist in Religion.
A Druggist by Profession.
A bachelor by fate.

WHEN the Municipal clerk of a certain town in Western Europe went on vacation, he left the following sign prominently displayed on his office door:
For registration of births and deaths, see Dr. Barr.
For auto and truck licenses, go to Saint Rose.
For Municipal business, see Mr. Fletch.
For marriage licenses—think it over carefully and come back again in ten days.

THE French novelist, Honore de Balzac, once made a trip to Poland, where he did not understand the language. He was later asked how he managed to pay the taxi drivers the proper fare.

"It was simple," he said "I handed them some coins, one coin at a time, until they smiled. Then I reached out and took back the last coin, because I knew that I had overpaid."

COMPOSER Maurice Ravel was an enthusiatic collector of rare books and prints, fine porcelains and other *objets d'art*. In his study, occupying a place of honor on a pedestal, stood his most revered possession—a ball of smoked crystal, which he invariably pointed out to his friends with great pride.

"Maurice," his guests would whisper in awe, "Where did you get it? It's exquisite!"

"You really think so?" he would answer modestly. "Well, it's just a burned-out electric bulb!"

SIGN on a hospital wall: "What Pill?"

THE wife was learning to drive. A neighbour asked the husband how she was getting along.

"Not too well," he sighed. "She took a turn for the worse last week."

"HAVE you seen Edna's new bathing suit?" Jane asked her mother.

"No," she replied. "What's it like?"

"In many places," was the answer, "it's just like Edna."

POET: "I really think you should publish my poem on Spring. I'm an old subscriber, you know."

Editor: "Yes, but we have our other old subscribers to consider."

THE sharp-witted French man of letters, Voltaire, was called upon for a eulogy upon the death of a colleague whom he cordially detested. He tried to beg off the hypocritical task but was finally prevailed upon to write something. The result was the brief and reluctant statement: "I have just been informed that Monsieur Blanc is dead. He was a sturdy patriot, a gifted writer, a loyal friend, and an affectionate husband and father. Yes, he was all of those—provided he is really dead."

"FRANK, why were you absent from school yesterday?" the teacher asked.

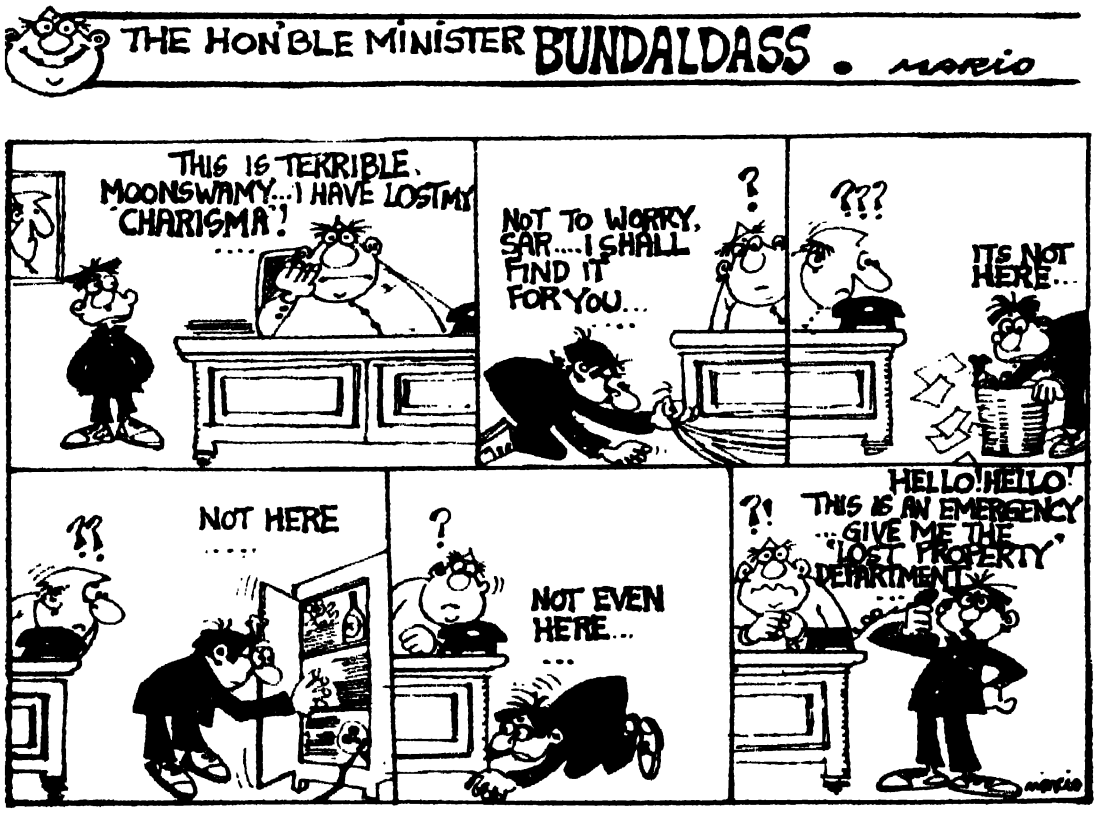
"Because yesterday our family was enlarged," the boy answered.

"Ahhhh, what was it, a brother or a sister?"

"Neither," explained the student. "My mother finally got married!"

JUDGE to defendant: "Colonel Willis, why are you called 'Colonel'? I don't think you were ever in the Army. What regiment were you in?"

"Well, Sir, it's like this, the 'Colonel' in front of my name is like when someone calls you the 'Honorable' Judge. It means the same thing!"



RICHARD NIXON, speaking in San Frascisco, offered this comparison of himself and President Johnson: "Lyndon Johnson served in the House, the Senate and as Vice-President. I served in the House, the Senate and as Vice-President. Lyndon Johnson has a dog—I have a dog. Lyndon has two daughters—I have two daughters. Lyndon Johnson has a lovely wife—I have a lovely wife. Lyndon Johnson has a television station—I have a lovely wife."

THE lawyer for the plaintiff and the rather pompous judge didn't get along well. During the final argument, the attorney was interrupted in the middle of his speech by a question from the Bench. The lawyer replied deliberately.

"I am not as dumb as Your Honour—," he paused as he poured himself a glass of water and took a drink. Then he set the glass down and continued, "—thinks."

A MAN came into court seeking a divorce. When the judge asked him what his grounds were, the disgruntled husband simply handed him a note he'd received from his wife that read:

"I won't be home when you return from work. Have gone to the bridge club. There'll be a recipe for your dinner at 7 o'clock on T.V."

"OFFICER," stormed the motorist to the policeman, "I clearly had the right of way when this man ran into me and yet you say I am to blame!"

The local officer eyed him accusingly: "You certainly were."

"But why?" the ruffled driver wanted to know.

"Because," the officer replied, "the Mayor of this town is the father of the fellow you hit, his brother is Chief of Police, and what's more I go steady with his sister!"

THE four little girls, dressed in clothes from the attic, were whiling away a rainy afternoon by playing "Wedding." They had a bride, two bridesmaids and a maid of honour.

"But where's the groom?" asked the mother of one of them.

"We don't need a groom," replied her daughter disdainfully.

A SMALL girl named Sally was always interrupting the family breakfast conversation by narrating her dreams.

"Sally," asked her mother, "do you know what dreams are?"

"Of course," said Sally. "They're television that you see when you're asleep."

"I HEAR Mrs. Tondavle is down with blood-poisoning."

"That old gossip! She must have bitten her tongue."

A RECORD KEEPER, classifying his job in a report for his officials, wrote: "I am responsible for maintaining all the obsolete records as up-to-date as possible."

"WHAT was the most expensive piece of jewellery you ever bought?" one man asked another.

"My wedding ring," was the reply. "I'm paying Rs. 1,500 alimony every month."

BEAU PEEP — the adventures of Legionnaire Beau Peep

Toys that care.
Because you care

Open up a whole new world of imagination for your child. A world of warmth and love. Of caring and sharing. Of playing and learning. Of growing and developing. A world of fun, laughter and happiness.

That's the promise of Leo. Toys of a kind never before available in India. Toys that are designed to delight, amuse, yet educate your child . . . cater to his creative needs. Attractive, sturdy, yet safe to play with. In an ever growing range — pre-school, educational, action, puzzles and games.

Leo Toys. They could become your child's best friends. Today.

Afterglow

This poignant little story, a blend of fact and fiction, is a daughter's tribute to a mother who is no more.

by
Christine M.Krishnasami

"Sharply the slate-grey sky defines
Each angular edge it meets..."

—Jane Jaffe

FIGHTING my way to the booth, I pushed in a bill and collected my platform ticket with the change I wanted to hold her hand before the train departed, or at least wave goodbye. But when I rushed to the platform, there was no train. My mother had gone. I glanced down the black length of the deserted platform and at the useless ticket in my hand. The grey sky peeking out over the edge of the grimy soot-worn roof was as empty as the spaces of my mind and heart. It was the most desolate place in all the world.

Then I woke up. I must have dozed off in my rocking chair for I am old and grey and full of sleep these days. Memories ebb and flow ceaselessly into one another in the hour between sleep and a dreamy wakefulness. There are no angular edges of clarity left now, only the rich golden suffusion of a tropical afterglow that lasts but a few enchanted moments before night spreads its restful canopy over tired minds and worn-out bodies.

Let me remember and retell, for the last time, the story of the diamond earrings

The world was a dazzle of rainbow colours, an exciting, confusing bustle for little Sundari as she clung to the *pallav* of her mother, Janakiamma, whose cousin's first pregnancy was being celebrated at the home of C Vijayaraghavachariar of Salem. The world was a flurry of bright silks, blur of flowers, condiments, potions, Sanskrit chant rising above the noise, glitter of gold thread and jewels around the sacred fire...

One of the richly clad matrons called out "Soundarya!" and a little girl about Sundari's age came running to her mother seated near Janakiamma. The Brahmin priest poured more *ghee* into the fire, the flames leapt, and the diamond earstuds and dangling *jhumkis* of Soundarya danced gaily in the firelight.

Saucer-eyed Sundari could look at nothing else. If only I, too, could have *jhumkis* like that, she thought, and why didn't Amma name me "Soundarya" instead of plain "Sundari"?

"Amma!" Sundari burst out, "why can't I, too, have *jhumkis* like these?"

Janakiamma looked where her daughter's longing gaze was fixed and smiled ruefully. "Of course, dear, you too shall have diamond earrings some day. You'll just have to wait a bit, see? Now look where those other girls are playing. Wouldn't you like to join them?"

Little Sundari clung only the tighter to her mother's *pallav*, her eyes never wavering from the splendour of Soundarya's earrings. All the way back to Mysore in the train, she sat gravely controlled beside her mother. It was only in the jiggling horse-drawn cart on the way home that she broke into frustrated sobs. Janakiamma enfolded her youngest one in the brocaded *pallav* of her rich crimson sari.

Illustrated by P B Kavadi

The matter of Sundari's diamond earrings came up now and then between Janakiamma and her husband, Chakravarti Srinivasa Iyengar What with one thing or another, four daughters to be married off and Sundari being so young, the matter was shelved. Then it became too late, for tragedy struck and the days passed like clouds that hid the moon more than they revealed it A grave injustice was perpetrated upon Srinivasa Iyengar.

Executive Engineer in the administration of Sir M. Visvesvarayya under the ceremonial canopy of Sri Krishnaraja Wodeyar, Sundari's father had been given the task of completing the Krishnarajasagara Dam at the Brindavan Gardens. He was on the job night and day, often camping out at the site Under personal supervision in his meticulous fashion, he completed the work in record time.

Then Srinivasa Iyengar discovered that a clerk in the department had been guilty of irregular practices. The clerk offered

Sundari's father monetary appeasement to hush up matters and was dismissed instead. The clerk, in turn, wrote an anonymous letter to the authorities accusing Srinivasa Iyengar of malpractice. That was not all Several people were out for Mr Iyengar's blood because through articles to *The Hindu* Mr Iyengar had been exposing other instances of corruption in his department.

Chief Engineer Sir Visvesvarayya ordered an official enquiry which dragged on for years, Srinivasa Iyengar arguing his own case in court and refuting every petty charge with facts and figures

Even the British Resident supported Mr Iyengar, whom he termed an innocent man wrongfully accused by fabricated evidence which even dogs would not smell. The matter was also referred to Yuvaraja Narasimha Wadeyer. Although His Highness and Mr Iyengar were personal friends who would go horseback riding together, His Highness regretfully expressed his inability to interfere in an internal administrative matter

Mr Iyengar had the entire proceedings published in book form at his own cost. The Government banned the book. Having discovered their initial error, however, the authorities asked Mr Iyengar to accept a temporary demotion (he had been suspended from service during the entire enquiry) as Assistant Engineer, promising that they would reinstate him within one year so that the faceless governmental machinery would be enabled to save face

Mr Iyengar's answer was characteristically unequivocal. "If I am guilty, prove me so and take appropriate action. Otherwise, if I may not continue in my present position, suffer me to retire from the service"

He was fifty years of age then The Government retired him on a reduced pension of Rs 100 a month with no benefits, proving once more the futility of one honest man's courage pitted against collective ruthlessness.

Meanwhile, little Sundari grew up, a preoccupied student who hid her blossoming womanhood behind a sepia facade as glimpsed in an old photograph album that never fails to surprise and amuse the present generation. When she won the Sri Ramanujacharya Prize for distinction in the Lower Secondary Examination, the Prize for Best Candidate in all three years of the Higher Secondary and the coveted First Position in the Pre-University Entrance Examination, Janakiamma's heart overflowed

Hidden under the bed in Janakiamma's sparsely furnished room, there reposed an old black tin trunk whose secrets were known to her alone From the inner recesses of this trunk she now unearthed a weathered pouch containing an exquisite medallion a little over an inch in diameter, worked in chased and fretted gold and displaying, in the ancient art of repousage, a Hindu god flanked by two graceful consorts They gave my daughter no medal, Janakiamma thought to herself, but I shall give her one

Sundari went on to complete her Bachelor of Arts in English with distinction and first position in the university, winning her own Weir Memorial Gold Medal and purses. In 1933, she emerged as the best student and the only woman candidate for M A. in English at Mysore University, being recipient of the Rangonayakamma Gold Medal. Her M.A. papers were preserved by the university, for a long time, as models.

Then came an opportunity for Sundari to travel abroad and study at the University of London. By this time, Janakiamma's health had suffered setbacks. Presenting to the world her usual decorous serenity, nevertheless, she would not let young Sundru grow alarmed Sundari's departure from her ancestral home, with its jasmine creepers and decorative pillars, generated the excitement that might have graced her wedding

In the pre-dawn greyness a few hours before she was due to leave for Bombay, the young lady tiptoed into her mother's room.

Janakiamma lay tossing and turning, but motioned her daughter towards a small parcel on the bedside table. As Sundari's eager, impulsive fingers tore open the wrapping and opened the lid of the little box, the eyes of mother and daughter met. Once again, Sundru's dark lustrous head was buried in the crumpled folds of Janakiamma's faded sari.

So did Miss Iyengar step aboard the "S.S. VICTORIA" at Bombay, all set for windy adventure and wearing the brightest, most beautiful pair of diamond earrings anyone had ever seen. So it was that London was a brave new world where she met people from everywhere, played tennis and discovered the world of theatre. In between bouts of study, she toured the country.

One fine summer's morning when all was right with the world, she went down to the lobby of her hostel and withdrew her mail from its cubbyhole. Back in her room, she saved her father's letter for last. And then the ground shook and the splinters flew.

Srinivasa Iyengar had written that after suffering for months, Janakiamma had breathed her last in hospital. Her last audible word had been "Sundru".

Sundari sat staring at the paragraph until the lines of her father's Victorian script merged one into another like clouds in a painting by Constable. Then she put on her street gear and went out for a walk. Oxford Street passed her by and Regent Street. Back at Piccadilly Circus, she walked blindly anywhere, anywhere...

At last she dragged herself back to the hostel on Russell Street and went up to her room to finish reading her father's letter. It concluded with the information that Sundari's diamond earrings had been purchased in secret by Janakiamma with money that had been scrimped over the unforgiving years, money that Janakiamma had been reserving for her own funeral expenses But not to worry, Mr Iyengar had added, relatives had come to his aid and all was as well as could be expected. Sundari was to bear her loss like a thoroughbred and carry on with her work and commitments.

Sundari obeyed. After obtaining her M.A. in English at London, she returned to India. For a while, she worked at *The Hindu* office in Madras and then acted as companion-tutor to some wealthy young ladies at Ahmedabad.

These were years of poverty and struggle, often with but one square meal a day so that she might help her aged father pay off the mortgage on the ancestral home. Her sisters were all married with families of their own; her brothers were dead; the ancestral forest land was gone.

THAT was me, of course, silly little Sundru that I used to be, so easily dazzled by diamonds and by a world that has always over-prized them. Some of the medals I won at university went into making gold bangles for *my* daughter. She has redesigned the diamond earrings so that they form a mango-shaped fire in the hollow of her throat and sparkle daintily in her ears.

After her time, who will wear these jewels forged on the anvil of memory, experience, caring, loss and pain?

It seems like only yesterday that, as I sat in my rocking chair, she was quoting poetry to me—lines by someone called Bunting, I think:

Not to thank dogwood nor
the wind that sifts
petals are these words,
nor for a record,
but, as notes sung and received
still the air,

These are controlled by
yesterday evening,
a peal after
the bells have rested... "

When I am gone, it will be my daughter's turn to be left behind on the long deserted platform, gazing out into empty space. But when she takes my gnarled hands in hers, looks into my eyes or quotes me poetry, the same look passes between us as it did once between my mother and myself in the pre-dawn greyness of long ago before I left for Bombay, London and the merciless tests of life. And that is all that matters. The rest, you might say, is merely expensive-looking carbon.

With some difficulty, I turn round round in my chair and look out of the window at the western sky. Layers of creamy orange cloud emerge invitingly out of jagged edges of violet-grey wrapping paper. Through veils of Persian rose flung over shades and contours of blue, there glitters the most flawless diamond of them all, the evening star. In a moment, it will be afterglow. ■

Blocking The Road To Dusty Death

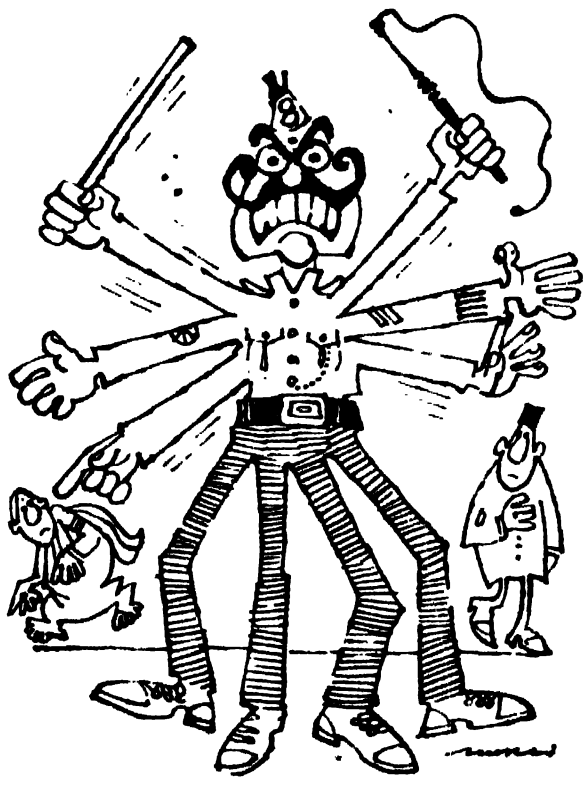
by Ranjit Lal

HERE at last is a massive road safety campaign drawn up to reduce accident fatalities. The three-pronged programme will tone up training, improve deterrent facilities for those remaining untrained and make punishment for offenders extremely swift and much more just.

For a start, traffic cops will be subjected to a crash course under the direct supervision of Chief Lion Tamer (of Russian Circus fame). All constables will be equipped with electric whips which are being imported from a country with a suitably repressive knowhow. (According to the grapevine, Israel has filled in the lowest tender). In addition, new uniforms which add eight arms and four legs to the cops will be supplied. These will enable them to direct traffic from as many directions simultaneously and also chase fleeing offenders. To make cops look more fierce and intimidating, special *Rakshasa* masks are being designed. Doordarshan has denied the rumour that the design for the mask was based on the visage of one of its announcers (he has since had it patented!)

The significance of traffic lights will be drummed into the learner drivers with rigorous Pavlovian techniques. This training programme is apparently adapted from a children's game called L-O-N-D-O-N-LON-DON! Slow-learners are to be conditioned with the help of red and green chillies. An eminent behaviourist maintains that all that is needed is to condition the drivers to comb their hair/powder their noses every time they come across a red light. He admits, however, that this could lead to bedlam when such drivers go past red light areas.

To discourage jaywalking, all road dividing fences are to be electrified and be redesigned after the Berlin Wall. To take care of the Load Shedding Contingency (LSC), drivers are to be planted over with special hybrid poison ivy which imparts instant sterility on touch. To ensure that all vehicles keep to their lanes, all yellow and white lines on roads will be spiked with eight-inch flourescent nails. All trucks, buses, taxis and autorickshaws will be fitted with Electric Shock Giving Device (ESGD) in the driver's seat which becomes operative whenever the speed limit is exceeded. As an added precaution, Automatic Evacuation Device (AED) will eject the driver through the roof (without parachute) if he tries to tamper with the seat or tries to place insulating material such as a wooden plank on it before sitting. These extreme measures are being adopted because earlier attempts to install Embarrassing Whopee Cushion Device (EWCD) on the driver's seat for the same purpose failed to produce the desired results. It was found that neither drivers nor passengers were put out or discomfitted by the audio effects of the seat.



Punishment for committing traffic offences is to fit the crime as closely as possible. Jaywalkers who have shorted electric fences and developed immunity to poison ivy will be rounded up and let loose in a derelict depot with a mini bus in *musth* on a full moon night. Vehicle-owners with siren horns or those that play tunes and use the same to call their wives, children, friends from their houses, friends' houses or bathrooms, are to have their heads stuffed in the bonnet after which the horn will be blown till the battery goes flat. Rash and negligent driving will be eradicated with the negligent drivers being rashly and negligently shoved over suitable Himalayan cliffs along with their vehicles, by driving them over bridges, into trees that need felling, into hutments that need demolishing and so on... Bus drivers who do not stop correctly at bus stops will be tied to buses and will be made to canter behind them at 60 kmph (interspersed with sudden and totally random halts!). In an exquisite form of retribution, Heavy Motor Vehicle (HMV) drivers caught bullying Light Motor Vehicle (LMV) and two-wheeler compatriots will be made to swap positions with the latter and will be driven as a ham is pushed into a sandwich, between two HMVs driven by the LMV drivers. All autorickshaw and taxi drivers caught weaving and pirouetting—and who remain un-nailed—will be extradited from city limits by being put on a gigantic, imported open-ended roller coaster. Those who do not dip their headlamps will be put directly in front of two lighthouse lamps until their *battee bandh ho jatin hain*. Non-signallers will be lined up in a suitably public place (like battlements of the Red Fort, Marine Drive wall etc) and will be made to do callisthenic signal exercises every Sunday afternoon. Vehicles parked in No Parking zones will be towed away to the nearest Students Union instead of a police station and will be released only after issuance of the Tin Work Challan. Drunken drivers will be doused in the alcohol they have been consuming (in some cases this may not be necessary) and they'll be set ablaze—though this move has been criticised as an infringement of the sacred Indian marriage rites.

Finally, all RTO officials, inspectors, driving instructors responsible for giving the above-mentioned violators their licences will be made to take full part in whatever form of retribution that is meted out to the offender. ■

NEW! Instant Nespray The 5-Second Milk

Just Drop, Stir and Serve

It's easy to make

Drop 3 tablespoons of Instant Nespray into a glass of cold or warm water Just stir and your glass of milk is ready in 5 seconds.

So nutritious

Instant Nespray is specially fortified with vitamins A & D. It's the richer, creamier, tastier milk, for those growing up years.

Dissolves instantly even in cold water

CAS213

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan 19

This is going to be a very active and interesting week. Business and career should be given top priority. New contacts made early in the week will prove profitable. You will make rapid strides in the personal and business spheres. Midweek brings an elevation in your status. Seniors and elders should be listened to calmly.

AQUARIUS
(Kumbha)
Jan 20-Feb. 18

You will be under heavy pressure, both mentally and physically early in the week. You receive a piece of news which will make you shed your complacent attitude in haste. However, you tackle all the problems with enthusiasm and look forward to the end of the week. You may be on the defensive with seniors and elders.

PISCES
(Mina)
Feb 19-Mar. 20

Despite a large number of bottlenecks and difficulties, you will make a headway in your career. Artists and sportsmen make rapid strides in their respective fields. Keep a tight rein on your temper; don't let it get the better of you. You will strike a new strategy that will benefit you in various ways.

ARIES
(Mesha)
Mar 21-Apr 20

Financially, you will do well in the next couple of weeks. Banks and other financial institutions will come to your aid. Youngsters are likely to form new ties this week but it will take much time and effort to strengthen the links. All domestic backlog should be cleared early in the week. Midweek is excellent for entertaining.

TAURUS
(Vrishabha)
Apr. 21-May 20

Your enthsiasm should be channelled in the right direction in consultation with seniors both in the family and at work. Seek the help and co-operation of Government officials to solve certain difficult problems. You may have to revise your plans and put them up for scrutiny before experts.

GEMINI
(Mithuna)
May 21-June 20

Instead of whiling away precious time in arguing on unprofitable deals you are better advised to concentrate on legitimate duties and responsibilities. Tackle family members with care and caution, do not expose their drawbacks and shortcomings under any circumstances. Midweek is excellent for business negotiations.

CANCER
(Kataka)
June 21-July 20

You will be kept busy making arrangements for travel abroad in the next couple of weeks. Do not seek undue publicity but carry on your activities quietly. Recognition will come your way in the course of time. Clear all domestic backlog early in the week in expectation of a family celebration, midweek.

LEO
(Simha)
July 21-Aug. 21

You must conserve your physical energy to the largest extent possible. Do not effect changes at work merely because it strikes your fancy. Check your expenses so that you can avoid borrowing from different sources to raise additional funds to meet your requirements. The younger generation will be under stress.

VIRGO
(Kanya)
Aug. 22-Sept. 23

An extremely busy but nevertheless interesting week. Your interest revolves mainly around the activities outside home. Games, sports, entertainment and buying of luxury goods will be the items on your agenda. Don't be too critical of others. The early part of the week is quite entertaining.

LIBRA
(Tula)
Sept. 24-Oct. 23

Job activities will flourish. Business, however, will be slightly poor. Investment in stocks and shares will attract your attention considerably but don't be too hasty. Clear all backlog early in the week so that you are free to rejoice in the company of friends and relatives later on. Midweek is full of outings.

SCORPIO
(Vrishchika)
Oct. 24-Nov. 22

Slowly and steadily you will acquire physical and mental stability. You can now begin to plan a new strategy for business and other professional activities. Luck favours romance this week. Unexpected money gains early in the week will help you tide over your financial difficulties. Do not squander your money.

SAGITTARIUS
(Dhanu)
Nov 23-Dec. 20

The emphasis in the next four weeks is on personal well-being and domestic matters. At all costs you must avoid widening the generation gap. However, your humour and wit save the day. Group activities keep you busy, midweek. It comes as a surprise to none if you are elected or to a covetous post.

STAR FOCUS

Love In 1983—I

Capricorn: An interesting year when you must make the best use of new ties that emerge in May. July and August are months to strengthen all relationships, whether old or new. Your love affairs will take strange twists and turns in September but will finally take concrete shape in October/November. Do not disturb existing relationships unless you are sure of new ties.

Aquarius: You are not very serious about love or romance but almost unwittingly you form sweet attachments. A rare combination of events in the second half of the year brings another attachment between July and October. You may develop certain prejudices in September but will patch things up in October. A marriage may take place in November.

Pisces: As usual you will be in two minds about your romance and tend to be suspicious about your love mate. Try and strengthen the relationship in July-August. However, you are likely to drift further apart from your partner after a quarrel on flimsy grounds. A new friendship may be taken as a brief interlude but remember that old is gold. Don't do anything you may regret.

Aries: Basically, you are fond of thrills and romance. This year, everything hinges on what type of a friend or companion you meet in June, August or November. If he/she is sober you will reach an understanding and the tie will be strengthened otherwise by end of the year, you will break apart and once again travel alone with only sweet memories of the relationship.

Birthday Forecast

Sunday, January 30

An interesting year lies ahead of you. Be pleasant to family members and keep up your sporting spirit in the face of adverses in July, August and September. On the vocational front, you will do well and can gain independence after October.

Monday, January 31

Your courage and drive will help to build up your own independence in profession or vocation by the last quarter of the year. Between July and September you must be alert and active in all walks of life. Finances are good in April and November.

Tuesday, February 1

Be ready to overcome difficult problems and conflicting issues in April, August and September. The early and last quarter of the year are favourable when you can build up goodwill and start out on your own independent venture.

Wednesday, February 2

This will be a most important year. You must turn a new leaf in career, either in the first or last quarter. Budding industrialists will establish themselves soundly in their business.

Thursday, February 3

Everything hinges on how well you maintain status quo in career/job/profession till the end of September. The first quarter holds bright prospects for starting out on a new business venture.

Friday, February 4

Much depends on how firm you stand under adverse circumstances. Do not be too hasty in your decisions and think well before making the necessary sacrifices.

Saturday, February 5

A progressive and rewarding year, provided you act discreetly between July and September. November and December are excellent months for winding up old business and starting out on a new venture.

ABHA 10

The Crowd In India

by Surindar Suri

A revealing characteristic of any society is found in the geometry of its collective behaviour, especially the pattern of crowd formation. In countries that have undergone the Industrial Revolution as well as some type of Protestant Reformation, the geometry of crowd formation is mainly linear. Queues form spontaneously because people tend to move in straight lines. There are popular jokes about some people, such as Englishmen, who cannot resist joining a queue even if they do not know what it is for. Indians, who consider standing in the queue as a form of punishment, are attracted by any swirling circular gathering. Germany, with a less puritanical past, exhibits a peculiar form of crowd behaviour. A queue often forms, as for a city bus, but it frequently breaks up into a motley mass when the bus arrives. France and Italy are also non-linear in their crowd morphology.

The queue involves the acceptance of an hierarchy, though temporarily and for common convenience. The pattern fits in with the deferential status-oriented behaviour of the average Englishman. In the US, where the people are more anti-hierarchical in their social ideology, queue formation is not spontaneous. It is accepted as a functional imperative rather than a preferred pattern of social conduct. The ethos of mass society and compulsions of the machine age, particularly the universal use of automobiles for personal transportation, enforce a certain geometry of public order.

A Swirling Mass

The crowd in India is a swirling mass. It is neither perpendicular as in a queue nor horizontal as in a side-by-side friendly gathering. Typically the religious places in India are mostly circular rather than rectangular like the churches in the West. Traditionally, Indian society has been stratified along caste lines with a dual polarisation. At one extreme stand the Brahmins to whom all others are virtually untouchable. At the other end there were the outcastes who were untouchable to virtually everybody else. In other words, untouchability became a universal phenomenon, entering into the individual's own psyche and physical body. The necessity of touching the untouchable was atoned for by means of rituals and sacrificial ceremonies.

In Christian faith man is born in sin. He fell from the Garden of Eden and is condemned to hard work in order to survive. The Indian, on the other hand, is haunted by the perils of pollution. Even the purest cannot remain unsullied because the very survival of life depends upon elements and objects that are polluting. This is the dilemma—moral and aesthetic as well as intellectual—that underlies the karmachakra, the wheel of man's fate. Thus there is a swirl within the individual and it prevents him from forming an orderly crowd, except under extraordinary circumstances.

Fading Tradition

The weakening of the power of tradition, has considerably deritualised social interactions and crowd formation patterns. However, though the pollution ritual cannot be and is not practised often, it has not been surrendered. The caste values have neither been given up nor yet transcended and transformed.

In Japan the case is different. Rituals have governed Japanese social relations for centuries, as they have in every society in the past. Now that the Japanese society has modernised, industrialised, and become, in many respects, a mass society like that in America and Europe, it has made a smooth and relatively unbroken transition. In mass transportation where the ritual distance between individuals cannot be maintained nor the niceties observed, the Japanese undertake a deliberate but temporary suspension of traditional attitudes and patterns of social conduct. This means that the Japanese are not being linearised nor forced into the individualistic pattern. Their group model remains the circle where everyone can bow to everyone else.

The confusion that would be produced in situations where the circular patterning does not work is obviated in Japan by a series of well-thought out measures. Places where people must stand in line, as when boarding a train, are marked out clearly with bright paint on the platform. Queuing is obviated by providing a large number of ticket-selling automatic machines at railway and subway stations. So, though Japan is an overcrowded group of islands, the governing elite makes every effort and uses considerable ingenuity to avoid situations where uncontrollable crowds might assemble.

A crowd may be prevented from becoming a mob if the services or objects that the people need are brought to the individuals concerned rather than allowing them to gather at the place or around the person who is supposed to supply them. In fact this method has been used successfully in India on certain occasions.

The assumption that the linear crowding pattern of the West would somehow take root in India ignores the fact that the average Indian, unlike the average European, is not an individualist. Nor is it true that a group-oriented society cannot industrialise and modernise itself, for the experience of Japan and several others proves that it can. In fact the typical Indian, like his Japanese counterpart, has a group ego. He is incapable of acting on the basis of purely individual responsibility or within the framework of an atomised moral Universe. The widespread inefficiency and corruption in India result from the official policy of placing responsibility upon individuals. That the atomised individual ego does not exist in India is recognised in some cases. In long-distance buses there is a rule forbidding passengers, who are sitting in seats next to the driver, to dose off or fall asleep while the bus is running. It is assumed that a sleeping neighbour would induce sleepiness in the driver. In contrast, bus drivers in Europe or the US are pleased when a passenger sitting nearby doses off during travel because it is a compliment to their smooth and skilful driving. He does not have the group ego so that a sleepy neighbour does not induce sleepiness in him.

Once we give up the Western-induced assumption that decision-making on the basis of the self-integrity of an individual in isolation is possible in India, but accept the reality that the atomised individual does not exist here, we can devise methods of effective crowd control. Crowd behaviour in any society represents the psyche of its individual members writ large. If we grasp that, we can use the insights so obtained to evolve effective methods and procedures of decision-making, of ensuring honesty, integrity and efficiency that are practicable in our distinctive social and cultural matrix.

Sense Of Time

The sense of time in a society is related to its morphology of group conduct. Social linearity implies a mechanical and additive sense of time. Minutes, hours and days are independent units. They can be combined in certain ways to produce an optimal time duration. But the time sense in non-Western societies is not linear; it is circular. It is also non-additive. There is in these societies a strong sense of identity with one's forebears, living and dead. To many Indians, Rama, Sita and Ravana of mythology are more alive and meaningful than the persons around them. Here again the Japanese have succeeded in operationalising the circular time sense of their society. The national day of Japan even now commemorates its foundation by a mythical sovereign. Nor do statistical averages mean much to them. It is not a meaningful concept to the group ego.

Japanese manufacturers do not expect their workers to produce goods of an optimum average quality but demand perfection from them. They very nearly get it. Statistical optimum standards do not provide the right challenge to Indian workers either. Hence quality control and efficiency of operations in India have deteriorated. We cannot force our crowds into a straight line but must learn to deal with them in circular patterns. Only then may we create orderliness, efficiency and incorruptibility in our society. ■

"LOSE 10-15 CMS OF BULGING FAT"

Let

SAUNA SYSTEM

reduce a combination of your WAIST and HIPS; NOW!

FREE 14-DAY HOME TRIAL OFFER RESULTS GUARANTEED OR YOU PAY NOTHING

Just fill out the coupon and post your order today! Try it. Use it FREE for 14 days. A trial period which will cost you nothing. Watch cms disappear. If for any reason you are not delighted, send it back, we will refund your money. Over 876,000 satisfied customers all over the world make us bold enough to make this super guarantee!

Slim Down Scientifically Without Starving!
That's right! 10-15 cms starting the very first day! Science has known about this principle for years. In fact, right now, professional and amateur athletes the world over are using it in their training programmes. And many famous film stars who have to trim down fast rely on this method. Now, you can use it to melt cms off your waist, your hips, anywhere!

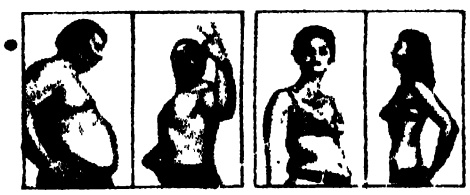
Don't Hold Fat In .. Lose It!
If you want to go even further, the Sauna System will do it for you. Our special fastening system allows the Sauna Belt to adjust to your new size as you shrink away. And your waistline, hips and other problem areas will continue to shrink when you use the Sauna System programme. You can use it as often as you need to keep those cms off!

Not A Cheap Imitation!
The Sauna System is strong — quality construction has added benefits which give soothing, invigorating support to tired, tense back muscles, while helping you trim away cms easily and comfortably. Just one look at our distinctive waist-belt and you know you'll be getting the utmost.

Remember, elastics and girdles are merely flimsy imitations, which just squeeze the fat in. But the SAUNA SYSTEM takes it off — fast! It's working right now for thousands of satisfied buyers and it can work for you, if you order now!

The Sauna System comes with its own easy exercise programme to shed unsightly cms even more rapidly.

REAL PEOPLE LOSE POUNDS AND CMS
Here are the impressive stories (all sworn and notarized) of a few outstanding users. Everyone may not do as well, but if they can do this well, just think how many pounds and cms you will lose quickly with the SAUNA SYSTEM.



FREE WITH THE PRODUCT A NEW UNIQUE FAT MEASURE IF ORDERED WITHIN 10 DAYS

Mr. Gurmeet Singh — Ludhiana, India
"My total weight loss was 9 cms off my waist and hips! I've been overweight for as long as I can remember. The Sauna System worked miracles! all in only 6 short months! The Sauna System even helped me to stop overeating and snacking. I lost 15 pounds! Now I'm a new man.

Mrs. Mildred C. Cable — Land O' Lakes, Fla.
I went from a size 20½" dress down to a 16! I tried every method. With the Sauna Belt, the exercise programme and a sensible diet, I lost 32 pounds! I lost 8 cms from my waist and 11 cms from my hips! Now I tell all my friends about the Sauna System.

Hercules, Jr.

Maybe your child isn't poor in studies. It could be that she just can't hear well.

She needs a check-up and probably, a Philips Hearing Aid.

Your child won't know there's something wrong with her hearing. All she'll sense is that she can't really understand her teacher. Which means lower marks in school.

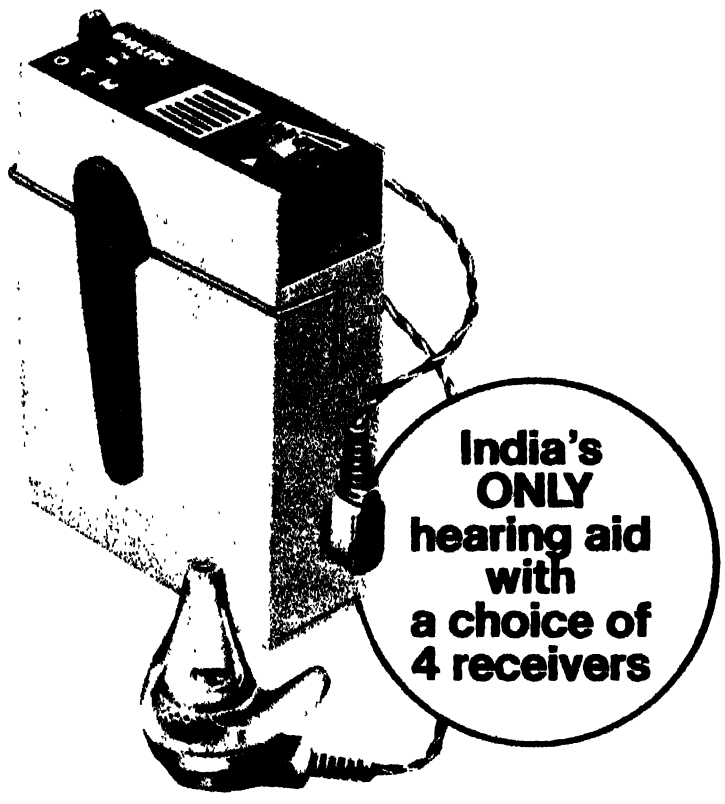
It's up to you to do something.
Get her hearing checked up. Ask your family doctor.

Why a Philips Hearing Aid?
Only Philips has a choice of 4 receivers. So you need not buy a whole new unit as time goes by. Just change the receiver. Featherweight and compact, Philips Hearing Aid comes to you with special foodspill cover and inexpensive soft ear tips. Specially designed with stabilising circuits to provide long battery life.

Free Service Unit
If the hearing aid comes for repairs (which is rare) we'll give you a temporary replacement FREE. You can rest assured your service problems do not fall on deaf ears.

Of superior quality and easily available, a Philips Hearing Aid could make all the difference in your child's marks. It's not too late to repair the damage to her ears. Check with your doctor today!

Available with select Philips Radio Dealers



PHILIPS

PHILIPS

Philips — the trusted Indian household name for over fifty years

OBM/9574

This Week's Bridge
1982 World Championships — III

Open Pairs:

A record field of over 250 pairs started this event. The first elimination, down to 224, was very mild, and most of the Indian pairs in the fray made the cut. The elimination from the semi-finals to the finals was brutal — only 40 pairs qualified, which placed an enormous premium on luck, not to mention good play, of course.

After two of the four semi final sessions, Santanu Ghose and Govind Singha of Calcutta were fifth, but no other Indian pair did particularly well. Santanu incidentally, was a member of the W.B.F. Appeals Committee, a signal honour, and he played from the W.B.F. quota! But Ghose - Singha fell away thereafter, and no Indian pair made it to the Finals field of 40.

U.S.A. had 14 pairs in the Finals, France had 8, and the rest were spread out from different countries. China, playing in their first World Championship, had one pair Wang - Lu in the Finals, a very creditable performance. Actually, our new zone, B.F.A.M.E. had no representatives in the pairs finals, not even the Pakistanis who finished runners up in the 1981 Bermuda Bowl.

At the halfway stage in the Finals the top four positions were held by American pairs! Andersen - Berkowitz, Janitschke brothers, Martel - Stansby and Hamman - Wolff, who had won the 1974 World Pairs Championships at Las Palmas. The other pairs are not very well-known here in India, but they are among the hottest pairs in the U.S. today.

At the end of four sessions, the results were announced - Rebattu - Maas were first, Martel - Stansby second! But the latter soon discovered a major error in the computer scoring, as did several other pairs - soon the corrected results were announced, and Martel - Stansby had won, with the unfortunate Rebattu - Maas of Netherlands second, and Chagas - De Mello of Brazil third.

So Lew Stansby 42 and Chip Martel 28, are new World Pairs Champions.

Here are a couple of hands they especially enjoyed, taken from the Daily Bulletins etited by Dorothy and Henry Francis:

There's nothing like changing horses in midstream. Martel originally was going for ruffs by leading a singleton on this deal, but he decided he didn't want them after all. He got the message through to Stansby by his discard. It was a doubled contract so the message was vital. As a matter of fact, if their opponents had been allowed to make their contract, the Open Pairs winners wouldn't have been Martel and Stansby — it would have been their opponents! If nothing else changed, of course. The deal came up in the third final of the Open Pairs.

Board - 2: Dealer East. N - S Vul.

	♠ QJ98 ♥ AJ7 ♦ 2 ♣ QJ1093	
♠ K3 ♥ KQ1054 ♦ QJ963 ♣ 5	N W E S	♠ 642 ♥ 932 ♦ 1074 ♣ AK76
	♠ A1075 ♥ 86 ♦ AK85 ♣ 842	

The bidding:

West	North	East	South
Martel		Stansby	
		P	1D (i)
1H	D'ble(ii)	2H	2S
3D	4S	D'ble	All Pass

(i) Precision

(ii) Negative.

As Stansby took his Club Ace and Club King, Martel realised declarer would place the Spade King in his hand Stansby had made only a simple raise of his partner's suit, and Martel knew that if he ruffed the third Club, declarer would win the heart return and spurn the finesse of the Spade King and drop the now lone King to score his doubled contract Acting on that, Martel played the Heart ten (!), leaving Stansby to work out that the Spade King was doubleton with his partner and to get the Hearts going while his side still was able to gain the lead Otherwise the Heart loser would disappear on the good Clubs. Martel's message came through loud and clear Stansby switched to a Heart, and Martel was able to cash the setting trick when he won his trump King. Yes, we know that an original Heart lead would beat the contract off the top, but didn't this make a much better story? Who was the other pair? Jeff Meckstroth and Eric Rodwell!

Stansby and Martel believe in spirited auctions and in doubling as is evidenced by the following deal from the third session of the Open Pairs finals. They also know how to scramble

Board - 17 Dealer North None Vul

	♠ K932 ♥ AK4 ♦ 98 ♣ J843	
♠ AQ10 ♥ J875 ♦ A5 ♣ A962	N W E S	♠ 1865 ♥ 1096 ♦ QJ642 ♣ 5
	♠ 74 ♥ Q32 ♦ K1073 ♣ KQ107	

The bidding:

West	North	East	South
Martel		Stansby	
	P	P	P
1C	D'ble	1D	1NT
D'ble	P	2D	D'ble
P	P	RD'ble	P
2H	P	P	D'ble

All Pass.

North made the not unlikely lead of th Diamond nine That went to the Queen King and Ace Martel then made the ke play at trick two: since North was origin ally a passed hand, Martel placed th Spade King with him for his double If h played the Club Ace and ruffed a Club then finessed the Spade coming back, th defenders will be in a position to pul trumps and cash two Clubs to defeat th contract one But Martel decided to try a little deception — he played the Spad ten! His left-hand opponent looked at i suspiciously but decided to duck Tha was all Martel needed. He then pro ceeded to plop down the Club Ace, ruff a Club and come to the Spade Ace fo another Club ruff That came to tw Spades, two Diamonds, two Club ruff and one Club — plus one Heart or power.

AVINASH GOKHALE

This Week's Chess
Knight Sac And Fork

WHEN two Knights are in action, combinations based on a Knight fork are likely to be round the corner. In position No 297 a Knight sacrifice is followed by the offer of the exchange which Black cannot accept for fear of losing his Queen in a fork by the other Knight. In position No. 298 after the sacrifice of a White Knight his companion takes his place and a further Bishop sacrifice brings about a winning fork.

Kupreichik - Gulko
USSR Ch. 1981

1. e4, e6 2.d4, d5 3.Nd2, c5 4.exd5, exd5 5.Ngf3, Nc6 6.Bb5, Bd6 7.dxc5, Bxc5 8.Nb3, Bd6 9.00, Ne7 10.Bg5, 00 11.c3, Bg4 12.Re1, Re8 13.h3, Bh5 14.Nbd4, Qc7 15.Qa4, Rac8 16.Nh4, f6 17.Ne6, Qd7 18.Bf4, g5? 19.Bxd6, Qxd6 20.Bxc6, Rxc6.

Position No 297: 21.Ng7!, Kxg7 22.Rxe7ch!, Kh8 23.Nf5, Qb8 24.Rae1, Rxe7 25.Nxe7, Ra6 26.Qb5, Rb6 27.Qxd5, Rxb2 28.g4!, 1-0

3.Nd2) French Defence; Tarrasch Variation. 3...Nf6 and 3...Nc6 are Black's other continuations.

4...exd5) 4...Qxd5 avoids the isolated QP but entails some development problems.

7.dxc5) Lutikov-Gulko, Moscow 1982: 7.000, cxd4 8.Nb3, Nc7 9.Nbxd4, 00 10.Bg5, Qc7 11.h3, h6 12.Bxe7, Bxe7 13.c3, Bf6 was won by Black.

11.c3) Rodrigues-Uhlmann, Berlin 1979: 11.Re1, a6 12.Bc2, Bf5 13 c3, Qc7 14.Bxe7, Nxe7 15.Bd3, Bxd3 (drawn 40).

12.Re1) Velimirovich-Lyubojevich, Yugo 1978: 12.Bh4, Qb6 13.Bd3, Ne5 14.Be2, Nc4 15.Bxe7, Bxe7 16.Qxd5, Nxb2 (0-1; 28).

12.. Re8) Better is 12...Qc7. 13.h3, Bh5 followed by .. h6 or f6. The text self-pins the Knight on c6 and presents White with some tempii.

16...f6) Concedes a hole on e6: the right move may be 16...h6.

18...g5?) The losing move. He had to play 18...Bf7 when the combination 19.Nxg7? does not succeed i.c. 19...Kxg7 20.Bxd6 (or 20.Bxc6, Rxc6 21.Bxd6, Rxd6) Qxd6 21.Bxc6, Qxc6! avoids the fork. But 19.Bxd6, Bxe6 20.Bxe7, Qxe7 (20...Rxc7? 21.Qxa7!, Nxa7 22.Bxd7, Rxd7 23.Rxe6 wins a Pawn) 21.Nf5, Qd7 22.Nd4 is favourable for white.

21 Ng7!) This move based on a Knight fork on f5 completely upsets Black's calculations.

28.g4) If 28...Be8 29.Qg8 mate, or 28...Bg6 29 Nxg6ch, hxg6 30.Qf7 wins

Dommes - Agapov
Leningrad, 1981

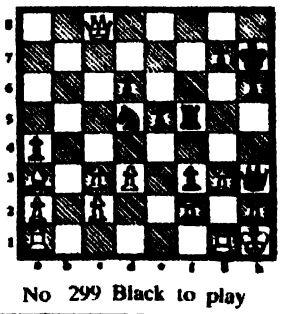
1.d4, Nf6 2.c4, c5 3.d5, e6 4 Nc3, exd5 5.cxd5, d6 6.e4, g6 7.f4, Bg7 8 Bb5ch, Nfd7 9.a4, 00 10.Nf3, a6 11.Be2. Re8 12.00, b6 13.Nd2, Nf6 14 Bf3, Bb7 15.Nc4, b5 16.axb5, axb5 17.Rxa8, Bxa8 18.Nxb5, Nxc4 19.Re1, Nf6 20.Nbxd6, Rxe1ch 21.Qxe1, Bxd5 22.Bxd5, Nxd5 23.f5, Bd4ch? 24.Kf1, Nf6? 25.Bg5, Nbd7

Position No 298: 26.Nxf7!, Kxf7? 27.Nd6ch, Kg7 28.Bh6ch!' Kxh6 29.Nf7ch, Kg7 30.Nxd8, 1-0.

3...e6) Modern Benoni Defence.

7.f4) More incisive than 7.Nf3

8...Nfd7) 8...Nbd7? or 8 Bd7? 9.e5!



No 299 Black to play

9.a4) 9.Bd3, 00 10 Nf3 occurs frequently.

10 .a6) For 10 . Na6 see Falk Ostoich, No.270 12 9.82

11 . Re8) Kasparov Kuipers, Dortmund 1980. 11 . Nf6 12.00 Qc7? 13 e5 Ne8 14 e6, fxe6 15 Bc4, Qc7 16.dxe6 Nc7 (1-0, 28).

Semkov Popov, USSR 1980. (in the above) 12 Bg4 13 e5!, Bxf3 14.Bxf3 dxe5 15.fxe5, Nfd7 16 e6, Nc5 (1-0, 32,

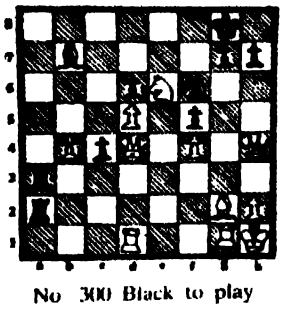
15.Nc4) 15.Re1, Nbd7 16.Nc4, Qb8 17.Ra3 might give better prospects for White The text permits simplication with the liquidation of centre pawns.

23...Bd4ch?) Here or on his next move Black should get an even game by...Qc7 whether or not White exchanges Queens

26...Kxf7?) Possible was 26...Qe8 continuing a Pawn down.

27...Kg7) The Knight fork is inevitable; 27...Kg8 28.Qe6ch.

R.B. SAPRE



No 300 Black to play

Make it easier for your baby to change from milk to solids...

Nestum: the baby cereal specially formulated for a gentle transition.

You want the very best for your baby. That's why you breast-feed him. The most nourishing and easily digestible feed you can give.

When he is about four months, he'll need solids in his diet. But his digestive system is still delicate. So he needs a cereal that's easy on his digestion. Like Nestum.

Nestum is so right as a first solid because of its special formulation. It's made from rice. And nutrition experts agree this is the easiest to digest amongst cereals as it's gluten-free.

Nutrition-conscious mothers like you say 'yes' to Nestum because it's fortified with 11 vitamins, iron and calcium—vital nutritional support for your baby. Vitamins to give a glow to his skin, a sparkle to his eyes and build baby's resistance to disease. Iron for healthy blood and calcium for strong bones and teeth.

Introducing solids in baby's diet is never a simple process. But Nestum can help you make the transition from milk to solids, gentle.

asy to prepare:

'our warm, re-boiled milk | Add Nestum & mix | Heady to serve

Fortified with iron and 11 vitamins

Nestum®
rice

NESTLÉ.

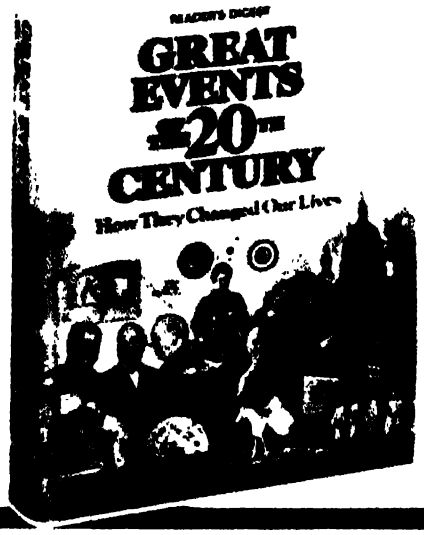
From Reader's Digest

Two great books for your reading pleasure!



Great Events of the 20th Century

Your time... your world.

The 20th Century is your time — your world... rediscover it now in this important Reader's Digest book. Read about major historical events... fads and fashions... scientific advances... developments in painting, music, literature... and much more. Meet the greats of the past — from Rudolph Valentino to Winston Churchill... Garbo to Gandhi... from the Wright brothers first flight to Apollo 11 and beyond in this fact-filled, fun-filled book for readers of every age. Captured in lively articles and stunning illustrations are the dramatic highlights of the events that shaped our world. Here in this 'diary' of our times is the expertise of historians, scientists, journalists, artists, draftsmen, and photographers... brought forth, in words and pictures, a story of our age probably unlike any you have ever seen before. This could be the most versatile volume in your home, one that you'll turn to again and again for handy reference. You'll have at hand the facts, figures, pictures and stories that make this book a truly unique "diary of our times"... a book that will inform and entertain every member of the family!

Price: Rs.199.00

544 pages • 19.7 cms × 24.9 cms • More than 850 photographs, paintings and maps

The Fight for Life

An insight into the fascinating and adventure-filled world of medicine

Seldom can we glimpse more than a fraction of the powerful dramas lived by doctors on their unending rounds of comforting and healing. Now the fascinating diversity of the medical world comes together in this Reader's Digest book. Here, for the first time in one beautifully illustrated volume, you find expert condensations of six unforgettable tales of facts and fiction by master storytellers including Sinclair Lewis.
Meet the real-life Dr. Semmelweis who gave his life while discovering how to save millions of women from deadly childbed fever... meet surgeon William A. Nolen whose best-selling autobiography throws open a window on life and death in a busy public hospital... meet the doctors who worked miracles to repair the wounds caused by the devilishly "sophisticated" weapons of the Vietnam war and meet more other doctors whose stories wil move you to compassion.
This book will provide you with a close-up look at these dedicated men of the medical profession, their triumphs and tragedies, their unceasing battle against death — their ever hopeful fight for life!

640 pages • 23.5cm × 16cm • More than 30 black and white and color illustrations

NEW! Instant Nespray The 5-Second Milk

Just Drop, Stir and Serve

It's easy to make

Drop 3 tablespoons of Instant Nespray into a glass of cold or warm water. Just stir and your glass of milk is ready in 5 seconds.

So nutritious

Instant Nespray is specially fortified with vitamins A & D. It's the richer, creamier, tastier milk, for those growing up years.

Dissolves instantly even in cold water

We've been growing in the midst of the most enviable brotherhood

Twenty-five years ago, Bombay was a little different. The sea at Marine Drive was shallower. Nariman Point was a mere finger stretching out into the Arabian Sea.

There were no fly-overs, no skyscrapers. International flights still landed and took-off at Santa Cruz Airport. Visiting cricket teams played the tests at the Brabourne Stadium.

And Patel Extrusion's first consignment of 2500 tubes was transported by a bullock cart. 20000 aluminium extruded tubes, took 26 days to produce.

In twenty-five years, Bombay has changed. And the one man venture has grown into the Patel Extrusion Group.

Today, the Patel Extrusion Group makes eight lakhs tubes a day. And, the Group ranks as the largest of its kind in Asia and one of the largest in the world.

The best part of our growth, however, is the brotherhood we have been growing alongwith

The happy, family relationship

Every one at the Patel Extrusion Group is a member of the Patel Extrusion family. Contributing their skills to a venture that has grown along with them.

The engineer, the chemist, the manager, the scientist, the skilled and un-skilled worker, the office assistant. 2500 friendly, loyal people proud to belong to the Group.

The loyal clientele

The happy knack of making a difficult task look simple and the satisfaction of achievement reflects in our ability to cater to an imposing list of clientele.

The ancilliary suppliers who never allow a crisis to develop

Our professional ability to meet the exacting demands of our clients is in a large measure, besides our own facilities, to the kind of ancilliary suppliers' support we get. From printing inks, oils, chemicals, office stationery to first-rate equipment and computer maintenance.

Fond memories don't fade

Today, in our Silver Jubilee Year, we remember and pay tribute to all those who have made the Patel Extrusion Group what it is. May our Brotherhood grow wider and stronger in years to come.

The future has already begun.

Patel Extrusion Group

LETTERS TO THE EDITOR

The Muslim Minorities

Sir—Syed Shahabuddin's "A State Of Siege" (January 9) is most illogical. According to him Muslims who adorn Parliament or hold party positions or who have become Ministers and Governors, etc, are men with "only Muslim names". Who are the real Muslims then? Let him define a Muslim. Also, he has kept mum on the issue of Jammu and Kashmir, the only State having a predominantly Muslim population which has the privilege of having a separate Constitution. Some of the Hindus there have no right to vote for the Assembly Elections or to acquire property in that State. Does this, according to Shahabuddin, amount to "participation in politics"? Or is he only interested in the Muslim participation in politics? Thirdly, if Balraj Madhok loves to play the "old cat-and-mouse game" of Indian first or Muslim first, what else are the other Muslim leaders, including Syed Shahabuddin, doing?

A.G. Karandikar
Bombay

Sir—Balraj Madhok, a known Jana Sanghi, has no right to talk about the present state of Indian Muslims. Instead, a piece by a secular Hindu would have helped in clearing the misunderstanding between the two communities.

Unbiased readers can never agree with Mr Madhok that the progeny of those who opted for partition cease to be Indian citizens. This is an anti-secular and anti-national view. Besides, Mr Madhok's allegation that the Muslim League, which masterminded the two-nation theory, shares power in Kerala is untenable. The League that contrived India's partition was led by Jinnah under the banner of All India Muslim League while the Muslim League, which is presently in power in Kerala, is the Indian Union Muslim League founded by the great freedom fighter, the late Ismail Saheb.

N.A. Sulaiman
Kerala

Sir—Syed Shahabuddin says Indian Muslims do not support the two-nation theory. Let him comment on what the Kashmir legislators are doing. Why do they want to open the door to Muslim immigrants from Pakistan? Why do they reject national programmes like Family Planning by making a reference to the Koran? Poverty, illiteracy and unemployment are not uncommon among Hindus. But Mr Shahabuddin wants to prove that the Hindus are more affluent than Muslims. It is not true. Hindus are not only broad-minded but also want their counterparts to mingle in the national mainstream. After all, we have been living in India for centuries.

And, why are we not really bothered about Harijans converting to Buddhism or Jainism? Because we have no problems with their way of life. They never claim their "group identity" or propound a separate nation theory as Muslims do. We fear their numbers. Bitter memories of partition of this great country have still kept us alert. We *don't* want to build a Hindu Rashtra. Not all the Hindus belong to the RSS just as all Muslims are not members of the Muslim League.

T.A. Mundargi
Shorapur

Well-Said

Sir—I have read and pondered over Mr K.C. Khanna's article, "The Roots Of Conflict" (January 9). As a Roman Catholic priest and member of a minority community I am proud to be his countryman.

C.V. George SJ
Pune

Sai Baba And Science

Sir—How could a prestigious journal like the WEEKLY publish a scurrilous report on Sri Sathya Baba? ("Godman Or Magician?", January 2).

The caption, "Sri Sathya Sai Baba scoffs at science and Marx and would have us believe there is no greater person than him in this universe" was not only wrong but also in bad taste.

Baba does not scoff at science. He has, on the other hand, started a university with advanced courses in science in a rural area for the benefit of the young (from all parts of the world).

Yes, he does maintain that science cannot explain, or provide proof for, *everything* under the sun. And he is entirely right!

A.N. Wupendram
Hyderabad

Sir—G.S. Reddy's piece was somewhat lopsided. He has selected a few devotees—a politician, a general, a maestro and a celebrity—and misquoted them, since in actuality they have seen only glimpses of Baba's (vain) glory. They deserve my sympathies. The only people who would stand testimony for or against his faith, are his wise and otherwise aides. The author further makes a feeble comparison of the times then and now. The old order has changed and people (I am convinced) can't just afford to accept utter hypocrisy and all that sham superbly glorified.

Hats off to the Vice-President who has guts enough to call a spade a spade. I feel everyone's life is an open book. If Baba ever meant what he said ("come, experience and then (dis) believe me"), G.S. Reddy would have been the last person to have approached and Baba the first to have avoided! Congrats to G.S.R. anyway!

Dr V. Hanaram
Bombay

Sir—My son Kailash was undergoing treatment for cancer of the kidneys. When we drew a blank at the Tata Memorial Hospital, a retired professor of English, suffering from breast cancer and under the spiritual treatment of Baba, took my son to the clinic at Baba's ashram at Andheri, where he was put on a cot, surrounded by fresh flowers of which Baba is very fond. My son had a glimpse of Baba from a distance and like a beggar waited with folded hands but the Baba went away without coming to the clinic. The professor took my son again the next day when my son saw "Him" from a distance. (He did not come to clinic to bless my son.) The professor was equally disappointed. My son was advised to write a registered a/d letter so that he would receive Baba's signature on the acknowledgement form and that would be a blessing. It was done and the signature was a rubber stamp! That was worshipped with great faith. However, my son's condition deteriorated and finally on June 9, 1982 he expired. Is Baba a God or Bhagwan? We do not know. We human beings want to measure him by "known" things, which is a blunder. Also, death is an unknown phenomenon. Thus astrologers, godmen, and mystics are able to make a living. Rajneeshs and Babas will continue to emerge so long as human nature remains unchanged.

Dr H.P. Gupta
Bombay

Sir—Shame on you for having published a bogus article. Are you aware that over 50 million people of 55 countries of the world are HIS devotees? They include scientists, doctors, psychiatrists, businessmen, engineers, lawyers, administrators, politicians, the rich as well as the poor. Never, and no incarnation of God in His own lifetime, has had such a following. Nor Christ or Mohammad, for that matter. Not even Lords Krishna or Rama. It is very difficult to carry conviction with so many people, by mere sleight of hand!

Wg Cdr Raizada Harbans Chowdhry (Rtd)
Haryana

Corny Choice?

Sir—"Critics' Choice" (Jaunary 2) made interesting reading. Understandably enough, many of the notable films were missing from the lists. But some of the ommissions were unforgivable. While Bimal Roy's *Do Bigha Zameen* figured prominently in several lists, Roy's other classic, *Bandini* was mentioned by none of the eight critics. Again, while Guru Dutt's *Pyasa* and *Sahib, Bibi Aur Ghulam* were mentioned, *Kagaz Ke Phool*—perhaps the film-maker's most moving film—was ignored completely. Basu Bhattacharya's *Teesri Kasam* was also sadly left out. Gulzar's best film to date, *Mausam*, should have also figured in the choice of the critics. A few other films by Hrishikesh Mukherjee, apart from *Anand* and *Anuradha*, also deserved pride of place—*Satyakam* and *Abhiman*, for example. And, pray, why wasn't *Guide*—one of the most enchanting films our country has ever produced—mentioned by anyone? On the other hand, the inclusion of an out-and-out potboiler like *Amar Akbar Anthony* was amazing. If that was the criterion, *Sholay* should have been included.

Subhash K. Jha
Patna

Mullahs In Khaki

Sir—The extract from the smuggled book by Air Marshal Asghar Khan ("Pakistan's Power-Mad Generals", December 26) was interesting. Had Asghar Khan himself come to power, an Air Marshal would have succeeded a General.

Democracy cannot exist in Pakistan so long as it remains Islamic. One politician after another has been exploiting Islam to capture power. As long as human rights are suppressed, democracy, too, will be throttled.

Yet, one has to admit that the law and order situation in Pakistan is much better than in India. Cases of theft, dacoity, cheating are dwindling due to fear of punishment. The shambles that is Indian democracy cannot inspire the Pakistani people.

Prafulla Kanti Biswas
West Bengal

Better Dead Than Red?

Sir—Kudos to the WEEKLY for exposing India's collapse towards bankruptcy (December 26). We are spending too much on defence due to our Soviet connection. We have gathered a huge inventory of Soviet arms—most of our combat aircraft,

nearly 500 of them, are MiGs and Sukhois. So is also the case with Naval ships and the Army's artillery and tanks. Our missile force is 95% Soviet SAMs and AAMs. But these are second grade and, as a result, we are forced to buy Western arms. When Mrs Gandhi blames the West for introducing sophisticated military technology in the subcontinent, she is in fact admitting her discomfiture at having to re-equip.

M.L. Halder
24-Parganas (W.B.)

Ah, Arabs!

Sir—Mr Pranay Gupte's article on Saudi Arabia (December 19) was fascinating. The Saudi Government should be congratulated for the rapid progress achieved in just ten years. The palmleaf-thatched huts of the erstwhile desert settlements are fast being replaced by modern skyscrapers. The constructions of ultra-modern cities like Yanbu on the West Coast and Jubail on the East Coast, to be completed in the third five-year plan, shows the capacity of the Arabs to achieve things in record time.

Muhammed Talheth
Coimbatore

Superb Story

Sir—"One More Dacoit" (November 28) was an absorbing story woven in a first rate literary style Mr Nagar has ably painted so many vivid scenes from village life on such a small canvas This story has left an indelible impression on our minds and hearts.

Next Issue

Will The Congress (I) Put Its House In Order?

"In the wake of the Congress (I)'s debacle in the Deccan and Mrs Gandhi's rapidly fading charisma, the question is whether and how long the party would stand by her. According to her own logic, since she has ceased to be a massive vote-getter, the Congress (I) should have less and less use for her

"Now she is alone, a tragic figure whom many see as a gifted politician who misconstructed her destiny surrounded by small men with petty ambitions, But she can still put her house in order by shedding her sense of insecurity and taking pains to demonstrate her faith in the system," says K.R. Sundar Rajan.

Sparkle, Brilliance And Glitter

Although a variety of gems and gemstones are available in India, the bulk of them are imported, cut polished and exported, says Meera Pandya.

DEMIGOD N.T RAMA RAO IN HIS TIRUPATI CONSTITUENCY The Celluloid God's meteoric rise to power has been on the strength of promises which, according to the author, are going to be very, very hard, if not impossible, to fulfil.

After Thunderbolts And Lightning

Misty Dawn Of NTR's Ram Rajya

Will NTR redeem his promise and usher Ram Rajya in Andhra Pradesh? Or will his rag-bag team of political novices combined with defectors turn the State Administration into a Rabble Raj? Will his Government be as corrupt and capricious as the outgoing Congress (I) regime or will it be very different? So far the portents, as our correspondent reports from Hyderabad, are ominous. But it is too early to judge. It would be manifestly unfair at this stage to belittle NTR's honest intentions and the enthusiasm of the young academics who have rallied to his banner with the sole purpose of cleaning up the Augean stables. They need time to settle down. It is possible, though by no means certain, that they may eventually govern the State much better than the way the other regional grouping, the AIADMK, is doing in neighbouring Tamil Nadu. The *Weekly* wishes them well.

by G.S. Reddy

THE one-man demolition squad, N.T. Ramarao, who ripped through the Congress(I) fortress in Andhra Pradesh and took over the reins of administration as Chief Minister, is yet to find his bearings in his new real-life role. The 60 million people of the State—soon to be renamed Telugu Nadu—are now looking forward to the promised "Ram Rajya"—an ideal state assured by N.T. Ramarao. Whether the new Chief Minister, who promised everything under the sun to the voters, will be able to live up to the rising expectations of the people is an open question. But, if the events of the first 10 days after his being voted to power are any indication, the establishment of Ram Rajya is going to prove to be as elusive as a mirage.

The day Nadendla Bhaskara Rao was inducted as Minister for Commercial Taxes and Finance, people, who otherwise had no reason to doubt the intentions of NTR, raised eyebrows. The corrupt practices of Bhaskara Rao—who as the Commercial Taxes Minister in Dr Chenna Reddy's Cabinet reportedly amassed huge wealth—are too familiar. One does not understand why NTR, despite his proclaimed determination to wipe out corruption, has risked such an appointment. When asked about this, NTR said: "Some of my Ministers could have resorted to malpractices in the past because of unavoidable political reasons."

Surprisingly, NTR's Government, though it vowed to root out corruption from every walk of life, has not so far cared to ask its Cabinet members to declare their assets. (Incidentally, the Janata Government in neighbouring Karnataka—which, too, promised a clean government—asked the new Ministers to declare their assets.) If the Telugu Desam Government was serious about its intentions, it should have ensured an appropriate beginning by making the assets of its Cabinet members public.

Enquiries by this writer revealed that the new Andhra Government is planning to replace the present Chief Secretary, B.N. Raman, and the Director-General of Police, Anambram. It may still change its mind. But, if it does not, it will be difficult for it to retain its image untarnished. B.N. Raman and Anambram are not only known for their honesty, they are also a source of inspiration to the young honest officers in the State service. In fact, the

—M.A. Rahim

new Government was spared an embarrassing situation when its orders for replacing the present Commissioner of Police, Chandrasekharan, were squashed. If these orders had been put into effect, the Government would have found itself in an unenviable position, because Chandrasekharan was to be replaced by an allegedly none too clean officer, Radhakrishna Murthy.

Growing Feeling

For the past few days, there is a growing feeling that NTR is unwittingly trying to outdo the previous Governments in making false promises. False because, though many of his commitments are desirable to usher in the promised Ram Rajya, they are not feasible financially. For instance, take the case of building *pucca* houses for Harijans. After visiting Padirikuppam in Chittoor district, where 5 Harijans were burned to death on January 5 (Polling Day), the new Chief Minister declared that his Government would construct 20 lakh *pucca* houses in Harijan colonies in the next 5 years. A conservative estimate shows that the Telugu Desam Government would need at least Rs 1,200 crores to fulfil this commitment!

With the State finances in the red, the new Government will find it difficult to implement even the basic promises of the Telugu Desam Manifesto—namely, supply of rice at Rs 2 a kilo and free nutritious midday meals. If the Government is to supply rice at Rs 2 a kilo, then the scheme should be subsidised by the State, because NTR has promised a higher support price to the farmers. The subsidy, running into tens of crores of rupees, will make a heavy dent on the meagre State resources. Besides, the midday meal, if made more nutritious with the addition of a boiled egg and a cup of milk, will need at least Rs 150 crores each year.

Apart from this, Telugu Desam has promised supply of protected drinking water to all the 13,000 villages that are without this basic facility. To implement this scheme, the new Government will need a few hundred crore rupees. While the State Administration is at its wits' end in finding ways and means of raising resources for these basic schemes, NTR is merrily committing himself to schemes that are absolutely out of bounds.

Ten Commandments

No doubt NTR made a good start when he took the oath of office in public, before a huge crowd of 3 lakh people. Immediately after being sworn in, he said: "The Government that is formed now, the Ministers and the officials—all are your servants." To reinforce the sincerity of his nascent Government, he issued Ten Commandments to his Cabinet:

1. *Telugu Desam legislators should keep in constant touch with their electorate and understand their problems through frequent tours.*
2. *Non-interference in employees' appointments and transfers and non-intervention in the affairs of officials discharging their duties.*
3. *Working towards a clean administration and wiping out corruption.*
4. *Avoiding felicitations, lavish dinners and other ostentatious acts while touring in their constituencies.*
5. *Dedicating Telugu Desam to the up lift of the poor and backward people.*
6. *Exposing culprits resorting to black-marketing, hoarding and other anti-social activities.*
7. *Attending the Legislative Assembly meetings without fail and bringing the people's problems to its notice.*
8. *Following the orders of the Party's Chief Whip and Whip.*
9. *Close contacts with the party workers at the grass-roots level.*
10. *Discipline, sincerity and simplicity among the party legislators.*

Will the Telugu Desam party legislators follow these Ten Commandments scrupulously and set an example in public life? The conduct of some Ministers so far leaves little hope for such an expectation.

Basic Issues

The Manifesto of the Telugu Desam, though it promises Ram Rajya in the State, avoids certain basic issues that should have been dealt with: for example, it is silent over the nationalisation of private buses in certain parts of the State—an issue that resulted in many agitations by the Communist Party of India.

Ironically, the new Government, while proposing to do away with several Boards, Corporations and Committees to contain expenditure on establishment expenses, is proposing to constitute new bodies, like an Agricultural Prices Commission, a high-power committee for determining Wages of Agricultural Labourers, a high-power committee to suggest Constitutional Amendments for according more powers to the State, and the like. According to some senior officials, these bodies, whose utility is doubtful, will only add to the expenditure on Centre-State relations.

NTR has made it clear that his Government will extend all kinds of possible support to the Union Government and strengthen national unity. But the State's relationship with the neighbouring States may run into rough weather. When the new Karnataka Power Minister made a request for supply of power to his State recently, his plea was turned down. Similarly, one is not sure whether NTR will permit diversion of the Krishna waters to Madras when the Rayalaseema area of the State, dependent upon the Krishna waters, is facing a water shortage.

While campaigning for his party, NTR promised that, in his Ram Rajya, law and order will be improved to such an extent that women need have no fear about walking alone on the deserted roads even at midnight. To achieve this, he is proposing to streamline the working of the Police Department.

To keep a watch on the functioning of the police force, a Board is to be constituted. This Board—consisting of the Governor, the Chief Minister, the Home Minister, the Assembly Speaker, the Chairman of the Legislative Council, the Opposition leaders, etc—will supervise the work of the Police Department. Investigation into any case is planned to be completed within 3 months. Further, plans are afoot to ensure the independence of the Director-General of Police by according him the protection given to a High Court Judge. Additional police personnel will be recruited to make the force more effective.

NTR's healthy Ram Rajya envisages a substantial increase in the outlay on Medical Services. As there is a dearth of finances even for other basic schemes, one is not sure how the new Government will tackle the scarcity of funds in expanding the Medical Services. At present, only →

—M.A. Rahim

FOR MOTHER AND SON ALIKE, Andhra has proved a personal defeat. Rajiv Gandhi reportedly took a good deal of interest in the management of the poll strategy; Mrs Gandhi, while engaging in hectic campaigning, risked her personal reputation on the outcome of the election. This is the first time that almost the entire South has gone out of the grip of the Ruling Congress at the Centre

—M.A. Rahim

—M.K. Sameeran

THE GOD THAT SUCCEEDED. His screen image made N T. Ramarao a cult figure for the masses. Like MGR in Tamil Nadu, in his campaigning, NTR proved a master in the art of appealing to the emotions of women, who venerated him from his screen roles. However, living up to his movie image—of being a do-gooder and a doer—is not going to be all that easy for NTR. A legend like MGR, he is already coming face to face with the reality—in the shape of a host of problems sure to confront Andhra Pradesh even after it becomes Telugu Nadu

2 per cent of the State Budget is allocated for Health Services—a poor record compared to the neighbouring States: Kerala (14 per cent), Karnataka (9 per cent) and Tamil Nadu (6 per cent). In fact, several Public Health Centres in the State are without doctors, leave alone other facilities.

Though the previous Governments had also adopted Telugu as the official language, NTR's Government is taking vigorous steps to implement Telugu at the Secretariat level, too. The flashy signboards of various Ministers, written in Telugu, provide a pointer in this direction.

While the previous Governments succeeded in implementing Telugu up to the district level, they left the Secretariat untouched, because of some peculiar problems. For instance, several employees of the Secretariat, especially those hailing from Telangana, are not at home in Telugu, because of their education in Urdu. Naturally, in such a situation, one cannot force Telugu upon these employees. In fact, there is a growing resentment among some sections of the Telangana employees at these hasty steps of the Telugu Desam Government. That NTR should go ahead with these acts (including efforts to acquire Telugu electric typewriters) in spite of his specific assurances to the minorities is indeed tragic.

Perhaps NTR has forgotten the promises he made to the minorities. At one point, he even said that Urdu will be encouraged wherever necessary. The previous Governments gave a raw deal to the minorities, though the AP Minorities Commission had submitted three reports, listing the steps that should be taken to improve the lot of the minorities in the State. It appears as though NTR will prove no better than the previous Governments in protecting the interest of the minorities.

Telugu For Telugu's Sake?

In NTR's Ram Rajya, the education system is being totally revamped. Job-oriented courses are proposed to be introduced at the high-school level. Study of Telugu, Telugu History and Telugu Culture are to be encouraged. An ambitious scheme (though there are no resources for implementing it) is being launched to take over all the private educational institutions. In an interview, NTR said that the takeover will be applicable to *all* the private professional colleges, too, in order to stop commercialisation of education.

Will NTR try to promote his party outside the State too? If the experience of the AIADMK is any indication, then the answer is a positive No. The AIADMK made a vain bid to enter the Andhra and Karnataka Assemblies. But it was totally rejected, save for the Kolar Gold Fields seat it won in the last Karnataka Assembly Elections. With the impact of NTR's glamour being confined to Andhra, he will not have a major role in national affairs or at the Centre. The sweep in the Assembly Elections is no guarantee of the party's success in the forthcoming Lok Sabha polls. A lot needs to be done to retain the vote banks that have so generously catapulted NTR to power.

According to a top official, the new Government is seriously thinking of posting local (Telugu) people in the key posts of administration. This policy, if implemented, is bound to backfire on the Government. NTR should realise that there are several Telugu people working

in key posts in other States. This move, if it materialises, will put many of the Telugu officers in other States in an uncomfortable position. Though NTR heads a regional party, he should not let regional considerations prevail over his national perspective.

Promises Galore

Before making a declaration in public, NTR should consult his Cabinet colleagues and assess the pros and cons of his decisions. Even the Telugu Desam's Manifesto has several promises which cannot be fulfilled even in 20 years, leave alone 5. For instance, the Manifesto promises a house to every Government servant before he attains 50 years of age.

A noble idea indeed! But is it really feasible? According to one reliable source, there are at least 40,000 State Government employees who will be attaining 50 years of age this year. Even if each house costs Rs 50,000—a conservative estimate—the Telugu Desam Government will need at least Rs 200 crores to implement such a scheme this year. It does not take a financial expert to say that the NTR Government will have to do without this scheme for the present. So, before announcing any further schemes, the NTR Government should bear in mind the promises it had *already* made and take steps to fulfil *them*.

NTR, though he thinks he is infallible, should involve other Cabinet members and come to a decision on the problems facing his Government. I am told that the show is now being run by Nadendla Bhaskara Rao, after NTR's initial *faux pas*. If this is so, then one will be forced to assume that the Regional Party Chief is completely shaken by the initial blunders he has committed

The State has had enough of former Congressmen like Bhaskara Rao. What the State urgently needs is a sincere person with unshakeable convictions

The Telugu people saw these traits in NTR and voted him to power, hoping for the Ram Rajya he promised. Now it is up to N.T. Ramarao—the political *avatar* who created a sensation by uprooting the giant Congress(I)—to see that the Telugu people have not been wrong in voting his party to power ■

—M.A. Rahim

WITH NADENDLA BHASKARA RAO whose induction as his Minister for Commercial Taxes and Finance led to the raising of quite a few eyebrows. The image that the people of Andhra have of N. Bhaskara Rao from his days in Dr Chenna Reddy's Cabinet is evidently none too bright.

—Newstoday

FOR THIS OLD WOMAN -one of the many who voted him to power— NTR is Andhra and Andhra is NTR. The new Chief Minister has from his people a mandate which gives him the authority to initiate extensive reforms. The Congress (I), having been routed by NTR's Telugu Desam in the Assembly Elections, will perhaps do well not to find fault with him for the sake of finding fault but act as a responsible opposition

Refreshing water 24 hours a day...

with WASP Pumping systems.

No matter where you live you can get water with full force from any source—underground tank, deep borewell or open well (as deep as 85 metres), lake, river, etc.

Wasp has the widest range of pumps—Centrifugal, Self-Priming, Ejecto Jet Pumps, Submersible Pumps—to suit every requirement. We offer sound technical advice on how to select the right pump. We have a countrywide network of branches and dealers to give you quick and efficient service.

The Future Of Astrology

Soothsayers Of The World, Unite!

Whether it is the man in the street perched before a parrot or the Minister ensconced with his *tantriks* and pundits, a vast majority of Indians are intensely preoccupied with the future and the effect the stars have on their destinies. According to experts, who recently met at an astrological seminar in Delhi, however, the predictive aspect is just one of the myriad facets of a "science" that has an ancient pedigree.

by A Special Correspondent

THE banner at the hall said "National Seminar on Astrology" and it was a cold December morning in Delhi. A crowd had gathered at the venue—though there had been no fanfare of announcements. Of course Rao Birendra Singh, the Union Agriculture Minister, inaugurated the meet and Speaker Balaram Jakhar of the Lok Sabha released the compendium of papers as the souvenir Yet there was a variety of men and women in the audience, not all astrologers, not all seekers of personal fortune.

Among the participants there was Dr B.V. Raman, known the world over as the authority in Indian astrology, editor of the Astrological Magazine. He is known to have warned the world of the outbreak of a major conflagration in 1936 and in 1943 told that Hitler would meet with a violent end in 1945 There was the sedate S.K. Kelkar of Pune, the colourful Bejan Daruwala and Parsu Ram were the other well-known professionals There was the contingent from Astrological institute of Bangladesh and researchers from Calcutta's Indian Institute of Astrology and learned men from the South like the bearded C.V. Seetharama Iyer of Trichinopoly who grew under the influence of Sringeri.

Shouldering their way through the crowds during the breaks, taking earnest notes, questioning and interviewing, listening with rapt attention to the speeches were a tribe of foreign journalists, representing some of the media giants of the United States.

Would the seminar bring forth fateful predictions? It did not, though predictions for the year have been made and published in astrological journals. Would the destinies of nations and leaders be revealed? Would the key to the secret chambers of the ancient learning of the East be handed over to the world?

Such hopes were belied. The seminar organised by the Bharat Nirman, an organisation for constructive national activities, was intended to promote astrology, one of the most ancient sciences of India, and also to seek for astrology a recognised status which has been denied to it so far even by the eminent people who turn to it in secret.

An outcome of the seminar was the decision to promote an all India body for study and research in astrology. This body will exert control over the use and practice of astrology and strive to expose the dishonest persons who have brought disrepute to the science.

The seminar on astrology progressed through discussions at two levels. Guarding its flanks against unabated attacks by domestic rationalists, scientists and materialists, a great part of the discussion revolved round the question of the status of astrology as a legitimate mode of enquiry into reality. The defenders ranged from the traditionalists asserting the sanctity of the revealed word to the erudite and rational spokesmen like Dr B.V. Raman who questioned the scientists on their own ground. Others held up the empirical basis of forecast in astrology, as in meteorology or medicine The second level concerned itself with the state of art as practised today.

A seminar on astrology would naturally discuss the problems and issues related to the study of astrology with experts exchanging notes on these. To an extent, this was achieved through the papers presented in person and through the souvenir carrying reprints. Even so, the seminar was constrained right from the start first by the imperative need establish its right to exist, so vehement being the opposition to the study of the "occult"

As, the meet opened in Delhi on December 27, an association calling itself "The Indian Assocation of College-going Scientists" circulated a bitter attack denouncing the claims of astrology as a science and condemning its use. It argued that astrology prevents individuals from being self-dependent and, therefore, truly free.

The moral condemnation of astrology as harmful to society is answered by the astrologers who insist that the stars only rule over the general set of influences that affect life and within that frame the individual can and must make his own decisions to optimise advantages and cut losses to the minimum. Be that as it may, the concern for human safety and welfare did not stop the Manhattan project or the march of discoveries that is modern science today. If forces in nature do influence events concerning man on earth, moral postures will hardly suffice to push investigation under the carpet. Such a posture is hardly becoming of scientists—even of the college-going kind.

But *is* there investigation? Is there the rational approach to the queries raised by the unknown, is there analysis, the determination of cause and effect, the ceaseless correction and modification of every step in knowledge? Is there only adherence to revered texts and reluctance to verify them on the touchstone of total experience? Is astrology a science at all? Such questions are hurled at Dr B.V. Raman, the doyen of Indian astrology today and answered by him at different times and places with a frankness and humility that commands respect.

"I firmly believe that there is an epistemological obligation to know what a thing is about before you accept it or reject it" declares Dr Raman. Indeed, it is an obligation that forms the cornerstone of all science—never to believe anything until it is proved. The experience of man over the years has thrown up many interrelationships between phenomena which science has later confirmed as indeed essentially linked.

"Astrology addressing itself as it did to the bewildering complex that was life did not make the kind of instant impression that is fancied as the badge of acceptabil-

ity. Astrology was essentially a pragmatic discipline and as such was multidisciplinary in nature," says Dr Raman.

Obviously the claims of ancient Indian science must be assessed in the darkness of ignorance. There is no common language to link the modern scientist to the ancient texts where each term is open to a complex of interpretations. The interpretative wisdom is the jealously guarded secret of generations of gurus who refused to hand down the torch except to those who qualified in their rigorous test of aptitude, discipline and intellectual attitude. They asked for belief and not disbelief initially.

To the non-believer the seminar brought home the all-pervasive ignorance of the nature of our much vaunted Indian tradition, and the achievement of our ancestors. Who does not know of Varsh Mihira, Bhaskara and Aryabhatta of Indian astronomy? Ninety per cent of educated Indians is the ready answer. Even the few who dimly recognise the names have hardly a notion of what they contributed. One knows of Copernicus, Galileo and Kepler but not these sages who had made calculations and revelations in astronomy, now corroborated by science, more than 2,000 years ago.

The motion of planets round the sun was known in India long before civilisation dawned in Greece. The path of the sun among stars and other galaxies was also a phenomenon described by ancients. The "procession of the equinoxes" whereby the sun gradually shifts towards the lovely Rohini (Aldebaran) in Taurus is described with accuracy in the ancient texts. However, ancient astronomy and ancient methematics of India will remain shrouded in mystery, unexposed to the school and college students till perhaps it is "discovered" with much ceremony by Western scholars or Western cults.

"Perhaps if seasoned science men join hands with astrologers of long-standing experience, useful results may emerge. A common forum, for the two classes of savants to meet is, therefore, essential," says the frail, ascetic looking, soft-spoken Dr Raman. He could easily be taken for a dean in any modern university.

But a forum for the twain to meet is easier said than achieved. The approach of science is essentially analytical. It divides nature into so many parts and proceeds to probe their depths. The approach of Indian learning has always been synthetic. It is not the vision of "A Separate Reality" but the whole reality that the sages have stressed. From seeing one goes on to viewing and then on to total perception. But it is the process from the unknown to known that marks out the mathematical and philosophical bias of ancient Indian learning.

Others among the astrologers are less concerned with a dialogue with science. Jyotish Shiromani S.K. Kelkar believes that though the rules of astrology are given by ancients "we have to change them and modify them". Calling for a statistical approach, Mr Kelkar cites surveys conducted by him which have shown some old rules to be outdated. The belief that marriages celebrated at a time when Jupiter enters Leo are liable to be childless has been found to be untenable. Then again the dumb and deaf seem seem to be exceptions to the shastras. All this needs fresh rules and investigation.

The 78-year-old C.V. Seetharama Iyer who has renounced the world and entered vanaprastha asks: "why waste time on futile debate on the status of astrology? Those who are here are present because they recognise its status. Most pundits give expositions of their views—which is not the subject for a seminar. They have forgotten the precision of the trade. What, for instance, are the possible preventive measures when an evil forecast is seen? No one has dwelt on such problems. Devi's blessings rule over all our diverse efforts, as all rivers meet the sea."

What Is Astrology?

ASTROLOGY, one of the oldest fields of study among mankind, epitomises the human desire to know the shape of events in times ahead. It has for its basic premise the assumption of a basic unity in nature. The earth, the planets, the solar system and the cosmos are viewed as part of an arrangement where every part is correlated to others. A correlation is postulated between human and geophysical behaviour and the planetary movements.

A horoscope is prepared on the basis of the position of the sun the moon and the eight planets—Mercury, Venus, Mars, Jupiter, Saturn, Uranus, Neptune and Pluto—and their positions as related to a point of earth at a particular point of time. In addition, the 12 signs of the Zodiac form the framework or map in which the relative positions of the planets are recorded. Besides these 12 signs of the Zodiac there are the 12 houses corresponding to common activities of mankind such as marriage, home, career, travel and others.

The interpretations of astrology may concern the world, a nation, an undertaking or an individual. Calculations are made to pinpoint past, present and future events on the horoscope and the influences of the various heavenly bodies at the time.

The study of astrology, as linked to the study of stars and planets, is known to have existed in India as long as 5,000 years ago. Subsequently astrology flourished in Egypt, Babylon and Greece. Ptolemy, the Western astrologer, is known to have propounded his own theories in the second century AD. Indian astrologers, however, hold that the masterworks in the study of stars and planets and their influences have hardly been improved upon after the time of Varaha Mihira of the ancient Indian civilisation. ■

Mr K.N. Rao is one of those astrologers who pursue the studies as an amateur, concentrating on astrological research for its own sake. The walls of his small study are lined with charts and tables. To North Indian astrologers he brought the appeal to use the Ashtak Varga for effective forecast. The work on 337 Bindus for each varga, take long hours to accomplish, but the results, he feels, are more reliable. With great enthusiasm he welcomed the device presented by a young astrologer which can do the work in minutes. Similarly he appealed to the South Indian astrologers to make use of the Sarvota Bhadra Chakra which has proved so useful in the North.

Mr Rao fears a greatly harmful conspiracy against the integrity of India after April 1983. But though the year presages to be a sombre time for the country, a silver lining is seen in more and more of the younger generation turning to religion. For the Prime Minister, at the helm of national affairs, May 1983 augurs serious health problems. For the world, a really explosive situation will develop in 1985 with Saturn, Ketu and Mars afflicting Scorpio.

While other astrologers wax eloquent of India's emergence as a world leader in matters social and spirutual, Dr Raman's predictions, though couched in technical language, are sombre. Says the Astrological Magazine, "The head of the government is having the sub-period of Mars in the major period of Saturn. The Indian independence chart is having Mars in Ketu till 28.7.83 and then on the sub-period of Rahu Ketu and Mars are *shashtashtaka*. Any tyro in astrology will be able to recognise the fateful significance of these directional influences."

Regarding the world, the Astrologica Magazine sees a general improvement in the economy of the United States though there is danger of embroilment in conflict in Central America and El Salvador. Intense seismic activity along the San Fransisco coast is foreseen. It warns also that President Reagan will be well advised to take care of his health and person. The same advice is given to the royal family of Britain. The Soviet Union may see a "reshuffle in its ruling clique" about the time of the June lunar eclipse.

Indeed 1983 does not promise to be a year of peace or prosperity for the world or one of fulfilment for India. The big consolation is that there is no likelihood of a world war this year.

The forecasting aspect of astrology is but one of its uses. The deep roots of ancient learning perhaps never meant it to be its primary function. The marvellous accuracy of the astronomical observations made thousands of years ago call for a more serious and catholic consideration that a mere brush off as "a bit of luck". A civilisation that had so many bits of luck without the help of modern scientific techniques and knowledge, should not be disowned in such haste. The astrological seminar would have served a noble purpose if it can arouse even the spirit of historical inquiry into the amazing civilisation of 5,000 years ago ■

THE POACHER'S TOUCHSTONE. A rhino horn. —J. Banerjee

Though wildlife in India is in peril there is no need for panic, says the author. For, a concerted effort towards the protection of these endangered species has already begun.

Endangered Wildlife

All Creatures Great And Small

by J. Banerjee

SINCE 1,600 AD civilised man has wiped out some 270 species of animals and birds. This century we have stepped up their rate of extermination to one complete species a year; and, at such a pace, almost 600 other species of animals and birds could soon follow the dodo into extinction.

However, in recent years, there has been a growing awareness of the need for wildlife conservation. In India more and more people are concerned about preserving our flora and fauna. This is definitely a welcome sign.

As in most other countries, we have also awakened late to the need to protect and preserve our wild animals. The cheetah or the hunting leopard has become extinct in India because of our failure to give it protection in time. The tiger, too, faced the same dire threat; but thanks to a timely warning by naturalists at the Ninth General Assembly of the International Union for the Conservation of Nature in New Delhi, in December 1969, the Indian tiger found a place in the Union's Red Book.

A BRAHMINI MYNAH caught in a trap.

—J. Banerjee

The one-horned rhino that once lived at many places in the Indo-Gangetic plain as far as Punjab, is now found only in a few protected places in Assam and West Bengal. The cheetah—of which Emperor Akbar is stated to have had over a 1,000 as pets—now adorns only a few zoological parks.

A timely ban on killing and the provision for a protected place to live and breed freely in helped save the Indian lion. Yet, the species is now confined to a small place—its last foothold—in the Gir forests of Gujarat.

The Indian wild buffaloes have been restricted to the Manas and Kaziranga sanctuaries in Assam and to some parts of Madhya Pradesh and Orissa. Among other threatened species are the bara singha or swamp deer, the chausingha, the Kashmir deer or hangul, the musk deer, the snow leopard, the black buck and many Indian birds, like the pink-headed duck, the white-winged wood duck and the great Indian bustard. The black buck, perhaps the most beautiful of all antelopes, once roamed in hundred-strong herds in open plains and valleys; they are now a rare sight, except in Rajasthan and few other neighbouring States.

Where The Blame Rests

Three factors, singly and in combination, must share the blame for the disappearance of wildlife. The first is the progressive destruction of their natural habitat, thanks to the advances of "civilisation" and the consequent environmental pollution. Miles and miles of virgin jungles and grasslands have forcibly had to make way for towns and factories and roads and railways. And 32 tigers died of folidol poisoning, in the space of 18 months, in Madhya Pradesh.

A second factor for the disappearance of wildlife, is the disappearance of their prey and it has resulted, for example, in many tigers becoming man-eaters. As for the third, it is man and he is perhaps, the biggest culprit of all. Indiscriminate shooting, even in the face of a governmental ban, has greatly reduced the deer population in Kashmir and this is but one instance.

According to a recent report, 25 out of the 1,115 one-horned rhinos in the Kaziranga Park were killed by poachers in 1981. The number for 1982 was expected to be even higher. The poaching goes on inspite of the Government's having raised the jail term from three to six months for the offenders. One reason is the lure of money which scores against a short jail sentence; especially, as the rhino horn easily fetches a sum far exceeding 60,000 rupees in the market.

Superstition has also played its part in the large-scale destruction of many species which are now rare. In

Wildlife Protection In Sikkim

AN ADDRESS by experts of the Forest Department.

SIKKIM, the 22nd State of India, is bounded by West Bengal, Bhutan, Nepal and Tibet. With an area of 7,300 sq km Sikkim rises from 200 metres in the foothills to 4000 metres; and the region falls into various vegetation and climatic zones ranging from the sub-tropical, to the tropical and temperate. Its climatic conditions have helped a variety of flora and fauna sustain themselves. The entire region including the Alpine Zone has hardy species of birds like the snow cock, the sky lark, the partridge, etc.

"Operation Trap Demolition"

The Wildlife Protection Act was extended and enforced in Sikkim in 1976 and an area of 850 sq km in North Sikkim was demarcated as the Khangchendzongna National Park. Poachers, from outside the country, infiltrated the area for hunting during the summers. They planted rows of hedges with traps so that animals from the high zones like the musk deer, the renowned "Shaepi" of Sikkim, the monal, the tragopan could be caught easily. Hence, "Operation Trap Demolition", a three-pronged attack, was launched in the national park—for the first time in 1977—by the Wildlife Wing of the Forest Department, aided by the Sikkim Armed Police.

The main objectives of the operation were: to apprehend the poachers; to make a census of the wildlife sighted; and to demolish the hedges by uprooting and rendering them ineffective for laying traps. Three notorious poachers from outside the country were apprehended and convicted in a court of law. A similar operation was launched in 1978 and a lesser number of poachers were apprehended and convicted. Since then, such operations have become a yearly feature of the department. Also, hunting licences have been banned till such time as the census will be complete.

THE RED JUNGLE FOWL

THE KALIJ

A RED PANDA

Educating The People

The Wildlife Wing of the Forest Department organises student rallies and exhibitions. Public gatherings are addressed by the Ministers, in remote areas, every year with a view to publicising and educating the people on the subjects of environment, ecology and the importance of the co-existence with wildlife. Village leaders are also invited to record their difficulties, views and suggestions which are thoroughly examined by the department. There has been a marked increase in the faunal population due to extension of the Wildlife Protection Act and massive afforestation done by the department over the last ten years. In the current year itself, 46 lakhs of free fruit, fuel, and fodder seedlings, as against a previous 43.75 lakhs, have been planted by the department to maintain the ecological balance. ■

A. Pazo and M.K. Lama

China and some other countries every portion of a tiger was regarded as a powerful aphrodisiac. The carcass of a Sumatran rhinoceros was reportedly sold in small bits and pieces for a total of £1,500 in 1967 by aphrodisiac traders. The rhino horn container is claimed to have properties for detecting poison in drinks and there are some who believe that the powder of the horn as well as the rhino's urine have aphrodisiacal properties.

The prices of animal skins and rugs and the demand for the mounted heads of wild beasts soared so high in recent times that the fur traders, encouraged by the fashion houses, flooded the Western markets with these products in the hope of making a fast buck. Tiger-skin coats (at prices up to $3,000) were vigorously promoted in Europe and America till the Indian Government banned tiger shooting and the export of tiger skin.

The Friends of the Earth Society also embarked upon a new scheme in the early seventies to save non-returnable animals. If the sixty odd species in question, including otters, tigers, leopards, seals, whales and crocodiles became extinct, no technology would bring them back. So, concerned mainly with the slaughter of animals for fashion, the Friends were determined to bring this particular battle to Britain and for two reasons. Firstly, the World Wildlife Fund estimated that 85% of the international fur trade passes through London, and secondly, it has proved virtually impossible to stop the supply of skins at source.

"Policing the vast areas," said a report of *The Times*, London, in early 1972, "where poachers work, is beyond most of the nations involved. For example in the Somali Republic where the leopard is almost exterminated, the Government has passed a law giving it total protection. It is illegal even to own a leopard-skin. But since a leopard skin is worth more than the average yearly income of a Somali shepherd, there is little chance of the species survival... In Kenya the poachers are well-organised, sometimes operating in 80 strong groups. One party of 68 poachers has 42 fire-arms, including two Bren guns, and four Stens."

Yet, despite an appeal from IFTA for a voluntary ban on killing of seven particularly endangered species—the snow leopard, the clouded leopard, the La Plata otter, the giant otter, the leopard and the cheetah—no guarantee was forthcoming from the fur traders as to the stocks held by members before the ban, as to members' support, or even the action to be taken against a member defying the ban. And when a leopard skin fetches a minimum of £400 in UK, any such guarantee is hardly likely.

According to one top official of the International Fur Traders Federation: "Voluntary ban (as appealed by the Friends of Earth Society) obviously has its limitations and the Government should introduce new laws that would protect the spotted cats and other endangered species."

Undoubtedly the co-operation of such concerned groups and associations is valuable, but neither this nor the advice of the conservationists, nor the restraints of the true game hunters will decide the future of the endangered species. The responsibility for their survival or extinction lies squarely with the Governments of the world.

Public opinion is a powerful weapon and it can force a Government to take prompt action in saving wildlife that is threatened. A recent case concerned the great Indian bustard. It was saved from being killed by Saudi noble men under the patronage of the Indian Government

The future of Indian wildlife rests on a concerted effort to protect harmless animals and birds. Their protection is the need of the hour. But, before the wildlife can be protected effectively and so preserved, the people of India must be educated on this subject. For, if conservation must succeed the people and the Government must work towards it as one. ■

Power And Lust In Washington

by Valeska Von Roques

WASHINGTON — Less than half an hour after meeting him, civil servant Hal Lyons offered his host David Green oral sex, popularly known as "a blow job." The price was to be $200, including naturally the amorous services to be provided by Lyons' pretty woman companion, herself a state department employee.

Green agreed and the money changed hands but then, the cupboard in the room swung open and out came Thomas Wise, who, like Green, is a police officer, and had carefully recorded the entire scene. Lyons fell in a trap. Early this year, he went on trial on charges of procuring and unethical behaviour.

Moral scandals seem to be part of the Federal Capital's scene just like cherry blossoms in spring time and crowds of tourists in summer time. They hardly arouse big attention.

But when, several weeks ago, they found in the bathroom of a Democratic politician the corpse of a young boy who committed suicide and who was known to police as a pederast, the discovery should have normally cast a dark shadow across the career of Congressman, Frederick Richmond. As it happened, he was already forced to resign his seat two months earlier on charges of involvement in a drug affair, and tax fraud.

The revelations about the alleged sexual abuse of youthful messenger boys by members of Congress has also been something that had gone beyond the limit of what is tacitly tolerated in Washington's secluded political world.

By overstepping such a limit, the powerful Chairman of the House of Representatives' Finance Committee, Wilbur Mills, in 1974, had abruptly snapped his successful career. He was caught watching the midnight bath of his lady friend Fanne Fox, a striptease dancer, in a lake in front of the Jefferson Memorial.

Or take Wayne Hays. As Chairman of the House Appropriation Committee, he was overseeing the operating costs of Congress and won a solid reputation as a money-pincher. So it was doubly painful when it leaked out that the moralising Mr Hays was misusing public pennies for the upkeep of his girl friend Elizabeth Ray. He set her up in an office as a secretary though she could not even type. Hays lost his seat and his mistress wrote a best-seller.

Last year, a blonde, buxomy lady lobbyist Paula Parkinson held the city at tenterhooks. The story went around that Ms Parkinson had recorded on videotapes her nightly exercises with politicians of both parties to sell them to *Playboy* magazine.

Simultaneously appeared in bookshops the memoirs of Rita Jenrette, the wife of a Congressman, first published in *Playboy* and illustrated by her bared breast.

From the memoirs, the shocked American public could learn that their representatives do not hesitate to perform sexual activities in front of the *holy of holies* of the U.S. democracy: on the steps of the Capitol where usually are taken only the pictures of visiting scout and church groups with their senator.

With lurid detail, Mrs Jenrette described how her husband unbuttoned her furcoat, while she opened the fly of his trousers, how he pulled up her blue silk gown and both made lusty love "in the shadow of a powerful column in front of the Capitol."

Mrs Jenrette explained away her daring revelation as being an example of the rare intimate moments she had experienced with her husband, without interruption or a telephone call—an apparent vengeance for the countless other erotic adventures of her husband at which she was not present.

Rita discovered her husband one day on the top floor of their summer house in the arms of a voluptuous lady who, he afterwards insisted, was none other than Shirley Maclaine. To make him lose his penchant for alcohol, John was sent to a sanatorium, where he stayed longer than on previous occasions, because a warm-hearted woman warden there had helped him to pleasantly while his time away.

John is not the only bad boy in the rotten world of the Federal Capital which had revealed itself to his unsuspecting, puritanically-educated wife from Texas.

The Governor of an American Federal state with whom the Jenrette couple had spent a weekend, pursued her till under the shower. Grave-faced senators pinched her bottom and whispered shameless offers into her ear. A lobbyist put drugs into her food to make her agree to a love game with other couples while her John would sit by in drunken stupor.

Such excesses have become traditional in Washington and part of its political culture. A newly published book by the well-known political analyst Garry Wills titled *The Kennedy Imprisonment* shows that even in the Kennedy clan the "competitive discipline of lust" belonged to the education of the boys in the same way as rough sport competitions and lunch-time political talk.

Wills has portrayed Joseph Kennedy Sr, the founder of the political dynasty and former ambassador to London, as a man notorious for his lust for women. He reportedly liked to enter the bedrooms of the girl friends of his sons on weekend visits to show everyone that in the Kennedy realm, he was the top cock.

He liked to boast about his love affairs with young film stars and as he succeeded in gaining the friendship of a true great star, Gloria Swanson; he did not mind taking her ostensibly along with his pious wife Rose, on foreign travels.

The near-compulsory need for women of his second son John F. Kennedy carried, according to Wills, already "pathologic features." One of J.F.K's student friends describes in Wills' book how things used to happen in the young senator's apartment: A young blonde girl from West Palm Beach came into the house and disappeared with John into the bedroom. He would come out later complaining he had to get rid of her promptly because she was dumb. Shortly, another girl would come in, probably the one for the the night. The next morning, yet, a third one would show up at the breakfast table, young Kennedy would take girls in "by the dozen."

In his affairs, Wills asserts, Kennedy displayed neither discretion nor finesse. As a young navy officer he lost his job with the Defence Department in Washington because he would enjoy the company of a nordic beauty queen named Inge Arvad who was known to be on the Nazi payroll.

As President, Kennedy once informed British Prime Minister Harold Macmillan how he should carry out his duties of a perfect host: Kennedy suffers from headaches each time he has to be without a woman for a long time.

And as Kennedy finally brought into the White House, Judith Campbells, the mistress of the Mafia Boss Sam Giancana, he had reached doubtlessly a "new frontier" of a kind different from the one mentioned ceaselessly in his Presidential oratory.

Lyndon Johnson, Kennedy's successor, tried to outdo his predecessor even in this area. His promiscuity was legendary in Washington.

"This President at least does not discriminate" was the way he was being described in Washington because of the quality of women he would take with him in bed. This is at least the way US author Myra Mcpherson tells things in her book *"The Power Lovers."*

According to Ms Mcpherson, Johnson liked to compare ladies to the cows of his ranch when he boasted he had stamped one with his brand iron.

There were no locks on the doors of the bedrooms in the Johnson ranch—the woman visitors had to expect nightly visits of her host who, says Ms Mcpherson, would coo to them in his rocky Texas drawl to roll over... "Here comes your President."

But even obscure politicians know how to use their power for the satisfaction of their private lust. They have built for themselves in the faraway recesses below the Capital—a world for their secret privileges carefully concealed from the unsuspecting eyes of tourists thronging respectfully through the marble halls.

That secret area contains swimming pools, saunas, slimming and rest rooms accessible only for the members of the two Houses, shops and restaurants with inflation-proof prices and a private bank providing loans at conditions unavailable in the real world up-stairs.

The US people's representatives get their shoes shined for free, their hair done for a small tip, they ride, unseen by the public, in their own elevators from which are banned even their closest collaborators. That these privileges also include the free use of sexual pleasures is quite natural.

But it would be wrong to believe that Washington is a city eternally immersed in erotic joy. In fact, complains journalist Blythe Babyak in *Newsweek* magazine, it is a city where sex is secondary and where the only romance is the one with power.

There is no time for flirting in Washington. Day in day out, men and women meet one another at countless cocktail and dinner parties. But these are just a continuation of the workday with a glass in hand.

Thus, says an article in the newspaper *The Washingtonian*, actress Sophia Loren might sit on a sofa with a deep-cut decollete, but when Tip O'neill, the powerful House speaker steps into the

RITA JENRETTE'S (seen with her Congressman husband, John) revelations about her "escapades" on the steps of the Capitol shocked Americans when they were first published in Playboy.

room, all the men promptly turn their back on her and rush to him.

A New York career woman transferred to Washington, describes her own experience, "I became suddenly invisible, at the fabled Washington parties, men marched past me to that spot in the room where they felt was the center of power."

These complaints about the erotic desert of Washington appear not to fit in with the sexual exploits with which the City's manfolk keep shocking the prudish provincial population. But they complement one another. Since the fight for power is in Washington such an absorbing and stressful passion, there remains little time or energy for the citizens' intimate activities—at most for fleeting joys on the level of a massage salon.

At the same time American politicians may gain the exaggerated illusion about their role as men, and as men wielding power.

This corresponds to the specific American tradition of machismo which makes US politicians and their partners appear most of the time as taken directly from the scenario of a Western. The ideal image is the "right guy" who works hard and plays hard, who drinks hard and has many love affairs, who fights the bad guys and beats them into submission with his fists and his gun.

In this thought-system world policy itself becomes a global competition of manliness, according to a book, *The Machismo Factor*, published recently by Lucy Komisar. Under its influence, the American politicians (naturally not only American, but particularly them) cool their feelings for the interest of the nation.

Like John F Kennedy, they dream of rubbing the nose of thier rival "into the ..", will not to be "kicked around" (Jimmy Carter), or they want to see the enemy go down, whining, not with a thud, in the liking of Defense Secretary Caspar Weinberger. Ms Komisar quotes Lyndon Johnson's contempt for the Vietcong and his boast he would cut the Vietminh leader Ho Chi Minh's sexual organ off if he ever laid his hands on him

SENATOR HARRISON WILLIAMS (with his wife) talks to reporters after being expelled by the Senate Select Committee for his conduct in the Abscam case.

WILBUR MILLS, the former Chairman of the House of Representatives with his lady friend, Fanne Fox, the striptease-dancer, at the Boston Burlesque Theatre. This "friendship" ruined Mills's career.

For these machos, says Ms Komisar, negotation equates cowardice. For John F. Kennedy, his advisors, cautioning him against a direct confrontation with the Soviets during the Cuba crisis, were mere weaklings who wanted to "save their balls". Richard Barnet, the American politolog, calls this attitude, "The hairy breast syndrome".

No wonder then, if these men believe that they must have their last word also in private life with womanfolk. In this respect, however the counter-balancing influence is their puritanical education which force them to extoll before the electroate the virtues of the holy American marriage

Thus, an American politician's wife is required to stand by his side when he shakes hands with workers at a factory gate in the morning, at the lunch table in front of the inevitable chicken and poison-green coloured tin peas, and listen while he pours out eternal electoral platitudes.

And when he is finally elected to office, she must stand by him with their freshly-bathed children and possibly hold the Bible on which he will be sworn in. Their marriage may have long fallen into ruin, yet the facade must be preserved.

Although nearly every second marriage ends in divorce in the United States, a divorce is a black spot on the career of a politician who wants to safeguard his marketing value. This has prompted Edward Kenedy to take along once again his long estranged wife during his presidential nomination campaign, and let her pronounce before the voters his election slogans.

The barely recovered Mrs Kennedy, who had undergone treatment for alcoholic abuse, hardly looked like a happy bride—rather a zombie with a wind-up speaking automat inside. Once Edward Kennedy's attempt at becoming a presidential candidate was over the spectacle was promptly terminated and their separation was renewed until the next election (Senator Kennedy has since divorced his wife and decided not to run for Presidency in 1984.)

For these reasons, unavoidable Washington divorces are pronounced preferably in August. With everyone fleeing the oppressive heat the time has come, according to *Washington Post* gossip columnist Diana Mcleellan, for politicians to trade their wives for newer models.

But divorces in Washington politics are rare, simply because romances likely to destroy a marriage are rare Love affairs are rush jobs, performed, according to Ms Mclellan, in cars, in bathrooms, on the black leather sofas of a representative's office or—in a celebrated case—in the private sauna of a cabinet member.

Since American politicians are so terribly busy working for the common good, some of them consider it unworthy of themselves to seek out company for thier bed. It is the duty of their collaborator to find partners for their boss for a bit of togetherness between two ballots in Congress or two stops on an election tour

The serious paper *The Washington Monthly* some time ago described how it used to be with Edward Kennedy, a man known around the Federal Capital for his countless love affairs. On occasion, the *Monthly* asserted, he didn't know beforehand his woman companion. She was selected by his collaborators as the female type the Senator preferred and then asked whether she would like to have a "date" with him This, as a rule, meant a lunch and then a "quickie" in bed.

Teddy Kennedy's case shows, however, that some change has taken place in Washington's "man" club The *Washington Monthly* article clearly established that Kennedy's problem with women has become a problem for women with Kennedy With his compulsive urge for women the senator had demonstrated a giant baby-ego which must be catered to constantly, a heavy case of arrested development that made it difficult for women to vote for him.

Politolog Garry Wills also believes that Edward Kennedy's pronounced penchant for throw-away affairs had badly hurt him during his quest for the Democratic nomination While this type of behaviour of his elder brother was watched with secret admiration by the Liberal intelligentsia—considering it a sign of masculine vitality—the same Liberals today see Teddy's attitude as mere contempt for women, something no longer tolerated in those quarters

The changing climate has also prompted many Americans, and not only the prude moral majority, to demand after the Watergate debacle a new political ethic which would not exclude private life of the politicians.

But basically, the Washington interplay of power and sex is not likely to change soon. For it is still the main stimulus for all the participants. Power, in the words of Henry Kissinger—a man not lacking in experience—is for most Washington women themselves the "best aphrodisiac". ■

(By special arrangement with *Der Spiegel)*

In The States

The Sinking Valley

SRINAGAR: "The world's most beautiful scenic spot" -the 1,500-year old city of Srinagar, the "Venice of India" -will become a swampy, polluted city in the near future, and the jewel of the city---the Dal lake- will be a silt-laden, weed-ridden area for our grandchildren.

Several studies conducted by experts show that if the present rate of deterioration continues, "Dal and Nagin lakes will be lost within the next 80 years and what will remain will be a small spring in the lakes, surrounded by vegetable farms and swamps."

And what is Srinagar without Dal lake?

Srinagar has been the dream garden-city since the days of Ashoka. The Mughals added formal beauty to nature's loveliness by laying out fanciful gardens, the likes of which only they could work out of imagination. Face to face with the ethereal beauty of the valley, Shah Jehan rapturously exclaimed:

Agar jannat bar ruye zamin ast,
Hamin asto, haman asto, haman asto

("If there be a paradise on earth, it is this it is this, it is this!")

The very names of the gardens they built sound like the cascading waters from the serene, icy mountains into the silver shimmering lakes. *Shalimar, Naseembagh* (garden of breezes), *Nishat, Chashma Shahi*.

The rippling waters of the Dal lake have mirrored, for centuries, the terraced gardens which surround it, the ageless snow-capped mountains and the azure skies. Presiding over the scene is the Shankaracharya temple on a 400-metre high hill and Pari Mahal, the Buddhist monastery converted into a school of astrology, built by Shah Jehan's son, Dara Shikoh. The lake is also the main thoroughfare of Srinagar, connected as it is by a network of canals and the Jhelum river.

All this may be lost to us forever. The reason for the gloom is the abominable condition of the lakes themselves. Dal lake has already shrunk by more than half in the last 50 years. Its present area of 19.6 sq km comprises 11.7 sq km of open water, 3.9 sq km of floating garden, 2.6 sq km of marsh and 1.4 sq km of land.

The lake, which now attracts millions of tourists, may soon stand as a monument to official apathy and the despair of conservationists, environmentalists as also tourism officials, tongue-tied as they are by the bureaucracy.

In fact, there is already a drop in the number of tourists visiting Srinagar. The State had earned Rs. 27 crores in 1976 from tourists. It was expected that the revenue would double by 1990 and treble by the year 2000. The fall has come as a surprise to the authorities but not strong enough to shake off apathy.

Yet, as if in acknowledgement of facts, the Government has been developing places like Kokernag, Ladakh and other areas to attract tourists to the State.

If the lake continues to shrink at the present rate, it may be reduced to a mere channel in three decades, according to Prof. J. Dave, Professor of Environment Management and Dean of the Environment of Science, Jawaharlal Nehru University.

GROWING VEGETATION. Much of the area occupied by the Dal lake is now surrounded by vegetation and swamps. Life is slowly being choked out of the once-limpid waters of the Nagin Lake (left).

The biggest blow to the lake came in 1952 when its water level fell during the floods. By 1956, it had been reduced by about 30 per cent. The nullahs and drains flowing into the lake have been adding sand and mud to it, much to the delight of land-reclaimers. Already hundreds of hectares of the lake area has irretrievably gone over to cultivation.

There were suggestions that the drainage of the houseboats should be taken to the shore in order to reduce the pollution, but few boats have cared to implement it. Another suggestionhas been to ring the lake with a concrete drain to prevent muddy water from flowing into it. This will also have the advantage of checking silting.

A committee appointed by the Government found the sanitation very poor "and there is a very real risk of cholera and typhoid epidemics breaking out" here. The financial effects of such an epidemic can be disastrous to the State "as it can have a permanent effect on the tourist industry."

"The increasing population around the lake, which includes part of Srinagar itself, over-grazing of the catchment areas, increasing intensity of agriculture, both in the catchments and in the floating gardens and wastes from the houseboats have resulted in the inflow of nutrients and as a consequence the further deterioration of the lake," the committee warned. The tragedy is that the thousands of houseboats that the lake supports are also among its killers. The *shikaras*, as these boats are called, are the dischargers of so much filth and excreta that the city, which gets its water from the lake, can never be free from water-borne diseases.

The city, in its turn, has also been dumping waste into the lake with great abandon. The floating vegetable discards, earth and aquatic plants clog the waterways. To make way for the boats, the owners remove and dump the plants in areas which are slowly being filled up. Indeed, many plots of land thus created have been illegally occupied for housing and cultivation.

The prolific growth of weeds and other aquatic plants, fed on the ever-increasing inflow of chemicals, fertilisers and pesticides into the lakes from the surrounding orchards and cultivated farms, has been choking the life out of the once-limpid waters.

In fact, so thick is the growth of these plants that they have practically decimated other acquatic forms of life like fish. An anxious Central Inlands Fisheries Research Institute has taken strong objection to the creation of artificial islands for vegetable cultivation "as it results in nutrients from the lake bottom being lost, affecting fish growth."

Thousands of fishermen depend on the lake for their livelihood as the lake provided some 1,000 tonnes of fish every year. As a remedial measure, the Regional Research Laboratory in Jammu has developed a special kind of fish which can help in clearing the water and eliminating weed and algae.

Despite the heavy growth of weeds, water hyacinths and other plants, rarely is any de-weeding operation taken up. Because of the deterioration in the quality of water, not only the lake's aesthetic beauty but also its recreational potential has been affected, making it increasingly unsuitable for swimming, boating and fishing. The luxuriant growth of macrophytes like *Myriophyllum spicatum, Nymphoides petata* and *Phragmites communis* cover most of the lake surface, endangering its life span. These macrophytes decay and add to the layers of the lake, making it shallow.

According to two biologists who have studied the problem, "the fern *(Salvinia natans)* has reached a nuisance level by covering more than nine per cent of the lake area. It has carpeted the water surface, excluding light, thus hastening the decay of the macrophytes."

The problem of silting, too, is so menacing that experts of the Commonwealth Fund for Technical Co-operation, after a thorough study, recently suggested increasing the open water area so as to cut down the quantity of nutrients and sediments entering the lake. The five experts in 1978 suggested the setting up of a Dal lake corporation. They also wanted afforestation taken up in a serious way in the catchment areas, especially in the denuded slopes, and confining grazing to the lower areas.

The ecological problem of Srinagar was first noticed as early as the fifties, yet concrete steps towards stemming the rot have been tardy. Apart from studies by experts and a Rs 20-crore plan which is still on paper, no major attempt has been made to save Dal lake and Srinagar valley for future generations.

Unless serious steps are taken to prevent silting by afforestation and dredging of the lake floor, de-weeding, checking organic and inorganic pollution and reclaiming the lake area from the encroachment of land mass, Dal lake may go the way of Naini lake, a once-beautiful sheet of water now given over to silt, weed and pollution.

And once Dal lake dies, Srinagar and the whole Kashmir valley will follow---and the world will be deprived of one more bit of pristine beauty.

E.R. Ram Kumar

A Tale Of Tribal Exploitation

DALLI RAJHARA: The Government of Madhya Pradesh, one of the poorest States (next only to Bihar and UP), must have spent a couple of lakh of rupees in an effort (which eventually boomeranged), to boost up the Industries Minister Zhumuklal Bhendia whose future as a tribal leader is threatened by the growing strength of Shankar Guha Niyogi in Bhendia's constituency—the villages around Durg and his home town, Balod.

Since Niyogi organises a massive get-together of his followers among the mine workers and the tribal farmers, unionised as Chattisgarh Mines Shramik Sangh (CMSS) and Chattisgarh Mukti Morcha, on December 19 every year to commemorate the martyrdom of a local tribal, Veer Narayan Singh in the so-called mutiny of 1857, Bhendia decided to hold a parallel *jalsa*, ostensibly initiated and funded by an association formed for the uplift of Adivasis. Chief Minister Arjun Singh and four Adivasi and Harijan ministers, including Mr Porte, whose brother is Collector of Durg, flew in by two helicopters. Bhendia claimed that 21 MLAs and one MP also attended the function. Needless to say the Government machinery was used extensively to transport villagers to the rally in Dalli Rajhara. The cost of flying the two helicopters 1600 kms (Bhopal-Dalli Rajhara-Bhopal) for fuel alone must have been nearly Rs 40,000.

When I asked Bhendia about his future plans for the tribals of the region, he announced the commissioning of an epic poem on the life and work of another tribal martyr of the region! When I pointed out to him that though he has been their leader for a couple of decades, the tribals had hardly progressed, the Minister conceded that he had failed to persuade the Government to implement some "good programmes"! Incidentally, Durg is considered to be one of the nine growth centres in Madhyo Pradesh, which needs 45 growth centres for as many districts.

The Government of this largest State in India has a per capita monthly income of only Rs 72 and yet it has spent several lakhs of rupees in the last few years to show off, much like proud owners of heirlooms, the impoverished, oppressed and exploited Bastar region as a "home of colourful tribes". The Government-sponsored film maker Shyam Benegal, travel writers and hoardes of known and unknown journalists have been invited at State expense to see and depict the Bastar tribals as colonial anthropologists would have done—self-consciously eloquent about the pulse beats of the young camping in the *ghotuls* (havens where marriages are made), the rhythm of the tribal dances, the quaint bows and arrows of the children of the jungle and so on.

At Niyogi's annual rally, we encountered reality. The faces that looked at us on the dais were not the kind that could have excited the curious in search of the exotic. They were not live totems of a delightfully savage and stunningly static tribal culture. They were devoid of colour, sparkle. Those people in CMSS's cherry red and deep green uniforms had never had a square meal all their lives nor had their forefathers. They looked resigned. Daily exploitation by the bribe-hungry policemen, forest officials and the local leaders was their fate and they seemed reconciled. They had mutely suffered rape of their women and had helplessly watched the killing of their colleagues, women included, by the police in 1977 and 1978 when they rose in protest under the leadership of Niyogi.

I did not get a chance to investigate how much Niyogi has done for the tribals and how. But journalists in the State seem to be admirers of the man and his work. His latest programme of *nashabandi* (ban on liquor) certainly has hurt interests of liquor vendors so much so that they have now launched a murderous offensive.

Mr Sharma, a colleague of Niyogi's, alleges that one of the main liquor *thekedars* tried to kill him by driving his truck at Sharma's scooter late one night as the latter was riding along the lonesome road between Dalli Rajhara and Durg. The truck slid down the slope, the driver lost control of the vehicle for a few seconds which gave Sharma a chance to escape into the jungle. He tried to stop a cyclist and then a scooter-rider. But when the men saw blood on his forehead they fled. However the scooter-rider whose help Sharma had sought was able to indicate the likely spot where the injured Sharma could be found when Niyogi came looking for him.

When some of us journalists went to a high-ranking official to seek accommodation at the Government Rest House, and later when we went to see the Ministers, we saw these liquor *thekedars* exchanging warm greetings with the people in power.

Niyogi used the poor people's money to stage an impressive three day get-together. He invited all kinds of people to address the tribals—Lok Dal's Purushottam Kaushik (ex-Minister), Gandhian Sushila Nayyar, Shetkari Sanghatana's Sharad Joshi, trade unionist George Fernandes and Arun Shourie. George and Shourie did not turn up. Nayyar was invited because she is chief of All India Prohibition Council. Kaushik, because he is said to have helped Niyogi when he was arrested under the National Security Act in early 1981 and Sharad Joshi came under the mistaken impression that a journalist friend of his was arranging a private meeting between him and Niyogi about whom Joshi hardly knew anything.

The tribals came on foot, on bicycles, by buses and by hired trucks to the CMSS programme. Nearly 8,000 people ate two meals during the three day mela. On the second day of the meeting, Niyogi's rivals tried to provoke fights by blocking the CMSS delegates' trucks right under the nose of Government officials. But Niyogi managed to control the situation by asking his followers to retreat. He then sent them out by different routes.

Nothing could have proved Niyogi's strength as management of this crisis did. Apart from that there was this undeniable fact that while Bhendia used the Government machinery to collect 25,000 people for two hours, the CMSS show, funded by the poor themselves went on for three eventful days.

Sheela Barse

NO MORE COLOUR, NO MORE SPARKLE. The tribals of Bastar are resigned to their fate—one of rank exploitation, by Government officials, from beginning to end.

NO SIGHT FOR SORE EYES. Vultures feeding on a dead animal in a drought-hit area.

Drought In The Hills

SIMLA: Himachal Pradesh is in the grip of a severe drought for the third year in succession, resulting in extensive damage to food crops, potatoes, pulses, fruits and fodder to the tune of Rs 44.42 crores. According to a recent survey conducted by the State Government, about 21.30 lakh people have been directly hit by the drought. These families have lost between 25 per cent and 100 per cent of their crops.

The kharif sowing during 1982 was quite normal and the prospects of the crops during the year appeared bright initially because of the well-spread rainfall. But these hopes were dashed when the monsoon withdrew abruptly in the first week of August last year. Later, there were some irregular and erratic rains in certain parts of the State which did more harm than good as they resulted in soil erosion and floods. Following the failure of the rains, the standing kharif crops started withering and soon there was widespread drought.

In November last year, the Central Government had deputed a team of experts from the Union Ministries of Planning, Agriculture and Finance to Himachal Pradesh for an extensive on-the-spot study of losses caused by drought and other natural calamities. After the team submitted its report, the Centre released Rs 17 crores to the State for immediate relief measures for the people and also to advance short-term loans to the farmers for the next sowing season.

Besides approaching the Central Government for liberal financial aid to meet the situation created by the drought, the State Government has announced various relief measures to mitigate the sufferings of people affected. The Government has announced the remission and suspension of land revenue where the losses have been estimated to be between 25 per cent and 100 per cent. Recovery of all Government loans have been deferred for one year. The Government has also decided to spend Rs 7 crores on various relief works for employment-generating schemes like roads, irrigation and water supply schemes, etc.

The State Government, however, does not seem to be happy. According to a spokesman, the Central aid is "not even a drop in the ocean-in view of the magnitude of the damage."

Meanwhile, two Opposition leaders, Mr Shanta Kumar, a former Chief Minister and Major Vijay Singh, an independent legislator, have accused the State Government of 'uneven' distribution of relief in the drought hit areas and of diverting the drought relief funds received from the Central Government towards the completion of a number of schemes under execution. ■

A Special Correspondent

That's Business

From Our Special Correspondents

IS Mr L.K. Jha, Chairman of the Economic Administration Reforms Commission, losing his patience? Addressing the Institute of Financial Management and Research in Madras on January 4, he said "The concept that nothing should be allowed to be done without a licence or a permit is not a symbol of radicalism but an extension of Section 144 of the Criminal Procedure Code." These are strong words.

Interviewed, Mr Jha confirms that he has been correctly quoted and points to the need to build up public opinion. But public opinion is already there, in its vanguard being many knowledgeable observers of the economic scene. The latest convert to the view that over-regulation has been proving counterproductive is Mr Jha's erstwhile colleague in the ICS, Mr B.K. Nehru, now Governor of Jammu and Kashmir. In a paper presented at a workshop organised recently by the Associated Chambers of Commerce and Industry, he has urged the replacement of a "command economy" by a competitive economy. Elaborating, he said "This implies an elimination of physical controls and their replacement by generalised regulations which so affect the market as to achieve the same social ends. This would also make the cosseted Indian industry more efficient."

Mr Jha explains that the recommendations the EARC has made to the Government on the subject of controls come under three broad heads: industrial licensing, working of the Monopoly and Restrictive Trade Practices Act and rent control laws. Asked whether he feels that the Government is sitting over the recommendations, Mr Jha is naturally mum. He clarifies, "The thrust of the recommendations is towards trimming controls and removing procedural hurdles that make for delays. We have given them a framework of criteria but not actually identified specific controls that could be jettisoned."

Mr Jha refuses to comment on my observation that the Government is most unlikely to go beyond tokenism in ridding the economy of excessive controls unless the exploitative nexus between fund-seeking politicians and profit-greedy industrialists is broken. He asserts that this has nothing to do with his terms of reference. Hyper-technically he may be right, but nobody can fully delve into the issue of controls and yet remain oblivious to their political implications.

The EARC has also dealt with direct tax laws. Here, too, the Government has still to bestir itself. Mr Jha says: "The Commission is concerned with the improvement of tax administration and not rates of taxation, which are to be determined by the Government. Our recommendations, if approved by the Government, could be incorporated either in the Finance Bill or implemented through a bill to amend the Income Tax Act and not made a part of the budget proposals."

Pre-Budget Mems

"The Government has no business to be in business," Mr S.L. Kirloskar had declared in his valedictory presidential address to an annual session of the Federation of Indian Chambers of Commerce and Industry. The corporate grapevine has it that he singed his fingers. Whether the story is apocryphal or authentic, FICCI presidents have learnt to adopt a low profile vis-a vis the Government during the run-up to the budget, the thinking obviously being that nothing is to be gained by crossing swords with a powerful interlocutor.

The FICCI, under Mr G.K. Devarajulu, is suitably circumspect. Its pre-budget memorandum to the Government is being kept a closely guarded secret. Mr Devarajulu himself is so taciturn that he is not prepared to go beyond a platitudinous repetition of the state of the economy. Nonetheless, all businessmen think alike. What the FICCI has proposed can be surmised from the pre-budget memoranda of its affiliate chambers of commerce which are, of course, publicised. The oft-repeated demands are: Reduce corporation tax to 50 per cent, de-link depreciation allowance from historical costs, give relief in respect of excise duty and sales tax, reduce commercial lending rates.

MR G.K. DEVARAJULU, President, Federation of Indian Chambers of Commerce and Industry

Mr Devarajulu would rather talk about the FICCI business delegation which he recently led to the United Arab Emirates. Reminded that the Arabs have till now not cared to invest in India, he says: "Because of recession in the West, they are now looking for investment opportunities in other regions. What they want is specific initiatives by us, whether it is deployment of their money in India or export of our technology to UAE. For example, authorities in Sharjah want to set up units to manufacture shoes and electrical appliances. We can also collaborate in third countries in Africa." The FICCI and the UAE Chamber of Commerce are to set up a joint-holding company to promote joint ventures.

Output Down, Profit Up

The Calcutta-based Chloride India Limited seems to have formed the healthy habit of winning accolades on the export front. It was prominent among the companies which recently received trophies from the President for export performance in 1979-80. Earlier also, in 1975-76, the company won a trophy and in the interregnum, there have been three certificates of merit. Moreover, Chloride India was the first company to set up a 100 per cent export unit (in Haldia) outside a free trade zone. Its other two units are in Shamnagar (West Bengal) and Chinchwad (near Pune).

MR J. SENGUPTA, Managing Director, Chloride India Ltd.

The company's exports of car batteries in recent years have risen thus: Rs 5.18 crore in 1980-81, Rs 6.84 crore in 1981-82 and Rs 10 crore (estimated) in 1982-83. Over 80 per cent of its exports are to the Soviet Union. If Chloride India wants to make headway in other markets, it will have to develop batteries for the models in vogue there, particularly the Japanese cars. At present its Haldia unit is operating at only 35 to 40 per cent of the licensed capacity.

"Why is the Exide battery so expensive, its price ranging from Rs 600 to Rs 800 depending on the size?" is a question many car-owners would be prone to ask. Mr J. Sengupta, Managing Director, mentions the high price of lead which is fixed by the Government on the basis of the metal's international price. He also refers to the "reasonable" refund made for old batteries by his company. However, it seems that the battery industry could, for the consumer's sake, do with more competition. At present the only other well-known companies in the field are Mysore Electro-Chemicals (MEC) of Bangalore, Standard of Bombay, AMCO of of Bangalore and Willard, which is located near Ghaziabad.

Mr Sengupta, who is slated to take over as President of ASSOCHAM in April, expects the turnover of his company to increase from Rs 66.85 crore in 1981-82 to Rs 69 crore in 1982-83. Last year the company paid a dividend of 20 per cent.

Defeatist Approach

The Shanti Prasad Jain Management Research Centre recently took a useful initiative in organising a three-day seminar on labour-management issues in collaboration with the Bureau of Public Enterprises, the National Labour Institute and the International Labour Organisation. It is, however, difficult to share the views of some participants, including business management professors from abroad, who tended to adopt a defeatist approach towards the prickly problem of multiplicity of unions and their politicisation.

This malaise can be alleviated, if not eradicated, by making efforts to ensure that the leadership of unions comes from the ranks of workers and by introducing a proper secret ballot system—as against the check-off system which is generally supported by the party in power because of political motives—for determining a representative union. In West Germany, which has an enviable record of good industrial relations, there is the apex German Trade Union Federation, popularly called DGB (Deutsche Gewerkschaftsbund). Affiliated to DGB are 17 trade unions organised on the basis of "one industry, one union". We could study the West German System with much benefit.

Tight Money?

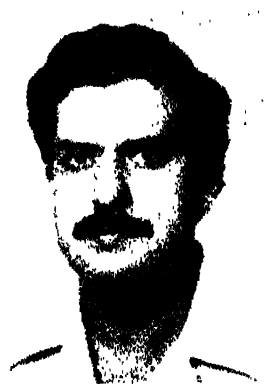
Reports emanating from Bombay only a few weeks ago spoke of tightness in the banking system. But Mr Vinod Dikshit, Joint Secretary, Banking Department, the Union Ministry of Finance, thought they were exaggerated. His thesis ran thus: although the ceiling fixed for increase in non-food commercial credit in the current financial year is Rs 4,600 crore, the expansion remains much below it being only Rs 2,672 crore till December 31. Neither has the increase in bank deposits been unsubstantial, being nearly Rs 5,000 crore. Therefore, there should be enough liquidity in the banking system.

Mr Dikshit's view notwithstanding, the inter bank call money rate had indeed firmed up at the ceiling level of 10 per cent, which is supposed to indicate a tight situation.

The discrepancy could perhaps be explained in terms of three factors. It seems that the rate of growth of deposits has not been commensurate with the rate of credit expansion stipulated under a ceiling as high as Rs 4,600 crore. The Life Insurance Corporation and the Unit Trust have been withdrawing funds from the money market. A number of public sector companies, running on loss or slender profit margins and unable to get their debt rescheduled, have of late been making forays into the banking system.

For all that, the inter-bank call money rate did come down to 5 per cent by January 13. Mr Dikshit may, after all, be right! ■

MR VINOD DIKSHIT, Joint Secretary, Banking Department, Union Ministry of Finance.



Save The Sandalwood

Nature's marauders and man have been responsible for the large-scale disappearance of sandalwood trees from their natural habitat. Unless adquate steps are taken for their protection, sandalwood may be lost to us forever.

by R. Krishnamurthy

NO Hindu home in this land of festivals ever goes without sandalwood. Sandalwood paste and *kumkum* are part and parcel of every Hindu religious ceremony While sandalwood carvings and handicrafts have been a matter of vanity to erstwhile Maharajas, a small piece of sandalwood along with a round polished granite slab is even today a necessary possession for every Hindu home

Of all sandalwood products, sandalwood oil is the most valued, although synthetic sandalwood oil, like synthetic rubber, has now come into market. The oil earns India a sizeable amount in foreign exchange

Nature takes care to hide her precious possessions against marauders and destroyers. Hence it is difficult to recognise a sandalwood tree if one goes by its perfume alone. For it is not the bark of the tree that is sweet smelling but the roots and the xylem vessels in the trunk. While the roots contain 5.75 to 6.0 per cent of sandalwood oil, the billets contain 4.5 to 5 0 per cent

How does one, then, decide that a particular tree bears substantial sandalwood? It is not necessary to fell the trees to determine this. With a Prestler's tree increment borer, one can examine the tissue. The hole thus made can then be plugged with bee's wax to ward off insect and fungal attack

This lovely creation of nature does not choose a fertile habitat for its growth. It thrives on eroded red laterite soil in the states of Tamil Nadu, Karnataka, Kerala, Andhra Pradesh, Punjab, Uttar Pradesh and Manipur. A moderate rainfall of 300 mm and a fair degree of sunshine throughout the year are congenial to its growth. It can grow even at elevations of 1,800 metres above sea-level, and under a rainfall of 300 cm.

Sandalwood or *Santalum album* of the family *Santalaceae* is a slow growing species and stores its heartwood for as long as five decades—this from its tenth year.

Karnataka was at one time the leading producer of sandalwood. However, the spike disease that struck most of its forests has rendered it dependent on Tamil Nadu to meet a major part of its requirements for the Mysore Sandal Soap factory, a State Government unit. Now, Tamil Nadu leads in sandalwood production, with its chief tracts in the Javadis, Chitheri, Denkanikottah, Kolli Hills, Talaimalai and Satyamangalam forests. Chitheri and Javadis have better quality of wood.

AT THE MERCY OF MAN A full grown sandalwood tree seen against the backdrop of a hill in Bannari at the foot of the Talamalai hills Left Uncleaned sandalwood barks await cleaning and processing at a sandal wood depot

Sandalwood is essentially a root parasite. Nearly 150 species of plants have been identified as host plants for sandalwood The chief among these are the *Lantana* bushes, a common sight in the forests. With commercial interest in sandalwood growing at an enormous rate, species like *Cassia siamia, Vagai (Albizzia lebbeck)* and *Leucaena glauca* have been introduced artificially as host plants.

Succulent Fruit

The sandalwood trees bear fruit in the months of September and October—purplish-black, globose and succulent drupes. Birds eagerly peck at these fruits and disseminate the seeds. Although the natural regeneration of sandalwood through such dispersal of seeds is guaranteed, it is advisable to artificially plant the seeds in order to avoid extinction. Nursery techniques are being evolved to hatch the seedlings and then transplant these into the forests So far, however, artificial introduction has not taken much root

The major pests and diseases that attack sandalwood are the spike disease and the stem borer Though different views were held on the causes of the former, it is now generally agreed that a mycoplasma-like substance may have been responsible for the spike. A spike-affected sandal sheds all foliage and there has been no cure so far.

Of the stem borers, the larvae of *Aristobia octofasciculata aurivillus* bore into the heart-wood The adults feeding on the bark kill the tissues outright if the tree is young. Although insecticides could effectively control this, no systematic steps have yet been taken in this direction. This calls for tremendous amount of devotion to work among the forest officials at the division level.

The worst enemy of sandalwood is, however, man himself, who ventures to cut down the trees illegally. Although sandalwood's other enemies can be tackled sooner or later, the last one evades the clutches of the law by his ingenious methods As the possession of less than five kilogrammes of sandalwood is not an offence in Kerala, unlike in Tamil Nadu, the State offers excellent scope for the illicit felling of sandalwood trees The offenders carry the felled tree in parts for final cleaning. Some such gangs are at times even armed during the clandestine operations.

Unless the Forest Protection Squad takes strong measures to root out this menace, the very existence of this wondrous gift of nature is threatened There may come a time when sandalwood will no longer wrap Hindu homes in its gentle perfume. ■

Letter From Calcutta

Foot And Mouth

IN spite of the Marxist furore, I am prepared to accept Lt-Gen A.S Vaidya's assurance that he did not justify the Congress (I)'s electoral pact with the Tripura Upajati Juba Samaj. But I cannot understand what the GOC in-C, Eastern Command, meant by claiming—as his clarification admits—that any organisation which tries to prove its bona fides through the democratic process rather than by any other means is taking a step in the right direction and is welcome. And why should this baffling reply be given to a specific question seeking his opinion of the poll alliance?

Perhaps the question should not have been asked. But it would have been perfectly appropriate and acceptable for General Vaidya to decline to reply on the grounds that military officers are not expected to air political views. Instead, he chose to give an answer that was obviously open to misinterpretation. The truth is that the tradition of army reticence is not very strong nowadays. General Cariappa and Field Marshal Manekshaw have never minced words, of course, but the tendency is now spreading to officers on active duty, especially in Eastern Command which, because of the problem areas of Nagaland, Manipur, Tripura and Mizoram, can often claim a valid reason for communicating with the Press.

Fun And Games

Some of the bitter controversy over Calcutta's Salt Lake Stadium, now being built, may evaporate if it is the venue for next January's pre-Olympic elimination rounds for Asian football. But there seems to be more than a little substance in the charge that sport is being sacrificed to money.

Mr Priya Ranjan Das Munshi, vice-president of the All-India Football Federation, complains that the Left Front's manner of raising funds for the stadium favours the rich, especially those with a lot of black money to get rid of. He has a point. For any company can get an application form from a small commercial bank, pay Rs 25,000 down and reserve future seats. Private individuals can do so for smaller sums. Mr Das Munshi's fear is that at this rate there will be no seats left for poor people with an interest in games.

The autonomous Cricket Association Board (President: Mr Siddhartha Sankar Ray) also complains that in its zeal to attract donors, the Government has promised seats not only in the new stadium but also in the CAB's Eden Gardens stadium where there is already an acute shortage of accommodation during test matches. Such criticism has not had much effect on the Left Front which looks on the Salt Lake Stadium as a matter of political prestige, and is ready to repay generosity with generosity, even to the point of giving away what it does not own.

Police Raj

Calcutta's human parking metres are already rapacious enough without encouraging the police to add to their illicit earnings by fleecing motorists. The new system—ostensibly to check traffic abuses—is summary punishment: if a car is wrongly parked or violates some other rule, a sergeant materialises and takes away the driver's licence and tax token, giving him a receipt in return.

This has to be produced at the Lalbazar police headquarters where the policeman on duty suggests a deal: either the errant driver faces the expense and time-consuming tedium of court prosecution, or else he pays some money (usually about Rs 80) on the spot without being given any receipt, and has the satisfaction of seeing his name scratched off the list of offenders.

Who benefits from this money? For that matter, who benefits from the daily takings of parking fees which were introduced on the plea that whatever was collected would be used to improve the conditions of roads? Calcutta's roads are as bad as ever though parking fee contractors are waxing rich, while traffic policemen have found another way of inflating their incomes.

Islamic Neighbour

Since whatever happens in Bangladesh is closely followed in West Bengal, the news that Lt Gen. H.M Ershad will declare Islam the official religion was received here with some perturbation. The Chief Martial Law Administrator has, of course, promised that hands will not be chopped off and that similar Pakistani excesses will be avoided; but a Koranic constitution will destroy Bangladesh's secular liberalism.

The fear is that if that happens, it will encourage the Muslim League there and elements like the old Razakars, Al Badr and Al Shams groups who opposed the liberation war and supported Pakistan. Hindus and Buddhists are bound to feel insecure; a fresh influx of refugees (which always follows the rise of communalism) will also add to already acute problems in West Bengal, Assam and Tripura. But, at least, West Bengal's ten million or more Muslims fear no kind of retaliatory action.

LT GENERAL VAIDYA, G.O.C.-in-C, Eastern Command

MODEL OF SALT LAKE STADIUM

Horse-Play

With racing and the horse show, polo is one of the principal equestrian—and more luxurious—gracious—features of the winter season's entertainments. The glamorous Rajmata of Jaipur was an unscheduled visitor this time, reaffirming faith in a sport that owed so much to her late husband's skill and patronage. Another kind of elegance was provided by visitors from France, the Polo Club de Rambouillet, who, though roundly defeated by the 61st Cavalry in the Darbhanga Cup match, nevertheless played with languid style.

It all explained why polo, a rich man's game, has fallen on hard times in spite of the Calcutta Polo Club's obvious enthusiasm. Yet there was a time when the game, which originated in Baltistan in Central Asia and was popularised in modern India by British officers in the 1860s, was originally more than mere sport. It was a form of defence; and Pemberton's *Report on the Eastern Frontier of British India* recorded in 1835 that Manipuris "were able for many years not only to repel the aggressions of the Burmahs, but to save the whole country...and plant their banners on the banks of the Irrawattee" because every Manipuri male was born to the saddle and instructed in polo from infancy.

After The Party

Mr Prafulla Chandra Sen, West Bengal's former Chief Minister, has again asked for partyless panchayat polls. On the face of it, this sounds an idealistic plea. But why is the demand always made only by politicians who have no party to speak of? Similarly, only minority parties ever ask for proportional representation. ■

Sumita Sandilya

Letter From London

by Taya Zinkin

THREE quarters of a million Indians, half a million Pakistanis and Bangladeshis, many East African Indians and some Anglo-Indians live in Great Britain. All of them come directly or via Africa from the subcontinent which used to be called "Undivided India". They have been integrating, more or less. The Anglo-Indians have vanished, absorbed into invisibility. At the other end of the spectrum, illiterate Muslims in *purdah*—often Bengalis from Bangladesh—remain like foreign bodies exposed to unwarranted attacks from racist phagocytes.

But before one looks at the way Britons respond to the presence in their midst of these immigrants, a dip in the London Telephone Directory can indeed be illuminating. There are four *Moraes*. Neither *Moraes* nor *Judith* reveal an Indian origin. Not so with, say, *Mirza*, of which there are 101 with un-British names like *Shakoor*, *Anwarul* or *Muhammad*. This, even to the layman, spells religious and ethnic differences. There are 23 columns of *Patel*, five of *Singh*. The 38 *Mukherjis* are split into *Mookerjee* (3), *Mukherjee* (29), *Mukherji* (3) and *Mukhopadhyay* (3), a tribute to Bengali ingenuity.

Who can say where the Mirzas, the Patels or the Mukherjis come from? India, Pakistan, Bangladesh, Kenya, Uganda, Birmingham or Southall? Even the Sikhs, once they cut their hair and trim their beards, are thrown into the giant melting-pot Britain is gradually becoming.

The Spotting Game

One generation ago, playing the spotting game was child's play for the initiated. Indians from East Africa used to dress, walk, speak and behave so differently that they stood out a mile from their Asian kin. This was even true of the men; they did not dress differently, but they did carry themselves differently. No longer.

The spotting game is becoming increasingly difficult as more and more Indian women and girls cut their hair, wear dresses, skirts, jeans, trousers or jumpsuits while more and more of their British sisters grow their hair, dye it black, wear *salwar kameezes*, *gharuras*, *adivasi* earrings and trinkets, tattoos and, occasionally, even nose-studs. Indian women (be it from Kenya, Lahore or Madras) can still be distinguished from Italian, Spanish, Iranian or Portuguese women because their legs tend to be spindly; however, once legs are hidden, the melting-pot makes spotting increasingly impossible.

Leaving all this aside, let us now see how Indian women—that is the women of the subcontinent—fare in Great Britain. They fall into different categories. Each category deserves to be looked at on its own. First, at the top of the ladder, are educated women from the professional upper and middle classes who speak good English and often have specialised skills. They take to life in England like ducks to water, particularly if they have come from Pakistan, because, then, with a few exceptions, they have no desire to return to the "Pure Islamic Land of Purdah".

Favoured Position

Many women from the subcontinent are perfectly at home in London, where they often occupy a favoured position. They look "exotic". Many are very good-looking, more with grace, and, in saris, dwarf all other women into inelegance. They are doctors teachers, dress designers, owners of boutiques, investment analysts, financial experts, account executives, travel agents, university lecturers or social workers; some are in publishing, while others sing or dance or teach Indian dancing and yoga. Only in the media and in nursing are they conspicuous by their absence. Could it be that even in Britain, where nursing is a much-respected profession, they cling to Indian prejudices?

Moreover, they are conspicuous largely because they are better at their jobs than their British counterparts. My nearest Thomas Cook's office would collapse were it not for the pert Indian from Mombasa, who alone can read complex time-tables and never grumbles.

Next on the ladder are the middle-class women with a smattering of English who help their husbands run the shop. They come mostly from East Africa or Gujarat and are extremely popular. They provide a valuable service: keeping shops open when the British ones are shut. Moreover, as the corner shop is making way for the impersonal supermarket, with the loss of personal and friendly service, people value more and more the friendly Indian shop assistants.

Not far from where I live in Central London, there is a fairly large Indian supermarket which, besides the standard lines, specialises in all sorts of delicacies from the Continent as well as goodies from the East. It boasts a superb delicatessen section and a range of frozen and tinned foods practically without rival; and it remains open seven days a week from nine in the morning till eleven at night. Miss Patel, who presides over the delicatessen, warned, with a charming smile; "I'd not take that slice if I were you; it's no longer quite fresh. Let me start a new lot for you." I thanked her, asking what she would do with the stale bit. She laughed and said: "We'll eat that ourselves."

But not all middle-class women work in family concerns; many are shop assistants in department stores or cashiers in supermarkets. Some even work as hairdressers or do alterations in dress shops.

Always Friendly

In a sense, these middle-class women play in English life the part often played by Anglo-Indians in busy shopping centres like Colaba in Bombay. Because, unlike many of their British counterparts, Asians are always friendly, people take to them. However, this does not mean that women from the subcontinent find life in Britain easy. Far from it.

There are many who must find life in England hell, especially on first arrival if they know no English and come from villages. The jump from, let us say, Chota Gaon to Southall is even more traumatic than from Chota Gaon to Bombay or Calcutta. Life in the village is one thing, life in the city quite another. It takes getting used to, especially if the husband has already been here for a few years and got so used to things that he no longer appreciates the hurdles one fresh from the village has to overcome if only to cross the streets or brave escalators, not to mention travel by subways. For a woman in a sari, an escalator can look like a death-trap. I remember how my Indian friends used to react the first time they met an escalator—and they are highly sophisticated! But far worse than traffic on escalators is the language barrier.

It hits these women on arrival. Far too many immigration officers have the nasty habit of treating those they think they can bully with impunity, as if they were dirt. The performance of such bullies at Heathrow or Gatwick leaves a great deal to be desired. Until recently, there was that ludicrously offensive virginity test for prospective brides, but racialism and discrimination will be dealt with on some other occasion.

The Universal Way

The women from the subcontinent, who come from villages not knowing English, tend to cluster in ghettos. This is a sensible and universal way in which minorities, be they Italians in New York or Cypriots in North London or Bengalis in Hackney, tend to behave. Ghettos provide the support of one's own community and create enough of a market for shops to cater to special needs. However, it has the disadvantage of slowing the process of assimilation by one generation since it is the children rather than the parents who learn English.

Nevertheless, even women can be enterprising. Many of them particularly from the Punjab, can be seen at Heathrow. Although they cling to their national dress, they manage somehow to fraternise with the British cleaners and can be seen in the underground to Heathrow, early in the morning, going to their morning shift. Cockney, and a kind of pidgin English, interspersed with *achchaas*, enlivens the journey as cleaners exchange news in friendly chit-chat. Then, too, there are the women who take factory jobs, preferably within walking distance from their homes. These women are perhaps the most exploited, especially when the factory is a sweat-shop run by one of their compatriots. First-generation migrants without skills are exploited the world over. But life for them is better here than it would be in, say, Muhammad Ali Road. They may be homesick, they may miss their relatives and the sunshine, but they are looked after under the National Health Service if they fall ill, their children's education is free and they are entitled to welfare benefits.

Gandhi is reported to have said that a nation can be judged by the way it treats its minorities. How Britain passes Gandhi's test is something that still needs to be thoroughly explored.

Why Businessmen Are Nervous

by Virendra Agarwala

THE Finance Minister has made it absolutely clear that there is little scope of reducing corporate or other taxes or of enhancing concessions. But it is a fact that the tax rates in India are the highest in the world. Looking at the purchasing capacity of the masses, it is essential that fiscal concessions must be so granted as to enable the common man to meet both ends. Although we are committed to eradicating poverty, we have formulated a tax policy which has accentuated poverty. This contradiction must be brought to an end. The purchasing capacity of the common man has been eroded to such an extent that he can barely exist on the present income levels and the dwindling value of the rupee. In a democratic country, people have every right to expect the Government to formulate policies which will ultimately help to raise their purchasing capacity. The fiscal policy is judged entirely by the monetary benefits it grants to the people, particularly to those living below the poverty line. If the economy actually expends, then it is the function of the fiscal policy to see that its fruits are percolated to the lowest class.

Tight Money Policy

The Finance Minister had predicted that 1982 would turn out to be a "bridge year" from recession to recovery but, unfortunately, it has not happened. Though there is no single remedy for the economic slump, many experts feel that both monetary and trade conditions must be eased in order to encourage domestic demand and permit a long-term recovery. Tight money policy has brought some notable gains over inflation, but it has also put our economy into the worst post-war slump ever and saddled it with a whopping debt.

Unlike in India where we incessantly talk about socialism but have, in actuality, created small islands of affluence in a vast sea of poverty, and an emasculated middle class, in Japan they have been practising egalitarianism without making a fuss about it. Japan has adopted a policy on incomes which has given it hardly any ultra-poor and very few super-rich. The bulk of the populace—about 90 percent—is in the well to do middle class. Unlike India, where the middle class is financially emaciated, the Japanese middle class is able to purchase items other than basic necessities. This has been rendered possible by maintaining a high wage level, low tax level and low inflation rates. The existence of a large domestic market has enabled the Japanese industry to offer the consumer high-technology and high-quality goods at prices which he can easily afford.

It is misleading to believe that big business has no other business but to campaign for fiscal concessions. The business community is shrewd enough to appreciate the Finance Minister's dilemma and also the pressing needs of growth and distributive justice. Prices and availability of some essential commodities have, of course, begun to fluctuate. However, such apprehensions about the budget are sure to exist till the budget for 1983-84 is actually presented.

FINANCE MINISTER PRANAB KUMAR MUKHERJEE

The pre-budget atmosphere in the last three years was quite stable—obviously because of political stability at the Centre. But the nervousness in the market now is largely due to the financial uncertainty on the part of the Government itself. The shortfall in collection of taxes—direct and indirect—is admittedly all-pervasive and universal this year. This, together with expenditure running well ahead of budget estimates and a central loan of nearly Rs 1,400 crore raised by created money to clear State government overdrafts, means the budgetary deficit during the current year has swelled to well over Rs. 3,000 crore. States have again run overdrafts, notwithstanding the fact that the Centre discontinued this practice on July 11, 1982. More than Rs 2,085 69 crore were converted into medium and short-term loans by the Centre in order to put an end to the practice of overdrafts. The problem of overdrafts has always been a major irritant in Centre-State relations. Neither the States nor the Centre have learnt to practice fiscal discipline.

Unnecessary Expenditure

Markets have reason to be nervous when the people discover that the Government is spending extravagantly on either non-developmental activities or on projects which are not part of our priorities. The recent series of upward adjustments in excise and customs duties have created a stir in the market. These adjustments, which raise revenue prior to the new budget can have no rationale or justification. Earlier, revision of prices of selected goods and services before the presentation of the budget had attracted adverse attention. But such price revisions could be rationalised, they have reduced the significance of the budget. What is more important, industry would not be able to function smoothly if decisions are taken in an adhoc manner by the Government rather than following any well-thought-out strategy.

The people, by and large, expect the Government to bring about a radical change in the economic philosophy which could accelerate the pace of growth while reducing unproductive expenditure in a big way. The public sector has come to stay, and no one expects it to be dismantled, but it needs to be so managed that the country's meagre resources are put to the best productive use. The public sector, the bastion of a vibrant and egalitarian economy, is at the crossroads today. There is an urgent need to reinforce and reinculcate the fundamental premise of the public sector against the insidious threats that are inherent in a renaissance of this all-important sector of activity.

The Government, as an entrepreneur and as an owner, is less business-like than a private entrepreneur. It is unfortunate that the culture of the public sector has been one of government administration rather than of professional management. An air of distrust and an obsession with legality has continued to atrophy intiative and vitality in the public sector. Its poor performance has caused growing scepticism on the part of the public about the Government being in business.

As a nation we must pursue a policy which helps the industry to grow at a faster pace. It implies that licensing procedures need to be simplified and procedural delays cut down to a minimum. The Government should seriously explore the possibility of scrapping the licensing system, for all industries, particularly for investments of over Rs 10 crore.

Mr L.K. Jha, an eminent economist, has gone on record as saying that proliferation of controls has become a major obstacle to the timely fulfillment of the targets of planned development. We may have some controls but at the same time we need to appreciate that socialism is not synonymous with bureaucratic controls. A policy of gradual decontrol in respect to cement and steel has produced favourable results. We have made exciting progress but we can still do much better if these controls and licensing procedures are either simplified or altogether scrapped wherever found unnecessary.

The current decade is proving difficult for the poor nations. Over a quarter of a century, ending in 1980, world output trebled in real terms with growth in every region of the world having surpassed both expectations and previous records and despite the increase in population from 2,800 million to 4,400 million, the per capita income doubled. Thus, although standards of living have become better than before, there is now a greater gap between the rich and the poor both in real purchasing power and in a more simple income comparison. For many of the low income countries, the long-term trends offer less reassurance for the future. It is true that the future will be determined considerably by the wisdom of the domestic policies and the will with which their implementation is pursued. The plight of developing countries is far worse with the decrease in overall economic growth, the stagnant volume in world trade that affected all commodity and raw material prices and the increasing external payments problem, particularly for the non-oil producing countries.

IMF Loan Squandered

India's overall balance of payments position deteriorated sharply during the fiscal year 1980-81, as reflected by the draft on reserves of Rs 576 crore against the accretion of Rs 369 crore in the preceeding year. It meant a rise of about Rs 3,100 crore, or 65 per cent, in government imports including crude, petroleum and other bulk imports that widened the trade deficit in 1980-81 to Rs 5,967 crore from Rs 3,374 crore in 1979-80. The improvement in official aid and banking capital receipts was more than off-set by a turn-around in miscellaneous capital transactions and a rise in amortisation payments. The net foreign exchange assets of the banking sector declined by Rs 1,126 crore as on November 26, 1982. It is unfortunate that the IMF loan—which will not be available after 1984—is being squandered for importing commodities for which there is adequate productive capacity in the country. If the remedies are strictly adhered to there is no reason why the economy, which has been maintaining an upward trend since 1980-81, should not surge forward in 1983.

There has been no let-up in the stagnation of industrial production. There are many factors which are sure to hinder the achievement of the Sixth Plan. Bad industrial relations, which are often mentioned in this connection, are only one of the symptoms of the wider malaise that affects the economy. There is a growing alienation between the rich and the poor, the elite and the masses, the Government and the people. This gap needs to be bridged if optimum production is to be reached. This can only be achieved if, besides efficiency, equity is recognised as a worthwhile goal and the credibility of the economic and social system is established. The prior claims of the poor on any economic gain must be given their due, which means that the system must give proper priority to the production of those goods which are required though not necessarily in effective demand, and that it must not produce all goods which are in demand but not really needed. How the two can be reconciled is a vital question to which the Finance Minister will have to address himself while presenting the Union Budget for 1983-84. ■

Gagarin's Dream Comes True!

by K. A. Abbas

YURI GAGARIN

IT happened 21 years ago on a day in June 1961, in an unnamed suburb in Moscow, at the Soviet Air Officers' Club, where I was expected. Without much questioning, my interpreter and I were shown into the drawing room. There was an electric wallclock in the room, and as the two hands of the clock met and merged, at noon, the inner door opened and the (then) world's most publicised person, shyly, entered the room. He was the "Columbus of the Space Age"—Yuri Alexeivich Gagarin.

This was the young man whom I had come to meet. He had been where no man had ever been before, beyond the gravity-charged atmosphere of this earth and he had travelled at an incredible speed of over 18,000 miles per hour. He was also the only man who (till then) had looked down at our planet and who could personally testify that it is round like a football and whirls in the cosmos.

We talked for more than an hour. He took an orange from the fruit bowl on the table and, taking out his ball-pen, traced on it a map of the world. Then, marking on it the flight-course of his capsule, said:

"I could see your India—the Himalayas as well as the narrowing of the peninsula into the Indian ocean—it was beautiful—beyond any description that I can give you—like a painting by Nikolai Roerich!"

Towards the end of our talk, he said something prophetic and these words came back to me, when he was no more. I asked him for a message to the youth of India. This is what he said:

"I would like to travel in a spaceship, with a crew of young cosmonauts from different countries, including India, Russia and America. This will be a research spaceship. You realise that this is still only a dream. But let us jointly strive to make this dream come true. And, indeed, is not our earth itself such a spaceship which speeds through the expanses of the universe? This spaceship belongs to all of us, people of the world, and its crew should live in peace and friendship."

He repeated this invitation and the sentiments, two years later, when he came to India on a personal invitation from the late Jawaharlal Nehru. Today Gagarin is no more. He died on one of his test-flights. But, his words have come true. His dream has been fulfilled.

India's Cosmonauts

Two Indian pilots, R. Malhotra and R. Sharma are now under training in the Soviet Union and their names were first revealed when they were introduced to Prime Minister Indira Gandhi on her last visit to the Soviet Union. They are both being trained as cosmonauts who will soon—how soon none can say yet—go up in a spacecraft with their Soviet comrades and, may be, cosmonauts of other nationalities, too—in a Russian spaceship.

What, specifically, is the training that is being given to R. Malhotra and R. Sharma? It is highly confidential. But, it cannot be very different from the training Yuri Gagarin had and which he described to me, except that in 21 years, it is probably more sophisticated and streamlined.

When Lt Gagarin of the Soviet Air Force applied to be trained as a cosmonaut, he had to go through a rigorous health-test—the same that the two Indian pilots would have had to undergo. So, the test would be medical and psychological. Not only that, biochemical and electro-psychological methods would also be applied to test each candidate's fitness to stand the maximum physical and psychological strain. It appears the final test is still to come—the test that even Gagarin found tedious and irksome.

For this test, the candidate is confined in a capsule, without a watch, so, he loses all count of time. Every now and then, he has to report on a one-way radio channel, but he has no means of finding out whether his radio messages are being received in the control room. How long can he remain in this fathomless darkness?

Unknown to the candidate, secret electrical wires are attached to his seat to convey, to the control room, his nervous and psychic reactions. For, in space, he would be cooped up in his spaceship for days on end. Of all the training devices and tests, this is the hardest and most severe, because the cosmonaut never knows how long he has spent in "solitary imprisonment"

The "Vibration Stand"

Another machine for testing endurance and nerves is the "vibration stand". In it, one is mechanically shaken and rattled for a couple of hours; it simulates the violent vibrations of the spaceship when the powerful rocket engines are working. The last and perhaps most pleasant experience is that of weightlessness and it is absolutely essential for the training.

Even the most elementary motive of self-preservation requires astronauts to learn many lessons in the science and theory of space flights, about every thing that may be connected with the ballistic functioning of the rockets—noises, vibrations, overload stresses, and (above all) weightlessness. Connected with it are the conditions in the artificial spaceship, the restricted size of the cabin and the couches on which the cosmonauts would have to be strapped while taking off, the extremely limited field for movements, the emotional tensions, and the inconveniences of carrying out the flight for days and nights encased in a heavy, cumbrous but life-saving space-suit. Thus they will have to learn to be scientists, astronomers, doctors and astromechanics who will be able to go out of the space capsule when and if the need arises to dock with another space-vehicle or carry out the necessary repairs to the outside of their own spacecraft

No superman—or flying *genii*—has had to do all these things. This is no magic—this is not fantasy—this is Science, the science of flying outside the orbit of conventional earth-gravity and of carrying out tasks necessary for human life. Thus, will spacemen Malhotra and Sharma join that select band from the Soviet Union, America and France; and may they carry the spirit of Aryabhatta with them.

PRIME MINISTER INDIRA GANDHI with India's aspiring cosmonauts R. Malhotra and R. Sharma at the cosmic centre named after Y.A. Gagarin.

HE WAS NO GREAT SHAKES AS PRIME MINISTER—at least according to the CIA! Gough Whitlam is seen with Indira Gandhi during his visit to India in June 1973. Whitlam, it may be recalled, supported the proposal to turn the Indian Ocean into a Zone of Peace—something that was opposed by the United States and favoured by the Non-Aligned Movement.

CIA's Perfidy In Australia—2

A Hand In The Drug Trade?

A recent investigation into the 1980 failure of the Sydney-based, American owned Nugan Hand Merchant Bank has brought amazing facts to light about the possible role of the CIA in the fall of the Whitlam Government in the mid 1970s. Nugan Hand seems to have employed an incredible collection of former top-ranking US Intelligence officials. And, since 1977, the Sydney Police have received reports suggesting that the Bank served as a conduit for the drug trade. In 1980, following the apparent suicide of its Chairman, Frank Nugan, the Bank collapsed. Before that, Nugan Hand had swiftly expanded from a $1 million capitalisation to an estimated $1 billion operation, with offices in 22 countries—mostly in Asia. Even if all the charges against CIA activities in Australia are false, no US Administration can evidently undertake an investigation to bring out the truth. The base facilities in Australia are crucial to US security. An investigation can only open up opportunities for irresponsible as well as properly motivated critics.

by James A. Nathan

IN the year 1976, one highly placed ASIO informant, who did not like Whitlam, told *The Bulletin* that the CIA was "active on the sidelines of the loans scandal". In 1981, a CIA contract employee, Joseph Flynn, told the *National Times* that he actually manufactured some of the cables under the direction of former CIA employee Edwin Wilson, now infamous because of the assistance he has allegedly provided Libya in terrorist activities.

Flynn, a man of colourful background, has been deemed believable in this story—if not in others he has told—by respected members of the Washington legal community, the Australian Press and several US investigative journalists. He has also claimed to have helped Wilson in preparing documents that were leaked to the press. Joseph Flynn claims he was paid by Michael Hand, a co-founder of the now defunct Nugan Hand Bank.

About the same time, Admiral Bobby Inman, former Director of the National Security Agency and Deputy Director of the CIA, gave further credibility to this line of suspicion. Asked in Washington on September 30, 1980, and January 24, 1981, about the collapse of the Nugan Hand empire, Bobby Inman expressed deep concern that any further investigation of Nugan Hand would lead to disclosure of a range of "dirty tricks" played against the Whitlam Government. It seems that the controversial Task Force 157 was active in Australia while the Whitlam Government was in power. Inman has said that Task Force 157 member Wilson worked closely with Bernie Houghton, a key Nugan Hand official.

Task Force 157 operated out of the Office of Naval Research until Inman disbanded it soon after he became Director of Naval Intelligence. Task Force 157 had two functions, the first was to run more than 100 CIA properties. The man in charge of the latter operation was Wilson. Early in Inman's tenure as Director of Naval Intelligence, Wilson approached the Admiral to suggest that he, Wilson, would help secure naval intelligence appropriations through the US Senate if Inman steered contracts to Wilson's properties. Wilson was soon fired.

If You Need Him, You Pay Him!

Almost immediately, Theodore Shackley, Deputy Director of Operations for the CIA, urged Inman to appeal on Wilson's behalf. According to one source, Inman's response was: "If you need him, you pay him."

But there is more that tantalises. Task Force 157 communicated to Washington by voice link. The messages were relayed through Los Angeles and then forwarded to Washington. A young cipher clerk, Christopher Boyce, worked in the code room of TRW Inc, which handled the messages. During his trial on espionage charges, Boyce's only defence for giving codes and plans to the Soviets was that he opposed US policy not only in Chile but also in Australia. With reference to the overthrow of Allende in 1973, Boyce told his accomplice that, if "you think that's bad, you should hear what the CIA is doing in Australia".

In other words, Boyce believed that the Whitlam Government was being destabilised. As Desmond Ball, a highly respected expert on defence communications, noted, Boyce should have known, for he monitored messages from Pine Gap, the US intelligence gathering facility in Australia. In Ball's own words, the message provided a "unique insight into the plans and foibles of the Labour Government—such as the communications with respect to the loans affair".

Alice Springs is almost at the dead centre of Australia. Just outside of town is the enormous US facility at Pine. It is supposed to be jointly run and about one-half on the nearly 500 employees are Australian. But only 16 of the Australians are said to have security clearances for code work. Along with Christopher Boyce's testimony, a former Deputy Director of the CIA has privately indicated that information from Pine Gap has never been shared with Australia. As Ball points out, there is every external indication that information is withheld routinely to this day. Whitlam claims he was ignorant of Pine Gap's capability which, according to Victor Marchetti, former executive assistant to the Deputy Director of the CIA, has the ability to act as a giant vacuum-cleaner, sucking up telexes, voice communications and cable traffic over most of the Pacific.

Pine Gap's importance lies in its versatility and range of missions. Its capability is due to its location. It is in a uniquely stable geological formation in an area free of electronic clutter, with some of the lightest cloud-cover in the world. Except for Alice Springs—population: 14,000—the region is almost uninhabited. The Australians have accorded the facility remarkable hospitality. People and cargo routinely fly in and out, entering and exiting without the burden of customs or immigration checks. The place enjoys almost extraterritorial status.

They Were Alarmed

The agreement to renew the Pine Gap lease expired on December 10, 1975, and was renewed by Fraser. Whitlam had said in April 1975 that he might not renew the agreement or that at least the terms of the lease should be changed. Whitlam may or may not have been serious about this threat. But his own intelligence services, as well as the American Intelligence community, were alarmed.

Perhaps the ultimate sin against Australian and American security guardians occurred when Whitlam accused the head of the smaller section of the opposition, the National Country Party's Douglas Anthony, of receiving CIA funds and favours from a former CIA officer once in charge of Pine Gap. This charge linked alliance intelligence facilities indirectly to alleged covert operations that would be intolerable to any Australian Government.

During a 1973 interview in Australia, Marchetti noted in passing that he "heard from my good friend, Dick Stallings, about how things are being done down there in Australia". Brian Toohey, then working for the *Australian Financial Review*, overheard the remark. And Toohey found out that Stallings had worked at Pine Gap in the late 1960s. Toohey's interest was piqued by two facts: first, Stallings had no technical background; second, Stallings had become a close friend of Anthony. Toohey's investigations reached Whitlam, who asked the US Embassy for a list of all CIA employees acting in Australia in the late 1960s. Stallings' name was not on the list. Toohey learned of this fact and published a background article on Stallings for the *Financial Review*.

Real Shock

The ALP had always believed that Pine Gap was built and manned by US Defence Department officials. That it was a CIA facility giving Pentagon cover to CIA officers came as a real shock. The resulting static grew when it appeared that one of the officers, Stallings, had established not only a friendship with an opposition figure but, charged Whitlam, had helped finance the ALP's opposition.

The CIA was enraged. On November 10, 1975, the day before Wilson was sacked, ASIO's new Director-General (DG), a bureaucrat who really owed his appointment to Gough Whitlam, received a formal *demarche* from the CIA. The cable

was published in the *Financial Review* in 1977 and has been widely reprinted in Australia. Its authenticity has never been denied. It read, in part:

> *On November 2 the PM of Australia made a statement... to the effect that the CIA had been funding Anthony's National Country Party...*
>
> *On November 6, the Prime Minister publicly repeated the allegation that he knew of two instances in which CIA money had been used to influence domestic Australian politics.*
>
> *Simultaneously, press coverage in Australia was such that a number of CIA members serving in Australia have been identified...*
>
> *CIA cannot see how this dialogue with continued reference to CIA can do other than blow the lid off those installations in Australia where the persons concerned have been working and which are vital to both of our services and countries, particularly the installation at Alice Springs..*
>
> *CIA can understand a statement made in political debate but constant further unravelling worries them.*
>
> *Is there a change in the Prime Minister's attitude in Australian policy in this field?*
>
> *This message should be regarded as an official* demarche *on a service-to-service link...*
>
> *CIA feel* (sic) *that... if this problem cannot be solved they do not see how our mutually beneficial relationships are going to continue.*
>
> *CIA feels grave concern as to where this type of public discussion may lead.*
>
> *The DG should be assured that CIA does not lightly adopt this attitude*

Australia's Permanent Secretary of the Department of Defence did try to get Whitlam to stop a scheduled November 11, 1975, parliamentary debate about CIA agents and Alice Springs. But passions were high. Both Whitlam and Anthony refused. On November 11, the day after the telegram was received and before Whitlam could have acted—had he wanted to—Kerr fired the PM.

The CIA's concern to halt Whitlam's revelations is especially peculiar in its timing. There was not that much more to say about Pine Gap, as the cable notes. It had been revealed as a cover for US CIA personnel and as a CIA station. In Australia, many people conclude that there could be only two more CIA concerns: that the Pine Gap lease would not be renewed—but Whitlam had privately insisted that the CIA had no worries and they probably would not have had until the provocative cable was sent—or that CIA funding of other operations aimed at Australia's unions and parties was about to be revealed. It is widely believed that the Nugan Hand Bank was a bursar for such operations.

Nugan was an Australian and Hand is an American. If quick profit is a guide, Nugan and Hand were a match made in heaven. Frank Nugan started off in the fruit and vegetable business in the Australian country town of Griffiths, a place where people have been killed for speaking to authorities about the huge crop of illicit drugs grown in the region. In Sydney, in 1969, Hand established Australian and Pacific Holdings Ltd. Of the 19 founding shareholders, 10 worked with Air America or Continental Air Services, an airline subsidiary of the US Continental Airlines under CIA contract in Laos.

In early 1973, Nugan and Hand became merchant bankers. They immediately made money as financial advisers to American servicemen passing through or living in Australia. The Bank's founders, along with Nugan and Hand, were 4 officials of Air America, a CIA property.

Nugan Hand quickly expanded from a $1 million capitalisation to an estimated $1 billion operation with offices in 22 countries—most of them in Asia. And one, in Chiang Mai, Northern Thailand—the Golden Triangle—was in an area where the frontiers of Thailand, Burma and Laos join.

The Director of the Chiang Mai office claimed on Australian Television that he handled 2.6 million dollars in less than 6 months. The money was garnered from the drugs transiting the area. The Bank, he put it starkly, was a "laundry" for Meo tribesmen and other poppy-growers. The Bangkok office was run by the former CIA Chief of Station in Bangkok. Back in Sydney, when Nugan died, records from the Bangkok office were full of descriptions of troop deployments and arms sales in the region. Investigators found it hard to believe that Nugan Hand was just a bank and not an abetter of US Intelligence.

Some of the branch locations were peculiar—in the words of one investigator. Moreover, the management was of a calibre and number to "run a small-sized war". For it included Air Force General LeRoy Manor, Chief of Staff of the entire Pacific Command and a specialist in counter-insurgency, Army General Edwin Black, the Commander of US Forces in Thailand; Rear Admiral Earl Yates, former Chief of Staff for Policy and Plans of the Pacific Command; as also Patry Loomis, a CIA employee who helped Wilson recruit a team of Green Berets to train Libyans. Loomis was on the Board of Directors under an alias, according to a highly placed CIA source.

The activities of the Nugan Hand Merchant Bank—drug charges aside—were strange indeed. Yates attempted to relocate 3,000 Meo tribesmen—refugees who had assisted the US war effort in Vietnam—to the Caribbean, using the Nugan Hand offices in the Cayman Islands to disperse funds sought from the US Government. Kent Crane, an arms merchant on close terms with current high White House officials, made a number of trips to Sydney, one in the company of Yates.

Crane, a former CIA operative, was said to be handling Shah Mohammad Reza Pahlavi's investments. Wilson also assisted the Shah in moving money from Iran to a Nugan Hand Bank branch in Switzerland. And Wilson was a close associate of the Nugan Hand Saudi representative, Bernie Houghton. Houghton was a member of Task Force 157 until it disbanded. Plus Wilson and the man who signed off on the CIA *demarche* sent to Australia on November 9, 1975—Shackley, then Head of the East Asian Division of the CIA—were also associated with Task Force 157. Shackley has had a long, close relationship with the Nugan Hand Bank, according to Australian sources.

The portents are ominous. Since 1977, the Labour Party has officially and consistently entertained the proposition that the CIA was involved in the Whitlam coup. Labour is ascendant in the polls. The Labour Party in Australia, now led by former Queensland Police officer Bill Hayden, has already spoken about US bases, claiming that it would demand joint control.

Nugan was an Australian and Hand is an American. If quick profit is a guide, Nugan and Hand were a match made in heaven.

The (US Intelligence) bases are coming to represent to Australians a badge of weakness and vulnerability... (They) are increasingly considered less an asset and more a liability. They seem to place Australia's survival at stake by making what had been an area free of nuclear phobia a strategic target.

When Hayden met Bush in April 1982, the issue of CIA involvement in Australian domestic politics dominated their conversations. Hayden is being pushed by the newly elected Labour Party based in Melbourne to repudiate the Australia-New Zealand-United States security pact (ANZUS) altogether. And other State Labour Parties may well follow suit. The Party of the State of Victoria recently told the Acting Melbourne Consul General that it would prefer that no US Navy forces, whether or not they might carry nuclear munitions, visit Melbourne. And a number of Australia's most respected strategic thinkers are currently urging a re-evaluation of ANZUS and they have embarked on tireless public education campaigns concerning the functions of US bases and their capacity to draw Soviet atomic fire in the event of East-West hostility.

The technical education and evaluation surrounding US installations have been sober and judicious. Pine Gap's functions have been quite convincingly documented. Since the United States lost its intelligence stations in Iran, Pine Gap is called one of the last reliable means of verifying any Soviet-American strategic arms accord. US installations on the Australian North-West Cape provide the means of coordinating any US nuclear retaliatory strike against Soviet targets. And these installations are also said to be the most sophisticated anti-submarine warfare-monitoring facilities in the world. Some 300 miles north-west of Adelaide (capital of South Australia) lies Nurrangar, an early-warning monitoring station linked with a geostationary satellite high above Borneo.

Not So Binding Stake?

These bases have always been seen by the Australians as a quid pro quo for the ANZUS pact. Australia could afford only with difficulty the logistics, the manpower and the weapons of currently defined interests in the Indian and the Pacific Ocean. A continental defence, which is one of the alternatives to a withdrawal from ANZUS, could be even more expensive. The bases were a bargain, as Australian strategist Hedley Bull has pointed out; for the bases symbolised an American stake in Australia, visibly binding the United States to Australia. The bases assuaged a fear of abandonment. They were such a blessing that the Harold Holt Government of the 1960s charged but one peppercorn for rent of the North-West Cape naval facility.

Yet US intelligence bases and security agreements are increasingly considered less an asset and more a liability. They seem to place Australia's survival at stake by making what had been an area free of nuclear phobia a strategic target. Such fears are heightened by US counterforce strategies—especially since they would almost have to involve the detection and coordination capability located in Australia. Bases not only make Australia a potential strategic target but a political hostage as well.

Even if all the charges made against the CIA's activities in Australia are false, no US Administration can eagerly undertake an investigation to bring out the truth. For the facilities in Australia are crucial to US security. An investigation opens up opportunities for irresponsible as well as properly motivated critics.

At the same time, refusing to cooperate in an investigation to clear the air now seems to carry even higher risks for US security. Any Left-leaning government may well think it better to cut ties with the United States in the light of the fate the Australian Left feels befell Whitlam. No future Labour Government will feel secure that the whole story has been told if the past has not been cleared up convincingly. In the mid 1970s, Cairns was barred from even visiting Pine Gap and the three Prime Ministers who preceded Fraser have complained that not only were they incompletely informed about US bases but that they were also misled.

No Longer A Source Of Strength

The bases are coming to represent to Australians a badge of weakness and vulnerability. Whitlam's deputy was barred from entering Pine Gap and Whitlam could not know that the US electronic feed from Pine Gap to Washington was handled by a commercial firm in Los Angeles—TRW—until the Boyce trial. And the Australian Government did not know what Boyce, a 23-year-old dope-smoking college dropout, could sell for a song to the USSR.

Substantive questions need answering before balance and amity can be restored to the relationship. If it can be proved that Washington was more than a bystander, the relevant documents ought to be released. If the CIA was guilty of any of the serious charges being aired in Australia, corrective steps are necessary to reassure the Australians that the United States will never undertake similar activities in the future. Perhaps, given the CIA's reticence in making painful disclosures in the past, the matter ought to be taken up by Congress. ■

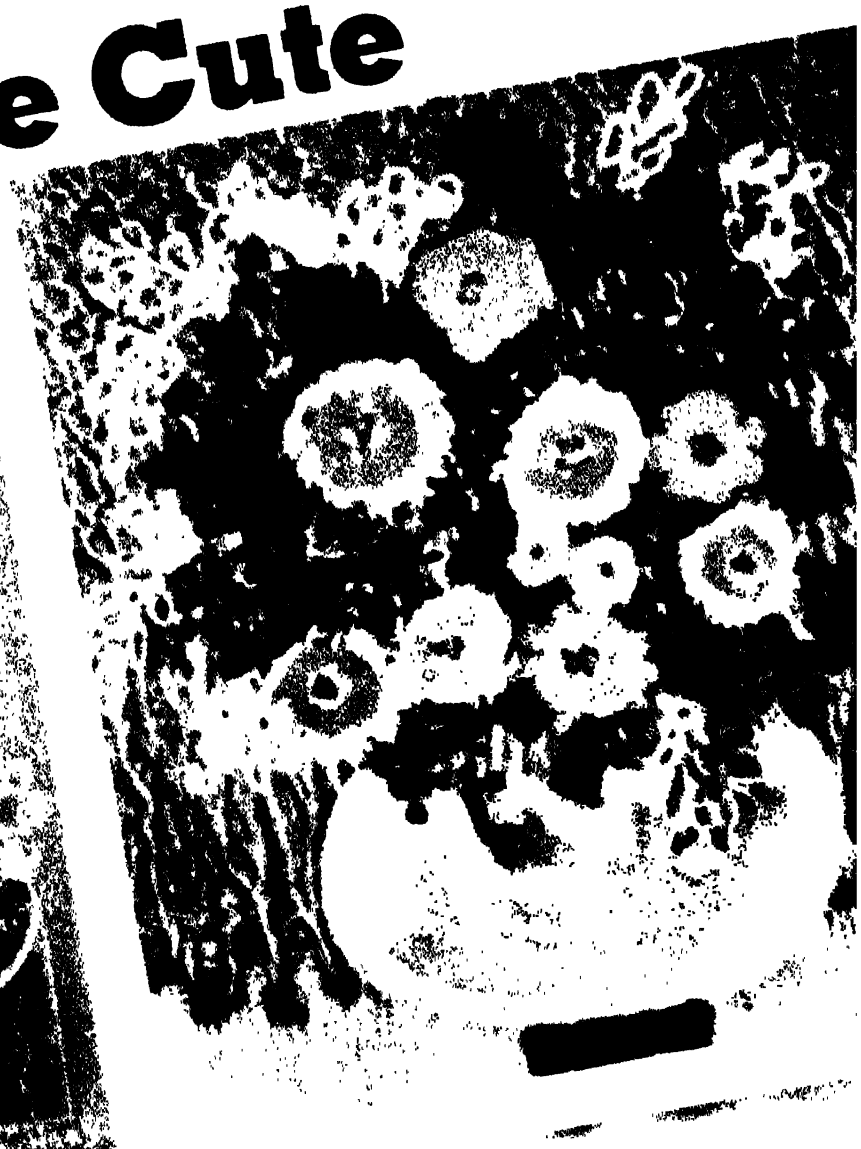
Ceramics Are Cute



Ceramic tile painting is endowed with a phoenix-like quality: baptised by the fires of the kiln, it can easily withstand the ravages of Time.

VIJOO Sadwelkar's painted tiles are a decorator's delight. Delicately drawn, brightly coloured and superbly framed, they instantly glamorise your walls. The shiny ceramic surface and the brilliant hues are no doubt appealing to the viewer. But they can be tricky, offering a real challenge to the noviciate. For, unlike works on canvas or paper, paintings on glazed surfaces are "twice-born". "glaze" your design

a kiln to achieve the final result which is a painting of great durability. It is acid-resistant and can safely be exposed to wind, rain and sun. However, the baking process can sometimes literally "misfire": colours are altered, charred, blackened. The tiles may chip or flake

Photographs by Uday Dandappa

off... Thus the artist's skill and judgment in the *application* and *mixing* of glazes is crucial to this medium. And, until they are baked, the glazes are dry, powdery and extremely fragile; they can come off at the slightest pressure. (Admittedly however, the quirks of the kiln can also *enhance* the qualities of a painting beyond the artist's expectations!)
Thus every painting partakes a phoenix-like quality: it is tested and tried by fire. Within the limitations imposed by the medium, one can create images of great vitality and verve.

Vijoo's firm control of colour and line are at once evident. (She uses a scraper-point to incise her images upon washed areas in one continuous line. This leaves her no room for prevarication.) "I have always been fascinated by fishes, birds and traditional motifs." says the artist: "I used to watch my elder sister (Mrs Newagi, who retired recently from SNDT) doing miniatures when she was learning art at the J.J School of Art, Bombay. My mother, too, is an accomplished person. She conducted tailoring and cutting classes for women, both at Lonavla and Bombay and has written a best seller on the subject. We were always encouraged to express ourselves creatively.

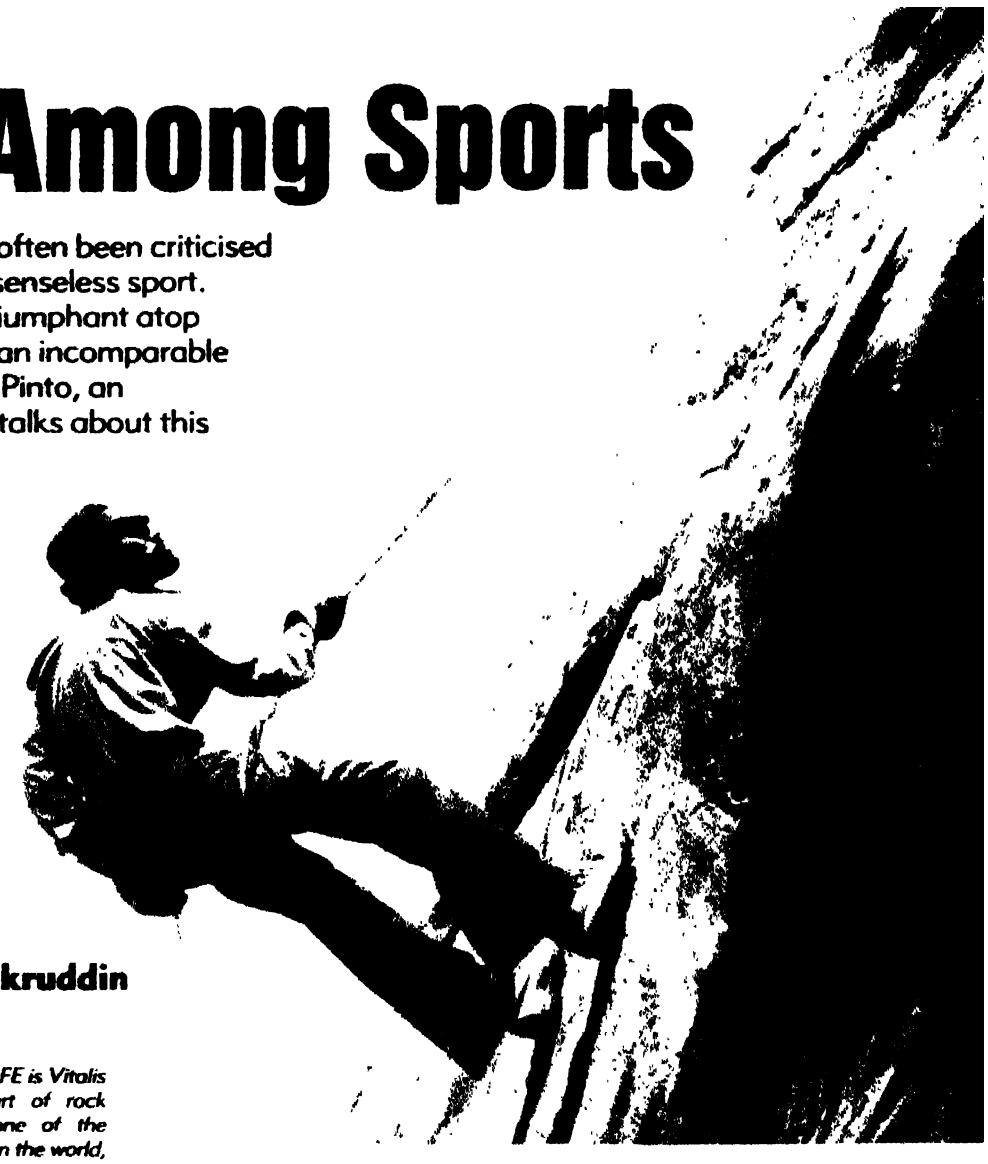
"At the J.J. School I met Baburao Sadwelkar, the eminent artist and art educationist Just before our marriage in 1956, he introduced me to the Vitrum Studio where, allong with K.H. Ara, Badri Narayan and Sharad Palande, I first started work in this revolutionary medium. We worked on several thousand tiles, made pioneering experiments to obtain different visual effects in tone, texture and scales of colour.

"In 1961 with two small children to look after, I gave up full-time service. I rejoined the studio (renamed HEX-AMAR) in 1966. However, since 1971 I have been working on my own." (She conducts a class at the Bhulabhai Memorial Institut and *also* runs her house.) ∎

Mountaineering

King Among Sports

Mountaineering has often been criticised as a dangerous and senseless sport. However, to stand triumphant atop challenging peaks is an incomparable achievement. Vitalis Pinto, an experienced trekker, talks about this exhilarating sport.



HANGING ON FOR DEAR LIFE is Vitalis Pinto, demonstrating the art of rock climbing Mountaineering, one of the costliest and toughest sports in the world, involves myriad disciplines—rock climbing is one such aspect

by
Dr Mohamed Fakruddin

WHY do so many people deliberately risk their life and limb to overpower some cold, unfeeling heap of stone and ice? That men climb mountains "because they are there" is only a partial answer. Perhaps mountaineering derives its chief attraction from its inherent danger, which makes its aficionados take calculated, almost suicidal risks in order to stand triumphant atop a peak

Vitalis Justin Pinto, 37, one of the founders of the Mysore Mountaineering Association, Bangalore, and a well-known climber of the Ladakh, Zanskar, Pir Panjal and Kumaon mountain ranges, revealed several interesting features about this "king among sports", in an interview

He says mountaineering is not only the costliest but one of the toughest and most scientific sports in the world. It involves myriad disciplines—hiking, camping, rock climbing, skiing, scientific exploration, acclimatising oneself at high altitudes, etc, and calls for all-round participation.

He quotes James Ramsey Ullman, the noted chronicler of the successful American Mount Everest Expedition of 1963, as having provided the most fitting answer to the question why men climb mountains "Challenge is the core and mainspring of all human activity. If there's a wrong, we right it; if there's a record, we break it; and finally, if there's a mountain, we climb it."

Beginnings

Mountaineering as a sport owes its beginnings to Horace Benedict De Saussure, a Geneva scientist, who dreamt of scaling Mont Blanc as early as 1760. However the first to stand on its 15,781 ft high summit were Jacques Balmat, a 24-year old Alpine guide, and Gabriel Paccard, a noted doctor, on August 6, 1786. The following year De Saussure *did* realise his dream, by scaling Mont Blanc during his combined climbing and scientific expedition In 1851, Albert Smith, an English physician, also scaled Mont Blanc and wrote a lucid account of his experiences In 1854, a group of wealthy enthusiasts founded the Alpine Club in London

Alpinism was, however, temporarily halted in 1865, following the tragic deaths of the four mountaineers who accompanied Edward Whymper on his eighth attempt to conquer the 14,701 ft high Matterhorn summit. It was eventually resumed and after almost all Alpine peaks had been scaled, a new trail of adventure and discovery was blazed on the then-unexplored Indian Himalayas, the American Andes, the Canadian Rockies. The pioneers of mountaineering in the early years of the century, says Mr Pinto, were mostly from Britain, Germany, France and Italy.

When It Began In India

When asked about its popularisation in India, Mr Pinto says that mountaineering began to gather momentum in this country rather innocuously at the Doon School, Dehra Dun, in 1942, when three 15-year old schoolboys, led by their mountaineer-masters Holdsworth and John Martin, climbed up 19,000 ft in the Arwa Valley above Badrinath. Then, in 1951, Gurdial Singh, another master at Doon School, led a few young Indians to success, atop the 23,000 ft high Trishul peak.

The thrilling scaling of Mount Everest by Sir Edmund Hillary and Sherpa Tensing Norgay, on May 29, 1953, proved to be a major landmark in the history of mountaineering.

In 1954, the Himalayan Mountaineering Institute was founded at Darjeeling, with enthusiastic support from Pandit Jawaharlal Nehru and Dr B.C. Roy (the then Chief Minister of West Bengal), who saw to it that the Institute gained a firm footing and trained several promising youngsters who later joined many of the early expeditions to the Himalayas.

Mr Pinto says, in modern times, mountaineering has become a valuable source of scientific study. The sciences of geology, meteorology, medicine, photography and glaciology have benefitted considerably from mountaineering.

Asked about mountaineering as "big business", Mr Pinto felt that by and large, in India at least, it was as yet, just a "voluntary" hobby. Professional mountaineering was limited to instructors at the mountaineering institutions, rock climbing associations and the defence and police forces.

However, according to Mr Pinto, mountaineering can be developed into a major source of income and foreign exchange by setting up regular Himalayan institutes for mountaineering sports, and making full use of our majestic mountains. ■

Textbook Muddle

With An Absence of Malice?

While a bitter controversy still rages over the muddling up of facts, the offending chapters have been blanked out of the history textbook prescribed for middle school.

by Sushila D'Cruz

THREE "blanked out" pages before me in the history textbook prescribed for class VIII in Maharashtra's schools mirror the silent protest of two minorities—the Muslims and the Christians.

December 17, in fact, might well have been a sad Friday in view of the proposed one-day Catholic Schools' bank over the textbook muddle, had it not been for the timely announcement of Chief Minister B.A. Bhosale to withdraw the objectionable Chapter II on the *Rise of Christianity* and an assurance that necessary amendments in Chapters V & VIII would be made.

Earlier, following vehement protests by the Muslims, the offending chapter on Islam in the same textbook was deleted.

The book, as a whole, bristles with factual errors and bad proof-reading, thereby making a mockery of the laudable sentiments in the preface which embodies, among other points, that the book intends "to awaken in students a sense of pride, foster in them a spirit of international understanding and religious toleration and to make them enlightened citizens."

It further states that "to ensure flawlessness, the textbook was sent for a try-out to a few select schools in Maharashtra and was referred to several renowned historians and history teachers seeking their opinions which were duly considered before the book was printed."

A cross-section shed light on this "burning issue" in the course of interviews.

Alluding to the step-motherly treatment to the chapter on the *Rise of Islam*, Miss Yasmin Chagla, a senior history teacher in a Bombay school, pointed to some glaring errors and conspicuous omissions. Teachings and practices of Islam mean two different things, she said, and wondered how they could possibly be grouped together. Another error, she stressed, was the meaning of Islam defined as 'the path of salvation' Referring to the *Larousse Encyclopaedia of Ancient And Medieval History*, Miss Chagla held that Islam "connotes submission to one God."

The absence of an account of pre-Islamic Arabia, the cultural contribution by the Muslims (in architecture, sciences, poetry and music), and the unity of the Arab tribes, which Prophet Mohammed successfully achieved, was sadly bypassed. The Koran, the basis of Muslim philosophy, was also downgraded. Adequate details on all these counts were necessary in order to present a comprehensive picture of Islam to the students, she felt.

Professor Sadanand Varde, Janata Party MLA and former Education Minister of Maharashtra, clarified his stand that his opposition to the Government decision to delete certain portions in the textbook centred on two reasons: first, the publication of historical data should not be denied merely because it was embarrassing to a particular community or individual. In this context, he elaborated that the term "fled" with reference to Prophet Mohammed had raised a storm of protest although there was no deliberate intention to hurt the religious sentiments of the Muslims. Nevertheless, the latter felt that the term "fled" conveyed a sinister meaning and should have been replaced by the word "migrated". Prof. Varde, however, was of the firm opinion that sugar-coating a repugnant detail "cannot serve to hide it", for "a rose by any other name still remains a rose". He regretted that such trivial matters over word usage should have been magnified beyond all proportion.

Rewriting History

Secondly, he resented, the fact that the Government should succumb to pressures of the Christians and the Muslims by issuing directives that the so-called offending chapters be deleted or rewritten. How could this happen when the Board of Studies was an autonomous body, he pointedly asked.

Taking the book all in all, he maintained that stress on the construction of sentences, syntax, grammar and spellings deserved more careful attention. Naming a few source books in writing the textbook, Prof. Varde maintained that they were historians of repute like Will Durrant and H.G. Wells who are known for their objectivity. Reference was also made to Jawaharlal Nehru's *Glimpses Of World History* though eyebrows had been raised in amazement as to when Nehru had turned a historian. Besides, the writers were teachers and historians themselves, he added

Referring to the Marathi version of the textbook, he was taken aback by the demand of a Muslim MP for the removal of a poem *Sarva Dharma Sambhava* (Secularism) by Sant Tukadji Maharaj on the ground that it made unsavoury references to Islam. Elucidating the poem written by the "national saint" (he was honoured with this title by the late President, Dr Rajendra Prasad), he was baffled as to how an offence could have been caused, for the poem states thus: "We are all Indians transcending communal diversity."

The "distortion of facts" in the chapter on Christianity had touched even the Archbishop of Bombay, Rev. Dr. Simon Pimenta, to the core, apart from the Catholics at large, for he personally wrote to the Chief Minister of Maharashtra expressing dissatisfaction over the "insubstantial correction" made in the offensive chapters prior to their deletion.

The derogatory reference that "Christ claimed no divinity" in the textbook was also strongly denounced by Fr Nereus Rodrigues, Diocesan Inspector of Schools, who eloquently stated that He had always identified Himself on a par with God. This is documented in the New Testament of the Bible, precisely in Chapter 14 of the evangelist, Mark. In fact, Christianity hinges on this dogma. History should be taught as history and not as religion, he stressed, adding that interpretations in history books are totally unwarranted", like the view that St Paul's teachings differed from those of Christ.

Christmas is the celebration of "the word of God made flesh" or the "incarnation of God" and this "miracle" was never forbidden from being preached by the disciples as wrongly quoted in the book, Fr Nereus explained.

Bad Light

Christianity as a whole was not shown up in good light, observed Prof. George Moraes, a former President of the Indian History Congress and member of the Indian Historical Commission. He regretted that the reason for the division of the non-European world among the European followers by Pope Alexander VI was skipped, thus portraying him as an autocratic ruler. He explained it thus. the discovery of the West Indies in 1493 by Christopher Columbus had precipitated bloody colonial wars and in order to bring a stop to this bloodshed the Pope had "granted" an "award" at the turn of the 15th century—namely sanctioning a dividing line in the New World, allotting part of it to Spain and part to Portugal which were no doubt his European followers, and the "award" was widely respected and lasted till 1600.

Prince Henry, the Portuguese navigator, is elevated to the status of a King, although he never ascended the Portuguese throne, Prof. Moraes stated

Another wrongful presentation concerns Galileo, the Italian astronomer and physicist, who was summoned to Rome and tried by the Inquisition for supporting the Copernician theory which was regarded as dangerous to faith Failing to recant his theory, he was no doubt tortured, but the torture did not make him abjure his belief as stated in the book For the *Columbia Encyclopaedia* mentions that Galileo continued in the pursuit of scientific truth until his death

All said and done, the Pune University Board of Studies in history and the State Textbook (Secondary) Board maintains that there was no malice in the presentation of Christian and Muslim history while the Society for the protection of Fundamental Rights in Bombay denounced the "negative twist" that the authors had given to the chapters.

In summing up it can be said that the history textbook has itself made "history" by the unprecedented wave of protests it had unnecessarily triggered ■

Madvertisements

by H. Jesse Kochar

'GET me ads, get me ads," the editor constantly pestered me. "Too many blank pages," he complained.

But look at the blake! When I got him these ads (which I thought were the most imaginative since the GARIBI HATAO) he booted me out:

TOYS! TOYS! TOYS! We offer the latest, large and small, automatic, non-automatic. Six-inch men and policemen in battle, also Bhosale and Pawar, Begin and Arafat, Ronnie and Andropov—they disembowel each other with safe plastic bayonets

Also animated replicas of J. Ram, Morarjee, Charan, Swamy and Buta Singh. Batteries, clothes, caps, spectacles, walking sticks, bandages and Appu (only with Buta Singh) extra.

Latest micro-chip programmed doll "Indu", delight of all kids; she chucks her food about, throws tantrums and paperweights, beats up naughty children.

Also bargain offer male oversized doll called "Chavan"—on pressing button it mumbles, mumbles.

Plough-Blast Plastics

A Tryst With The Mahatma

by M. Sirajuddin

On the death anniversary of Gandhiji, the author, who was then an officer in the Railway Police in pre-independent India, recalls a meeting with the Mahatma which is deeply etched in his memory.

IN the year 1945 Mahatma Gandhi was to visit Madras at the invitation of the Hindi Prachar Sabha. The proposed visit had generated great public enthusiasm, as several years had elapsed since his earlier visit. During this period, momentous events had occurred in which he played the key role.

During the fortnight preceding Gandhiji's visit, administrative pressures were mounting, because the Mahatma's visits everywhere in the country were a big administrative and traffic problem. Whatever the political tensions and differences, on such occasions the administrative staff functioned at its best—British and Indian alike. On the present occasion the Railways had their own problem, as Gandhiji was travelling by train. The organisers of the Hindi Prachar Sabha were anxious that Gandhiji should travel by a special train. The General Manager of then M & SM Railway, a reasonable man in many ways, said they might do so, provided they paid for it. Provide a free special train for a rebel! The prestige of the ruling race clouded his reason. The Sabha was not in a position to bear this heavy cost.

Getting Ready For The Day

At this stage the officials of the Sabha came to me. Leave it to me, I told them. I was then the Superintendent, Government Railway Police, and at the moment charged with the responsibility of the Mahatma's safe conduct by rail to Madras. It had now become for me a matter of my country's prestige; and I told the General Manager briefly but in no uncertain terms that if Gandhiji travelled by the regular Mail, not only that train but all others would run 12 to 15 hours behind schedule on account of which there would be a general hardship and outcry, that matters would get out of control for which I could take no responsibility and that, above all, the incidental inconvenience to the venerated leader would generate a great deal of public resentment. A special train, I said, was the only answer. The answer came—a special train.

A greater problem remained, not only of regulating the thousands of citizens who would flock to the not too spacious railway station at Madras, but also of preventing Gandhiji, when he detrained, from being mobbed by the eager and pressing crowds. It had been our experience on such occasions that people broke through barricades and police cordons. Then followed a meeting between the Police Commissioner, Madras, the Chief Operating Superintendent—both senior British officers—and myself. The Commissioner was not very contributive to the discussion; his anxiety was evident in his face. The COPS looked at me.

I suggested we might divert the special train to a suburban station and none would know this last minute change except senior railway and police officers. The COPS jumped at the idea. Excellent, he said. Ambattur station would be ideal. The Commissioner asked me in a somewhat frigid tone how I proposed to deal with the Congress leaders who were planning a big welcome at Madras railway station; to him I said quietly, I would speak to those gentlemen, and later did so.

IN TOUCH WITH INDIA. If he did not travel on foot, then it was always by train.

Clockwork And Goodluck

The great day arrived. It was a cool and clear afternoon. Meanwhile the secret was well kept. We all gathered at Ambattur, a suburban railway station, seven miles to the west of Madras. The regulatory arrangements worked perfectly, and Gandhiji got down from the train fresh and smiling. The great man looked around, pleased and visibly relaxed. The leaders greeted him and a minute later C Rajagopalachari presented me to the Mahatma, who graciously acknowledged my salute. As I had previously arranged, his car followed mine through the streets which were getting congested with the evening traffic. None along the route were aware that the car was carrying the Mahatma! We arrived at the Hindi Prachar Sabha without any incident.

More of Gandhiji's graciousness was yet to come. On the evening previous to his departure from Madras, I had a telephone message from the Sabha that Gandhiji had asked for me. Could I come? Within minutes I was there and was taken to the Mahatma's presence. A few others were also there. It was like finding myself in the sanctum sanctorum.

He looked at my uniform with a curious smile, invited me to sit down and said in his soft voice, "I have troubled you, my friend, to thank you. You have spared me much strain.

"Will you extend your goodness further and take me tomorrow evening in a similar unobstrusive manner through this crowded city to the house of my friend Srinivasa, who is ill?"

For a moment I was non-plussed and said, "Sir, the city is in the jurisdiction of the Commissioner of Police." He smiled and said he would like to leave the matter to me. As I saluted and was about to leave, he added, "If you are not in a hurry, my young friend, please dine with us." **A strange emotion overwhelmed me—my smallness and his immeasurable eminence. I excused myself. There was much to be done. The morrow's responsibility was heavy on my shoulders.**

A Cherished Secret

I kept Gandhiji's last minute programme to myself. I did not even inform the Commissioner. In this I had taken upon myself a great responsibility and had anything gone wrong, there would have been a great deal for me to answer for. My youth at the time was the only excuse for this foolhardiness.

I presented myself at the Sabha the next evening and Gandhiji was ready to leave. He asked me whether I would be good enough to get into his car—to show the way, he added with a smile. Only he, great as he was, was capable of such graciousness, I thought. I said, "Thank you, Sir, but I would like to pilot your car." We reached Sastry's house where Gandhiji stayed for half-an-hour, after which I again led the cars carrying him and the other leaders, to Ambattur.

Except those who had come to see him off, there was no one at the railway station, that the entraining was to be at Ambattur was also kept a secret. There were still a few minutes before the train left and Gandhiji talked to us in a light vein. And when I finally saluted him, he said in unforgettable tones, "I am happy to have met you, my friend. I wish you a fine future."

Sure enough, two days later the Commissioner took me to task. He ignored what I said and remarked truculently that I had wished to steal the thunder. I **flashed at this and retorted that there was no question of stealing any thunder when we were dealing with a man who was above all thunder.** ■

INDIAN FILM FESTIVALS

Project Hope?

Each year we hold a film festival, and each year we make bigger fools of ourselves. If we had any self-respect, we would have stopped holding such jamborees a long time ago.

by Anjali Ewing

TIME OUT The Jury caught in a light moment But they were not laughing when they announced that there was not a single film which deserved the Golden Peacock award.

"BUNGLING all the way" "Festival limps along" "Film festival running risk of being non-event". "Chaos due to lack of foresight". "Film festival future bleak?"

These are just some of the opinions of our best film critics on the Indian film festival held each year. And what do they do about it? They write dismal, dejected and disgruntled daily reports for two whole weeks, after which they hope (even pray) for a better film festival the next year. They dream of a festival which is well organised, brings the cream of world cinema to the country and also attracts the biggest and best names in the business. But it is not only futile, it is unreasonable to hope for such a festival the way we run ours.

The first film festival in India was organised in 1952, to date, we have had 14 film festivals 9 international and 5 Filmotsavs. So we cannot claim that we have had no opportunity to acquaint ourselves with the correct way to do it and to make our efforts a success. But we have learnt nothing. If we had any self-respect we would have stopped holding these jamborees a long time ago. But we hope .

Some Problems

Money is probably the first and biggest problem You cannot begin to organise a festival of this sort without knowing how much you are willing to spend on it. And, naturally, the more you put into it, the more you get out of it Elementary, my dear authorities Unfortunately, our Government has the dreadful habit of coughing up the funds in fits and starts, and by the time it decides to take a dose of Formula 44, it leaves the organisers barely a few months to get everything ready before the curtain goes up.

Another problem is that each festival is organised by a different team of people. This is because officials in the Directorate of Film Festivals and the Information and Broadcasting Ministry are transferred to other jobs by the time the next film festival comes round. So you have raw, inexperienced people bumbling along, organising a prestigious show without a clue as to how it's done. And yet, all we really have to do is follow the method that the authorities in Cannes, Berlin, Venice and Moscow adopt

A third problem is inconsistency. The Indian film festival has no clear-cut objectives or policy. Sometimes it flirts with the West; at other times it woos the Third World. Sometimes it aims at being truly international, at other times it tries to foster the cinema of developing countries In the end, it endears itself to no one.

Then there are the minor irritations which are so characteristic of each festival—prints which don't turn up in time or those which do and get stuck at the customs, prints which come without subtitles, films which are shown with the reels mixed up, invitees who find there are no seats allotted to them; screenings held without proper information; entries accepted long past the deadline, schedules planned without foresight; discriminatory treatment—the list is very long. It is a wonder—a miracle, actually—that we continue to hold a festival each year and that people come back—like masochists—for more

The best way to judge a film festival's success is to gauge the quality of the films shown. Any good festival will attract—and get—good films. The fact that we are getting the dregs is tell-tale Until last year I read reports by Indian film critics which said that our festival was ranked seventh in the world. Considering the Jury refused to award the Golden Peacock this year, it would be wise not to delude ourselves any longer. Even the Manila Film Festival, which is two years old this year, is getting much better films than us (they even got *Gandhi*!), and this despite the refusal of many producers to have anything to do with it because of their political antipathy to the Marcos government.

Next year will mark a decade since we started organising the competitive film festival Many are of the opinion that we should do away with such a festival altogether and only stage a Filmotsav (non-competitive festival). But that is a counsel of despair. Things would be a lot better if the Indian film industry took over the responsibility of organising the film festivals and also raising funds for the purpose. The Information and Broadcasting Ministry, in that case, should chip in with a substantial subsidy. A committee of respected and able leaders of the industry, working closely with film critics, film societies and the Film and Television Institute of Pune would be the best bet, though the NFDC, which took over from the Directorate of Film Festivals this year, should continue to run the market section I'm sure a film maker abroad would be more receptive to an invitation from Satyajit Ray than to one from a Mr Ramaswamy of the DFF or a Mr Punjabi of the I & B Ministry!

Forum For Third World

There is no film festival in this part of the world to speak of, especially after the Tehran Film Festival folded up In spite of the money being poured into the Manila Film Festival by the Americans, it will never be a big success as long as an authoritarian regime remains in the saddle in the Philippines. The members of its jury are practically unheard of (except for our own Satyajit Ray who surprised and disappointed many by accepting to head the Jury last year). If we were to organise ourselves, we could become the showcase of Third World cinema (dare we compete with Nantes?) or Asian cinema. As it is, we have an excellent Panorama of our serious cinema which draws foreign film critics in hordes. If we had a competition section of only Third World cinema and invited films from the West for the information section, it could be the answer we've been searching for. Such a policy would mean purchasing films from the Third World countries for distribution here, something the Government has tried to avoid so far but which is quite essential because we have common problems. Besides, much of Third World cinema compares favourably with films being made in the USA, the UK, France, West Germany, Sweden, Switzerland, Czechoslovakia, Hungary and Italy

All competitive festivals should be held in Bombay, the nation's film capital, and all non-competitive festivals should rotate between New Delhi, Calcutta, Bangalore and Hyderabad. There was some talk this time of Goa being an ideal place to have the film festival Yes, Goa would certainly be idyllic, but there's money to be made at such festivals and Goa has no cinemas worth mentioning. So such schemes are out!

With effect from next year, the competitive festival will be held in August. It was clear to many that we needed to change the dates of the festival. January is too close to Christmas and New Year—vacation time for most people all over the world. Besides, Delhi is freezing in January and there's not much fun in talking to distinguished visitors when half your face is tucked into a shawl or a muffler August, however, doesn't sound much better That's the time of year we spend in the swimming pool; it is far too hot for people to be traipsing around. The ideal months to hold the film festival in India would be March, April, October and early November. After all, a film festival combines business with pleasure and ideal weather keeps everyone happy.

The policy of disqualifying films shown at competitive festivals elsewhere from the competition section of the Indian Film Festival needs to be reviewed. One simple analogy. Bjorn Borg is not disqualified from Wimbledon if he has played at the US Open. If he is good, let him win wherever he can. That's the policy we should have adopted from the beginning but it's not too late to make amends

In fact, it's never too late. Where there's a will, there's a way. I vote for Project Hope.

The Third Eye

Compelling Colour

Photographs and Text by P. Mansaram

I started with photography to record my paintings and to take pictures of my family when I came down to India. I began to use a camera instead of a sketch book. In the process I discovered the magical quality of photography. When one dimension is missing, the illusion of a third dimension through perspective can be very exciting.

My photographs generally contain a human element or are pictures of nature. Sometimes, just the colour or the atmosphere attracts. I do not worry too much about technicalities; I wish to portray the joy and human drama which is all around us.

Too many of my pictures have been published to remember them. There are many more which have never been published. But I am especially proud of one black-and-white photograph which was published along with one of my paintings in an American book on collage.

In the end, all photographic images are basically collages. ■

Poetry of the month

Selected by Nissim Ezekiel

Observation

I like to look at you
as you keep on talking about your husband
whom you do not hate
but cannot love
I like the honest expression
of your physical desire,
and the conflicting conscience
that sends you back and forth to therapy.

I have watched birds and trees since my childhood.
I have watched my pets and the seeds in my garden growing.
I wonder if it is the same love of life
or the morbid scientist's curiosity
that fascinates me in watching you.

With your schizoid self-preoccupation,
I like you as an object of observation.
I admire my great detachment,
but hate my introspection
as a corpse hates feeding upon itself

—**Sumatheendra Nadig (Bangalore)**

Poem 8

Mother
is eighty
Her eyesight is poor
But if he goes there
she calls him
to come closer
and sit by her

He sits close to her

She feels him
all over—
his face,
his hands,
his neck,
and finds him
and is happy.

Again that voice
speaks:
Dear Friend,
where is the wall,
and where the picture
which seeks?

T.K. Doraiswamy (Trivandrum)
(Translated from the Tamil by M.S. Ramaswami)

Two Poems

I

This is to say
that faced
with honest violence
I snigger embarrassed.
A face to me
is as interesting
as the grey concrete
I pass every day
My green tree
no longer delights me
I have stopped
anticipating it
Sometimes, when
I have nothing
better to do,
I sit on
my bed
comforted by my fat
books,
gazing at figures
passing by in my mirror

II

The despondent
Your fumbling
attempts
to rekindle old fires
freezes my body
into Rodin's statue.
Your desperation,
agonised frustration,
I view
like a commercial.
Forgive me,
my body,
for I am hemmed in
by my own walls.

Himani Bhatt (Dehradun)

Coronation

Cough, cough I seem to be
smoking my way to death. Ha!
It's the made-for-each-other
blend My love, how I relish
the poison breath of thy kiss . .
Ho now .
I'm drunk! The glowing touch
of fire-hot alcohol shimmers
like the sea of froth
on the rocks.
Setting fit for a
coronation! Long live the king
the king ...
is dead! He was
buried with pomp and show
at the fire-grave tonight
and they all drank to
his good health and
placed a placard upon the
tombstone Statutory
Warning: Cigarette Smoking
Is Injurious To Health.

Amit Nagpal (Bombay)

Requiem For Two Dogs

They lay motionless
on the heartless charcoal road,
struck like lightning
by the monster trucks of the modern age,
driven by reckless speed maniacs
who don't care
whether a poor dog lives or dies.

I saw them sprawled on the road to Delhi,
with open eyes,
staring accusingly at the steely sky
as if asking
what they had done
to deserve the brutal blow.

A question haunts my mind, though—
What made them die together?
Was it a bone they had found somewhere?
Or was it a case of inseparable lovers?
Maybe a truck first struck one,
and the other came
to pay his condolences—
only to join his friend in instant death.

Will someone lift them up
and give them a grave?
Or will they be flattened out
by the stream of speeding trucks
into the darkening night?

Poor little creatures!
The world is too fast for you.

The Need For Prayer

by N. V. Eswar

"LAKSHMY, will you please get me change to pay the vegetable vendor? Saraswathy, will you get the newspaper for me, please? Krishna, is the coffee ready? Govinda, will you please post this letter for me? Narayana, collect the clothes from the laundry. Oh Parvathy, can I have my lunch now?"

Requests of this type fly about in any household. Each one of them is addressed to any one of the numerous goddesses and gods of the Hindu pantheon. It is the custom with Hindu families to be named after a god or goddess. So whether you like to pray or not, you are always obliged to take the name of a god or goddess whenever you want anything done. You address a prayer to one of your family members and it is answered immediately Prayer to God is also something on the same level.

Whenever I find myself in a tight corner, I pray. It's not that I ask God to intervene and lift me out of the situation I just chant, mentally, hymns that come to my mind. I feel at ease and relief arrives from the most unexpected quarters. Or a solution,which I had not thought of earlier, comes to mind

In the last few years I have found myself in impossible situations and have escaped coming to grief because of them through prayer. During one of my train trips to North Bihar, a few years ago, I was rudely awakened at midnight by heavy pounding on the window of my compartment. I opened the window only to be confronted by a menacing crowd of nearly fifty ticketless travellers who ordered me to open the door

Violent Crowd

I protested that it was a first class compartment and all the berths were occupied but the crowd grew violent and began stoning the bogie The crowd swelled. I sat on my berth and began praying. My fellow passengers just shrank into their berths asking me not to open the door. I continued praying. And the crowd moved away from my compartment, apparently disgusted with my possum-like posture. Someone among the crowd hooted that I had gone into samadhi.

The next morning, I learned from the guard that nearly a thousand ticketless travellers had forced their way into the train the previous night and the train had been held up at the station for more than two hours

My approach to the unseen hand has been personal and constant. So much so that my prayers have taken on a man-to-man hue. One day my wife heard me complaining bitterly. She peeped furtively into the room and was amazed to find nobody there with me. Sarcastically, she asked me whether I was alright. I told her that I was only talking to God. She, of course, did not approve of my casual approach. But I strongly maintain that a prayer to God is such a personal affair that it can be addressed very much like the requests one usually makes to the family.

It's only when you adopt a casual attitude that you can establish that certain element of intimacy which is so vital for you to flow into God and for God to flow into you For God requires man as much as man requires God, even as the Gita has stressed it

During a recent trip to my village, I met a priest wearing a tattered silk cloth. I asked him why he could not buy a new one and he replied that he had no money. "The Lord there knows I am wearing the same cloth for the last six years," he said. "All I could do was to pray to Him to give me a new one. And He knows that I have been praying."

A few minutes later, a child came running to the priest and said that he was wanted in their house The priest, by his denomination, could not participate in any of the religious rites, so the family had, at the last minute, decided to gift him a new silk cloth

It is not that one should pray to obtain immediate and material answers in the above fashion This example was cited only to prove that prayers are answered in everyday life. Prayer must be for its own sake. As Ralph Waldo Emerson wrote: "Prayer as a means to effect a private end is meanness and theft."

No set time has to be kept apart for prayers It should be a continuous process I pray when travelling, during a dull moment between finishing a job and taking up another, ascending or descending in a lift I pray as I wait for a bus or a train I pray even when I am in the bath

The idea is to not indulge in even one idle moment. My continuous engagement in prayer gives me a mental poise which has often helped me maintain my equilibrium, thus averting tragedies that may have befallen.

In my former job there was steep opposition against me. The boss picked on everything I did or said,to provoke me. My family priest suggested I pray I had never done it before, except in a formal, and even impersonal way at the temple or before the family deity. Which made me somewhat skeptical in the beginning. I followed his advice, however, and found that it worked.

Inspite of the deep-rooted resentment and provocation, I remained absolutely calm This confused my boss for he knew that I had a very violent temper. He realised that it was useless trying to pick a fight with me What he didn't realise was that his fight was no longer with me. It was now with God Himself. He gave up And never bothered me after that

Mental Poise

I had scored but that wasn't the point any more. It was the mental-poise that I had obtained through prayer. Prayer, today, has become very important to me especially since every passing day presents its own quota of crises, without any apparent solutions.
Losing yourself in prayer makes you oblivious of the outside world and its problems They just don't exist, so you are never confronted by them Your mental calmness projects itself and pervades the atmosphere around you As you are, so is the world around you.

When you pray it's not just for yourself, it's for others as well That is why all Hindu ceremonies end with the prayer: *Sarve Jana Shukhino Bhavanthi* (Let there be happiness for every one in this world)

Constant prayers create a sense of humility and yet generate a feeling of confidence in yourself. It is these conflicting, yet commendable traits that attract others to you and make them want to do things for you, even without your asking them Prayer thus makes for a smooth running all around you in this mundane existence dictated by a sluggish economy and exigencies.

So pray as often as you can, for you should. Even if God does not answer your prayers and drop mansions, automobiles television sets, ranches or refrigerators into your laps, pray. For it leads to a happy and peaceful existence. ■

He had barely bought the animal, when he had been forced to part with it. It was as if in the presence of the rich, he suffered a paralysis of the will. How was he going to face his daughter?

The She-Camel

by Upendranath Ashk

(Translated from the Hindi by Sudha Chandola and Kathleen Moor

CHAUDHRI Nandu, seated in the shade of a tree, saw Baakar casting greedy eyes at his flock and in his hoarse voice called out, "Hey! What are you doing here?" He had been relaxing against the tree trunk and now straightened up to his full height of six feet. His coarse, homespun shirt was buttonless and his broad chest and powerful arms were plainly visible.

Baakar, a member of the Muslim community residing at P-Sikandar, came a bit closer. Above his small pointed dirty beard and arrow-like moustaches, his deep-set eyes sparkled for moment. Smiling faintly, he said, "Mister, I was looking at the she-camel. How pretty and young she is. It is a pleasure just to look at her."

Hearing his flock praised, Chaudhri Nandu's suspicion lessened somewhat. He said, "Which she-camel?"

"The fourth from the other end." Baakar pointed at her.

Under a shady tree eight to ten camels were tied. In the midst of them that young she-camel, her long, beautiful, well-shaped neck raised, was plucking at the thick leaves. As far as the eye could see the stockyard was crammed with large, tall camels, pretty she-camels, black, fat, ugly buffaloes, beautiful Nagori horned oxen and cattle. There were a few donkeys, too, but they were almost unnoticeable.

In the stockyard of the desert town of Bahaawal it was natural that camels should be in the majority. In this sandy area the work of providing transportation, of ploughing and carrying loads is done only by the camel. Even in the old days when cows sold for ten rupees and bullocks for fifteen, a good camel didn't come for less than fifty rupees. And its worth had gone up even though canals had come to this area and there was not such a scarcity of water. Passenger camels sold for between two hundred and three hun dred rupees and camels used for carrying loads and ploughing did not cost less than eighty to one hundred rupees.
